Owing to a strong foreign demand and attendant high prices, wheat raising has been very profitable in this state the past two years. In consequence of this, the usual California tendency to overdo the business and to inflate the price of land has been manifested. A drought like that of 1863–'4, or a fall in prices (one or both of which may almost certainly be expected within the next three years) would throw many of our farmers all aback. If either event occurs, foreclosures of mortgages and suits for debt will become unpleasantly plenty, and the five per cent. per month money lender will once more look cheerful. This is not a pleasant prospect but it is one which is sooner or later inevitable, unless farmers avoid speculating, borrowing largely, and taking great risks. Every well-wisher of the State desires to see evils avoided, when that is possible. One way to avoid them is to direct the attention of farmers to more profitable and reliable occupations than exclusive wheat growing upon high-priced land. Such an occupation we propose to call their attention to; it is that of hog raising.

Down in Merced county, 125 miles from San Francisco, the best of wheat land is worth only $5 to $10 per acre. Each acre of 20 bushels will feed five hogs from May until December. Two and-a-half pounds of wheat, it is reckoned, will make one pound of pork. In December and January the hogs can be fed on pumpkins, a piece of ground for the raising of which must be reserved. From January until May the animals can be driven down to the Merced or San Joaquin river, where in the tule lands they can subsist on tule roots and fish. This land can be purchased at $2 50 to $3 50 per acre, or rented for a nominal sum.

This business is more profitable than wheat raising under the most favorable circumstances. When wheat sells for two cents per pound it does not net the producer more than one cent and a half. Grain-fed pork, on foot, has never been sold for less than five cents per pound here, while five to eight cents per pound is the average price. Each animal will average one hundred and seventy-five pounds in weight. San Francisco is the chief market; the animals can be driven down from the country named in about twenty-one days; two hired men and the owner can take care of a drove of one thousand. The entire cost of bringing this number to the city is not more than $250 to $300.

This business nets ten per cent. greater profits than wheat raising, and has many additional advantages. The first and chief one is, that while the hogs are eating the wheat in the field where it is raised, they are fertilizing the land and keeping it up to a high standard of productiveness. In the second place, no expensive agricultural implements are requisite, and no hired help is needed, except when the animals are being driven to market. Six years ago an industrious man entered upon this business in Merced county, without capital. He made an arrangement by which he was allowed the use of thirty sows, he giving the owner half the increase. Since that time he has sold $20,000 worth of pork, and has, besides, three thousand hogs worth $5 each. He has accomplished all this alone, never having any help except when driving to market.

One man can clear about $800 a year from one hundred hogs.

Although vast quantities of pork are raised on this coast the market is not yet nearly supplied with the home article, a large amount being still imported from the East. In view of the facts named, there is no necessity for us to go abroad for an article that we can raise profitably and better at home. There need be no fear whatever of the supply exceeding the demand. If the supply of grain-fed pork was increased, the business of raising slimy and poisonous carrion-fed pork in this city would be done away with.

Here is a profitable occupation, which is open to industrious persons. It is more profitable and far more certain than simple wheat raising. Want of transportation facilities keeps farmers back in counties far removed from the city, but this objection does not apply to hog raising, as those witless animals transport their own carcasses to market and slaughter. Those who go into the business can therefore settle where land is cheap; along the line of the Central Pacific Railroad, for instance, or in the extreme southern counties of the state. Because of the benefits likely to occur to the State and to individuals from an extension of the above business, we have given space to some facts connected with it in the interior land department of the Circular.—*San Francisco Real Estate Circular.*

Sheep Farming in Turkey.

The British Consul at Adrianople, gives some interesting details of the sheep and goat farming in that villayet. He gives the number of sheep at 4,512,000, and the number of goats at 778,000, the tax on which, at the rate of four piastres each, yielded £171,297 in 1867. Nevertheless it is estimated that 20 per cent. profit is obtained by sheep husbandry. The tax produced £10,596 more in the year 1867 than in the previous year, and for the last ten years there appears to have been a steady increase in the number of sheep.

The peculiarity of the shepherd's work in this district is the process of milking the sheep and goats, large quantities of butter and cheese being made from the milk of these animals and sent into Constantinople, whence also the sheep and lambs are sent from the district or villayet of Adrianople for local consumption. The total cost of a flock consisting of 1,880 ewes, 150 rams and 50 goats, is stated to be 90,500 piastres, the cost of keeping, &c., being 81,000 piastres, and the total value of produce exclusive of the skins, 56,910 piastres—112 piastres being equal to the £1 sterling. There is an active market for the sales of the lambs and goats, which are salted and packed for the French and English market.

The two prominent breeds, which are considered by the natives as distinctly local, are the Kavirjik, which bear some affinity to the demi-Merino, and the Karabash, which are blacked-faced, and not unlike the sheep in Macedonia and Thessaly. The wool of the former is most esteemed, being long, soft and elastic, and twisted in ringlets, which gives the name to the breed.—*London Field.*

How to Fit Collars to Horses' Shoulders.

It is very important to have a collar fit nicely and snugly to the shoulders of a horse. It enables him to work with a great deal more ease, and to apply a great deal more strength. It prevents galling and wounding, as the friction is avoided. Collars are so made, or should be so made, as to throw the chief force on the lower part of the shoulders. The horse can apply but little strength on the upper part, and for this reason breast collars are coming greatly in vogue; as the strength is exerted on the lowest part of the shoulders. But we started out to tell our readers how to make a new collar fit the shoulder of the horse. The collar should be purchased of the proper size. They are usually too large. If obtained of the proper size, just before putting it on the first time, immerse it in water, letting it remain about a minute, and immediately put it on the horse, being careful to have the hame so adjusted at the top and bottom as to fit the shoulder, and then put the horse to work. The collar, by being wet, will adapt itself to the shoulder, and should dry on the horse. When taken off, it should be left in the same shape it occupied on the horse, and ever after you will have a snug-fitting collar and no wounds.—*Valley Farmer.*

"Buy Bulwer's last work" said a sharp newsboy, the other day, to a gentleman on the ferry boat.

"No," said the man; I'm Bulwer himself."

"Well, buy the 'Women of England,' sir; you're not Mrs. Ellis, are you?"

Archbishop Whately, describing commonplace preachers, said: "In their sermons, they aim at nothing, and hit."

WEEKLY MARKET REPORT.

Wednesday, October 14, 1868.

Flour—Sales of 500 bbls Vineyard and Orange Extra, hf sks, $6. We quote jobbing rates for city brands as follows: Superfine, in sks, ℔ 196 lbs, $5@$5 25; Extra, in sks, $6@6 25.

Wheat—Sales include 500 sks good milling, $1 80; 1,000 sks shipping, prior to arrival, full figure; 15,008 sks do, prior to arrival, private. The range of the market is $1 50@1 90 ℔ 100 lbs. At the close, 4,000 sks choice white, sold yesterday, for export, $1 90; 233 sks Oregon, new crop, ex steamer, private.

Barley—No sales reported; quotations nominally $2 05 @$2 20 ℔ 100 lbs.

Oats—Sales include 200 sks poor, $1 75; 1,000 sks light, $1 87½; 1,025 sks do, in two lots, $1 90; 300 sks fair, $2. As extremes, we quote the market at $1 97@2 12½ ℔ 100 lbs. At the close, 2,000 sks Oregon, ex steamer, private.

Potatoes—Sales of 400 sks Mission, from wharf, $1 65 @1 10; 175 sks Bodega, $1 20@1 25; 200 sks Carolina, 75c@$1. We quote Monterey and Pigeon Point at $1 20@ $1 25: Lighthouse, $1 50@1 20; Humboldt, $1 37½ ℔ 100 lbs.

Onions—Sales of 100 sks Yellow, in lots, $1 80 ℔ 100 lbs.

Beans—The market is somewhat irregular, and prices nominal. We quote jobbing rates for first quality as follows: Bayo, 3¾@3¾; Butter, 4@4½c; small White, 3½@3¾c; Pink, 2¾@3c; Red, 2¾c ℔ lb.

Rye—Sale of 452 sks choice, private. The receipts of new crop are expected to increase shortly, when a lower range of prices is anticipated.

Buckwheat—Quiet and nominal at $1 75 ℔ 100 lbs.

Mustard Seed—The receipts to-day are quite large, reaching 400 sks. Choice California Black is quotable at 4c ℔ lb.

Flax Seed.—The local mill continues to pay 4c ℔ lb for choice.

Bran—Sales of 100 tons, in lots, at about $22 50 ℔ ton.

Middlings—Fine sell at $37 50@40; feed descriptions $32@35 ℔ ton.

Oil Cake Meal—Meets with steady demand at $30 ℔ ton.

Hay—200 bales poor, $7 50; 175 bales medium, $13; 138 bales choice, $16 ℔ ton.

Dairy Products—California fresh roll Butter continues scarce at 55@65c, latter figure for favorite dairies; California pickled, 40@45c. Cheese is in active demand at 17@18c ℔ lb for the best California and Eastern dairies, with sales of the former for the week amounting to upwards of 10,000 lbs within the range. Eggs are firm at 2½c ℔ dozen.

Provisions—Bacon is jobbing at 14½@15c for California smoked; Oregon do, 14@14½; California Hams, 16½@17c; Oregon do, 16½@17; Lard, 12½@14c ℔ lb.

Poultry—Live Turkeys are quoted at 17@18c ℔ lb; Hens $7@7 50; Roosters, large size, $6@7; Spring Chickens, $4@ 5 50; Ducks, $4@5; Quail, $1 25 ℔ dozen; Geese, $2@ $2 25 ℔ pair; Venison, 8@9c ℔ lb.

Wool—Market active at a still further advance. Sales for the week, by two of the leading receiving houses, 352,000 lbs fall clip at 14½@17½c, latter figure for very choice lots of fine descriptions. Fall burry ranges from 10@12½c ℔ lb.

Hides—Sales since last Wednesday of 1,680 California dry at 14@14½c ℔ lb.

Tallow—Sales for the week of 15,000 lbs good Beef. Some receivers quote as high as 8½c, but we have heard of no sales at that figure.

San Francisco Cattle Market.

Beyond a slight decline in Lamb and Pork, there are no changes to report.

We quote slaughterers' prices as follows:

Beef—American, 1st quality, 7@8c ℔ lb.
  do 2d do 6@7c ℔ lb.
Veal—Ranges from 6 to 10c ℔ lb.
Mutton—Is steady at 6@6½c ℔ lb.
Lamb—Has declined to 7@8c ℔ lb.
Pork—Undressed, 4½@5½c; dressed, 6½@7c ℔ lb, outside figures for milk or grain fed.

—*S. F. Bulletin.*

MINING.

Gold in Africa.

Recent accounts from Africa represent the discovery of rich and extensive gold fields in the interior of South Africa. The London *Times* says the accounts in circulation are of the wildest description, but setting these aside there is reason to believe, not only that deposits exist, but that they are very rich and extensive. So marvelous are the stories in regard to those discoveries that it is thought the ancient Ophir has been struck. We have seen also that a paper upon the "gold fields of South Africa," was recently read before the British Science Association by Dr. R. J. Mann, giving an account of the discoveries made by a young German by the name of Carl Manch, in 1864. The paper read gives a detailed history of the young man, and the manner by which he chanced to get into the region of the gold field. During his excursions to the Orange river and the territory of Transvaal, he fell in with a noted elephant hunter, an Englishman by the name of Hartly, and accompanied him in one of his excursions beyond the Limpopo river. He described the region over which they passed, as the crest of the water shed separating two rivers, called the Limpopo and the Zambesi, which included a stretch of about 250 miles. While in this region, Mr. Hartly told him that in pursuing a wounded elephant on a former occasion there, he came across some holes artificially made in a mass of quartz rock where it was obvious there had been some mining done in former years. Carl Manch, the young German, armed himself with a hammer and started in the direction indicated to make discoveries. On reaching the place, he found everything just as it had been described by his companion, Mr. Hartly, and on investigation discovered a pit, coal ashes, clay pipes and other articles, showing that it was an old smelting place. There were in the vicinity several similar pits. In the course of his investigations he collected fragments of bright lead ore, containing silver, and pieces of quartz rock impregnated with gold. He again joined Mr. Hartly, his companion, with whom he returned in a few days, and extended the investigation. They proceeded to within forty miles of the Portuguese settlement of Tese, on the Zambesi river, when a second tract, rich in gold, was found. The search was limited, for it seems they were accompanied by a native attendant, attached to them by the chief of the country, who has forbidden any search of this kind. They were constantly under his eye, and consequently the small collection of mineral they made was done by stealth, and during the accidental absence of this spy. Notwithstanding this disadvantage they made ample observations to satisfy themselves that there were several fields unquestionably rich in the precious metals. Very little was ever before known of the district traversed by them, but Carl Manch, the young German, proposes to return to that region, accompanied by Mr. Erskine, son of the Colonial Secretary, and it is said that both sympathy and substantial aid will be afforded him. These are the mines spoken of by the London *Times*, to which we referred in the beginning of this article, and of which there are such extravagant accounts at present. A place called Natal is the nearest seaport to the district, and it is said that the traders at Cape Town know the line of the route well, and it was hoped that further and fuller particulars would soon be had. The *Times* speaks of a letter from a merchant of Cape Town, which indicated that the discovery has created a frenzy among the people there, and it speaks of gold in heavy veins, embedded in white quartz of enormous extent.—[*Reese River Reveille.*

Copper Reduction Works—Home-made Materials.

The *Enterprise* describes as follows the process of reducing copper ores in the wet way at the newly-erected works at Virginia City, Nev.:

The ore is first crushed to a fine powder, when it is placed in a large copper tank, and subjected to the action of dilute sulphuric acid, heat being applied to the bottom of the tank (which stands upon a furnace), to hasten the process of dissolving the copper contained in the ore. When dissolved, the solution is drawn off into a large filtering tank, and from this is conducted into a precipitating tank. In case it is intended to manufacture bluestone from the solution, it is conducted to the evaporating pans, and thence, after being sufficiently reduced, is placed in pans lined with lead, for crystallization, when it is ready for sale to millmen and others who have use for the article. For the production of metallic copper, the process is precisely the same as for the making of bluestone, up to the point of running the solution from the filter. To obtain metallic copper the solution is conducted from the filter to a large precipitating tank, where it is precipitated by the use of metallic iron in a state of fine division, and at once becomes metallic copper in fine grains. The metallic iron used in precipitating the copper contained in the solution is obtained in the following manner from the ore itself, the ore (from Walker River) containing but twenty-one per cent. of copper, and a considerable amount of iron. The crushed ore, just as it comes from the batteries, is mixed with a quantity of pulverized charcoal, placed in iron tubes or cylinders, and kept for a length of time at a certain heat, by which time the iron is annealed and becomes metallic, and then is ready to be used in the precipitation of the copper obtained in solution by the first process. This iron powder acts almost instantaneously, and all the copper in a tank of the solution, no matter how large the tank, may be precipitated in less than an hour. After the copper has been precipitated there remains in the solution sulphate of iron (green vitriol), and this is evaporated and crystallized in the usual way, when it is used for the manufacture of sulphuric acid, to be again employed in the process of dissolving the ore in the first operation. After the distillation of the sulphate of iron for the production of sulphuric acid, there remains behind in the retorts used, a substance called colcothar—a red oxide of iron, sometimes used as a pigment, and for polishing glass. Thus it will be seen that the ore is made to furnish the materials by which it is worked; the only loss is about ten per cent. of sulphuric acid. To work copper ore by the new process will cost from $8 to $15 per ton, according to the price of fuel, facilities for obtaining ore, etc.

Quartz Mining.

The Grass Valley *National* give the following account of the process of obtaining gold from the quartz in the Eureka mine:

Before going to the stamps, of which there are thirty, the quartz passes through a rock-breaker, worked by an engine of fifteen-horse power, which crumbles it into small fragments so that it is easily crushed. About 375 tons are crushed every week. The pulverized quartz, after passing over the blankets, goes through a contrivance called "Hunter's Eureka Rubber and Amalgamator." This consists of a rubber of wood and iron, and six horizontal copper tubes, coated with quicksilver, which roll backward and forward. After coming out of this concern, the quartz passes over copper plates covered with quicksilver. The blankets, rubbers and plates pick up about all the gold there is, except that contained in the sulphurets. The amalgam of gold and quicksilver obtained in this manner is then retorted; that is, placed in a close furnace and heated so that the quicksilver passes off, in vapor, through a tube into cold water, where it is condensed. Hardly any quicksilver is lost in the entire process; pure at first, it mixes with the gold, making amalgam, is driven off in vapor, is condensed, and re-appears in its original pure state, having done its work, and not lost one-tenth of one per cent. The same identical quicksilver is thus used over and over again. The gold left in the retort is in the form of rough-looking, scraggy balls. This is placed in crucibles, with a little borax and saltpeter, melted, and poured into molds. The flux, containing all the dross and impurities, hardens on the surface in the form of a black, brittle coating; it is knocked off with a hammer, and the beautiful gold brick is the result. Thus we have briefly stated the process by which the bullion, ready for the mint, is obtained from quartz ledge. The operation, though familiar to many, still is unknown to some of our readers, and we hope that our crude account is not devoid of interest.

Useful Metals and Minerals.

The *S. F. Commercial Herald* in the following article shows that gold and silver are by no means our only source of mineral wealth:

While gold and silver have held their place as the principal attraction in the mining world, a good deal of attention has been directed of late to inquiries concerning our supplies of the useful minerals and metals, and the best means for rendering them practically available. Already our deposits of coal, though by no means of the best quality, have greatly relieved the stringency of the fuel question, which at one time excited serious concern as to its favorable solution. Recently, an extensive bed of iron ore of the most desirable kind has been discovered in Napa county; and being in the midst of timber, with water and other facilities for cheap reduction convenient, and but four miles from the railroad, there is a probability that measures will soon be taken for manufacturing iron from the ore. During the past quarter, some attempts at resuming work upon certain of the copper mines in this State have been made, and with but a slight advance in the price of these ores, a general resumption of operations would follow. Considerable quantities of manganese have been extracted from the mines on Red Rock Island, and from the more recently discovered and extensive deposits in San Joaquin county. Work has lately been renewed on the Temescal mines, Los Angeles county, with a view of testing tne quality and probable quatnity of the ore. Should the results prove favorable, capital is to be invested for working them on an extended scale.

Congregational Singing.

ROBINSON'S SONGS OF THE SANCTUARY. Hymns and Tunes for Congregational Singing. 35,000 copies already sold. Editions for Congregational, Presbyterian, and Baptist Churches. Price, $2,50. A liberal deduction to churches for first introduction.

HERNY WARD BEECHER'S PLYMOUTH COLLECTION. 75,000 copies sold. Congregational and Baptist editions, $2 50.

EPISCOPAL COMMON PRAISE. Appropriate Tunes for all the Psalms and Hymns in the Book of Common Prayer, with select chants. Just published. $2 75.

A. S. BARNES & CO.,
Publishers, New York.

For sale by H. H. Bancroft & Co., San Francisco.

Sabbath School Books.

I have the most complete assortment of Sunday School Books, Cards, Question Books, and Sunday School Music Books, in the city.

Also, a fine assortment of Stationery. Paper and envelopes stamped with purchaser's initials, without charge.

A liberal discount made to Sunday Schools, Teachers, and Clergymen.

Just received, five hundred "SONGS OF THE SANCTUARY."

CHILION BEACH,
Bookseller and Stationer,
34 Montgomery Street, opposite Lick House.

Life Among the Shakers.

The Senior Editor of the *N. Y. Observer* has recently visited the Shaker settlement in Lebanon, N. Y. He publishes in the *Observer* an interesting account of this strange people, from which we make the following extracts:

Near the line dividing New York from Massachusetts, in the town of Lebanon, famous for its springs, in a region remarkable for its picturesque beauty, is a settlement of six hundred men, women and children, among all of whom there is not one who stands to another in the relation of husband, wife, father, mother, son or daughter. They are divided into eight groups, or families, dwelling in large buildings, like factories, four or five stories high, without a blind or shutter to the windows. The settlement has an air of extreme neatness, with a severe simplicity that rejects all ornaments. Not a flower blooms in the yards. Not a piazza nor a tower breaks the dull uniformity of the place. Not a person is seen moving in the streets. Not a face looks out of a door or a window. Silence reigns as if the village was solitary, deserted by its inhabitants yesterday.

This is the Shaker village. The Elder, Frederick W. Evans is his name, is a tall slim man, with a high forehead, mild eye, benevolent face, pleasant voice, and kindly manner, inclined to humor, and anxious to converse upon the peculiar faiths and practices of the singular sect, of which he is now the acknowledged leader.

I have no doubt but you will be as surprised as I was to find that Shakerism is composed of Millenarianism and Spiritualism. It is built upon the twofold idea that the Lord Jesus Christ has made his promised second appearing already in the homes and faith of the Shakers. They have also constant communication with the unseen world, by spiritual manifestations. Signs and wonders are of daily occurrence among them. Miracles have been frequent in their history.

But the peculir feature of the system by which they are separated from the world, is the practice of *celibacy*. Not the forced celibacy of those who live apart from the other sex and submit to the system as a penance; men and women live here together, as brothers and sisters, in the same family. They eat at the same table. They sleep in adjoining chambers. They mingle daily and hourly in the ordinary pursuits of life, as members of the same household. They have all the enjoyments of the *social*, none of the *domestic* state. This abstinence from the conjugal state, they call purity. It is the greatest misnomer in the language. They think themselves holy because they disobey the first command that God laid upon the parents of the race after the flood.

The saying: "It is not good to marry," the Elder and the Shakers contend is the saying which Jesus said "all cannot receive, save they to whom it is given." On this flimsy basis the system of Shakerism rests. This passage, and misunderstood, is *all* in the teachings of the Master to justify a persistent, life-long rebellion against the positive ordinance of God written in two books of revelation, the Bible and human nature.

There is nothing, even in the speech of people who are always willing to take up an evil report, to justify a suspicion that the Shakers do not live as they profess. Their reputation in the world about them is that of honest, upright, and worthy people, doing justly, living humbly, and walking in the fear of God.

When a person from the world joins them, he puts in all that he has: and when he quits, as some will get sick of the system and retire, they give him what is just, and in the history of the community no one has invoked the aid of the law to recover what he has paid in. But they have lawsuits with the world's people, and protect their own "rights" by going before the Courts as freely as other folks. So when they are sick they send for the world's doctors, and are cured by the same medicines that their outside neighbors take, or they die in the same way. Their food is simple but abundant. They do not use meat as freely as others do, prefering a greater supply of vegetables; and swine's flesh they reject as Jews. Alcoholic drinks are not for them, and temperance in eating and drinking is one of their cardinal virtues. From a comparison of statistics it appears that they live as long and with as good health, on an average, as other communities. This is their own report, and it ought to be a better report. Their habits of industry, frugality, temperance, and especially their exemption from the vices and the excitements of the outside world, should ensure for them more good health and greater longevity than others have. It is quite probable that celibacy as a rule is not healthful. If so, it is not right.

In their meeting-houses they assemble often for their peculiar services; the men and women standing in rows; they sing; they hear words of instruction from the elders or any one who is moved to speak; they pray; and they "go forth"—that is they leave their fixed posture and join in a lively, regular dance, moving their hands as if to receive gifts from above. On Sunday, in summer, this service is largely attended by persons from the Springs and villages around, who come merely from curiosity. Sometimes the fashionable young gentlemen and ladies are treated to a discourse on a subject not often made the theme of public instruction; and when the elder sets before them, without a fig leaf of shame, the reason why he thinks it "not good for a man to marry," these young people wish they had gone to their own meeting.

Of the sincerity of these people I have no doubt. They believe much of the simple gospel, and they practice many of the virtues which the gospel requires. That they are sadly deluded is just as plain. There are now in various parts of the United States eighteen societies of Shakers, in the same faith and order with this. We went hence to Hancock, near Pittsfield, a neater and more inviting village than Lebanon, where two or three hundred Shakers dwell. There are 300 at Watervliet, 150 in Grove land, Livingston county N. Y., 200 at Enfield, Conn., 200 in Harvard, Mass., 300 in Canterbury, N. H. and elsewhere several smaller communities. Elder Evans told me there are about 4,000 in the world. As the present population of the earth is not far from 1,300,000,000, there is no great danger of a decrease from the celibacy of the Shakers.

I left them with a feeling of pity that so worthy a people should be so misled. But I was comforted with the belief that they have the average of human happiness among them, and if they are not contented with their lot they are free to change it at their pleasure.

Siberian Exiles.

At the present time all desire information respecting Russia. She is believed to be advancing with rapid strides toward the position of the leading Power in Europe. An interesting account of one of her peculiar Institutions is given in the *Atlantic Monthly*. We make the following extracts:

Crime in Russia is rarely punished with death; many offences which in other countries would demand the execution of the offender, are there followed by exile to Siberia. As Russia is but thinly inhabited, her rulers are greatly averse to taking the lives of their subjects; the transfer of an individual from one part of the empire to another is a satisfactory mode of punishment, and gladly practiced in a country that has no population to spare. Siberia, with its immense area, has barely four millions of inhabitants, and consequently possesses abundant room for all those who offend against Russian laws. Criminals of various grades become dwellers in Siberia, and very often make excellent citizens; then there are political offenders, banished for disturbing the peace and dignity of the state, or loving other forms of government better than the Emperior's. Outside of Russia there is a belief, as erroneous as it is general, that the great majority of exiles are *politiques*. Except at the close of the periodic revolutions in Poland, the criminals out number the political exiles in the ratio of twenty to one. For a year or more following each struggle of the Poles for their national independence the road to Siberia is travelled to an unusual extent; between the insurrections there is only the regular stream of deported criminals, with here and there a batch of those who plot against the government.

It is easy to go to Siberia; easier, I am told, than it is to get away from it. Banishment is decreed for various offences, some of them of a very serious character. Many a murderer, who would have been hanged in England or America, has been sent into exile with the opportunity of becoming a free citizen after ten or twelve years of compulsory labor. On the descending scale of culpability there are burglars, street and highway robbers, petty thieves, and so through a list of namable and nameless offenders. Before the abolition of serfdom, a master could send a serf to Siberia for no other reason than that he chose to do so. The record against the exile stated that he was banished "by the will of his master," but it was not necessary to declare the cause of this exercise of abitrary power. The plan was instituted to enable land-owners to rid themselves of idle, quarrelsome, or dissolute serfs, whose absence was desirable, but who had committed no offence that the laws could touch. Doubtless it was often abused; and instances are narrated where the best men or women on an estate have been banished upon caprice of their owners, or for worse reasons. Its liability to abuse was checked by the requirement that the master must pay the outfitting and travelling expenses of the exiled serf, and also those of his wife and immature children.

Of political exiles there are the men, and sometimes women, concerned in the various insurrections in Poland, taken with arms in their hands, or involved in conspiracies for Polish independence. Then there are Russian revolutionists, like the Decembrists of 1825, or the restless spirits that now and then declare that the government of the Czar is not the best for their beloved country. In the scale of intelligence, the *politiques* are far above the criminals, and frequently include some of Russia's ablest men.

Theoretically all persons sent into exile—with the exception of the serfs mentioned above—must be tried and convicted before a court, military commission, or some kind of judicial authority. Practically this is not always the case; but instances of arbitrary banisment are far less frequent now than under former rulers. Catharine II. exiled many of her subjects without so much as a hearing, and the Emperor Paul was accustomed to issue orders of deportation for little or no apparent reason. Nicholas, though severe, aimed to be just; and the present Emperor has the reputation of tempering justice with mercy quite as much as could be expected of a despotic monarch. Very likely it occasionally happens that a banished man has no trial, or is unfairly sentenced; but I do not think Russia is any worse in the matter of justice than the average of European governments. Certainly the rule of Alexander is better than that of the Queen of Spain; and, so far as I have knowledge of Austria and France, there is little to chose between them and their rugged Northern antagonist.

A criminal condemned to exile is sent away with very little ceremony; and the same in the case with the great majority of *politiques*. When an officer of the army, or other person of note, has been sentenced to banishment for life, he is dressed in full uniform, and led to a scaffold in some public place. In the presence of the multitude, and of certain officials appointed to execute the sentence, he is made to knee. His epaulets and decorations are then torn from his coat, and his sword is broken above his head; to indicate that he no longer possesses rank and title. He is declared legally dead; his estates are confiscated to the Crown; and his wife, if he is married, can consider herself a widow if she so chooses. From the scaffold he starts on his journey to Siberia. His wife and children, sisters and mother, can follow or accompany him, but on the condition that they share his banishment, and cannot return to Europe. Children born to him in exile are illegitimate in the eye of the law, and technically, though not practically, are forbidden to bear their family name. They cannot leave Siberia while their father is under sentence; but this regulation is occasionally evaded by daughters' marrying, and travelling under the name of their husbands.

Louis Napoleon and His Empire.

Under this title *Putnam's Magazine* for October contains an ably written article in which the writer gives the French Emperor due credit for the efficient service he has rendered to the cause of civilization in France and Europe, while severe comments are made upon the many evils existing in France, which the writer attributes to the carrying out of Napoleon's policy. The following extract presents the Emperor's course in a favorable light:

Wise enough to perceive that the genuine Cæsarism of Napoleon I. was not to be attempted—cognizant, in a word, of the age, its demands and its impossibilities,—Napoleon III. has departed widely from the model of his uncle. He has tacitly declared himself independent of the traditions of the Empire. At Bordeaux there stands, in one of the public squares, a statue of the present Emperor, upon the pedestal of which is graven the memorable words, "*L'Empire, c'est la Paix*"—"The Empire is Peace;" words which he himself uttered there not long after he attained to the Imperial purple. By those words he broke loose from the promise implied by his elevation; and, if they keenly disappointed the restless and vainglorious spirits who blindly hoped for war, they fell gratefully upon the ears of those who only asked tranquility, political security, and the internal development of France. And the Empire has been, for the most part, Peace. Only twice has Napoleon III. openly defied the ideas of the progressive age—in Mexico, and at Rome; and, as we have shown, these acts were rather defensive than aggressive. The world naturally looked forward to European troubles, to great devastating wars, to gigantic schemes of conquest; but the temptation, if temptation it was, has been shunned, and France has been able to pursue the peaceful arts of internal growth almost without interruption. Let us do justice to the Empire. Faults, blunders, crimes there have been; but the picture is not without lights as well as shadows. The Empire has certainly kept apace with the popular current. Unlike the Bourbons, it can forget, and it can learn; and the secret of its success lies in its capacity for receiving and satisfying the tone of popular opinion. Popular opinion sent the Empire on the glorious errand of freeing Italy, and creating a new and extensive constitutional kingdom. More recently, we have seen another, and equally famous, acknowledgment of the march of events. When the German war was in progress, it would have been easy for France to extend her frontier to the Rhine, thus accomplishing an ambition of four hundred years. But the temptation passed, then the opportunity. Not only did the Empire gracefully yield to the ascendency of Prussia. For the first time in the history of the world, we heard the Emperor of the French, in the presence of the representatives of the nation, casting to the winds the old idea of balance of power, and in one grand sentence announcing the new doctrine of nationalities. People of the same race, he declared, had a right to unite together. The Germans could resolve themselves into a single nation, if they would; it was not for France to say them nay. No longer was Europe to be convulsed from the seas to the centre, because this or that power was found to be a growing power. In place of that petty jealousy which begrudged a neighbor his progress and prosperity, that sensitive alarm which hastened to enfeeble, by sudden alliances, a thriving people, that unworthy suspicion which saw in every forward step, in every territorial accession, in every wholesome improvement, a menace and defiance,—in place of these, Napoleon frankly announced the right of great nationalities, and welcomed them; he spoke, not without a tone of complacency, of the final downfall of feudalism, and of the resolving of many small states into a few large ones. Instead of distrust in view of this prospect, he would generously welcome the event; France wished no more territory, France wished peace: France would congratulate and make friends with the new power, and would insure her safety in their midst by friendly confidence, while her competition with them would rather be in the fields of peace, industry, and education, than on those of battle.

And this course was consistent in the heir of Napoleon. It was by the feudal elements of Europe, with which the balance-of-power principle was indissolubly linked, that the first Empire was opposed, and finally crushed. It was against feudalism and that principle, that Napoleon fought all his life. Waterloo was at once his ruin, and their triumph; and the Treaty of Paris, which restricted France to its present limits, was concluded in the name of the ballance of power, and was the compact of feudal Europe, pledging itself against the freedom of nationalities. By announcing, therefore, the doctrine of nationalities, by conceding the right of Germany to unification, by sustaining the independence of Italy, Napoleon III. asserted the cause of the first Empire, and protested against the feudal principle by the successful maintenance of which the first Empire fell.

There is one more act of the present dynasty, which it would be unjust to overlook, and which reflects upon it the fulness of that honor which is due to true political wisdom. I refer to the frank adoption of an enlightened commercial policy. And it is remarkable to note, that this was accomplished by a diplomacy which was completely wanting in those intricate arts of which diplomacy is supposed to consist. It was due mainly to Richard Cobden; a man so open, so honest, so upright in life, so devoid of all chicanery and subtlety, so pure alike in his means and ends, that when he died, his bitterest antagonists mourned the loss which England suffered; yet a man possessed of so luminous a mind, and so persuasive a tongue, that what the tortuous course of professional diplomacy either could not have done at all, or could only have done by slow and tedious steps, he did briefly and with ease. It is hard to over-estimate the benefit both to France and to England, and indeed to the world, which resulted from the Commercial Treaty which Cobden persuaded the Emperor to conclude. Beside stimulating the trade of the two nations, and especially that of France, the announcement of that treaty heightened the estimation in which the Emperor was held by France, diminished that dislike and distrust which had hitherto embarrassed his reign, surprised and pleased the civilized nations, and seemed to confirm the famous words of Bordeaux, that the Empire was, in truth, Peace. Nothing could be a stronger proof that Napoleon III. had committed his fortunes to the tide of public opinion—that he stood ready to yield to the demands of his generation. From the date of that Treaty, France seems to have fully entered upon a new career, less brilliant, perhaps, than she had anticipated, but far more wholesome, far more productive of happiness and content.

Thomas H. Selby & Co.

IMPORTERS OF METALS,

As follows: Bar Iron, Cast Steel, Boiler Plate, Axles and Springs Tin Plate, Sheet Iron, Iron Pipe, Zinc, Water Cocks, Plumbers' Tools, Iron Wire, Rubber Hose, Tinman's Tools and Machines Blacksmith's do., Cumberland Coal, etc., etc.

SAN FRANCISCO,

Importers, Manufacturers, and Wholesale and Retail Dealers in Metalic and Wooden Burial Caskets, Cases and Coffins, Coffin Trimmings, Hearse Plumes, Plume Sockets, etc., etc.

Sole Agents for Barstow's Patent Improved Metalic Burial Caskets and Cases.

Heuston, Hastings & Company,

ARE THE

FASHIONABLE CLOTHIERS

OF

SAN FRANCISCO.

SPECIALITIES.

PRICE AND GUARANTEE.

The largest and most varied stock of Gentlemen's Clothing, Furnishing Goods, Trunks, Bags and Valises, on the Pacific Coast. Every article sold, being of our own manufacture, is guaranteed. Having contracts direct with European and American Manufacturers of piece goods, we thereby effect a saving of fully 50 per cent. in wholesale dealers' profits, and are thus able to offer superior Goods at less than second-rate prices.

STYLES.

Having agents in London and Paris, we introduce the new styles in San Francisco simultaneously with their appearance in New York.

GOODS MADE TO ORDER.

For the accommodation of such as may desire, we have secured the services of a celebrated European cutter, and are prepared to make up piece goods in a style superior to any other house on the coast. Shirts, Ties, Collars, etc., made to order at short notice.

COUNTRY ORDERS.

Goods forwarded by Express to any part of the Pacific Coast on receipt of orders and measures; send for directions for measurement.

Heuston, Hastings & Co.

LICK HOUSE BLOCK,

SAN FRANCISCO.

United States Life Insurance Comp'y,

IN THE CITY OF NEW YORK.

Office, No. 40 Wall Street.

CASH ASSETS EXCEED $2,700,000.

This Company, having a Stock Capital, makes Insurances and Endowments with or without profits. Dividends to Policies with profits are equal to, or larger than those of other, or "Purely Mutual" Companies in available present cash value.

NEW AND IMPORTANT PLANS OF LIFE INSURANCE HAVE BEEN ADOPTED BY THIS COMPANY. SEE THE NEW PROSPECTUS.

Life Assurances, Endowments and Annuities in every form Profits available after Policies have run one year, and annually thereafter. The reserved Cash fund, for re-insurance, is the largest known to or required by, the ablest and most experienced authorities in Life Insurance, thus affording undoubted security. A liberal non-forfeiture system, as to whole Life or Endowment Policies.

Policy Holders in this Company can use or apply the Dividends of profits in a greater number of ways than is afforded to Policy Holders by any other Company.

The law under which the company is Chartered, provides that if the Capital should, from any cause, become impaired to the extent of Twenty-five Thousand Dollars, or more, the Stockholders SHALL BE CALLED UPON TO MAKE GOOD SUCH DEFICIENCY. This is the only Cash Company in America which affords this safeguard to Policy-holders.

The assured in this Company are not personally liable as in Mutual Companies, which have the power of assessing their members or of reducing the sums insured, in case of deficiency.

CLERGYMEN, insuring in this Company, are allowed a DISCOUNT of TWENTY PER CENT. on first year's premium, and a libera commission will be given on all Insurances influenced by them.

Agents wanted, on the most advantageous terms.

Forms and every information will be furnished by

B. J. DORSEY,

General Agent for the Pacific Coast,

Southeast Corner Sansome and California Sts., San Francisco.

Family Reading.

Good Night.

Good-night! a word so often said,
The heedless mind forgets its meaning;
'Tis only when some heart lies dead,
On which our own was leaning,
We hear in maddening music roll
That last "good-night" along the soul.

Good-night! in tones that never die
It peals along the quickening ear,
And tender gales of memory
Forever waft it near,
When stilled the voice—oh, crush of pain—
That ne'er shall breathe "good-night" again.

Good-night! It mocks us from the grave,
It overleaps that strange world's bound,
From whence there flows no backward wave;
It calls out from the ground,
On every side, around, above,
Good-night, good-night to life and love.

Good-night! Oh, wherefore fades away
The light that lived in that dear word?
Why follows that Good-night no day,
Why are our souls so stirred?
Oh, rather say, dull brain, once more
Good-night! Thy time of toil is o'er.

Good night! now cometh gentle sleep,
And tears that fall like welcome rain,
Good-night! Oh, holy, blest and deep
The rest that follows pain;
How should we reach God's upper light,
If life's long day had no "Good-night?"

—*N. Y. Observer.*

An Instructive Anecdote.

FOR YOUNG MEN SEEKING EMPLOYMENT.

Most young people are very fond of displays in dress. Rings, breast-pins, and similar superfluities, are all in great demand among them. We have known a girl to spend a month's wages for a single article of this kind, and a young man to run into debt for a cane when he had scarcely clothing enough to appear respectable. The following story of a successful merchant will show to such how these things look to sensible people. Said he: "I was seventeen years old when I left the country store where I had 'tended' for three years, and came to Boston in search of a place. Anxious of course, to appear to the best advantage, I spent an unusual amount of time and solicitude upon my toilet, and when it was completed I surveyed my reflection in the glass with no little satisfaction, glancing lastly and approvingly upon a seal ring which embellished my little finger, and my cane, a very pretty affair which I purchased with direct reference to this occasion. My first day's experience was not encouraging. I travelled street after street, up one side and down the other, without success. I fancied toward the last, that the clerks all knew my business the moment I opened the door, and they winked ill-naturedly at my discomfiture as I passed out. But nature endowed me with a good degree of persistency, and the next day I started again. Toward noon I entered a store where an elderly gentleman was talking with a lady near by the door. I waited until the visitor had left, and then stated my errand. 'No, sir,' was the answer, given in a crisp and decided manner. Possibly I looked the discouragement I was beginning to feel, for he added in a kindlier tone, 'Are you good at taking a hint?' 'I don't know,' I answered, and my face flushed painfully. 'What I wish to say is this,' said he, looking me in the face and smiling at my embarrassment, 'if I were in want of a clerk, I would not engage a young man who came seeking employment with a flashy ring upon his finger, and swinging a cane.' For a moment mortified vanity struggled with common sense, but sense got the victory, and I replied, with rather a shaky voice, 'I'm very much obliged to you,' and then beat a hasty retreat. As soon as I got out of sight I slipped the ring into my pocket, and walking rapidly to the Worcester depot, I left the cane in charge of the baggage master 'until called for.' It is there now for aught I know. At any rate I never called for it. That afternoon I obtained a situation with the firm of which I am now a partner. How much my unfortunate finery had injured my prospects on the previous day, I shall never know; but I never think of the old gentleman and his plain dealing with me, without always feeling, as I told him at the time, 'very much obliged to him.'"—*Protestant Churchman.*

What it Cost Him.

"What is the value of this estate?" said a gentleman to another, with whom he was riding, as they passed a fine mansion surrounded by fair and fertile fields.

"I don't know what it is valued at; I know what it cost its late possessor."

"How much?"

"*His soul!*"

A solemn pause followed this brief answer, for the inquirer had not sought first the kingdom of God and His righteousness.

The person referred to was the son of a pious laboring man. Early in life he professed faith in Christ, and he soon obtained a subordinate position in a mercantile establishment in the city. He continued to maintain a reputable religious profession till he became a partner in the firm. Labor then increased. He gave less attention to religion, and more and more to his business, and the cares of the world choked the Word. Ere he became old, he was exceedingly rich in money, but so poor and miserly in soul, that none who knew him would have suspected that he had ever borne the sacred name of Him who said, "It is more blessed to give than to receive."

At length he purchased the large landed estate referred to, built a costly mansion, sickened and died. Just before he died, he remarked, "My prosperity has been my ruin."

O, what a price for which to barter away immortal joy and everlasting life; yet how many do it "When I have finished this house," said one man, then I will seek the Lord." "Years afterwards," said the narrator, "I passed that way; the house was not finished, but *the man was dead!*"

"What shall it profit a man, if he shall gain the whole world, and lose his own soul? Or what shall a man give in exchange for his soul?"—Mark viii. 36–37.—*Pittsburg Banner.*

Staying from Church to Read.

Some stay away from Church to read. They say they can find better religious thinking and teaching in their books than in any of the pulpits near them. Suppose they can. Do they get better teaching? Are they really at home for religious culture? Are they actually growing better, more godly, by this reading which keeps them from church? Let them be honest with themselves, and see if this is not a flimsy excuse for spending their Sabbaths, not in mere religious reading, but over all sorts of books. Even if they give their Sabbaths up wholly to religious reading, they have greatly mistaken the aim of public Sabbath services, if they think it can be thus met at home.

God expressly commands us to "reverence his sanctuary, to lift up our hands in his sanctuary," and promises to come unto us and bless us there. We should go to church to worship; to worship publicly and unitedly, as well as to receive instruction from the preacher. Would an Israelite have been blameless who never went to the temple to worship, because he had a roll of the law at home? But the church service is, in a sense, our temple worship. No other appliance of religious culture can take its place. Abolish all church services, and you abolish Christianity. He who stays regularly away from church is doing what little he can to introduce heathenism. He is contributing his influence towards secularizing his community. If his way was universal, irreligion would be dominant, and the nation would slowly sink back into atheistic barbarism.—*Parish Visitor.*

Private Prayer.

In the morning the mind is calmed; the temptations of the day have not beset you; the duties of the day have not filled your mind and begun to vex you. Before you go to the duties of the day, to its cares and anxieties and temptations, begin the day with prayer. Temptations you certainly will meet; trials of virtue and patience will overtake you; and many times before night you will need the aid of your Father to shield you. Go to Him, and ask His counsel to guide you, His power to uphold you, His presence to cheer you, His Spirit to sanctify you. Then will you have done what is equivalent to half the duties of the day, when you have thus engaged His care and assistance. And when the evening comes, when you have done with the duties of the day, the body is wearied, and the mind is jaded, when the world is shut out by the shades of night, when you come to look back and review the day, when you see how many deficiencies have marked it, how many imperfections still cluster around you, how many sins stare you in the face, how little you have done for yourself or for others, or for God, the day past, *then* is the hour of prayer. It will be sweet to feel that you have One to whom you can go and who will hear you; One who will forgive you if you are penitent, and ask in the name of Jesus Christ; One who will accept your sacrifice, and give you strength for the morrow, and gird you with His righteousness. This hour, if rightly improved, will be like the cheering countenance of a most beloved friend. Take care that nothing comes between you and these hours devoted to God.—*Dr. Todd.*

The Worst of It.

"Do you want to buy any berries to-day?" said a poor little boy to me one afternoon.

I looked at the little fellow, and saw that he was poorly dressed. In his hand he held a large basket full of ripe raspberries.

I told him I should like some; and taking the basket from him, stepped into the house. He did not follow me.

"Why don't you come in and see if I measure your berries rightly?" said I, "how do you know but I may cheat you, and take more than I agreed for?"

The boy looked up at me and smiled. "I am not afraid," said he, "for you would *get the worst of it*, ma'am."

"Get the worst of it!" I said. "What do you mean?"

"Why, ma'am, I should only lose my berries, but you would be stealing. Don't you think that would be the worst for you?"

Let us think of this when we are tempted in any way to cheat another. How often do we hear persons pity any one who has had his property stolen from him. Yet, though a man lose all, and keeps honest, he is rich indeed compared with the man who has robbed him.—*Winning Words.*

Not a Minute to Spare.

We are, many of us, too busy; our time is too absorbingly occupied. Many a good deed for the Lord goes undone because we have no time to do it. A dear child who had been deeply afflicted, very sick, when she took her first walk out saw her teacher coming. She expected to receive a kindly greeting, but the teacher was too busy. She feared she should be detained, and so, with but a single glance, and a simple good-morning, she hastily passed on, and the child walked away disconsolate. That teacher had forgotten what the Lord had said about offending one of those little ones; she should not have allowed her work to so crowd her that could not have a "minute to spare" when the Lord asked for it.—*American Presbyterian.*

The Silver Cup Destroyed and Restored.

In Dr. Brown's work on the Resurrection, there is a beautiful parable from Halley.

The story is of a servant, who receiving a silver cup from his master, suffers it to fall into a cup of *aqua fortis*, and seeing it disappear, contends in argument with a fellow servant that its recovery is impossible, till the master comes on the scene and infuses salt-water, which precipitates the silver from the solution, and then, by melting and hammering the metal, he restores it to its original shape.

With this incident, a skeptic—one of whose stumbling-blocks was the resurrection—was so struck that

he ultimately renounced his opposition to the Gospel, and became a partaker of the Christian hope of immortality.—*Congregationalist.*

Young Folks.

Little Brown Hands.

They drive home the cows from the pasture,
Up through the long shady lane,
Where the quail whistles loud in the wheat-fields,
That are yellow with ripening grain.
They find, in the thick waving grasses,
Where the scarlet-lipped strawberry grows.
They gather the earliest snowdrops
And the first crimson buds of the rose.

They toss the new hay in the meadow;
They gather the elder-bloom white;
They find where the dusky grapes purple
In the soft-tinted October light.
They know where the apples hang ripest,
And are sweeter than Italy's wines;
They know where the fruit hangs the thickest
On the long, thorny blackberry vines.

They gather the delicate sea-weeds,
And build tiny castles of sand;
They pick up the beautiful sea shells—
Fairy barks that have drifted to land.
They wave from the tall, rocking tree-tops
Where the oriole's hammock-nest swings,
And at night-time are folded in slumber
By a song that a fond mother sings.

Those who toil bravely are strongest;
The humble and poor become great;
And from these brown-handed children
Shall grow mighty rulers of state.
The pen of the author and statesman,—
The noble and wise of the land.—
The sword and the chisel and palette,
Shall be held in the little brown hand.

—*Our Young Folks.*

The White Apron.

A STORY FOR LITTLE GIRLS.

Celia's mother had gone away for a few days, and the house was very dull. Something was wanting in every room—a touch in the parlors to make them look bright, a reader for the books and papers in the sitting-room. The work-basket was in dreary order. In her own room, the stillness was worse. Celia could hardly see her mother's half-worn wrapper in the wardrobe without crying.

While the child was trying to read an old story-book, a little thought flashed into her mind, a plan of her own for the absent mother. A great whispering followed with the nurse, and many charges "not to tell," in a louder voice.

Wrapped in her warm suit, little Celia went forth to get the materials needed for her purpose. Before leaving the house, however, she went to her secret hoard of small paper bills and five cent coins. A large part of this money, folded in her purse, was confided to the hand of the nurse.

They went to a shop, where an opening was found at one of the busy counters. Celia putting on a wise air, called for striped muslins and nainsook in her lisping voice. The choice was made after much consultation, and the parcel sent home.

The dusk coming too soon, compelled Celia to wait for the daylight before the apron could be planned and cut out. Then she seated herself to sew the the long, hard seams, for long and difficult they were to Celia's little fingers. The new thimble helped her less than pulling the needle through with her thumb and finger.

What crooked little stitches Celia made in the new muslin! Sometimesthe rows came close together, then a long thread to fill a gap, and a knot, and a few tears, and a broken needle, with no place to throw it away safely, and a thread spoiled! Such was the history of the hem.

Celia kept on courageously, finding the gathers an easier process, where the stitches did not *show.* The band was finished by the help of the nurse; but these stages occupied as many days. The making of that apron was a work, a real achievement in Celia's life. The long strings were hemmed at last, a little black row of stitches coming near the end of a thread. Sometimes she tried *running;* then she fell back on the old, hard way.

Yet she did not falter; the great motive-power was the love she bore her absent mother. The white apron was an offering of love, from its purchase off the great roll by Celia's money, to the last pulling out of basting threads. Every stitch was set by love.

The mother came home, and the house changed at once. Now it was warm and light and pleasant, as if the sun had come out after days of mists and clouds. In this happy time, the white apron was slipped into the mother's hand, and what joy it gave. How lovingly the mother looked at the crooked stitches and the ill-made apron; how she passed over the soiled places in the zig-zag thread and the clumsy band; how she kissed her child, who had spent the hours of her absence in doing this work for pure love! It was not a duty-present; the child had given up her own will for the sake of pleasing her mother. She had done what was tiresome and disagreeable as a freewill offering from the heart.

So our Father likes to be loved and worked for while we are absent from him. Thus he overlooks all the imperfections of our work, the place where our fingers tired, our awkward attempts. He will accept all our efforts made from love, although, like little Celia's white apron, they may be full of knots, broken threads, uneven stitches, made with tears, yet made for *Him.*—*Child at Home.*

Winter's Stores.

A mouse was once caught in a jeweler's shop, which had a gold ring on its neck. The poor creature had evidently suffered from its finery, for the neck was much swollen on each side of it. The gentleman recognized the ring as one of a pair that had disappeared mysteriously some time before. A servant had been suspected of the theft, but very unjustly, as it now appeared. Probably the mother mouse, when out foraging, had taken the ring to her nest. A meddlesome young baby of hers had poked his head through it, and then had been unable to get it out again. The ring did not grow with his growth, and so proved a literal "choker" of a most uncomfortable sort. What Mrs. Mouse did with her other ring was never discovered. Some search was made for her nest, but without success.

Pet crows have a great fancy for shining things, but it is something unusual for mice to make off with such objects. The little creatures have a peculiar habit of hiding away their supplies, in some convenient nook, intending to call for them when they get ready. Some corn was laid about the stove one night to dry, and the next morning when the fire was made, all the holes on the covers of the stove began to smoke. On examination, they were found to be filled with corn, which had been left there for safe-keeping till they could be carried off to the nest. A lady's shoe also had a good many grains in it, much to its owner's surprise. The experiment was tried on several evenings, and the shoe was always found to contain the most corn, as it was probably thought the best hiding place.

But, alas! "the best laid schemes of mice and men" are often all in vain. A good old mouser left in the kitchen over night put a stop to all such thieving tricks. It is the best mouse-trap ever invented, and destroys more of these small thieves than we ever suspect. If all the cats were killed off in any town, it would soon become a very undesirable place to live in.—*Presbyterian,*

Anecdotes of Webster's Boyhood.

When Daniel Webster was a little fellow at school, the master one Saturday held up a new jack-knife, and told the scholars that the boy who would commit to memory the greatest number of verses from the Bible, and recite them on Monday morning, should have that knife. Many of the boys did well, but when it came Daniel's turn he recited sixty or seventy verses, and said that he had several chapters more. The matter gave it up. Daniel got the knife.

When about seven years of age his father kept a "Yankee tavern," and young Daniel used to entertain the guests by reading to them some of the psalms of David. Even the rough teamsters, when they pulled up their horses before the house, would say, "Come, let's go in and hear a psalm from Dan Webster!" His voice at that time was deep, rich, and musical. But as a school-boy he was no elocutionist, or rather his sensitiveness was such that he could not practice. His first effort at fourteen was a failure, for the moment he began he was embarrassed, and burst into tears. He tried it many times, preparing himself carefully, but when his name was called, and he saw all eyes turned upon him, he could not rise. So much for this great orator. Let not timid boys be discouraged.

When he entered school he was behind the other boys in his class; all was new and strange, and he was much depressed. "New boys" often feel the same difficulties. But his teacher encouraged him gently, urged him to think of nothing but his books, and soon all would come out right. Before long he was promoted, and at the close of the second quarter he was thus addressed: "Get your cap and books!" He did this with some surprise, and the tutor continued, "Now report yourself to the teacher of the *first class,* and you, young gentlemen, will take an affectionate leave of your classmate, for you will never see him again."—*S. S. Advocate.*

The Golden Key.

It was one stormy December day, and Lucy's aunt was seated by the table at work. Lucy was perched in her favorite seat by the window, watching the soft, white snow flakes as they fluttered gracefully to the ground, covering with their fleecy mantle every rough unsightly thing, and making the broad earth a scene of purity and beauty. She was so very quiet that her aunt at length looked up anxiously, and said, "What are you thinking of, my darling?" The thoughtful looked passed from her bright face, and the sunny smile came back again as she threw herself in her aunt's arms and exclaimed, "I was thinking, aunty, that I have found a *golden key* that unlocks everybody's heart to me. Can you guess what it is, aunty?"

Her aunt smiled and shook her head.

"It is only one little word—'Please.' If I say, 'Please give me a piece of bread and butter, Nora,' she says, 'Yes, miss!" and takes her hands out of the suds and goes and gets it at once. John says she is cross. But she is never cross to me. I think one reason is because I try not to vex her.

"Sometimes John tells her to get his slippers that very minute, no matter what she is doing, and she answers back in loud and angry words, and John says she is the crossest person he ever saw. Don't you think, aunty, if John used the golden key she would be kind and pleasant to him, too?"

"Yes, my love; and if they would both remember that 'a soft answer turneth away wrath,' and act accordingly, I think there would very soon cease to be harsh words between them. There are few persons so thoroughly bad that they cannot be won by kindness. Even dumb animals are not insensible to its influence. If you should beat Fide, or speak sharply to him, do you think he would show the same affection for you that he now does? If my little girl will always keep in her possession the precious *golden key* which she has been so fortunate as to find thus early, she will never want friends, and, in trying to make those around her happy, will ensure a neverfailing source of happines, herself."

Dear little readers, do you not each desire to secure this beautiful golden key which Lucy so prized, and whose magic influence made her happy and beloved?—*Children's Friend.*

News Summary.

PACIFIC COAST ITEMS.

A correspondent of the *Olympia Transcript* gives some very interesting particulars concerning the Simcoe Indian Reservation and Industrial School. The reservation contains 10,000 square miles, much of which is the best quality of farming land. There are 3,400 Indians on this tract, composed of different tribes but all speaking the same dialect. These Indians are generally industrious and sober. Simcoe being about 70 miles from any line of travel leading to the white settlements, the evils usually caused by intoxicating liquors are effectually prevented. The settlement is under the charge of Rev. J. H. Wilbur, who has labored long and successfully for these Natives, and is convinced of the practicability of converting the Indian to Christanity, and inducing him to adopt the habits of civilized life. The school is prosperous and numerously attended. Besides the elementary branches, the boys are instructed in Agriculture and the mechanical arts, and the girls in housework and sewing. 1500 acres are cultivated by the Indians, and last year 10,000 bushels of wheat, 2,000 of corn, 1,500 of peas, with other crops exceeding the consumption, were raised. This year 25,000 bushels of wheat will be produced. They have 1,500 head of cattle and 11,000 horses. They have two (native) Methodist Churches and 200 members.

The announcement of the withdrawal of the opposition line of steamers to New York is not very joyfully received by Californians, especially by that large class who have been making arrangements for a visit to the East. The sudden rise in the price of tickets to the old exorbitant rates will undoubtedly cause an indefinite postponement of many of these visits, from which so much pleasure was anticipated, and will have the more serious effect of checking the tide of immigration to our shores. It is not strange that the steamship companies are unwilling to continue the practice of carrying passengers at a rate less than the actual cost, but it is to be regretted that permanent and reasonable rates of passage cannot be established. It is not, however, worth while to find fault. The completion of the railroad will bring prices to their proper level. If one road will not do it, we must have two or more.

Fish Culture.—Brigham Young talks sensibly in his public council to young men. He tells them to marry at once, and make a home, be it ever so homely. Amongst other details, he says to those who have flowing water, "make for yourselves a pond and stock it with fish; you will have food that costs you nothing to raise, that neither rust nor crickets, nor caterpillars will destroy." Let every man in California who can command water, follow this sage advice. The fish crop that might be raised from the artesian wells now flowing would, without being a tax for tillage, supply a grateful abundance of food as healthy and nourishing as any animal meat. We are happy to note that artificial fish culture has been started on a good scale among the lagoons and small ponds in the Sierras, and in the sheets of water about the city. There is no cultivation that brings richer returns, with almost no labor and no risks of failure.—*Alta.*

By no means the least of the advantages gained by the establishment of the Labor Exchange is the prospective breaking up, at an early day, of the system of fraud by which sailors shipped in this port have been robbed of a large portion of their earnings, and masters of vessels wishing to obtain crews have been completely at the mercy of a set of rascally boarding-house keepers. The Labor Exchange has already supplied several vessels with crews, and as yet no serious trouble has occurred. Whether trouble shall occur or not, the Exchange should be sustained in this undertaking.

Yuba Hops.—One of the pioneer hop growers of California is J. D. Blanchar, who, though at present a merchant of Napa, has a large and fine ranch a few miles north of this city, upon which is raised an annual crop of hops. In 1867 Mr. B's field produced eight tons, and this year he has picked and packed for market twelve tons. Hops command a high price and pay more profit to the acre than any other crop produced by farmers. This being true it is surprising that no more of our agriculturists engage in the enterprise. —*Marsyville Appeal.*

The *Territorial Enterprise* says: We notice that the Union Pacific Railroad Company have 'struck ile' at a place called Carmichael's Camp. They struck it in a quarry of sandstone, which they were working to obtain stone for a culvert, or some similar work. A large pile of this stone is said to have ignited by spontaneous combustion, and burned for several days.

The quantity of salmon taken in the Sacramento River this year has been greater than for 14 years past.

A larger quantity of wheat is stored in the warehouses of our principal towns, than ever before.

Large quantities of furs have hitherto been taken from Alaska to Europe and thence imported to this country. This somewhat roundabout path of commerce has been materially shortened by recent events and the direct importation of furs from Alaska to this city has commenced. A quantity of valuable sable and mink furs was received here last week.

Oregon Items.—Oxen are scarce at $100 per yoke.

Five thousand head of sheep left Albany, Oregon, recently for Silver City, Idaho.

An Oregon cast iron stove, made at one of the Portland foundries, from Oswego iron, was on exhibition at the Fair.

The blowers which are so successfully employed for the purpose of introducing pure air into deep mines are, according to the *Herald*, manufactured exclusively in Stockton.

The work on the telegraph between Marysville and Colusa is progressing rapidly. It is thought that the line from Oregon to Yuba City will be completed in a few weeks.

The orange crop in Los Angeles is not promising. The fruit is covered with a black mold, attributed to animalculæ.

Fine chestnuts are said to be raised in a garden at Los Angeles.

TELEGRAPHIC.

Eastern.—Cornell University was dedicated on the 7th. 300 students were present....A National Convention of French Canadians was held in Springfield, Mass., on the 7th. ....The library of Fitz Greene Halleck was sold at auction on the 11th....There is to be no October session of Congress....A fire in Newark, N. J., destroyed $160,000 worth of property on the 10th....In the Protestant Episcopal Union, in session in New York, a memorial against ritualism has been presented. It was referred to the Committee on Canons ...A Commercial Convention is in session at Norfolk, Va. 2,500 delegates are present.

Political.—A State Convention of colored men was held at Utica, N. Y., on the 7th. Resolutions were adopted indorsing the Republican ticket. The subject of colored women's rights was considered. The country is anxiously awaiting the decision on the subject....A Republican procession was attacked by a mob in Pittsburg, Pa., on the 7th, and a serious fight ensued....Full returns from the Connecticut elections show that 86 towns are Republican, 69 Democratic, and 7 divided....The President thinks Grant will be elected....Prominent Democrats in New York have signed a call for a mass meeting in favor of Gen. Grant.

Personal.—The *Times* and *Tribune* say that Judge Chase has come out for Grant....The Republicans of the 7th Mass. District have renominated Boutwell for Congress.... Gen. Sherman wants more troops. Unless they are sent at once, he anticipates serious trouble with the Indians....Santa Anna has been ordered to leave Cuba....Howell Cobb, of Georgia, died suddenly in New York on the 9th....Horace Greeley has been nominated for Congress....Gen. Fremont is speaking in the West for Grant and Colfax.

The Election.—Elections held on the 13th in Pennsylvania, Ohio, Indiana and Nebraska were carried by the Republicans. The precise figures are not received, yet the latest dispatches put the majorities as follows: Pennsylvania, 13,000; Ohio, 25,000; Indiana, 3,000; Nebraska, 2,000.... Republicans all over the country are rejoicing....The Eastern papers of both parties admit that the result of the elections of the 13th, makes Grant's election sure.

Foreign.—The Emperor of China has opened the port of Chefo to foreign trade....The corner-stone of the new University of Glasgow was laid on the 8th, by the Prince of Wales....Vesuvius is threatening another eruption....The Italian Government has formally recognized the Juarez Government in Mexico....The Chinese Embassy is now in England making negotiations with the Government.... Fears of a European war have abated....Rich gold mines have been discovered in Guadalajara.

Spain.—Serrano and Prim are Honorary Presidents of the Provincial-Junta....The Junta proposes to free the children of Blacks in Spanish Colonies....The Junta has reduced the tariff on imports by one-third....It is thought that slavery will be abolished after 10 years....Civil and religious liberty has been proclaimed, with other radical reforms ....The leaders of the Junta prefer a monarchial form of Government....Permission has been given to build a Protestant chruch in Madrid....Minister Hale has formerly recognized the new Government.

SPECIAL NOTICE.

No better assortment of clothing and gentlemen's furnishing goods can be found in this city than that kept by Heuston, Hastings & Co., Lick House Block. Those who wish fashionable clothing, well made, a good fit, at reasonable prices, will certainly patronize this firm when they have learned by trial, the advantages which it offers.

Simple announcements of Marriages or Deaths inserted free of charge. Additional matter, such as Obituary Notices, or Poetry, inserted at the rate of ten cents per line.

MARRIED.

In this city, Oct. 7, by Rev. Dr. Eells, Geo. A. Conrad, of Calaveras, to Mary P. Batchelder, of this city.

In Visalia, Oct. 1, by Rev. J. L. Hopkins, Mr. Arthur Shearer to Mrs. Harriet R. Clapp.

In this city, Oct. 7, by Rev. J. H. McMonagle, William Otis Angus to Nellie T. Abbott.

In this city, Oct. 8th, by Rev. J. H. McMonagle, Daniel W. Ward to Madeline M. Perry, all of this city.

In Alameda, Oct. 7, by Rev. F. L. Nash, Frank Silva, of San Francisco, to Maria C. Marvin, of Alameda.

DIED.

In Brooklyn, N. Y., Oct. 10, Mrs. Maria Tuttle' wife of Hon. C. A. Tuttle, of Oakland.

APPLETON'S EDITION

OF THE

Waverley Novels,

NOW PUBLISHING,

From New Stereotype Plates, uniform with the new edition Dickens, containing all the Notes of the Author, and printed from the latest edition of the Authorized Text.

TO BE COMPLETED IN TWENTY-FIVE VOLUMES.

PRICE 25 CENTS EACH.

Printed on fine white paper, clear type, and convenient in size.

PRONOUNCED A "MIRACLE OF CHEAPNESS."

ORDER OF ISSUE.

1. Waverley.
2. Ivanhoe.
3. Kenilworth.
4. Guy Mannering.
5. Antiquary.
6. Rob Roy.
7. Old Mortality.
8. The Black Dwarf, and A Legend of Montrose.
9. Bride of Lammermoor.
10. Heart of Midlothian.
11. The Monastery.
12. The Abbot.
13. The Pirate.
14. Fortunes of Nigel.
15. Peveril of the Peak.
16. Quentin Durward.
17. St. Ronan's Well.
18. Redgauntlet.
19. The Betrothed, and Highland Widow.
20. The Talisman.
21. Woodstock.
22. Fair Maid of Perth.
23. Anne of Gierstein.
24. Count Robert of Paris.
25. The Surgeon's Daughter.

On receipt of SIX DOLLARS we will send the entire set of Waverley Novels, as published, and a copy of a new

STEEL-PLATE PORTRAIT OF SIR WALTER SCOTT,

from a painting by Sir Thomas Lawrence, suitable for framing; the Books and Engraving to be sent free of postage to any part of the United States.

Either of the above sent to any address on receipt of the price, 25 cents per volume.

On receipt of TEN DOLLARS a complete set of Dickens, in uniform style, 17 volumes, and Waverley, 25 volumes, will be sent postpaid. The cheapest Ten Dollars' worth to be found in the whole range of Literature. Forty-two volumes for $10.

Extraordinary Opportunity for the Million to Purchase a Set of Sir Walter Scott's World-renowned Waverley Novels.

CLUB RATES.

One Complete Set, 25 vols., $6 00 | Five Sets, $26 00.
Three Compete Sets, 25 vols, 16 00 | Ten Sets, $50 00.

Mailed at our expense.

Any person obtaining Four Subscribers for the Waverley Novels and remitting us $24, will be entitled to a set of Dickens, 17 vols., GRATIS. All mailed at our expense.

Any person obtaining eight subscribers, and remitting $48 00, will receive a copy of the "Waverley Gallery," containing 25 Steel Engravings of the Female Characters in the Waverley Novels, bound in elegant morocco, price $15 00.

Canvassers wanted in every town in the United States. A great opportunity is afforded to industrious men and women to make money, as every man, woman, and child will purchase the WAVERLEY NOVELS, at this low price.

For Special Rates, apply to the Publishers,

CURRENT TOPICS.

Description fails to convey a just idea of those things which powerfully affect us. They must be experienced, or they cannot be understood. Earthquakes have been described, and by the aid of fancy one may think he has knowledge beforehand of what the sensation must be, when the foundations are being shaken beneath his feet. But when he has actually felt the heaving of the solid ground, and seen the rocking of whatever man has created, and stood speechless and hopeless not knowing what will come next, he learns that language cannot represent either the feeling, or the scene. We had a vivid conviction of this, when passing through the dread experience of last Wednesday. There are many of those who have come recently to this coast, to whom it was new, and the late fearful commotions in the Sandwich Islands and in South America increased the fear of these persons, as well they might. Yet, even old residents were alarmed at the violence of the shocks, and especially at the unusual continuance of the tremulous motion, during a large part of the day. We never become accustomed to such manifestations of God's power, so that we feel no fear. We never feel how small is man, as we do when he and his works are tossed on the surface of the earth like bubbles on the ocean. Strange that the conviction of our impotence so rarely leads us to penitence for our sins, and to implore the favor of Him who thus demonstrates that He can crush us as the moth! Let not this new experience fail of an effect so salutary, while all unite in thanksgiving for escape from calamities that might so easily have overwhelmed us.

The successful use of refrigerator cars for the transportation of fruit will have an important bearing on the prosperity of California. There was doubt whether motion would not disturb the materials employed in the construction of these cars, so that in passing over long distances they would fail to preserve their contents, but further trial removes all such doubt. Fruit has been carried from Chicago to New England without any change, and those who have carefully examined the matter are convinced that it might be in motion for days or weeks, through all varieties of climate, without any other loss than that resulting from the ordinary wear and tear of transportation. Our most delicate grapes can be taken to New York, as soon as the railroad is completed. Our fruit of all kinds, most of it superior to any that can be raised at the East, can be sold in that market at any season of the year. We need not fear that too many of our farmers will give attention to fruit raising, if we can have the world for a market, as this invention seems to promise.

One of the most remarkable facts concerning the climate and soil of the Pacific Coast is that whereas until within a very few years no one believed any valuable products could be raised here except stock and wool, experiments are proving that almost everything can be produced here abundantly. A new demonstration of this is seen in the success of those who are giving attention to the raising of silkworms and the manufacture of silk. The lower counties of this State will soon compete with any part of the world in this department, if we may judge from the exhibitions at Fairs, and from the statements of the papers in that region. Three crops of eggs can be produced in a year, and the cocoons average 300 to the pound. When we have heard and read accounts of what we may expect to furnish to the world in the next twenty-five years, we have received them with some scepticism, we confess, but facts are fast dissipating our infidelity, and we may become as enthusiastic as are others, after a time. It should be the sincere prayer of all our people that a country of such amazing present and prospective resources may be useful to mankind in proportion to the contributions from its soil and industry.

The Synod of the Pacific, at its late session, passed a resolution approving of congregrational singing, so far as this is practicable, and recommending that at least our churches do not depend on choirs only for the praise of God in public worship. If the effect of this action shall be to induce the churches to cultivate singing, so that "all the people" shall be able to praise God, in this part of service, much will be gained. In the days of singing schools a kind of enthusiasm prevailed respecting music, and what was called congregational singing was not really congregational *noise*. But the experiments of later years are not always favorable to the entire abandonment of choirs, unless those who are expected to accompany the precentor shall be taught something of music. Until this is done, and the sooner the better, a compromise may be made, by having the choir lead the congregation in a part of the pieces, selecting those that may be supposed to be familiar to them, and perhaps once in each service sing some good tune that is not familiar but which by its occasional repetition may be learned. In this way, the music may be made comfortably good, and there may be a gradual approach towards congregational singing.

How it may be accomplished we are not prepared to intimate, but it does appear strange to lovers of decency and good order, that the authorities are unable to prevent the disgusting exhibition of prize-fighting. All admit the debasing influence of the brutal scenes which attract multitudes to witness them; all are obliged to feel the direct or indirect evils that attend them, almost all profess that they wish they might never be repeated, yet they thrust themselves upon us, and we are told they must be endured since they cannot be prevented. This can hardly be true. Let us have a thorough, resolute, persevering attempt to put an end to so wretched a vice.

It is said that more than $100,000 have been deposited in one bank in this city, having been wagered on the result of the Presidential election. Probably this is but a small part of the amount at stake in the same way in the State, and we have heard of men who have ventured all they have on the issue. It may be that betting has been more general and more reckless among Californians than in some other portions of the country, yet it has been so general in all portions as to give occasion for more than a mere passing homily on the evil of such gambling. We are informed that when the possibility of making a change in some of the nominations was considered, one of the chief difficulties was the fact that such a vast number of persons are interested to have no change because of the money at stake. The nation may not be placed in jeopardy at present by those who thus trifle with its welfare, but the time is rapidly coming when our elections will be controlled by money interests, and, what is worse, by those who care not what is the result provided they are winners. Good men ought not to wink at this growing vice, much less indulge in it. All proper means should be used to discountenance it, for it is as dangerous as it is wicked.

The sensitiveness manifested by all classes respecting the manner in which the State University shall be launched, is evidence that the people do not wish anything to prevent its success. There does not appear to be a disposition to dictate to the Regents what policy they should adopt, yet there is a healthful anxiety that they may discharge their trust so that the great interests involved may be promoted to the highest degree. The fact is well known that State Institutions for education have often been splendid failures, and the reasons are well known. The belief is general, however, that they may be magnificent monuments of wisdom, and successful in proportion to the endowment the State may be able to grant, and the good sense of the people will not err as to the means by which this may be accomplished. The pledge of such success will not be found alone in the money appropriated, nor in the well-digested arrangement of its departments, nor in the eminence of those who manage its affairs, but in the confidence of the people by which their continued patronage and favor may be rendered certain. If they become suspicious that the University is to be made a political machine, or that in any respect it is to be partizan in its character, but a

short time will elapse before its support will come only from those who are of the same party. If men are placed in its Faculty who, for any reason, do not attract to themselves the sympathy and good-will of all lovers of education, and cannot therefore summon the hearty assistance from these, without which a University will have no permanent life, their appointment must be regarded as a serious error. Hence the solicitude with which every motion of the Board is watched, and the nervous feeling with which everything is criticised which is supposed to indicate their policy. This is ominous of good, if the public expectation is not disappointed. It reveals a broad and reliable rock on which the Regents may rear a structure of which all will be proud, if they will so regard it. But it proves that it will be to the last degree unwise to ignore the sentiment which finds such general expression, and resolve to build for a party, or a few. We have no idea that the Regents have really elected Gen. McClellan as President of the University, as several of the daily papers assert, yet we can but regret the rumor that this is true as unfortunate. We know little about his literary and scientific qualifications for the position. Very likely these may be sufficient. But no man should have that place, at least in the beginning, who has been prominently identified with either of our political parties, and against whom a large portion of the people has been arrayed. The University cannot afford to encounter political prejudice at the threshold of its career. It will have a mighty work to do, if it attains success, with all influences to favor it.

Religious Intelligence.

PACIFIC COAST.

Notice.—An adjourned meeting of the Presbytery of California will be held in Calvary Presbyterian Church (Dr. Wadsworth's) on next Tuesday, October 27th, at 9 o'clock, A.M.

City Missionary Society.—The second quarterly meeting of this Society was held last Sunday at the Second Congregational Church on Taylor St. The meeting was in no respect less interesting than those which have previously been held. The object of the Society is one in which all our citizens are interested; consequently the house was well filled by those who wish to know what progress is being made in relieving the temporal and spiritual wants of the poor of our city. Addresses were made by C. C. Coffin, Esq., Rev. Dr. Stone, and Rev. E. C. Bissell. The Superintendent of City Missions reported the work of the society for the past quarter. By sickness he has been prevented from engaging as actively in the work as he has formerly done, still the report shows a large amount of work done, with gratifying results. The anecdotes related present in a sad light the hold that sin and poverty have gained upon our city as well as a brighter picture of the relief afforded through the labors of the City Missionary at an expense comparatively trifling. The following are some of the more important results of the work during the past quarter. No. of tracts distributed, 12,500; Bibles and Testaments, 96; No. of Sabbath Schools organized, 1, with 52 scholars and 8 teachers; children gathered into Sabbath School, 85; prayer-meetings sustained, 4; persons converted, 12; families visited, 567; persons relieved, 208; furnished with employment, 28; articles of clothing given away, 649.

Baptist.—The San Francisco Association of the Baptist Church met at San Jose on Saturday, the 10th inst. The public meetings were held in the Presbyterian church, the Baptist church not being large enough to accommodate the large number present. During the session a committee was appointed to confer with a similar committee of the Campbellite Church concerning a union with that branch of the Church. This action was not, however, according to the *Evangel*, indicative of any desire for union on the part of the regular Baptists, but was adopted out of courtesy. The Society favored a conference provided that it be distinctly understood that the conference should result in nothing tending toward union with any other denomination. A resolution was adopted commending the work of Elder Knapp on this coast. The proposition to alter the constitution so as to avoid the necessity of holding meetings of the Association over the Sabbath was defeated. Two new churches were reported at San Rafael and Paradise City. The churches at Placerville, Nicolaus, and San Juan were dropped from the list. The total membership of the Association is 2,000—a gain of 218 during the past year. Number of persons baptised during the year, 270.

Prayer-Meetings.—The prayer-meetings of the various denominations held on Wednesday evening are said to have been well attended—much better than usual. On that evening people seemed to understand the importance of prayer-meetings. There was no coldness, no backwardness; every one was willing to do his part. The occurrences of Wednesday morning were not calculated to foster feelings of pride and self-importance. Indeed, the feeling seemed quite prevalent that man, after all, is a very weak creature.

Congregational.—From the *Pacific* we take the following items: The Congregational church in Lincoln is made up from seven different denominations.

A church of 10 members has been organized in Saticoy, Santa Barbara County.

The Church at Lockeford will soon complete and dedicate their new building.

Revivals are reported in four Congregational churches during the past year.

Chinese Pupils.—The *Santa Clara Union* says that 26 Chinamen attended the class which met in the M. E. church last Sunday afternoon. The teachers report that the Chinamen are interested in their lessons and learn very rapidly.

Injured.—The Presbyterian church in San Jose and the Calvary Presbyterian Church in this city were much injured by the earthquake. The other churches in this city have escaped without damage.

M. E. South.—This Church in California has 2,813 members, 29 churches, and $56,000 worth of church property.

EASTERN.

What Can We Do?—The Synod of St. Paul in considering the duties of Presbyterians concerning the Boards and their necessities, adopted the following conclusions in response to the question, What can we do? The resolutions are published in the *Presbyterian* and also printed as a circular. We are obliged to omit the preamble:

1. Occupying as we do a most interesting and important missionary field; hearing so plainly our Leader's command to "Go forward," we cry for help to our brethren in the older and more wealthy portions of our Church. Brethren, help! Help our Home Boards! Help our Foreign Board! Help our Freedman's Committee! Our hearts are enlarged, and yearn for all men, that they may be saved through the gospel of Christ. We beseech our brethren, to whom God has lent wealth, to refund his treasury, for he has need of it. We cry earnestly for the large gifts of the wealthy, and for the widows' mites, to replenish the Lord's treasury.

2. We resolve to pray more and more earnestly that God will enable us, and all the members of our beloved Church, to know and do our duty in these great matters.

3. We will devote the first Sabbath in December next to the earnest and prayerful consideration of our own duty in this aggressive work of the Church. As ministers, we will prepare to instruct our people in regard to the workings of our Boards, their pressing wants at this time, and the duty of the Church to give to this work her sympathies, her prayers, her money, and her sons, and as ministers and elders we will labor with our people, individually, and from house to house, to bring them up to the full measure of their duty in this regard.

Done at Minneapolis, Minn., September 26th, 1868. Charles Thayer, Stated Clerk.

Startling Disclosures.—The Rev. George Bringhurst, who has spent some months, with success beyond his hopes, in efforts for reclaiming the fearfully fallen of Philadelphia, has informed our correspondent in that city of some of the most alarming facts which we have yet heard of, in connection with the inveigling of young females into a life of vice and ruin. It appears that in more than one instance the Sunday School has been made to subserve this fell purpose. The managers of schools, not often we trust, but sometimes, lack caution in the selection of teachers. In some cases, as in certain of the mission schools, there is peculiar liability to imposition; but who would have thought of such an atrocity as procuring the charge of a Sunday School class to use it for the stocking of a house of infamy? But such it appears has, in more than one instance, been the fact, and more than one poor victim has found her way to the haunts of profligacy. Worse even than this; in one instance a scholar, young, pretty, and, as a scholar, bright, was discovered in this nefarious agency, and it was found to be the purpose for which she entered the school. When and where are our children safe? The want of the first Napoleon, that the want of France was *mothers*, passed into a proverb. But deeper and more solemn is the truth that the want of the cause of purity is wise, educating, praying, and holy mothers.—*Evangelist.*

Temperance.—So long as the churches retained an active interest in the temperance reform, that reform took wider and deeper hold upon the community. When the churches lost their interest in the temperance movement, reform languished. Now that the churches are practically indifferent, intemperance is rampant among us. The remedy for this alarming state of things is a temperance revival in the Christian churches; as the result of which every pastor and every layman, according to the light which he has, and by the means which his judgment best approves, shall make his influence felt against this insidious and terrible scourge.—*Independent.*

The American Board free from Debt.—Many of our readers will be glad to hear the good news communicated by Rev. S. B. Treat, home secretary of the American Board. He says, in a note to *The Independent*: Many of our friends are inquiring anxiously in regard to the close of our financial year. I am happy to say that the treasurer will not be required to report any indebtedness to the next annual meeting. To those who have aided us so kindly and efficiently we tender our sincere thanks."

Call.—Professor Shedd, of New York City, is engaged to preach in the pulpit of the Central Presbyterian Church, Brooklyn, made vacant by Dr. Rockwell's acceptance of a call to Stapleton, Staten Island.—*Presbyterian.*

Action of Presbyteries on the Basis.—The Presbyteries of our own Church so far as their action has been reported, have adopted the Basis as submitted to them by the Assembly. So far as we have seen, no notice whatever has been taken of either of the Pittsburg or Cincinnati circulars, doubtless on the ground that they were considered as no part of the action of the Assemblies.

In the other branch of the Church the resolutions of the Presbyteries respecting the Basis have been various, as was natural from the several propositions submitted to them. But with the exception of two of the Presbyteries, West Lexington, Ky., and Hudson, N. Y., they are in favor of union on certain conditions—generally by the modification of the first or doctrinal article, striking out both the Smith and Gurley amendments, and adopting the standards, pure and simple. Of the thirty Presbyteries reported in Old School journals ten voted in favor of the Basis as submitted by the Assemblies, eighteen in favor with certain changes of the articles, and two opposed to union. In view of what has already transpired, *the Presbyter* regards the union as never so good as at present. "The Basis as it is, or with the amendment, will receive the approval of largely over three-fourths of the Presbyteries. The next Assembly, we have little doubt, will complete the union."—*Evangelist.*

Rev. J. E. Rockwell, of Brooklyn, has accepted a call to the First Presbyterian Church of Edgewater, Staten Island. This church has been lately formed by the union of the First Presbyterian church of Clifton, of which Rev. David Frazer, of Hudson, was the last pastor, and the Reformed (Dutch) church of Stapleton, the charge of which Rev. Thos. H. Skinner, jr., D. D., lately resigned to become the pastor of the church at Fort Wayne.—*Observer.*

Their True Purpose.—The *Church News* has been indiscreet enough to make public the purpose of the Ritualistic party of the Church of England in regard to the Thirty-nine Articles, thus: "It will soon become the duty of Churchmen to labor actively for the formal abolition of the Articles, which have long ago done their work, and are really of extremely little use now, *discrediting* us (as they do) *in the eyes of foreign Catholics.*"

Memorial Church.—The corner-stone of a new memorial Presbyterian church was laid at Troy, N. Y., last week. It is located near the iron works in the southern part of the city. The cost, which will exeeed $50,000, is to be met by Mr. Burden, proprietor of the iron works, who erects the structure as a memorial to his wife, who was a devout Presbyterian lady.—*Congregationalist.*

In Raleigh, N. C., steps have been taken for the organization of a church in connection with the Old School General Assembly. The first meeting was held at the Hall of the House of Representatives, and a subscription of $500 was taken up at the time for the erection of a building.—*Observer.*

"A Benefit."—A correspondent of the *Texas Christian Advocate* states that a church, desiring to build a house of worship, prevailed on a circus, which was exhibiting in the town, to give the church a benefit—which was duly advertised in the morning papers, with the appeal, "Come up to the help of the Lord against the mighty!"

Dr. House, formerly of Newark, N. J., but for the last ten years missionary to Bangkok, Siam, was recently attacked by an elephant, and nearly killed. He was on his way to a new station, in order to render medical aid to other missionaries who had preceeded him. His life was saved by a native.—*Independent.*

FOREIGN.

Moravian Mission.—We are pained to learn from *The Moravian* that there is danger that the Moravian mission at Copperamana, among the degraded natives in the far interior of Australia, stands in some danger of discontinuance. After waiting for nearly a year and a half to proceed on their journey—the incessant drought having dried up all the streams and pasturage—the missionaries set out: and after a toilsome journey of nearly four months, arrived at their present halting place, 700 miles north of Adelaide. Compelled to flee for their lives by the threats of the cannibal natives, they again returned, and resumed their work under the protection of the frontier police soldiery. The latest news from the brethren is that the Missionary Association at Melbourne—composed, we believe, for the most part of Presbyterians and Congregational Christians, and at whose instance this mission was commenced—has expressed fears that its funds will no longer permit the continuance of the mission. To he disgrace of Christianity, the difficulty seems to be this: A Lutheran minister, who has become a member of the committee of that association, has induced it to withdraw its support, on the pitiful ground that the German Lutheran (Hermansburg) missionaries will be unable, on account of doctrinal differences, to partake of the communion with the Moravian missionaries, etc.; which fact will have a bad influence upon converts that may be made. The *Moravian* well says: "If these missionaries propose, as the prime object of their efforts in the vast wilderness of Central Australia, to convert the besotted heathen Papuana, into strict confessional Lutherans, and to drive out missionaries who occupied the ground before them, then all we have to say is, that they have yet a good deal to learn of the true spirit of Christianity and the great aim of Christian missions, and they will not succeed.—*Independent.*

Hawaiian Churches.—Instead of *heiaus*, or heathen temples, the island of Hawaii is now belted with a girdle of Christian churches. The beautiful clasp of the girdle is located in the bay of Hilo, and the gem of the clasp is the new foreign church. We do not know the exact number of Christian churches on Hawaii, but the number, including Protestant and Catholic, cannot be less than fifty. As the voyager sails along the shore, these churches appear at every few miles, nestling among the groves of ohia, kukui and breadfruit trees. Some of these churches are tastefully built, and nearly all are surmounted with tapering spires, from which the sound of the church-going bell is often heard. They are built by the people. This is certainly true of all the Protestant church edifices. While at Kailua, we visited the old "Mother Church," built by the venerable Governor Adams, in those days when a chief could summon hundreds to work on a public building. Of late years it has become dilapidated, but, while there, we were glad to witness carpenters at work refitting it, at an expense of $2,000, nearly all of this amount having been already collected among the people of that district. Hawaiians are a church-going and church-building people.

The New Creed.—The *Rock* publishes a new creed, which is worth preserving, as a fair satire on the faith or unfaith, of many in the present day.

"We believe that there is no God, but that matter is God, and God is matter, and that it is no matter whether there is any God or not. We believe also that the world was not made, but made itself, that it had no beginning, and that it will last forever. We believe that man is a beast, that the soul is the body, and that the body is the soul, and that after death there is neither soul nor body. We believe that there is no religion—that natural religion is the only religion, and all religion unnatural. We believe not in Moses. We believe in some of the philosophers. We believe not in the prophets nor in the evangelists. We believe in Hobbs, Paine, Voltaire, and Bolingbroke, though all these men differed, and we differ too. We believe not in St. Paul. We believe not in Revelation. We believe not in Christ. We believe in ourselves. And lastly, we believe in all unbelief. Amen.

Midnight Mission.—The midnight mission movement for reclaiming the unfortunate, is carried on with great success in London. Two meetings were recently held, at which sixty and forty girls were, respectively, present, many of whom have been induced to take situations and return to a virtuous life.

New Foreign Church at Hilo.—The foreign residents at Hilo have built the neatest and most beautiful church edifice on the Sandwich Islands. In architectural plan and finish it is a perfect gem.

A church has already been organized, and a young pastor called from the United States, the Rev. F. Thompson, a graduate of Williams College and Andover Seminary. We learn that he has accepted the call, and may be expected in a few weeks. Most heartily shall we welcome him to the Islands, and can assure him a cordial welcome from the people at Hilo, where we recently spent two Sabbaths, preaching in the new church. The members of the congregation are quite enthusiastic in regard to this enterprise. They have fully paid for the church—about $5,000, and are now about purchasing a parsonage. The pews have rented one year for about $1,000, which nearly defrays their pastor's salary. So it appears that not only Hawaiians at Hilo give for church purposes, but foreigners equal if not surpass them.—*Honolulu Friend.*

Baptist.—Over forty Baptist ministers in England have, within a few years, joined the Pedo-Baptist denominations. Most, if not all of them, were open communionists, and two of them had been students in Spurgeon's College.—*Presbyterian.*

Oakland Academy.

A CLASSICAL, ENGLISH, & MILITARY BOARDING SCHOOL

REV. DAVID McCLURE, Principal.

The Eighth Term of this Institution will commence on Wednesday, July 8th, 1868, in the new Academy building, recently erected on Telegraph Road, one mile from the Railroad Depot.

The location and plan of this new building have been made with the design of securing for the students a home of beauty and refinement.

Careful provision is made for thorough and extensive courses of study in English, Mathematics, Natural Science, and the Ancient and Modern Languages. A special course is also provided for those who are preparing for a commercial life.

In addition to these courses there is a daily military inspection and drill, together with vocal and light gymnastic exercises, under the instruction of a teacher. Every student is required to attend the military and gymnastic exercises, as a means of physical training.

For the mental, moral, and physical culture of each pupil committed to his care, the Principal holds himself responsible.

Further particulars may be obtained by addressing the Principal at Oakland.

Correspondence.

Letter from Humboldt County.

THE BALD HILL REGION.

The remarks made in my last letter to The Occident touching the pursuits and character of the inhabitants, and the natural features, products, etc., of Mendocino county, apply so aptly to Humboldt also, that I need say but little on these points, in speaking of the latter county. As in Mendocino, lumbering is the principal business carried on, though agriculture and stock-raising are more extensively engaged in here than in that county. Humboldt, owing to its fine harbor and other advantages, was early settled, though population failed to increase rapidly in consequence of Indian difficulties. The most of the early settlers came from Oregon, having been attracted hither by the excellence of the soil and climate. They consist mostly of families who brought with them their herds with the purpose of locating permanently and engaging in stock raising, for which the Bald Hill country lying east of the timber affords great facilities. The Indians, however, who in this section are a powerful and savage race, committed so many depredations on these pioneers, destroying their stock, and occasionally murdering some of their own number, that the most of them finally abandoned their homes, and but few settlers having since gone into that section, it remains, with all its advantages and attractions, but sparsely populated, though for cattle as well as sheep and hog-raising, it is one of the most eligible districts in the State. With improved facilities for the transportation of produce to market, this would also be an excellent farming district, the soil being rich and the country open and ready for the plow. So far as soil, climate, beautiful scenery, and health are concerned, this region generally denominated the "Bald Hills," is one of the most inviting on the coast. The land, still belonging mostly to the Government, is nearly everywhere good. Timber and water are in fair supply, while the climate is mild and equable, the winters never being cold nor the summers excessively warm. Stock requires no fodder, being able to subsist the year round on the wild oats, clover, and other grasses that grow abundantly on the hills. Hogs fatten on the mast afforded by the oak trees, requiring little else besides. These oaks, mixed with pine, are scattered over the whole country, growing in some places quite dense, and in others more sparsely, but almost everywhere, in sufficient quantity to supply all needed fuel and lumber. This Bald Hill country, which lies between the heavy timber belt and the more abrupt portions of the coast range, is not only one of the most fruitful and healthful, but also one of the most beautiful regions in the world; the greater portion of it being gently undulating, with occasional bluffs, rounded knolls and long swelling heights, giving an agreeable variety of surface, while but little of it is too abrupt for easy cultivation. Being covered with scattered groves of oak and pine, and clothed with a luxuriant growth of wild oats and nutritious grasses, it is a very paradise for the farmer and herdsman, as well as the hunter; the latter finding elk, deer, grizzlies, quail, hare, etc., upon which to gratify his love of the chase; some of the larger streams al o affording fine sport for the angler.

This was formerly the favorite home of the Indian, who, besides fish and game, found in the great variety of berries that grow here a ready means of subsistence. The blackberry, the salall, huckle, June, thimble, salmon, raspberry and strawberry, are all found growing here in their season, and in many places quite plentiful. With a railroad connecting this country with the Bay of San Francisco, or even good wagon roads leading to shipping points on the coast, it would rapidly advance in population and wealth; being destined to become at no distant day one of the most prosperous and densely peopled as it is already one of the most beautiful and fertile districts in California.

AGRICULTURE, LUMBERING, SHIP BUILDING, ETC.

The principal towns in this county are Eureka, the county seat, and Arcata; both situate on Humboldt Bay; Arcata on the northern extremity and Eureka on its eastern shore, eight miles further south. The former is surrounded by a rich agricultural country, whence it derives its chief support; the latter being sustained by lumbering and ship building, both of which are carried on actively in and around it. The forests in the vicinity are very heavy, the trees consisting mostly of redwood, standing close together, and being of enormous proportions, some of them over 60 feet in circumference, and nearly 300 feet high. There are eleven saw mills in this county, cutting annually in the aggregate about 28,000,000 feet of lumber, valued at $600,000. Four of these mills, being the largest of the number, are situate near Eureka, from which point more than twice as much lumber is shipped as from other parts of the county. Here also a large number of small vessels are built every year, one of 800 tons burden having been recently launched. Ship building is also carried on quite extensively in Mendocino county; fir and other timber being found there as well as here, suitable for the purpose. Over a hundred schooners are engaged in the carrying trade between these two counties and San Francisco, the bulk of freight consisting of sawed and split lumber, pickets, shingles, spars, ship-knees, staves, posts, railroad ties, firewood, tan bark, etc. The redwood of this section affords excellent railroad ties, the red or chestnut oak supplying a superior article of tan bark; many small vessels, in the absence of other freight, loading with firewood, taken in usually at points along the Mendocino coast. The agricultural exports of this county consist mainly of potatoes, butter, cheese, oats and live stock. The raising of potatoes constitutes the principal branch of farming. The crops grown on the bottom lands about Arcata and upon the alluvial soil generally, being enormous, the average yield exceeding ten, and, in many cases, reaching twelve and even thirteen tons to the acre.

The potatoes raised here, owing to the sandy nature of the soil, are of an excellent quality, commanding the highest price in the San Francisco market. They grow to a large size, and the crop has never yet proved a failure. No irrigation or extra culture is required to insure their vigorous and healthful growth, the natural humidity of the climate and careful preparation of the soil at the start answering every purpose. The climate near the coast, though not marked by the strong summer winds and a little warmer, is in other respects much like that of San Francisco, and hence, while not so well adapted to certain kinds of fruit growing, is invigorating and pleasant, and well suited to dairying purposes.

The fisheries along this part of the coast, though now mostly in the hands of Chinamen, and consequently carried on with but little energy, are destined to become an important industry. The salmon fisheries on the several rivers that enter the sea in this vicinity, already form extensive and prosperous pursuits, being the best in the State. Immense quantities of these fish are cured here every year, there being no facilities in the absence of railroads, for sending them fresh to market.

POPULATION, IMPROVEMENTS, ETC.

Although neither Humboldt nor Mendocino are increasing as rapidly in population as some other sections of the State, both are steadily filling up with a very desirable class of inhabitants, the most of whom consist of families who come with the intention of making permanent homes, for securing which the opportunities are great. There are in this section no large Spanish grants, nor have the public lands been as yet, monopolized to any great extent by private speculators. There is plenty of private land eligibly situated yet, open to location; or if the new-comer desires he can purchase land from second hands, and partially improved, at reasonable prices, generally ranging from $5 to $20 per acre; some of the choice bottoms being tilled at higher figures. The fern covered openings here quite extensive, and which at one time were considered worthless, are found to yield well when once the wild growth has been thoroughly eradicated, and as a consequence these lands so long neglected are now eagerly sought after, being considered nearly as valuable as the grassy bottoms.

With the settling up of the country many hamlets are springing up at shipping points, and landing centres along the coast, all of which give evidence of thrift, and being new, present to the stranger an attractive appearance. Among the most pleasant of these new and growing places is the little settlement at the north of Big River, where although the population is comparatively small, one of the handsomest Presbyterian churches in the State has been erected, and a fine school-house put up, evincing the importance attached to religions and educational matters. A gathering has also been made here of the wild Indians, who, having been partially domesticated, while left to hunt and fish, and gather their food from indiginous sources as far as practicable, work, whenever required for the whites, proving of much service to the latter while they earn for thmselves considerable sums of money, and are kept from depredating upon the property of their civilized neighbors.

While the want of this region is a railroad connecting with San Francisco, the construction of wagon roads leading to the Coast and into the mines of Trinity and Klamath counties, and eastward across the Coast Range, would greatly advance the farming interest and promote the rapid population of this country. The Legislature at their last session passed a law authorizing the people of Humboldt to determine by vote at the coming election whether or not they would issue $50,000 worth of County bonds to aid in building a wagon road from Hydesville twenty-five miles south of Eureka, to the northern line of Mendocino county, and another from Arcata to Redwood in the direction of Hoopa Valley, an important agricultural settlement on the route to the Klamath mines, a measure that it is to be hoped will be approved by the people; as the bonds of this county drawing ten per cent. interest and running for fifteen or twenty years, could readily be sold at par in San Francisco market, preventing any sacrifice in this respect while the gain to the county at large would be immediate and lasting as well as great.

H.

Eureka, Oct. 20, 1868.

MISCELLANY.

Broken Vows.

Promises are lightly spoken;
Vows on which we blindly build
(Uttered only to be broken,)
Go forever unfulfilled.
Oft betrayed but still believing—
Duped again and yet again—
All our hoping, all our grieving
Warns us, but it warns in vain.

From the cradle to the coral—
From the sunny days of youth—
We are taught the simple moral.
Still we doubt the moral's truth.
When a boy they found me rather
Loth to do as I was bid.
"I shall buy a birch," said father.
Broken vows! He never did.

Grown extravagant, when youthful,
In my tailor's debt, I ran;
He appeared about as truthful
In his talk, as any man.
Let me tell you how he sold me;
"Look you, Mr. What's-Your-Name
I shall summon you," he told me—
But the summons never came.

Through the meadows, daisy-laden,
Once it was my lot to stray,
Talking to a lovely maiden
In a very spooney way;
And I stole a kiss—another—
Then another—then a lot.
"Fie!" she said: "I'll tell my mother."
Idle words; she told her not. —*London Fun.*

Philosophy of Eating.

Dr. Bellows says: "So perfectly ignorant are people generally of the laws of nature, that they give the pigs the food that their children need to develop muscle and brain, and give their children what their pigs need to develop fat. For example: the farmer separates from milk the muscle-making and brain-feeding nitrates and phosphates, and gives them to his pigs in the form of buttermilk, while the fattening carbonates he gives to his children in butter. He sifts out the bran and outer crust from the wheat, which contain the nitrates and phosphates, and gives them also to his pigs and cattle, while the fine flour, containing little less than heating carbonates, he gives to his children. Cheese, which contains the concentrated nutriment of milk, is seldom seen on our tables, while butter, which contains not a particle of food for brain or muscle, is on every table at all times of the day. Bread, white, sweet, delicious and eminently wholesome, may be made by mixing unbolted wheat meal with cold water, making paste of a proper consistence, which can only be determined by experiments, pouring or dropping it quickly into a heated pan—that with a concave department is best—and placing it quickly in a hot oven, and baking as quickly as possible without burning. The heat of the oven and pan suddenly coagulate the gluten of the outside, which retains the steam formed within, and each particle of water being interspersed with a particle of flour, and expanded into steam, separates the particles into cells, and being retained by the gluten, which is abundant in this natural flour, till it is cooked, the mass remains porous and digestible, and containing no carbonic acid gas, is wholesome when eaten immediately, and, of course equally so on becoming cold.

Foreboding Figures and Appalling Anagrams.—Regular prophecies by ingenious addition, subtraction, and division of Arabic numerals, make their appearance every few years, go the round of the papers, are duly wondered at by the gullible general reader, and then are forgotten. Likewise anagrams of similar significance. They are never falsified by the announcement of their non-fulfillment, and the accident of their corroboration by fact has not yet occurred. The *Nation* collects a few of the most notable figure forecasts, past and prevalent, which we quote:

Louis Philippe was born in 1773, his wife was born in 1782, and the pair were married in 1809. It will be noticed that the figures of each of these different dates foot up 18, which, added to 1830, the year of Louis Philippe's accession to the throne, gives 1848, the year of his abdication and flight from France in the guise of a *valet de chambre*. The prophecy caused at the time a good deal of excitement, and is now called to mind by a similar, but doubly striking prophetic coincidence in precisely the same events in the life of the present ruler of France. Louis Napoleon was born in 1808, his wife in 1826, and his marriage took place in 1853. The figures of these dates again sum up alike, 17, and 17 added to the date of the Emperor's ascending to the throne, 1852, give the year 1869, which, therefore, if one likes, may for some months safely be set down as the year of dethronement for the Man of December. It is said that no French paper has yet dared to publish the prophetic figures, which seems credible enough.—*Commercial Advertiser.*

Street Tramways in England.—The first act of Parliament authorizing the construction of street tramways on a scale sufficient to test their adaptability for the omnibus traffic of large cities and towns, has recently received the royal assent. The act empowers the company to lay down and work a line of tramway running from north to south of the borough of Liverpool, passing through crowded, and in some instances, narrow streets, with a hoop line in the center of the town, enabling carriages using the tramway to reach the Exchange. The act now passed was the third introduced for the purpose in three successive sessions. The two previous bills were thrown out through the opposition of the omnibus proprietors, aided by the London and Northwestern Railway Company. The corporation supported the project; many of the leading inhabitants gave evidence in favor of the scheme, and there is every prospect that street tramways, on a sound principle, will at length have a fair and adequate trial.—*Colliery Guardian.*

A Toad Undressing.—Audubon relates that he once saw a toad undress himself. He commenced by pressing his elbows hard against his side and rubbing downward. After a few smart rubs his hide began to burst open along the back. He kept on rubbing until he worked all his skin into folds on his sides and hips: then grasping one hind leg with his hands, he hauled off one leg of his pants the same as anybody would; then stripped off the other hind leg in the same way. He then took his cast-off skin forward between his fore-legs into his mouth and swallownig it; then, by raising and lowering his head, swallowed as his head came down, he stripped off the skin underneath, until it came to his fore-legs; then grasping one of these with the opposite hand, by a single motion of the head, and while swallowing, he drew it from the neck and swallowed the whole.

Introduction of Gas into Railroad Cars.—The New York and New Haven Railroad are trying a new experiment in the use of gas in their cars. A former experiment was tried on the same road a few years ago; but the inventor in that case relied upon atmospheric pressure to force the gas from the gasometer (under the cars) to the burners, and the plan proved a failure. In the present instance the gas is forced out of the gasometer to the burners by means of strong springs, and the quantity of light can be regulated as desired. The new apparatus has as yet only been applied to one car of the 8 o'clock P. M, Boston Express Line, with very satisfactory results, and will, in all probability, be introduced in all the cars of the night-lines at an early day.—*Gas Light Journal.*

Leaden Tobacco Boxes.—Dr. Mayer of Berlin, states that he has traced six cases of lead colic and paralysis to the use of tobacco held in leaden boxes. M. Chevallier has found, also, that tobacco wrapped in lead foil,—improperly called tinfoil,—becomes impregnated in course of time with acetate of lead.—*Scientific American.*

IGNORANT UNBELIEF.

When men examine what is submitted for their acceptance and then decline to receive it, we may regret that they so determine, yet we feel that their treatment of the subject has been worthy of themselves. But when they refuse to examine, when they simply reject, fancying that doubt and cavils and opposition are proof of superior wisdom, we sincerely pity their ignorance, and lament their folly. For, conclusions reached by investigation, and honest, careful thought, though they may not be just, command respect; but one who is almost an idiot can disbelieve, and he makes known his want of mind by nothing more than by his rejection of that concerning which he has no knowledge. There are multitudes of men who are too ignorant to understand the claims of the Bible, who have never given one day to serious study respecting its origin, and authority, yet disclose their infidelity with a feeling that in some way it magnifies them. There are writers of books and of articles for journals, who furnish evidence in almost every line that they have not examined what announces itself as the Word of God, with as much accuracy as they would feel to be necessary in searching the title to a village lot, yet write as though their ignorance were transmuted into wisdom by the mere boldness of their assertions.

These men cannot argue, yet the spirit they manifest is more disgraceful than that of more learned skeptics, for nothing can be more pitiable, than for one who knows not what he refuses, to turn away from what may be the richest good, as truly as the worthless thing he declares it to be, so far as is determined by his examination of its nature. Is not he a fool, who insists that the gold offered him is only clay and rejects it, when he has never looked at it to see whether his assertion is true or false? In truth, such men are not really unbelievers. They do not know enough to be unbelievers, for this term implies some apprehension of that which we decline to accept, and pre-supposes honest study, to some degree. They are merely *rejecters*. They give the reins to prejudice and their wishes, and harbor all doubts that swarm in the atmosphere where they are determined to live. Ignorance creates objections which they are able to utter, but they do not understand even these, and not daring really to trust what is thus suggested, they become, at last, the miserable victims of their own folly. It is not only a judgment pronounced upon them by the authority of God, but the inevitable result of their own habit of mind, which is uttered by the prophet, "Behold, ye despisers, and wonder, (or cavil) and perish!" No one is farther from the Kingdom of Heaven than he who declines to know its riches, persistently walks away from the path by which it may be approached, and says to all who urge him to look, at least, towards its shining portals, that is is a cheat, or worthless could it be gained. The Bible appeals to reason, courts study, offers to repay thought. The mere possibility that it may be what it claims to be makes ignorant unbelief of it unworthy of those to whom it is submitted.

Sunday School.—A Sunday School has been organized at Truckee which promises to be successful. Mr. A. Cook is Superintendent.

Gambling.

It is playing for a stake. It is risking money on the throw of a die, or the turn of a card. If you substitute a race-course for the gaming-table, and horses for cards, and stake money on the result of the contest between them, it is as much gambling as the other. And the lady (?) who bets kid gloves on a favorite horse is a gambler. It is not pleasant to apply such names where they sound harsh and degrading, but it is proper for all that, that the thing should be correctly labeled.

Gambling is a demoralizing vice. As practiced by professionals, who live but to ruin the unsuspecting and the gullible victims that they entice to their dens, it is the keystone in the arch of the dark and damning vices that curse society. It is utterly ruinous to the character and the purse. Many have turned from the gaming table desperate or frenzied, and ended their earthly career with knife, rope, or pistol. It is like a cancer on the body, that with fiery fangs gnaws to the vital parts, and finishes its terrible work in an agonizing death.

Gambling in its very worst forms prevails here to an alarming extent. Under cover of darkness, and shielded from public gaze, men win and lose, drink and curse. Many business men, who would blush to be caught there, lose their capital and defraud their creditors in these dark places of wickedness.

There is what may be termed a varioloid form of this moral pestilence, a milder type of the dreadful disease, that has become so prevalent in society as to create grave apprehensions in the minds of all who give the subject a thought.

One feature of it was witnessed by thousand sat, the recent State Fair. It is well known that there and at most of the district and county fairs; horse-racing is the most prominent feature at the agricultural grounds. The race is what draws the crowd. The few cattle, sheep, and draught horses do not claim a passing notice from the majority of visitors. Enormous sums of money are staked upon the races. I knew a good deal of them, though I did not witness any of them. Men, women and children bet on the races. An intelligent man, who acted as principal officer at the State Fair grounds this year, and who had an excellent opportunity to see what was going on, remarked in my hearing, that it was his opinion, that not less than a quarter of a million of dollars changed hands at those races. The public press that has no rebuke for the thing when conducted with fairness, rebuked in unmeasured terms the brazen faced swindling and rascality of the big gamblers, who fleeced their victims without mercy. Young boys were there betting, and drinking from the poisonous fountain, around whose margin lie the ghastly skeletons of many lost, ruined victims. Women, who should always and everywhere frown down the vices that ruin so many fathers, husbands, and sons, and bring desolation and misery to so many households, are carried away with excitement and freely bet on their favorite racers. Thus people blindly sow the wind to reap the whirlwind. The betting that is now going on between the political parties in the present Presidential contest is astounding. The sin lies equally at the door of each party. It takes one from the ranks of each to make a bet. The wagers range from hats, boots, and horses to very large sums of money. A ten thousand dollar stake is not an unusual thing. It is remarkable how many are infected with this gambling mania.

This is one of those terrible evils that will hasten the downfall of our republic, if not arrested. Every man who puts up a stake on the result of an election ought to be disfranchised. He is not a safe man to entrust with the ballot. If he will bet large sums, the probability is he will sacrifice principle to win his wager. If he should find himself supporting bad men or wrong measures, there could be little or no hope of his changing.

Raffling is another form of gambling, too often countenanced by Christian people. It becomes us to beware of this seductive, destructive vice, and to exert all the influence God has given us to frown it down.

Alpha.

Christian Baptism.

Having in several previous articles discussed two propositions: 1, that *baptizo* and its cognates are used by the sacred writers to signify the ritual use of water as a symbol of religious purification. 2d. That these ablutions, though divers in mode—as, by sprinkling, pouring, or washing—having in them all the essential idea of purification, are by the same inspired penmen, termed *baptismoi*, as in Heb. 9: 10, I now propound a third proposition, to wit: The ritual use of water as an emblem of religious purification culminates in the appointment of baptism by our Lord and Savior Jesus Christ as an ordinance of His Church. I am aware that I have now come to a place where two seas meet, around which two sets of opinions ebb and flow, the claim of the one being that baptism means simply and only immersion in the Holy Scriptures, and who thus translate the term, while on the other hand, is that of the vast majority of scholars in the Christian Church, who hold that by the appointment of Christ and the use of the sacred writers, the term signifies a glorious truth of Christian revelation, one of the heavenly things which Christ showed to us, and that the ordinance called baptism in the Greek text sets forth and symbolizes the gracious work of God in the purification of the heart of the believer from sin, and his new creation in spiritual life by the power of the Holy Ghost. The meaning of the term, in short, I hold to be represented and concisely set forth in Titus 3: 5.

"The washing of regeneration and the renewal of the Holy Ghost," as McKnight says in his comment on this passage, "through baptism, called the bath of regeneration, not because any change in the nature of the baptized person is produced by baptism, but because it is an emblem of the purification of his soul from sin."

That baptism has this exalted spiritual meaning I proceed to show: 1st, from the Scriptures. "He that believeth and is baptized shall be saved." (Mark 16: 16.) Here we have in the very appointment of the ordinance by our Savior, standing on the one side Christian faith—"he that believeth;" on the other side salvation—"shall be saved," and between the two, as is held by some, nothing but the mere physical act, immersion, placed by the voice of our Savior to connect the two members together. Let those believe who can, that between these two cardinal truths of a divine revelation there intervenes, by the appointment of Christ Himself, the mere physical act of immersion in water. I rather hold to the spiritual significance of baptism, and that, as in the Lord's Supper, the intent and significance of the ordinance does not rest in the mere act of eating and drinking, so in the Lord's baptism, the intent and meaning of this ordinance is not comprehended in the external rite, whether aspersion, effusion, or immersion, but in its spiritual significance; and yet, by the scholars of the Bible Union, *baptizo* and *baptisma* are held to be properly

translated for the English reader by a word signifying the physical act merely.

But again, in Acts 22: 16, Paul is directed, "Arise and be baptized and wash away thy sins, calling upon the name of the Lord." Here, likewise, the meaning of Christian baptism is distinctly set forth in the washing away of sins, as the design and effect of the ordinance, and its spiritual significance as such divinely attested by the words of Annanias, appointed by the Savior Himself to instruct Paul in his present duty.

So in Romans 6: 3–8, there is in baptism, burial into Christ's death, planting together in the likeness of His death, crucifixion of the old man of sin with Him, all represented in the one ordinance baptism, followed by "newness of life," "resurrection in His likeness," "freedom from sin," and thus, by the most striking and pertinent metaphors of which human thought is capable, even under the power of divine inspiration is the spiritual nature of baptism inculcated—its spiritual significance established, while it signifies the destruction of man's sinful nature by his death and burial in Christ, and the resurrection of the soul in a new life in Christ Jesus.

I present as the crown of my argument in this case as before, the passage in 1st Peter 4: 2, "The like figure whereunto baptism doth now save us; where, by the word of the inspired Apostle, we are taught that baptism saves us. I present this text as an *experimentum concis.* I would be willing to rest the whole case on this single passage and let the Christian intelligence of my readers pass judgment on the correctness of my position by the truth embodied in this Scripture. What does this *baptisma* which saves us, signify, we enquire? "Plunging in the water," responds the Bible Union. "Not the putting away the filth of the flesh," responds the Apostle, "but the answer of a good conscience towards God by the resurrection of Jesus Christ." The washing of regeneration and the renewal of the Holy Ghost, we respond, with another Apostle, and with us we are confident that we carry the suffrages of the whole Church outside of the narrow circle of the supporters of the Bible Union. F. B.

HYATT'S HAND-BOOK OF

Grape Culture in California,

Giving full and specific directions as to where, how, and when, to plant and cultivate a vineyard.

As the season is approaching for those who purpose going into the culture of the vine anew in California, or for those who wish to extend their vinicultural operations to make preparations there for, they can find no better aid, and no source of information more valuable than to consult this highly approved Hand-Book of Grape Culture.

Following are some of the testimonials that have appeared in commendation of this useful and indispensable work:

A committee of the late Fair of the Mechanics' Institute of San Francisco, to which the work had been referred, speak thus:

"Your committee have examined Mr. Hyatt's Treatise on the Culture of the Grape, and believe it to be the BEST HAND-BOOK published on that subject for California vine culturists, and for which they recommend a Special Premium."

The California State Agricultural Fair, of 1867, awarded a Diploma to the author of this work, and also the San Joaquin Valley Agricultural Fair, at the same season.

OPINIONS OF THE PRESS.

The following are brief extracts fron some of the elaborate notices of this work:

The San Francisco *Daily Evening Bulletin* says:—"The book contains a choice collection of the best foreign and native varieties of the grape cultivation in California especially, as well as at the East. The many excellent works on Grape Culture in the Atlantic States are of little or no value in California, where an entirely different system and practice are necessary in vine growing and wine-making. This Hand-Book is intended to supply this deficiency. The author has taken great pains to investigate this subject, and to aid in the improvement of viniculture in California. Its appearence is timely, and it can hardly fail to meet a large and ready sale. It is attractively printed and elegantly bound."

Sacramento Union—"Hyatt's Hand-Book of Grape Culture is a California production that will probably meet a common want. The author takes the experience of the most noted vine-growers in the State as the warrant for his conclusions and suggestions, turns to account the recorded results of experiments made by the pioneers of this branch of industry, and in addition to giving full and minute instructions in regard to the planting of vineyards and the manufacture of wines, presents statistics which will enable the beginner to calculate the probable profits of successful grape culture."

The *Mountain Democrat*, whose editor, Hon. D. W. Gelwicks, is the present State Printer of California, speaks thus:

"HYATT'S GRAPE CULTURE.—We have received from the publishers, H. H Bancroft & Co., San Francisco, a copy of this interesting and valuable work—a work greatly needed on this coast, and which every grape-grower should purchase. We sent it to a gentleman well known in this community, for his examination—a gentleman familiar with the subject, and largely engaged in the culture of the grape. He gives it the following cordial endorsement, and his endorsement ought to secure it a large sale:

'The limited time in which to examine Hyatt's Grape Culture, published by H. H. Bancroft & Co., San Francisco, has been sufficient, however, to satisfy me that it is a work which every grape-grower should have. No matter how well fortified we may be in our own experience and theory, we must acknowledge that we may adopt many of the author's ideas and suggestions with profit. The merit of the work certainly bespeaks for it a ready sale.

Respectfully, CHAS. P. JACKSON.'"

The Golden Era: * * * "With this book in his hand, the intelligent agriculturist can engage in the business of grape culture with almost the same chance of success as one who has bought his knowledge by expensive experience. * * * The practical information contained in the book would cost many hundred dollars to obtain in any other way. We predict for it a ready and rapid sale."

S. F. Daily Dramatic Chronicle: "The book is emphatically a California production, being written by T. Hart Hyatt, of this city, editor of the *Rural Home Journal*, and bearing the imprint, San Francisco: H. H. Bancroft & Co. It contains a large amount of valuable information, and should be in the possession of every vine-grower and wine manufacturer in the State. The usefulness of the volume, and its convenience for reference, are very much enhanced by a full and carefully prepared index."

S. F. Mining and Scientific Press: * * * "The book professes to be a complete manual, with instructions for the management of the grape and the manufacture of wine, and is especially designed for California. * * * The book contains a considerable amount of valuable information which is not generally found in such treatises."

S. F. Daily Times: * * * "The author seems to have exhausted his subject, particularly as it relates to viniculture in this State, and as the grape interest is just beginning to attract attention which is soon to become paramount among farmers, we regard the publication of the work as most opportune. No ranchman should be without it."

N. Y. Daily Tribune: "The author brings the result of many years' experience in foreign countries to the preparation of his work, and from his observations in climates similar to that of California, arrives at the conclusion that California is singularly favorable to the culture of the grape, and to all semi-tropical fruits, and that it will hereafter be distinguished as the land of the vine, the fig, the orange, the olive and the palm. His volume forms a capital, if not a complete manual, on the care of a vineyard, and it is enriched with much industrial information connected with the subject."

Lacon (Ind.) Home Journal: "This work is most *apropos.* It comes just as thousands, without any practical knowledge of the business, having planted vineyards, find themselves destitute of that information their intelligent care demands. All over the country this interest is growing, and probably the time is not distant when America will produce more, if not better, wines than any country in the world. The author, Mr. Thomas Hart Hyatt, is an enthusiast on the subject upon which he writes so pleasantly, and his book embodies just what every grape-grower would like to know—what every one must know, to cultivate the vine successfully."

Colman's Rural World, St. Louis: * * * "We merely want to introduce a new and interesting treatise on this subject to our readers, from the far-off shores of the Pacific—the Golden State of California. Its author is T. Hart Hyatt, editor of the California *Rural Home Journal.* He has had a large experience and observation in California and in the Old World. His style is entertaining, his directions clear, plain, and practical."

Rural New Yorker: * * * "Although most valuable to the California vinicultprist, yet it helps to widen our knowledge of the vine."

H. H. BANCROFT & CO., Publishers.

CURRENT LITERATURE.

Rural Hours.

Eighteen years ago, a lady friend of Cooper composed a series of articles descriptive of scenes and objects with which one becomes familiar in country life, and dedicated the volume to the great novelist under whose auspices it was published. Great changes have occurred in the charming valley of the Otsego Lake since the book was first issued. Yet the pleasing descriptions are as life-like as ever, and many a reader will be glad that in the multitude of new books this finds a place. There is much in it that is instructive as well as refreshing, and the authoress gives evidence enough that she was worthy of the patronage of the distinguished man to whom it was addressed. We not have too many books of this kind. They meet a want of which many a one is conscious, whether reared in the country or in the town, and though they are not for study they are delightful for recreation and family reading.

Published by G. P. Paterson & Son, New York, and sold by Bancroft & Co.

Personal History of General Grant.

We are not able to compare this volume written by Albert D. Richardson, with any of the others which the prominence of Gen. Grant has tempted various authors to produce. The author had peculiar facilties for the composition of a truthful and reliable work, and its contents bear the impress of truth, while the style renders it attractive.

Of course, much of the matter is history, not of a man, but of the nation, at a time when facts are of intense interest, but misrepresentation and fancy should have no place. It would scarcely be possible to write an account of Grant's carreer, when the pulse of the people is so high respecting him, without something of exaggeration, yet perhaps there is less probability of this when one has opportunity to know the real truth, than when one writes only to gratify the feelings of those who desire highly wrought statements. On the whole, we would have preferred that some years should pass before any elaborate attempt should be made to give a history of so prominent a man in the pasing events of the time. Still Mr. Richardson has written a valuable book. It is published by the American Publishing Company of Hartford, and sold here only by the agents of R. J. Trumbull & Co.

The New Method of Drawing.

One must understand the subject, as we do not, to be able to pass judgment upon the method unfolded in this neat little volume, called the Cavé Method, translated from the French, and published by Putnam & Son, New York. It is thus stated in a few words, in the preface :

" With this method, while one learns to copy the objects which are before the eye; they are so graven upon the memory as to be reproduced at will ; eye memory is the most common and the simplest. After six weeks of study, our pupils themselves are surprised at their familiarity with what they draw. Drawing from memory is having one's thought, the expression of that thought, at the point of the pencil, as the writer has his at the tip of his pen. All the great masters draw from memory; hence their originality.

" Consulting, copying, kills invention and genius ; composing, putting the thoughts rapidly upon paper by the aid of memory, that is the true process of invention."

Sold by H. H. Bancroft & Co.

Improvement in Phonography.

We are glad to be able to chronicle a real step in advance, in the writing of phonetic short-hand. Great revolutions come gradually—continents do not rise above the ocean at a single swoop. Though Pitman's system was very meritorious, and very systematic, and beautiful, so that every bright boy looking over its pages would be seized with a desire to learn it, yet his dream of a phonographic Utopia, when everybody would be writing " fly-tracks," were premature, and could not be expected to be realized. Two elements were wanting: ease of acquiring it so as to be able to follow a speaker, and legibility. Nothing but years of practice can make a reliable reporter, and a want of the opportunity or the inducement to benefit by such practice, furnishes the reason why so many old students of phonography have little left of short-hand but a few phonographic crotchets floating through the brain.

A number of Americans have labored enthusiastically to improve Pitman's system by methodizing and abbreviating it. Graham and Munson have published voluminous works. They are destined to be superseded, we think, by the closer method, clearer analysis, more thorough canvassing, and laborious practical trial of all the possibilities of geometry, and of all conceivable combinations of the English language, which are displayed in Marsh's Manual of Phonetic Short-hand; the last pages of which have just been struck off at Eastman's, for Bancroft & Co., the publishers.

To contribute materially toward the development of a perfect system of writing is a modest labor which is by no means calculated to incite torchlight processions and nightly serenades in honor of the author; but none can fail to see what a profound influence upon the world a few centuries hence, the simplification and universalization of short-hand, or in any degree informed on the subject, the claim of Marsh's book to superiority over every other system will speak for itself.—*Scientific and Mining Press.*

Thought About Books.

There are times in which every active mind feels itself above any and all human books.

I think a man must have a good opinion of himfelf, sir—said the divinity student—who should feel himself above Shakespeare at any time.

My young friend—I replied—the man who is never conscious of a state of feeling or of intellectual effort entirely beyond expression by any form of words whatsoever, is a mere creature of language. I can hardly believe there are any such men. Why, think for a moment of the power of music. The nerves that make us alive to it spread out (so the professor tells me) in the most sensitive region of the marrow, just where it is widening to run upwards into the hemispheres. It has its seat in the region of sense rather than of thought. Yet it produces a continuous and, as it were, logical sequence of emotional and intellectual changes ; but how different from trains of thought proper! how entirely beyond the reach of symbols! Think of human passions as compared with all phrases! Did you ever hear of a man's growing lean by the reading of " Romeo and Juliet," or blowing his brains out because Desdemona was maligned? There are a great many symbols, even, that are more expressive than words. I remember a young wife who had to part with her husband for a time. She did not write a mournful poem ; indeed, she was a silent person, and perhaps hardly said a word about it; but she quietly turned of a deep orange color with jaundice. A great many people in this world have but one form of rhetoric for their profoundest experiences ; namely, to waste away and die. When a man can *read*, his paroxysm of feeling is passing. When he can *read*, his thought has slackened its hold. You talk about reading Shakespeare, using him as an expression of the highest intellect, and you wonder that any common person should be so presumptuous as to suppose his thought can rise above the text which lies before him. But think a moment. A child's reading of Shakespeare is one thing, and Coleridge's or Schlegel's reading of him is another. The saturation point of each mind differs from that of every other. But I think it is as true for the small mind which can only take up a little as for the great one which takes up much, that the suggested trains of thought and feeling ought always to rise above—not the author, but the reader's mental version of the author, whoever he may be.—*Autocrat of the Breakfast Table.*

THE ENLISH LANGUAGE IN ENGLAND.—The *Morning Call's* London correspondent, refers to the broad provincialisms of England as follows: and here I must be permitted to remark that the American language must be very bad indeed if it is the same as the English. It is generally understood that a man may proceed from one end of the Union to the other and find the people talk one intelligible tongue. There may be a little nasal twang in the North and sniffle in the South, but you can readily understand on all occasions what is said even by the humblest and most illiterate of the people—if, indeed, uneducated are anywhere to be found. But go only into Berkshire, twenty miles distant from London, and you will scarcely understand a word of what the boors there say. In Mr. Disraeli's adjoining county of Bucks, they are, if possible, still more unintelligible. Of almost every other county in England the same remark holds good; and the singularity is, that each speaks a language unintelligible to the other. In the north of England the burr is universal, and in Scotland the language is broader still. Nothing, in fact, can be more hideous than the drone of Glasgow, unless it be the earsplitting whistle of Aberdeen. The West End shopkeepers of London, who get it from their intercourse with the aristocracy, and the inhabitants of Inverness, in the north of Scotland, who got it more than two centuries ago from Cromwell's soldiers, are the only persons in the British Islands who talk the English language with purity, though the former speak it with a sharp tone, and the other with somewhat of a Highland drawl. If your English be the same as that of other parts of the Island, Heaven save me from hearing it.

A COINCIDENCE.—The coincidence seems a little striking, that within a month we should have lost an important bit of our scanty information with regard to Shakespeare, and should have lighted upon a poem by Milton, written probably with his own hand, and never before published. The discovery that the entries relating to Shakespeare's plays contained in certain manuscript accounts of the Revels at Court in the reigns of Queen Elizabeth and James the First are forgeries by a later hand than that which wrote the original documents, seems, if we may judge by the journals, to have excited very little interest in England, although it deprives the world of one of the few items of knowledge it possessed about a man who was enough of a myth already without having his personal identity still further attenuated by this unhappy discovery.—*Putnam.*

Educational.

The Called Teacher.

One is called to be a teacher when his mind runs spontaneously upon the subject of education. Sometimes, as we travel, the road forks, and we are in doubt which way to go, till we consult a guideboard, or wayside cross. Hence, Bacon calls those experiments, or instances, which decide the philosopher in dubious cases, crucial experiments or experiments of the cross. The above is a crucial test in the case of the teacher. He may judge that he has not mistaken his calling if he finds his mind, without coercion, and in moments of entire freedom, revolving problems and inventing schemes of education. It is so in other departments of human labor, and teaching is not peculiar. We recognize a born artist in the accounts of Sir Joshua Reynolds. " He was always thinking of his art. He was one day walking with Dr. Lawrence, near Beaconsfield, when they met a beautiful little peasant boy. Sir Joshua, after looking earnestly at the child, exclaimed, 'I

must go home and deepen the color of my infant Hercules.' The boy was a good deal sunburnt." In the same manner we discover a true Christian pastor in the insight which is permitted us to the mind of Dr. James W. Alexander. "My mind works incessantly on such themes as these—the unreached masses; the waste of Church energy on the rich; its small operation on the poor; emigrant wretchedness; our boy population; our hopeless prostitutes; our grogshops; the farce of our Church alms; confinement of our Church efforts to pewholders; the do-nothing life of our Christian professors in regard to the masses; our copying the priest and Levite in the parable; our dread of innovation; our luxury and pride."

Of course it is not meant that the true teacher's mind will not often of itself run off on other trains of thought than those of education. As it is easy to imagine his hands occupying themselves often with pleasure in other toil, so it is easy to conceive that his mind will often revert with relief to other thoughts. A schoolmaster of Cincinnati laid aside his ferule for the surveyor's chain, and aided the proprietor in laying out the town. A schoolmaster of Menchen, in Germany, put on a joiner's blouse that he might make the coffin, and then a minister's gown that he might read the funeral service, for the illustrious Gustavus Adolphus. Calls of interest and affection draw the thoughts and the hands of the most devoted men at times from their wedded employments. This is inevitable and it argues nothing against their devotion and singleness of mind. That devotion can only be questioned when in general and as a recurring fact, it requires an effort to bring the mind down to business: when long intervals occur during which it indulges a discursive habit: when the man is as well known for other achievements as for those in his legitimate line: when his mind automatically engages itself with equal frequency in other themes than professional ones. C. R. C.

Personal.

Dr. Newcomb, formerly of Oakland, was at last accounts busily engaged in searching the reefs and bays of the Sandwich Islands. He has already discovered many valuable shells for his new collection.

Capt. John Mitchell, of the *Saginaw*, was murdered on the corner of Stockton and Sutter streets on Wednesday evening. The murderers, Smith and Savage, have been arrested.

Rev. C. L. Fisher has resigned the charge of the Baptist church at Columbia. The church, on account of the removal of members, is no longer able to support a pastor.

Rev. S. D. Simonds has retired from the itinerant ministry of the M. E. Church. He preaches each Sabbath at the hall of the Y. M. C. A. in this city.

Mr. J. W. Josselyn, Deputy County Clerk of Alameda County, was killed by the falling of the Court House in San Leandro during the earthquake.

Rev. Dr. Mooar, of Oakland, is on his way from the East, together with Rev. Elbridge Gerry, who will labor on this coast.

Majors T. H. Halsey and J. H. Nelson, Paymasters, have been relieved from duty at Detroit and ordered to San Francisco.

Mr. H. C. McCreary has been elected President of the Sacramento Library Association.

Rev. Selah Merrill, who recently left this city, was married on Sept. 16, and sailed for Europe about October 1st.

Mr. Wm. Strong, Wm. Best, and J. B. Mansfield were among the persons killed in this city on Wednesday last.

Madame Parepa-Rosa is on her way to the East, overland, giving concerts in the principal towns on the route.

Gov. Woods, of Oregon, has vetoed the Penitentiary bill, making the officers elective by the Legislature.

Rev. C. L. Fisher preached the annual sermon at the opening of the Baptist Association on the 10th

Gen. Geo. B. McClellan is talked of by the Regents as President of the State University.

Rufus Swett, the man who murdered Dr. Gray at Marysville, escaped from jail on Tuesday.

Rev. N. B. Klink preached in the Presbyterian church in Sacramento last Sunday.

Rev. S. B. Dunton proposes to lecture throughout the State on temperance.

Pacific Mail Steam Co's Steamships

— FOR —

NEW YORK, JAPAN AND CHINA

Will be Dispatched as follows:

LEAVE WHARF CORNER OF FIRST AND BRANNAN STREETS, at 11 o'clock A.M. of the following dates, for PANAMA connecting via Panama Railroad with one of the Company's splendid Steamers from ASPINWALL for NEW YORK.

the 6th 14th, 22d, and 30th of each month.

Steamer leaving San Francisco on the 6th touches at Manzanillo. All touch at Acapulco.

Departure of the 14th is expected to connect with the French Transatlantic Company's Steamer for St. Nazaire, and English Steamer for South America. Through tickets can be obtained.

Departure of 14th is expected to connect with English Steamer for Southampton, South America, and P. R. R. Co.'s Steamer for Central America. Through tickets can be obtained.

Departure of the 6th connects with English Steamer for Australia.

STEAMERS FOR OCTOBER, 1868.

The following Steamships will be dispatched on dates as given below.

October 6th—COLORADO, Captain Lapidge, connecting with ALASKA, Capt. Gray.

October 14th—GOLDEN CITY, Capt. E. S. Farnsworth, connecting with OCEAN QUEEN, Capt. King.

October 22d—SACRAMENTO, Captain Parker, connecting with HENRY CHAUNCEY, Capt. Conner.

October 30th—MONTANA, Capt. J. M. Cavarly, connecting with RISING STAR, Capt. Maury.

Passengers berthed through. Baggage checked through—100 pounds allowed each adult.

An experienced Surgeon on board. Medicine and attendance free.

These Steamers will positively sail at 11 o'clock. Passengers are requested to have their baggage on board before 10 o'clock.

Through tickets to Liverpool by the "Cunard," "Inman," and "National" Steamship Lines can be obtained at P. M. S. S. Co.'s office in San Francisco, where may also be obtained orders for passage from Liverpool or Southampton to San Francisco, either via New York or St. Thomas—if desired, an amount of £10 to £20 will be advanced with the above orders. Holders of orders will be required to identify themselves to the Agents in England.

For Merchandise and Freight for New York and way ports, apply to Messrs. WELLS, FARGO & CO.

The Steamship GREAT REPUBLIC, Captain Doane, will be dispatched on Saturday, October 3d, at 12 o'clock, noon, from wharf, corner of First and Brannan streets, for YOKOHAMA and HONGKONG, connecting with the COSTA RICA for SHANGHAE.

For passage and all other information, apply at the Pacific Mail Steamship Co.'s Office, corner of Sacramento and Leidesdorff Sts.

OLIVER ELDRIDGE, Agent.

Homœopathic Physician

No. 16, O'Farrell Street,

San Francisco.

THE FAMILY PAPER OF THE PACIFIC COAST.

THE OCCIDENT.

In every true home there should be found a first class family paper—one to whose coming, father, mother, children will look with eagerness each week. Such a paper is

THE OCCIDENT.

Let all who desire such a paper, and are asking, "What paper shall I take?" read the following statement of facts:

THE OCCIDENT contains a greater amount and variety of reading matter than any other family paper on the Coast. It contains choice selections for all classes of readers. Both the child and the person of cultivated literary taste will find in each number matter which cannot fail to be interesting.

THE OCCIDENT is extensively quoted. No other weekly paper on the Coast furnishes so much matter, either original or selected, to the columns of other papers. Whole columns are frequently taken from one or another of its departments. No stronger proof of its excellence could be desired than the fact that it is so well appreciated by contemporaries.

THE OCCIDENT has a complete Agricultural Department, carefully culled from the best authorities, with all the current agricultural items of our own coast, and full market reports. The Mining Department is also very complete.

THE OCCIDENT gives a summary of Pacific Coast news and of Eastern and Foreign Telegraphic News. These items are not hastily thrown together, but are carefully prepared, and are consequently copied to a great extent. The Personal Department is the most complete collection of personal news to be found in the State.

THE OCCIDENT is the official organ of all branches of the Presbyterian Church, and contains full religious intelligence concerning the progress of all denominations. Although a religious paper, it is not sectarian. Its aim is to make men better and happier by the inculcation of the principles of the Christian religion.

THE OCCIDENT is universally admitted to surpass all other papers in the State, in typographical appearance and systematic arrangement of its contents.

Read what the papers say of

THE OCCIDENT.

"Has commenced its second volume, enlarged and improved and with excellent prospects. It is full of 'knews,' views, and family reading, and is ably edited."—*Brooklyn (N. Y.) Union.*

"It gives evidence of ability, tact, and judgment in its management."—*Cincinnati Presbyter.*

"An able paper of the same form as the *Statesman*."—*Philadelphia Statesman.*

"One of the best of papers."—*Zion's Herald, Boston.*

"Well filled with readable articles. An important accession to the literature of the coast."—*S. F. Bulletin.*

"Its typographical appearance is finer than that of any weekly paper published on this coast."—*Chronicle.*

"A periodical worthy of patronage."—*Sacramento Union.*

"It is already attracting a great deal of attention. Its original articles and judicious selections make it an intellectual treat."—*S. F. Fair Press.*

"The ability displayed gives promise of success."—*S. F. Times.*

"The best style of any weekly issued in San Francisco."—*Pacific Churchman.*

"An attractive sheet and ably edited."—*Placerville Mountain Democrat.*

"A welcome visitor in the homes of our people."—*Woodbridge Messenger.*

"A neatly printed and ably edited sheet."—*Alameda County Gazette.*

AGRICULTURAL.

Grape Culture in California.

Investigation and experience have already demonstrated that there are portions of the State of California where the soil and climate are as well adapted to the growth of the vine for the production of table grapes, raisins, or for wine making, as any other land on this globe. This, we know, is making a high claim for our comparatively new State. We have a climate equal, if not superior, to the most favored portions of Spain, France, or Italy, or the most desirable isles of Oceanica. The climate which has the least amount of rain, or moisture, during the time for maturing the grape, and the vintage season, where the dry season is continued latest into the autumn, giving opportunity for the grape to mature its richness of flavor and its saccharine qualities, without damage from mildew or from the late frosts, is the most favorable and most desirable for a successful grape-growing country. In this respect California will compare most favorably with the best countries in Europe. In *Hyatt's Hand-book of Grape Culture* are several tables comparing the amount of rain-fall and the thermometrical range in the most highly favored grape growing regions of Europe with those of California, and the author states the result thus:

It will be seen by the foregoing table that the rain-guage of California is nearer like that of Malaga—the best grape region in the world, perhaps—than any other country. California has, in spring, 4.2 inches; Malaga, 4.5 inches. In summer California has 1-10 of an inch; Malaga, 3-10 of an inch. In autumn, California has 1 inch; Malaga, 5.8 inches—showing that autumn, the vintage season, in California, is better even than that of Malaga.

The same authority also speaks thus of the thermometrical comparisons:

It appears, taking Sacramento as a criterion, or average for California, that the mean temperature of the year was 67°; at Malaga, 68°; and that the summer months at Sacramento averaged 79°, and at Malaga, 78°; Madeira and Lisbon, each 70°. The three autumn months, or vintage season, in Sacramento indicated 68°; at Malaga, 71°; Lisbon, 62°; Madeira, 67°.

Thus we see, that, in the matter of climate, California is all that can be desired to make it a first-class grape-growing country. As to the matter of *soil*, it has also every advantage possessed by the best vine-countries in the Old World. The old idea that rich soils were best for the grape is fast exploding. Rich soil will produce a more rampant growth of wood or vine, and larger fruit, but the fruit will be coarse and wanting in the saccharine properties necessary to make a palatable table grape, fine raisins, or good wine.

One of the committees of the United States Commission at the Universal Exposition at Paris in 1867, composed of such distinguished pomologists as Marshall P. Wilder and Patrick Barry, in their report on the culture and products of the vine in Europe, having visited the principal vineyards of the Rhine, and vine-growing Europe generally, speak thus:

The soil of Medoc, where stand "Chateau Margeau," "Chateau La Fitte," and "Chateau La Tour," is a bed of coarse gravel, among whose pebbles the eye can barely detect soil enough to support the merest form of vegetable life. In the vicinity of Begires, on the other hand, the land is rich and strong enough to yield any kind of crop; yet Medoc grows wine that often sells for ten dollars per gallon, while that of Begires often sells for the half of ten cents per gallon. In Burgundy there is a long hill, on whose dark red ferruginous limestone sides a wretched thin covering of earth lies, like the coat of a beggar, revealing, not hiding, the nakedness beneath. Here stand little starveling vines, very slender and very low; yet here is the celebrated "Clos Vaugeot," and this is the hill and these are the vines that "yield a wine rivalling in excellence and value that of Medoc," and to the fortunate proprietor the *Cote d' Or* is what it signifies, a "hillside of gold." At its base spreads out a wide and very fertile plain, covered with luxuriant vines, whose juice sells at from ten to twenty cents per gallon.

If you go further northward (add the committee), and examine the hills of Champagne, you will find them to be merely hills of chalk; and these instances only illustrate the rule, derived not from them alone, but abundance of others, that for good wine you must go to a dry and meagre soil.

Now, we have in California, along the hillsides and foothills of the mountains that skirt all our vallies inland from the coast, abundance of these choice grape lands, that in many cases are unfit for any other products than those of the vine. California abounds in such regions, as well as in rich alluvial soils. But we have not space to designate them more particularly on this occasion, but would again refer to *Hyatt's Hand-book of Grape Culture*, which will furnish complete directions for all that pertains to the selection of soils and climate for a vineyard, as well as to the planting and cultivating the same, and the general management of the vintage, which is now in the midst of its fruitful abundant.

The cultivator of the vine in California has everything to encourage him. With a climate that enables us to produce the choicest and most delicious and most tender varieties of foreign grapes, by outdoor culture, we shall, by another year, be able to send to New York, Boston, Chicago, etc., the most luscious specimens of the White Muscat of Alexandria, the Black Hamburg, the Lombard, the Rose of Peru, etc., during the warm days of *July*, when their appearance will be most refreshing to our Atlantic neighbors, and most profitable to the vintners of California.

Grape Grower.

Reform in Farming.

We are in the habit of running over much land, and *running* it is; we must hurry to get the work done—not to do it well. If the season is backward, worse still. There will be late sowing, which is an evil—an evil generally; there will be bad ploughing and insufficient harrowing, and ploughing and harrowing when the soil is too wet—a greater evil than all the rest. We are crowded, straitened, and become vexed, we are anything but happy, day or night. And when harvest comes the same evil is there—a crowd, work on a leap, too much of it, and perhaps rain; as late harvesting, whether of grass or grain, is the rule, the crops will be too ripe, and a large share will be lost. There will be bad harvesting, shelling of the grain, and the grain grown, musty or shrunken—less plump by not being cut early.

These are evils and they are chronic. They will remain, in all likelihood, for a long time—the same thing to be gone over. And this is farming. A man's conscience must reprove him continually, and this it not pleasant. It is an uphill, miserable business—a mere life of drudgery. And all because farming needs a reformation; needs its land cut up, or less acres to the man—less labor and better cultivation. Then there will be enjoyment as well as profit. Science will do this—a true, correct view of the case; but the will must be there to engage in it, and there is where the difficulty is.—*Journal of Agriculture.*

Valuable Table.—The following table will be found valuable to many of our readers:

A box twenty-four inches by sixteen inches square and twenty-eight inches deep, will contain a barrel.

A box twenty-six by fifteen and a half inches square, and eight inches deep, will contain a bushel.

A box twelve inches by eleven and a half square, and nine inches deep, will contain half a bushel.

A box eight by eight inches square, and eight inches deep, will contain a peck.

A box eight by eight inches square, and four and one-eighth inches deep, will contain one gallon.

A box seven by eight inches square, and four and one-eighth inches deep, will contain a half gallon.

A box four inches by four inches square, and four and one-fourth inches deep, will contain a quart.

China Lemon Tree for Hedges.—We are assured, says the *Los Angeles News*, that there are no finer plants for hedges than the China Lemon Tree. Aside from the profit to be derived from the fruit, it is very umbrageous, comes to maturity in three years, and from its thorny character will effectually keep out cattle, etc. It is likewise both plentiful and cheap, and can be grown both from the cuttings and seed. There is nothing more beautiful than a hedge of these trees laden with ripe fruit, and it is certainly more valuable than either osage, orrange, or cotton wood.

WEEKLY MARKET REPORT.

Wednesday, October 21, 1868.

Flour—Sales of 500 bbls Vineyard and Orange Extra, hf sks, $6. We quote jobbing rates for city brands as follows: Superfine, in sks, ℔ 196 lbs, $5@5 25; Extra, in sks, $6@6 25.

Wheat—Sales include 500 sks good milling, $1 80; The range of the market is $1 50@1 90 ℔ 100 lbs. Fair to choice grades, $1 75@1 90.

Barley—Quotable at $2@2 25 for feed to choice brewing. Sales of 350 sks light brewing at $2 17½; 1,000 do choice brewing at full rates; 500 do coast at $2 15; 500 do light brewing at $2 20; 8,000 sks do sold in the interior for Sacramento at an extreme figure.

Oats—Sales include 200 sks poor, $1 75; 1,000 sks light, $1 87½; 1,025 sks do, in two lots, $1 90; 300 sks fair, $2. As extremes, we quote the market at $1 97@2 12½ ℔ 100 lbs. At the close, 2,000 sks Oregon, ex steamer, private.

Potatoes—Sales of 400 sks Mission, from wharf, $1 65@1 10; 175 sks Bodega, $1 20@1 25; 200 sks Carolina, 75c@$1. We quote Monterey and Pigeon Point at $1 20@$1 25: Lighthouse, $1 50@1 20; Humboldt, $1 37½ ℔ 100 lbs.

Onions—Sales of 100 sks Yellow, in lots, $1 80 ℔ 100 lbs.

Beans—The market is somewhat irregular, and prices nominal. We quote jobbing rates for first quality as follows: Bayo, 3¾@3¾; Butter, 4@4½c; small White, 3½@3¾c; Pink, 2¾@3c; Red, 2¾c ℔ lb.

Rye—Sale of 452 sks choice, private. The receipts of new crop are expected to increase shortly, when a lower range of prices is anticipated.

Buckwheat—Quiet and nominal at $1 75 ℔ 100 lbs.

Mustard Seed—The receipts to-day are quite large, reaching 400 sks. Choice California Black is quotable at 4c ℔ lb.

Flax Seed.—The local mill continues to pay 4c ℔ lb for choice.

Bran—Sales of 100 tons, in lots, at about $22 50 ℔ ton.

Middlings—Fine sell at $37 50@40; feed descriptions $32@35 ℔ ton.

Oil Cake Meal—Meets with steady demand at $30 ℔ ton.

Hay—200 bales poor, $7 50; 175 bales medium, $13; 138 bales choice, $16 ℔ ton.

Dairy Products—California fresh roll Butter continues scarce at 55@65c, latter figure for favorite dairies; California pickled, 40@45c. Cheese is in active demand at 17@18c ℔ lb for the best California axd Eastern dairies, with sales of the former for the week amounting to upwards of 10,000 lbs within the range. Eggs are firm at 2½c ℔ dozen.

Provisions—Bacon is jobbing at 14½@15c for California smoked; Oregon do, 14@14½; California Hams, 16½@17c; Oregon do, 16½@17; Lard, 12½@14c ℔ lb.

Poultry—Live Turkeys are quoted at 17@18c ℔ lb; Hens $7@7 50; Roosters, large size, $6@7; Spring Chickens, $4@5 50; Ducks, $4@5; Quail, $1 25 ℔ dozen; Geese, $2@$2 25 ℔ pair; Venison, 8@9c ℔ lb.

Wool—Market active at a still further advance. Sales for the week, by two of the leading receiving houses, 352,000 lbs fall clip at 14½@17½c, latter figure for very choice lots of fine descriptions. Fall burry ranges from 10@12½c ℔ lb.

Hides—Sales since last Wednesday of 1,680 California dry at 14@14½c ℔ lb.

Tallow—Sales for the week of 15,000 lbs good Beef. Some receivers quote as high as 8½c, but we have heard of no sales at that figure.

San Francisco Cattle Market.

Beyond a slight decline in Lamb and Pork, there are no changes to report.

We quote slaughterers' prices as follows:

Beef—American, 1st quality, 7@8c ℔ lb.
do 2d do 6@7c ℔ lb.
Veal—Ranges from 6 to 10c ℔ lb.
Mutton—Is steady at 6@6½c ℔ lb.
Lamb—Has declined to 7@8c ℔ lb.
Pork—Undressed, 4½@5½c; dressed, 6½@7c ℔ lb, outside figures for milk or grain fed.

MINING.

Rich Strike in the North Star.

There was brought to Findley & Co.'s bank yesterday, from the North Star Mine, a large piece of vein rock that was truly a magnificent specimen of mineral richness. The rock was about 70 pounds in weight, and running entirely through it, mixed in beautiful combination, was gold, galena, and sulphurets. This specimen attracted unusual attention, although rich quartz is by no means rare in Grass Valley, and experienced miners and quartz men are united in the opinion that, in real mineral wealth, it was the finest specimen they had seen in the district. But the most gratifying fact in connection with it, to the North Star Company, is that it is characteristic of the vein on the seventh or 1040 feet level, at a distance 292 feet east of the shaft, where the workmen have just opened on a portion of the vein that presents the appearance of being equally as rich as this piece. At this point the vein is full four feet in width and extraordinarily rich. This same rich chute was struck in the sixth level last season, but it is only by the opening of the seventh level, one hundred feet lower, that they are apprized of the extent and continued richness of the chute. The rock or ore, as seen in the vein, we are assured, looks extraordinarily rich, more so than anything before seen in the North Star Mine, which certainly has been no niggard in producing rich rock from time to time. There is another fact demonstrated by the opening of the lower level in this mine that must be interesting and gratifying to quartz men generally in the districts, and that is, proving the increased width and greater regularity of the veins at great depth. Not only has this proved true at the North Star, but at the Eureka, Ophir, and every one of the deep mines, and should go to dispel any mistrust of the narrowing or giving out of the veins at lower depths. In the upper levels of the North Star the vein was variable in size, and supplied with feeders or small veins, and the country rock was hard; at its present depth it is a strong, regular ledge, without feeders or small veins, the country rock much softer, and the pay of the rock more certain and regular. The North Star is a representative mine of the district, and one among the most valuable in California.—*Grass Valley Union.*

White Pine.—Judge Pitzer, who has for some time been out in White Pine, has returned to this city. He says the mines of that region are the richest he has ever seen—ten time as rich as was the Comstock lead in its best days. His idea of the deposit in that district is that it resembles a bed of coal, as, for the distance of a mile in length, by over half a mile in width, no shaft has been sunk but has penetrated the rich ore. Toward the top of the hill upon which the mines are situated, the cap of limestone overlying the ore is quite thin, but, in descending, shafts must be sunk to much greater depth to reach the ore deposit. The depth of the deposit is unknown. The ore rapidly increases in richness in sinking into the vein, and in the deepest shaft it is so rich and tough that it is very hard to sink in it. A pick leaves a hole in the ore such as would be left in a mass of lead by a blow with the same tool. There can be hardly found in the lead any kind of ore that is worth less than $500 per ton; in fact, the whole deposit is "fearfully and wonderfully" rich.—*Virginia Enterprise.*

The Mining Prospects.—In the all absorbing political contest, we seldom hear of other matters. But the number of locations made and the extensive preparations for work in the mines throughout the county indicate that the approaching mining season will be very lively. For two or three years past there has been a great revival in placer mining all over the county, and many of the new companies organized within that time will be able to take out money the coming winter, the prospecting having been finished. The quartz mines also have excellent prospects ahead in most localities, especially in the new districts, such as Graniteville, South Fork, Meadow Lake, etc., is their cause for encouragement. Nevada County has every prospect for a prosperous winter in every department of mining.—*Nevada Transcript.*

Australian Mining Statistics.—During the past year there were 470 steam engines employed in Australia in alluvial mining, and 532 in quartz mining. The aggregate power is 20,000-horse, and the rated value ten millions of dollars. The export of gold for 1866 was nearly thirty millions, of which about five-eighths were from alluvial and three-eighths from quartz mines. The rated value of all the gold claims is thirty-seven and a half millions of dollars. The whole amount of gold raised from the first discovery of gold to January 1st, 1868, was six hundred and eighty millions of dollars.

The entire gold field extends 350 miles east and west, and 180 miles north and south. With regular supplies of water it is urged the gold product would be greatly increased. The government has undertaken to furnish ample water, by means of works on a grand scale, now under contract, and the calculation is that no mining ground shall be without plenty of cheap water at all seasons.—*Mining and Scientific Press.*

Rich Strike in the Yellow Jacket.—The body of ore struck in the 810-feet level of the Yellow Jacket mine is proving exceedingly rich. From this deposit a single chunk was yesterday taken that weighs 160 pounds. This chunk is throughout rich enough for a cabinet specimen, as it assays at the rate of $3,000 per ton (principally silver), and is sprinkled over with spangles of native gold. The extent of this new and immensely rich body of ore has not as yet been ascertained. The finding of this rich deposit at so great a depth is most encouraging to all other companies on the Comstock lode.—*Virginia Enterprise.*

Going Still Deeper.—The Bullion Mining Company will shortly commence sinking their main shaft to a further depth of 200 feet. It is now the deepest shaft in the State, being 1,200 feet in depth. The Bullion folks are bound to strike silver, the infernal regions or China. They have got below all water—got down to where it is dry and dusty—and if it does not become too hot for them, they can go down to China as well as to stop half way.—*Enterprise.*

Gold in the Cascade Mountains.—Gold is believed to exist in paying quantities in the Cascade Mountains. The Indians are frequently possessed of rich specimens, but they refuse to divulge the whereabouts of the mines. They cannot, however, long escape the enterprising settlers of this valley. Such an incentive, should it exist, will rapidly tend to develop a region capable of supporting a vast population.—*Olympia Transcript.*

The Butte Basin Mining Company have sold their steam engine, pumps and hoisting works to the owners of the Anaconda mine, at Pine Grove. They intend to work their claim in future by sluicing, having purchased the old tunnel that leads into the gulch, for the purpose of carrying off the tailings This plan, it is believed, will work.—*Amador Ledger.*

The Chlorination Works, at the Coney & Bigelow Mill are now in full operation, and are producing astonishing results. Last Saturday they cleaned up after a run of four weeks, and the result was that nearly eight thousand dollars in gold was obtained. The gold produced by this process is of the finest quality, being 902.—*Amador Ledger.*

The Grass Valley *Union* says: "In Grass Valley township, which constitutes the Grass Valley Mining District, there are over four hundred distinct quartz ledges recorded, and not less than five thousand mining claims, on these ledges, registered."

The Coe Mine.—This mine is now looking better than at any previous time. At the depth of 365 feet, rock is looking splendidly and is certain to result in a fine yield when crushed.—*Union.*

Of the many millions of tons of coal produced throughout the world annually, England furnishes 104,000,000; United States 25,000,000; Prussia and the Zollverein 20,000,000; France 10,000,000 and seven other countries the balance.

Klamath River.—Mining on the bars in this stream, is said to be paying good steady average wages to a large importation of new Chinamen, who have lately commenced operations between the mouth of Humbug and Cottonwood.

The Shasta Hydraulic Mining Company has been incorporated to mine in Piety Hill district, Shasta county. Capital stock, $100,000.

GENERAL SELECTIONS.

The Church and Science.

The following article from the *Christian Intelligencer* may be read with profit by all and especially by those who imagine that the investigating spirit of modern science is hostile to Orthodox Christianity:

A very prevalent disposition of the present day is to suppose and then to assert that there is a feud between the *Church*, or perhaps we should rather say *faith* and *science*. We hold this to be a mistake. That science may bring new facts to light, and that new theories may be suggested and even established, it is not to be denied; but these relate to the action of physical laws and cannot effect a single doctrine of the Scriptures.

The Bible does not profess to furnish its readers with a system of natural history, or to explain in regular order the laws which control the physical universe, and yet it is worthy of note that the science of the Bible is wonderfully in advance of the ages in which its books were written. Many of its simplest statements were not understood as scientific verities until thousands of years had followed their first announcement. If the Scriptures employ language accommodated to the usages of ancient times, in speaking of physical facts, and represent phenomena as being what they seem to be, it is just what the wisest of modern philosophers do in our own day, and what their successors probably will do in all time.

We are not concerned, therefore, nor do we admit that there is good ground for alarm, in the alleged discoveries which reward the labor of modern research. In some cases, the theories which are suggested by facts are ingenious and plausible, and probably true, but in others the clamor is simply absurd and need awaken no greater anxiety than the song of certain domestic fowls before a change of weather. In all cases in which science has attained indisputable results, these have been in harmony with the Scriptures, though at times the commonly received interpretation of the sacred record has been modified. As usual, extremes are to be avoided, and there are opposite poles of error which are to be shunned in the discussion of the claims of science. They who are wise will be hasty neither to reject nor to accept the teachings which it proffers when they relate to physical laws, or facts. The same principle holds good when they seem to invalidate the historical accuracy of the sacred writings. Time will show what is truth, and after gaining victories in each successive age, it is right that the living word should have the confident faith of all who rejoice in its power to vindicate its own authority.

It is not seemly to acknowledge that there is a feud between science and orthodox faith, for true science is simply part and parcel of orthodoxy. Orthodoxy is not a fossil. It is a thing of life. It means progress. It must move. It never stagnates. Dead formality, which arrays itself in the grave-clothes of other generations, is not orthodoxy. Orthodoxy is simply right doctrine.

Now that which is true in its relation to the moral duties which we owe to God and to our fellow-men, is as true to-day as it was yesterday, and it will be as true to-morrow and in all time, as it is to-day. The truth itself cannot change, for it is abiding as its ever-living Author; but new modes of presenting, illustrating, defending and enforcing that truth are not to be rejected, but sought out rather, and when found or furnished are to be thankfully employed. This is the province of science, and they are not wise, however pious they may be, who lift up their hands in holy horror whenever a new thought is hurled at their heads with such force as to make itself felt, and who denounce the thing incontinently as neology in its worst form. And yet it will not do to be too severe in allusions to this amiable weakness, for thoughit be an infirmity, it has a bright side.

We hear so much that is styled learned criticism, so much that vaunts itself as science of the first water, but is after all sheer twaddle, that one naturally becomes suspicious, and this propension, unless checked, is apt to grow out of all proportion. We have respect, therefore, for an orthodoxy which is somewhat recusant, and even if it be recalcitrant, so much the better, provided only it be not the vigor of obstinacy, for it proves that there is a *vis motrix*, and so is good evidence of life and power; but we want orthodoxy that will think and make others think; we are willing it should strike in the right direction, but it must be with due deliberation, and after good and careful examination. We would not have its heavy blows fall on the heads of friends, when there are enemies enough in all conscience, who ought to have the benefit of such visitation, and in whose behalf it is piety itself to wish that controversially their heads may be broken beyond the power of leech or plaster to mend. We are to remember, also, that there are established truths as there are errors which have been stamped as such by the verdict of Christian consciousness in all ages of the Church, and we must be prepared to discriminate between the precious and the vile, so that when a heresy, which has been covered with the moss of centuries, is presented in some new form or relations, and we are challenged, in the name of science to accept it as a valuable contribution to the cause, or a rich addition to the store of truth, we may be prepared to put it where it belongs.

This is a busy age. In the walks of trade, of industry, of science, all is life and activity. Every department pertaining to theological literature is cultivated with intense interest. There is a winnowing process in progress, though not every critic who professes to have a fan in his hand, is competent to purge the threshing-floor. That there is abundance of chaff in the air is undeniable. Where it all comes from is not so easily told, but that a deal of it lights on the floor which workmen pretend to clean is susceptible of proof positive. We wish some of them in our own country and more across the water, would rest from their labors, or if that is not possible, turn their vast energies into some more profitable calling, cease cavilling about the genuineness of Matthew's gospel, or raising silly doubts about the gospel or epistles of St. John and take to making boots, or hats, or nutmegs and hams—anything to turn an *honest* penny and make a good living—and so fulfill the end of their creation which they have proposed to themselves. But we would not regard every man who shakes the goodly tree of Christianity as impelled by malice. If the leaves and the decayed fruit drops, and the withered twigs fall, the hand that has done this has made no felonious assault. We owe thanks and not censure for such service. The tree is not torn from its roots, nor are the fruitful branches severed from the stem by any such process, and the more thoroughly they are shaken, and the stronger the power that agitates them, the greater is the debt of gratitude which is earned, for the more parasites that are cast from boughs, the sounder will be the fruit of the good tree and the more vigorous will be its growth. Our faith must be strong enough for this. We lose nothing that is worth the keeping. Not a hope that has sustained, nor a promise that has cheered in hours of anxiety and sorrow can be torn from us, for whatever else may fade and fail, the truth is imperishable. Christ is the Truth, and Jesus Christ is the same yesterday and to-day and forever.

Literary Oddities.

Racine composed his verses while walking about, reciting them in a loud voice. One day, while thus working at his play of Mithridates, in the Tuileries garden, a crowd of workmen gathered around him, attracted by his gestures; they took him to be a madman about to throw himself into the basin. On his return home from such walks he could write down scene by scene, at first in prose, and when he had written it out, he would exclaim, "My tragedy is done!" considering the dressing of the acts up in verse as a very small affair. Magliabecchi, the learned librarian to the Duke of Tuscany, on the contrary, never stirred abroad, but lived amid books and upon books. He passed eight-and-forty years in their midst, only twice in the course of his life venturing beyond the walls of Florence, once to go two leagues off, and the other time three and a half leagues, by order of the Grand Duke. He was an extremely frugal man, living upon eggs, bread, and water, in great moderation. Luther, when studying, always had his dog lying at his feet, a dog he had brought from Wartburg and of which he was very fond. An ivory crucifix stood on the table before him, and the walls of his study were stuck round with caricatures of the Pope. He worked at his desk for days together without going out; but when fatigued, and the ideas began to stagnate in his brain, he would take his flute or his guitar with him into the porch, and there execute some musical fantasy (for he was a skilful musician), when the ideas would flow upon him as fresh as flowers after a summer's rain. Music was his invariable solace at such times. Indeed, Luther did not hesitate to say that, after theology, music was the first of arts. "Music," said he, "is the art of the prophets: it is the only art which, like theology, can calm the agitation of the soul and put the devil to flight." Next to music, if not before it, Luther loved children and flowers. The great, gnarled man had a heart as tender as a woman's. Calvin studied in his bed. Every morning, at five or six o'clock, he had books, manuscripts, and papers carried to him there, and he worked on them for four hours together. If he had occasion to go out, on his return he undressed and went to bed again to continue his studies. In his later years he dictated his writings to scretaries. He rarely corrected anything. The sentences issued complete from his mouth. If he felt his facility of composition leaving him, he forthwith quitted his bed, gave up writing and composing, and went about his outdoor duties for days, weeks, and months together. But as soon as he felt the inspiration fall upon him again, he went back to his bed, and his secretary set to work forthwith. Rousseau wrote his works early in the morning; Le Sage at midday; Byron at midnight. Villehardouin rose at four in the morning, and wrote till late at night. Aristotle was a tremendous worker; he took little sleep, and was constantly retrenching it. He had a contrivance by which he awoke early, and to awake was with him to commence work. Demosthenes passed three months in a cavern by the sea-side, laboring to overcome the deffects of his voice. There he read, studied and declaimed. Rabelais composed his life of Gargantua at Bellay, in the company of Roman cardinals, and under the eyes of the Bishop of Paris. La Fontaine wrote his fables chiefly under the shade of a tree, and sometimes by the side of Racine and Boileau. Pascal wrote most of his Thoughts on little scraps of paper, at his by-moments. Fénélon wrote his Telemachus in the Palace of Versailles, at the court of the Grand Monarque, when discharging the duties of tutor to the Dauphin. That a book so thoroughly democratic should have issued from such a source and been written by a priest may seem surprising. De Quincy first promulgated his notion of universal freedom of person and trade, and throwing off all taxes on the land,—the germ, perhaps, of the French Revolution,—in the boudoir of Madame de Pompadour! Pope could never compose well without first declaiming for some time at the top of his voice, and thus rousing his nervous system to its fullest activity. The life of Leibnitz was one of reading, writing and meditation. That was the secret of his prodigious knowledge. After an attack of gout, he confined himself to diet of bread and milk. Often he slept in a chair, and rarely went to bed till after midnight. Sometimes he spent months without quitting his seat, where he slept by night and wrote by day. Bacon knelt down before composing his great work, and prayed for light from Heaven.—*Hartford Churchman.*

A Sabbath at Keaiwa, Kau.

It has long been our desire to spend a Sabbath among Hawaiian Christians at some station where there was settled a native pastor, unassisted by any foreign missionary. This opportunity we enjoyed during our partial tour around Hawaii on our arrival at Keaiwa, situated about midway between the volcano of Kilauea and the southern part of the island. The church edifice is situated within one mile of the recent mud-flow which has attracted so much attention. In order to enjoy the privilege of a quiet Sabbath at this place, we halted in our journey, and spent one day in riding over the region overspread by this remarkable land slide or mud flow.

The church is situated in the open country, with only one native house in sight besides that of the pastor, the Rev. Mr. Kauhane. On the morning of July 26th, at "the hour of prayer," about half-past nine o'clock, we walked in from our lodgings to the church. Having repeatedly passed the church during the previous week, the thought was often suggested, from whence can this church be filled with hearers, for the region appears uninhabited! To our great surprise, on entering the church, we found the pastor engaged in teaching a Bible class composed of more than one hundred adults. In the schoolhouse near the church there was a Sabbath-school of about twenty-five children. The pastor questioned his people upon the leading facts of interest, as stated in the 4th, 5th, and 6th chapters of Genesis.

The congregation assembled at 11 A. M. When every seat in the church was occupied, the number of hearers was over two hundred. A more attentive audience we have seldom witnessed. The services were conducted in the usual Congregational order. The pastor commanded the attention of his audience, although not speaking in the usual animated and gesticulating style so common among Hawaiians. He discoursed from the text, Ephesians 5:8: "For ye were sometimes darkness, but now are ye light in the Lord; walk as children of the light."

We noticed that the preacher assisted his memory by glancing at a brief skeleton of his discourse. On retiring from the church, we asked him for his "notes," when he gave us a slip of paper, of which this is the translation:

Ephesians 5:8. *First.*—Look at the works of those in darkness, knowing not the light. (1.) Ignorance. *a.* Ignorance in reference to the body. *b.* Ignorance in reference to the spirit.

Second.—The new light of the present time—the Lord having come. (1.) Wisdom. *a.* Wisdom in reference to the body. *b.* Wisdom in reference to the spirit.

Third.—What is your thought, friends and brethren, in reference to this subject?

Upon inquiry, we learned that this native pastor was supported by his people upon a salary of two hundred dollars per annum. He was educated at Mr. Lyman's school in Hilo, Lahainaluna Seminary, and the Theological School at Wailuku. He has been settled several years at this place. The parsonage was in keeping with the modest appearance of the church. Two weeks after our departure the island association was to meet at this place, and the members were to be entertained by the Rev. Mr. Kauhane.

The church and parish have recently been severely afflicted by the terrible earthquakes which have shaken Hawaii. Ten of the thirty-one destroyed by mud-flow were members of this church, hence about one-tenth of the church-members perished. We rode over the very spot where their houses stood, and where, up to the moment when the earthquakes and mud-flow occurred on the 2d of April, they were living in apparent security. Not a timber or vestige now remains of their dwellings. It so happened that the Rev. Mr. Kauhane saw the catastrophe. At the moment, for security he lay upon the ground in front of the parsonage, and was looking towards the mountain, or hill, about one mile distant when the terrible earthquake detached earth, rocks, trees, etc., from the brow of the high cliff, sufficient to cover two and a-half miles long, and from half to three-fourths of a mile wide. The work of destruction took place in about three minutes. It was our privilege to ride over the flow with the Rev. Mr. Kauhane, and he pointed out the very spot where a tenth part of his church was instantly buried with earth, and where their bodies will rest until "the dead shall hear the voice of the Son of God; and they that hear shall live." We look back upon the Sabbath passed among the people of Keaiwa, Kau, as one of the most pleasant and profitable among the Sabbaths of our early pilgrimage. If all native churches will compare favorably with this, then we would say the Puritan Mission to the Sandwich Islands has not been a failure.—*The Honolulu Friend.*

IDLE men are dead all their lives.

Religious Books.

A great variety of works in all departments of Religious Literature, such as Devotional Books, Bible Dictionaries, Sermons, Religious History, and Biography, Annotations, Commentaries, etc., published by the

PRESBYTERIAN BOARD OF PUBLICATION.

Also, a large assortment of Sunday School Libraries and Hymn Books, including THE HYMNAL, Presbyterian Psalmodist, Presbyterian Juvenile Psalmodist and Children's Praise, to which the Publishers call the attention of

SUNDAY SCHOOL TEACHERS AND OFFICERS,

And of all who desire books in any of these departments. All such are requested to call and examine the publications of the Presbyterian Board at the Depository for the Pacific Coast, which has been established at the store of

Family Reading.

He giveth His Beloved Sleep.

"He giveth his beloved sleep;"
O precious words of him
Who knows our cup of grief is deep,
But filleth to the brim.

"He giveth his beloved sleep,"
Thus end the weary years;
No more to toil, no more to weep,
With mingled hopes and fears.

He giveth his beloved rest
From trials, care and pain;
To be with Christ, how truly blest,
How great the spirit's gain.

He giveth his beloved joy;
The night shall pass away,
And praises every heart employ,
In heaven's eternal day.

O sleep of hope! O rest of God!
Beyond this scene of strife,
Thy pathway all the saints have trod
To joys of endless life.

Lo! through thy gates the glory streams
Upon our longing souls;
And far exceeds our brightest dreams,
The heaven that near us rolls.

Then let us sorrow not as those
Who in the darkness grope;
For Christ's beloved ones repose
In resurrection hope.

Their souls are now in paradise,
With him whom they adore;
Their bodies soon in power shall rise,
Like his to die no more.

They rest—till through the burning stars
He thunders on our coasts;
They sleep—till he shall rend the bars
That bind the sleeping hosts.

This song of hope our faith shall keep,
Till faith is lost in sight;
"He giveth his beloved sleep,"
And brings the morning light. —*Evangel.*

Little Things.

Shall we strike a bargain, Fate?
And wilt thou to this agree?
Take whatever things are great,
Leave the little things to me!

Take the eagle, proud and dark,
Broad of shoulders, strong of wing;
Leave the robin, leave the lark,
'Tis the little birds that sing!

Take the oak-wood towering up,
With its top against the skies;
Leave one little acorn cup—
Therein all the forest lies.

Take the murmurous fountain heads,
Take the river, winding slow,
But about my garden-beds,
Leave the dew-drop, small and low.

Winding waves are fine to view,
Sweet the fountain's silver call;
But the little drop of dew
Holds the sunshine, after all.

Take the sea, the great wide sea,
White with many a swelling sail;
Leave the little stream to me,
Gliding silent through the vale.

Take the palace all ashine,
With its lofty halls and towers;
Let the little house be mine,
With its door-yard grass and flowers.

Take the lands, the royal lands,
All with parks and orchards bright;
Leave to me the little hands
Clinging closely morn and night.

Ah, for once be kindly, Fate,
To my harmless plan agree;
Take whatever things are great,
Leave the little things to me! —*Alice Cary.*

Somebody Loves Me.

Two or three years ago the Superintendent of the Little Wanderers' Home in Boston, received, one morning, a request from the Judge that he would come up to the court-room. He complied directly and found there a group of seven little girls, ragged, dirty, and forlorn, beyond what even he was accustomed to see. The Judge pointed to them (utterly homeless and friendless) and said, "Mr. T——, can you take any of these?"

"Certainly; I'll take them all," was his prompt reply.

"All! What in the world can you do with them?"

"I'll make women of them."

The Judge singled out one, even worse in appearance than the rest, and asked again: "What can you do with *that one?*"

"I'll make a woman out of her," Mr. T—— repeated firmly and hopefully. He took them all home. They were washed and dressed, and provided with a good supper and beds. The next morning they went into the school-room with the rest of the children. Mary was the name of the little girl whose chance for better things the Judge thought so small. During the forenoon the teacher said to Mr. T——, in reference to her, "I never saw a child like that; I have tried for an hour to get a single smile, and failed."

Mr. T—— said afterwards, himself, that her face was the saddest he had ever seen—sorrowful beyond expression; yet she was a very little girl, only five or six years old.

After school he called her into his office, and said pleasantly, "Mary, I've lost my little pet. I used to have a little girl here who would wait on me, and sit on my knee, and I loved her very much. A kind gentleman and lady adopted her, and she went to live with them. I miss her and I should like you to take her place and be my pet now; will you?"

A gleam of light flitted across the poor girl's face as she began to understand him. He gave her ten cents, and told her to go to a store near by and get some candy. While she was out he took two or three newspapers, tore them in pieces, and scattered them about the room. When she returned, in a few minutes, he said to her "Mary, will you clear up my office a little for me: pick up these papers, and make it look real nice?"

She went to work with a will. A little more of this sort of management—in fact, treating her just as a kind father would—brought about the desired result. She went into the school-room after dinner, with so changed a look and bearing, that the teacher was astonished. The child's face was absolutely radiant; and half fearful of some mental wandering, she went to her and said, "Mary, what is it? What makes you look so happy?"

"Oh! I've got somebody to love me! *somebody to love me!*" the child answered earnestly, as if it were heaven come down to earth.

This was all the secret. For want of love that little one's life had been so cold and desolate that she had lost childhood's beautiful faith and hope. She could not at first believe in the reality of kindness or joy for her. It was this certainty that some one loved her, and desired her affection, which lighted the child's soul and glorified her face!

Mary has since been adopted by wealthy people, and lives in a beautiful home in New England; but more than all its comfort and beauty, running like a golden thread through it all, she still finds the love of her father and mother.

Shall we who have many to love, and to love us, refuse to be comforted—to see any value and use of life—any work for our hands to do—because one of our treasures may be removed from our sight—from our home and care to a better?

And oh! shall we let any of these little ones go hungering for affection—go up even to God's throne, before they find "one to love them!"—*Arthur's Magazine.*

Female Friendship.

It is a wondrous advantage to a man in every pursuit or vocation, to secure an adviser in a sensible woman. In woman there is at once a subtle delicacy of tact and a plain soundness of judgment which are rarely combined to an equal degree in man. A woman, if she really be your friend, will have a sensitive regard for your character, honor and repute. She will seldom counsel you to do a shabby thing, for a woman friend always desires to be proud of you. At the same time her constitutional timidity makes her more cautious than your male friend. She, therefore, seldom counsels you to do an imprudent thing. By female friendships I mean pure friendships—those in which there is no admixture of the passion of love, except in the married state. A man's best female friend is a wife, of good sense and good heart, whom he loves, and who loves him. If he have that, he need not seek elsewhere. But supposing a man to be without such a helpmate, female friendship he must still have, or his intellect will be without a garden, and there will be many an unheeded gap even in its strongest fence. Better and safer, of course, such friendships where the disparity of years or circumstances puts the idea of love out of the question. Middle life has rarely this advantage; youth and old age have. We may have female friendships with those much older and those much younger than ourselves. Molier's old housekeeper was a great help to his genius; and Montagne's philosophy takes both a gentler and a loftier character of wisdom from the date in which he finds in Marie de Gournay an adopted daughter, "certainly beloved by me," says the Horace of essayists, "with more than paternal love, and involved in my solitude of retirement as one of the best parts of my being." Female friendship, indeed, is to a man the bulwark, sweetner, ornament of his existence. To his mental culture it is invaluable; without it all his knowledge of books will never give him knowledge of the world.—*Pittsburg United Presbyterian.*

Prayed Home.

A minister tell us of a weather-beaten sailor who, on his homeward journey, encountered a dreadful tempest. His mother, who had expected his return, was waiting with deep anxiety to see her son. During the raging of the storm she trembled, as she sat in her cottage, for her beloved child's safety; and with strong faith in God she earnestly prayed for his preservation.

When night came, she and her husband retired to bed; but not to rest. They were far too anxious to sleep. As the morning dawned, the winds were hushed, and all was calm. Presently the little gate in front of their dwelling turned on its hinges, the door opened, and their son, their beloved son, for whose life they had feared, stood before them. The vessel had been driven into one of the many harbors on the coast, and was safe. "Mother," said he, as tears ran down his rugged face, "I knew that you'd pray me home."—*Presbyterian.*

Irritability of Illness.

Those who are blessed with good health can never know, till they are in turn called upon to suffer what heroic strength of spirit lies hidden under the mask of silent, uncomplaining suffering; how strong the temptations are to be unreasonable, pettish, or repining; how difficult it is to be grateful, and still more to be amiable, when the irritation of every nerve renders the most skillful attendance irksome; when the irritated frame loathes the sunshine of a smile, and dreads the tear and the cloud, where all is pain, and weariness, and bitterness! Let the healthy lay these things ever to heart, and while they scrupulously perform their duty—while they reverence the fortitude and patience of the gentle and resigned, let them have pity on many a poor and querulous sufferer.

Our American Boys.—The Tory *Times* calls attention to the fact that, in passing through the large workshops, manufactories, foundries, and other establishments in our cities, where large numbers of journeymen and apprentices are employed, you will not fail to notice that at least three-fourths of the employés are foreign born, or the sons of foreign parents. This is particularly the case with the younger journeymen, and almost universally so with the apprentices. It is to be regretted that American boys are spoiled by their parents, who put false notions into their heads about genteel professions. They are spoiled, and become idlers and drones.

Long Sermons.—A lawyer who consumes three hours in a question of law relating to the ownership of a barrel of apples, is indignant at his minister for exceeding twenty-five minutes in unfolding one of the great principles of morality, in the observance of

which the tolerable existence of society depends. The judge who fills two hours with his "opinion" on the right of the counsel to challenge a witness, grumbles at his minister because he has prolonged the discussion of fundamental laws of human progress to thirty minutes. The physician who takes ten minutes to prepare the medicine for a headache is nervously restive if his minister spends only twice as many in attempting to relieve a chronic heartache. The belle who has spent—how long?—in adjusting the bows of her bonnet, is remorseless in her criticisms on the minister who does not finish his meditations on the Fatherhood of God in fifteen minutes. The fop, who has combed, and stroked and perfumed and waxed his moustache for half an hour, is mortified past endurance if the poor minister is not through his discussions of the immortal life "inside" of twenty minutes.

Young Folks.

Boys and Girls.

Raking in the meadows,
Riding in the hay.
Racing down hill shadows,
Pulling posies gay;
Hunting for the hen's nest,
Hunting for the cow,
On the fence at see-saw,
Jumping from the mow:
Gaming out at moonlight,
Playing hide and seek,
Fishing in the mill pond,
Sailing vessels fleet,
Loitering by the wayside
On the road to school,
Butterflies a chasing,
Wading in the pool.

Hurrah! life never comes but once
So never mind the weather;
We are young and happy now,
Boys and girls together.

Swinging in the wild wood,
Playing bat and ball,
Kindling ruddy bonfires,
Climbing nut trees tall;
Sitting on the house roof,
Swinging on the style,
Making dolls of pumpkins,
Marching Indian file;
Blowing airy bubbles,
Reading funny books;
After fruit and berries,
Wading in the brooks,
Playing games of marbles,
Hiding up the lane,
Jack-o'-lanterns making,
Raising merry Cain.

Boys can be mischievous,
Girls wild as a feather;
But there is nothing half so gay
As boys and girls together.

Harry'll grow a sailor,
Hennie'll buy and sell,
Mark'll be an artist,
Mamie'll be a belle,
Will'll go a soldier,
Frankie'll stay at home,
Sadi'll marry Herbert,
Jack'll marry Rome;
Ed. and Pete'll "farm it,"
John will be a fool,
A vulture of a lawyer,
And Jane'll keep a school;
Nellie'll reign in Paris,
Robbie'll break his heart,
Hermie'll be a minister—
And we'll always live apart.

But we'll look back to golden days,
Through memory's "specs of leather,"
When we were jolly boys and girls—
Boys and girls together. —*Young America.*

Two Oranges.

Ralph and Lulu were brother and sister. Ralph was the sunniest, homeliest little tow-head that ever waded through a mud-puddle, and Lulu was as bright as a sunbeam and as sweet as a spring violet. They made the sharp, staring little house bubble all over with love. Their grandmother said, "they were always into something, if it was not one thing, it was another—either tearing their clothes off or pulling the house down," but her eyes were twinkling with pride and pleasure all the time she was saying it, and she would not have known how to live without their rush and bustle.

One day an old gentleman gave them an orange apiece. They had never had more than half a dozen oranges before in all their lives, so it was no wonder that they said it was almost as good as Christmas.

Lulu was smelling and smoothing hers, and twirling about on her toes with delight, when her mother asked,

"Now, which of you is going to be generous and give your orange to Mr. Johnson, the poor, sick man?"

The bright look faded out of their eyes, and the smiling faces grew sober. It was so seldom they had an orange, or candy, or anything nice, it seemed too bad to give up either of these.

"How should you feel if you were sick in bed," continued their mother, and could not roll a hoop, or sail a boat or sit up a minute, but had to lie in bed all day long and ache and be so tired all over? Wouldn't you like to have somebody give you an orange?"

"But, mamma," began Lulu, uneasily, for she could not deny that what her mother said was true, but the orange was dear to her little heart.

"And supposing we were poor, like Mr. Johnson so that we hadn't anything to cool your throat with," continued her mother, "and you never had an orange, or anything good, except when somebody gave it to you; then if a little girl and boy had a whole orange apiece, shouldn't you wish they'd be generous and give you one?"

"I would give him mine, if I only knew he would be polite and say, 'No I thank you,'" said Lulu.

"Perhaps he is well by this time," suggested Ralph.

His mother shook her head. "He will never be well again till he reaches heaven."

"Is he going to die?" asked Ralph solemnly.

"So the doctor says."

"Then I shouldn't think he would want my orange," broke in Lulu, like a flash. "I wouldn't take it if I were he. He'll have more than he can eat in heaven, and I haven't got but just this one."

"Who put such an idea as that into your head?" asked her mother, rather startled at Lulu's theology.

"Why we read about it at prayers the other day. Don't you remember, mamma?" said Lulu feeling a little superior that she remembered so much more than her mother did. "It was all about a tree right on the bank of the river, and oranges enough on it for everybody and some over."

"I am glad you were so attentive, Lulu, but it did not say oranges—only fruit."

"Didn't it?" said Lulu, with a disappointed look.

"Never mind, Lu. You couldn't eat oranges in meeting, you know," said Ralph, who always found sunbeams even in shadows. "But," then Ralph hesitated.

"But what my son," said his mother encouragingly.

"But that is what they do in heaven, isn't it?—go to meeting and all sit on sofas like the minister. So what good would oranges be?" and Ralph gave a mournful sigh. The sight of the orange tree and the babbling brook was evidently sweeter to him than that of the congregation that ne'er broke up.

"Then folks make believe it is a great deal better than it is," burst in Lulu, impetuously. "And I shall stay here just as long as I can." "Listen to me a minute, children," said their mother. "If I were to go away to a very far off country, and were to send you word that though it was so different from our home here that I could not describe it to you so that you could understand it, still it was more beautiful than anything you had ever seen, should you believe me?"

"Yes, mamma," said both children.

"And should you want to come and live with me?" she asked.

"I would go anywhere with you," said Ralph, coming closer to her.

"I should think you might take us with you the first time you went," said Lulu, decidedly.

"So heaven is more beautiful then anything we can imagine, though the Bible does not tell us how it looks. Every one is happy there. There are no unkind words. There is no pain, and no tears are ever shed."

"What! Don't they ever get cross and cry? Not when they get stones in their shoes, and the strings get in hard knots, and everything?" interrupted Lulu.

"They leave the stones and shoes here. But if my little girl asks Christ to help her, she can be patient and pleasant even with stones in her shoes, and her strings in hard knots. And Christ will be in heaven loving us and watching over us just as he does here, only we shall see him and be like him, and we shall be trying all the time to do just as he wants us to do, instead of being selfish and only thinking what we want ourselves."

"Mr. Johnson may have my orange. I'll be as much like heaven as I can," said Lulu, blundering as usual. "But I hope I shall have a doll's house made out of red and white checkers, and chairs made out of real, live stars, and a stove that will boil water. That's prettier than anything I can think of!"

"How can I make her understand anything about it!" thought her mother, hopelessly.

"Let's give him both oranges, Lulu," said Ralph. Lulu agreed. "But do you suppose Christ would like to have such a little boy as me in heaven?" he asked earnestly.

His mother's heart gave a throb. "When He was on earth, he took little children in his arms and blessed them, and what he loved then he loves now as well," she said.—*Advance.*

The Elder Brother.

"Oh! Charlie, be careful, little brother; you are skating too near that hole."

The words came too late. Charlie did not see the hole, and before his brother had finished speaking, he saw the little fellow go out of sight under the ice.

With all speed Harry hastened to the spot; he could see his brother, and creeping to the edge, he reached out his hand; but the ice was not strong enough to hold him, and he fell in. Other boys, hearing cries, were soon on the spot. Harry caught his little brother, held him up where strong arms could reach him. "Save, Oh, save my brother!" he cried; then sank to rise no more.

The elder brother gave his life for the younger. Do you not believe Charlie thinks tenderly and lovingly of this elder brother? Do you think he will love to remember all he ever said to him, and will seek to do what would please him?

And this is what Jesus has done for you. He is your "Elder Brother." He gave his life for you. He died that you might live. "Greater love hath no man than this, that a man lay down his life for friends."

Every Bit of it.

The other evening at the prayer-meeting, many newly converted persons, both old and young, arose to tell what God had done for their souls, and their determination to love and serve Him. Among the rest, a little girl about 7 years old jumped up, her face beaming with happiness, and straining her childish voice to speak as loud as she could, she said,

"I have given *my* heart to Jesus, *every bit of it.*" Was not that a beautiful little speech? I wonder if all the older people who had risen before could say what she did: "I have given my heart to Jesus, every bit of it."

And is it not what Jesus wants? "My son, give me thy heart," is the command of the Bible. And will he be satisfied with having only a part of it? No indeed; he must have the whole, *every bit of it.*

News Summary.

PACIFIC COAST ITEMS.

The only subject which is talked or written of at present is the earthquake. The earthquake and the excitement connected with it cause a delay of one day in the publication of The Occident, and if the paper is in any respect not up to its usual standard of perfection, we can only say, by way of excuse—earthquake. The most violent shock, and the only one that did any damage, took place a few minutes before 8 o'clock, Wednesday morning. It was the heaviest shock on record which has ever taken place in California. Much damage was done to property in the city, but it was confined to that portion which is built on made land, and even there no properly constructed buildings were seriously damaged. The amount of loss is variously estimated at from $300,000 to $3,000,000. Four persons were killed by falling cornices and chimneys, and many were more or less severely injured in the same manner, and by jumping from windows through fright. The shock seems to have been heavier in this city than in the interior, so far as heard from, except in Alameda County. At Alvarado, Haywood, and San Leandro all brick and adobe buildings were destroyed and no chimneys remain standing. The warehouse at Haywood and the flouring mill were ruined; also the court house at San Leandro. At San Jose several buildings were badly injured, also in San Mateo County, including the court house at Redwood City. At Pacheco some brick buildings were thrown down. In other parts of the State no very serious damage was done, although the shock was the most violent ever experienced. Lighter shocks were experienced at intervals throughout the day and evening. The excitement in the city was of course very great, places of business were generally closed and the streets were filled with an excited crowd. The course of some of the daily papers in filling the columns of their extras with exaggerated and sensational rumors is much to be regretted, for not only do these accounts needlessly increase the panic in our midst, but being telegraphed to the East, they will create an impression which the true account, received later, will not entirely dispel.

A company has been formed and will commence operations during the coming year, to establish a French and Swiss colony in this county. The Santa Anita and the two Azuza ranchos are reported to have been purchased for that purpose.

An apple tree in the garden of Mr. Foy, of this city, is now having the second crop of leaves and flowers this year. We have seen both apple and pear trees have two crops of fruit, but never a second crop of leaves the same year after the old ones had fallen.

There are 115 men employed upon the railroad, and we can look for the iron horse to be snorting before the first of July, 1869. No railroad ever yet was built that did not benefit the community at large; no true progress can be expected until the city of Los Angeles is united with the sea.—*Los Angeles News.*

We understand that arrangements are being made for the establishment of a first class ladies' seminary in San Leandro. The leader in the matter has had large experience in such enterprises, and, we feel confident, will receive the hearty support of our people. A new seminary building, 40x40, two stories high, with a cupola, will be erected near the center of the town, which will add another attractive feature to the many inducements our locality already possess as a beautiful place for a residence.—*Alameda County Gazette.*

Since the recent rains quite a number of our farmers have commenced seeding, while others are preparing to put in their seed as early as possible. All who possibly can, should take advantage of these early rains and get their seed in the ground before the winter rains come on. Grain sown in September, or even in August, will do much better in this valley than that put in after the rainy season sets in. We learn that there will be a third more acres sown in Tulare this season than any year previous.—*Visalia Delta.*

The Collegiate Institute at Napa, according to the *Register*, is to be fitted up by parties from the East, and a first class school, with a full board of accomplished teachers, is to be opened on January 1st.

The town of Suisun, including Fairfield, has been formally incorporated as a city. A charter election will be held on the 17th day of November.

The old adobe Church at Mission San Jose, which has been standing over 100 years, was completely demolished by the earthquake.

A farmer in Reese River Valley raised wheat the past season which yielded 122⅔ bushels per acre.

The cost of freighting flour across the Isthmus, from this city to New York is $2 50.

Six and one-half hours is the time from San Francisco to Sacramento *via* Vallejo.

The *Bulletin* claims that San Francisco has a population of 153,000.

They have had hard rains at Yreka.

TELEGRAPHIC.

Eastern.—Gen. Hooker has been placed on the retired list....The speakers of both Houses of Congress have declared the Houses adjourned to Nov. 10th....A severe storm on Lake Michigan, on the 16th, caused the loss of many vessels and several lives....A cable is talked of direct between New York and Belgium....Gen. Hancock has returned to Washington....The steel works at Troy, N. Y., were destroyed by fire on the 20th....The Protestant Episcopal Convention will meet at Baltimore in 1871....It is thought that Gen. Stoneman will be appointed to take Gen Hooker's place....The railroad conductors have had a meeting to form a Mutual Insurance Co., each member to pay $1 to families of deceased persons....The Isthmus Canal Company has been organized in New York with Peter Cooper as President. ....The President has removed White, one of the U. P. R. R., Commissioners, and appointed C. Wendell in his place.

Political.—In Dacotah the Republican candidate for Delegate to Congress has been elected....The *World* attributes the defeat of Seymour to Grant's popularity and Blair's unpopularity, and advises the withdrawal of the Democratic candidates....The *Herald* favors Chase and Adams. It is probable that although such a step has been seriously thought of, no change of candidates will be made....The Democrats of the 2d New York District have nominated J. G. Schumacker for Congress....Oakes Ames has been renominated for Congress from Massachusetts....Latest accounts put the majority in Pennsylvania at 10,000, and in Ohio at 18,000....The election in Philadelphia was carried by the Democrats by means of illegal votes, and is to be contested....Horatio Seymour will take the stump....B. F Edmunds is re-elected U. S. Senator from Vermont....The majority in Kansas is 2,400....Great efforts are made to induce Blair to resign.....The Democratic National committee deny that they intend revolution or resistance to the laws.

Oregon.—The Legislature has passed a resolution withdrawing the consent of the State to the passage of the 14th Amendment to the Constitution of the United States, by a vote of 26 to 17....A resolution passed the Senate, declaring the East Side railroad entitled to the land grant of Congress. ....A homestead bill, exempting 80 acres and improvements from execution, has passed the House....A project to change the Constitution of the State and move the Capital is being considered....$30,000 have been voted to the Company that shall put a steam tug on Columbia River....A Bill has passed the House taxing Chinamen $10 per month.

Foreign.—In Spain Gen. Prim seems to be intriguing for the crown....It is thought that the European Powers will soon recognize the Provincial Junta as the *de facto* Government of Spain....Admiral Mendez Nunez has been appointed Captain General of the Spanish fleet, and Captain Lado to command the Squadron of the Pacific....The French Senate and Corps Legislatif will meet Nov. 11th.... An attempt has been made to assassinate Gen. Prim.... There are rumors of a reduction of the French army, which are gladly received by the French people....The Liberals in England are confident of a large majority in the next Parliament....Slavery is to be gradually abolished in Cuba.

Simple announcements of Marriages or Deaths inserted free of charge. Additional matter, such as Obituary Notices, or Poetry, inserted at the rate of ten cents per line.

Current Topics.

We published, a few weeks since, an account of the manifest sympathy with the Christian religion in the royal family of Madagascar. Later news is even more favorable, and the condition of the whole island, as respects Christianity, is as much like a nation being born in a day as anything that has been known in modern times. For a few days the people were devoted to the prescribed official mourning for the dead Queen. Yet, even in this, they observed the orders concerning the omission of idolatrous services which she had announced. Since that time the missionary chapels have been crowded, and at one which had been recently enlarged, 2,680 attendants were counted at an evening service. The interest seems to pervade all ranks, and some of those in high places have been converted and received into the Church. No cause is assigned for this eagerness to hear the Gospel, except that the spirit of God has been evidently working among the people, and the results already greatly encourage those who have been faithfully sowing the seed, of which they are beginning to reap so bountiful a harvest.

The Presbytery of Ontario in acting upon the application of a pastor to be dismissed from the Church in Geneseo, makes a suggestion that deserves special notice from the Churches. The reasons assigned by the pastor, were the failure of health, and the opportunity to enter another department of work that would be less exacting in its demands upon his strength. Upon inquiring, the Presbytery became convinced that the "*prevailing* reason had been an insufficiency of support, which had contributed to his impaired health, and need of change;" and while not disposed to censure the Church as more at fault than many others in this respect, they "suggest whether this resignation should not awaken the apprehension, that inadequacy of support is impairing the permanency and otherwise deleteriously affecting the efficiency of our ministers." It is true that the salaries of ministers have not been increased in proportion to the real expense of living. A few have been placed beyond want and are paid all they ought to receive. This is true of most in the cities, and in the large towns of the land. But the pastors of country churches generally are absolutely unable to support their families in the way they have a right to live, upon the amount they receive from the people. The necessity to study constant and rigid economy, while they study for their pulpits; the daily anxiety respecting the supply of those dear to them as life, and the education of their children; the actual want in some cases of what may make them comfortable; these and accompanying occasions of trouble do subtract from the usefulness, wear upon the nerves and break down the health of some of our best and most respected ministers. In a majority of cases, this is unnecessary and wicked. The point of self-denial would be reached by very few of their parishoners, if they should give them double what they now receive, and to many of these dear brethren, it would be a luxury if they could have a half dollar occasionally which they might feel at liberty to give away. Do not study to ascertain the least sum that will keep your pastor and his family alive, when you fix his salary. If you are able to do so, give him a wide margin beyond this, and trust him to spend it to good purpose. He will have better health, better spirits, more happiness, more usefulness, and more years for work; and you will have better sermons, and far greater satisfaction with his ministry.

Knowing that the transportation of passengers from the Atlantic to the Pacific, after the railroad shall be completed, will require not less than seven days, many have been waiting to know what course would be adopted by the companies respecting the Sabbath. During the strife for superiority in the construction of the road, the disregard of God's day was expected by all, though greatly regretted by those who believe that "the Sabbath was made for man." But it will cause not a little apprehension of the consequences when it is announced that the time-table of the Union Pacific Road for regular travel is the same for the seven days of the week. We are aware that not a few in our time regard it as superstition and folly, but we believe that neither nations, corporations, nor individuals can trample upon God's law with impunity. We know that specious arguments have been supposed to remove the law concerning the Sabbath from among those that are binding upon us, yet we believe that proof abounds that prosperity does not attend the continued violation of this law. God demands, and He has a right to demand, that He be honored by those to whom He grants blessings. It will be both dangerous and sinful to belt the continent by desecration of His holy day.

At a recent meeting in New York, Rev. Dr. Prime stated that the experiment of mission chapels has failed, and that not one self-sustaining church has ever been produced thereby. We are somewhat surprised at the statement from one who has had opportunity for such extended observation, for it does not agree with what others have observed. But does the fact that self-sustaining churches have not sprung from these chapels afford sufficient evience that they have been a failure? The establishment of missions in our cities, or among the heathen, is not chiefly that independent churches may be formed, but that the Gospel may be preached to the destitute and perishing. That they are poor, and continue to be poor, too poor to sustain such means of grace without assistance year after year, does not become a reason for abandoning the mission. There are localities in every large city where a church cannot be supported by the inhabitants for a generation, but a chapel erected among them, in which a minister of God shall preach, a Sabbath School shall be maintained, and all may gather as to their spiritual home, is an imperative demand upon those who are able to give them so great a blessing. Experience proves that the poor will assemble in large numbers in such chapels, and that many of them are converted as the result, who would never be found in our prominent churches. In time they may assist in sustaining the church formed among them—possibly may do this without assistance from others. But, whether they can do this or not, it is the duty involved in the very commission of our Lord that their spiritual wants be supplied in such a way as is most likely to reach the largest number.

The Board of Domestic Missions, O. S., is in a position that must occasion much distress to the missionaries who are dependent on its treasury, and limit the hopes of those who have been looking for advance by the Board in some proportion to the increase of demand for laborers. The lately appointed Secretary, Rev. Dr. Dickson, to whom many who know the requisites for that office from personal observation in the new portions of our country, had looked as being eminently qualified to fill it, is not to leave his church in Baltimore. The contributions of the churches to the Board have diminished, when every consideration urges their large increase. There is an embarrassing debt which lies directly across the path of advance. It will be difficult to find the right man for Secretary, and more difficult to obtain him after he is found. In the meantime, what are those to do who have been accustomed to look to the O. S. Board for help? What are we on this vast coast to do, upon whom thousands of emigrants are pouring every month, and who ought, in some measure at least, to provide without delay for the future that we have almost reached? It is our prayer to God that speedily this Board, and all other agencies by which the Gospel may be given to the destitute, may be free of everything that can cripple their highest efficiency. We are convinced that our churches at the East do not yet realize the amount or the pressure of the work to be done.

The vote on Reunion in the Presbyteries indicates that in the New School branch of the Church, the basis as submitted by the Assemblies will be almost unanimously accepted, and in the Old School branch the majority will favor a change at least in the first article. Some desire the substitution of the simple Confession of Faith and the Catechisms, for the qualifying clauses of that article. Some desire the omission of some of these clauses. Some are

opposed to union on any terms. Some vote for the Basis unchanged. It is probable that a large portion of the O. S. branch will overture the next Assembly in such a manner that if the way shall be open, there may be some plan adopted by which the Church may come together without the delay necessary if the Presbyteries must again vote on the subject. It is impossible to tell what will be the effect of this divided state of feeling, though the probability is that it may postpone indefinitely the consummation which so many have ardently longed to see. The Head of the Church will overrule the whole matter, and His will should be most earnestly sought.

Religious Intelligence.

PACIFIC COAST.

Earthquake Sermons.—Many of the clergymen of this city preached last Sabbath on topics suggested by the convulsion of the 21st. Many able discourses were delivered, and the lessons to be learned from the occurrence were clearly presented. Still it may be doubted if any of our preachers succeeded in making as deep impressions on the minds of hearers, or in presenting the subject in as clear a light, as did the earthquake itself on the morning of its occurrence.

Dr. Wadsworth, of Calvary Presbyterian Church, preached in the morning, from Acts, 16: 26. "And suddenly there was a great earthquake, so that the foundations of the prison were shaken," showing the necessity of a firm foundation for our spiritual as well as temporal homes. In the evening, from the 71st Psalm, "Be thou my strong habitation," it was shown that our only "strong habitation," and place of refuge from evils which surround us, is to be found in the Christian religion.

At the First Congregational Church, Rev. Dr. Stone dwelt upon the power of God as manifested in the earthquake. Even on the Pacific coast, where God's claims have been disregarded, His name profaned, and His authority defied, He has sent upon us the pestilence and earthquake to show us our weakness and His omnipotence. "This is the finger of God," Ex. 8: 19.

Dr. Eells' morning sermon, at the First Presbyterian Church, was calculated to allay the prevailing excitement, by presenting the lesson of perfect faith taught in the text, 1st Cor. 3: 23: "Ye are Christ's." The subject was continued in the evening, from the text, "Is any among you afflicted? let him pray." James 5: 13.

Rev. Dr. Thomas, of the First Baptist Church, regarded earthquakes as sent by God to frighten sinners and lead them to repentance. Men need not be ashamed of their "fear," if it shall have the intended effect, for "the fear of the Lord is the beginning of wisdom." Psalm 111th: 10.

Rev. Dr. Cox, of the Howard Street M. E. Church, spoke of the permanence of God's kingdom when the earth and all its creatures shall be destroyed. "And Thou, Lord, in the beginning hast laid the foundation of the earth, and the heavens are the works of Thine hands. They shall perish, but Thou remainest." Heb. 1: 10, 11.

Rev. Mr. Pond, at the Third Congregational Church, preached from Heb. 12: 25—29, directing the minds of his hearers to "those things that cannot be shaken:" the Church of God and the principles of the Christian Religion. "Wherefore, we receiving a kingdom which cannot be moved, let us have grace whereby we may serve God acceptably with reverence and godly fear."

Oregon Items.—A State Fair Religious Association was formed at the late State Fair. The object is to hold religious services every evening during the continuance of the Fair each year. The Association is composed of members of all the evangelical churches. The object is novel and important. It is to be hoped that good will be accomplished.

The preachers who were present at the late Oregon Conference of the M. E. Church contributed each a lock of his hair for the formation of a hair wreath. The work was beautifully done by a lady of Salem, and the wreath was sold at the Orphan's Fair on the 24th ult. It was also exhibited at the late State Fair, where it attracted much attention.

San Jose.—A new Methodist College is to be established near San Jose.

The new M. E. church is to be removed south of Second Street, to make way for a business block in he place where it now stands.

The organ in the Presbyterian church was completely ruined, by the falling of the spire during the earthquake. The church will be closed for a time for repairs. The pastor has gone East for his health.

Y. M. C. A.—The new building on Sutter Street is to be dedicated, with appropriate ceremonies, on the evening of Nov. 10th. The members of the committee have been very successful in their efforts to obtain funds.

Membership.—The Presbyterian Church, Old and New School, on the Pacific Coast has 3,207 members. The Congregational Church has 2,343.

EASTERN.

New York Bible House.—The *Congregationalist* gives the following account of this great and useful institution:

The publishing House of the American Bible Society stands on Astor Place, on an open square, containing about three-fourths of an acre. The building, which is six stories high, covers the entire area. It is of brick, with freestone copings, and the whole cost, with the ground, was about three hundred thousand dollars, which was contributed for this object in distinction from funds raised for the publication and distribution of the Scriptures. The corner stone was laid June 29th, 1852, and it was occupied by the Society early the following year. An engine of sixty-horse power runs twenty-three of Adams's platform power presses, which print from five to eight thousand volumes per day through the year. Four hundred and fifty persons, two hundred and fifty being females, are now employed. The Society owns over one hundred sets of stereotype and electrotype plates, some of which have been prepared at great expense, and all are among the very best specimens of modern typographic art. These are marked and carefully laid away in fire proof vaults under the Bible House. In the different processes of making a Bible, from thirty to forty persons are employed, and the time required varies from a week to a month according to the size and style of binding. About two hundred and eighty different varieties of Bibles, Testaments, and parts are now published by this Society; and of these, the Bibles sold for forty-five cents, and the Testaments at ten cents, are sold most largely. An edition of the larger Bibles and Testaments usually consists of about four thousand, and of the smaller, sixteen thousand. All the publications are sold at cost, so that the Scriptures may be placed within reach of all. The Library room, which is fire proof, contains a valuable library, in which is a Latin Bible printed in 1464, an English Bible printed in 1575, and nine other English Bibles printed before the present version, King James's, had made its appearanee.

The Churches in Canada.—As to numbers the Presbyterian church of Canada has 101 ministers; and is throughout a living, working body. The Old Kirk has forty ministers; but not a tenth of the life of the Canada Church. This pastor informs me that he preaches three times each Sabbath; and four times on the alternate one. What salary he receives I do not konw. In Toronto, where there are seven Canada Presbyterian churches and one Kirk the highest salary is $2,000; equal to a third more on our side. Others receive $1,500, and so down.

The Episcopal Church, I am told, in Canada, is rother losing than gaining. It is said to be—and by a member of it—more and more formal and lifeless, and the people neglect attendance largely upon its worship. The Methodists, and perhaps the Baptists, on the other hand—and perhaps also the Congregationalists—are growing. The Presbyterian Church will have to give freedom in the matter of music to keep its young people. I judge that the beginning of relaxation from Rouse has already been made. I have a book of Sabbath-school hymns which is superior to such as we use on our side for Sabbath-school purposes; and which is common in the Sabbath-schools here.—*Evangelist.*

Y. M. C. A.—The Massachusetts Convention of the Association was recently held in Worcester, and was attended by 300 delegates, representing 102 Associations. The number of new Associations formed during the year is 63. The following are some of the resolutions passed during the session:

That we are unalterably convinced that legal prohibition rather than license, is the only true policy to be pursued by a Commonwealth, in regard to all crimes within the reach of human law, among which crimes we recognize the sale of intoxicating drinks as a beverage.

That we heartily approve of the growing disposition among the members of our Associations, to regard the common use of tobacco as a sensual indulgence, unbecoming in a gentleman, and inconsistent with symmetrical Christian character.

That in the opinion of this convention, it is highly expedient and desirable to admit women as members of the Association, with equal rights and privileges.

Prayer Meeting.—The Young Men's Christian Association at Washington, D. C., have commenced holding street-meetings every evening, commencing at 7 o'clock, and continuing half an hour or more, at the junction of 7th Street and Pa. Avenue. Brief and direct addresses, the singing of hymns, and prayer, occupy the time. Thus far, the meetings are very quiet and orderly, arresting the attention of those who are thronging the "broad way," and drawing many aside for a few minutes to listen, who either remain in respectful silence to the close, or pass on after having in important thought impressed upon them by the inspiring song or the earnest address.—*Congregationalist.*

Lane Seminary.—A correspondent of the *Evangelist* writes as follows:

Our cherished school of the prophets, with its new professors, new buildings, and new students, enters upon a new career of success and usefulness. Our Western Zion is deeply and deservedly interested in the growing prosperity of Lane, the Alma Mater of so many of our earnest and successful pastors. Its friends are greatly encouraged. Its past history and present prospects inspire the confidence that Lane Seminary will continue an efficient auxiliary to every other great agency for the advancement of home evangelization and the spread of the Gospel in heathen lands.

Number of Members.—The following is the relative membership of the Presbyterian (Old and New School) and Congregationale churches in the United States, omitting New England, where there are but few Presbyterians, and the Southern States where Congregationalism is yet feeble: Presbyterians, O. S., 227,190; N. S., 160,826; both branches, 388,016. Congregationalists, 92,140.

Christian Convention.—A Call for a National Christian Convention has just been issued. It is to be held under the auspices of the American Christian Commission, and will assemble in the Reformed Collegiate chruch in Fifth Avenue, on the forenoon of Nov. 17. The call is signed by Geo. H. Stuart, Esq., Howard Crosby, D.D., and Revs. Alfred C. Roe and F. G. Ensign, officers of the Commission, and by nearly a hundred of our best known and most influential clergy and laymen. This Convention will be looked forward to with great interest.—*Evangelist.*

Colored Baptists.—Nearly one hundred colored Baptists churches, all said to have been organized since the war, were represented at a General Association just held in Raleigh, N. C. The session continued four days and the proceedings were marked with the utmost decorum. It was decided to establish a theological school in that city, and a missionary was appointed to organize churches. A vote was passed recommending that the churches ordain no young man to the ministry who cannot read and write.—*Congregationalist.*

A Good Work.—The Y. M. C. A., of Biddeford, continues its good work. For the last month it has averaged one hopeful conversion a day. In a boarding house of 20 all but one have been led to Christ, apparently through the efforts of one young woman. Others are doing nearly as well. Most of the converts have not been wont to attend any meeting. Soon as they are interested they generally connect themselves with the Sabbath School, and in many cases with one of the churches of the place.—*Congregationalist.*

A Sermon Repeated.—Rev. Dr. Sprague preached to his own people at Albany, a few Sabbaths ago, a sermon preached by him just fifty years before. And what is more remarkable, it was the first sermon he ever preached. The first date was Andover, Ct., Aug. 30, 1818, and the last Aug. 30, 1868. It was also the first sermon preached by him at West Springfield, April 25, 1819. There are few preachers whose first sermons would bear to be repeated at the end of a half century.—*Springfield Republican.*

Rev. Asa D. Lord, D.D., late superintendent of the Ohio Institution for the Blind at Columbus, has taken charge of our similar institution at Batavia; and, as if one good theologian were enough for a place, the Presbyterian people of the very promising town of Irving, in Knasas, have asked the Rev. C. F. Mussey to leave Batavia and come to them.—*Evangelist.*

Infant Baptism.—It is stated that in one of the churches in Vermont there is a family whose eleven children were all baptized in infancy, and that their names all stand in order on the church records with no name intervening. A noticible instance of adhesion to the doctrine of infant baptism and—of non-adhesion.—*Advance.*

Colored Schools.—Rev. Chester Holcombe, missionary of the Am. S. S. Union, by the Sabbath School in Winchester, Mass., reports revivals in three schools of colored children which he has organized in Georgia, in which from eighty to ninety hope they have become disciples of Christ.

Rev. Norman Seaver, D.D., of Rutland, has accepted a call to the pastorate of the First Presbyterian Church in Brooklyn, N. Y., of which Rev. Charles S. Robinson, D.D., also a Vermonter, was recently pastor.

Unusual religious interest has of late been manifested among the North American Indians of the Upper Missouri. Fifteen or more in one place, recently made a public profession of their faith in Christ.

A Long Work.—A preacher in New Bedford is seventy-nine years old, and has married 1,800 couples and buried 2,172 persons.

The Presbyterian Seminary at Chicago has opened its new year with twenty-four students.

Triumph over Prejudice.—In the little city of Monmouth, Ill., there is a United Presbyterian male and female college. At the beginning of the present term, as we learn from a correspondent, a decent colored youth presented himself before the proper officer, paid his tuition, and was admitted to the academical department. At once there was a flutter of excitement in the neighborhood, and several scholars left the institution. There were some "shaky" individuals in the board of trustees and the faculty, but the body stood firm. One professor said:

"I would exchange no words on the subject; I would call no meeting; the white boys and girls may leave, if they wish to; the colored boy must remain." "The president being in Europe, the president *pro tem* said:

"Gentlemen, I cannot rescind this action without doing violence to the principles for which I have contended for thirty years; and, if it is a question of finance, take my salary for the present year, and I will work for nothing." The result of the battle was, the colored boy's rights were respected, the college preserved its integrity, principle gained another triumph over prejudice, the loyal people of the town drew a long breath, and said Amen!—*Independent.*

Increase of the Church.—The *Radical* is thus pertly rebuked by *The Register*: In an editorial article on "Thin Churches," we are told that the people are deserting the churches, and have no faith in "organized religion." Here, bear in mind, is an appeal to numbers as evidence of the decline of popular faith. How stand the statistics? The Methodists at the beginning of the century had 15,000 communicants, now they number two millions. The Baptists during the same time have increased from 35,000 to 1,700,000, the Presbyterians from 40,000 to 700,000 the Congregationalists from 75,000 to 275,000, and the Catholics now number 4,000,000. While the population has increased six-fold, the church membership has increased fourteen-fold, and while in 1800 there was one communicant to about fifteen of the population, in 1760 there was one to six.

FOREIGN.

Denominationalism in India.—Dr. Norman McLeod of Glasgow, who has been examining the Missions of the Established Church of Scotland in India, urges that the distinction of the English, Scotch, and American sects be disregarded in that country, and that a common, undivided Christianity may be built up among the heathen. As a missionary conference, held in the Punjab in 1863, in which English churchmen, American and Scotch Presbyterians, and American Methodists participated, a paper was read by Rev. John Newton, connected with the General Assembly's Board (O. S.), on the question of "an Indian Catholic Church," in which he advocated the union of all evangelical mission churches on the plan of mutual fellowship, and a "return to first principles, or reconstruction on the simple basis of the Bible." The sentiment of the paper were generally approved by the speakers in the discussion which followed the reading. The feeling in favor of merging denominational differences as far as possible in ecclesiastical arangements on heathen ground, and of a practical co-operation, notwithstanding diversities which may continue to exist, is likely to strengthen among missionaries. How much the increase of the spirit of union among evangelical Christians in Christendom is due to the influence of their missionary undertakings cannot be measured, but it is doubtless a large indebtedness.—*Evangelist.*

Good Investment.—Several years ago an engineer informed the Governor of Allahabad, India, that within a year or two the government buildings, consisting of a church, a court-house, several large bungalows for officers, and a large tract of ground, all on the banks of the Jumna, would be swept into the river. Hence a new site was selected for the government premises, and the American Presbyterian missionaries, who doubted the truth of the prediction purchased the rejected estate for $2,000. They can sell it now for $50,000.—*Congregationalist.*

Wages of Sin.—Recently a woman in Edinburgh, Scotland, who had accumulated a large amount of money by keeping a brothel, was reformed, and at her death willed it all for the foundation of an institution for the elevation of fallen women. But the church refused to handle the money which had been the wages of sin. They are more sensitive over in Scotland on these points than are the good people in New York, who have been welcoming John Allen so fraternally—even before he professes any repentance.—*Advance.*

New Church in Brazil.—A church was organized in May at Lorena, a town about one hundred and ninety miles south of Rio de Janeiro, and six persons were received as members. Mr. Blackford, in the *Foreign Missionary*, gives interesting accounts of some of these members, and pleads for a missionary to be stationed at Lorena, and for means to employ two more colporteurs in Rio. Mr. Pires also gives an encouraging report of his labors on a tour in the province of Minas.—*Presbyterian.*

Sweden.—The Baptist churches in Sweden received during the last year 850 members by baptism. Nine new churches were formed, and the total number of Baptists in Sweden was 7,478, in 191 churches.—*Presbyterian.*

Oakland Academy.

A CLASSICAL, ENGLISH, & MILITARY BOARDING SCHOOL

REV. DAVID McCLURE, Principal.

The Eighth Term of this Institution will commence on Wednesday, July 8th, 1868, in the new Academy building, recently erected on Telegraph Road, one mile from the Railroad Depot.

The location and plan of this new building have been made with the design of securing for the students a home of beauty and refinement.

Careful provision is made for thorough and extensive courses of study in English, Mathematics, Natural Science, and the Ancient and Modern Languages. A special course is also provided for those who are preparing for a commercial life.

In addition to these courses there is a daily military inspection and drill, together with vocal and light gymnastic exercises, under the instruction of a teacher. Every student is required to attend the military and gymnastic exercises, as a means of physical training.

For the mental, moral, and physical culture of each pupil committed to his care, the Principal holds himself responsible.

Further particulars may be obtained by addressing the Principal at Oakland.

Correspondence.

Salt Lake City and the Mormons.

Forbidden for a season at least to exercise the functions of my vocation, it is pleasant to address kind friends through the columns of The Occident. I have imagined that possibly an occasional letter might keep me in remembrance while sojourning in the East. The scenes passing beneath my notice have been many of them so frequently and fully described that I shall not attempt a connected narration, but take the liberty of mentioning only that which seems of adequate interest. A trip overland, either to or from the Pacific coast, is becoming so easy and familiar that perhaps it is impossible to add anything to what has been written, and yet it is sometimes a pleasure to see objects through another's eyes, although already familiar.

There is nothing better calculated to test the patience and fortitude than a crowded stage coach. It was my fortune to experience this trial, and I can bear testimony to its severity. Dust and heat by day, cold and sleepless hours by night, with little to divert the mind in the surrounding scenery, which consisted chiefly of barren wastes, relieved here and there by by tufts of sage bush and clumbs of grease wood, the traveler requires no small degree of patience to maintain a quiet and peaceful frame. Between Austin, Nev., and Salt Lake City, Utah, the overland stage road passes through a series of valleys, separated by low ranges of hills. The stations are located at convenient distances, furnishing relays of horses, and food for the traveler. Were it not for the precious metals concealed beneath the surface of the mountains, and brought forth by the persevering research of the miner, Nevada could certainly afford few attractions to man, but where gold and silver can be found, it matters little how costly the efforts needed, or unattractive the location, thither flock the enterprising and the strong; thither, too, the vicious and degraded.

We entered Salt Lake City with the rising sun, there to find for a season what all needed most—rest and sleep. In its general outlines I am reminded of another, and, to me, far more attractive place—San José. The streets are wide and straight, well shaded, and clean, although not curbed or paved. The streams of pure water running on either side add greatly to the beauty of the town. The business streets are built up with large and flourishing stores, and numerous public edifices contribute to ornament the city. There are twenty wards, with a place of worship in each; while the Tabernacle affords a central audience room for the great congregation. This spacious edifice will accommodate 10,000 worshippers, and is provided with a grand organ, not yet completed, but which fills the vast space to its utmost capacity. So far as hearing is concerned, the Tabernacle is a failure, except for those who sit immediately in front of the speaker's desk, or crowd the sides of the building.

To the east of the Tabernacle, and just above the surface, appear the massive foundations of the Temple, whose corner-stone was laid thirteen years ago, and the top stone of which it is not rash to predict will never be laid. But these material structures are only the external symbols of a mighty system which is here a thing of reality and power. A system which lays hold upon the bodies and souls of its subjects, and binds them down in the cruelest bondage. Particularly is this the case with woman, who, by one fell swoop, is degraded from the elevation to which eighteen centuries of labor had exalted her. Polygamy is made the corner-stone of the Mormon religion. Marriage is represented as the only method by which woman can attain present or future exaltation. It is a duty—a religious duty—separate entirely from love—a cross which must be accepted.

It seems passing strange that such a faith should gain adherents, and yet it does—this present year adding some 8,000 foreigners to the Church. There are probably about 80,000 Latter Day Saints in the Territory, paying tithes into the treasures of the Church, and bound together by its tremendous obligations.

During the past four weeks a strenuous effort has been made to exclude the Gentile merchants from the city, because, it is claimed, they only impoverish the Saints, and cast nothing into the treasure-house of the Lord; and unjust as is the attempt, it is probable it will succeed, unless the Railroad establishes another town at some convenient point in the valley, where Gentile merchants can establish themselves.

I attended service at the Tabernacle on Sabbath afternoon, and heard two addresses, the first by a returned Elder who had been absent four years on a mission in Europe. The second by Brigham Young, Jun. The communion is celebrated at this hour on each Sabbath, bread and water instead of wine, being the elements, and all, even strangers and little children partake, but it is manifest that the act has very little meaning to many—the man who sat next to me, and was a member, I judged, fell asleep and had to be aroused to partake. An incident was told me which further illustrates the meaningless character of this service. A rough ox-teamster had strayed into the Tabernacle while the communion was in progress, and when the water was passed to him he lifted the cup to his lips nor withdrew it till the last drop was exhausted. "You were dry, I think," exclaimed the indignant Elder. "You bet I was," replied the driver as if nothing ludicrous had occurred.

While we admire the industry, frugality, and perseverance which have made Salt Lake the city it is, we cannot but deplore the ignorance, error and bigotry which degrade and embondage the masses among its citizens. It is gratifying to hear the gospel regularly and faithfully proclaimed in the midst of so much superstition and moral probation. The Episcopal church maintains a mission consisting of three clergymen and their families; these gentlemen carry on a day school, and had gathered a membership of fifty persons. They worship in the building formerly occupied by Rev. Mr. McLeod, for congregational services, and still owned by the Congregational church. It was very pleasant to assemble with God's people and participate in the delights of His sanctuary. Our hope is that the light and liberty of the gospel may gradually penetrate these dark places of the land, and make these thousands now sitting in darkness and the shadows of death free in all the length and breadth of that sublime reality.

J. S. W.

Humorous.

An eight-hour-a-day man, in going home one evening for his supper, found his wife sitting in her best clothes, on the front stoop, reading a volume of travels.

"How is that!" he exclaimed. "Where's my supper?"

"I don't know," replied the wife, "I began to get breakfast at at six o'clock this morning, and *my eight hours ended at 2 P. M.*

Alaska.

"owed" for the (7) million!

My country! 'tis of thee,
Just purchased from Rooshie!
Of thee I speak!
Land where my fathers caught
Whales! who ever taught
You—who ever taught
Freedom to shriek.
How "dear" art thou to me!
Of Columbia's eagle the
Last new tail feather!
"Dear" art thou at any price,
But now it seems so very nice
To have so "dear a thing on ice"
In this hot weather!

An old and weather-worn trapper was recently seen sauntering along the main street of one of our western villages. Pausing in front of a little meeting-house a moment, he went in and took his seat among the congregation. The preacher was discoursing on the text of the "sheep and the wolves," and, having evidently been drawing a contrast between the two subjects, says he:

"We who assemble here from week to week, and do our duty and perform our part, are the sheep; now, who are the wolves?"

A pause, and then our friend, the trapper, rose to his feet, and said:

"Wa'al, stranger, rather than see the play stopped I will be the wolves!"

The preacher was vanquished.

A minister, exchanging pulpits, waited at the close of the morning service for some one to ask him to dinner. All passed out and the preacher got no invitation. He had no alternative but to go home, some miles distant, or loiter around the sheds. As the last man was leaving the church he stepped up to him and said:

"Friend, will you go home to dinner with me today?"

"Why—yes—how far is it?"

"O, only about twenty miles."

"Then I guess you had better go home with me," was the reply.

An Irishman lost his hat in a well, and was let down in a bucket to recover it; the well being deep, and exceedingly dark withal, his courage failed him before he reached the water. In vain did he call to those above to pull him up; they lent a deaf ear to all he said, till at last, quite in despair, he bellowed out:

"Be St. Patrick, if you don't draw me up sure I'll cut the rope."

"Mamma, papa is getting very rich, isn't he?"

"I don't know; why, child?"

"'Cause he gives me so much money. Almost every morning, after breakfast, when Sally is sweeping the parlor, he gives me a sixpence to go out and play."

Sally received a short notice to quit.

Two friends meeting, one remarked: "I have just met a man who told me I looked exactly like you."

"Tell me who it was that I may knock him down," replied his friend.

"Don't trouble yourself," he said; "I did that myself."

During a performance at a theatre in Salt Lake City, the prompter detracted somewhat from the stage illusion by exclaiming in tones audible to all present:

"Hurry up that thunder and lightning there, you?"

A clergyman in this city recently called his little daughter to his side and imparted to her the intelligence that God had given her a little sister. The child seemed pleased to hear it and inquired:

"Does mamma know it?"

When an acquaintance says, 'How are you?' and pushes by you without waiting for a reply, I wouldn't, if I were in your place, follow him more than a mile to tell him you are well.

What is the difference between a barber and a mother? One has razors to shave, and the other has shavers to raise.

Many public men consider themselves the pillars of the State, who are more properly caterpillars.

What is it that causes the saltness of the ocean?" inquired a teacher of a bright little boy.

"The codfish," replied the little original.

Josh Billings says: It strains a man's philosophy the wust kind tew laff when he gits beat.

At what time should an inn-keeper visit an iron foundry? When he wants a bar-maid.

Singing undoubtedly "oils the wheels of care," especially singing "Coal Oil Tommy."

How do you arrive at the height of a church steeple on a hot day? Per spire.

Noah was probably the first person who went to sea for fear of being drowned.

Pacific Mail Steam Co's Steamships

— FOR —

NEW YORK, JAPAN AND CHINA

Will be Dispatched as follows:

LEAVE WHARF CORNER OF FIRST AND BRANNAN STREETS, at 11 o'clock A.M. of the following dates, for PANAMA connecting via Panama Railroad with one of the Company's splendid Steamers from ASPINWALL for NEW YORK.

the 6th 14th, 22d, and 30th of each month.

Steamer leaving San Francisco on the 6th touches at Manzanillo. All touch at Acapulco.

Departure of the 14th is expected to connect with the French Transatlantic Company's Steamer for St. Nazaire, and English Steamer for South America. Through tickets can be obtained.

Departure of 14th is expected to connect with English Steamer for Southampton, South America, and P. R. R. Co.'s Steamer for Central America. Through tickets can be obtained.

Departure of the 6th connects with English Steamer for Australia.

STEAMERS FOR OCTOBER, 1868.

The following Steamships will be dispatched on dates as given below.

October 6th—COLORADO, Captain Lapidge, connecting with ALASKA, Capt. Gray.

October 14th—GOLDEN CITY, Capt. E. S. Farnsworth, connecting with OCEAN QUEEN, Capt. King.

October 22d—SACRAMENTO, Captain Parker, connecting with HENRY CHAUNCEY, Capt. Conner.

October 30th—MONTANA, Capt. J. M. Cavarly, connecting with RISING STAR, Capt. Maury.

Passengers berthed through. Baggage checked through—100 pounds allowed each adult.

An experienced Surgeon on board. Medicine and attendance free.

These Steamers will positively sail at 11 o'clock. Passengers are requested to have their baggage on board before 10 o'clock.

Through tickets to Liverpool by the "Cunard," "Inman," and "National" Steamship Lines can be obtained at P. M. S. S. Co.'s office in San Francisco, where may also be obtained orders for passage from Liverpool or Southampton to San Francisco, either via New York or St. Thomas—if desired, an amount of £10 to £20 will be advanced with the above orders. Holders of orders will be required to identity themselves to the Agents in England.

For Merchandise and Freight for New York and way ports, apply to Messrs. WELLS, FARGO & CO.

The Steamship JAPAN, Captain Geo. E. Lane, will be dispatched on Monday, November 2d, at 12 o'clock, noon, from wharf, corner of First and Brannan streets, for YOKOHAMA and HONGKONG, connecting with the COSTA RICA for SHANGHAE.

For passage and all other information, apply at the Pacific Mail Steamship Co.'s Office, corner of Sacramento and Leidesdorff Sts.

POWER BELONGETH UNTO GOD.

There are times when men are inclined to exalt themselves, as was the King of Babylon when he walked among the structures his power had reared. There are other times when men feel that they are small indeed, as did the King of France when, amidst the falling fortunes and blighted hopes he was powerless to recover, he exclaimed, "God only is great!" The days through which we are now passing oppress us with the sense of our impotence. We do not propose to attempt to render the stern voice that has spoken to us more impressive, nor to make more vivid the sense of Jehovah's greatness which the muttered thunders of His power, even in its restrained manifestation, have forced upon us all. The occasion is not one for comments. The voice does not summon to speculation. "Let all the earth stand in awe before Him!" seems to be the burden of its address to us, and there can hardly be a person who does not feel obliged, in some measure, to obey.

What an unspeakable privilege to have such a Being for a Friend, an Ally, a Refuge! To feel that when He shakes the solid world, we need not tremble; that when He turns all man's works to destruction, we need not be afraid. He tells us there are those to whom He says in every time of commotion and foreboding, "Fear not, for I am with thee!" Who can estimate the worth to men who feel their danger yet know that they can do nothing, of these few short words! They may look away from their difficulties, and pass through them with their eyes fixed on God, treading hopefully and firmly, where others have no helper.

What an unutterable experience must be his, who in the midst of scenes that bring pallor to the cheeks of the bravest, and faintness to the hearts of the most strong, feels that He who thus displays Himself cannot be a Friend, because of his sins! In view of convictions that must have had a place in the hearts, if not on the lips, of multitudes within these last few days, the folly of opposition to God, of rebellion against His authority, of despising His mercy, of lightly esteeming His love, cannot be expressed. Men have not been wont to think enough of God's *power*. He is able to do all He says He will do. He can sweep His enemies with the besom of destruction. The infinite *reserve* of might in Omnipotence, after such proofs as we have had, fills us with dread; for the feeling with most of us that gives us chief alarm comes not because of what God has done, but from what it is so evident He can do at any moment. None of us can escape the eye that ranges the universe. None of us can be independent of the hand that in turn upholds, and shivers the worlds. Surely, we should seek peace with such a God. Then we may have confidence in Him, and see His salvation even to the last, for though heaven and earth shall pass away, His word shall not fail.

IMPLICIT TRUST.

We do not mean by implicit trust, a faith which has no foundation in honest and careful, and even rigid, investigation. We do not insist that men shall take the Bible as of Divine authorship, without evidence that may satisfy the reason, when the province of reason in such a case is properly defined. But when this is established—when we really believe that its declarations and promises are the word of God, our faith in them, and our trust in Him, as thus revealed to us, should be as implicit as that of a little child who looks up into his father's face and believes every word he says to him, never asking whether he can comprehend it or not. This kind of trust has always been ridiculed, and it is now, and yet it is most worthy and proper. If I cannot see a house a mile distant, may I not receive the description of one who can? If I cannot traverse the eastern continents, may I not trust the accounts of those who have as being reliable knowledge? If I cannot understand the composition of chemical compounds, may I not take the word of one whose greater powers or attainments render him able to make known the facts to me? If I cannot reach the deep things of God, and wander in darkness through regions which seem only desert, may I not accept the light that scatters the darkness, and reveals these regions as really glowing with beauty I could never have fancied, and teeming with interests of which I have never dreamed? Faith is the grandest, the worthiest, the noblest exercise of a finite mind. It opens the widest and most rational avenue, along which it may make progress. It is as far from credulity as wisdom is from folly, and is no more than the unwavering trust of the child in what his father says, whom he knows never to have deceived him, nor to have erred in what he has told him. This spirit, preceded by the serious study and thought of which I have spoken, when one is capable of these, will distinguish all who enter into the Kingdom of God. It brings us, as little children, around our Father; it drives away pride of intellect, and pride of heart; it opens our ears to His words, and allows no cavil, no hesitation, no fear. Strange, that men should have ridiculed what constitutes the charm and glory of the heavenly home. Strange, that ignorance and weakness should reject that which alone can supply what both experience and reason declare they lack.

EVIL MAY BE GOOD.

It is one peculiarity of God's dealing with men, in all cases, that He seeks to attain the higher object that may be possible, at the sacrifice of the lower, if this is necessary. He wishes to develop and establish a desire for spiritual good in one whom He sees to be devoted to the world and those inferior objects which absorb his thoughts and efforts. The shortest, most effectual, and therefore the best way to effect this, He sees to be by thwarting his plans, rendering his labor idle, and compelling him to sit amidst the ruins of his hopes, while He there presents lessons and inspires purposes, and cultivates wishes, that could not have been pressed on his attention while he was absorbed as before. He sees that prosperity would be an incubus upon the true and abiding happiness of a family; that money would make the members selfish in their relations to each other, and would be a wedge to rive apart the interests that should be common; that an unbroken circle would have no opportunity to test and cherish the finer, more delicate, and more beautiful feelings, which being in exercise here, will culminate hereafter and flourish forever. Therefore, He refuses to allow them wealth, or takes it away after they have gained it. He breaks the circle by the interposition of graves and grief, well knowing, and proving in the result, that loss of money and the translation of those who are loved, may be the most blessed bonds of union, and the most charming means of love-culture that are ever felt, for which all will be willing to give thanks together when they are gathered in their heavenly mansion, for which they are often thankful even here, though they witness the effects through tears.

He sees that a nation or a State does not assume the position He has assigned to it in the progress of the race; that it is hindered by the very prosperity by which it has been distinguished; that it may be ruined by the measure of its growth, and He brings calamities upon it, burdens it for a time with losses, and taxes its nobler qualities till the very strain they feel renders them prominent and in full exercise. Thus He forces before the public view its unworthy features, till there is common consent that they may be put away, and by strange exigencies leads a whole people to a higher level of worth and influence, though every step of the advance may have been taken with lamentation over what were thought at the time to be evils from which there could hardly be any recovery. He sees the Church to be worldly in its spirit, narrow in its plans, by no means prepared for the demands that by His providence He intends to sound in the ears of His people; and He adopts a policy of discipline, sends intimations of difficulty, utters the notes of alarm—perhaps permits apostacy, darkness, disappointment, till the ways of Zion languish, and her enemies begin to exalt. Then, from this experience of trouble, the Church learns the truths that were before rejected, and, from the wilderness in which she has been afflicted and desolate, Zion comes up leaning on the arm of her Beloved, and ready for any service He may require, a thousand-fold more beautiful and strong, because of the furnace in which she has been refined.

Neither the individual, the family, the nation, nor the Church, may be able to see, while suffering the losses of present experience, their relation to the result God has in view. Indeed, could this be seen at the time, the sense of present loss would be so keen that there would be but little sympathy with God in what He designs. Yet, how definitely does this view interpret many things said of God in the Bible, which men have always declared are hard to be understood; and what a flood of light does it pour around the course of His Providence, which is so mysterious often, when examined through the dim medium of vision otherwise supplied. "Shall there be evil in the city, and the Lord hath not done it?" How many infidels have scoffed when they have read these words in the Bible! And how many Christians of weak faith and short vision have stumbled and been sad, when they have seen the apparent triumph of the infidels, and found themselves unable to make this sentiment consist with their ideas of a God altogether benevolent. Admit that what is often called *evil* is in the city, and admit that the Lord hath done it. What we call evil is in His list of most speedy and effective means for the introduction of the grandest blessings into a world where evil has such general sway, and He does it with a full knowledge of the temporary trouble that must result. It is not necessary to refer to instances that abound in history, sacred and profane, in proof of this. God ever has his eye on the ultimate, higher good to be gained by us; and when sacrifice, trouble, loss, as judged by our standards, come between us and that good, He permits these, He even sends them, to be the heralds of that which would be otherwise unknown. It becomes us to study the "uses of adversity," to ascertain the purpose of calamity, public or private, and to find in evil these features by which it is transformed into good.

Baptism as a Christian Ordinance.

This spiritual significance of baptism, as set forth by the terms *baptizo* and *baptisma* in the New Testament appears in the creed of every church, and the teaching of all scholars, who have, according to the wisdom that is in them, attempted to give the sense of the Scriptures, except those who subscribe to the views of the Bible Union. To show the world-wide contrast between these two lots of opinions, I will, as briefly as possible, quote from the creeds of some of the leading denominations of the Protestant Church, and some of her ablest scholars, and then give the meaning of *baptizo* as held by the scholars of the Bible Union.

First in point of age is the *Heidelburg Catechism*, the exponent of the faith of the Reformed Church of Germany and Holland. "How is it signified and sealed to thee in *Holy Baptism*, that thou hast part in the one Sacrifice of Christ on the Cross? Thus: that Christ has appointed this outward washing, with water, and has joined therewith this promise, that I am *washed with His blood and spirit*, from the *pollution* of my soul, that is, from all my sins, as certainly as I am washed outwardly with water, whereby commonly the filthiness of the body is taken away."

Second. Of the Westminster Catechism, the acknowledged standard of Presbyterians and Congregationalists: "What is baptism? Baptism is a sacrament wherein the washing with water in the name of the Father, and of the Son, and of the Holy Ghost, doth signify and seal our ingrafting into Christ, and partaking of the benefits of the covenant of grace and an engagement to be the Lord's."

The creed of the Episcopal Church is thus expressed: "Baptism is also a sign of regeneration, a new birth, whereby they that receive baptism rightly, as by an instrument are grafted into the Church, the promises of the forgiveness of sins, and our adoption to be the sons of God by the Holy Ghost visibly signed and sealed."

M. E. Church: "Baptism represents the necessity of the sprinkling or washing the soul from sin and pollution by the Holy Spirit in His purifying influences. It is an outward and visible sign of an inward and spiritual grace."

Among the Baptists, though each church is independent and adopts its own formula of faith; yet that of the Baptist Convention of New Hampshire is believed to express, with little variation, the general sentiments of the regular or associated Baptists. On baptism we read as follows: "Christian baptism is the immersion of a believer in water in the name of the Father, Son, and Spirit, to show forth in a solemn and beautiful emblem our faith in a crucified, buried, and risen Savior, with its purifying power."

These being the truths entering into the creeds of our churches, I quote from a few of our distinguished scholars. Among the Reformers, says Calvin: "Therefore, those who have imagined that baptism is only a mark or sign by which we profess our religion before men, have not considered that which is the principle thing in baptism, which is that we ought to receive it with this promise: 'He that believeth and is baptized shall be saved.' In this sense we are to understand what is said by Paul, that Christ sanctifies and cleanses the Church with the washing of water, by the word;' and in another place, that 'according to His mercy, He saved us, by the washing of regeneration, and renewing of the Holy Ghost;' and by Peter, that 'baptism doth save us.' Paul connects together the 'Word of Life' and the baptism of water, as if he had said, 'our ablution and sanctification are announced to us by the Gospel, and by baptism this message is confirmed.'"

But I need hardly multiply quotations, when the authorities of the Church are unanimous on the question of the spiritual significance of *baptizo* and *baptisma*, but still I desire, to adduce some further testimony from Baptist writers whose standing in the denomination cannot be gainsayed. F. B.

HYATT'S HAND-BOOK OF

Grape Culture in California,

Giving full and specific directions as to where, how, and when, to plant and cultivate a vineyard.

As the season is approaching for those who purpose going into the culture of the vine anew in California, or for those who wish to extend their vinicultural operations to make preparations therefor, they can find no better aid, and no source of information more valuable than to consult this highly approved Hand-Book of Grape Culture.

Following are some of the testimonials that have appeared in commendation of this useful and indispensable work:

A committee of the late Fair of the Mechanics' Institute of San Francisco, to which the work had been referred, speak thus:

"Your committee have examined Mr. Hyatt's Treatise on the Culture of the Grape, and believe it to be the BEST HAND-BOOK published on that subject for California vine culturists, and for which they recommend a Special Premium."

The California State Agricultural Fair, of 1867, awarded a Diploma to the author of this work, and also the San Joaquin Valley Agricultural Fair, at the same season.

OPINIONS OF THE PRESS.

The following are brief extracts from some of the elaborate notices of this work:

The San Francisco *Daily Evening Bulletin* says:—"The book contains a choice collection of the best foreign and native varieties of the grape cultivation in California especially, as well as at the East. The many excellent works on Grape Culture in the Atlantic States are of little or no value in California, where an entirely different system and practice are necessary in vine growing and wine-making. This Hand-Book is intended to supply this deficiency. The author has taken great pains to investigate this subject, and to aid in the improvement of viniculture in California. Its appearance is timely, and it can hardly fail to meet a large and ready sale. It is attractively printed and elegantly bound."

Sacramento Union—"Hyatt's Hand-Book of Grape Culture is a California production that will probably meet a common want. The author takes the experience of the most noted vine-growers in the State as the warrant for his conclusions and suggestions, turns to account the recorded results of experiments made by the pioneers of this branch of industry, and in addition to giving full and minute instructions in regard to the planting of vineyards and the manufacture of wines, presents statistics which will enable the beginner to calculate the probable profits of successful grape culture."

The *Mountain Democrat*, whose editor, Hon. D. W. Gelwicks, is the present State Printer of California, speaks thus:

"HYATT'S GRAPE CULTURE.—We have received from the publishers, H. H. Bancroft & Co., San Francisco, a copy of this interesting and valuable work—a work greatly needed on this coast, and which every grape-grower should purchase. We sent it to a gentleman well known in this community, for his examination—a gentleman familiar with the subject, and largely engaged in the culture of the grape. He gives it the following cordial endorsement, and his endorsement ought to secure it a large sale:

'The limited time in which to examine Hyatt's Grape Culture, published by H. H. Bancroft & Co., San Francisco, has been sufficient, however, to satisfy me that it is a work which every grape-grower should have. No matter how well fortified we may be in our own experience and theory, we must acknowledge that we may adopt many of the author's ideas and suggestions with profit. The merit of the work certainly bespeaks for it a ready sale.

Respectfully, CHAS. P. JACKSON.'"

The Golden Era: * * * "With this book in his hand, the intelligent agriculturist can engage in the business of grape culture with almost the same chance of success as one who has bought his knowledge by expensive experience. * * * The practical information contained in the book would cost many hundred dollars to obtain in any other way. We predict for it a ready and rapid sale."

S. F. Daily Dramatic Chronicle: "The book is emphatically a California production, being written by T. HART HYATT, of this city, editor of the *Rural Home Journal*, and bearing the imprint, San Francisco: H. H. Bancroft & Co. It contains a large amount of valuable information, and should be in the possession of every vine-grower and wine manufacturer in the State. The usefulness of the volume, and its convenience for reference, are very much enhanced by a full and carefully prepared index."

S. F. Mining and Scientific Press: * * * "The book professes to be a complete manual, with instructions for the management of the grape and the manufacture of wine, and is especially designed for California. * * * The book contains a considerable amount of valuable information which is not generally found in such treatises."

S. F. Daily Times: * * * "The author seems to have exhausted his subject, particularly as it relates to viniculture in this State, and as the grape interest is just beginning to attract attention which is soon to become paramount among farmers, we regard the publication of the work as most opportune. No ranchman should be without it."

N. Y. Daily Tribune: "The author brings the result of many years' experience in foreign countries to the preparation of his work, and from his observations in climates similar to that of California, arrives at the conclusion that California is singularly favorable to the culture of the grape, and to all semi-tropical fruits, and that it will hereafter be distinguished as the land of the vine, the fig, the orange, the olive and the palm. His volume forms a capital, if not a complete manual, on the care of a vineyard, and it is enriched with much industrial information connected with the subject."

Lacon (Ind.) Home Journal: "This work is most *apropos*. It comes just as thousands, without any practical knowledge of the business, having planted vineyards, find themselves destitute of that information their intelligent care demands. All over the country this interest is growing, and probably the time is not distant when America will produce more, if not better, wines than any country in the world. The author, MR. THOMAS HART HYATT, is an enthusiast on the subject upon which he writes so pleasantly, and his book embodies just what every grape-grower would like to know—what every one must know, to cultivate the vine successfully."

Colman's Rural World, St. Louis: * * * "We merely want to introduce a new and interesting treatise on this subject to our readers, from the far-off shores of the Pacific—the Golden State of California. Its author is T. HART HYATT, editor of the California *Rural Home Journal*. He has had a large experience and observation in California and in the Old World. His style is entertaining, his directions clear, plain, and practical."

Rural New Yorker: * * * "Although most valuable to the California viniculturist, yet it helps to widen our knowledge of the vine."

H. H. BANCROFT & CO., Publishers.

Current Literature.

Lives and Deeds Worth Knowing About.

Under this somewhat awkward title, Rev. William F. Stevenson has published through Strahan & Co. of London, a series of narratives and miscellanies which fully convince the reader that the title tells the truth. The book is eminently religious in its character, and so far as any single purpose is manifest in its contents, it seems to have been designed as an encouragement to faith and prayer with reference to special objects. Yet the accounts cannot but be considered remarkable however they may be regarded. Some of them are in respect to men whom the good have long been about to honor. Some of them respecting those whose names have not been known before, except by a few, but who deserve the place the author has assigned them. Facts, instances, narratives are often more instructive and stimulating and cheering than any abstract declarations, upon subjects which they illustrate, and for this reason such a collection as this may have great value.

A few chapters at the close of the book are upon general themes, one of which is "Guessers of Truth," and the discussion of it is so direct and clear that it deserves marked attention. Here are some extracts from this chapter:

For now well-nigh six thousand years mankind has been guessing at Truth, with what result its mythologies, philosophies, wise sentences, and the rest may declare to those that read them. That the Truth itself has been meanwhile declared, nay, has been declared from the beginning, has proved little check. For most of those years it has been known in the narrowest circle, a mere pin-point of light within a sphere of darkness; and even now it is but advancing with a slow and irregular step, and as if fighting its way over the barricades. Four-fifths of men are still reduced to guesswork for any knowledge of the things that are, and failing the sun and stars, make shift to grope their way by a fitful firefly radiance. But even with positive truth known as widely as may be, there is abundant room and perhaps necessity for guessing. For the truth is so manifold, and by its nature hidden, that although discovered in its outline, various of its part are still shrouded, and to be humbly guessed at rather than rudely unveiled.

Guessing of this sort is no light and hap-hazard matter, a sport for idle hours, or for other than serious and profound minds. Those only who come with reverent and tractable minds to the truth they know, are likely to guess at the unknown; those who search after it lovingly for its own sake, and serve for it in patient and long and rigorous servitude. The Christian thinker may be still a guesser, but thought is no longer one great guess. It is based upon the common verities of revelation; on these it builds its speculations concerning the yet unknown; by these it shapes its wise sentences, and wields the truth of God into the facts of life; out of these it springs, and back to these it ever returns. Some of the earliest of such Christian guesses are crude enough, and with a great baldness and sameness of form; at times, however, with the distinctness and pregnancy of a proverb; often the simple setting of words of Scripture; not seldom trifling and fanciful. Their range is narrow, extending over the teaching of life and the experience of the Christian, but avoiding philosophy, science, and politics.

It may be hoped that some other Christian guesser will arise, moving within less narrow and arbitrary limits, with more creative energy of thought, and essaying rather than shunning the problems of modern life and modern science.

For those who do venture, and with honest purpose of discovery, there are infinite and abundant pleasures, joys like Columbus's when he touched the new land, or Le Verrier's when he found his planet. Our world is still full of hard and tangled problems; may we not guess at the loosing of them? Science is not rounded off like a measured and definite sphere; is there not yet some further region to him that will manfully go out and seek it? Are there not certain great gaps in our knowledge, confusion in the things we know? May they not lead the quiet and patient thinker to those truths that will fill up the one and explain the other? Nay, even in spiritual wisdom how much each generation learns from the last, how much has still to be learnt! But Christ is absolutely true, the point whence we start and where we must end. From Christ and to Christ includes the whole circle of our knowledge and the whole circle of our uncertainty. All truth and all the ways to truth must end in Him who is the Truth and the way. Being in Him, what is unknown need not perplex us, cannot baffle us, for He knows it, in whom *are hid all treasures of wisdom and knowledge.* And above all, we have by Him that knowledge which is eternal—whatever way human guesses may shift—of a Redeemer from the woe, and wreck, and curse of sin, the knowledge of God and Jesus Christ whom He hath sent.

For sale by Bancroft & Co.

A. Roman & Co. have just published two beautiful books for children, that have one peculiarity which specially commends them. They are thoroughly Californian. The authors, publishers, and the characters and scenes, belong to the Pacific Coast, and the books are proof that in none of these, are we behind the other portions of the country.

A Boy's Trip Across the Plains, by Laura Preston, is a pleasant narrative of incidents and facts that would be likely to excite attention among the young in a journey overland to California. The principal character is a boy who deserves the admiration children will be certain to bestow upon him.

Inglenook, by Carrie Carlton, is a story of California life, and is well sustained and well written. In beauty of execution, and general taste, these books will compare favorably with any of like style published at the East.

Periodicals Received:

Hours at Home for October. New York: Chas. Scribner & Co.

Catholic World for October. New York: Catholic Publication House.

The Sabbath at Home for October. Boston: American Tract Society.

The Family Christian Almanac for 1869. Boston: American Tract Society.

The American Quarterly Church Review, October, 1868. New York: Bible House.

Christian Work, or News of the Churches, for September. London: S. W. Partridge & Co.

The Presbyterian Monthly for October. Philadelphia: Presbyterian House.

The Family Treasury of Sunday Reading. Part 53. London: T. Nelson & Sons.

The American Missionary for October. New York: American Missionary Society.

Merry's Museum for October. Boston: H. B. Fuller.

LITERARY ITEMS.

Stereotyping Newspapers.

Few persons are aware of the fact that our principal morning journals are not printed directly from the type but from stereotypes taken from the regular forms. The whole time consumed in making the plates of the four pages is about twenty minutes. It is accomplished thus: Each page is made up in a separate form, on a table in size and height expressly adapted for the purpose; the legs of this table are furnished with castors, and as soon as the form is locked, the table is rolled into the stereotype room. The form is then removed to the moulding table; the latter has an iron bed, the cavity of which is filled with steam, as heat is one of the requirements in facilitating the operation. After the right temperature is attained, the form is removed again to the imposing table, and two or three sheets of paper laid over the surface of the type, and they are then beaten down with a brush in the same manner that printers proceed in taking a brush proof. The form is then carefully slid upon the moulding table, and another and heavier sheet of paper is placed over the first; this is covered with a wet blanket, the whole slipped under the press attached to the moulding table, and the power applied. This is done almost instantly, when the form is again run out, and the paper peeled off in a complete matrix of the whole form. A preparation of French chalk is now applied to the surface of this paper, when it is placed into the mould, and the hot metal poured against it and the plate almost instantly formed. It is now removed to the plainer; is cut, routed and justified, and in a few minutes is on its way to the press room. These plates are cast in the exact form required for a cylinder press, and are about half an inch in thickness.

Careless Use of Pronouns.

One of the most common mistakes is the use of the personal pronoun in the plural, when it should be singular, in sentences like these: "Every one must judge of their own feelings." "Let every boy and girl study their own lesson." Any one sees that it will not be *strictly* correct to use either *his* or *her*, and hence *their* is seized upon as the pronoun of the common gender including both boys and girls; but the use of the singular nouns, and the distributive pronoun *every*, requires that the pronoun in place of *their* should be in the singular, in order that it may agree with its antecedents in number; and though not strictly accurate, by the common consent of scholars and grammarians, *his* must be used instead of *their*. A multitude of mistakes in sentences similar to the above grow out of the great want, in our language, of a personal pronoun in the singular, possessive, *common gender*. Cannot some of the philologists or grammarians, at a single bold dash, move an amendment in this matter, which shall be carried by acclamation?

There is another common mistake, growing out of the use of collective nouns. In many cases, good grammarians even, are puzzled to determine whether they may best be used in the singular or the plural number; but every one can easily see the necessity of using the *same* number, whether plural or singular, through the entire paragraph. Here is an example of this error: "The River Church *has* purchased a parsonage for *their* pastor." *Its* must be used, of course, in place of *their*, as *Church*, the antecedent, is used in the singular.—*Congregationalist.*

Jean Ingelow's Poetry.

Miss Ingelow lived in a low, flat country, on the sea-shore, in an old town full of antiquities and memorials of the past—a city of Roman sea-walls and Norman churches; environed with rich English meadows, stretching along a pleasant river; yet with a great light-house always before her eyes, and the sound of the sea in her ears. Might not such a home be guessed at from her first volume? Her poetry is either of the sea or the meadows. Her favorite landscape, repeated even to weariness, is the low horizon which the sky encloses without a break. Mountains seem to be alien to her verse. Here and there they come in, but rather as things learned from books than personal experiences. No long poem is concerned with them. But her largest work is the history of a Deluge, and perhaps the best of her minor poems is a story of the High Tide that so damaged her native city in 1571. "Winstanley," another of her best poems, is the history of a light-house. When she writes of the land, she chooses always country scenes and objects; the stir and tumult of a great city are never felt in her verse. In short, she reflects, more strongly even than most of her guild, the image of her youthful surroundings.

A boy entered a stationery store the other day and asked the proprietor what kind of pens he sold.

"All kinds," was the reply.

"Well then, I'll take three cents worth of pig pens."

Educational.

Chesterfield as a Teacher.

In all parts of the training of youth we naturally turn to books for assistance. A good volume is a friend who comes in to lend to the hackneyed counsels of the fireside something of the reviving charm of novelty. It comes in also, to multiply these counsels, by virtue of that superior wisdom and longer study which a published author is supposed to have brought to his theme. But especially do we look to literature for aid in the teaching of polite manners and gentlemanlike deportment. Few teachers and parents feel entirely competent to the handling of subjects like these. They require a special taste, as well as a wide and varied social experience. We know well enough the great principles of self-respect and respect for others upon which true politeness is founded, but we do not know all the various conventionalities and possible expressions of those principles in deportment and manners. We turn, therefore, to the authors who have made these matters a study. And the prime caution here is a negative one—to avoid Lord Chesterfield. This nobleman's *Letters to his Son* enjoy, by reason of their long publication, a wide advertisement, on the strength of which they are widely purchased for presentation to the young. But they are wholly undeserving of this honor. In the opinion of the best judges, both of morals and of gentlemanhood, they offer false and misleading counsels. "Lord Chesterfield was a worldling-gentleman, and how surely the gentleman sinks when the worldling is in the ascendant, his doings and counsels teach." "Chesterfield found the standard of gentlemanhood low, and he left it lower." "They are just such letters as a polished infidel man of fashion would write, and depict anything but the true notion of gentlemanhood." "A brilliant polish on the surface would atone, according to the maxims of Chesterfield, for any rottenness, however great, within." The first two sentences quoted are from Calvert's volume, entitled *The Gentleman;* and the last two from Collier's new and interesting *History of English Literature.* And these severe judgments are fully supported by an examination of the *Letters* themselves. Sentence after sentence may be quoted which would make any thoughtful father tremble for his children, were they uttered by a visitor at his table. "Even polished brass will pass upon more people than rough gold." "My great object was to make every man I met with like me, and every woman love me." "Make your court particularly, and show distinguished attention, to such men and women as are best at Court, highest in the fashion and in the opinion of the public; speak advantageously of them behind their backs in companies who, you have reason to believe, will tell them again." "The pleasures of high life and good company (though possibly in themselves not more moral than those of low life) are more delicate, more refined, and less disgraceful; and, in the common course of things, not reckoned disgraceful at all." Whoever, therefore, should be taken as a teacher of politeness, Lord Chesterfield should not. C. R. C.

Natural Philosophy.

I.

Mirage.—A mirage was visible lately at Dover, England. The dome of the cathedral and Napoleon's Pillar at Boulogne, were to be seen from the Crescent Walk by the naked eye, but with a telescope of ordinary power the entrance of the port, its lighthouse, its shipping, and the surrounding houses, the valley of the hill-side of Capecure, and the little fishing village of Portel were distinctly visible; while on the eastern side the principal features of the country, the lighthouse of Cape Grinez, the adjacent windmill, numerous farms and villages, with their windows illuminated by the setting sun, stood out with extraordinary clearness. While these were under observation, a locomotive was seen to leave Boulogne and travel some miles in the Calais direction by its puffs and wreaths of white steam. Shortly after sunset the mirage subsided.

II.

Varieties of Steel.—It was long accepted as a truism in the art or science of metalurgy that steel is simply a carbide of iron, that is, a compound of carbon and iron, the former element being present in the compound to the extent of from one to one and a half per cent. This chemical definition is now quite superseded. Steel has become a generic term, and of the genus steel there are various species. Ordinary steel is carbon steel; but steely compounds of iron have been produced which have the same general properties as ordinary steel, the carbon of which is replaced, either in whole or in part, by other chemical elements. Thus we now have tungsten steel, in which the metal tungsten is combined with the iron; manganese steel containing the metal manganese; and other steels containing chromium and titanium. In the cases just mentioned the steel is invariably a compound of iron with another metal; it is, in short, an alloy. Other species or varieties, however, contain non-metallic bodies as the steel-generating materials. Carbon is one of these elements; and, therefore, it is but natural to suppose that such elements as closely resemble it in their chemical properties will be the most likely to serve in its stead. Silicon, or, as some modern chemists call it, silicum, the basis of silica or flint, is one of the nearest chemical relatives of carbon. The French chemist, Caron, has made silicon steel. Then there is the element boron, full cousin, as it were, to carbon and silicon, the basis of ordinary borax. Steel has recently been made in Glasgow of most extraordinary hardness and cutting power, when used for tools in turning operations. In one instance, the tool did thirteen times the amount of cutting work of an ordinary tool of carbon steel. The process of making this new steel is at present kept secret; but there is reason to believe that it is boron steel. Other varieties of steel besides exist. The material of which the celebrated Berlin castings are made is phosphorus steel, and many Swedish cannons are made of sulphur steel.—*Harper.*

Personal.

Rev. Dr. Lindsley, of the First Presbyterian Church, Portland, Oregon, on a recent Sabbath delivered an address before the Sabbath School of the M. E. Church. The *Advocate* speaks highly of the address, and is pleased with the spirit which prompts such exchanges.

Rev. J. J. Talbot of the Episcopal Church at Gold Hill, has started for his home in Kentucky, his health not permitting him to remain till Spring as he had intended. Services in the Church will be suspended during his absence.

Rev. I. D. Driver who started a few weeks ago from Salem, Oregon, to visit Idaho on business connected with the American Bible Society, was taken ill at La Grande, and compelled to return.

Mr. C. O. Cummings has become one of the proprietors and managing editor of the *Pajaronian*, published at Watsonville. Mr. Cottle is forced to retire on account of failing health.

Mr. Thomas B. Evans, born in San Francisco, will cast his first vote for President at the coming election. Mr. John J. Kell also born in California will vote in San Jose.

Rev. J. G. Fackler preached last Sabbath in the Presbyterian Church at Vallejo.

Rev. A. M. Stewart preached last Sunday at Truckee. The *Tribune* says that Mr. Stewart has written East to secure the appointment of a minister to that place.

Rev. J. S. Wylie has gone East in the hope of restoring his health. The readers of The Occident will hear from him occasionally during his absence.

Mr. F. M. Hackett has been elected Secretary of the Napa Valley Railroad Company in place of Mr. John M. Coghlan, resigned.

Rev. Jesse Wood, formerly of Stockton, will preach for the Methodist Church South, in San Francisco, for the coming year.

Rev. A. Fairbairn of Tomales, preached at Woods' Hall, Chico, last Sunday.

Rev. S. H. Willey is very ill at his residence in Oakland.

THE FAMILY PAPER OF THE PACIFIC COAST.

The Occident.

In every true home there should be found a first class family paper—one to whose coming, father, mother, children will look with eagerness each week. Such a paper is

The Occident.

Let all who desire such a paper, and are asking, "What paper shall I take?" read the following statement of facts:

THE OCCIDENT contains a greater amount and variety of reading matter than any other family paper on the Coast. It contains choice selections for all classes of readers. Both the child and the person of cultivated literary taste will find in each number matter which cannot fail to be interesting.

THE OCCIDENT is extensively quoted. No other weekly paper on the Coast furnishes so much matter, either original or selected, to the columns of other papers. Whole columns are frequently taken from one or another of its departments. No stronger proof of its excellence could be desired than the fact that it is so well appreciated by contemporaries.

THE OCCIDENT has a complete Agricultural Department, carefully culled from the best authorities, with all the current agricultural items of our own coast, and full market reports. The Mining Department is also very complete.

THE OCCIDENT gives a summary of Pacific Coast news and of Eastern and Foreign Telegraphic News. These items are not hastily thrown together, but are carefully prepared, and are consequently copied to a great extent. The Personal Department is the most complete collection of personal news to be found in the State.

THE OCCIDENT is the official organ of all branches of the Presbyterian Church, and contains full religious intelligence concerning the progress of all denominations. Although a religious paper, it is not sectarian. Its aim is to make men better and happier by the inculcation of the principles of the Christian religion.

THE OCCIDENT is universally admitted to surpass all other papers in the State, in typographical appearance and systematic arrangement of its contents.

Read what the papers say of

The Occident.

"Has commenced its second volume, enlarged and improved and with excellent prospects. It is full of 'knews,' views, and family reading, and is ably edited."—*Brooklyn (N. Y.) Union.*

"It gives evidence of ability, tact, and judgment in its management."—*Cincinnati Presbyter.*

"An able paper of the same form as the *Statesman.*"—*Philadelphia Statesman.*

"One of the best of papers."—*Zion's Herald, Boston.*

"Well filled with readable articles. An important accession to the literature of the coast."—*S. F. Bulletin.*

"Its typographical appearance is finer than that of any weekly paper published on this coast."—*Chronicle.*

What is Said

In the last number of the *Vallejo Recorder*:

The Occident—This elegant journal, the organ of the Presbyterian Church on this coast, published by Bancroft & Co., is worthy of a place in every household. Too much cannot be said in its praise.

Practical and Scientific.

AGRICULTURAL.

Amateur Farmers.

Donald G. Mitchell, in "Hints about Farming," suggests that the orators at agricultural fairs are disposed to give too much of rose color to their statements, and to elevate farming into the position of one of the exact sciences. These speakers only view the poetic side of farm life—they put stramonium in barren fields where it never grew, and make the female birds chant a gay carol, which they never do. Mr. Mitchell, popularly known as "Ik Marvel," thus comments on amateur farmers:

The misfortune about this farm rhetoric is the notable fact that it is most persistently and persuasively indulged in by those who know very little about the practical drift and intent of farm life. They do not have the kicking cows to milk, or the corn to replant after the crows, or the bar-post to reset after an Irish teamster. They never reach to the core of the matter.

It is extraordinary, indeed, how a man of fine imagination can make a dazzling and fascinating thing out of only earthly materials. Goldsmith stewing in London chambers, strolling out of the dirty Strand for a steak, greasy and savory with onions, at his chop house can yet spin for us pretty and deft rhyme about the "loveliest village of the plain," and honest rustics as one could wish for. And yet if Goldsmith had lived among them they would have fleeced him just as surely as the landlady in the Strand. Not because they were worse people, but because they were people, and not shepherds and shepherdesses with pretty crooks and rosettes in their shoes; not because rogues, but because struggling for such livelihood as their wits and work would earn them; and because country pursuits are, after all, no sufficient panoply against the devices of the devil.

Oaks are fine things; and rivers are fine things; and so are sunsets, and morning glories, and new mown hay, and fresh curds, and spotted calves; but after all, a farm and farming do not absorb all the romance of life, or all its stateliest heroics. There are health, and beauty, and independence, indeed; but there are also sweat, and anxiety, and horny hands, and a great deal of dust in the hair.

For a man who is thoroughly in earnest, farming offers a grand field for effort; but the man who is only half in earnest, who thinks that costly barns, imported stock and a nicely rolled lawn are the great objects of attainment, may accomplish pretty results, but they will be small ones. So the *dilettanti* farmer, who has a smattering of science, whose head is filled with nostrums, who thinks his salts will do it all, who doses his crops now to feebleness and now to an unnatural exuberance, who dawdles over his fermentation while his neighbors' oxen are breaking into his rye field, who has no managing capacity—no breadth of vision—who sends two men to accomplish the work of one—let such a man give up all hope of making farming a lucrative pursuit. But if a man, as we said, be thoroughly in earnest, if he have the sagacity to see all over his farm—to systematize his labor, to carry out his plans punctually and thoroughly; if he is not above economies, nor heedless of the teachings of science, nor unobservant of progress otherwheres, nor neglectful of such opportunities as were the Yale Agricultural Lectures—let him work; for he will have his reward. But even such a one will never come to his "four-in-hand," except they be colts of his own raising; or to private concerts in his own grounds, except what the birds make.

Window Plants.

The *Massachusetts Ploughman* in an article on 'House Plants" says: Ivy may be trained about your picture frames, to creep over the mantle and windows, or to form a border of the paper around the room, close to the ceiling. The most brilliant flowers do not give so pretty an effect to a room as a thrifty, climbing ivy. Money, Wandering Jew, Myrtle, &c., grow well when hung in the window, and the effect of the graceful drooping sprigs is extremely pleasing, both outside the house and in it.

Turnips and carrots scooped out, filled with earth, planted with canary seed or chicken weed, and suspended by strings in the window, are very pretty. The leaves sprout from the root, underneath, and the plants spring from the seed, simultaneously. Beside the pretty effect, your birds, if you keep them, can have a feast through the winter upon vegetaion.

A common pine cone planted in its several crevices with canary seed, and placed half-way in water in a hyacinth water-glass, is another original and effective flower vase. For hanging vases, you can make for yourselves highly ornamental ones. Bread-baskets, sea-shells, with three holes drilled for a cord, are very pretty; a common wooden chop-basin covered with little knotty branches, gnarled joints, dried fungi, &c., the whole highly varnished, is as picturesque and ornamental a vase as can be desired.

Wild Oats—Their Origin.—European plants cover square leagues on the plains of the La Plata, to the almost entire exclusion of natives. American plants, introduced since the discovery of this continent, have disseminated themselves over the whole of Hindostan, from Cape Cormorin to the Himalaya Mountains. It is, therefore, no exception to the natural order of things that wild oats should be the leading grass of California, and not unreasonable to suppose that they were introduced from Europe, notwithstanding the lapse of time since that shore was first visited and first occupied by civilized man, has been sufficient to efface every tradition of the circumstance. They are found from San Diego to the head of the Sacramento valley, the almost sole occupants of thousands of square miles. Did they supplant the native vegetation; or were those plains and hillsides previously bare? They differ little from the cultivated oat, but seldom grow as thickly as in a farmer's field; frequently cover the lower hills and the sides of the valleys, but are kept off from the richer and moister soils by other vegetation; drop their seed early upon the parched clay and spring up again after the winter rains, out of the sun-cracks which have saved a portion from hungry beast and sweeping fire. Their wide dissemination does not indicate oats as the staple crop of the State, and experience has shown barley and wheat to be more profitable; but it does, in connection with the character of the unquestionably native flora, reveal a mood of nature propitious to early ripening, favorable to shallow-rooted annuals, and averse to those perennial grasses which form a sod.—*Hours at Home.*

Weight of Milk.—W. S. Grow writes to the *Massachusetts Plowman* in regard to the weight of milk from different cows: "I have lately measured and weighed one quart each from seventeen cows: all but one weighed just two pounds and one ounce; one weighed two pounds only. My cows have given milk from fifteen down to two months: the one whose milk weighed but two pounds has given milk about one year; the last part of September last she gave sixteen quarts per day. One milking was set and skimmed, and the cream from it made in ten minutes one pound of as good butter as I ever saw; the buttermilk was all out before salting. Opening an old book in which I kept some minutes in 1858, when I was making butter and selecting cows for that purpose, I find that on the 19th of September I weighed and set separately the milk of some young cows; from one the milk weighed six pounds and two ounces; the butter six and one-half ounces; another six pounds of milk, eight ounces of butter; the third seven pounds and six ounces of milk, eight ounces of butter; fourth, eleven pounds and twelve ounces of milk, twelve ounces of butter; the above statements are on paper and I know them to be correct."

Useful Hints.—Rich cheese feels soft under the pressure of the finger. To keep one that is cut, tie it in a cloth, put it in a cool, dry place. If mold appears on it, wipe it off with a dry cloth.

Flour and meal of all kinds should be kept in a cool, dry place.

To select nutmegs, prick them with a pin. If they are good, the oil will instantly spread around the puncture.

Keep coffee by itself, as its odor affects other articles. Keep tea in a close chest or canister.

Oranges and lemons keep best wrapped close in soft paper, and laid in a drawer of linen.

Bread and cake should be kept in a tin box or stone jar.

Soft soap should be kept in a dry place in the cellar, and should not be used till three months old.

Bar soap should be cut into pieces of a convenient size, and laid where it will become dry. It is well to keep it several weeks before using, as it spends fast when it is new.

WEEKLY MARKET REPORT.

Wednesday, October 28, 1868.

Flour—Sales of 500 bbls Vineyard and Orange Extra, hf sks, $6. We quote jobbing rates for city brands as follows: Superfine, in sks, ₱ 196 lbs, $5@$5 25; Extra, in sks, $6@6 25.

Wheat—Sales of 1,500 sks choice, in two lots, $1 80; 2,000 sks do, free on board, $1 80. Market dull and prices nominal. We quote ordinary coast at $1 40@1 50; common to fair milling, $1 60@1 70; fair to choice shipping, $1 70@$1 80; good to choice milling, $1 75@1 85 ₱ 100 lbs, latter an extreme figure, obtainable only for strong lots.

Barley—We note a round sale of 1,000 tons for export, private; very few round lots of choice offering. The nominal range of the market is $2 25@2 40 ₱ 100 lbs.

Oats—Sales of 200 sks light, $1 65; 1,000 sks do, $1 70; 100 sks choice, $2. We quote good to choice Oregon at $2 @$2 15 ₱ 100 lbs.

Potatoes—Sales of 250 sks Pigeon Point, balance in hands of principal receiver, $1 30; 225 sks Mission, 90@95c; 100 sks do, $1; 100 sks Bodega, $1; 400 sks do, $1@$1 12½; quotable as to range at $1@1 15. The *Pacific*, from the north last evening, brought 2,500 sks Humboldt, of which no sales had been made up to noon to-day; quotable at $1 25@1 30. No fresh Carolina have been received for a day or two; quotable nominally at $1 37½ ₱ 100 lbs.

Onions—There are none in first hands, though we note considerable inquiry. There was a sale of a small lot yesterday at $1 75 ₱ 100 lbs.

Beans—We quote jobbing rates for first quality as follows: Bayo, 3½@3¾; Butter, 4@4½c; small White, 3½@3¼c; Pink, 2¾@3c; Pink, 2¾@3c; Red, 2¾c ₱ lb.

Rye—Sale of a small lot of inferior at $2 10 ₱ 100 lbs.

Buckwheat—No sales; quotable at $1 75 ₱ 100 lbs.

Mustard Seed—700 sks choice English White sold a few days ago, but not before reported, at 5⅜c, an extreme figure; fair to choice California Black is quoted at 3½@4c ₱ lb.

Flax Seed.—40 sks choice, 4c; 600 sks reported sold, private. The mill continues to pay 4c ₱ lb for choice.

Bran—Sales of 125 tons, $21 50@22 50 ₱ ton.

Middlings—Fine are dull at $35@40 as extremes, though nothing but a choice article will bring $37 50; feed descriptions range from $28 to $44, inside figure for coarse.

Oil Cake Meal—Quotable at $30 ₱ ton from the mill.

Hops—New crop California are quotable at about 25c ₱ lb.

Hay—Sales of 75 tons common to good at $9@15; choice is quoted at $15 ₱ ton.

Dairy Products—California fresh roll Butter is quoted at 60@65c; occasionally small lots of extra choice sell at a slight advance on the outside figure; California pickled, 42½@45c; Cheese 17@19c for California, and 18@20c for Eastern dairies; Pineapple Cheese $18@21 ₱ dozen; Eggs are firm at 65c ₱ dozen.

Provisions—Bacon is jobbing at 14@14½c for California smoked; Oregon do, 14@14½; California Hams, 16@17c; Oregon do, 17@18c; Lard, 13@13½c, and 14c ₱ lb for small tins.

Poultry—Live Turkeys are quoted at 15@16c ₱ lb; Hens and Roosters, $6@7; Spring Chickens, $3 50@4 50; Ducks, $4 50@5 50; Quail, $1@1 25 ₱ dozen; Geese, $2@$2 25 ₱ pair; Venison, 8@9c ₱ lb.

Wool—Sales for the week, by two of the leading receiving houses amount to 150,000 lbs. The market continues active and prices unchanged; good to choice shipping grades are quoted at 16½@18c; fancy lots, 18½c; burry, 11½@13½c.

Hides—Sales since last Wednesday of 1,400 California dry at 14@15c for usual selection; salted, 7½c ₱ lb.

Tallow—The market is but poorly supplied, and quotation range from 7½@8½c, according to quality and description of package. There is but little disposition to pay over 8c for good Beef. Sales for the week of 10,000 lbs good, for local use, 8c; 3,000 lbs very choice, in tins, 8½c, ₱ lb—an extreme figure.

San Francisco Cattle Market.

The demand and supply are about equally balanced, and hence prices are without change, if we except a slight decline in Hogs on foot.

We quote slaughterers' prices as follows:

Beef—American, 1st quality, 7@8c ₱ lb.
do 2d do 6@7c ₱ lb.
Veal—Ranges from 6 to 10c ₱ lb.
Mutton—Is steady at 6@6½c ₱ lb.
Lamb—Has declined to 7@8c ₱ lb.
Pork—Undressed, 4½@5½c; dressed, 6½@7c ₱ lb, outside figures for milk or grain fed.

—*S. F. Bulletin.*

MINING.

Discovery of Coal on the Humboldt.—We were shown by Judge Carter, one day this week, some samples of coal taken from the outcrop of what appeared to be an extensive coal field, situated about eight miles from the Humboldt river and Gravelly Ford. The samples in Judge Carter's possession burned very freely, giving out the unmistakable bituminous smoke and odor, and in appearance resembled exactly the coal found to the east of Salt Lake along the line of the Union Pacific Railroad. The discovery was made by Judge Carter, William Gregg and another man whose name we did not learn.—*Humboldt Register.*

A Rich Mine.—A correspondent of the *Mining Press* says the Alaska, six miles east of Camptonville, promises to be one of the richest quartz mines in the State. The ravine below the mine yielded $100,000 in quartz gold to placer miners in 1857 and 1858. A five stamp mill has reduced three hundred and sixteen tons of rock this year, averaging $42 50 per ton. The lode is from four to six feet thick.

Treasure City.—The mountain upon which Treasure City, White Pine, is situated, is 9,262 feet high; the town is 400 feet lower than the top of the mountain, or 8,862 feet above the level of the sea—2,657 feet higher than this city. Above the town the peak of the mountain towers like a huge spire, the top of which is 1,004 feet higher than the summit of Mt. Davidson.—*Virginia Enterprise.*

Yellow Jacket Mine.—This mine is looking exceedingly well. The rich body, on the 810-feet level, mentioned by us heretofore, is now fully five feet in width and of unknown extent in all directions. It is too rich to be worked by the common mill process and is being shipped to Dall's mill, Washoe Valley, for reduction by the Friberg plan.—*Virginia Enterprise.*

Copper.—The Mariposa *Gazette* reports that 50 tons of copper are shipped per week from the Buchanan Hollow Mine, in Fresno County, 25 miles from the town of Mariposa, and 30 miles from Overton's Landing, on the San Joaquin River, from which point it is shipped by steamer, when the water is high enough.

Rich Specimen.—A 100-pound chunk of black sulphuret ore, taken from the 850-foot level of the Yellow Jacket mine, is on exhibition at Gold Hill. An essay of it shows that a ton of the same would yield, silver, $3,676 53; gold, $1,783 61; total, $5,460 14.

Mining Enterprise.—The owners of the ground between the Ophir and Gould and Curry mines have organized a consolidated company and will sink a shaft 900 feet deep.—*Nevada Gazette.*

Eureka District.—A new claim, supposed to be on the extension of the Banbury ledge, is now being opened, and is yielding as rich ore as was ever seen in the district.—*Nevada Gazette.*

Mariposa Estate.—The Mariposa grant, it is stated, has passed into the hands of new parties with some promise of a successful termination of the difficulties of the old company.

Puget Sound.—The gold miners on the beach at Gray's Harbor are still at work, making satisfactory wages.

White Pine.—Discoveries of extraordinary richness continue to be made in the White Pine District.

SCIENTIFIC.

Arctic Expeditions.—It will doubtless cause a thrill of mingled surprise and sorrow to learn that after all that has been done to discover the Franklin expedition, two of its members survived to as recent a period as 1864. These were Capt. Crozier and a steward of one of the lost vessels, who died near Southampton island while endeavoring to make their way to that place, in the belief that they would there find a whaling vessel which would carry them home. Dr. Hall is confident of the identity of Capt. Crozier with one of the men so described to have perished, and has in his possession several articles that belonged to him. The fate of these two unfortunate men, who after eighteen years wandering through Arctic wastes, had so nearly reached a place within reach of civilized man, forms one of saddest chapters in the melancholy and mysterious story of the lost.

Electric Telegraph in China.—The Chinese Government, through Envoy Burlingame, has conceded to a company the privilege of connecting the great seaports of the empire, by submarine electric telegraph cable, and it is proposed to commence operations at once, by laying down a line of nine hundred miles between ten of the largest ports, which, it is declared, have a foreign commerce of $900,000,000, besides an immense internal trade. When that cable is laid, land lines will follow, ramifying through the whole country, and commanding the communications of the Government, business and social life of a people who have no postal system. To commence this work, a capital of $5,000,000 is to be subscribed in small shares.—*Evangelist.*

Information for Travelers.—An excellent apparatus for informing travelers the names of stations is used on the cars of the Ogdensburg and Lake Champlain Railroad. It consists externally of a box surmounted by a bell, and having a glass plate in front, under which the name of a stations appears in letters about three inches in length. When the train arrives at the station named on the indicator the bell on the top of the box rings; and presently the name of the next station on the line appears under the glass plate. This plate ought to be adopted on all railroads. It would save passengers anxiety and conductors much trouble.—*Boston Journal.*

Bullet-Proof Cloth.—*The United States Service Gazette* says: "We hear of a perfectly flexible cloth which is said to be absolutely impenetrable to bullets. We have not yet seen the article, but we are disposed to think that, though the bullet may not be able to get inside the cloth, broken bones and other consequences of a bullet wound will. In our young days we remember that broad cloth was quite impervious to the bodily substance of the rattan, but we had proof positive that it admitted a very large amount of its most disagreeable properties."

Carbolic Acid.—Carbolic acid, which is nothing more than the disinfectant and preserving element in smoke and creosote, is now coming into very extensive use as a purifying agent. It is used in a solution of one part to one hundred of water. No vegetable germs or insects can live where it is employed. For burns nothing is better than an application of this solution, on cotton, to the burn; or, if the skin is broken, the same diluted with an equal part of water.—*Independent.*

Improvement in Horse-Shoeing.—A Frenchman has invented a new system of shoeing horses. He lets an iron band into a rectangular groove scooped from the outer circle of the horse's foot. This band is fastened with seven rectangular nails, driven into oval holes. The sole of the foot and the fog are thus allowed to touch the ground, the horse never slips, and never get diseases of the feet.

Mummies.—Four hundred mummies, it is stated, were cast up by the earthquakes in Lima, and stand in long lines facing the sea, a ghastly regiment, and a good chance for a photographer.

Transmitting Power.—Compressed air is proposed by Leloup as a means of transmitting power to great distances from waterfalls, even when not needed for ventilation, as in tunnels. The piston of the compressor is to act under water.

Sunshine in Sleeping Rooms.—Sunshine is as necessary to the health of animals as plants, and we should contrive, if possible, to have our sleeping rooms upon the east and south sides of the house. We want more sunlight of the material kind, as well as the spiritual, in our houses. "Faded carpets!" you exclaim. Then out with them, or let them fade. Better a thousand times than have the roses fade from the cheeks of wives and children.

Musical.—One of the lowest musical sounds which it is possible to distinguish is produced by muscular contractions. It is best heard by inserting the extremity of the finger gently into the ear, bringing at the same time the muscles of the hand into strong contraction. The note produced corresponds to 32 double vibrations in a second.—*Independent.*

Perpetual Motion.—The "perpetual motion" chimera is not given up yet. A Dr. Updegraff, of Reading, Pa., thinks he has solved the problem in a combination leverage by which, while a ball on one side is falling and moving the machine, it raises one on the other side to take its turn. He claims to have been offered $100,000 for his invention. We advise him to sell.—*Chicago Advance.*

Influence of the Moon on the Weather.—At the late Scientific Convention in Chicago, Prof. Elias Loomis argued that the moon does affect the weather, just before its full, influencing it toward cloudiness rather than clearness, and following the same law as the sun.

Carbolic Acid for embalming, even without incisions, has proved a perfect success for 103 days. By injecting it into the veins, Prof. Seely thinks a body can be kept a hundred years entirely unchanged.

Sleeping Dogs.

Some truth may be found in the following; taken from the *Saturday Review* by *Every Saturday*, an excellent collection of articles from the best foreign periodicals:

There is a capital old proverb, often quoted but not so often acted on, called, "Let sleeping dogs lie"; a proverb which, if we were to abide by its injunction, would keep us out of many a mess that we get into now, because we cannot let well alone. Certainly we fall into trouble sometimes or rather we drift into it,—we allow it to gather round us,—for want of a frank explanation to clear off small misunderstandings. At least novelists say so. But, leaving novelists alone, on the whole we find in real life that if speech is silver, silence is essentially golden, and that more harm is done by saying too much than by saying too little; above all, that infinite mischief arises by not letting sleeping dogs lie.

People are so wonderfully anxious to stir up the dregs of everything, they can never let things rest. Take a man or woman who has done something just a little queer,—nothing very heinous perhaps,—that gets noised abroad, and who is coldly looked on in consequence by those who believe the report that arises, or worse. Now the wisest thing undoubtedly is to bear the coldness as the righteous punishment of his folly, and to trust for rehabilitation to that mysterious process called "living it down." If there has been absolutely no sinfulness to speak of, nothing but a little imprudence perhaps, a little precipitancy and a great deal of ill-nature, by all means wake up the sleeping dog, and set him howling through the streets. He may do good, seeing that truth would be your friend. But if there is a core of ugly fact, even if it is not quite as ugly as the envelope which rumor has put about it, then fall back upon the dignity of living it down, and let the dog lie sleeping and muzzled.

Many a man who gets his farthing damages had better have borne the surly growl of the only half-roused dog, than to have retaliated, and so waked him up. The farthing damages representing say a cuff on the head or a kick in the ribs, or a milder "Lie down, sir!" may be very pleasant to the feelings of the yelped at, as so much revenge exacted,—Shylock's pound of flesh without the blood. But what about the consequences? what about the disclosure of your secret follies, and the uncovering of the foundations on which the libel rested? The foundations remain immovable to the end of time if the superstructure is disroofed, and the sleeping dog is awakened, never to be set at rest again while he has a tooth in his head that can bit.

One of the arts of peaceful living at home is contained in the power of letting sleeping dogs lie. Papa is surly,—it is a way papas have,—or mamma is snappish, as even the best of mammas are at times, when the girls are tiresome, will flirt with ineligible young brothers, or when the boys, who must marry money, are paying attention to dowerless beauty instead. Well, the family horizon is overcast, and the black dog keeps the gate of the family mansion. Better let it lie there asleep, if it will be content to remain so. It is not pleasant to have it there certainly, but it would be worse to rouse it into activity and a general yelping through the house. Sometimes, indeed, in a family given to tears and caresses, and easily excited feelings, a frank challenge as to reasons why is answered by a temporary storm, followed by a scene of effusion and *attendrissement*, and the black dog is not wakened, but banished, by the rousing he has got. This is a method that can be tried when you have perfect knowledge and command of your material; else it is dangerous, and nine times out of ten would be an unsuccessful experiment. It is nearly always unsuccessful with husbands and wives, who often sulk, but rarely for causes needing explanation.

A sleeping dog of another kind, which it would be well if women would always leave at rest, is the potential passion of a man who is a cherished friend, but an impossible lover. Certain slow-going men are able to maintain a strong but strictly platonic attachment for certain women. This is all very well so long as the woman minds what she is about; for the passionless attachment of a man depends mainly on her desire to keep things in their present place, and on her power of holding to the line to be observed. If she oversteps this line, if she wakens up that sleeping dog of passion, it is all over with him and platonism. What was once a pleasant truth would now be a burning satire, for friendship routed by love can never take service under its old banner again. And yet this is what women are continually doing. They are always complaining that men are not there friends, and that they are only selfish and self-seeking in their relations with them; yet no sooner do they possess a man friend, who is nothing else, than they try their utmost to convert him into a lover, and are nto well pleased if they do not succeed; which might by chance sometimes happen, like any other rare occurrence, but not often. And yet success ruins everything. It takes away the friend, and does not give an available lover; it destroys the existing good, and substitutes natter.

Just as easy is it to rouse the sleeping dogs of hatred, of jealousy, of envy. You have a tepid, well-controlled dislike to some one; and you know that he knows it. For feelings are eloquent, even when dumb, and express themselves in a thousand ways independent of words. You do not care much about your dislike,—you do not nurse it and feed it in any way, and are rather content than not to let it lie dormant and so far harmless. But your unloved friend cannot let well alone. He will be always treading on your corns and touching you on the raw. That unlucky speculation you made; the election you lost; the decision that was given against you, with costs,—whenever you see him he is sure to introduce some topic that rubs you the wrong way, till at last the sleeping dog gets fairly roused, and what was merely a well-ordered dislike bursts out into a frantic and ungovernable hatred. Young people are much given to this kind of thing. There is an impish tendency in most girls, and in all boys, that makes teazing a matter of exquisite delight to them. If they know of any sleeping dog that an elder carries about under his cloak, they arenever so happy as when they are arousing it to activity, though their own backs may get bitten in the fray. Let a youngster into the secret of a weakness, a sore, or a passion, and if he can resist the temptation of torturing you as the result of his knowledge he may lay claim to a virtue almost unknown in boyish morals. But they sometimes pay pretty dearly for their fun. More than one lifelong dislike, culminating in a disastrous codicil or total omission from the body of the will, has been the return-blow for a course of boyish teasings which a testy old uncle or huffish maiden aunt has had to undergo. Even fathers and mothers have human and personal feelings in excess of their instincts, and they, no more than any one else, like to be put through their paces by the impish vivacity of youth, and made to dance according to the piping of an irreverent lad or saucy girl. If they have dogs, they don't want their children to pry into their kennels and whip them out at their pleasure, and those who do most will naturally get worst off in the great division of family love. "Let sleeping dogs lie," certainly as a rule for private life. Historically the saying does not hold good. For if the great leaders of thought and reform had not roused up the sleeping dogs of their day, and made them give tongue for all after ages to hear, we should be but poorly off at this present time. Many of our liberties have been got only by diligently prodding up that very sleepy dog, the public, till he has been forced to show his teeth, and every school boy's history is full of instances of how much has been done, all the world over and in every age, by the like means. Sometimes the prodded dog flies at the wrong throat on the other side, as we have had a few notable instances of late; and then it would have been wiser to have left him quietly sleeping in the shade, whether at Mentana or elsewhere; to rouse for rending being a poor amusement at the best, and an eminently unprofitable use of leather.

Conversation teaches more than meditation.

EARTHQUAKES.

Their Volcanic Origin and their Function in Nature—The Earth in a Continual State of Perturbation.

The late earthquake which shook the western coast of South America lacks no incident of calamity or touch of the terrible to render complete the afflictive picture of utter horror and elemental wrack.

None of the more direful manifestations of nature's energies—tempest, whirlwind, thunder or flood—is so calculated to affright the imagination as are these throes of the planet upon which we live; and perhaps there is for this (apart from the appalling results that ofttimes attend these phenomena), a reason in the very nature of the human mind. It has often been noted that the *unexpected* is a main element in the horrible. Now, there is no conviction more deep-seated than that, instinctively entertained by mankind, of the firm-based, solid structure of the earth. When, therefore, it comes to pass that its stout-ribbed, immobile fabric is seen to quake and shiver, and the surface on which we mortals so securely tread, treacherously to yield like the unstable sea, the sudden shock given to our firm faith cannot but confound the reason, and awaken a deep dismay. Even when the tremor is harmless it is alarming, but the dread is immeasurably increased when there occurs one of the greater convulsive travailings of nature, such as that which last month overwhelmed the sea-side cities of Peru, Ecuador and Chili.

It is a tragic tale, commingled of all horrors, that comes up to us from that unhappy land. We hear of scores of cities overturned, burying tens of thousands of the inhabitants beneath their ruins, and then deluged by the swollen and angry sea; we are told of the affrighted populations fleeing from present wrath, without food or shelter, to the mountains; of the whole coast for several thousand miles shaken with horrible commotions; of direful subterranean vomitings; of mephitic vapors filling all the air; of violent volcanic eruptions; while to complete the picture of horrors we have the vision of the yawning earth rendering up its old-time burial places, and disclosing the ghastly files of antique dead.

Well, where the uninstructed mind leaves off, fatigued at the thought of so much calamity and puzzled to reconcile such scourges with the conception of a benevolent Creator, Science appears, laboriously studies these strange phenomena in terrestrial physics, succeeds at length in connecting them with the general cosmic plan, and—last triumph of divining power—boldly proclaims that the earthquake itself, desolating as are sometimes its effects, is but a fresh illustration of the great law of compensation, but an incident in a vast system of action to which we owe the very ground we stand upon, and the very land we inhabit.

It is a matter of observation that everywhere around the coast line of every continent, the sea is constantly at work, warring against the land, crumbling away its edges, grinding it to powder, and carrying the detritus away and spreading it out over its own bottom. This process is slow, but it goes on *forever*, and the result is that in time (that is, in the secular time in which geology works) the structure of continents is entirely worn away, and new ones are formed out of the ruins of the former ones. It is quite certain that our present land was formerly the bed of the sea, and that continental masses once reared their forms where now rolls the "deep and dark blue ocean." Now, rightly estimating this mighty power of the aqueous agents which incessantly labor to reduce the inequalities of the earth's surface to a level, it is easy to see that, if they went on unopposed, they would at length "clear away and spread over the bed of the ocean all our present existing continents and islands," and, indeed, they have been at work long enough to have, if unopposed, produced this very result.

It is the earthquake and the volcano which place themselves in opposition to this destructive tendency; so that we may regard the igneous agents as in constant antagonism to the aqueous agents—the latter laboring incessantly to obliterate the land, while the former are equally active in restoring it. What are these igneous agents, and what is their source?

Now, though geology does not say that there may not be a solid central mass in the interior of the earth—"kept solid in spite of the heat by the enormous pressure"—it does say that an immense range of terrestrial phenomena compels us to conclude that beneath the crust of the earth there is a sea of liquid fire, on which the continents and the land underneath the oceans are floating. This central fire is not only incandescent matter, but it is matter in a state of energefic elasticity, continually reacting upon the structure of the earth, and making itself felt more or less palpably—sometimes producing violent undulatory motions, and at other times breaking through the crust, and vomiting forth lava and the central fluid. The former of these commotions are styled earthquakes; the latter, volcanoes; so there is little doubt that they have a common origin, and, as has already been observed, it is their function to counteract the leveling effect of water, partly by heaping up new matter in certain localities, and partly by deepening one portion, and forcing out another, of the earth's envelope. It remains to see in what manner this is done.

In a paper as profound in its views as it is luminous in its statement, Sir John Herschell has indicated the philosophy of these divulsions and upheavals, and we cannot do better here than epitomize his statement. The land, as has been seen, is perpetually wearing down, and the materials are being carried out to sea—thinning toward the land, and thickening over all the bed of the sea. What must happen? If the continents be lightened, they will rise; if the bed of the sea receive additional weight, it will sink. It is impossible but that this increase of pressure in some places, and relief in others, must be very unequal in their bearings; so that at some place or other this solid floating crust must be brought into a state of strain, and if there be a weak or soft place, a crack will at last take place. When this happens, down goes the land on the heavy side, and up on the light side. This is exactly what happens in earthquakes. We should naturally expect that such cracks and outbreaks would occur along those lines where the relief of pressure is the greatest, and also its increase on the seaside; that is to say, along or in the neighborhood of the sea-coast, where the destruction of the land is going on with the most activity. Now, it is a remarkable fact in the history of volcanoes that there is hardly an instance of any *active* volcano at any considerable distance from the sea-coast, while it is to be observed that the favorite sporting places of earthquakes are the regions covered by the great chains of volcanic cones.

That earthquakes operate to raise the land-masses is not a mere matter of speculation, but a fact of repeated observation. In 1822, in a single night (Nov. 10), the whole coast line of Chili, for a hundred miles about Valparaiso, with the mighty chain of the Andes, was hoisted at one shock from two to seven feet above its former level, leaving the beach *below* the old low-water mark high and dry. In 1819, in an earthquake in India, in the district of Cutch, bordering on the Indus, a tract of country more than fifty miles long and sixteen broad, was suddenly raised ten feet above its former level. And again, in 1538, in the convulsion which threw up the Monte Nuevo, the whole coast of Pozzuoli, near Naples, was raised twenty feet above its former level, and remains so permanently upheaved to this day. There are hundreds of the like instances on record, and no doubt when we come to get full scientific accounts of the late convulsion, it will be found that parts of the coast of South America have been raised above their former level.

Such is the way in which earthquakes do their work, and they are *always* at work. According to Humboldt, there is not a day in which the earth is not shaken by these commotions; so that the state of perpetual movement is the normal condition of the surface of our globe, and if we had apparatus sufficiently sensitive we should doubtless detect this constant movement.

Why the working of the mechanism of our planet is attended with so much evil is a mystery beyond philosophy; but we know that these tremendous convulsions are a part, and in a large sense even a beneficent part of the general scheme—that, in the fine language of Lyell, "the earthquake itself, although so often the source of death and terror to the inhabitants of the globe, visiting in succession every zone, and filling the earth with monuments of ruin and disorder, is nevertheless the agent of a consertive principle above all others essential to the stability of the system."

These actions and re-actions incessantly proceed. They have made the world what it is. Modern geology has banished the old notion of sudden cataclysms—of a time when nature

> "Wanton'd in her prime and played at will
> Her virgin fancies."

For the causes now at work are adequate to account for all cosmic changes; and the earthquake is an illustration of agencies which have given the form to our globe, which now continue to modify it, and which, in the future, are certain to subject its huge rondure to new transformations in the cycles of unending change.

CASH ASSETS EXCEED $2,700,000.

This Company, having a Stock Capital, makes Insurances and Endowments with or without profits. Dividends to Policies with profits are equal to, or larger than those of other, or "Purely Mutual" Companies in available present cash value.

NEW AND IMPORTANT PLANS OF LIFE INSURANCE HAVE BEEN ADOPTED BY THIS COMPANY. SEE THE NEW PROSPECTUS.

Life Assurances, Endowments and Annuities in every form Profits available after Policies have run one year, and annually thereafter. The reserved Cash fund, for re-insurance, is the largest known to or required by, the ablest and most experienced authorities in Life Insurance, thus affording undoubted security. A liberal non-forfeiture system, as to whole Life or Endowment Policies.

Policy Holders in this Company can use or apply the Dividends of profits in a greater number of ways than is afforded to Policy Holders by any other Company.

The law under which the company is Chartered, provides that if the Capital should, from any cause, become impaired to the extent of Twenty-five Thousand Dollars, or more, the Stockholders SHALL BE CALLED UPON TO MAKE GOOD SUCH DEFICIENCY. This is the only Cash Company in America which affords this safeguard to Policy-holders.

The assured in this Company are not personally liable as in Mutual Companies, which have the power of assessing their membere or of reducing the sums insured, in case of deficiency.

CLERGYMEN, insuring in this Company, are allowed a Discount of TWENTY PER CENT. on first year's premium, and a libera commission will be given on all Insurances influenced by them.

Agents wanted, on the most advantageous terms.

Family Reading.

By the Sea.

Backward and forward, under the moon,
Swings the tide in its old-time way;
Never too late, and never too soon;
And evening and morning make the day.

Backward and forward, over the sand,
And over the rocks, to fall and flow;
And this wave has touched a dead man's hand,
And that one has seen a face we know.

They have sped the good ship on her way,
Or buried her deep from love and light;
But here, as they sink at our feet to-day,
Ah, who shall distinguish their voices aright?

From their separate burdens of hope and fear
Are blended now in one solemn tone,
And only this song of the waves I hear,
"For ever and ever His will is done."

Backward and forward, to and fro,
Swings our life in its weary way;
Now at its ebb, and now at its flow:
And evening and morning make the day.

Sorrow and comfort, peace and strife,
Pain and rejoicing, its moments know;
How from the discords of such a life
Shall the clear music flow?

Yet to the ear of God it swells,
And to the blessed round the throne,
Sweeter than chime of vesper bells,
"For ever and ever His will is done."

His Yoke is Easy.

The yoke of repentance, subjection, and duty must be worn by every disciple, and though it is hard to bend the neck to it, and yield the stubborn will to Christ, yet, after the yoke has been taken, it is neither a degradation nor a burden. The difficult and humiliating part of religion comes first, and lies in the incipient struggle. When that is over, all is peace, rest, sweetness, growth, enjoyment. One may almost certainly decide whether a religion is true or false by asking the question, is it easy or is it difficult. Religions that are burdened with ceremonies, hampered with traditions, which enjoin masses and sacrifices, fasts, vigils, and penances, are all of human origin, and not of Christ. His yoke is easy. The hard religions, like the Papacy and the countless devices of Paganism, are of the devil. And so are all those ascetic features which have been engrafted upon the various forms of Christianity. Christ indeed requires great activity and energy of service, but these things are not hard. He requires prayer, meditation and watchfulness—but these are delightful. He enjoins upon His disciples a firm opposition to all the foes of righteousness, but in this warfare they have every advantage, invulnerable armor, powerful allies, a glorious Leader. He demands self-denial and conformity to His will—but these are so sweet and comforting to the Christian as to involve but little cross bearing. The roughnesses of religion come of non-conformity to Christ. The discontented intellects who are discussing metaphysics, quarreling with the doctrines, and stumbling over theological dogmas, are far from Christ, and this precisely is their trouble. They need to go to Him, and they never will find rest until they do. Those gloomy Christians who go mourning all their days, filling the air with woful lamentations, are guilty of misrepresenting religion, and do continually contradict its beautiful truths and principles. They have just enough of piety to awaken remorse for sin, but not enough to give them the peace of justification. They are living below their privileges, and are only half broken to the yoke. His commandments are not grievous. His service is no slavery. He shall find his life who loseth it; and whosoever forsaketh all that he hath for Christ's sake, shall receive an hundred-fold recompense in this world, and in the world to come life everlasting.

How simple a thing is the religion of Jesus! It is level with the capacity of a child, and requires no strenuous effort to reach it. Wayfaring men, though fools, need not err therein. It is as reasonable as it is simple; precisely adapted to bring rest to the weary, and peace to the broken in heart. A joyous religion it is, also. It offers redemption from all the real evils of the universe. It removes the fear which hath torment, strengthens the weak, assures the timid, calms the anxious, soothes the irritated, extracts the sting of death which is sin, and fills the soul with love, serenity, courage, hope, and confidence in God. —*Congregationalist.*

Perpetual Presence of Christ.

A Christian should make his Savior a perpetual companion—everywhere, and on every day of the week. Christ offers to walk with him in every day's journey of life. What companionship so enlivening and so purifying as His; who else can make our hearts so burn within us by the way?

Christ's presence with believers is one of the best preventives from sin; one of the best stimulators to duty. Jesus is "made unto us sanctification" as well as redemption. That is—his is a spirit of holiness. And when we live in hourly communion with Jesus it has a tendency to make us holy.

The sense of Christ's immediate presence is a perpetual check upon our lusts—a perpetual spur to our self-indolence. Are we provoked to cutting words or irritating retorts? One look from the gentle, all-forgiving Jesus should be enough to seal the lip and to smooth the ruffled brow. Are we ever tempted to keen bargains and overreaching in business? Selfishness says, "All is fair—others do it—it is the custom of our trade." But what will the pure and holy Jesus say?

How will our account books look to Him when He "audits" them? And so on, all through the calendar of duties and the circle of daily temptations. With my Savior beside me, how will I dare to play the coward, or the cheat, or the trifler, or the sensualist, or the trickster?

Nowhere will Christ's presence be more cheering and sustaining than in the weariness of a sick room, or under the silent shadows of a great bereavement. "Christ comes to me in the watches of the night," said the bed-ridden saint, Halyurton: "He draws aside the curtains and says: It is I; be of good cheer; be not afraid. Here I lie pained with pain; without strength, and yet strong." And when the last farewells have been spoken through the sobs of the dying hour, this never failing Friend will sweetly whisper, "Fear not, I am with thee. Where I am ye shall be also. Having loved my own, I will love them unto the end."—*Cuyler.*

A Mother's Reward.

A gentleman was once visiting a cottage, where the mother of the family was a true and earnest Christian. During the conversation he remarked how happy she must be to see every one of her children (and there were eight of them) so early brought to the Savior's feet, and following Him so closely in their daily lives; and he inquired whether she had adopted any peculiar method in their religious instruction. The poor woman replied that she had only done what every Christian mother ought to do; but on her visitor pressing her still further, she continued with much humility:

"I think I may say I *never* fed my infant children without praying in my heart that God would give me grace to nourish them as inheritors of the kingdom of heaven. Whilst I was dressing them in the morning, I used to beseech my Heavenly Father to clothe them with the robe of Christ's righteousness; when I prepared their meals, I asked God to feed their souls with the true bread from heaven, and to give them to drink of that living water, which springeth up to life everlasting; when I took them to the Lord's house, I prayed to Him to sanctify them, and make them temples of the Holy Ghost; when they left my side for school, I followed them with my eyes, praying that their lives might be like the path of the just, which shineth more and more unto the perfect day; and in the evening, when the hour of rest arrived, I used in silence to ask their Heavenly Father to bless them, and keep them safely in his everlasting arms."

And truly this mother was rewarded for her patient waiting upon God, richly and fully rewarded.

O that more mothers would remember the infinite and awful influences they possess for weal or woe! —*Southern Churchman.*

Gnarled Lives.

It is a solemn thing to grow out of youth and not be a Christian. It is a solemn thing for a young man to grow up into manhood and not be a Christian. It is a solemn thing for parents to wait for their children to get into the trough of the sea before they attempt to bring them to the Lord Jesus Christ. It is a solemn thing to abandon a child to hope and chance, and promise, when all growth beyond youth is wrong growth. I buy an old place of a careless man, and find that the grape trellises have been neglected until the vines have gone in and out, and twisted themselves around the trellis. I look at it for awhile, and say to my gardener:—"See here; which is the cheapest, to take that vine up and burn it, and plant a new vine there, or undertake to trim this up and give it a new start, and endeavor to train it right?" He would say that it was about "six of one, and half a dozen of the other." On the whole it is better to plant a new root, than to seek to change the old vine. Is not this true in regard to a great many men? To undertake to untwist and unlock those gnarled branches which are twisted around their life, is it not taking the very root out of them? How many are here who know this from experience! Conceive yourself as being again in the state of a child, and your whole life as conforming to the wish of your Father who is in heaven; what a mighty change would that be!—*Beecher.*

Truth-slaughter.—Our civil law recognizes degrees in crime. If a reckless driver on the street, or a careless pilot on a vessel, causes a loss of life, he is not hung like the man who waylays his neighbor and maliciously takes his life, but he is held guilty of manslaughter in a lower degree, and is punished therefor.

There are many moral offenses which are committed, even by very good men, the guilt of which is not fully perceived, because it is only in a lower degree. A man borrows money and neglects to return it. He runs in debt without any certainty that he will be able to pay. Often thus, even by those who are deliberately dishonest, others are defrauded. Now, these persons would not steal directly—they would not pick a pocket, but they are guilty of dishonesty in the second or third degree.

Perhaps you ask a minister how large a congregation he has. He does not like to have it thought he is a man of no account, and his answer gives about double the real size. He does not intend to lie—he merely "stretches" the truth. So men will often make promises which they are not sure to fulfill. They would not be guilty of direct *lying*, but we fear they might be convicted of *truth-slaughter* in the second degree.—*St. Louis Record.*

A Slight Mistake.—In a New Hampshire town there lived an ignorant, irreligious, worthless family, Ransom by name, no member of which had been seen inside a church within the "memory of the oldest inhabitant." The village pastor, after years of failure, had at length almost "persuaded" two of the younger scions to promise attendance for one Sabbath; but the fear that they would be the subject of some personal remarks still deterred them. They were in great terror lest they should be publicly upbraided for their misdoings, and called to account for their wickedness.

After much exertion their fears were quieted, and on the following Sunday the eyes of the good pastor's congregation were astonished at the unwonted presence of the aforesaid Ransoms. All went well until the reading of the second hymn, which was the familiar "Blow ye the trumpet blow," etc. Imagine the effect when, at the end of the line "Return ye *ransom'd* sinners home," the elder of our heroes seized his hat, and, with long strides towards the door, shouted,

"Come along home, Bill, I know'd they'd be flinging at us if we came here!"

Gambling. Let every young man avoid all sorts of gambling as he would poison. A poor man or a boy should not even allow himself to toss up even for half a penny; for this is a beginning of a habit of gambling, and this ruinous crime comes on by

low degrees. Whilst a man is minding his work e is playing the best game, and he is sure to win. A gambler never makes any good use of his money, ven if he should win. He only gambles the more, nd he is often reduced to beggary and despair; he often tempted to commit crimes for which his life forfeited to his country; or, perhaps, he puts an nd, himself, to his miserable existence. If a gamler loses, he injures himself; if he wins, he injures companion or a friend. And could any honest an enjoy money gained in such a way?

Young Folks.

A Picture.

Sitting there in the old barn door,
One, two, three;
Gay Queen Bess, with her golden hair,
Meek-eyed Allie, and handsome Clare;
And o'er all, the sunbeams ling'ring there,
What prettier sight can there be?

They are weary; tired of play.
Strange though it may be;
Tired of romping o'er fragrant hay,
With chasing butterflies all the day,
With climbing to look at the nest that lay
High in the apple tree.

Hark! they're telling tales of fairy-land,
Wondrous and strange;
Of bright-eyed maidens, and stern, old kings;
Of tiny beings, with gossamer wings,
Of jewels, and diamonds, and all such things
O'er which childish fancies range.

And now they are building castles of air,
One by one.
Grand and beautiful; towering high!
Filling with rapture each beaming eye;
Yet ready *at only a breath*, to fly,
Quick to be gone.

I can hear the laugh and the merry sound
Of their happy play;
I can see them running to and fro,
And the sunbeams come, and the sunbeams go,
But on no prettier sight have they rested, I know,
Than this, to-day.

Yet call not these life's happiest days,
When they are gone;
For *all* life is happy, if lived aright,
Thus childhood and manhood shall *both* be bright,
And shine each day with a fairer light,
As the years roll on.

But sometimes, far off in the years to come,
When childhood is o'er,
They'll look back to this picture with pleasure I know,
And their hearts will thrill with a warmer glow,
Caught from the sunbeams that come and go,
On the rough, worn floor.

Little Nellie's Red Nose.

Nellie Muller was a bright, quick little body, of out eight years old, but in spite of her many good ualities, she was often in disgrace for being careless nd inconsiderate. Her mother required that the ursery where the children breakfasted should be pt clean and neat, and many a punishment was incted upon Nellie for staining the carpet, or spoilg the clean table-cloth. A more thoughtless little rite never lived, and neither reproof nor whipping emed to make any impression upon her. Her exse, like some other children I have known, was alays, "O, I forgot!" or "I never thought!" The ursery walls were literally covered with the prints her greasy fingers. The table-cloth near her seat as daubed with spots both small and great. Her tle books were torn and dirty; and as for her esses, a new one was soon so stained and ragged, at her father declared she ought to wear nothing t sheet iron.

Last spring, the nursery was newly papered and rpeted, and the mother, calling her children toether, said: "Now listen, all of you, to what I say. hoever gets the first three spots on the new cart, will receive a mark that will not soon be forgotn. Do you hear, Helen?" Nellie looked very ave, for her mother never called her *Helen* except nen she was very much in earnest. So she replied Yes, dear mamma, I will certainly be very care-l." But, alas! alas! before the week had passed, ree large, dark spots were visible on the pretty green carpet. Mrs. Muller questioned her children closely, and found that Nellie, as usual, was the culprit. She did not scold the little girl, but only said, very quietly, "You remember what I told you!" The next morning, when the children met in the nursery, a shout of laughter arose, at which Nellie looked astonished. "What is the matter?" she cried, "I don't see anything to laugh at!"

"Look in the glass! look in the glass!" was all they could say for laughter. Nellie looked, and started back frightened, for on the end of her nose was a spot red as sealing-wax, and rub as hard as she would it could not be removed. She cried bitterly, and her mother said: "The spots on the carpet look quite as badly as that on your nose. One is as great a blemish as the other. You must keep your nose red for three days, as a lesson and punishment to you. You cannot get it off yourself, for it is painted in oil-colors!"

Nellie was much ashamed, and cried until she was quite tired. At the end of the three days the spot disappeared from her nose, but the effect produced by it was lasting. She learned to be a careful and orderly child, if at times she grew negligent, her mother had only to say warmly, "Remember your red nose!"—*Lewiston Journal.*

Bread and Milk.

One morning Johnny (for that was his real name) came to the breakfast table and boldly said he would not eat bread and milk that morning.

"Very well, Johnny," said his mother quietly, and without raising her voice, "I'll set it on this high shelf. You can run off to school."

This run was along a good piece of road, and then a short time through a wood, which gave John ample time to call up his temper and to strengthen his desire not to give in.

Accordingly, on his return, he was all ready to assert the dignity of boyhood, and when he drew up to the table and saw the bread and milk set before him, he felt nerved to any wicked course, and decided not to give in.

"Very well, Johnny," was the mother's calm remark, "I'll set it on the high shelf till you want it;" and a firm wave of the hand sent him from the table, and in due time he was bidden by an authority he could not resist, to run off to school.

That run was not so spirited as the morning run had been. He felt "dreadfully hollow," and had no relish for his usual sport of pretending to be chased by a bear, climbing, in fancied terror, a tree, running out on its branches, and dropping to the ground, only to gain another tree and act the same feat.

On the contrary, he felt as if he would give up. He knew his mother never would, and admitted to himself that he should be glad of that bowl of bread and milk; and when he came dragging home at night, and the bowl was lifted down from the high shelf, without a word of threatening or reproach, he pretty well understood the force of calm and firm authority.

Feeling well assured that he never would eat anything else until he had swallowed that oft-presented and oft-refused bread and milk, he just took to it as quietly as it was offered, and ate it. And after that he never set up his will in defiance of his mother's. I saw the tears of fond love gather in his eyes as he said:

"My mother was a woman of good judgment, and I love to think how she made me obey her."

It is such mothers whom their sons delight to honor."—*Child's Guest.*

The Sky.

What is the blue sky, so grandly arched above our heads? The ancient Greeks supposed it to be a solid substance, spread above the earth at an immense height, in which the sun, moon, and stars were set like diamonds in a ring. The upper surface was laid with gold—the pavement of the gods.

In pagan countries somewhat similar notions still prevail. A converted heathen said to his missionary teacher that he thought the sun, moon, and stars were holes in the solid sky, through which came streaming down to earth the brightness and glory of the heavenly world.

But, in reality, the sky is nothing more than the *air we breathe.* Instead of the solid arch, towering so many thousands of miles above us, where our childish fancy placed it, the blue sky is nothing but the color of the ocean of air, in which we live and move. And, as to its distance from us, it is all *within three or four miles.* For travellers, who go upon high mountain-tops, tell us that they no longer see any blue sky above them there, where the air is so thin that they pant for breath, but only the *blackness* of empty space.

But it may be asked, why do we not see the blue color of the air when we look up to the ceiling of our rooms? Why do we not have a blue sky in the house as well as out of doors? The answer is that some substances, of which air is one, do not show their colors except *in the mass.* Take a piece of glass, pour upon it a single drop of ink; now press another piece of glass upon the ink, and hold them both, pressed together, up to the light. Scarcely any color of the ink can be seen.

The poet says:

"'Tis distance lends enchantment to the view,
And robes the mountain with its azure hue."

But Philosopy, that great enemy to Poetry, steps up and tells us that it is *not* the *mountain's blue robe* which we see, but only the *air*, which, like a misty curtain, hangs between us and the mountain.—*Our Boys and Girls.*

Emma Gray.

Emma Gray, on her way to school, passed a little boy whose hand was through the railing of a gentle man's front garden, trying to pick a beautiful flower.

"Oh, little boy," said Emma, kindly, "are you not taking that without leave?"

"Nobody sees me," answered the little boy.

"Somebody sees you from the blue sky," said Emma. "God says we must not take what does not belong to us, without leave, and you will grieve him if you do so."

The little boy looked up into her face as she spoke.

"Shall I?" said he; "then I won't." He drew back his hand and went away.

One way of doing good is to prevent others from doing wrong. A gentle word of reproof or persuasion would save many a one from sin.—*N. Y. Observer.*

THE LITTLE DRAWER.—"Where did you get your orderly habits?" I asked of a lady who never had to waste a moment in hunting for things out of their place.

"When I was four years old," she answered, "mother gave me a little drawer to put my clothes in. 'Make it your business, my dear child,' she said, 'to keep that drawer neat and tidy. Let me never find it in disorder.'

"Once she sent for me to come home from a party of little girls, in order to put away a pair of stockings carelessly left on the floor; and I used sometimes to think mother was hard on me; but now I see I owe my good habits to the care I was made to take of that little drawer when I was four years old."

You see how early habits are formed. It is never too soon to begin a good one.—*The Child's Paper.*

FISHER & CO.

ESTABLISHED 1851,

Importerrs and Manufacturers of

Fine Hats.

300 Montgomery Street, Corner of Pine,

SAN FRANCISCO.

Corner of Battery and Bush streets, San Francisco, and 93 I St Sacramento.

News Summary.

PACIFIC COAST ITEMS.

People have nearly recovered from the fright occasioned by the earthquake of last week, although less severe shocks have been experienced nearly every day since. The work of repairing damaged buildings is being rapidly effected, superfluous and dangerous cornices are being removed, and there seems to be a general confidence that we shall have no more severe shocks for several years. Full particulars from various parts of the State show that at Haywood and San Leandro the most severe shocks were experienced. A view of the ruins in these places, while it has created in our minds a feeling of thankfulness that San Francisco has escaped with so little damage, suggests at the same time a fearful picture of the loss of life and property that would result from an equally severe earthquake in our city. At Haywood the loss is estimated at $225,000, the brick and adobe buildings being completely destroyed, and all other buildings damaged and moved from their foundations. The inhabitants spent several nights out of doors in tents and hay-stacks, fearing to return to their houses. It is to be hoped that our citizens will be impelled by the recent disaster to exercise greater care in the choice of suitable building materials and secure foundations.

The political campaign, with its attendant excitement, will have terminated before our next issue. Concerning the general result of the contest there would seem to be little doubt, but in our own State each party seems to have sufficient hope of victory to call forth its best efforts. Political enthusiasm in our city shows itself by torchlight processions in this campaign, both parties having made splendid efforts in this direction. The demonstration of the Union party on Tuesday evening was a brilliant affair in respect to the number, character, aud enthusiasm of those who took part in it. The Democrats will make another demonstration before the election. The unprovoked assault of the roughs on the procession of Tuesday shows the existence of a spirit in our midst which causes indignation in the minds of all good citizens, and which may lead to more serious results on election day, if the greatest precautions are not used. A large number of men who can be depended upon should be employed as special police officers to insure quiet and prevent any riotous demonstrations at the polls.

The musical instrument in the Congregational church in Portland, Oregon, lately got out of order and a gentleman was ordered to take it to his establishment for repairs. Being a stranger in town, he sent to the Methodist church and carried away the large new organ which has just been obtained for that denomination. The organ naturally was missed, and much excitement was created among the Methodist brethren, who at last put the matter in the hands of the police. In the meantime arrangements must be made for music, and one of the deacons called on the gentleman who made the mistake to see what could be done, and in his establishment, to his great surprise, found the lost organ. The matter was explained, and, according to the *Oregonian*, much amusement resulted from the affair.

The Republican members of the Oregon Legislature, being in the minority, have resigned *en masse*, and their resignations have been accepted, leaving the Democratic majority powerless to transact any business—even to adjourn *sine die* —for want of a quorum. Not a very sensible proceeding, it must be confessed.

A large quantity of a new kind of fuel in a mineral state has been found in Dacotah near the railroad line. The scientific name, according to the *Frontier Index*, is sage-brush-greasewood-petroleum-saturated alkali-speckled-bituminous earth.

A new paper, the *Echo*, has made its appearance in Olympia, W. T. This makes five papers published in that town. We doubt if any place in the world of equal size can boast of so many.

A very interesting session of the Teachers' Institute of San Joaquin County has been held in Stockton during the past week.

The grading is about completed on the San Jose and Gilroy Railroad. The work of laying the track has been commenced.

An agricultural paper is to be published in Oregon by the State Agricultural Society. It will be called the *Willamette Farmer*.

The potato crop in Washington Territory is short.

There are over 80 logging camps on Puget Sound, giving employment to more than 1,000 men and 7 steamboats.

There is said to be plenty of wild honey in the hills of Alameda County.

TELEGRAPHIC.

Eastern.—Rev. Dr. McCosh has arrived at Princeton, where he was welcomed with enthusiasm, and was inaugurated President of the College on the 27th....20,000 naturalization papers have been issued in Chicago....Gen. Fairchild died in Milwaukie from wounds received in the battle of Shiloh....A line of steamers is projected between New York and Florence for the fruit trade....500 workmen in the woolen mills in Philadelphia are on a strike against a reduction of wages....On the 27th the Union Pacific Railroad laid 7½ miles of track, passing the advanced stakes of the Central Pacific.

Southern.—Colored troops have been distributed in various parts of the South. The Democrats disclaim any intention of interfering with the acts of suffrage....The murder of a negro in Charleston has caused great excitement....A prominent officer reports that the rebels in Northern Texas are organizing regiments to drive out Federal troops....Disguised persons recently entered the jail at Carrollton, and shot two negroes....A destructive fire destroyed 9 buildings at Gretna, opposite New Orleans; during the conflagration a fight took place between the whites and negroes. There is a prospect of further trouble. The Governor has issued a proclamation forbidding all demonstrations and processions till after election. 200 special police officers have been sworn in.

Political.—Gov. Seymour is actively engaged in stumping Pennsylvania....The *National Intelligencer* predicts the defeat of Seymour and Blair....The President has written a letter to Gov. Seymour cheering him up and approving his course in taking the stump....The official returns make the Republican majority in Indiana 1,059....Proceedings have been commenced to contest the election in Philadelphia....The Republicans have carried Western Virginia by a majority of from 2,000 to 3,000....The President has written a financial letter to Gen. Ewing....The National Republican Committee have issued a proclamation warning the people against the attempts of the Democrats to gain votes by a pretended change of policy and principle....The official majority in Ohio is 17,312....Horace Greeley vacates the nomination for Congress and becomes candidate for Register.

Foreign.—The Queen of Madagascar has made a present to our Government of valuable silk articles and silver plate.....All the ports of Panama are declared closed....Volunteer companies are forming and offering their services to the Captain-General of Cuba....Prince Napoleon writes to Gen. Prim, advocating the claims of the Duke of Aosta to the Spanish throne....It is stated that Ferdinand has declined the crown of Spain....An arrangement has been made between minister Johnson and Lord Stanly to refer the Alabama claims to a commission of 8 persons appointed by Great Britain and 8 appointed by the United States, disputed questions of International law to be decided by the Emperor of Russia....A treaty has been concluded between Madagascar and the United States, securing Religious liberty and free commerce....A Swedish Polar Expedition has returned having penetrated to the 82d degree.

SPECIAL NOTICE.

Agents

Wanted in every town to canvass for the "Sabbath at Home," the only Illustrated Religious Magazine published in America.

It contains sketches in Biography, History, and Natural Science, and employs the ablest pens and best artists in giving interest to the study of the Bible.

It has Stories and Illustrated Bible Recreations for the young, and it is in a large measure a Young People's Magazine Price, $2 00 a year. $20 00 worth of books or $10 00 in cash given for twenty subscribers. Also seven *extra cash premiums*, the highest being $50 00 for the largest club for 1869.

Send ten cents for a specimen copy and circular containing full particulars.

Published by the American Tract Society. Address,
"Sabbath at Home,"
163 Tremont St., Boston.

ALLEN'S ORIGINAL AND GENUINE
Nerve and Bone Liniment.

The Nerve and Bone Liniment was originated by Geo. M. Allen, in the year 1834, and has lived entirely on its own merits without the aid of advertisements; but owing to the many counterfeit and worthless articles called Nerve and Bone Liniment, now upon the market, has induced the proprietors to advertise it. Many certificates of leading citizens who have used and constantly keep it in their houses, as a great family remedy, could be added to the advertisement, but knowing the many virtues of Allen's Nerve and Bone Liniment, and that one application will satisfy any one of its beneficial effects, deem it unnecessary to bring the certificates before the public. Allen's Nerve and Bone Liniment does not effect a cure in a minute, but acts upon the Nerve and the Bone of the patient by its penetrating properties, when used according to the directions on each bottle, and gives new strength to the parts affected, and thus acts as an agent in helping nature to restore the diseased parts to health. It is also invaluable in all diseases of horses.

Be sure to call for Allen's original and genuine Nerve and Bone Liniment, all others are worthless counterfeits, and should not be tolerated by the public.

CURRENT TOPICS.

After one of the most warmly contested campaigns, Gen. Grant has been elected President of our nation. The issues before the people were very distinct, and the decision should be accepted by all parties with the spirit of submission to the will of the majority which must ever be the ground of safety in a Republic. The successful party will have a difficult task, if the expectations of those who have supported it are fulfilled, however faithful its leading men may be. Yet the country is by no means in the condition which the heat of excitement has represented, and we have no sympathy with extremists on either side, who are just now so busy with their predictions. The strain upon the frame-work of the government from which we had most to fear has passed, and if party feeling will now subside and all will rally to the maintenance of the nation's honor and the promotion of the nation's prosperity, we have no dangers which may not be safely encountered. Sensible, patriotic, true men will take this view of the result, and experience proves that we adapt ourselves to circumstances with a facility that is as promising as it is remarkable. The calm which always follows such a tempest as has prevailed will have a favorable influence on the people, and as a large portion even of his opponents believe we shall have an honest man for our President, never having been distinguished as a partizan, we believe he will seek the welfare of all classes, and pray that he be blessed in all lawful endeavors.

Debate upon the questions involved in the differences between the High and Low Church parties in the Episcopal Church, is not likely to end without practical results. The censure imposed on some clergymen only incites others to action that must in like manner be condemned, and those who do not feel willing to be thus restricted by the prevailing power in the Church are seeking a place of more freedom in belief and practice. Thus far, however, the opposition has been that of individuals only, but a recent number of the *Protestant Churchman*, the chief organ of the evangelical party, intimates that there will soon be a more formidable movement by which the Episcopal Church must be divided. That paper contains a recommendation that a "call be issued at once for a General Council of all the evangelical members of our Communion," the object of which shall be to effect certain radical changes in the Prayer-Book and Polity, and to provide for a new organization. The language is sufficiently positive to be comprehended by those who have been the most unwilling to believe any such results possible. The appointment of a Committee on Liturgical Revision is advocated "whose duty it shall be thoroughly to expurgate the Prayer-Book of every Romanizing germ," &c., and a Committee on Canons and Church Relations, "who may invite all friends of Evangelical Faith, whether in the Church or out of it, to unite with us in the formation of the Reformed Protestant Episcopal Church of these United States." It is proposed that this Council invite the Evangelical Bishops to head the movement, but in case of their refusal to do so, it is declared that "truth should be above order," and therefore the end must be reached without the aid of Bishops. This is revolutionary indeed. It is resisted, and declared to be schismatic by the majority, and some of the papers even ridicule the purpose to carry out the proposition, but the fact has been manifest for years that there is schism in the Body, and this open rupture cannot be long prevented.

Difficulties of many kinds arise when practical union between Christian denominations is discussed, and in the opinion of some, these are likely to prevent what all seem to desire. The very crystalization and growth of the separate organizations render both absorption and assimilation unnatural. The interests which gradually attach to each body become too important to be abandoned. The preferences and prejudices which serve as bonds in the case of multitudes, are too strong to be easily put aside. Hence, what is beautiful and desirable in theory is regarded of doubtful expediency, and given up, even though it be with much sincere regret. These facts are instructive in reference to the manner in which missions among the heathen should be conducted and the form which churches of converts should assume. There is no reason why sectarianism should have any place in these churches. There is every reason why it should be carefully excluded. In many of the missionary fields this is felt to be true. At a missionary conference in India, attended by English churchmen, American and Scotch Presbyterians, and American Methodists, an "Indian Catholic Church" was strongly advocated, by which was meant the union of all evangelical mission churches on the simplest gospel basis. Dr. McLeod, who has been examining the missions of the established Church of Scotland in that country, urges the importance of this union, "that a common, undivided Christianity may be built up among the heathen." We may hope that the spirit thus exhibited will become universal in missionary work, and that partisan feeling and church bigotry may never be known in lands that are to become Christian.

A National Christian convention is to be held in the city of New York on the 17th of this month. The call is signed by officers of the American Christian Commission, and by nearly a hundred of our most influential Christian men, of various denominations. Coming from such a source, the design of the convention may be inferred, in part at least, and it will be approved by a large portion of those who desire the more rapid evangelization of our country. The American Christian Commission has been engaged since the war, in efforts of many kinds for the general religious benefit of our people. Under their direction, the district conventions have been held in many of the States, of which extended accounts have been given in the papers. They have had agents, or representatives working in several large cities, in connection with effective local organizations, for the good of the neglected thousands there congregated. They have printed documents in large numbers for the instruction and encouragement of those who desire to do more, but are at a loss how to do it wisely and successfully. In short, their office has been to stimulate, and aid all Christians in the duty of preaching the gospel to every creature. Undoubtedly, it is hoped that this National Convention will give opportunity for more general agency in the same direction, and that by conference and prayer, and the blessed effect of manifested fellowship and communication, still more can be accomplished than has been yet attempted. We trust there will be a large and enthusiastic convention of earnest men, and that streams may issue from it that shall make glad all portions of our beloved land.

The power for good of a single man could have no better illustration than is furnished by Mr. Spurgeon, of London. He has more than ordinary ability, yet there are many men in England of more ability than he. His own heroic, persistant purpose, with remarkable common sense, and knowledge of human nature, and devotion to the Master, has rendered him not only the most noted preacher in England, but one of the most useful men in the world. As pastor of an immense congregation he has great power, yet his agencies outside of his church are even more effective and extensive in their influence than he could possibly exercise as a pastor. His College has several hundred students, from America, and Germany and Austria, as well as Great Britain; 155 young men have been educated for the ministry in it; 39 new churches have been formed through its means, and 22 chapels have been erected, and 11 additional churches are in process of formation. He does much, also, for the youth of London, and much for the poor. His direct influence is felt almost every where, in that mighty center, and indirectly he makes himself felt over the globe. His career should be studied by all who desire to be greatly useful, whatever may be their sphere. His success should inspire all with zeal and hope, wherever they may labor.

By permission of the Mayor, preaching in the open air had been maintained in several places in New York, with very favorable results, when sud-

denly it was prohibited. Upon inquiring, it was ascertained that the Mayor was absent from the city, and the authorities had forbidden these gatherings for worship, on the plea that disturbance had been threatened if they were continued. There was no complaint that the meetings were disorderly, or that the public peace or comfort were at all affected by them. But it was distinctly stated that these threats were from Romanists, who were determined that such meetings should not be held, and the authorities were unwilling to risk the results should a mob undertake to break them up. Upon the return of the Mayor, application was again made for his permission to hold out-door services, and it was granted, then suddenly revoked, as if some influence had been brought to bear on him which he felt himself not at liberty to resist. When the Romish pageants by which the whole Christian population of New York and Brooklyn were disturbed throughout two entire Sabbaths, a few months ago, are remembered, and the real insolence is recalled with which remonstrance was treated by the papers that justified the displays, these threats that violence will break up peaceable gatherings of Protestants for the worship of God, unless they are prohibited by the city government, are not of slight import. They indicate a power behind the throne that should be watched. Political meetings in the streets, meetings of any general character not religious, meetings ostensibly religious that offend multitudes, are to be permitted, and may be justified in language severe and positive; but meetings for the quiet and reverential contemplation of God's word, and prayer and praise, must not be tolerated, because a mob of those who do not favor such exercises may make an attack npon the citizens so engaged. It is time for Protestants to protest against such injustice, and to insist on their rights, as they are expected, and willing to grant to others the same privilege.

Religious Intelligence.

PACIFIC COAST.

Calvary Church.—The purchasers of the building and lot on Bush Street, allowing the recent earthquake to affect somewhat unfavorably their ideas of the future greatness of San Francisco, and the probable value of property therein, concluded to throw up the trade and forfeit the $1,000 which had been paid over to bind the bargain. Thus having the property thrown back on their hands, the Trustees had no difficulty in finding purchasers who, believing the prosperity of our city to be earthquake-proof, were willing to take the property at the same price for which it was previously sold. The Society will therefore receive $81,000.

The old church proves not to have been seriously injured by the earthquake, as it was at first reported, while the new building on Union Square, on which work is rapidly progressing, received no damage, except the falling of a few bricks from the top of the walls.

Methodist.—A correspondent of the *Cal. Christian Advocate* writes as follows concerning the M. E. Church in Austin, Nev.:

The M. E. church is a noble brick structure of modern style, erected at a cost of some $50,000 currency. It seems extravagant for this isolated region, but witnesses the faith of the people in the future of their city. The condition of the Society is hopeful, the Sabbath School large and full of interest. The absence of two-thirds of the number in the White Pine District, just opened, renders active operations almost impracticable, To conduct the regular service is about all we can hope to do, till winter drives in the outgoing population.

Lincoln.—A correspondent of the *Evangel*, writing from Lincoln, says that the Congregationalists have there a large brick church. Divine service is held every Sabbath by Rev. J. N. Hubbard. The congregation averages 40; 30 children attend the Sabbath School. They have had no Baptist meetings since last year, when Rev. J. Brooks, of Nicolaus, preached once a month. A large school-house has been completed, and a school with 50 scholars has been started.

A correspondent of the *Pacific Christian Advocate*, writing from La Grande, Oregon, says:

While Bro. Driver was with us we protracted a meeting over two Sabbaths, resulting in several conversions and sixteen accessions to the Church. The good people raised $75 for the Bible cause, and presented a purse of $60 to the Bible Agent. They have also subscribed $350 for repairing the church, and have painted, carpeted, and nearly furnished a comfortable parsonage. We feel much encouraged.

Salem.—The Cumberland Presbyterians are making preparations to build a church in this city. The regular meeting of their Presbytery was recently held there.

There are nine Sunday Schools in Salem, with 794 pupils.

Santa Clara.—The Sunday School for Chinese which has recently been opened, seems to be very successful. About 30 pupils attend the meetings. They take a great interest and are rapidly learning to read. Such schools should be started at once in other towns.

Alameda.—The Trustees of the First Presbyterian Church in Alameda have been authorized to mortgage the property of the Church for a sum not exceeding $2,000, that sum to be applied to the payment of the debts of the Church.

Sacramento.—The corner-stone of the new Congregational church was laid on Saturday last without any special ceremony. Various documents were placed in the stone, including papers containing full accounts of the late earthquake.

The *Victoria Colonist* mentions the laying of the foundations of a new M. E. church in that city.

EASTERN.

Presbyterianism in Boston.—A correspondent of the *Northwestern Presbyterian* gives the following account of the progress of our Church in the "Hub:"

In the City of Boston there are now six Presbyterian churches, all founded since 1846. Three of these are United Presbyterian churches, one Reformed Presbyterian and two Old School Presbyterian churches. All of these churches now have settled pastors. One of the Old School churches is in East Boston, on Meridian Street, of which the Rev. M. A. Depue is pastor. The other is the First Presbyterian church in Boston, corner of Beech Street and Harrison Avenue, over which the Rev. James B. Dunn, a young Scotch minister of much promise, has just been installed pastor.

The installation of a Presbyterian pastor under favorable auspices in the city of Boston, is an event worthy of being noted. It is only within a short period that any serious attempts have been made to organize Old School Presbyterian churches in this modern Athens. Up to within a recent date, New England soil has been regarded as almost the exclusive home of Congregationalism. Outside of New England it was scarcely supposed Congregationalism could live, and within those limits any attempt to plant Presbyterianism, was regarded as an intrusion.

An important change has taken place in both these respects in recent years. Now Congregationalism is shooting out in all directions, and Presbyterianism is taking root in the strongholds of Congregationalism. This is as it should be. The one branch of the church will supplement the other in many communities. In Boston there are many from Great Britain, the Canadas and the Middle States, who were brought up Presbyterians, and will not feel at home in other communions. The Congregationalists of New England are scattered broadcast over the land. Let them carry with them their churches and their schools. There is ample room for all. Wherever a band of Presbyterians are to be found, there let them have a church of their own faith and order. Let all these Evangelical bands rival each other only in faith, Christian zeal and good works.

The Churches and the Paper Mills.—A correspondent makes a suggestion which deserves consideration. It is, that our benevolent societies spend quite too much of the money of the churches in printing and distributing broadcast, bulky pamphlet reports, circulars, and other literature of the sort. The evil is, in the first place, that these "documents" absorb very considerable sums which might otherwise be more wisely bestowed for the promotion of the cause to which they have been contributed by the hard-working Christians from whose charity they have come; and in the second place, that as our correspondent judges—in nine cases out of ten, they are never read, and so, in toil, cost, and postage, fall utterly abortive and wastefully to the ground. It may well be questioned whether, in most cases, this is not a true view. There can be no doubt that among the utter lumber of every pastor's library may nearly always be found heaps of these "documents" whose leaves have never been turned, if ever cut. It is not too much to say that tons of such unread pamphlets might be gathered to-day in New England by any paper merchant who should take the trouble to drive his cart from parsonage to parsonage within its bounds. The printing press wearied itself with them, and the binder sweat, and the mails groaned, and the churches paid the bills under the head of "expenses," and that was all the good it did.—*Louisville Commonwealth.*

Hartford Seminary.—The editor of the *Advance* writes as follows concerning this Institution, showing perhaps in his remarks his own theological tendencies:

Of course, we visited the theological seminary, which is accommodated partly in the ancient Wadsworth mansion, hired for the purpose, and partly in a building near by, which has been purchased for dormitories and boarding house. The term is just opening, and the prospect is that the students will number about twenty-five. Drs. Vermilye, Thompson and Bodwell compose the faculty, and there is some probability that Dr. Schaff may be induced to take the chair of history. The students have labored with marked advantage to themselves and others in the churches and missions schools of the city. The institution represents the Old School type of New England theology, which must not be confounded, however, with Presbyterian Old School theology of the Princeton type, which is a much more aggravated form of the disease. The students that are fearful of Andover and New Haven will here find shelter and be made happy, while any undue preponderance of old-fashioned theology in the Seminary will be balanced by the varied pastorial instruction in the surrounding pulpits.

A Rich Church.—After completing a large Catholic Church at Atchison, Kansas, the contractors say that they have discovered that every brick in the building contains a quantity offine gold. An analysis of samples of the brick confirms the fact, and thus inadvertently an edifice has been erected, more costly in its material than the famous temple of the Jews.

Chicago.—Of Protestant Evangelical churches there are about one hundred, of which twelve are Methodist, ten New School and eight Old School Presbyterian; and yet the population gains on the churches. The ministers are worthy of the large and intelligent congregations to which they minister. The Congregationalists and Old School Presbyterians have each a Theological Seminary, with fine buildings and liberal endowments. The Methodists have the North-Western University, with a productive fund of $200,000, besides ample buildings, and also the Garret Biblical Institute. The Baptists have the Douglas University, an honor to the city and the denomination. These institutions are taking rank with older ones in the East, and prove the wisdom of their patrons in locating them there.—*Correspondent of United Presbyterian.*

Evangelization of the French Population of Chicago.—M. Placide Bondreau, a young Frenchman from St. Ann, a student in our Theological Seminary, preaches every Sabbath to as many of his fellow countrymen as he may be able to collect in a hall on Randolph street for that purpose. An average attendance of about fifty is secured. Mr. Bondreau is a young man of considerable promise, earnest and faithful in his efforts for the salvation of his people. It is the day of small things with his work. With t he blessing of God upon his labors, the seed sown by this young brother may bring forth much precious fruit in due season. We beg in behalf of this work the earnest prayer of God's people.—*Chicago Presbyterian.*

Synod of Iowa.—This Synod convened in Cedar Rapids on the evening of the 1st of October. The Parsons Collegiate Institute, under the care of our enterprising New School brethern, is located in this place. Our church is at present without a pastor. In the absence of the last Moderator, the Synod was opened with a sermon by the Rev. J. Armstrong. There were twenty-eight ministers present, out of fifty-eight that should have been there, and twenty-four Ruling Elders from our one hundred churches. One cause of so many of our missionary bretheren being absent was doubtless their empty pockets, resulting from the empty treasury of our Board of Missions.—*N. W. Presbyterian.*

Long Island.—A correspondent writing from Huntington says:

At the regular meeting of the Long Island Presbytery, held in this village this week, Rev. Samuel T. Carter was installed pastor of the First Presbyterian church of this village. The church has been very fortunate in securing so talented, agreeable and efficient a pastor. Rev. Theodore S. Wynkoop, pastor of the Second Presbyterian church of this village, is about to resign his pastorate to accept an appointment as missionary to India. This will be a very great loss to the place.

Revival in Virginia.—There is a revival of religion going on in Danville, Virginia, in the Methodist Church, and over an hundred persons have professed conversion. The revival is not confined to one congregation, but members of all the congregations are subjects of it. The ministers of the Methodist, Baptist, and Presbyterian churches are working together, in perfect harmony, and doing everything, as far as human instrumentality is concerned, in bringing sinners under the influence of the gospel.

Synod of Wisconsin.—The Synod of Wisconsin met in the church in Portage, October, 9th, at 7½ P. M., and was opened with a sermon by the Moderator, Rev. J. M. Buchanan, D. D., from Pro. iv. 17. Rev. Baker Johnson, of Oxford, was elected Moderator, and Rev. T. G. Smith, of Fond du Lac, temporary Clerk. Rev. William Spear, D. D., and Rev. W. E. Schenck, D. D., of Philadelphia, were present and addressed the Synod in relation to the Boards of the church.—*N. W. Presbyterian.*

Rev. Wm. A. Niles, D.D., of Corning, N. Y., has a call to the First Presbyterian church of St. Louis, successor of Rev. Dr. Nelson.—*Commonwealth.*

The Rev. William A. P. Martin, missionary of the Presbyterian Board in Pekin, China, and Professor in the new University established by the Chinese Emperor in that city, has been in Philadelphia during the past week. Dr. Martin returned from China by way of California, and proposes to return by way of Russia and Siberia, thus girdling the world in his homeward journey, and the return. His address for the present will be New Haven, Connecticut.—*Presbyterian.*

Domestic Missions.—The Board of Domestic Missions, at their late meeting, resolved to defer the election of a Secretary for the present. Dr. Musgrave, says the *Presbyterian*, is discharging the duties of the office with great energy and efficiency, and with the blessing of God, we hope that a few months will see the Board extricated from its embarrassments, and ready to enlarge its operations.

New Mexico.—The Presbytery of Richland, ordained, on the 22d of September, Mr. J. M. Robberts, of the last class of the Western Theological Seminary, and asked the appointment by the Roard of Foreign Missions as a missionary to the Navajoe Indians in New Mexico. According to the order of last General Assembly, a new Presbytery will be formed in New Mexico very soon.

Congregational Singing.—The New England church of his city, having tried congregational singing with a precentor, have swung to the other extreme of a salaried choir, one of the finest—artistically speaking—of any in the city. Meanwhile the First Church find good praise and growing satisfaction in congregational singing led by a volunteer choir.—*Chicago Advance.*

Gains.—The Baltimore *Episcopal Methodist* speaks of great gains to the Southern Church on the eastern shore of Maryland. "The Kent Circuit" was organized at the late Baltimore Conference with three appointments. It now numbers fifteen. In Kent and Queen Anne's many of the most influential men, with their families, have united with our Church.

Mr. Richard C. Morse, one of the founders, and for thirty-five years an editor of the *N. Y. Observer*, died in Germany, September 25d, in his 79th year. Mr. Morse was graduated at Yale College, in 1812, studied theology with Dr. Dwight, and was licensed to preach the Gospel.

A Fine Building.—A new Methodist church is being built on Arch Street, Philadelphia, of pure white marble, 75 feet wide by 138 long, with a spire 230 feet high. When completed it will be one of the most elegant edifices in the United States.

The Rev. J. S. McConnell, from the United Presbyterian Presbytery of Chicago, has been received into the New-school church, and the Presbytery of Chicago.

The Presbytery of Wilmington, N. C., expresses preference for the "Standards," while adopting the plan for the Joint Committee.—*Pittsburg Banner.*

The Rev. Dr. Thomas A. Stockton, for many years chaplain of the House of Representatives, died in Philadelphia, on Friday, Oct. 9th.

There are sixty thousand members of Baptist churches in Missouri.

Oakland Academy.

A CLASSICAL, ENGLISH, & MILITARY BOARDING SCHOOL

REV. DAVID McCLURE, Principal.

The Eighth Term of this Institution will commence on Wednesday, July 8th, 1868, in the new Academy building, recently erected on Telegraph Road, one mile from the Railroad Depot.

The location and plan of this new building have been made with the design of securing for the students a home of beauty and refinement.

Careful provision is made for thorough and extensive courses of study in English, Mathematics, Natural Science, and the Ancient and Modern Languages. A special course is also provided for those who are preparing for a commercial life.

In addition to these courses there is a daily military inspection and drill, together with vocal and light gymnastic exercises, under the instruction of a teacher. Every student is required to attend the military and gymnastic exercises, as a means of physical training.

For the mental, moral, and physical culture of each pupil committed to his care, the Principal holds himself responsible.

Further particulars may be obtained by addressing the Principal at Oakland.

Letter from Humboldt County—II.

THE COUNTY AGRICULTURAL FAIR.

The fair of the Humboldt County Agricultural Society held at this place during the first week in October was well attended, and seemed to give general satisfaction. The building erected for the accommodation of the fair, a neat and convenient structure, was filled with a great variety of articles, the most of them of home production, the display, as a whole, being highly creditable to the industry and inventive talent of the country. A variety of improved agricultural implements were on exhibition, some of them evincing much ingenuity on the part of the inventors, and promising to be of great practical value. Robert Gardner, a resident of this county, formerly of San Francisco, has just left for the latter place, taking with him the model of a potato-digging machine, a contrivance of his own, and which he is about taking measures to have patented. It is calculated that this machine will dig from six to eight acres of potatoes per day, thus doing the work of twenty-five or thirty men. Should it prove a success, as there is every reason to suppose it may, it will be of great service in this region, where potato-digging constitutes an important item of labor.

AGRICULTURAL PRODUCTS, PROPERTY VALUES, POPULATION, ETC.

A tolerably correct notion of the natural capacities and productive energies of the county may be gathered from the report of the County Assessor for the year extending from January 1st, 1867, to January 1st, 1868, recently published. On the first day of January last there were 28,438 acres of land inclosed in the county, of which 12,127 were under cultivation. During the year 1867 there were 1,342 acres planted to wheat, which yielded 32,314 bushels, being at the rate of nearly 25 bushels to the acre, while 387 acres of barley gave 16,254 bushels, being at the rate of nearly 45 bushels to the acre, and 3,698 acres of oats gave 165,472 bushels, being also at the rate of nearly 45 bushels to the acre. 315 acres of Indian corn yielded 7,555 bushels; 7 acres of buckwheat 155 bushels; 703 acres of peas, 30,034 bushels, and 1,360 acres of potatoes 382,100 bushels. There were 44,515 pounds of butter, 1,600 pounds of cheese, 2,515 pounds of wool, and 4,220 pounds of honey produced in the county. 287 tons of hay were cut from 1,369 acres. Besides potatoes, many other vegetables and considerable quantities of fruit were raised.

The number of fruit trees in the county was as follows: 33,586 apple, 540 peach, 1,222 pear, 2,626 plum, 1,014 cherry, and 71 apricot trees, besides many berry bushes of different varieties, and a few hundred grape vines.

The live stock in the county consists of 5,671 horses, 742 mules, 14,813 neat cattle, of which number ever 6,000 are cows, 1,125 sheep, and 7,352 hogs, with a large quantity of poultry.

Humboldt contains at the present time 10 saw-mills, 7 of which are run by steam and 3 by water, the whole turning out about 20,500,000 feet of lumber the present year; nearly 1,000 shingles being also made in the county. There are three grist-mills, which will make during the year about 2,000 barrels of flour and a couple of hundred barrels of corn-meal.

The real estate in the county is, at the present time, valued at $338,790, and the improvements on the same at $202,865; besides town lots with improvements $254,175; personal property, $847,015; making a total valuation of property in the county of $1,644,845.

The increase in the value of property the present year has been larger than during any former year, being confined mostly to real estate. Considerable additions have been also made to the population, which is now estimated at 4,500, of whom about 1,400 are registered voters.

LAND ENCLOSED, LUMBER INTEREST, HARBORS ON THE COAST, ETC.

During the past eighteen months there has been a large quantity of land inclosed, making the present amount nearly double that indicated in the Assessor's Report. Fencing here is cheap, being made wholly of the redwood everywhere so abundant and easily gotten out. Besides the lumber and shingles mentioned, immense quantities of railroad ties, shakes, posts, rails, etc., are split from the redwood, which, in addition to its lightness and durability, rives with such facility that ordinary fence rails can be got out with the axe alone. Much of this redwood grows to such a size that many of the logs were formerly left, being too large for the saw-mills. These are now being split and the pieces sent to the mills in manageable size for the saws. As the trees are being cut away near the margin of the bay and along the banks of the sloughs and streams, tramways are laid down, extending back to the timber, and on these the logs are brought to points whence they can be floated to the mills, the most of which are situated on tide water either about the bay, or on the little coves and inlets formed by streams entering the ocean, of which there are many along the Mendocino and Humboldt coast.

On reaching tide-water, the logs are caught by booms and thus retained till required for use, when they are floated to an inclined platform reaching from the mill to the water, and hauled up and placed on the saw carriage by steam power. Every thing in this lumbering business is reduced to the utmost system, nothing that can economize human labor or lighten its burdens having been neglected. Hence it is the force of hands and teams employed seems so small, considering the vast shipments of lumber made from these counties. It would be thought that the heavy drafts made on this region for lumber supplies during the past eighteen years would have left considerable sections of the country cleared of timber; but such is the gigantic character of the forests here that the inroads yet made upon them are scarcely perceptible. The principal of these little creeks and coves beginning with Humbolt Bay, not belonging to the above category, and going south, are Eel River, Bear River, Mattole River, Spilter Cove, Bear Harbor, Long Valley, Pudding Creek, Noyo Casper Creek, Rio Grande, Albion River, Navaro River, Mill Creek, Elk Creek, Garcia Creek, Puenta Arenas, Inallalla, Fisherman's Bay, Fish's Mills, Timber Cove and Fort Ross—the last three being in Sonoma County. Besides these places (nearly all accurately laid down on Bancroft's recent and most excellent map of California) there are many other small inlets and bites along this part of the coast where vessels find shelter from all but southerly winds; and where, although there are not as yet any saw mills or settlements, both will no doubt shortly make their appearance, as the timber at these points is always abundant, and generally some good agricultural land to be obtained. They will all in time become places of importance, as shipping points for farming produce and lumber. During strong southerly and southwesterly winds vessels frequenting many of these places of shelter are now obliged to put out to sea. With a breakwater constructed at some of them, safe anchorage could at all times be had, while by dredging away the sand, small craft could pass over the bars formed at the mouths of others, finding the most complete protection inside.

THE OIL REGION AND EXPLORATIONS.

The oil excitement inaugurated here in 1864, and kept up so persistently for several years, in Mattole region, has at length subsided; the explorations and boring, some of them carried to a depth of nearly a thousand feet, having failed to reach any very abundant, or at least permanent deposits. There are those who still affect to have faith in the oleaginous wealth of Humboldt; and it is not unlikely that these researches may at some future time be renewed. That they would be, were the prices of petroleum to experience any material advance in the San Francisco market, seems highly probable, as the surface indications in the above locality are every way encouraging, and in one instance a considerable flow of oil was obtained by one of the companies boring there. The Mattole oil as found in its natural state is limpid and volatile, resembling in this respect that of the East, and being much more valuable for the purposes of distillation than the dark and viscid petroleum of the southern counties. H.

Eureka, October 25th, 1867.

Our Intercourse with Japan.

About 1545, a Portuguese adventurer, in company with some Chinese, was driven by foul weather into one of the Japan Islands, kindly treated and hospitably sent back. Missionaries soon followed, and St. Francis Xavier visited Japan in 1549, dying soon after on the Chinese coast. It happened, unfortunately, that at that time Portugal was united to Spain, and Tacko Same, at that time regarded by the Japanese as the greatest character in their history, having unfortunately inquired of a Spanish traveler how it was that his king had managed to possess himself of half the world, was indiscreetly answered, "He sends priests to win the people; his troops then are sent to join the native Christians, and the conquest is easy." This answer, it is said, produced a great impression, and, in 1587, an edict was issued for the banishment of the missionaries. Ten years later it is said that twenty-three missionaries were put to death in one day, and a few years later many of the Japanese converts were killed, their churches and schools destroyed, and their faith declared infamous and rebellious. In 1639, the Portuguese were finally expelled, and their trade transferred to the Dutch, who had been and were considered their enemies, but under many restrictions. Nor were these difficulties removed for more than two hundred years. In 1857, however, a new treaty was negotiated at Simoda, between the United States Government and the Japanese, by Mr. Townsend Harris, and in the following year the same gentleman succeeded in reaching Yeddo, and concluding a still more favorable treaty; and in August of the same year, the Earl of Elgin, a British Ambassador, concluded a treaty between Great Britain and Japan. About this time, however, the reigning Tycoon died of epilepsy, at the age of thirty-six, succeeded by a young man of great intelligence and liberality. The civil war in this country has, since 1861, done much to prevent the extension of commercial and social intercourse between the Japanese and the citizens of the United States, which might have been expected. No doubt, now, with our line of steamers from San Francisco and the Sandwich Islands, our country will have natural advantages over all others in the way of trade, social intercourse, and knowledge of the habits, customs and opinions of the natives. Indeed, it would seem as if Japan were to form a natural connecting link between the old world and the new. In point

of population, the country is variously estimated to contain from 15,000,000 to 50,000,000 of inhabitants. The manners and customs, especially of the ladies, are declared to be most refined, and the men of the higher grades of society carry the point of honor to a degree of refinement unknown elsewhere. Indeed, a recent English writer well says, "they carry notions of honor to the verge of fanaticism. They are haughty, vindictive and licentious. But brawlers, backbiters and braggarts are held in the most supreme contempt, and they are open-hearted, hospitable and faithful as friends to death." St. Francis Xavier declared, three hundred years ago, that in virtue and probity they surpassed all nations he had ever seen. The agriculture of the Japanese is conducted with skill and diligence; hardly a foot of ground is left uncultivated to the tops of the mountains; manure is carefully collected, and used in the production of abundant harvests. They dwarf trees and enlarge all vegetable productions with great care and success. Manufactures are carried to a perfection that must surpass those of the other parts of the world. They lacquer in wood with great skill, and imitate not only the goods of Eastern nations, but Colt's revolvers and Sharp's rifles. Steam engines are built at Nagasaki, and a screw steamer has been successfully navigated to Yeddo in nine days, entirely by native engineers and seamen. The Japanese are not good surgeons, because their religious prejudices prevent free dissection, but as physicians they have much that they can teach us, and are deficient in many points in which they can learn from us, so that there is beyond doubt the basis for much profitable interchange of knowledge.—*Philadelphia Ledger.*

In Rome there are 288 Protestants, and 1372 Romish priests.

Pacific Mail Steam Co's Steamships

— FOR —

NEW YORK, JAPAN AND CHINA

Will be Dispatched as follows:

LEAVE WHARF CORNER OF FIRST AND BRANNAN STREETS, at 11 o'clock A.M. of the following dates, for PANAMA connecting via Panama Railroad with one of the Company's splendid Steamers from ASPINWALL for NEW YORK.

the 6th 14th, 22d, and 30th of each month.

Steamer leaving San Francisco on the 6th touches at Manzanillo. All touch at Acapulco.

Departure of the 14th is expected to connect with the French Transatlantic Company's Steamer for St. Nazaire, and English Steamer for South America. Through tickets can be obtained.

Departure of 14th is expected to connect with English Steamer for Southampton, South America, and P. R. R. Co.'s Steamer for Central America. Through tickets can be obtained.

Departure of the 6th connects with English Steamer for Australia.

STEAMERS FOR OCTOBER, 1868.

The following Steamships will be dispatched on dates as given below.

October 6th—COLORADO, Captain Lapidge, connecting with ALASKA, Capt. Gray.

October 14th—GOLDEN CITY, Capt. E. S. Farnsworth, connecting with OCEAN QUEEN, Capt. King.

October 22d—SACRAMENTO, Captain Parker, connecting with HENRY CHAUNCEY, Capt. Conner.

October 30th—MONTANA, Capt. J. M. Cavarly, connecting with RISING STAR, Capt. Maury.

Passengers berthed through. Baggage checked through—100 pounds allowed each adult.

An experienced Surgeon on board. Medicine and attendance free.

These Steamers will positively sail at 11 o'clock. Passengers are requested to have their baggage on board before 10 o'clock.

Through tickets to Liverpool by the "Cunard," "Inman," and "National" Steamship Lines can be obtained at P. M. S. S. Co.'s office in San Francisco, where may also be obtained orders for passage from Liverpool or Southampton to San Francisco, either via New York or St. Thomas—if desired, an amount of £10 to £20 will be advanced with the above orders. Holders of orders will be required to identify themselves to the Agents in England.

For Merchandise and Freight for New York and way ports, apply to Messrs. WELLS, FARGO & CO.

The Steamship JAPAN, Captain Geo. E. Lane, will be dispatched on Monday, November 2d, at 12 o'clock, noon, from wharf, corner of First and Brannan streets, for YOKOHAMA and HONGKONG, connecting with the COSTA RICA for SHANGHAE.

For passage and all other information, apply at the Pacific Mail Steamship Co.'s Office, corner of Sacramento and Leidesdorff Sts.

OLIVER ELDRIDGE, Agent.

HYATT'S HAND-BOOK OF

Grape Culture in California,

Giving full and specific directions as to where, how, and when, to plant and cultivate a vineyard.

As the season is approaching for those who purpose going into the culture of the vine anew in California, or for those who wish to extend their vinicultural operations to make preparations therefor, they can find no better aid, and no source of information more valuable than to consult this highly approved Hand-Book of Grape Culture.

Following are some of the testimonials that have appeared in commendation of this useful and indispensable work:

A committee of the late Fair of the Mechanics' Institute of San Francisco, to which the work had been referred, speak thus:

"Your committee have examined Mr. Hyatt's Treatise on the Culture of the Grape, and believe it to be the BEST HAND-BOOK published on that subject for California vine culturists, and for which they recommend a Special Premium."

The California State Agricultural Fair, of 1867, awarded a Diploma to the author of this work, and also the San Joaquin Valley Agricultural Fair, at the same season.

OPINIONS OF THE PRESS.

The following are brief extracts fron some of the elaborate notices of this work:

The San Francisco *Daily Evening Bulletin* says:—"The book contains a choice collection of the best foreign and native varieties of the grape cultivation in California especially, as well as at the East. The many excellent works on Grape Culture in the Atlantic States are of little or no value in California, where an entirely different system and practice are necessary in vine growing and wine-making. This Hand-Book is intended to supply this deficiency. The author has taken great pains to investigate this subject, and to aid in the improvement of viniculture in California. Its appearence is timely, and it can hardly fail to meet a large and ready sale. It is attractively printed and elegantly bound."

Sacramento Union—"Hyatt's Hand-Book of Grape Culture is a California production that will probably meet a common want. The author takes the experience of the most noted vine-growers in the State as the warrant for his conclusions and suggestions, turns to account the recorded results of experiments made by the pioneers of this branch of industry, and in addition to giving full and minute instructions in regard to the planting of vineyards and the manufacture of wines, presents statistics which will enable the beginner to calculate the probable profits of successful grape culture."

The *Mountain Democrat*, whose editor, Hon. D. W. Gelwicks, s the present State Printer of California, speaks thus:

"HYATT'S GRAPE CULTURE.—We have received from the publishers, H. H. Bancroft & Co., San Francisco, a copy of this interesting and valuable work—a work greatly needed on this coast, and which every grape-grower should purchase. We sent it to a gentleman well known in this community, for his examination—a gentleman familiar with the subject, and largely engaged in the culture of the grape. He gives it the following cordial endorsement, and his endorsement ought to secure it a large sale:

'The limited time in which to examine Hyatt's Grape Culture, published by H. H. Bancroft & Co., San Francisco, has been sufficient, however, to satisfy me that it is a work which every grape-grower should have. No matter how well fortified we may be in our own experience and theory, we must acknowledge that we may adopt many of the author's ideas and suggestions with profit. The merit of the work certainly bespeaks for it a ready sale.

Respectfully, CHAS. P. JACKSON.'"

The Golden Era: * * * "With this book in his hand, the intelligent agriculturist can engage in the business of grape culture with almost the same chance of success as one who has bought his knowledge by expensive experience. * * * The practical information contained in the book would cost many hundred dollars to obtain in any other way. We predict for it a ready and rapid sale."

S. F. Daily Dramatic Chronicle: "The book is emphatically a California production, being written by T. HART HYATT, of this city, editor of the *Rural Home Journal*, and bearing the imprint, San Francisco: H. H. Bancroft & Co. It contains a large amount of valuable information, and should be in the possession of every vine-grower and wine manufacturer in the State. The usefulness of the volume, and its convenience for reference, are very much enhanced by a full and carefully prepared index."

S. F. Mining and Scientific Press: * * * "The book professes to be a complete manual, with instructions for the management of the grape and the manufacture of wine, and is especially designed for California. * * * The book contains a considerable amount of valuable information which is not generally found in such treatises."

S. F. Daily Times: * * * "The author seems to have exhausted his subject, particularly as it relates to viniculture in this State, and as the grape interest is just beginning to attract attention which is soon to become paramount among farmers, we regard the publication of the work as most opportune. No ranchman should be without it."

N. Y. Daily Tribune: "The author brings the result of many years' experience in foreign countries to the preparation of his work, and from his observations in climates similar to that of California, arrives at the conclusion that California is singularly favorable to the culture of the grape, and to all semi-tropical fruits, and that it will hereafter be distinguished as the land of the vine, the fig, the orange, the olive and the palm. His volume forms a capital, if not a complete manual, on the care of a vineyard, and it is enriched with much industrial information connected with the subject."

Lacon (Ind.) Home Journal: "This work is most *apropos*. It comes just as thousands, without any practical knowledge of the business, having planted vineyards, find themselves destitute of that information their intelligent care demands. All over the country this interest is growing, and probably the time is not distant when America will produce more, if not better, wines than any country in the world. The author, MR. THOMAS HART HYATT, is an enthusiast on the subject upon which he writes so pleasantly, and his book embodies just what every grape-grower would like to know—what every one must know, to cultivate the vine successfully."

Colman's Rural World, St. Louis: * * * "We merely want to introduce a new and interesting treatise on this subject to our readers, from the far-off shores of the Pacific—the Golden State of California. Its author is T. HART HYATT, editor of the California *Rural Home Journal*. He has had a large experience and observation in California and in the Old World. His style is entertaining, his directions clear, plain, and practical."

Rural New Yorker: * * * "Although most valuable to the California viniculturist, yet it helps to widen our knowledge of the vine."

H. H. BANCROFT & CO., Publishers.

THE OCCIDENT.

SAN FRANCISCO, SATURDAY, NOVEMBER 7, 1868.

THE GULF FIXED BETWEEN GOD AND THE WICKED.

Since there can be no harmony of purpose and act between God and selfish men, such men cannot desire to be perpetually in His presence. They wish to be unmolested in the attainment of their ends, and all they ask of God is that He will not prevent them. They find that even contact and association with one so radically opposed to them gives them uneasiness and a kind of dread. This is not because He is God, but because of the contrast between them. We are annoyed by constant intercourse with men, with whom we are conscious we have nothing in common, especially if our opposite characters and designs frequently and inevitably come up for comparison; and more especially if we feel that such comparison exhibits our inferiority.

The Greeks demanded not merely that Aristides be ostracised, because he was just, and they were not, but that the ostracism become banishment from the country, because they could not endure to meet one so unlike themselves. When men represent the character of God and interpret His word, and explain His conduct, so that these may comport, or at least not conflict, with their own views and wishes, they think they could endure communion with Him; though, even then, this would give them no special pleasure. They think they could endure a kind of co-operation with Him, though they would prefer to be relieved of such a necessity. But when a revelation of God as He is places Him in direct opposition to them in character and purpose, they would drive Him out of the range of their living, were this possible; but this being beyond their power, they eagerly separate themselves from His presence.

Much more does this become true, when in the working out of His designs, He is often obliged to crush and destroy what they anxiously strive to promote. Impenitent men, conscious that their wills are not subject to God's will, uncomfortable when even for a little season they feel constrained for any cause to regard with some show of interest what He makes the great object of all worthy living, yet trying to make themselves believe that they could be happy with God for their eternal associate, and ruler, and model, neither do justice to their own nature nor to His, in such a thought. The ceaseless conflict between selfishness and God would make Heaven intolerable, would render His throne a source of evil, not of good; would change those who bow before it and adore, into enemies, and transform the very smiles of His face upon those who really worship and serve, into an occasion of hate. There will be no need of an arbitrary judicial banishment from His presence; and if it is uttered, as the final sentence, it will be hailed as release from what is loathed, and, could there be complete separation, it would be unspeakable relief. The prayer of the soul throughout eternity, if it be not in fellowship with God, will be for escape from Him; a prayer never to be answered, for the misery of opposition to Him, of insubordination to His will, of selfishness ever raging and exacting, yet never satisfied, will be the chief misery of the lost. The presence of Him who ought to be welcomed, and served, and loved, in this sense, will add to their torment, because the necessary separation will be all the more felt—a separation in heart, in feelings, in wishes, in aims, in life, marked by that great gulf fixed between the abode of the selfish and the home of the blest.

The demand, therefore, that we become like God, if we would be happy and finally dwell with Him, is a demand of our nature no less than of His word. There can be no peace, no comfort, in the ever-changing scenes of this life, often so sadly in conflict with our selfish desires, without resignation and faith. There can be no hope of future good and eternal bliss in the presence of the Lord, and in the service we may render, unless we are in submission to His will, and ready to feel that all interests are to be determined according as they relate to His glory. Self must be dethroned. God must be exalted. Faith must be in full exercise. The lower must be sacrificed, the higher must be sought. Then murmurs will not increase the gloom of the trouble unavoidable in a state of probation, and light will be thrown forward on the state we must soon enter. At any cost, we must bend all our wishes and plans into submission to God's, and with His friendship and the promise of His support, we can cheerfully wait for what He may ordain. The greatest evil is, in affection and in spirit, to be separate from God. The greatest good is, by the blood of Jesus, and the attraction and purification of the Holy Ghost, to be brought nigh to Him, and feel that we are His children and heirs.

PRAYER FOR OUR RULERS.

The voice of the people has been uttered, and the men are chosen who are to fill the chief offices of our government for the next four years. Every good citizen, whether his own preference is gratified in the election or not, will now begin to inquire how he may contribute to the highest success of an administration that must have momentous relations to the future history of the nation. Some can do this by their counsel, and there will be need of counsel the most wise, and liberal, and far-seeing. Some can do it by action in the various subordinate offices they may occupy, and there will be need of harmonious and efficient execution of those measures which a just apprehension of our national state shall suggest. Some can do it by affording the support which comes from wealth and influence when enlisted for the public good. But *all* can do it by accepting the result with the spirit of genuine loyalty, and praying to God for His guidance in our national affairs, and His blessing upon those who must administer them. If the men elected are those whom we believe most likely to meet the exigencies of our condition with wisdom and fidelity, we should pray that they may not be turned aside from the purpose to do all in their power for the best good of the people, and the greatest prosperity of the country. If they are those whom we would not have chosen, and whom we believe to represent sentiments that will be dangerous when they are made practical, we should pray that they may be enlightened and moved by Him who knows what is the true policy to be adopted, and that they may be willing to accept this as their own.

The feeling is not uncommon, even among patriotic and good men, that when our rulers do not pursue a course which we approve, we may omit to pray for them. They seem to think that prayer for them in some degree sanctions their acts, and aids them in their designs. While they please us in their conduct, we should not cease to implore the favor of Heaven upon them. But when they do what we regard as wrong, we should leave them out of our supplications before the Throne of Grace. It is possible that the evils of some Presidential administrations have been increased and protracted for just this reason. That men are wrong, whatever stations they occupy, renders them the more proper subjects of prayer that they may become right, and this is especially true if their wrong course is certain to affect the welfare of others, or great public interests. There are difficulties to be encountered during the term of office of those men just now elected which should engage the sympathy of every lover of his country on their behalf. There are questions to be settled which must tax the wisdom, and patience, and principle of men in high station, as have no others perhaps since the formation of our government. We must not be mere observers, curious or anxious to see how these difficulties will be met, and these questions disposed of. A measure of responsibility for the result rests with every citizen, and Christians may become a mighty power in the land by their habitual and earnest prayers. With an abiding conviction of our individual duty in this respect, and a solemn purpose that we will never intermit it, let us bear the men who are to represent our nation as its public officers before the God of our fathers for His constant benediction, and all the people will rejoice in the answer to our prayers.

Baptist Authorities.

I now adduce the testimony of Baptist authorities as to the meaning of baptize.

I quote from Bunyan in his narration of what befel the pilgrims in the Interpreter's house:

In the morning they arose with the sun and prepared for their departure, but the Interpreter would have them tarry awhile, for, said he, you must orderly go from hence. Then said he to the damsel who first opened to them, take them and have them into the garden to the bath, and there wash them clean from the soil which they have gathered by traveling. Then Innocence the damsel, took them and led them into the garden, and brought them to the bath. So she told them that there they must wash and be clean, for so her master would have women to do that called at his house as they were going on pilgrimage. Then they went in and washed, they and the boys, and all, and they came out of their bath, wet and sweet and clean, but also much enlivened and strengthened in their joints. So when they came in they looked fairer a deal than when they went ont to the washing.

"Then he called for the seal wherewith they used to be sealed that were washed in his bath."

The term Baptism is not used here, because that would not be consistent with the allegorical style, but the washing and cleaning, and the seal, and the fairness, beauty and 'bath of sanctification' in the order of the Interpreter's house, all point directly to the ordinance of Baptism, and show that in the mind of Bunyan, Baptism meant the washing of regeneration, and was indicative of that spiritual cleansing which we claim to be the significance of the word.

Spurgeon, another distinguished light of the Baptist denomination, is quite as explicit in respect to the spiritual significance of Baptism. In his sermon on Baptismal Regeneration, he says, "In Scripture I find this: 'Arise and be baptized and wash away thy sins, calling on the name of the Lord.' I find as much as this elsewhere. I know that Believer's Baptism itself does not wash away sin, yet it is so the outward sign and emblem of it to the believer,

that the thing visible may be described as the thing signified. Just as our Saviour said, 'This is my body,' when it was not his body but bread, yet inasmuch as it represented his body, it was fair and right, according to the usage of language to say, 'Take, eat, this is my body.' And so inasmuch as baptism to the believer representeth the washing of sins—it may be called the washing of sin—not that it is so, but it is to saved souls the outward symbol and representation of what is done by the power of the Holy Spirit in the man who believes in Christ."

"The Gospel regards all men as sinners, needing not only forgiveness, but also the purifying of their hearts from sin. This purity of heart produced by the Holy Spirit's influences and a reception of Christ as the crucified and risen Saviour, is emblematically signified by the ordinance of Baptism in the purifying element of water. As the body is made clean by water, so the soul is cleansed by divine grace, and what is inwardly performed, is thus outwardly expressed by this significant emblem."—*Prof. Ripley.*

"This clause states a result of the Baptism in language derived from the nature of the ordinance. It answers to the passage in Acts 2: 38, *i.e.:* submit to the rite in order to be forgiven. In both passages Baptism is represented as having this importance or efficacy because it is the sign of the repentance and faith which are the conditions of salvation."—*Prof. Hackett.*

Professor Hackett has lately been appointed one of the final revisors of the Bible Union.

Alexander Campbell, one of the translators of the Bible Union, writes thus of Baptism:

"The water of baptism then formally washes away our sins. The blood of Christ really washes away our sins. Paul's sins were really pardoned, when he believed, yet he had no solemn pledge of the fact, no formal acquittal, no formal purgation of his sins, until he washed them away in the water of Baptism."

Dr. Judson, one of the ablest, most devout, and most successful missionaries of modern times, who may justly be said with his family, to be the crown of the glory of the Baptist church of the present century, in translating *Baptizo* into Burmese, found, as we may suppose, no word in the language to express the Christian idea of Baptize, therefore he formed a word for the purpose, taking the Burmese term signifying to dip; he gave it a prefix and a suffix, that it might thus be set apart in the language forever, to signify a sacred, holy dipping, peculiar to the Christian religion. If Dr. Judson's authority is of any weight with Baptists, it settles two things for them; first, that a heathen tongue does not furnish a proper term to set forth a sacrament of Christ's church. Second, that there is something more in Baptism than the mere mode of its ministration, to wit: its spiritual significance as a Christian ordinance.

Having thus shown by evidence, which it seems to me must be satisfactory, that Baptist divines, and the Baptist Church in the main, hold to the spiritual meaning and significance of Baptise and Baptism, I shall next proceed to show the position of the Bible Union.

HYATT'S HAND-BOOK OF

Grape Culture in California,

Giving full and specific directions as to where, how, and when, to plant and cultivate a vineyard.

As the season is approaching for those who purpose going into the culture of the vine anew in California, or for those who wish to extend their vinicultural operations to make preparations there for, they can find no better aid, and no source of information more valuable than to consult this highly approved Hand-Book of Grape Culture.

Following are some of the testimonials that have appeared in commendation of this useful and indispensable work:

A committee of the late Fair of the Mechanics' Institute of San Francisco, to which the work had been referred, speak thus:

"Your committee have examined Mr. Hyatt's Treatise on the Culture of the Grape, and believe it to be the BEST HAND-BOOK published on that subject for California vine culturists, and for which they recommend a Special Premium."

The California State Agricultural Fair, of 1867, awarded a Diploma to the author of this work, and also the San Joaquin Valley Agricultural Fair, at the same season.

OPINIONS OF THE PRESS.

The following are brief extracts fron some of the elaborate notices of this work:

The San Francisco *Daily Evening Bulletin* says:—"The book contains a choice collection of the best foreign and native varieties of the grape cultivation in California especially, as well as at the East. The many excellent works on Grape Culture in the Atlantic States are of little or no value in California, where an entirely different system and practice are necessary in vine growing and wine-making. This Hand-Book is intended to supply this deficiency. The author has taken great pains to investigate this subject, and to aid in the improvement of viniculture in California. Its appearence is timely, and it can hardly fail to meet a large and ready sale. It is attractively printed and elegantly bound."

Sacramento Union—"Hyatt's Hand-Book of Grape Culture is a California production that will probably meet a common want. The author takes the experience of the most noted vine-growers in the State as the warrant for his conclusions and suggestions, turns to account the recorded results of experiments made by the pioneers of this branch of industry, and in addition to giving full and minute instructions in regard to the planting of vineyards and the manufacture of wines, presents statistics which will enable the beginner to calculate the probable profits of successful grape culture."

The *Mountain Democrat*, whose editor, Hon. D. W. Gelwicks, s the present State Printer of California, speaks thus:

"HYATT'S GRAPE CULTURE.—We have received from the publishers, H. H. Bancroft & Co., San Francisco, a copy of this interesting and valuable work—a work greatly needed on this coast, and which every grape-grower should purchase. We sent it to a gentleman well known in this community, for his examination—a gentleman familiar with the subject, and largely engaged in the culture of the grape. He gives it the following cordial endorsement, and his endorsement ought to secure it a large sale:

'The limited time in which to examine Hyatt's Grape Culture, published by H. H. Bancroft & Co., San Francisco, has been sufficient, however, to satisfy me that it is a work which every grape-grower should have. No matter how well fortified we may be in our own experience and theory, we must acknowledge that we may adopt many of the author's ideas and suggestions with profit. The merit of the work certainly bespeaks for it a ready sale.

Respectfully, CHAS. P. JACKSON.'"

The Golden Era: * * * "With this book in his hand, the intelligent agriculturist can engage in the business of grape culture with almost the same chance of success as one who has bought his knowledge by expensive experience. * * * The practical information contained in the book would cost many hundred dollars to obtain in any other way. We predict for it a ready and rapid sale."

S. F. Daily Dramatic Chronicle: "The book is emphatically a California production, being written by T. HART HYATT, of this city, editor of the *Rural Home Journal*, and bearing the imprint, San Francisco: H. H. Bancroft & Co. It contains a large amount of valuable information, and should be in the possession of every vine-grower and wine manufacturer in the State. The usefulness of the volume, and its convenience for reference, are very much enhanced by a full and carefully prepared index."

S. F. Mining and Scientific Press: * * * "The book professes to be a complete manual, with instructions for the management of the grape and the manufacture of wine, and is especially designed for California. * * * The book contains a considerable amount of valuable information which is not generally found in such treatises."

S. F. Daily Times: * * * "The author seems to have exhausted his subject, particularly as it relates to viniculture in this State, and as the grape interest is just beginning to attract attention which is soon to become paramount among farmers, we regard the publication of the work as most opportune. No ranchman should be without it."

N. Y. Daily Tribune: "The author brings the result of many years' experience in foreign countries to the preparation of his work, and from his observations in climates similar to that of California, arrives at the conclusion that California is singularly favorable to the culture of the grape, and to all semi-tropical fruits, and that it will hereafter be distinguished as the land of the vine, the fig, the orange, the olive and the palm. His volume forms a capital, if not a complete manual, on the care of a vineyard, and it is enriched with much industrial information connected with the subject."

Lacon (Ind.) Home Journal: "This work is most *apropos*. It comes just as thousands, without any practical knowledge of the business, having planted vineyards, find themselves destitute of that information their intelligent care demands. All over the country this interest is growing, and probably the time is not distant when America will produce more, if not better, wines than any country in the world. The author, MR. THOMAS HART HYATT, is an enthusiast on the subject upon which he writes so pleasantly, and his book embodies just what every grape-grower would like to know—what every one must know, to cultivate the vine successfully."

Colman's Rural World, St. Louis: * * * "We merely want to introduce a new and interesting treatise on this subject to our readers, from the far-off shores of the Pacific—the Golden State of California. Its author is T. HART HYATT, editor of the California *Rural Home Journal*. He has had a large experience and observation in California and in the Old World. His style is entertaining, his directions clear, plain, and practical."

Rural New Yorker: * * * "Although most valuable to the California viniculturist, yet it helps to widen our knowledge of the vine."

H. H. BANCROFT & CO., Publishers.

Current Literature.

Plain Thoughts on the Art of Living.

No men have better opportunity to judge of success than those whose calling brings them into contact with all kinds of persons, in every variety of circumstances, as pastors of churches. If they fail in other respects, they are most heartily to be blamed if they fail to gain some knowledge of human nature in the course of years, and some wisdom as to the best means for acquiring what is of real worth. This is understood by those to whom they minister, and therefore there is no one to whom they go so naturally, or with so much confidence, when they need advice, as to their pastor, and he becomes a kind of oracle oftentimes, for the young and the old. The published thoughts upon practical subjects, or upon life in general, in the form of lectures, essays, and books, with which clergymen have favored the people, are among the most valuable to be found in print, for their common sense, their adaptation to the actual wants of men, and their ability to bring them the help they need. The volume now before us is not an exception in this respect. Rev. Washington Gladden, its author, is pastor of a church in North Adams, Mass., and these "Plain Thoughts," were just addressed to the young of his own congregation, then published in a series of newspaper articles, and now given to more extended perusal in a book. The subjects discussed are thoroughly practical, and they are presented in language often more direct and forcible than elegant, yet so as to make an impression often by the very manner of statement. The author does not seem to be ambitious of distinction, but anxious to be useful, and he has not failed. Manifestly a keen observer, and able to reach correct conclusions from the premises furnished by facts, he gives us these in the remarks and suggestions, and counsels which compose the work. While it is designed particularly for the young, those of any age will find much in it that will serve them. Boston: Ticknor & Fields. San Francisco: H. H. Bancroft & Co.

History of the New School.

Dr. Samuel J. Baird has availed himself of the posture of affairs in the Presbyterian Church respecting the union of its principal branches, to add another volume to the list already existing, upon the history of the Disruption in 1838. The book is published by Claxton, Remsen & Haffelfinger, of Philadelphia, and its appearance is pleasing, yet so far as we can judge from a casual review of its contents, it adds little to the information that was before so abundant, except the sentiments and commentaries of the author. As he is thoroughly Old School, and entirely opposed to the union contemplated, it is natural that he should be quite positive in the expression of his views since he deems one "inexcusable, who, in circumstances of peculiar emergency, should disregard and ignore the lessons of his own experience, lest they should interfere with the dictates of the moment's impulses and interests." The conclusion he announces, as the result of his study and observation, is that "there is a fundamental and irreconcilable difference of principle between the two bodies, on the subject of liberty of doctrinal divergence from the standards;" and the question he propounds for the Old School to determine, is, "whether we are prepared to ignore all the past, surrender the principles on which our Church has heretofore stood, furl the banner of testimony which she has borne, and enter into covenant to abandon the precious doctrines of grace to the mercy of every theological empiric who may fancy that his 'free inquiries' have found a new and better way." When all the facts connected with the origin and progress of the proposition before the Church are considered, and all the solemn declarations of men able to speak on the points respecting the doctrines in debate, are remembered, and all the arguments by which our greatest and best men in both branches have been honored and moved, are reviewed, it must be confessed that such an authoritative and absolute statement sounds a little too emphatic. Men are willing to read and weigh history, but they will claim the privilege of judging whether present circumstances and facts shall have any influence upon their decisions. The question of reunion is a living, practical question. It relates to the present and the future, rather than to the past, though the past should have a bearing upon it. So far as Dr, Baird has contributed to the *knowledge* of our members upon the points involved, his book will be accepted as useful and well-timed.

Sold by A. Roman & Co.

A. Roman & Co. have received a beautiful edition of Willis's Sacred Poems published by Clark & Maynard, of New York. These poems are so well known that nothing need be said in their praise. In addition to the very tasteful manner in which they are collected in this volume, it contains an interesting biographical sketch of the author, and several illustrations by some of the most eminent artists. With all his fastidiousness on this point, Mr. Willis himself would be satisfied with the casket in which those productions he was wont to regard as his gems are here presented to the world.

What Makes Me Grow? is the title of a book also sold by A. Roman & Co. and published by Appleton & Co. which is full of matter that will please and instruct children. It is very practical, yet very entertaining, and after it is finished, the young reader will be sorry that there is no more, and his parents and friends will join in the hope that an author who has succeeded so well in communicating useful knowledge may be inclined to give them more books of a like spirit and design.

The Little Corporal for November comes to us in an enlarged and improved form. This is a publication which is always welcomed by the young folks. Chicago. Alfred L. Sewell.

Literary Items.

Books for Boys.

If I visit my bookseller's at this beautiful season of the year I probably find his counter covered with gayly-bound volumes, red, blue and green, which I at once recognize as books for the young. Further examination establishes the fact that the majority of them are stories for boys. Why girls should be so inadequately provided for in this respect is no business of mine. I suppose it is considered by their monitors that the offscourings of the circulating libraries are good enough for them. But I rejoice over the activity which is displayed in ministering to the literary tastes of boys.

In our day we were not so well off. A boy's library was thought to be very complete if it contained "Robinson Crusoe," "Sandford and Merton," and Edgeworth's Tales, with one of a class of smaller stories, which have since been buried in oblivion. Most of these were very like one another in plot. The chief *dramatis personæ* were three—a preternaturally wise and just schoolmaster, with spectacles, who dealt largely in useful information, and precepts savoring of the classics rather than Christianity, a young fiend in human shape, whom we may call Master Badboy, and a stainless angel of the same dimensions, who serves as hero. This model Master Goodboy is represented as passing triumphantly through all sorts of temptations, and as rebuking his wicked companion in most edifying and grammatical language. Master Badboy, not profiting thereby, is held up to the moral indignation of the reader, and finally comes to grief, being discovered by the sapient preceptor in some heinous naughtiness, whereupon he either repents or is visited with poetic and scholastic justice, according to the taste of the writer and his or her opinions on the subject of corporal punishment.

Boys used to read this sort of thing with a certain delight, just as they would read the story of "Puss in Boots;" never for one moment supposing, however, that the characters were meant for human beings like themselves, or that the warnings and examples held up by the author had any connection with their own daily life. At least I can remember no such effect produced on me, and in my youth I was a by no means unfrequent votary of this muse. We didn't often meet with Master Badboy at school, still seldomer with Master Goodboy; and though our master wore spectacles, he talked very much like an ordinary mortal, and used to flog us without making any grand speeches, or quoting any Latin whatever. So we did not believe much in our story-books, but knowing no better, we took what we got, and were thankful.

What a change from all this state of things was "Tom Brown's School Days!" Then probably, for the first time, English boys saw themselves described as they were. The former tales were written as truthfully and naturally as if a distinguished lady author had sat down to give us an account of the man in the moon; this was as if the man in the moon had taken the trouble to write an autobiography of himself.—*A Book about Boys.*

La Lanterne.

The last number of the *Lanterne* consists entirely of extracts from the political writings of the Emperor, Napoleon III—of course those passages which have a liberal tendency being selected. It was to have been published in France, but no one would take the hazard of printing it; so M. Rochefort is enabled to say that the works of the Emperor cannot be published in the Emperor's own dominions. This is very smart, but it is also very silly. Isolated extracts may be made to serve any purpose, and the Emperor may fairly object to having his writings mangled, garbled, and twisted, to serve designs for which they were never intended. But if a Frenchman can only be epigrammatic and mischievous, for what else does he care? This fatal preference of epigram to discussion is one of the reasons why France never progresses in reform, but swings blindly from revolution to reaction, and from reaction to revolution again. What is to be hoped from such such tactics as those of M. Rochefort? Authority is irritated without being convinced, and retaliates; M. Rochefort buzzes and stings again; and not a single step is taken towards the elucidation of any political principle, the removal of any difficulty, or the amelioration of any wrong.—*London Review.*

A Wealthy Author.—John Ruskin, the decidedly eccentric, though brilliant critic of art and literature, differs from most of his brethren of the brush and pen in that he has an ample fortune—estimated at $3,000,000—the income of which he employs in the most benevolent manner. He has an elegant residence, with gardens attached, in one of the suburbs of London, and he has stocked it with a most admirable collection of objects of *vertu* and gems of art. Among other things he possesses a wonderful collection of crystals. A gentleman who has visited him says, however, that among his varied collections there is no curiosity so great as Ruskin himself. The entire time of a confidential secretary is employed in responding to the many calls upon his large philanthropy.

Libraries.—The public libraries of France contain 6,233,000 volumes—nearly 5,000,000 more than those of Great Britain; but the private collections in the latter country far exceed those in the former.

Hints to Writers.—Perfect your manuscript; there are a few mistakes which are so common, even among educated writers and speakers, as to deserve special notice. One is the frequent use of a dash, longer or shorter, in place of the proper punctuation mark,—comma, semicolon, or period. Whenever uncertain what the mark should be, some writers who ought to know better, and to do better, seem to cut the gordian knot to their own satisfaction by a stroke of the pen, presuming that the printer will not only do his own work, but perfect a slovenly and incomplete manuscript. There is also the equally pernicious practice of making a letter that will pass either for a capital or not, when the writer himself does not know which he ought to use.

English and American Journalism.—The impersonal system of English journalism is, unquestionably, the best for the interest of the journal, while the personal responsibility of the writer in France is the better system for the journalist; but the mixed system which prevails here, where each journal has a well-known and responsible chief, while his assistants are mostly unknown, is, on the whole, the better system for the public—and the interests of the public are of paramount importance.

The *Pall Mall Gazette*, referring to a recent article in *The London Saturday Review*, says: "Like other productions from the same mint, every line of it conveys the impression that if the author's opinion upon the creation had been asked on the first Sabbath, he would probably have said, "Well, it is not so very bad considering."

The *N. Y. Times* has a new-word mania, and proposes to say "it has been cabled," instead of "it has been telegraphed over the Atlantic cable," and to use "photogram" for "photograph," and "stereogram" for "stereoscopic view."

A German philologist, at Jena, predicts that in five centuries the English will be the universal language.

Educational.

Earthquakes and Self-Culture.

An event like a great earthquake in a crowded city makes its own impression upon the memory. With the steel of fear for ourselves, or the diamond of sympathy for others, it leaves a record of itself upon our minds which is absolutely ineffaceable. But, here is a hint of mental discipline. Have we, indeed, in this, an event which is sure to return itself to our recollections? Then, let us see to it that it does not return empty-handed. Let us insure its bringing with it a troop of brighter and more fruitful reminiscences than its own barren self. The solitude-loving raven would probably, in any event, have hovered over the retreat of the prophet Elijah; but, by the blessing of God, his visits were clothed with a ministry of nourishment and consolation. Let us be, after the same manner, merciful and improving to ourselves. This raven memory of the earthquake, let us bend its talons to the service of restoring to us, when it must itself return, tender and instructive memories of home, friendship, the house of God, the city, and passing historical events. The home circle of his youth—how good a reminiscence is this for a young man to associate with any memory which is likely to recur to him! And none is more easily associated with an event like an earthquake. With only the least possible pains, a young person can teach himself, or a parent can teach his children, to rivet firmly to this more inevitable recollection, sweeter ones of the constitution of the family circle—of such a brother, as an infant—of another, as an abecedarian—of some loved and faithful servant—of father and mother in their prime—or of those humble inmates of the household named Carlo or Pussie. All of these are easily made one with the memory of the earthquake by a few deliberate presentments to the mind of how each was affected by that event; where each one was; what each one did, or failed to do. So with the wider circle of friendship. A little pains only, is wanting to transform this otherwise boding memory into a carrier dove, under whose wing as it revisits us we shall find sweet pictures of those other family circles which are interlinked with ours in love. So with our church and civic surroundings, and contemporaneous events. The memory is like an arch—its burden is its strength. To associate inextricably with some assured matter of recollection, other important and interesting matters, is not only to provide future pleasure, but to employ a wise means of mental invigoration. In the old libraries we find parchment pages where the original writing has been half erased and other matters written over. Thus monkish legends have been found on the same page with classic elegance and Scripture truth. Let us see to it that the page of memory, which records a passing event of mystery and death, and which on this account, is so likely to fall open before our eyes of its own accord, shall bring back to us at the same time, pleasant recollections of matters related to us as worshippers in God's temples, as citizens, and as actors in, and spectators of, passing history.

C. R. C.

A Smart Pupil.—The late Prince Albert once paid a visit to a school, and the teacher made one of the classes go through what is termed in the phraseology of pedagogues an object lesson. "Now, can you tell me anything about heat?" was one of the questions. A bright little man held forth his hand, as much as to say he could. "Well, now, my boy," said the teacher, "what do you know?" "Heat expands," said the boy, in the jerky style of delivery characteristic of his years. "Heat expands—cold contracts." The teacher looked at the Prince for approval; the Prince bowed his head, and smiled approbation. The teacher, eager for more such smiles, went on. "Very good," he said, "now give me an example." "In Summer the days are long; in Winter the days are short.

Personal.

The following are the City and County officers elected in San Francisco on the 3d: Chief of Police, P. Crowley. Tax Collector, Alexander Austin. Auditor, Col. Thos. H. Holt. Superintendent of Streets, Col. M. C. Smith. City and County Attorney, J. M. Nogues. Public Administrator, J. Benjamin. Fire Commissioner, Samuel Rainey, Jr. Supervisors, P. H. Canavan, Edward Flaherty, Monroe Ashbury, Richard Ring, A. J. Shrader. School Directors, E. H. Coe, J. M. Burnett, J. F. Meagher, Dr. J. D. P. Stillman, Wm. H. Knight, Wm. Shew, Edgar Briggs, H. F. Williams, R. H. Sinton, Dr. W. C. Angell.

Rev. O. W. Whitaker, Rector of St. Paul's Church, Virginia City, has been elected by the Episcopal Convention now in session in New York, Missionary Bishop of Nevada and Arizona. This is in every respect a good choice.

Mr. F. I. Angier, editor of the *London and China Express*, a paper published in London in connection with the arrival and departure of the Asiatic steamers, passed through our city last week on his way to China.

Rev. Dr. Hendrickson of the Second Baptist Church, was forced to leave the pulpit during the services on the morning of Sunday, Oct. 24th, by a severe attack of Rheumatism. He will take a short vacation.

Baron Von Koschkill, a distinguished mining engineer from Russia, is examining the mines of Nevada and California, under orders from the Russian Government.

Rev. J. A. Burlingame, a brother of Hon. Anson P. Burlingame, died recently at Sonoma, where he had been stationed by the Conference at its last session.

Rev. A. Fairbairn having been absent from home for two weeks, found on his return to Tomales that a valuable horse had been stolen from his pasture.

Rev. Dr. Wadsworth, of Calvary Church, who has resumed his pastoral duties after a short rest, baptized six infants last Sunday morning.

The editor of the *Salt Lake Reporter* is said to have received 3 anonymous letters ordering him to leave the Territory under the pain of death.

The arrival of Rev. Dr. Mooar from the East, and Rev. Eli Corwin from Honolulu, is announced in the *Pacific*.

The editor of the *Stockton Gazette* marched in a Republican procession on Saturday night. The result of a wager.

Rev. A. Parker lectured at Nevada on last Sunday evening, on "The Dangers and Duties of our Times."

Mr. R. F. Perkins, formerly postmaster of San Francisco, died on board the steamer on the passage to Panama.

Senator Williams of Oregon, has arrived in this city, and will sail for the East on the next steamer.

Rev. Dr. Rounds of Oregon, recently received a very severe injury by falling down stairs.

Rev. Mr. Francis, a Baptist minister, is on his way to California overland, from the East.

Governor Seymour of British Columbia, is seriously ill at Victoria.

Religious Books.

A great variety of works in all departments of Religious Literature, such as Devotional Books, Bible Dictionaries, Sermons, Religious History, and Biography, Annotations, Commentaries, etc., published by the

PRESBYTERIAN BOARD OF PUBLICATION.

Also, a large assortment of Sunday School Libraries and Hymn Books, including THE HYMNAL, Presbyterian Psalmodist, Presbyterian Juvenile Psalmodist and Children's Praise, to which the Publishers call the attention of

SUNDAY SCHOOL TEACHERS AND OFFICERS,

And of all who desire books in any of these departments. All such are requested to call and examine the publications of the Presbyterian Board at the Depository for the Pacific Coast, which has been established at the store of

H. H. BANCROFT & COMPANY,
609 Montgomery Street, San Francisco, Cal.

Congregational Singing.

ROBINSON'S SONGS OF THE SANCTUARY. Hymns and Tunes for Congregational Singing. 35,000 copies already sold. Editions for Congregational, Presbyterian, and Baptist Churches. Price, $2 50. A liberal deduction to churches for first introduction.

HENRY WARD BEECHER'S PLYMOUTH COLLECTION. 75,000 copies sold. Congregational and Baptist editions, $2 50.

EPISCOPAL COMMON PRAISE. Appropriate Tunes for all the Psalms and Hymns in the Book of Common Prayer, with select chants. Just published. $2 75.

A. S. BARNES & CO.,
Publishers, New York.
For sale by H. H Bancroft & Co., San Francisco.

Practical and Scientific.

AGRICULTURAL.

Waste in Feeding.

One of the elements of success in trade lies in the careful attention to details, the stoppage of leaks, the boldness for large adventures linked to the careful mastery of minor things. In this respect agriculturists are an age behind business men. It is easy to be penny-wise in a small way, but that is different from the broad-sighted economy referred to. If one could get at the figures of actual destruction in the injudicious waste so common in the feeding of domestic animals—the amount would surprise the reader. Hay is trampled in the mud, oats are sprinkled around almost every feeding-place, corn in the cob is thrown to pigs. Commenting on one feature of this fact, a writer in the *New York Times* says:

"It is an expensive system of management to feed whole grain to any kind of animals. All kinds of cereal grain are provided with a tough hull, or skin, which the digestive powers of most animals will not dissolve; consequently, if the skin is not broken before the grain enters the stomach, the kernels will usually pass off with the droppings, without affording the beasts that swallow the grain any more nourishment than fragments of wood of equal size. During the month of August last the writer procured a quantity of horse manure for top-dressing strawberry plants, and in a few days after the mulch was spread around the plants, the unbroken kernels of oats vegetated, so that the entire surface of the ground appeared as green as a lawn. This fact showed conclusively that much of the grain had never afforded the beasts that swallowed it any nourishment at all. Young horses, having sound and sharp teeth, will sometimes crush every kernel. But old horses, with poor teeth, frequently swallow half of their mess of oats without breaking the skin of the kernel. When mills are at a distance, and people will persist in feeding hard whole grain, it will always be found advantageous to soak the grain at least about twenty-four hours before using it. Suppose, for example, a drayman is accustomed to feed to his horses eight quarts of corn and oats at each feeding, say three times a day. Let the grain be put in a pail and covered with warm water every time the animals are fed. Warm water is preferable to cold, because the latter in cold weather will soften the grain but little.

"Those who study economy and the comfort of their horses may rest assured that it will pay well for all trouble to immerse the grain before feeding. Horses while eating should be provided with easy-fitting feed-bags, such as are made by saddlers. It is no saving whatever to allow a horse to eat oats out of a box, or from the top of a barrel, scattering his much needed feed hither and thither, while the price of such waste would in a very short time more than cover the cost of a sail-cloth or leather feeding-bag."

Preserving Fruit in Bottles.

An esteemed correspondent, who has tried various plans, sends us the following as the one found to be attended with the best success. This, of course, is intended for ordinary bottles with corks. Where some of the many patent jars are used, the sealing process is unnecessary:

"Put the fruit in bottles and add one-eighth of its weight of sugar. Place the bottles, completely filled, in a boiler, with a board or other material, in the bottom, to prevent the heat breaking them. Fill the boiler with cold water nearly to the top of the bottles and heat it to boiling. Dip the corks in melted sealing-wax and drive them into the bottles. Tie the corks down with wire or twine, and then seal the corked bottles by turning the necks down twice into the melted sealing-wax. When sealed, place them again in the boiler, and boil a short time. Put them in a cool place until wanted for use. The necks of the bottles must be heated in water before the corks can be drawn. The first boiling expands and expels most of the air from the bottle, coagulates the albuminous parts of the fruit, and retards its fermenting tendencies. The second boiling, after the bottles have been corked and sealed, renders the free oxygen contained in the small quantity of inclosed air inert; the oxygen unites under the influence of heat with the organic matter, it is wholly converted into carbonic acid, and cannot act further in causing decomposition. To make the wax to seal the bottles, melt together one pound of resin, four ounces of beeswax, and three ounces of tallow."—*Congregationalist.*

Weight of Cattle by Measurement.

Many experiments have been made by graziers and dealers in cattle to ascertain the net weight of cattle by measurement. Rules have been given and tables constructed of the results obtained. At best, these are but approximations, and the measure of correctness will depend much upon a practical acquaintance with the form and prominent points of the animals to be measured. Something will depend, too, on the breed, size, mode of fattening, the time the process has been going on, and the character of the feed supplied. The following method comes as near a correct result as any known:

Measure carefully with a tape-line from the top of the shoulder to where the tail is attached to the back; this will give the length. For the girth, measure immediately behind the shoulders and fore-legs. Multiply half the girth by itself in feet, then multiply this product by the length, and the product will give the net weight in stones of eight pounds. For example: with an ox or cow 5 feet in length and 7 feet in girth, the calculation will be as follows:

Multiply half the girth bp itself in feet	3.5
	3.5
	12.25
Multiply by length in feet	5
Weight in stones	61.22

This multiplied by eight, the pounds in a stone, or rather half a stone, and the result will be 490 pounds net.—*Rural New Yorker.*

Borrowing Tools.—Of all the nuisances attached to a neighborhood, there is none more annoying than that of a borrower. I happen to live where I have two or more of the agreeables, and this morning, wanting my hedge-shears to prune a little piece of hedge, on looking for them where they ought to have been, they were not there. On asking my good wife if she knew aught of the missing property, she replied:

"Why, yes; Mr. C. came the other day when you were gone, and I could not refuse him, although I told him you did not like to lend, because every day almost you want them to use; but he said he guessed he'd take them, and when he got through with them, perhaps he'd bring them back."

Another day I wanted my little plow to plow out a few rods of currants, but looking in the shed for it, I found no plow.

"Oh!" says my man, "Captain ——'s man came here yesterday while you were gone, and although I told him you gave me orders not to lend, he said he was told to get it any how, for they wanted it to use."—*Rural New Yorker.*

Trimming Tomato Vines.—A correspondent of the *Highland News* says:

Keep your vines trimmed to not more than three or four strands. A little attention will enable you to do this in a way that will throw the strength of the plant into the fruit. Fruit-bearing branches never put out immediately over the leaf. Just now, when the tomato is in blossom, this can easily be observed. The branches which put out directly over the leaves or strands of vines should be pinched out with the thumb and finger, except three or four you wish to train up; you can have the fruit greatly improved in both quality and quantity. Ten plants occupying about twenty square feet, will in this way yield an abundance for a family of six persons. Your correspondent does not claim to have originated this mode of cultivation; he first saw it tried, and then tried it himself, very much to his satisfaction. Last summer and autumn his "table tomatoes" were not only his delight, but the wonder of his neighbors.

Sweet Tomato Pickle.—Slice one gallon of green tomatoes, and put a handful of salt to each layer of tomatoes. Let them stand twelve hours, then drain off the liquor, and add to them two green peppers, and from two to four onions sliced. Take two quarts of strong cider vinegar, a little more than one-half pint of molasses, and two tablespoonsful of whole mustard, a teaspoonful of allspice, same of cloves, and heat until it begins to boil. Then put in tomatoes, onions, and peppers, and let them boil ten minutes. Pour them into a stone jar and seal tight, and put them into a cool place for a fortnight, after which they will be ready for use, and will keep a year without scalding.—*N. Y. Presbyterian.*

Napoleon's stables cost $80,000 a year.

WEEKLY MARKET REPORT.

Wednesday, November 4, 1868.

Flour—Sales of 1,000 bbls Extra and Superfine, in lots, to the city trade, private. We quote jobbing rates for city brands as follows: Superfine, in sks, ℔ 196 lbs, $5@$5 25; Extra, in sks, $6@6 25.

Wheat—Sales of 4,300 choice shipping, private; 15,000 sks do, prior to arrival, private; 2,000 sks do, $1 75; 500 sks choice Santa Clara, $1 80; 250 sks do, $1 80. We quote good to choice shipping, $1 70@1 75 ℔ 100 lbs.

Barley—200 sks feed, $2 15; 200 sks do, $2 10; 500 sks brewing, $2 30. Feed qualities are in light request, at prices ranging from $3 12½@2 20; brewing, $2 25@2 35 ℔ 100 lbs.

Oats—Sales of 200 sks common, $1 60; 300 sks fair, $1 75; 200 sks good, $1 90. The range of the market is $1 60@2 ℔ 100 lbs, latter an extreme figure.

Potatoes—Market continues depressed and inquiry light. Sales of 500 sks Humboldt, $1 75; 400 sks Bodega, 75c @80c; and 50 sks Carolina, at $1 12½ ℔ 100 lbs.

Onions—Are scarce at a slight advance. Sales of 100 sks Silver Skins, private; quotable at about $1 80 ℔ 100 lbs.

Beans—We quote jobbing rates for first quality as follows: Bayo, 3½@3¾; Butter, 4@4½c; small White, 3½@3¾c; Pink, 2¾@3c; Red, 2¾c ℔ lb.

Rye—The stock is well concentrated in the hands of speculators, who are holding for high figures. The nominal quotations from wharf are $2 10@2 20 ℔ 100 lbs.

Buckwheat—The market is entirely nominal at about $1 75 ℔ 100 lbs.

Corn—New crop Yellow is selling at about $1 80 for large and $2 ℔ 100 lbs for small.

Mustard Seed—Choice California Black still commands 4c, inferior qualities 3@3½c; English White, 5@5½c ℔ lb.

Flax Seed.—75 sks choice, 4c ℔ lb, which is the price paid by the mill.

Bran—Sales of 100 tons, in three lots, $21@22 ℔ ton.

Middlings—The nominal range for fair is $35@40, though $37 50 is considered a good price; feed descriptions $28@ $34 ℔ ton.

Oil Cake Meal—The mill continues to ask $30 ℔ ton.

Hops—New crop California are quotable at about 25c ℔ lb.

Hay—Sale of 175 bales fair, $11; quotable at $10@14 ℔ ton.

Dairy Products—Strictly choice California fresh roll Butter is quoted at 55@57½c; good to choice do, 60@65c; California pickled, 40@45c; fancy lots do, 47½c; California Cheese is jobbing at 17@19c, and Eastern at 18c ℔ lb. Eggs are scarce and firm at an advance; quotable at 70@75c ℔ dozen.

Provisions—Bacon is jobbing at 14@14½c for California smoked; Oregon do, 14@14½; California Hams, 16@17c; Oregon do, 17@18c; California Lard, 13@13½c, and 14c ℔ lb for small tins.

Poultry—Live Turkeys are quoted at 16@17c ℔ lb; Hens $6 50@7; Roosters, large size, $6@6 50; Spring Chickens, $4@5; Quail, $1 25 ℔ dozen; Geese, $2@$2 25 ℔ pair; Venison, 8@9c ℔ lb.

Wool—Sales for the week, by two of the leading receiving houses amount to 170,000 lbs. The demand continues active, the various lots finding buyers immediately upon arrival. No change in prices; good to choice shipping grades are quoted at 16½@18c; fancy lots, long staple, 18½c; burry, 11½ @13½c ℔ lb.

Hides—Sales since last Wednesday of 1,800 California dry at 14@15c. We quote salted at 7c ℔ lb.

Tallow—Sales for the week to a single purchaser of 40,000 lbs good Beef at 8c; market variously quoted at 7¾@ 8¼c ℔ lb.

San Francisco Cattle Market.

The market presents no features worthy of remark.

We quote slaughterers' prices as follows:

Beef—American, 1st quality, 7@8c ℔ lb.
do 2d do 6@7c ℔ lb.

Veal—Ranges from 6 to 10c ℔ lb.

Mutton—Is steady at 6@6½c ℔ lb.

Lamb—Has declined to 7@8c ℔ lb.

Pork—Undressed, 4½@5½c; dressed, 6½@7c ℔ lb, outside figures for milk or grain fed.

—*S. F. Bulletin.*

MINING.

ALL'S NOT GOLD THAT GLITTERS.—Not long since a green looking Vermonter walked into the store of Dr. C. T. Jackson, the chemist, and addressed him as follows:

"Dr. Jackson, I suppose?"

"Yes, sir."

"Are you alone?"

"Yes, sir."

"May I lock the door?"

He did so, and having looked behind the sofa and satisfied himself that no one else was in the room, he placed a large bundle done up in a yellow bandana, on the table and opened it.

"There, Doctor, look at that."

"Well," said the doctor, "I see it."

"What do you call that, Doctor?"

"I call it iron pyrites."

"What!" exclaimed the man, "isn't that stuff gold?"

"No," said the Doctor, "it's good for nothing," and putting some over the fire in a shovel it evaporated up the chimney.

"Well," said the fellow, with a woe-begone look, "there's a widder woman up in our town has a whole hill full of that, *and I've been and married her!*"

A BIG OFFER.—We understand that D. E. Buel, as agent of an English company, has offered to purchase one-half or the whole of the Golconda Mine, at the rate of $60,000 for half or $120,000 for the whole, and there is a strong prospect that the sale will be closed. The Golconda now gives promise of being one of the best mines in the State, and in the hands of a wealthy company of English capitalists, would yield enormous sums of silver. There is already enough ore in sight to yield immense sums of bullion, but the mill now at work is too small to make any impression upon it.—*Humboldt Register.*

IMPERIAL EMPIRE.—The shaft is now down 1,025 feet, and timbered to within five feet of the bottom. Very hard rock is now encountered, so hard that Giant powder is used in the blasting, and found to be very effectual indeed, very satisfactory progress being made. At the depth of 1,100 feet a new station will probably be opened for a drift west to the ledge. At 1,500 feet, the shaft, sinking perpendicularly, will cut the ledge itself, in case the present known 'dip' or inclination of the ledge eastward is maintained.—*Virginia Safeguard.*

BATTLE MOUNTAIN DISTRICT.—It affords us much pleasure to be able to announce that the Battle Mountain mill, is a perfect success. Ten tons of very inferior ore were first run through the mill in order to get the batteries, pans and machinery in good condition for work, which, when cleaned up gave $500, or at the rate of $50 to the ton. The company is now working 50 tons, which will yield at the rate of $200 to the ton, or $10,000 for the whole. There are large quantities of this class of ore in the mine.—*Humboldt Register.*

NEW DISCOVERY.—William Sims, a well known miner, of this county, struck a vein of quartz near the Ferguson Mine, on the main fork of the Merced River, exceeding in richness anything that has lately been discovered. Here is another instance where a deserving man has been rewarded for years of toil.

Hite & Co., at Hite's Cove, after a run of three weeks, cleaned up the snug sum of $20,000.—*Mariposa Mail.*

MEDICAL.

What Shall we Drink?

The following extract are from the October number of *Hall's Journal of Health*, which is considered good authority on all subjects relating to the preservation of health:

COLD WATER.

Cold water, swallowed during the progress of digestion, instantly arrests it, and the process is not resumed, until the water has been there long enough to be warmed from the temperature at which it was drank, to that of the stomach; or from some forty degrees, to a hundred: to accomplish this, the heat must be abstracted from the general system, chilling it. Strong, robust persons may not feel this, but if a man in feeble health drink cold water at a meal, at all largely, he rises from the table chilly, and soon has fever, while the stomach being kept that much longer at work in digesting the food, loses its vigor, the digestion is imperfect, and the food becomes impure, thus lying at the foundation of disease. The inevitable inference from these facts is, that

COLD WATER IS INJURIOUS TO HEALTH,

if taken at meals. Injurious to the most robust, if taken largely, and to persons in feeble health, if taken at all, beyond a few swallows at a meal.

I therefore set it down, as a clearly established fact, that a glass or more of cold water, drank habitually at meals, or soon after, is a pernicious practice, even to the most healthy.

Injury is done in another manner; water, or any other fluid, dilutes the gastric juice, and thus weakens its power to dissolve the food. The amount of gastric juice is not lessened, but its power is diminished by its dilution. The finger will be scalded by dipping it into a vessel of boiling water; but if an equal amount of cold water is added, it may be thrust in with impunity, although there is as much heat in the mass as before; but it is more diffused.

Any kind of fluid taken largely at a meal, or soon after, is positively injurious to health.

A standing item of advice to my patients is—Take but half a glass of water at a single meal, or a single cup of weak coffee or tea, never increasing the strength or quantity, and drink nothing within an hour after eating.

If cold drinks are injurious at meals, cold food is for the same reason also injurious; thus it is, that some of the most terrible forms of disease are brought on by persistence in eating cold food, exclusively, especially in winter time.

WARM DRINKS.

If cold fluids are injurious at meal, we naturally conclude that warm fluids, in moderation, are beneficial, and rightly so.

It then follows, that, if we drink anything at meals, it should be first warmed.

We may safely admit, that the universal custom of a country is founded on common sense, common sense being the teachings of experience. Common consent, and the experience of the civilized world is, that a cup of good hot coffee for breakfast, and a cup of good hot tea for supper is "wholesome." If a person is prejudiced against "store tea and coffee," then any of our common garden herbs may be substituted, as balm, sage, sassafras, and the like; it is the warmth that comes first in importance, and there must be the taste of something palatable in it, or the stomach will loathe it. I am well aware that some persons consider tea and coffee poisonous, as did an enthusiastic young "theological" at New Brunswick, a few years ago, and demonstrated it, as he thought, to the old Domine, then in his eighty-sixth year, and still an efficient laborer in the vineyard. "It may be a poison as you say," replied the old veteran, as the sly mischief twinkled out of the corner of his eye, "but it must be a very slow poison, for I have taken it regularly night and morning for these eighty years, and am, as you see, not dead yet." The same has been said of Dr. Johnson.

But how comes it that so many sensible people believe that tea and coffee are poisonous? Just as they have come to the adoption of any other fallacy. Somebody who had nothing else to do, imagined it, then hunted up facts and parts of facts to prove it; and what with adding a little to one fact, and suppressing from another, a really plausible case was made out, to every reader or hearer, who had rather admit a statement, than take the trouble thoroughly to sift its truth, and there are many such.

COFEEE A SUSTENANT.

"Once upon a time," not very long ago, a party of men left Salt Lake City for St. Louis, with the United States mail, to be delivered at Independence or "*St. Joe.*" It was winter. They found the prairies covered with snow, and finally their "*animals*" perished with hunger; at this stage the six men found themselves utterly destitute of food; the game had taken to the woods, there were no rivers, the ground was covered with snow, they were still hundreds of miles from their journey's end, while the bleak winter winds whistling across the wide prairies in unobstructed fury, froze them sometimes almost to the heart's core. All, absolutely all they had to subsist upon under these desperate circumstances, was snow water and a quantity of green coffee; this they burned and boiled in snow water, and upon it travelled for six days, until they reached a place of help. These are the bare facts of the case, as reported to government, and demonstrate that coffee, alone, is a sustenant, as well as a stimulant, that it contains the elements of nutrition, consequently it is not a mere stimulant, and all that has been said of "mere stimulants," is not applicable to it. Coffee then being of itself nutritious, capable of sustaining life for days at a time, under circumstances of severe cold and the labor of travelling on foot, and it being customary to use it with cream and sugar, which are themselves concentrated nutrients, and withal, being drank hot, the conclusion appears to us legitimate as one of Euclid's corollaries, that coffee as generally used in this country is a valuable, nutritious, healthful, and comfortable item.

PREPARTION OF TEA AND COFFEE.

Having said so much about a cup of tea and coffee, it is proper to say something of its preparation. Individuals and nations have their preferences, but some things must be laid down as of universal application:

The first cup of coffee is the best. The last cup of tea is the best. Never take more than one cup at a meal. Never increase the strength.

THE TIME TO DRINK TEA

is at supper, when the lightest meal of the day is taken; for, by its exhilarating effects, it destroys the sense of hunger, and enables a person to go to sleep without having much in the stomach to keep it working all night, and so prevent sound, refreshing sleep.

TO MAKE A CUP OF TEA.

The teapot itself should be as perfectly plain and even in shape, inside and out, as possible; it will thus throw off less heat, and consequently keep hot longer, and be more easily kept thoroughly clean. A level teaspoon for one cup.

When the pot is perfectly clean, and dry, put the dry tea in and stand it before the fire for at least ten minutes; then pour on the boiling rain or soft water, let it stand five minutes, and it is ready for use; then put your sugar and milk in the tea cup, and pour the tea upon it.

TO MAKE A CUP OF COFFEE.

As soon as the coffee is parched, scarcely brown, grind as much as you will want to use for that time; put it in the coffee-pot, and pour on boiling water; stir, place it on the fire, bring it to a boil; as soon as four or five bubbles appear, take it off the fire, pour out a tea-cupful and return it, then set the pot down for one minute, next pour gently over it a tea-cup of cold water, let it stand another minute to allow the heavy cold water to sink to the bottom and carry the grounds with it, then put your usual amount of sugar in your coffee-cup, and as much boiling milk as you desire, then fill it from the coffee-pot.

A SUBSTITUTE FOR COFFEE.

From chemical analysis it appears that the seeds of the asparagus when dried, parched and ground, make a full flavored coffee, but little inferior to Mocha, containing in common with tea and coffee, the principle called taurine. Dry the asparagus berries well, after being thoroughly ripened, then rub them on a sieve, thus the seeds are readily separated.

Savings Banks.

The following are extracts from an article by O. B. Bunce in the last number of *Hours at Home*:

The steady accumulation of the funds in Savings Banks has now resulted in an aggregate so large and so important as a financial power, that it is attracting the attention of politicians, financiers, and adventurers. In England government has cast its eye upon it, and taken measures to derive such advantages from it as it may, by constituting itself a vast Savings Bank, with a branch in every village post-office, and at almost every corner in the larger towns.

The American banks have not as yet encountered any such formidable rival, but schemes are beginning to be rife seeking to divert the vast savings fund into other hands and other channels. It is claimed that Savings Banks are too conservative, too negative and too obstructive. As their funds are the savings of the poor it is asserted that they should be employed solely for the benefit of the poor. Some propose "building funds" whereby the bank deposits should be employed in erecting cottages at low cost and low rental; others suggest "business associations," by which the found may be used as capital, in conducting manufacturing and mercantile enterprises, with hopeful brilliant results, of course. The projectors of these schemes, as well as all bank depositors, should understand a practical and universal business axiom, that absolute security and low interest are two elements which cannot be put asunder. As in the Savings Bank funds are garnered up the hearts and hopes of thousands of people—the widown's mite, the hope of old age, the dependence for sickness, the security against want, infirmity or misfortune—it should be guarded and fortified by every legitimate means against the schemes of hopeful visionaries or reckless adventurers.

It is a noticeable fact that the depositors in Savings Banks are commonly the poorest paid of the laboring classes. It may be stated, with approximate truth, that the savings of people are in inverse ratio to their earnings. While your well-paid mechanic or clerk spends all he gets, the shop-boy, working-girl, porter, and half-paid artisan, will manage to squeeze out of their scanty means a little sum for at least a monthly visit to the Savings Bank. Some almost wealthy depositors are found where least expected. The Irish servant girls are naturally fond of Savings Bank accounts, and the second largest institution in the country, holding some sixteen millions of dollars on deposit, is mainly supported by this class. This is the New York Bleecker street Bank. The largest bank is the Bowery Savings Bank, also of New York, which has seventeen millions in its possession.

It would be surprising and interesting to take one's stand at the counter of one of the larger banks and watch the tide of depositors as it flows to and fro. Many of them you will suspect as beggars, but put not your trust in appearance. Bent, worn, trembling old women will totter up to the counter, draw from mysterious recesses in their tattered clothing their paper-wrapped and tied roll of bills with which to swell their already liberal bank account. The rag-picker whom you see enter, who is up daily by daylight with hook and bags and dog-cart, turning over dust-heaps, fishing for bones and rags in refuse barrels, and for cinders among ash-piles, has, the bank-officer will whisper you, her round $3,000 in the bank. This lad, scarcely fifteen, who polishes boots at the corners, and whom you might suppose was depending upon his next dime for his dinner, has $1,400 to his credit. This old woman who sits near the bank all day by her peanut and apple stand, and whose scant pennies were wont to excite your pity so keenly, keeps her double bank account and will die worth her thousands. These, of course, are the surprising examples of comparative wealth where the extreme of poverty is only looked for; but the instances of people, who manage out of small earnings to accumulate large savings, are very numerous. Among the the better class of laborers there is much less providence, and the importance of habits of saving, the necessity of preparing for illness, infirmity, or misfortune, and the advantages that may arise from accumulating a small capital, must be impressed upon that very class who are not only best able to save, but whose intelligence should render such instructions unnecessarw.

To impress this lesson upon the public mind the English banks circulate to a large extent tracts and pamphlets bearing upon the subject. Our own banks have not employed this machinery so extensively, but there is a neat little *brochure* insued by the "Citizens, Savings Bank" of New York, which is somewhat unique in its character. Besides its reports and annual statements, it contains a collection of "Illustrated facts and incidents," which very happily exhibit the value of Savings Banks, and the saving grace of habits of economy; also a string of maxims that have the old Poor Richard stamp; some rhyming proverbs; a number of interesting tables showing how "mony mickles mak' a muckle;" and finally an exciting sale with the title of "The Two Friends; or How to Live.'

The story in question is not solely sentimental, but points the arguments for saving with success. Here is one illustration it gives of a certain method of getting rich, which, while it would require a philosopher of a transcendent gift for calculation to practise it, yet exhibits what slow and regular accumulation will do. It is a story told by the heroine's father of a friend who got independently rich by keeping a Savings Bank account. "I'll tell you how it was," he would say: "Alden was a smart young fellow, and got a good salary as a clerk in a wholesale house down town. At the age of eighteen he opened his bank account, and at twenty began putting in the bank five dollars each week. 'I've made my calculations,' said he, 'and I've found that by putting five dollars a week in the bank regularly, at fifty years of age I shall be rich sure—worth about $24,000—that is, if I let the interest accumulate all the while. As soon as it get up to $5,000 I shall invest the amount on a safe bond and mortgage, at seven per cent., and deposit the interest in the bank. When another $5,000 is reached—it takes thirteen years at five dollars a week with accumulating interest, to get $5,000—invest that in the same way. Now if I get into business I may succeed and I may fail—but this bank plan is a sure way of getting rich, and I mean to try it." And he did try it; and when he was a little over fifty years of age, he had about $25,000 in the bank and in bonds and mortgages, every dollar of it accumulated by that plan." To this mathematical romance the hero replies by explaining "that the great bulk of his $25,000 was made by interest on his deposits. Five dollars a week for thirty years only amounts to $7,800, but with interest compounded every six months, as is done in the bank, it would become $21,400—the clear profit being $13,600." This mode of acquiring wealth, which only exacts prudence and patience, and exempts the depositor from all the risks and vexations of trade, is commended to those whose philosophy can digest it.

The spirit of economy has been so eloquently defended, its influence upon character and its importance to the general welfare have been so frequently illustrated, that it would seem unnecessary to dwell upon it here. The services that the Savings Banks render in encouraging the spirit and in providing opportunity for its display, can scarcely be measured. "No other institutions," says the Hon. James Cook, Superintendent of the New York Bank Department, "operate so directly upon the interest and welfare of our citizens, none so silently and uniformly afford relief to thousands from the ills that flesh is heir to. Is it too much to say that they are the great benevolent institutions of the age?"

Worship—Congregational Singing.

The *Christian Intelligencer* presents the following sensible views on a subject which deserves the special attention of Christians:

A more important subject than this cannot possibly engage the attention of the church. The forms and mode of worship are a part of church order second to none other. We believe that the Church of the present day is, in one material respect, in a transition state. In this remark we have regard not so much to forms of prayer, or to a litany, as to forms of praise which are properly liturgical. In this respect there is great need of reform, which shall consist, not in the introduction of novelties, but in a reinstatement of the ancient manner of praise. We long for the congregational singing of the early, the mediæval and the reformation periods. The system of choir-singing has seen its best days. As a substitute for congregational praise, it is an abuse which must be abated; as a help to public worship, in which all who come to wait on the Lord shall be encouraged to engage, it may profitably retain its place. In order to have congregational singing that really deserves the name, we must go back to the choral style. Many of the tunes which are the most popular among the songs of Zion, are good, and are altogether too valuable to be discarded, but many others are sheer *lilts*, without the first requisites of pure melody, and without the shadow of a claim to musical science. They are the surest means of vitiating religious æsthetics which can be devised, and they must be put out of the way.

Prayer is for saint and sinner, and a litany is by no means an impediment to edification, although the exclusion of free prayer would be. The Lord's prayer is the earliest as it is the best Christian litany, and our Reformed Church has, therefore, properly introduced it into every formula for the administration of the ordinances of public worship; but praise is emphatically that part of the worship which belongs to the Lord's people. "Whoso offereth praise glorifieth me," and without faith it is impossible to please God. None but the ransomed of the Lord can understand his praise, and therefore praise survives all other acts of worship. It consitutes the very life of the beatific vision. The song of the redeemed is ever new, and the ecstacy of that great choral multitude who chant the anthems of the heavenly order may be known, but can never be portrayed in words.

The effect of congregational chanting can only be appreciated by those who have made trial of it. It is easier to teacha congregation to chant or intone the Psalms than to sing any one of our ordinary hymn-tunes, because chants are ordinarily sung in unison, and the cadences are soon acquired by a little attention to the accent. Imagine the effect of a thousand voices lifted up in praising God in the use of one of the old Gregorian chants. Compare it with the spasmodic, ofttimes asthmatic, wheezing, flat and sleepy performance of an imperfectly drilled quartette; or contrast it with the best of the attempts which choirs may make to supplement the praise of God, or supply the lack of melody in the congregation, and a single experiment will settle the question for all time. *The exclusion of Christians from their share in public worship is a grievance.* In prayer, according to our form, the congregation is passive, or at least silent, but in praise the people are presumed to be active. "*Let the people praise thee, O God. Yea, let all the people praise thee!*" This expresses what we would impress upon every man who has a heart to praise, and a mouth and tongue to sing.

Moral Men.

J. B. Ford & Co., of New York, are publishing each week the sermons of Henry Ward Beecher. These sermons are published by the consent and authorization of Mr. Beecher, and the low price at which they are sold puts them within the reach of all. We make the following extract from the first number, which appeared on September 26th:

A moral man, as distinguished from a Christian man, is one who is negative. A Christian is one who is positive. A Christian is a fruit-bearer. A moral man is a vine that does not bear fruit. But then, it bears everything else—good leaves, a good, strong stem, a healthy root, everything that is good and nice in it, except the fruit. A Christian man is one that developes graces into postivity. He acts out of himself and upon others. A moral man is like an empty bottle, well corked, so that no defilement can get into it, so that it may be kept pure

within. Pure? And what is the use of a bottle that is pure, if it is empty and corked up? A moral man, I repeat, is negative. He does *not* swear, and he does *not* steal, and he does *not* murder, and he does *not* get drunk, and his whole life is *not*. His law is, "Thou shalt *not*," and, "Thou shalt *not*," and, "Thou shalt *not*." He is *not* all over, and nothing more! He is not positive. There is no overtness to him.

Stakes are very good; but they are better made of dead wood than living. Moral men are stakes, put up for uses. There are no branches, and there is no shade to them. We can draw lines of demarkation by them; we can do a great many things with them; but these are lower uses, they are servile. Moral men are good, they are admirable, and are encouraged; not, however, for these lower uses which they serve, but in the hope that by and by, by pruning, by teaching, and by inspiration, they may be so trained that they shall bear fruit. He that lives through his whole life, concentrating upon himself all the bounties of God, and gives nothing to his fellow-men, is not a Christian, though he may be a very moral man.

Lastly, consider the wickedness of what seldom passes for a wicked life. I am not speaking of a life of vice and of sin, which is the diseased form of all wickedness—wickedness carried to its most morbid condition. But see how, all through life, men of repute, men of standing, men of influence, men that are praised while they live and are eulogized when they die, are men that are given to the lust of pride and vanity. They live inordinately for themselves. They do not actually do harm, it may be; but they are men who are full of ambition, all for themselves. They are like the oak that stands in the night to gather dew for itself, and then, if the wind in the morning shakes it, is willing to part with the few drops that it really cannot hold on to; and they call themselves benevolent! They are men that spead abroad gigantic arms, and gather the wealth of heaven—whatever God's bounty can give them—meaning it all for themselves; and a few accidental drops of kindness here and there give them some claim to generosity and benevolence. But where are the channels into which their life flows? Where are the uses that these great forces, concentring in them, subserve? They live for pride, for vanity—the meanest of all feelings when it is in excess—and for self. They live for everything but others. Now and then a stray benefaction alleviates their conscience; now and then a *douceur*, as it were, they give to the Lord, that he may not bring accusation against them; but the vast mine which they work from day to day; the wide-sweeping net by which they drag the depths of the wondrous ocean; the vast harvest-field which they reap—these are all for self. Revengeful, jealous, full of rivalries and competitions, and full of injuries to other men in thought or in deed, or in both, they live through life, and are at length mourned over as being men that had some flaws, but that, after all, were very excellent men.

Ah! when a man is dead, and you are sure that he is out of the way, you can afford to praise him. It is when men are living that we are not so charitable about it. I have not the least particle of prejudice against the thistles that were on my place last year. It is those that are there now that I do not like. The nettles that I remember when I was a boy I am very charitable toward; but the nettles that were in my hands last week I do not feel so about. When I look at the *stramonium* that is swelling on the bloated ground, when I look at the thistles and the various noisome pestilent weeds that spring up from the dunghill, and see how rank they are, filling the air with vapor, and how they subsist on that which belongs to nutritious plants, how I abhor them!

Increase of Suicide.

Recently an article appeared in a French review, prepared by a celebrated statistician, containing appalling facts, which are thus summed up by the *New York Tribune:*

Suicide is on the increase, steadily, alarmingly. The real number and the real increase, annually of suicides is probably greater than would appear from official records. Many deaths recorded as accidental, should doubtless be set to the intentional account. Parents and friends willingly conceal what official recorders find no call to scrutinize too narrowly. From 1827 to 1866 in France, the increase of suicide has been annually from fifty-four to 134 cases. The whole number in the first five years from 1827 inclusive, was annually 1739; in 1866 it amounted to 5,119! The increase in the interval is 148 per cent.; the increase of population in the same interval is a fraction under twenty per cent. The increase is much more, and proportionately much more with men than with women. The test applied by countries and by the million of inhabitants, shows one hundred and twenty-three for Prussia, one hundred and ten for France, sixty-nine for England, forty-three for Austria, thirty-two for the United States. Doubtless the greater accuracy in respect of the nature of deaths, which is observed in the mortuary records of Prussia and France, partly account for the comparatively small suicidal cipher set against Austria and the United States. But an auxiliary explanation will offer itself presently. The most suicidal people are the Danes and those of the North German States. The test of sex shows, in fourteen States, of which more or less perfect statistics are at hand, thirty females to one hundred males; that of age shows an increase by years till the age of sixty to seventy, the term being later with men than with women. The test by seasons shows for suicides, as for crimes committed on persons, and for attacks of insanity, an augmentation in Summer over the Winter months. The means of suicide are, in the order of their frequency of use: Strangulation and drowning, firearms and cutting or thrusting instruments, poison. Poison and drowning are the favorite means with females. It is notable here again, in respect of seasons, that drowning is much rarer in Winter than in Summer. The avoidance of pain at the first blush is instinctive even with the secker of death. Women yield oftenest to moral influences, love, jealousy, domestic troubles, excited sentiments of any kind; men to material trials, poverty, business losses, drunkenness and debauchery. Note that these last two causes figure very slightly as causes of female suicide. In Denmark one-third of the male, and but one-fifteenth of the female suicides are attributable to drunkenness. Cities furnish an enormously disproportionate number of volunteers of death. The seventh part of all French suicides are committed in Paris. The proportion of Berlin to all Prussia and of Copenhagen to all Denmark is still greater. Fewer married than single people, but fewer maids and bachelors than widows and widowers; fewer agriculturists than mechanics and merchants; still fewer of these last than members of the liberal professions, and yet fewer of these than of the remaining non-professional population [of France especially, where the number of the military, bureaucacy, domestic and other employed classes, is enormously greater, notably of the male sex than in some other countries], the proportion of the agricultural to the non-professional class being, in 100,000 individuals, as nine to fifty-nine; fewer Jews than Christians; fewer Catholics than Protestants, die by their own hand.

Miners' Foundry and Machine Works,

Nos. 245 to 255 FIRST STREET,

SAN FRANCISCO.

HOWLAND, ANGELL, & KING, Proprietors,

Manufacturers of Machinery for

QUARTZ MILLS, SAW MILLS, POWDER MILLS, FLOUR MILLS, SUGAR MILLS, PAPER MILLS, STEAM ENGINES OF ALL KINDS, AMALGAMATORS OF ALL KINDS, MINING PUMPS, OIL WELL TOOLS, ROCK BREAKERS, HOISTING WORKS,

—AND—

Machinery and Castings of all kinds, either of Iron or Brass.

Boilers and Sheet Iron Work, in all its branches.

Shoes and Dies of White Iron, manufactured for, and imported by us, expressly for this purpose, and will last 25 per cent. longer than any other made on this coast.

Russia Iron Screens, of any degree of fineness. We are the only manufacturers on this coast of the "Hicks Engine," the most compact, simple in construction, and durable, of any Engine in use.

W. H. HOWLAND, H. B. ANGELL, E. T. KING, CYRUS PALMER

Heuston, Hastings & Company,

ARE THE

FASHIONABLE CLOTHIERS

OF

SAN FRANCISCO.

SPECIALITIES.

PRICE AND GUARANTEE.

The largest and most varied stock of Gentlemen's Clothing, Furnishing Goods, Trunks, Bags and Valises, on the Pacific Coast. Every article sold, being of our own manufacture, is guaranteed. Having contracts direct with European and American Manufacturers of piece goods, we thereby effect a saving of fully 50 per cent in wholesale dealers' profits, and are thus able to offer superior Goods at less than second-rate prices.

STYLES.

Having agents in London and Paris, we introduce the new styles in San Francisco simultaneously with their appearance in New York.

GOODS MADE TO ORDER.

For the accommodation of such as may desire, we have secured the services of a celebrated European cutter, and are prepared to make up piece goods in a style superior to any other house on the coast. Shirts, Ties, Collars, etc., made to order at short notice.

COUNTRY ORDERS.

Goods forwarded by Express to any part of the Pacific Coast on receipt of orders and measures; send for directions for measurement.

Heuston, Hastings & Co.

LICK HOUSE BLOCK,

SAN FRANCISCO.

United States Life Insurance Comp'y,

IN THE CITY OF NEW YORK.

Office, No. 40 Wall Street.

CASH ASSETS EXCEED $2,700,000.

This Company, having a Stock Capital, makes Insurances and Endowments with or without profits. Dividends to Policies with profits are equal to, or larger than those of other, or "Purely Mutual" Companies in available present cash value.

NEW AND IMPORTANT PLANS OF LIFE INSURANCE HAVE BEEN ADOPTED BY THIS COMPANY. SEE THE NEW PROSPECTUS.

Life Assurances, Endowments and Annuities in every form Profits available after Policies have run one year, and annually thereafter. The reserved Cash fund, for re-insurance, is the largest known to or required by, the ablest and most experienced authorities in Life Insurance, thus affording undoubted security. A liberal non-forfeiture system, as to whole Life or Endowment Policies.

Policy Holders in this Company can use or apply the Dividends of profits in a greater number of ways than is afforded to Policy Holders by any other Company.

The law under which the company is Chartered, provides that if the Capital should, from any cause, become impaired to the extent of Twenty-five Thousand Dollars, or more, the Stockholders SHALL BE CALLED UPON TO MAKE GOOD SUCH DEFICIENCY. This is the only Cash Company in America which afford this safeguard to Policy-holders.

The assured in this Company are not personally liable as in Mutual Companies, which have the power of assessing their members or of reducing the sums insured, in case of deficiency.

CLERGYMEN, insuring in this Company, are allowed a DISCOUNT of TWENTY PER CENT. on first year's premium, and a libera commission will be given on all Insurances influenced by them.

Agents wanted, on the most advantageous terms.

Forms and every information will be furnished by

B. J. DORSEY,

General Agent for the Pacific Coast,

Southeast Corner Sansome and California Sts., San Francisco

Family Reading.

October.

The summer rose is dead;
The sad leaves withered,
Strew ankle deep the pathway to our tread.
Dry grasses mat the plain,
And drifts of blossoms slain;
And day and night the wind is like a pain.

No nightingale to sing
In green bough, listening,
Through balmy twilight hushes of the spring.
No thrush, no oriole
In music to out-roll
The little golden raptures of his soul.

O royal summer-reign!
When will you come again,
Bringing the happy birds across the main?
O blossoms! when renew
Your pretty garbs, and woo
Your waiting, wild-bee lovers back to you.

For lo, my heart is numb;
For lo, my heart is dumb—
Is silent till the birds and blossoms come!
A flower that lieth cold
Under the wintry mold,
Waiting the warm spring breathing to unfold.

O swallow! all too slow
Over the waves you go,
Dipping your light wings in their sparkling flow,
Over the golden sea,
O swallow! flying free,
Fly swiftly with the summer back to me.

—*Overland Monthly.*

Two Kinds of Cant.

"I do hate *cant*, that's a fact," said Smith,
As, returning home from labor,
He talked of conference-meetings with Brown,
His fellow-workman and neighbor.
"Just what do you mean?" said Brown, his hand
On the arm of the other laying;
"Why, what we hear in the lecture-room,
When brethren are speaking and praying:
A always asks for a hearing ear;
B begs for a holy boldness;
C comes on the bended knees of his soul,
Confessing the church's coldness;
D deplores his deadness"—"Enough, friend Smith,
There's truth in all you are saying;
But what are you doing to bring about
A change in this style of praying?"
"I doing! pray what would you have *me* do?
Don't you know, without my repeating,
I never speak in a public way?
Of course I can't pray in meeting."
"You *can't* friend Smith,—did I hear aright?
It may be the Master in Heaven
Finds *your* sort of *cant* more offensive to Him,
And harder to be forgiven." —*Congregationalist.*

Gaiety in the Home.

Gaiety is indispensable to childhood. I doubt whether it can be dispensed with in after life. There is an innocent craving for it even in old age. God has scattered flowers upon our fallen earth, and sent us the songs of birds. Why should we turn away from them? Why should mirth and hearty laughter scandalize us?

If many of us do not love our homes, the reason is far, far from inexplicable. To tell the truth, I have but a poor opinion of homes where laughter and merriment, and jokes and puns, nay, even absurdities, are unknown. Measure the heartlessness of that confession of Fontenelle, "for the last half century I have neither wept nor laughed." The two best things in life, those which prove that we have a heart and an imagination, as well as a brain, were lost to the man whose universe was academies and drawing-rooms. We are quite aware that there is a forced gaiety and a forced laughter, than which nothing is more sad; and that this spirit may become chronic, to the annihilation of every serious thought. It would be difficult to choose between Fontenelle, who never laughed, and the man who is always laughing—difficult to say which of the two had sunk the lowest.

Without seriousness family life would hardly deserve the name. There is nothing so serious as life; nothing so serious as happiness, duty, responsibility, the education of children, personal education. Is there anything so serious as our sins, our repentance, our prayers? any task more serious than the charge of souls that we love?

But in proportion as seriousness is genuine, cheerfulness will be so too. There will be the "time to laugh, and the time to weep." Solomon tells us that the "wisdom of a man maketh his faith to shine, and his countenance is no more sad." This is the magic of wisdom; it is when the heart is turned towards God that the countenance is joyous and beneficent.

A hearty laugh is one of the best and rarest of things; gaiety is the privilege of the simple-minded; it is one of the surest symptoms of moral health; though of course this a rule by no means without exceptions. *Ennui* must not be classed among the virtues; we must not give way to morose and languid moods. I know houses where there is a perpetual sighing over the evils of humanity, past, present, and to come; after the evils come the faults and after the faults the errors, till the melancholy catalogue is gone through; but that does not prevent it from being resumed on the morrow. There are complaints, political, religious, moral, artistic, and literary, always in abundance.

I remember once visiting a neighbor who was extremely deaf; every one made it a duty to contribute something for his amusement; the speaking trumpet was passed from hand to hand; and what were the themes that passed through it but the sorrows and calamities of the neighborhood!—how one poor gentleman had broken his leg; how some poor lady had taken the small-pox, and another had lost a child. The most communicative added details of the faults and mistakes of government, the fears entertained as to the harvests, the failure of sundry attempts to do good; and the unfortunate listener lifted up his eyes to Heaven and sighed piteously; but when the evening had ended, every one congratulated himself on having helped to amuse him for an hour.

If I were asked for a recipe for cheerfulness, I would say: Humbly enjoy the good gifts of God, love those around you tenderly, realize that amiability is a binding virtue, and that we are bound to diffuse joy around us in our homes. But there is just one more item in my prescription: we must be willing to unbend, even to stoop to a little harmless folly. A love for animals will encourage this; the very presence of these true but unassuming friends will do our hearts good. We may talk nonsense to them; they introduce an element of intellectual repose. Dogs, horses, cats, poultry, are so many contributors to the gaiety and simplicity of our daily life. We cannot enjoy them without loving them. I am not going to enter into the ranks of those who contend that they have souls; still I hope my reader holds in equal abhorrence with myself the systems of Descartes and Malebranche, which would make them out to be mere machines. We have but to contemplate the dog that follows us, watches us, shares our fatigues and perils voluntarily, either to sink at our side, or perhaps to follow us to the grave and die there—to reply to the theory of mere mechanism. Animals are, in some sort, members of the family. They are the friends of young and old, and young and old alike enjoy and benefit by their gleeful, irrational society.—*Count De Gasparin.*

The Biography of Many a Man.

"I am writing a play," said an intimate friend to us one day, two years ago; "I'd like you to hear it—you have had some experience in literary matters."

We found the play in an unsettled condition; but so far as it was in a form to be heard, it was very interesting and sufficiently witty. Its writer had undoubted talent.

"How comes on the play?" we asked, as we met our friend four weeks from that time.

"Pretty well; but, by the way, come around to my room this afternoon; I have a plan to talk over."

The play was not brought out that afternoon. Its writer talked *medicine* to us an hour or two. He had learned of a remarkable root, grown in the East Indies and very scarce, but a certain cure for rheumatism and consumption, scarlet fever and sore throat. One man in England, an M. D., had introduced it there. He knew its secret, and would probably sell it to him at a small figure. He intended to start for England directly. "When do you get away?" we asked, not many weeks after this.

"Away!—where?"

"To England."

"Oh, yes—I'm not going just now; by the way—I've got a plan. When I was in Cuba, I saw how this sugar business was conducted—do you know there are *immense* profits in it? I have a friend who sails between here and the Island. I'm going to get him to buy some sugar for me, and I'll get a little corner store—live cheaply, you know—and in less than two years."

We wished him success with his new plan, and have not met him since. We received a letter from him, however, not many weeks ago. He was living in a little country town where he had gone for his health, and was studying for the ministry. This reminded us of the fact that years ago he prepared himself for the ministry of another denomination. He actually went to Europe to finish his education, gave up the idea, returned to this country and went into the navy. He afterwards engaged in business pursuits for a few years, and then took up literature; then came the various plans which we have noticed, and now a friend informs us last week that he had given up the ministry again, and is about to go on a farm and *raise honey!*

This reads like a fiction or a burlesque; every word of it is literally true, and the man to whom it refers will read this article. He has talents which are admired by every friend he has ever had. He might make a fine name in literature. He would succeed in business; he would make an excellent minister. He is an exceedingly agreeable companion. His life, however, will be an absolute and total failure, simply because he has no continuity of purpose. He cannot control his judgment and his taste. He tires of everything as soon as the novelty is lost. How many of our young readers are encouraging this same restless uncertainty of character.—*N. Y. Mail.*

Think of the Poor.

How much of true religion is connected with the poor! Christ seems to have taken them under His special charge. His gospel was preached to the poor, and this was one of the signs which He sent to John the Baptist in prison. With His own blessed hands He fed the poor by a creative act, having compassion on them when they fainted. His miracles, we have reason to think, were, in a majority of instances, wrought upon the poor, and "the common people heard him gladly." The Apostles of Jerusalem were anxious that Paul should remember the poor. And when Christ shall sit on His throne of judgment, He will make inquisition concerning all we have done, or failed to do, in regard to the hungry, the naked, the stranger, the prisoner, and the sick, and will regard us as having done, or failed to do, all this to Himself.

There are powerful motives to make us think of the poor. When it is well with us, we should remember them; when we hear the storm beating upon our habitations, and yet are secure, sheltered, warmed, fed, sitting over our books, or among our children, we should think of the poor; when God has sent us some large or unexpected gains, we should think of the poor. If at any time, for a short period, we are made to experience cold, or pinching want, or hunger, or repulses from the proud, let us consider it an occasion for sympathizing with thousands who are suffering something of this all their lives.

Reader, have you made this a part of your religion, or divine service, "to visit the fatherless and widows?" Or is this part of your Christian character still defective?—*Milwaukie Church Register.*

Sociability.

Hawthorne, in his diary, makes record of a day wherein he resolved to speak to no human soul. He went to the village, got his mail at the post-office, returned, and triumphantly records the fact that he spoke to no man. Is it any wonder that, with all his genius, Hawthorne was melancholy and essentially an unhappy man? How much wiser and better the opposite course. Think of how much happi

ness you convey to others by kindly notice and a cheerful conversation. Think how much sunshine such sociability lets back into your own soul! Who does not feel more cheerful and contented for receiving a polite bow, a genial "good morning," a hearty shake of the hand? Who does not make himself the happier by these little expressions of fellow-feeling and good will? Silence and a stiff, unbending reserve are essentially selfish and essentially vulgar. The generous and polite man has a pleasant recognition and a cheerful word for all he meets. He scatters sunbeams wherever he goes. He paves the path of others with smiles. He makes society seem genial, and the world delightful, to those who else would find them cold, selfish, and forlorn. And what he gives is but a tithe of what he receives. Be sociable, then, wherever you go, and wrap your lightest words in tones that are sweet, and a spirit that is genial.—*Presbyterian.*

Young Folks.

The Forsaken Cage.

"Oh! why do you weep, little maiden,
Sitting there all alone?"
"Alas! I weep, dear lady,
Because my bird has flown;
I gave him food and water;
I fostered him with care;
I housed him in the gilded cage,
Now hanging empty there.

I did not love the flowers,
I cared not for the trees,
Nor for the green and dancing leaves,
That ripple in the breeze,
For my birdie made me happy,
He sang to me all day;
But now alas! he has taken wing,
And flown to the woods away."

"I pity you, little maiden,
But I see no reason why,
Because your bird has flown away,
You are sitting there to cry.
I will tell you a simple story,
About a beautiful child,
With sunny hair and waving curls,
And eyes so blue and mild.

She was an only daughter,
Her mother's darling too;
As dear to her heart, my little girl,
As your birdie was to you.
But an angel came and wrapped her,
In a beautiful robe of white,
And her soul went out from its prison,
As the bird from its cage last night.

Then the mother, sad and lonely,
Sat down to weep, and pray,
That God would send the treasure back
The angels took away.
But she heard a whisper softly,
Steal into her inmost heart,
And tell her, that He who created all,
Should share of her love a part.

Then she knew why her little daughter,
Was taken so soon away.
She had loved her with a *selfish* love,
And made her 'an idol of clay.'"

The tears of the little maiden,
Came trembling to her eyes,
As the lady said, "Such losses teach
A lesson we should prize:
The cage of the bird is empty,
But here are the blooming flowers;
There is something left for the empty heart,
To sweeten its saddest hours." N.

The Children at the Seaside.

In August, grandma and the children went to the seaside, for a visit, and there Will found many new and curious things to examine and talk about. Polly collected pretty shells and sea-weed; Will shot peeps and gulls, studied ships and light-houses; and both splashed, scrambled, and frolicked till they were as stout, lively, and brown as the little fisher-children of the bay.

Gradma used to sit in a comfortable cranny of the rocks, knitting or reading, while the young folks played; and when they grew tired of climbing about, they brought their new-found treasures to her and rested, while she told stories about them.

"I've got a live snail. I picked him off a rock, and wanted to see his horns; but he shut himself up in a great hurry, and I can't make him come out," said Will, tapping at the little brown door which Mr. Snail had shut in his face.

"Put him in that pool of water, and let him alone; then he will pop his head out, and you can watch him at your ease," said grandma, moving Polly's fleet of clam-shells to make room for the snail.

"Has he got any eyes? How does he walk? Can't he ever take his shell off?" asked Will, lying down on the warm rock, to enjoy his luncheon as luxuriously as possible.

"Yes; he has eyes at the end of his two longest horns. They look like two black dots; but they are regular eyes, and the snail can move them to and fro, or draw them out of sight, as it likes. Under the two smaller horns is its mouth; and though it seems too soft to bite anything, yet it has eight teeth, and chews leaves, and even bites off its own shell with them."

"Is it true that they can mend their shells? I trod on one once, and father said the snail would mend it if I let it be," said Polly, who was making paper sailors to man her pretty white boats.

"They have a slimy substance which hardens when exposed to the air, and with this they mend their broken shells. Even when they seemed crushed to pieces, they can repair the damage, though you can see the places which they mend, for the new shell is fresher than the old; so, the little patches show. They can't grow an entirely fresh shell, however, for the experiment was tried, and failed. Swammerdon carefully took off a shell, and hoped the snail would make a new one. The poor thing tried, but died of cold before it was half done."

"Are these little ones the baby-snails?" asked Will, fishing up some tiny white shells from the pool.

"I think so. The old ones lay eggs as big as small peas, and put them under a clod of earth, or in some cool, moist place. From these eggs are hatched little snails, with their houses all ready on their backs. That sort is the garden-snail. I don't know about the sea-snails, but fancy they are a good deal alike. This kind do harm among the plants, spoiling fruit and young leaves. Another sort are large, and used to be eaten in Rome. They had *snaileries*, called *Cochlearia*, where these creatures were kept, and fed on bran and wine, and when fat enough, boiled or fried, and considered great delicacies."

"Don't believe I should like the slimy things. I'm afraid my big one is dead; it don't stir," said Will, poking the snail, who appeared to have shut up his house for the season.

"Don't be impatient; he'll come when he is ready. No fear of his being dead; for snails can bear a good deal, if all the stories are true. My old book gives two anecdotes, which may interest you. One is of a man, who kept some snails for fifteen years, and then gave them to his little son to play with, supposing that of course the creatures were dead long ago. The boy put them in a basin of water, and left them there. Next day, he came running to tell his father that the shells were walking about the sides of the bowl. M. Simon could not believe it; but, as they lived in the city, he knew the boy could not have found any other snails; and, strange as it seemed, there were the old ones promenading round the basin, as lively as possible, after fifteen years' nap. They were kept and shown as great curiosities; and if the tale was true, they certainly *were* remarkable snails."

"Another person was making a shell-tower for an ornament; and finding her pretty pebbles and sea-shells gave out, she went into the garden, and got a handful of snails. In order to kill them before sticking them on the tower, she poured boiling water over them, and set the bowl away with her other things, to be ready to finish the work next day. But, when she went to the place in the morning, instead of being dead, the snails were out of the basin, sticking all about the table, some examining the tower, and others actually eating the paste that they were to be stuck on with. Having a kind heart, the lady picked them all up, and carried them back to the garden, finishing her work with less pretty shells, rather than be cruel enough to boil the poor snails over again."

"Tell about the little seal we saw down on the wharf. The man keeps him in a great cask, and feeds him with fish; and he's very funny, with no ears, and big eyes, and only two flippers, or feet. I poked him, and he made a queer noise, and dived out of sight. But presently, he popped his head up, and winked at us, and wiggled his nose, as if he wanted more fish. I asked the man lots of questions; but he only said he caught little Jack in the bay."

As Polly stopped for breath, grandma replied, "The common seal is called the sea-calf, and inhabits all the European seas. They are very large, some of them, with round heads, pretty black eyes, and no visible ears. The front legs are very short, and the back ones are only used in swimming, being close to the tail. They live on fish; in summer, going on shore a good deal, but taking to the sea in winter. They swim and dive very swiftly, and are hunted for their skins and oil. The Greenlanders could hardly get on without them, they are so useful in many ways. The flesh serves for food; the fat makes oil for lamps, fires, and cooking; the fibers of the sinews are used for thread; the skins for carpets, clothes, tents, and boat-coverings; and of the bones they make tools of all sorts."

"How do they hunt them?" asked Will, with his mouth full.

"The men go at night to the caves where the seals live in great numbers. Armed with torches, they row in as far as they can, and getting into good places, begin to shout all at once. This wakes and frightens the seals, who rush out as fast as they can, and in the confusion are easily killed by striking them on the nose, where a slight blow soon finishes them."

"The Ursine seals live in the neighborhood of Kamtchatka. They are very large and fierce, and fight bravely before they can be taken. They live in families, and are very affectionate. The cubs are as playful as puppies, and have mock fights; while the parents look on with pleasure, caressing those who win. They make a loud noise when angry; low like a cow, when happy; and wail dismally if sick or wounded. Some kinds are easily tamed, and will learn to love and follow a master, like dogs. I saw one once who went creeping about the house when it liked to get out of its tub. It would kiss its keeper with a funny little smack, sigh and shed tears when he left it, and play several tricks if ordered. It fell ill, and its pretty eyes were very pathetic as they followed us about, seeming to ask help. We could do nothing for it, and it died; but my friend kept its skin, which was as soft as velvet."

"I shall enjoy seeing Jack more than ever, now I know something about him. I'm afraid he's home-sick, for he sighs and looks as if he wanted his mother. I shall ask the man to let him go; and if he won't, I'll get papa to buy Jack, and then we'll let him swim away."

Will was so interested in Polly's plan about the seal, that he forgot to look at his snail, till grandma told him the little gentleman was out; and there he was, sure enough, moving his horns about, and creeping slowly toward a clam-shell, as if anxious to get aboard, and sail home to his native pool.—*Merry's Museum.*

NEWS SUMMARY.

PACIFIC COAST ITEMS.

THE election is at last over, and the results are known with a tolerable degree of certainty. All are not satisfied with these results, but all will be glad that the excitement of a political campaign is over, for it is certain that there are other important matters which deserve a share of public attention. During the next 4 years it is to be hoped that our country will have so far recovered from the troubles caused by the late war, that in the next campaign there will be no occasion for the bitter partizan feeling that has characterized that through which we have just passed.

It is probable that California has gone for Grant by a small majority. The Republicans have carried Nevada by a majority of several thousand. In Oregon the result is still doubtful, but it is thought the Democrats have carried the State.

As far as heard from, the Republicans have elected their candidates for Congress in the 2d and 3d Districts, and the Democrats have carried the 1st District.

In San Francisco the Democrats have elected their candidates by a majority of about 1,500, except the Chief of Police, 3 supervisors and 4 school directors;

It is said that the election in some of the wards will be contested, on the ground that it was carried by fraudulent voting.

The election in the city passed off without disturbance.

A MAN who is called the "earthquake seer of San Jose," predicted four months ago that during the autumn there would be a heavier shock of earthquake than had ever been experienced in California. This man has invented an "earthquake register," from which he obtained the "data" for his prediction.

A scientific gentleman proposes an apparatus by which the news of the approach of an earthquake may be forwarded to our city over the various lines of telegraph, and our citizens be warned by the ringing of a bell to abandon dangerous places. He proposes to accomplish all this without the intervention of telegraphic operators, the undulation of the earth starting the dispatch over the wires.

On Wednesday evening at about nine o'clock was felt a severe shock of earthquake in this city. It was the heaviest that has been experienced since that of the 21st ult. No damage was done.

HOPS grow wild all over Arizona, and there is considerable demand for them among our people; yet nobody has undertaken to raise them as a crop. In California hop-raising pays well, and we see no good reason why it should not be a profitable business here. They have never sold for less than thirty cents per pound, gold, and it is said that, when the plants are two years old, an acre of them will yield over 800 pounds.

Arizona beats the world as a mast-producing country. Persons from the country tell us that this year there is more mast than ever before. Thousands of swine could be fattened here, and yet there are not more than 500 or 600 of them in this county. What a pity to see so much hog-feed going to waste!—*Arizona Miner.*

THE new town of Argenti, to which the railroad is now completed, is situated about eight miles east of the mouth of Reese River, therefore is 338 miles east of Sacramento. As yet, however, passengers are carried no further than Wadsworth, for the reason that there are no houses at Argenti for the accommodation of travelers—it is as yet a town without a public house. Public houses will soon be opened, when passengers will be carried through to the town, saving 200 miles of stage travel. It is expected that Argenti will be the big town of all that region, as it is there that the new Austin road will strike the railroad. The site of the town was selected 8 miles beyond the mouth of Reese River, for the reason that from that point a better road to Austin could be built.—*Virginia Enterprise.*

THE *National* says that the view from Osborne Hill, an eminence a few miles southeast of Grass Valley, is one of the grandest in the State and is said by those who know, to have no superior in Europe. The Downieville Buttes, the snow-capped Sierras, the whole breadth of the Sacramento Valley, the blue summits of the Coast Range, the Marysville Buttes, Mount Diablo, and the village of Grass Valley, are among the objects of interest to be seen from this point.

THE *Oregonian*, after a careful consideration of the advantages of situation, climate, productiveness of surrounding country, etc., comes to the conclusion that Portland is destined to become a large city.

THE *Pacific Christian Advocate* says that limestone of good quality has been found on Butte Creek a few miles above Oregon City. Lime of excellent quality manufactured at that place can be delivered in Portland at $2 50 per barrel.

WITHIN a distance of four miles from Gilroy there is said to be more than 200 acres of tobacco, from which a yield of 300,000 pounds is expected.

A NEW stage road, which will save a hundred miles of travel, is being built from Silver City, Idaho, to the Pacific Railroad.

FIVE hundred horses have been sent to California this season, from Oregon, and sold at great profit.

TELEGRAPHIC.

EASTERN.—The Department of Agriculture, in its report for October upon the condition of the crops, says the promise of early summer has not been realized. The increase in the total quantity of wheat over last year will be only 3 per cent.

SOUTHERN—Murders and outrages by the Ku-Klux Clan are reported in various parts of the South just before the election....A Republican meeting was broken up in Greene Co., Alabama, by a mob headed by one of the Seymour electors. ....Another meeting was broken up at Tuscalo, Alabama. ....No serious riots are reported on election day. In New Orleans the Democrats held possession of the polls and the Republicans did not attempt to vote. A fight between the negroes and whites took place at the polls in Savannah, Ga.

RELIGIOUS.—The American Missionary Association commenced its annual session at Springfield, Mass., on the 29th. The present indebtedness of the Society is $80,726. The Society owns property in excess of its debts to the amount of $500,000....The Massachusetts Baptist State Convention met on the 29th and voted in favor of close communion.... Six missionaries left Boston on the 30th for foreign fields of labor. An interesting meeting was held in the missionary rooms on the occasion.

PERSONAL.—J. W. Simonton has commenced a libel suit against the *New York Tribune*....Gen. Rosecrans contradicts the report that he will not go to Mexico....Secretary Seward has been making political speeches in New York. It is impossible to tell on which side he speaks....Justice Chase declared his intention not to vote for President.

THE ELECTION—The following States have gone for Grant and Colfax: All the New England States, Pennsylvania, Illinois, Ohio, Indiana, Missouri, Kansas, all the Northwestern States, Western Virginia, Tennessee, and South Carolina. The other Southern States have probably gone for Seymour and Blair, although the returns are not yet complete. New York and New Jersey are still doubtful—probably for Seymour....The New York Legislature has a Republican majority....Gen. Butler is re-elected to Congress.

POLITICAL.—Many arrests were made in New York previous to the election, on charges of fraud in issuing naturalization papers....The work of contesting the Philadelphia elections is being carried forward in the courts....The total number of registered voters in New York City is 169,070, in Brooklyn, 69,307....In Minnesota the negro suffrage amendment to the Constitution is adopted by a small majority.... There was no unusual disturbance at the polls in any of the Eastern cities.

FOREIGN.—From Panama and Central America come somewhat mixed rumors of revolutions, hurricanes, tidal waves, floods, treaties of peace, etc....The revolutionists in Cuba are taking advantage of the state of affairs in Spain to make active efforts to free the island from Spanish rule.... Two expeditions to the North Pole are being prepared in Europe—one at Bremen, the other at Havre....Gen. Dulce has been appointed Governor-General of Cuba....Slight earthquake shocks have been lately felt in England....There seems to be danger of a revolution in Spain against the Provisional Government, by the working men.

NEW LODES.—The Colorado *Register* reports the discovery of some new lodes of very rich silver ore on the Platte, five miles below the forks on the South Park road.

Simple announcements of Marriages or Deaths inserted free of charge. Additional matter, such as Obituary Notices, or Poetry, inserted at the rate of ten cents per line.

MARRIED.

In this city, Nov. 1st, by Rev. J. H. McMonagle, JOHN BURY and JENNIE MCCOMB, all of this city.

In San Ramon Valley, Oct. 18th, by Rev. H. R. Avery, at the residence of Mr. Joseph Wiley, THOMAS SCOTT and MISS ELLEN M. GLASS.

In Walnut Creek, Oct. 28th, by Rev. H. R. Avery, C. L. ISAAC and MISS MARY A. CLARK.

ALLEN'S ORIGINAL AND GENUINE

Nerve and Bone Liniment.

The Nerve and Bone Liniment was originated by Geo. M. Allen, in the year 1834, and has lived entirely on its own merits without the aid of advertisements; but owing to the many counterfeit and worthless articles called Nerve and Bone Liniment, now upon the market, has induced the proprietors to advertise it. Many certificates of leading citizens who have used and constantly keep it in their houses, as a great family remedy, could be added to the advertisement, but knowing the many virtues of Allen's Nerve and Bone Liniment, and that one application will satisfy any one of its beneficial effects, deem it unnecessary to bring the certificates before the public. Allen's Nerve and Bone Liniment does not effect a cure in a minute, but acts upon the Nerve and the Bone of the patient by its penetrating properties, when used according to the directions on each bottle, and gives new strength to the parts affected, and thus acts as an agent in helping nature to restore the diseased parts to health. It is also invaluable in all diseases of horses.

Be sure to call for Allen's original and genuine Nerve and Bone Liniment, all others are worthless counterfeits, and should not be tolerated by the public.

CURRENT TOPICS.

The meeting of the American Board in Norwich, Conn., must have been one long to be remembered by those who were present. It had been anticipated by many with a kind of dread, because of the great debt reported by the Secretaries towards the close of the year, which it was feared could not be removed from the meeting. But God mercifully opened the hearts of His people in a wonderful manner during the two months preceding the Anniversary, and $200,000 were contributed to the treasury within that time, so that a small balance was found in its favor, when the host of its friends assembled. What is to be noticed as particularly important in this collection is, that the sum was not given by a few wealthy men, in large amounts, under pressure of the exigency, but by the masses of the Church, who responded to the appeal with almost unprecedented liberality. Instances of self-denial on the part of the poor, of widows, of missionaries, of children, are mentioned, which exhibit the spirit of the primitive disciples, and reveal a basis for hope respecting progress, notwithstanding any temporary embarrassments, which cheers all friends of missions. The same efficient officers who have managed the affairs of the Board for years past are continued in their places, with Rev. Dr. Mark Hopkins as the President, and a glorious career seems to open before this mighty agency for good, which has ever been so abundantly blessed of God.

While some in Christian lands are declaring that missions among the heathen have been a failure, and several prominent religious papers have felt constrained to prove by statistics that this is not true, there are proofs from heathen nations themselves which confirm the statements of missionary societies. From time to time, those who have been converted give us their judgment on the subject, and others, though not converts, yet convinced of the worth of the religion of the Bible, publicly welcome its influence among them. Yet these might be supposed unable to come to a just conclusion, because of the limited range of their observation. Testimony as satisfactory, therefore, though of a different kind, is furnished in the fact that in several stations the missions are liberally aided by the foreign residents, who see the good they are effecting. The English residents in India, men who are avowedly there only for a season, and for the purpose of money-making, contribute no less than $100,000 each year to missions, and, in addition, give time and labor to increase the ability for usefulness, and to diminish the embarrassments, of those who conduct these missions. They are able to judge, and they do not believe missions to be a failure.

The number of Presbyteries in the Old School branch of the Church is 142. The constitutional requirement is that the Basis of Union which has been submitted to them for action shall be approved by three-fourths of these, or fail. More than one-fourth have already voted against the Basis, as submitted, and therefore there is no hope of its approval. It should be said, however, that most of those Presbyteries that have voted against it have resolved to overture the next Assembly that in case union can be accomplished by certain changes in the plan proposed, they will favor it and there need not be delay for a new vote. The New School Presbyteries are largely in favor of the Basis as it is, and it is not probable that any agreement will be completed at present. We confess to much grief that the announcement must be made.

The Unitarians of this country have a Constitution, it seems, and rely somewhat for their efficiency upon the general organization which it establishes. Yet it is difficult to see of what value it can really be to them, if we are to judge of its vigor from the recent action of their convention in New York. We have heard so much and read so much, about their liberal views touching the doctrines of the Bible, and the essential features of piety, that we are prepared for almost any announcement as a confession of their faith. But here is freedom, which we would suppose must herald rapid disintegration in the very structure which liberal views of doctrine and experience are expected to rear and support. The 9th Article of the Constitution was amended, so as to read as follows:

To secure the largest unity of the spirit, and the widest co-operation, it is hereby understood that all declarations of this Conference, including the preamble and constitution, are expressions only of its majority, committing in no degree those who object to them, and dependent wholly for their effect upon the consent they command on their own merits from the churches here represented, or belonging within the circle of our friendship.

This is sufficiently "broad," but what force have Constitutions that are thus subjected to the judgment of those who are to be governed by them? What organic life has a body, each member of which may decide for himself what is healthful and good.

The Presbyterian Convention held last year in Philadelphia, by resolution requested the several bodies whose delegates constituted that Convention, to appoint representatives who should meet in conference respecting a plan of union between all those Churches. The Assemblies of the Old and New School branches appointed each five persons to act as such a Committee of Conference, and all who remember the thrilling interest and delightful effect of the Convention by which it was suggested, have looked anxiously for the day when it should assemble. We very much hope the matter will not be suffered to go by default. In the present posture of the reunion question, as affecting the Old and New School bodies, a conference between those coming from the whole Presbyterian family might greatly aid the cause which was proved last year to be so near the hearts of most who bear this honored name.

We congratulate the public that a number of our leading journals, religious and secular, have felt called upon to rebuke the growing and heaven-provoking vice of profanity in this country. A sensible man finds it difficult to give any reason why so senseless a sin should have become so general, yet the fact causes his ears to tingle whenever he associates with his fellows. Men swear, and boys swear, and, shameful though it is, even women swear, in America, as nowhere else on the globe; and yet no one of all who are guilty of the crime can give even a decent excuse for such outrage of the feelings of those who are obliged to hear their blasphemy. Some seem to have formed such a habit of profanity, that they are not aware when they indulge in it, and many would be glad could they be free from its power. Possibly, the expression of public opinion on the subject, by the press and in ordinary intercourse, may induce those who regard themselves as respectable, to take some pains to be less offensive, at least, in the oaths they utter. Certainly, all who know the danger of God's wrath to be visited upon a people so regardless of His law and name, will strive to check and remove this terrible sin.

A few years ago a Bible could not be sold in the Turkish Empire. Now there are 300,000 copies in circulation among the Turks, and there are evidences that they are widely read, and having a marked effect on the religious sentiments of the people. The time is not far distant when even Mohammedan prejudice will yield to the power of God's Word, and everywhere it will come into competition with the Koran for popular acceptance.

The disposition to establish institutions of learning which shall be entirely under the influence of ecclesiastical bodies, appears to be more general in this country, than was true in former years. The reason given, when the Church thus undertakes to direct the education of her sons and daughters, is that it is impossible for them to obtain a Christian education unless this course is adopted. The Presbytery of Carlisle has resolved to raise $200,000 for the endowment of a "Female College of the highest order" within its bounds, and there has been an unexpected response from the people to this resolution. Other Presbyteries have in like manner announced the purpose to furnish schools of various grades, in which the children of the Church, and all others who value such a privilege, may be educated

under positive religious superintendence, and by those who are known to be instructors of the heart as well as of the intellect. It is not certain that such a separation from the great and small institutions of the land is wise, though the experiment will be studied well by all concerned. It is possible that responsibility respecting the continuance of all proper religious influence wherever minds are being trained cannot be renounced, because those who may exercise it prefer to sustain only Christian and denominational schools. No doubt there are localities and circumstances in which these should be established, and vigorously supported, but we are not prepared to advocate only these as worthy of the patronage of Christian men.

Religious Intelligence.

PACIFIC COAST.

Bible Society.—The 19th Anniversary meeting of the California Bible Society was held last Sunday evening at the Howard Presbyterian Church. There was a very large attendance of those who are interested in the distribution of the Word of God, which number includes, we hope, all good citizens. Interesting addresses were made by Rev. Mr. Bently, and by Rev. Drs. Scudder and Stone. The report of the operations of the Society during the past year was read by Rev. Fred. Buel, agent of the society, which report we publish as follows:

REPORT.

Receipts for the year: Rent, $4,346 50; donations, $2448 73; sales, $4,226 00; branch societies, $120 05; total, $11,141 28.

Expenditures for the year: Colporteur, 1,584 68; real estate, $803 69; interest, $2,416 00; American Bible Society, $5,320 00; freight, $761 58; depository, $175 00; printing, $205 60; total, $11,266 55. Balance, $125 27.

Number of Bibles sold: English, 2,943; foreign, 120; total, 3,063.

Number of Testaments sold: English, 5,135; foreign, 81; total, 5,216.

Number of Bibles donated: English, 253; foreign, 44; total. 297.

Number of Testaments donated: English, 559; foreign, 102; total, 661.

Whole number volumes disposed of 9,237.

The work performed by the California Bible Society, indicated by the number of volumes sold, and the number of volumes donated, has already been given in the tables read. Our work in canvassing the State now remains to be considered. We have at the present time four local agents employed, who go from house to house in different parts of the State, and who, during the past year, have labored in Solano, Lake, Mendocino, Marin, Humboldt, and San Bernardino counties, carrying to each family the Word of God. A work so essential to the well-being of the community, in a social, moral, and religious aspect, bespeaks, in itself, the commendation and support of every friend of his race. We do not now refer to it to dwell on its necessity, or to enlarge on its excellence, but to show that it is now being performed under the auspices and at the expense of the Society, and that, as servants of the Christian Church, in so doing, we have endeavored to fullfil the pledge we made at our last anniversary, to prosecute the work of canvass and supply as rapidly as our means would allow.

We are happy to be able to say that our work has been performed in some regions where the light of religious truth has been most needed; where preachers of the Word have been scarce, and opportunities of public worship infrequent; where, from the very circumstances of the case, the written Word has been precious beyond the conception of those who are sometimes wearied with the number of Bibles about the house. The Bible has been carried to those who lost their copies crossing the plains, or who, perhaps, parted with them when war spread its devastation over the Southern States, or to households where a dissolute or profane parent would not provide the Scriptures for his family. Many such cases of destitution, as the reports of our local agents show, have been relieved by this Society, as they have performed their mission in the canvass of our State.

It is a satisfaction to report, also, that we have, during the past year, sent forth 1,000 Family Bibles. The sage and philosophical Franklin declared that the country would be safe when there was a Bible and newspaper in every household, and a public school in every district.

Robert Burns, in his "Cotter's Saturday Night," puts the big family Bible into the hands of the humble cottager, and while the family docilely listen to the Word of Truth, and reverently bow in praise to God, cries,

> From scenes like these old Scotia's grandeur springs,
> Which makes her loved at home, revered abroad;
> Princes and Lords are but the breath of Kings;
> An honest man 's the noblest work of God.

A greater and better than either has taught us in his farewell address to his countrymen, that the pillars of our public civil liberty rest on the foundation of virtue and morality, and it is vain to expect these to prevail without religion. But why multiply individual authorities? Two *nations* who have walked together generously on the fore-front of the world's progress in civil liberty, in civilization, in the moral wealth of their homes, and the material wealth of the people; who have been as pre-eminent in arts and in arms, in literature and science, as in virtue and religion, owe their superiority to the inestimable inheritance of the same common Bible, which, by the good providence of God was vouchsafed to the English-speaking people through the ripe scholarship and devout and conscientious labors of the learned men who translated for us His Word, under the appointment of King James the First of England.

This canvass, so auspiciously commenced in this State, we intend to carry forward as the means shall be afforded us, until, as agents for the performance of the Church's mission, which is to give the Word of God to the people (for such a duty is laid upon us by the ascending Savior), until, as almoners of their bounty, (for such a privilege is granted to them—to help along the progress of God's truth through the world by the means God has given them) duty had privilege thus working together for us, the Church thus putting the ability into our hands, we shall be able to carry the Word of God through every neighborhood, and into every household within the bounds of our State.

Such a consummation so earnestly to be wished for, the future prosperity of the State, and the temporal well-being of the people, is dependent in a great measure for its early completion on the donations of benevolent people, for in them, under God, is our strength for this work.

Said a colored preacher lately: "I am not learned, and I cannot use many words, therefore I must keep very near to God and the Cross of Christ," and now in this matter I wish to despise and contemn all affluence of verbiage, and, getting behind the Book, say, brethren and friends, the work is to carry the Bible to the people of this State. Patriots! our political salvation depends on the prevalence of the virtue and morality among the people which this Book teaches. Christians! your religion, with its comfort in this life, and hope for eternity, is the fruit of divine truth. Sow the seed, then, broadcast over the land.

Turning from the circle of our labors to the wider scope of the parent society, we are impressed with the importance of the field now spread before it. Three-quarters of the human race are now accessible and open to the entrance of God's truth in the various languages in which the Bible is published by American and British Bible Societies. To send one missionary to every million of the human race would require a thousand men and the expenditure of at least a million of dollars. A Bible containing all God's revealed truth to man can be furnished for one dollar. The same funds which would be required to send forth a thousand missionaries would send forth a million copies of the Scripture. We do not undervalue the living preacher, for the ministry is by God's appointment, but let the Word attend or precede the living minister; let the Word of Life, the fountain of living water, flow very swiftly in these channels, which in our day God has opened by His wonderful providence for its entrance into the nations.

The American Bible Society printed and sent forth from its publishing house during last year 12-00,000 copies of the Holy Scriptures. To do this work, it had twenty-two power presses in operation, which flung from their iron cylinders the sheets of seven copies of the Scriptures, each minute of working time. Nothing but the requisite want of the funds prevented the Society from sending forth double and treble the number. We have thought as we have stood beside the great engine which moves this whole machinery, that if this iron worker was instinct with life, and reason, if it had a brain to think, a hand to feel, and a mouth to speak, it would say, O, water! stint not your steam to supply my boilers; O, fireman! spare not your coals to keep the flames hot beneath my furnaces. I need all my strength, make these iron hands of mine very strong, make these iron fingers of mine very nimble, ten-fold more busy than they are; for, lo! the islands are waiting for the Law of God. Ethiopia is stretching out her hands to God; western and Central Asia are open to the gospel.

Fill my boilers, feed my furnaces, make my whole body strong and efficient, then when my work is multiplied ten-fold, I will say to the swift ships in which my brethren sail upon the great deep, "Go, ye swift-winged messenger, and bear the precious freight of God's word wide abroad among the nations of the earth.

To change the figure, so says the Parent Society, and cries to all Christian people, give us money, means and houses to multiply our labor and extend our work vigorously, for God has opened to us a very wide and effectual door for the proclamation of the Society.

From the report of our local agent, Rev. H. Richardson, we extract as follows: Number of families visited, 3,266; Destitute, 243; Supplied, 135; Bibles and Testaments sold, 1,060; Value, $1,645; Number of Bibles and Testaments donated, 500; Value, $246.

Our work is eminently broadcast, and missionary is its character. In not less than 15 languages, have I circulated the sacred leaves, since I have been in

this work, and that too, among men who had never had a Bible before, or if so, not for many years. In one family in Sonoma County, a lady acknowledged as she procured one of our largest Bibles, "that they had not had one in their house since they crossed the plains, ten years ago."

In another house near, by I found a Kentucky family of whom the father and mother and some of their twelve children were members of a church, who were very poor, though they had evidently seen better days. Destitute alike of Bibles and money I gave them one, causing the mother to shed many tears of joy and to say, "her husband would pay me something."

Of the donations made we trust *none* were made unworthily. It is worthy of consideration, that most of those who were destitute would, undoubtedly, have remained so for months, or years, or even for life, if they had not been thus *furnished at their very doors.*

Upon an average, I have found that it takes about three months to *thoroughly* canvass a county. According to this estimate, it would take one man more than *twelve years* to canvass the whole State,—two men more than *six*, and four men more than *three* years, and eight men more than *one year and a half.*

Shall we take twelve years to supply the State with the Bible? Before that time many of us will not be able to help in this work. Before many years shall pass away, multitudes who should have had the Bible, will be in their graves. We wish to do this work vigorously and immediately, but we must be aided by the friends of the Bible liberally of their substance before we can do it.

Religious Destitution on the Pacific Coast.—In the report of the remarks of Rev. Mr. Buckbee, at the recent meeting of the Bible Union in New York, the *N. Y. Times* says:

Mr. Buckbee spoke of the great religious destitution of the Pacific coast. As an instance, he stated that the number of Baptist churches in California is only about fifty, and only half of these are supplied with the stated preaching of the gospel. Not more than ten or twelve churches sustain their pastors in their work. Twenty-six counties embracing a population of 140,000 souls, and covering an area in square miles larger than all the States of New England, New York and New Jersey, have neither a Baptist preacher, nor a Baptist church.

Bible Union.—At the meeting above alluded to, Rev. Mr. Francis read a report in which he presented some statements which will perhaps surprise those Christians on this coast who are attached to the old Bible and do not think it destined to be supplanted by any denominational version. To some perhaps it will be news to hear that the discussion between the agents of the two Bible societies resulted so triumphantly for the Bible Union. The following are extracts from the report:

God has signally favored the Bible Union on the Pacific Coast. In April, 1867, a vigorous canvass was begun by the Secretary, Bro. Buckbee. The friends of truth everywhere came up nobly to our support. In a brief period the cause was presented before congregations of not less than five denominations. The secular press gave extended notices of the Union and commended the revision. Opposition was soon aroused. The agent of the American Bible Society in California and Oregon challenged him to public discussion, and attacked the Union in his own meeting. He promptly met them. Our defense was triumphant.

Y. M. C. A.—The new building of the Young Men's Christian Association, No. 232 Sutter Street, will be dedicated next Monday evening, the 16th inst., when the report of the Building Committee will be read, and the dedicatory address will be delivered by Rev. James Eells, D.D., with other interesting exercises.

At noon of Monday, from 12 to 2, the ladies propose to spread lunch, to raise funds to complete furnishing the Ladies' Parlor.

On Tuesday evening there will be a grand social reunion of the literary societies of the various churches. A fine programme of musical and literary exercises is presented. Supper will be furnished by the ladies.

Sunday School Anniversary.—The 13th Anniversary of the 2d Congregational Church Sunday School, was celebrated yesterday at the church on Taylor Street. The exercises took place after the usual morning review, and were largely attended. They commenced with a recitation of the commandments, by the children, after which the Pastor, Rev. J. A. Benton offered up a prayer. The Anniversary hymn was then sung, and after singing by the infant class, the Superintendent, Judge E. D. Sawyer, read his report and that of the Secretary. The children were then addressed by Noah Brooks, Esq., in an interesting manner. Subsequently the Pastor addressed the parents and teachers, and after several hymns had been sung and a collection taken up, the benediction was pronounced and the assembly separated well pleased with the exercises. The school has increased somewhat during the past year, and is in a prosperous condition.—*S. F. Times.*

List of Presbyterian Clergymen,

ON THE PACIFIC COAST, ALPHABETICALLY ARRANGED.

Rev. Jas. M. Alexander, N. S., San Leandro, Cal.
Rev. H. R. Avery, O. S., Walnut Creek, Cal.
Rev. B. B. Bonham, O. S., Sebastopol, Cal.

Correspondence.

Letter from New Jersey.

Newark, Oct. 21, 1868.

I remember when I left San Francisco for a short trip to "the States," you asked me to send an occasional letter to The Occident. As I am now on sacred ground, I cannot forbear sending you a few lines.

The First Presbyterian Church of this city was planted about two hundred years ago. The first minister was Rev. Abraham Pierson, who settled here October 1, 1667. The present church building, a noble stone edifice, was built more than one hundred years ago—built at a time when builders were honest and did honest work. The walls, built with stone from quarries within the city limits, are about five feet in thickness. It has been kept in excellent repair, and, from appearance, you would not think it had been erected more than a dozen years.

Here the sainted McWhorter preached and died. Here Griffin and Richards gave splendid proof of their ministry and of the power of the Gospel. Here, in this very building, the Synods of New York and New Jersey are now holding their annual sessions. They assembled at 3 o'clock on Tuesday afternoon. The introductory services were very able. Rev. Dr. Cox, the Nestor of the Synod, read the first chapter of the Epistle to the Ephesians. His exposition was eloquent and characteristic. In this respect no man in America is his equal. His prayer was very appropriate, full of unction, and, portions of it, eloquent and sublime.

The Rev. Burtis Megie, of Dover, the retiring Moderator, preached a very elaborate and interesting sermon from 2 Thess. iii: 1.

Rev. William W. Newell, D.D., of the Allen St. Church, New York, was elected Moderator.

Last evening a union prayer meeting was held by invitation of the Synod of New Jersey,(O. S.) now holding its sessions in this city, in the Third Presbyterian Church. It was presided over by the two Moderators, Rev. Drs. Newell and Reed,—the latter from Camden, N. J. Speeches were made by Rev. Samuel L. Howell, of Lawrenceville, N. J., Rev. Dr. Theodore L. Cuyler, of Brooklyn, Rev. Dr. Wheelan, of Poughkeepsie, and Rev. George Mott, of Newton, N. J. The spirit of the meetings was delightful. The glory of the Lord filled the house. Every heart was swayed by one impulse—the impulse of holy love.

This afternoon the two Synods met in the First Church, and united in celebrating the Sacrament of the Lord's Supper. The lower part of the large audience room was crowded. There could not have been less than 800 persons present. It was an imposing spectacle. The spirit of the previous evening seemed to pervade every heart. Even the long-winded speeches of one or two of the officiating clergymen could not abate the fraternal and holy feeling that glowed in every heart, sparkled in every eye, and beamed on every face. If this feeling becomes general, as it manifestly is becoming, the period is not far distant when the now segregated families of the Presbyterian Church in America will become organically one.

It was gratifying to meet again some of our former California clergymen at the Synod. Brother Brodt, now happily settled on 88th Street, New York, was there; so was Rev. W. W. Martin—in spirit and enthusiasm the youngest man in the Synod—though the frosty fingers of old Time have dallied with his locks for many a year past. He made an eloquent and telling speech on Home Missions.

Dr. Kendall, Commander-in-Chief of the Home Missionary Department, just returned from Europe, spoke in words of cheer. Dr. Hatfield followed in the same strain. A colored clergyman succeeded him, and, judging from the applause, his speech was the most interesting of the three.

Dr. Dulles, of Philadelphia, plead the cause of Church literature in a manner that showed that that interest is safe in his hands.

If Newark is an interesting place religiously, so it is in a material point of view. Its manufacturing interests are second to no city in the Union. It engages in manufactures of almost every description, and during the last seven years it has had work enough, and to spare, for all the operatives in the city. Every one in Newark seems to be busy. During my stay of four days I did not see an idle man, and I went into almost every part of the city.

I had the honor of being most hospitably entertained at the mansion, on Broad Street, of my old college mate, William A. Righter, Esq., and he kindly ordered his carriage and took me to see all the most interesting objects and localities of Newark. He showed me the "Washoe Tool Factory," in which he is a stockholder. There they make a new and improved style of pick, now very popular in the mining districts. The "eyes" are not made by welding, but are *punched;* just two strokes do the work. But I must not stop to particularize, or this letter will be too long.

There are here about thirty manufactories of jewelry, into one of which we entered and saw all manner of beautiful, curious, and costly workmanship.

There are here about forty tanneries. We called at one of them. The works of this one cover six acres of land. Four steam engines are kept in constant motion. To supply this single establishment for one year requires the killing of 330,000 sheep, 25,000 calves, 30,000 bullocks, and 4,000 deer.

We went into Fagan's Flouring Mill. It is *fourteen* stories high, has the capacity of turning out 2,000 barrels of flour per day, and is the largest establishment of the kind in the world.

From all I could see, prosperity smiles benignantly on Newark and her benevolent, industrious and most thrifty inhabitants.

S. S. H.

Impressions of Scotland.

In Scotland there is a greater distance and reserve between the minister and the people than with us. The Bible tells us that pastors are to be "esteemed very highly in love, for their work's sake." Doubtless this scriptural requirement is met there, but the esteem is more manifest than the love. Still this is by no means lacking, but it is a peculiarity of the national character not to be demonstrative in that line. The system of patronage that prevails so extensively, may also have something to do with it, as well as the fact that the minister is not directly dependent on his people for a support, but on some fund carefully placed out of the reach of their interference. One cannot help feeling that a little more confidence manifested in the people would receive a greater manifestation of affection for the pastor, but as it is, a country parishoner is much more likely to show his respect for the minister by uncovering at his approach, than by exercising a loving care for his comfort. In some of the remoter parishes the minister's wife is expected to keep a supply of simple remedies for invalids, and cordials for convalescents, and know how to use them. And in all times of trouble the manse is looked upon as a Bethesda, (House of Mercy) in reality, if not in name.

There is one form of benevolence which, if it had not its origin in Scotland, is carried out with great success in its large cities, and that is, providing food for the poorer classes, at cost. In Edinburgh there is a substantial building on George the Fourth Bridge, close to the Parliament House, called Miss Sinclair's Cooking Hall. (The Catherine Sinclair known among us as the author of "Hugh Kennedy;" "Profession not Principle.") Here in a large and very neat Hall, excellent soups, and other plain, nourishing kinds of food are served at at the low rates of a penny a plate, and other things in proportion. The house is several stories high, and the walls of the eating-room are adorned with very good pictures. Daily papers, too, are lying about within reach, and everything wears an aspect of neatness and comfort. The house is well patronized, and many who cannot dress well enough to sit down in the eating-room carry away the food they buy, to eat at home. Such are supplied at still cheaper rates, but nothing is given outright. Scotch pride prefers to pay for a cheap thing, rather than receive a more costly gift. In Glasgow, a practical philanthropist has established several of what he calls cooking depots, where, by purchasing at wholesale, and a good out-lay of brains in the general arrangements, he aims to make the charity a self-supporting one, and has, I believe, succeeded; but the lady who presides at the branch cooking depot, nearest the mass of misery and intemperance in High street already described, will tell you that very few of these degraded ones avail themselves of the excellent charity thus brought to their doors. The living ministry must go with these other modes of doing good, to give them their highest success.

There are a few Baptists, Methodists, and Episcopalians in Scotland, but the great mass of the people are Presbyterians. The Free Kirk is the most active and forth-putting of any of the branches of the Presbyterian Church. Within ten years from the Disruption it had expended more than £3,018,000, or, at present rates, about $20,000,000. But the acerbity of feeling manifested toward the Established Church is beginning to be unpopular, and even the fervor of its activity begins to tell against it; for some, growing tired of the constant demands for its various "schemes," as they are called, on removing their residence, quietly slip into the empty pews of the establishment, and so get evangelical preaching at a much cheaper rate, for, whether Established, Free, or U. P., the pulpits all preach the same Gospel, very much in the same way. Scotch sermons are doctrinal and instructive, rather than hortatory. You will scarcely hear one that does not present more or less directly the essence of the Gospel, and the people would not listen to discourses that did not make prominent the great distinctive truths of salvation through the redemption that is in Christ Jesus. A much larger proportion of the population is found in church on the Sabbath than with us, and the attendance is more regular and reliable. The quiet of the Sabbath, even in a large town, is much more noticeable than here, though there are not so many meetings during the week.

Our own Home Missionaries tell us they like to find Scotch Christians in their trying fields of labor.

"They are so reliable," they say, "we always know where to find them." At the funeral of a Scotch widow, in one of our western States, whose husband had died a few months before her, the officiating clergyman dwelt much on their "steadfastness of Christian character, having been so uniform and so reliable for a long course of years in unfavorable outward circumstances;" but it would have required the absence of this steadfastness to excite remark in Scotland. The child there is trained to walk in this way, and when he is old he does not depart from it. He is not coaxed to attend Sabbath School by "splendid" picnics, or equally "splendid" library books; but he is taught, from the first, that he owes a duty of obedience to God, and that it involves the crucifixion of an evil nature. Instead of being left to pass judgment on his teacher and the question-book that happens to be used at the moment, he is taught by his parents the shorter catechism, and all idea of "dryness" is lost sight of in the oft inculcated idea of "duty." This is to be done, "for it is right," and that is not to be done, "for it is wrong,"

and that is the end of it. The idea that he is to be holy in order to be happy is one he never learns either from, or in connection with, the catechism, much less the idea that holiness must be made consistent in some way with the greatest present happiness, or else give place to something else that is. So the Scotchman grows up in the habit of conscientious adherence to truth and duty. His piety is steadfast, because rooted in the truth, leavened with the sense of obligation, and above all brought into captivity to the obedience of Christ. It is just such piety that the world needs; and at this moment our own country especially needs it to stem the tide of worldliness, and hold fast to the truth as it is in Jesus.—*Rev. Dr. Laurie in Congregationalist.*

Pacific Mail Steam Co's Steamships

—FOR—

NEW YORK, JAPAN AND CHINA

Will be Dispatched as follows:

LEAVE WHARF CORNER OF FIRST AND BRANNAN STREETS, at 11 o'clock A.M. of the following dates, for PANAMA connecting via Panama Railroad with one of the Company's splendid Steamers from ASPINWALL for NEW YORK.

the 6th 14th, 22d, and 30th of each month.

Steamer leaving San Francisco on the 6th touches at Manzanillo. All touch at Acapulco.

Departure of the 14th is expected to connect with the French Transatlantic Company's Steamer for St. Nazaire, and English Steamer for South America. Through tickets can be obtained.

Departure of 14th is expected to connect with English Steamer for Southampton, South America, and P. R. R. Co.'s Steamer for Central America. Through tickets can be obtained.

Departure of the 6th connects with English Steamer for Australia.

STEAMERS FOR NOVEMBER, 1868.

The following Steamships will be dispatched on dates as given below.

November 15th—GOLDEN AGE, Capt. Lapidge, connecting with OCEAN QUEEN, Capt. King.

November 21st—COLORADO, Capt. Farnsworth, connecting with HENRY CHAUNCEY, Capt. Conner.

November 30th—SACRAMENTO, Captain Parker, connecting with ARIZONA, Capt. Maury.

Passengers berthed through. Baggage checked through—100 pounds allowed each adult.

An experienced Surgeon on board. Medicine and attendance free.

These Steamers will positively sail at 11 o'clock. Passengers are requested to have their baggage on board before 10 o'clock.

Through tickets to Liverpool by the "Cunard," "Inman," and "National" Steamship Lines can be obtained at P. M. S. S. Co.'s office in San Francisco, where may also be obtained orders for passage from Liverpool or Southampton to San Francisco, either via New York or St. Thomas—if desired, an amount of £10 to £20 will be advanced with the above orders. Holders of orders will be required to identify themselves to the Agents in England.

For Merchandise and Freight for New York and way ports, apply to Messrs. WELLS, FARGO & CO.

The Steamship CHINA, Captain Geo. E. Lane, will be dispatched on Thursday, December 3d, at 12 o'clock, noon, from wharf, corner of First and Brannan streets, for YOKOHAMA and HONGKONG, connecting with the COSTA RICA for SHANGHAE.

For passage and all other information, apply at the Pacific Mail Steamship Co.'s Office, corner of Sacramento and Leidesdorff Sts.

United States Life Insurance Comp'y,

IN THE CITY OF NEW YORK.

Office, No. 40 Wall Street.

CASH ASSETS EXCEED $2,700,000.

This Company, having a Stock Capital, makes Insurances and Endowments with or without profits. Dividends to Policies with profits are equal to, or larger than those of other, or "Purely Mutual" Companies in available present cash value.

NEW AND IMPORTANT PLANS OF LIFE INSURANCE HAVE BEEN ADOPTED BY THIS COMPANY. SEE THE NEW PROSPECTUS.

Life Assurances, Endowments and Annuities in every form. Profits available after Policies have run one year, and annually thereafter. The reserved Cash fund, for re-insurance, is the largest known to or required by, the ablest and most experienced authorities in Life Insurance, thus affording undoubted security. A liberal non-forfeiture system, as to whole Life or Endowment Policies.

Policy Holders in this Company can use or apply the Dividends of profits in a greater number of ways than is afforded to Policy Holders by any other Company.

The law under which the company is Chartered, provides that if the Capital should, from any cause, become impaired to the extent of Twenty-five Thousand Dollars, or more, the Stockholders SHALL BE CALLED UPON TO MAKE GOOD SUCH DEFICIENCY. This is the only Cash Company in America which affords this safeguard to Policy-holders.

The assured in this Company are not personally liable as in Mutual Companies, which have the power of assessing their members or of reducing the sums insured, in case of deficiency.

CLERGYMEN, insuring in this Company, are allowed a DISCOUNT of TWENTY PER CENT. on first year's premium, and a liberal commission will be given on all Insurances influenced by them.

Agents wanted, on the most advantageous terms.

Forms and every information will be furnished by

B. J. DORSEY,
General Agent for the Pacific Coast,
Southeast Corner Sansome and California Sts., San Francisco

THE OCCIDENT.

SAN FRANCISCO, SATURDAY, NOVEMBER 14, 1868.

"GET THEE BEHIND ME, SATAN."

The supremacy of grace, and the mighty power of God, are never more manifest than when Satan is compelled to promote the greater usefulness and higher attainments of those whom he designed to destroy. God keeps steadily in view the separation of the chaff from the wheat, the putting apart of the evil and the good, and it is a great gain when a clear line is drawn between them, by whatever agency. A symmetrical, complete Christian character is the highest good that can be attained by any series of influence, and God would be no longer true to His nature were He to seek less than perfection in every one of us. Yet it is often true that He employs Satan as a chief instrument in the accomplishment of this end. He did not tell Satan what He designed to effect in Job, and in Peter, by the very process which he hoped would give him advantage in their history, yet He did not intend that His servants should have no profit from so terrible an experience. He looked beyond the triumph of their adversary, as he should see their temporary overthrow, to the vigor, and increased devotion and zeal, of their recovered piety, and in this was found the reason for all they endured. Even Satan himself now saw in them a perfection of character he would not have hoped to destroy had he seen it before he began his arts, and in this found proof of the wisdom that by such means had accomplished so great a good. He hastened to the garden, when he had permission to make Peter his prey, if he could. He watched him with anxious delight as he saw that he was able to keep him afar off when Jesus was arrested and conducted into Jerusalem. He exulted with fiendish assurance of success when he heard him lie, and curse and swear, in the High Priest's palace. But how did he tremble when he beheld him weeping bitterly in the vestibule, and how was he obliged to confess God the victor when, in his chastened and humble life, his more beautiful and Christ-like character, his more consistent and affectionate words, even to the end of his days, he saw that the very fall, over which he had exulted, had been the means of the noblest spiritual culture and development! How did he learn that even *he* may be obliged by Jehovah to contribute to good, when he saw that ever after Peter thought of that dreadful experience in the palace, when he attempted to gain the mastery over him again, and was too strong for the arts that once so sadly conquered him.

In like manner does God design the process of assault and temptation and possible temporary failure through which He permits us to pass, in the midst of which we faint, it may be, to be of ultimate advantage, if we are His children. It is sad that it should have any such immediate effect as is so often manifest. It is mournful that when abundant grace is offered we should ever be made the captives of the Devil. But it is glorious that, if we are carried away by him for a time, not only shall we be recovered by our Almighty Lord, but we shall be wiser, holier, stronger, because of our experience. Self-conceit, self-reliance, and the love of sin in this way become purged out of us. The chaff is gone—the wheat remains; the dross is removed—the gold is left. Satan designs to make us his, or render us useless to Christ. God designs to make us more worthy Christians, and forces our great adversary to contribute largely to this end. Were God to abandon us, our case would be hopeless, but never while He is our ally. The vital question is, not whether we shall be beset, and beleaguered, and assailed, but whether we shall have grace sufficient. The greatest gain is, not in escape from the Devil's power, but in triumph over him, through the aid of Him who can make us conquerors, and this gain is possible to the weak as well as to the strong.

THE VALUE OF RESTRAINT.

It is not necessary that a man be a Christian to know the worth of what may restrain him from evil and aid him in the pursuit of good. Every one who knows the world and knows himself, will say that no folly equals his who allows himself to drift away from these influences by which he may be blessed. A cherished early training in the ways of virtue and piety is both a safeguard and a joy. It gathers around us an atmosphere which seems to repel whatever is noxious. It becomes a spring within us of satisfaction and peace. The memory of our childhood, blessed by a mother's prayers, guided by a father's godly counsels, made pure and sacred by the perpetual influence of a home from which evil was strictly excluded, of the church to which we went with reverent steps on the holy Sabbath, and were taught to regard it as the house of God; of the Sunday School, with all its hallowed associations; this memory dwelling in our hearts amidst the temptations and distractions of after years, how does it make us strong and happy! No one can tell his loss who removes himself from the power of such a means of good and courts opposing influences to bear upon his manhood. Many a man has left his home in the East and come here with his heart warm with the love of those whom he has left, his principles anchored, as he thinks, and confident that he shall not fall; and while these feelings continue, he is safe. But he has come into a new position; he has new surroundings, and little thinks of the temptations that will come upon him. An inviting territory opens before him, in which walk pleasure, wealth, success. Associates urge him to enter, and he inclines to yield, but his early instructions, the recollections of his home, hold him back, until he resolves that he will cut loose from these and rely upon himself, then enters the path that invites his feet. He has taken a long stride towards ruin when he is *willing* to trample upon the remembrances of the past, and attempt to break those ties which might hold him in the ways of safety, with the reckless assertion that he needs those restraints no longer. He begins, at once a wild and ungoverned career, and he has no guaranty as to its end, except that, unless he is restored again to the control of those influences he has discarded, he will perish.

Nor is the danger less to one who has been a professing Christian, but who now habitually neglects those means which all know to be essential to stability and progress in right ways, and which he himself has regarded in former times.

There are not a few among us who say that church-going and attention to religious duties, social and personal, are important to most people, who advise their families and friends to avail themselves of such helps, but *they* will not do so, and the inference is that they do not feel the need of these means of strength. There are even those who have been church members, and possibly active Christians elsewhere, ready for any call of duty, and useful in their places, who are not known here as Christians at all. They have fallen into darkness and doubt and sloth, they gradually neglect even the means of grace, and the melancholy tidings are borne to their former home, that they are doing nothing for Christ in California; that they have turned their backs on their holy cause, and are rapidly moving downward.

This repeated and sad experience proves that nothing but evil can come of contempt for the supports which weakness always needs, and disregard of duties which will make us strong. Their experience should force the conviction on these persons, that the laying aside of what they once attempted, the breaking away from the holy influence of church relations, has done them serious harm. They are neither as happy, nor as strong, as they were. They find more open doors to sin, and less restraints. They should cease such courting of evil, cease to be their own tempters, and without delay take advantage of all the influences God allows them, by which they may be helped in a Christian life. The history of individual declension and apostacy has erected most impressive beacons, to warn us of the danger to which they expose themselves, and perseverance in their course will only transform them into like monuments of folly. Every one should throw around himself all possible restraints from evil, and welcome all possible stimulants to good.

Position of the Bible Union.

I have been charged in this discussion with confusing the external mode with the internal significance of the ordinance. With submission, this is the very thing which I have not done. I have held that the *baptisma* of Paul (Eph. iv: 5,) and the *baptisma* of 1 Pet. iv: 21, is a term of exalted spiritual significance, which Christ has appointed to set forth an ordinance of His Church. I have shown this from the Scriptures; from the creeds of our churches, and from the carefully prepared statements of the lights of the Baptist Church, the latter of which may be summed up in the testimony of the New Hampshire Association:

"ART. XII.—*Of Baptism and the Lord's Supper.*—That Christian baptism is the immersion of a believer in water in the name of Father, Son, and Spirit; to show forth," etc.

We have here the distinct statement of this Association, and with them coincide, as I have shown in a previous article, the great divines of the Baptist Church, that Christian baptism consists of three essentials, of which immersion is but one.

While, as I shall now proceed to show, the scholars of the Bible Union restrict the meaning of the term baptism to immersion merely, making this wide and, as I conscientiously believe, fatal discrepancy between their views and the principles of the most distinguished scholars of the Baptist Church not only, but of the whole Christian world.

Dr. Conant, in a treatise on the meaning of the term *baptizo*, prepared for and published by the Bible Union, in connection with his translation of Matthew, he being one of the final revisors of the Union, and the scholar to whom, more than any one else, the new version owes its peculiar characteristics, thus officially speaks of *baptizo*:

"Among the several words all agreeing in the essential idea of total submergence by which baptism may be expressed in English, the word *immerse* has been selected for use in this revision as most nearly resembling the original word in the *extent* of its application."

The Rev. Charles Scovel, of London, has contributed to the Bible Union a lengthy article on *baptizo*, the intent of which may be expressed in the following extract:

"The original and proper meaning of *baptizo* was to immerse, In this sense it was uniformly employed by Christ and His Apostles. No other idea was attached to the word itself.

The Spirit intends, when using the word *baptizein*, to fix the thoughts of men on the act of immersion, and nothing else."

Dr. Judd says the conclusion is therefore legitimate, irresistible, inevitable, that the word used by Christ to signify that ordinance (baptism), signified immersion—*nothing less, and nothing more.*

Spencer H. Cone declares of Stovell: "He shows that *baptizein* means immerse—nothing more, and nothing less."

These extracts, which might be multiplied indefinitely, show plainly the stand taken by the scholars as to the meaning of *baptizo* as used in the New Testament. They are all taken from the documents of the Bible Union and published by authority.

"It is a common secular word used in the daily affairs of life to express the most familiar acts and conditions. It is not an ecclesiastical term. It is not a metaphysical term."—*Dr. Conant.*

Having demonstrated, from utterances of the scholars of the Bible Union, published officially, that in choosing immerse as the term in English which represents *baptizo* in Greek, they selected it as a "secular term," "having no ecclesiastical sense, no metaphysical sense," and that *baptizo* emphatically "means nothing more than immerse—nothing less," the enquirer is thereby at once transferred from the original *baptizo* of the New Testament to its English synonym, *immerse*, with the assurance that he will find the meaning of *baptizo* coming from the lips of Jesus Christ and the Apostles, in its perfect representative in English in immerse, up to "the extent of its application."

We are pleased to find this definiteness and positiveness of statement. If the word were to be taken in a religious sense, not "secular," we should consult commentaries. If it were "an ecclesiastical act," creeds. If it were "a metaphysical act," the mysteries of the Gospel. But being thus definitely and positively shut up to Webster, to Webster we will go, and find what our Savior meant when, as we have it in the new version, he said: "Go into all the world and preach the good news to every creature. He that believeth and is immersed, shall be saved, and he that believeth not shall be condemned."

We shall learn what our Savior meant when He appointed the ordinance of baptism or immersion for His people. I find in Webster the primary meaning of baptise to be: "To put under the water," and the idea of total submersion, which Dr. Conant holds to be the essential idea of *baptizein*, distinctly set forth in the English term immerse. But is total submergence the only idea contained in *baptizein* when used by our Savior? I appeal to the common sense of my readers. Is not subsequent emergence just as much a part and concomitant of baptism, by the very necessity of the case, as total submergence? But if immerse limit baptism in the extent of its application (see Dr. Conant), then I appeal to the dictionary; total submergence is indefinite and continuous.

If, as Dr. Conant alleges, immerse means totally submerging the subject, we must leave him in the condition of total submergence until, by further examination of the dictionary, we can find some authority for letting him out of the enveloping fluid. As we run our eye down through the meanings of immerse, we find nothing of the kind; not only so, but we find immersion to be the very opposite of the desired emersion. F. B.

CURRENT LITERATURE.

What Answer?

It is doubtful whether any one of the thousands who have heard Miss Anna E. Dickinson speak, and often have been thrilled by her manner, would expect her to write a book that could be as popular as her addresses. There are few whose eloquence of speech is so thoroughly nervous and the result of enthusiastic earnestness in the speaker, as is true of hers, who equal the expectations of their friends when they publish through the press the sentiments with the utterance of which they have greatly moved their hearers. Whitefield understood this when, in reply to his friends, who insisted that a sermon should be printed which he had delivered in the midst of a fearful storm, taking advantage as he could of the struggling elements to add to the effect of his words, that he would consent to its publication if they would paint the thunder and lightning with it.

We are not willing to say we are sorry that Miss Dickinson has written this book, "What Answer?" for there is much in the matter, and the manner in which it is presented, which deserves thought and praise. The design is to reveal, in the form of a story, the sentiments for which the author is distinguished respecting the wickedness of prejudice against the colored race in this country, and to show that when any proper feelings exist, this prejudice will yield to them. There are passages in the story that are intensely interesting, especially those in which some of the terrible scenes of the war are described. There are features of the principal characters which one is obliged to admire. Yet, there is nothing in the plot, or in the persons introduced that can claim remarkable merit. The book was written, we may believe, for the purpose of doing something to break down the barriers in the way of advance and elevation on the part of black men, and not with particular reference to style or rhetoric in its expressions. While it will be read by thousands who have listened to its author, they will all agree that her forte is not in the use of the pen. Published by Ticknor & Fields, Boston. Sold by H. H. Bancroft & Co.

Almost a Nun.

The Presbyterian Publication Committee has issued this book, with the announcement that it has peculiar value because its revelations are greatly needed, just at this time. The author is Mrs. Julia McNair Wright, who says of it in the Preface, that by it she hopes "to stir up many who are, unhappily, lukewarm Protestants, to an earnestness of zeal for that faith, pure and undefiled, for which the martyrs witnessed a good confession." The book commands interest from the beginning. Sometimes, the reader is inclined to ask for proof of what is said, although he may be ready to admit almost anything respecting such persons as are here described. But doubts are removed by the assurance of the writer, "that the story is composed almost entirely of *fact*. All the leading incidents are sober truths, and the characters are not children of fancy, but the people of to-day."

One great object of the author is to make known the folly of Protestant parents, who entrust the education of their children to Romish priests and sisters, and it is difficult to see how any one who reads this story can ever consent, for any consideration, to run such a risk. There is a farther design, however, bearing upon Romanism itself, and unless they wholly set aside the statements here made as unworthy of belief, the wish expressed in the introduction will be realized in the feelings of multitudes, "that the book may have a mission, to awaken a deeper sense of their responsibility in all Protestants, and to call them to protest in speech and practice against this worst form of idolatry,—idolatry subtle and fascinating, and working the works of darkness under the full blaze of revelation."

This volume is not at all like "Maria Monk," which created so much excitement years ago. It does not profess to tell what nuns are, and what they do, and what they suffer; but calls attention to the means by which it is hoped that our daughters may be made nuns, and the danger that these may be successful.

Danger from Impure Vaccine Virus.

THE PACIFIC MEDICAL AND SURGICAL JOURNAL for November has been received from the publishers, Bancroft & Co. Beside a large amount of matter designed for the use of the Medical Profession, it contains many articles of interest to the unprofessional reader in which the meaning of the writer is not obscured by an excessive use of technical expressions. In view of the fact that the small-pox is still raging in our midst and the necessity of precautionary measures still urgent, the following extract from an editorial article will be read with interest:

During the present variolous epidemic, a number of persons have suffered severely from extensive inflammation of the arm, with sloughing in some instances, consequent on vaccination. It is told on the street that one individual lost an arm from this cause, amputation having been deemed necessary. The popular inference is that the virus employed was contaminated with the poison of some other disease; and physicians are called on to avoid risk by taking the matter directly from the cow. That vaccine matter may be impure, and may generate disease, is admitted; but we regard such results as rare. In all probability, the cases reported are not of this kind, but owe their severity to the condition of the patient and not to the quality of the virus. The same epidemic influence which enables small-pox to break through its ordinary limits and assume a severe and malignant type, affects alike the character of the kine-pock and renders it in many cases severe and even malignant. Within the range of our observation, a large proportion of adults who have been re-vaccinated lately, suffered more pain and inflammation of the arm than belong to genuine vaccine disease. For the first week the vaccination pursues the course of the genuine cow-pock; but after that, erysipelatous inflammation invades the arm, and fever often supervenes. Persons are often prevented from using the arm for several days. This occurs when the virus employed is known to be pure. So, the scratch of a pin will induce serious results, when the individual, from some hidden cause, is in a condition incapable of resisting injury.

After the experience of a lifetime, we have more confidence in the lymph or the crust from the arm of a healthy child, which has passed through the regular stages of perfect variola vaccina, under our own observation, than we have in the virus from any other source whatever. We have no belief in the deterioration of the cow-pock by transmission. The description given by Jenner still applies perfectly. In fact, the vaccine vesicle, in its course from stage to stage, is a striking and really a beautiful phenomenon, not to be mistaken for anything else. If care be taken to procure matter from a healthy child, having the affection for the first time, and in whom it has passed through the several stages in a regular manner, our conviction is that nothing better can be done in the premises.

There is another mode of poisoning by vaccine virus which is worthy of mention. When the crust is mixed with water and kept on hand for use, as is sometimes done, it soon decomposes, and develops an active poison. We have seen violent inflammation and sloughing produced in this way. The moral is—do not use vaccine virus after it has been mixed for an hour or two.

THE VOICE MY SOUL HEARD, is the name of a little poem of some merit, written by W. A. Kendall, neatly printed, published in an attractive form, and for sale by H. H. Bancroft & Company. The VOICE speaks

> "To those who delve, and those who strive,
> Who scheme, and covet, and deprive;
> Who pile on dollars, dollars still,
> By plausible subtleties of ill;
> Whose sole ambition to acquire
> What passes neither lower nor higher;
> Whose object, aim, and all is pelf,
> Ignoring any nobler self."

From its utterances we select the following:

> "Since baubles please ye, baubles take,
> And to your likings idols make;
> For gems with flaws and metals base
> Barter the soul's eternal grace;
> Amass the pride-inflating dust
> That moth doth dim and damp doth rust;
> Glitter a temporal day, then hence,
> Forsaken by Omnipotence.
>
> Yet would I warn, that ye may see
> Your folly's huge enormity;
> And yet again what will endure
> I proffer, and ye may secure:
> O, that ye were not blind, and would
> Strive for the Everlasting Good!
> Value the wealth of changeless worth,
> And not be usurers of the Earth."

With this poem is published another, entitled TWO PATHS, which we give to our readers in another department.

PUTNAM'S MAGAZINE is received from Bancroft & Co., and THE OVERLAND MONTHLY from A. Roman & Co. The November numbers of these periodicals contain the usual amount and variety of interesting and instructive matter, selections from which will be found in another department.

Educational.

Photograph Education.

Visiting a pleasant family recently, we saw the father employ a leisure moment in teaching his boy a lesson out of a photograph album. The youngster was required to give the name of the kinsman, or friend represented, as the father displayed the picture. The device possesses high educational merits. It tends to cultivate the love of kindred—an affection not only beautiful and valuable in itself, but the true seed and beginning of broader sentiments of friendship and philanthropy. "A lively recognition of the bonds of blood, whether of those closer ones which unite us to that which by best right we term our family, or those wider ones which knit us to the whole human family, is the true source out of which all genuine love and affection must spring." These are the words of Trench, as he points out the common origin of the words *kinship* and *kindness*. At the same time it is only too apparent why the sense of kinship needs special cultivation here in California. Artificial production must be resorted to, since nature is unpropitious. Surrounded in our old homes by representations of every shade of human relationship, the love of kindred needed culture little more than a tamarind in the wilds of Panama; but

in California even aunts and uncles are a rarity and grandfathers a positive myth. But the device in question promotes the education of the head as well as the heart. "Memory is that activity which finds for every general conception or thought the appropriate word, and recognizes in every word the conception it contains." So much is the memory exercised in reproducing words when images are presented, and images when words are given, that the above is the very definition of this faculty given by Rauch in his *Psychology*. But even if we object to this as an exhaustive description of the power in question, we cannot but allow that the recollection of words (or names) when images (or faces) present themselves, is one of its functions which ranks among the foremost in importance. It is a means of power.

The writer has seen Henry Clay, after a sociable evening with a large company—all newly introduced to him—dismiss each at least with a "good evening," whose all-captivating power was obviously doubled by the circumstance that it was rounded off with a sonorous utterance of the individual's own proper and unmistakable "Smith," or "Brown." But a better plea for the memory of name is found in the circumstance that it is a means of benevolence. There is a degree of respect for an individual expressed by the memory and mention of his name, that awakens positive pleasure in his heart. Is the pleasure a small one? Sir Humphrey Davy shall furnish an answer to any objection of this nature. "Life is made up, not of great sacrifices or duties, but of little things, in which smiles, and kindnesses, and small obligations, given habitually, are what win and preserve the heart, and give comfort." But we may go even a step further: we may say that the power of readily connecting names with faces is a source of comfort and even virtue to the possessor. Only the last day, probably, will disclose the magnitude of that world of discomfort and peccadillo which the inability to recall names on important occasions has heaped together, grain by grain, in the experiences of miserable men. And the inventiveness wasted by wretched spirits in eluding detection in this kind of forgetfulness, on meeting persons whom they *ought* to remember, would undoubtedly, if turned into other channels, long ago have constructed for us a safe and beautiful flying machine; some apparatus for arresting in October, and then utilizing during the remainder of the year, the wasted energy of earthquakes; or even some form of civil government which should gather in days of war and change of administration, the surplus patriotism of public men and spread it over the days of peace and relaxation of popular vigilance, as a guard to the interests of the nation. C. R. C.

Personal.

Hon. J. Mott Smith, *Chargè d'Affaires* for the Hawaiian Government at Washington, arrived in this city by the Montana. His mission is respecting the reciprocity treaty.

Rev. G. A. Easton, assistant Rector of Grace Church, preached his final sermon on Sunday last. He will take charge of the Episcopal church at Santa Clara.

Mr. Geo. W. Crane, a prominent citizen of Monterey County, died at San Juan on the 2d inst.

Hon. Geo. C. Gorham sailed for the East, by the steamer of the 6th.

Gen. Geo. B. McClellan was elected President of the University of California, at a meeting of the Regents held on Tuesday. Gen. McClellan received 12 votes; Rev. H. Stebbins of San Francisco, 5; Prof. Henry of the Smithsonian Institute, 1; F. L. Olmstead of New York, 1. The President elect has been notified by telegraph of his election. It is greatly to be hoped that he will decline the honor.

Mr. H. H. Bancroft and family returned to San Francisco by the last steamer, after an absence in the Eastern States and Europe, of over two years and a half.

Mr. J. B. Davis, formerly editor of the Healdsburg *Standard*, was shot in a quarrel by Mr. J. B. Fitch, the present editor, on the 4th.

Rev. S. S. Harmon, who has been spending a few months in the East, writes us that he shall return to California in about six weeks.

Mr. and Mrs. Thompson celebrated their golden wedding at Mrs. Blake's Seminary in Oakland, on the 5th inst.

Ex-Gov. Low has tendered his resignation as member of the Board of Regents of the State University.

Mr. Albert S. Evans, local editor of the *Alta*, is making an exploring tour through Nevada and Utah.

Wm. P. Moffatt, Esq., a prominent lawyer of this city, died on Wednesday last.

Rev. Mr. Buckbee will return to this coast about the 1st of January.

CAN IT BE POSSIBLE THAT OVER FIVE MILLION BOTtles of PLANTATION BITTERS have been sold during the past year? It is almost incredible, nevertheless it is absolutely true, and is the most convincing proof of their wonderful medicinal and health-restoring qualities. Every family should be supplied with these Bitters, at whatever cost or trouble it may be to obtain them. Be careful that you get the genuine, and that you are not imposed upon by a spurious article.

Zion's Herald, Vol. XLVI.

THIS OLDEST OF CHURCH PAPERS STILL AIMS TO lead the column of the religious press. Its principles are Christ and His Gospel faithfully applied to the renewal of every human heart, and of the human race in all the life of God. It advocates Christian doctrine as preached in all ages by the evangelical church. It supports Prohibition as the chief duty of every State to its own citizens. It opposes Caste, and urges the liberty, equality and fraternity of all men. It seeks to spread Scripture Holiness in all its entire nature and work over all the land.

The editor in chief, Rev. Gilbert Haven, has few equals and no superior, as a brilliant writer and successful editor.

It has five editors, and not less than fifty contributors. Among these are the best newspaper writers: Abel Stevens, Theodore L. Cuyler, Theodore Tilton, Daniel D. Whedon, editor of *The Methodist Quarterly*, Nehemiah Adams, author of "Agnes," "Catherine," etc., Misses Warner, author of "Wide, Wide World," etc., Phebe Cary, E. O. Haven, President of Michigan University, "Warrington," J. D. Fulton, James Redpath, C. C. Hazewell, F. D. Huntington, Bishop Thompson, "Willy Wisp," B. K. Pierce, Lucy Larcom, Phebe Palmer, Judge Bond, etc.

THE CHURCH DOOR,

A new story, by Miss Anna Warner, author of "Queechy," "The Old Hamlet," etc., will commence with the next volume Children's Home, Commercial, Agricultural, Foreign, Political and Religious, and all other departments of a first-class paper are carefully filled by the best pens. The Herald is printed in the best style, on a sheet the size and form of *Harper's Weekly*, cut and stitched.

Only two dollars and a half a year, in advance. Any one sending five new subscribers and twelve dollars and a half, shall receive a sixth copy gratis. Other premiums are offered. Specimen copies sent gratis. Send subscriptions to E. D. Winslow, Publishing Agent, 11 Cornhill, Boston.

Nos. 443 and 445 Broadway, New York,

Are publishing

A POPULAR EDITION OF THE

WORKS OF CHARLES DICKENS,

FOR THE MILLION.

Clear Type. Handsomely Printed, and of Convenient Size, comprising the following Volumes, at the annexed Prices, varying in Price according to the number of Pages:

Oliver Twist (now ready)	172 pages	25 cents.
American Notes (now ready)	104 "	15 "
Dombey & Son (now ready)	348 "	35 "
Martin Chuzzlewit	330 "	35 "
Our Mutual Friend	330 "	35 "
Christmas Stories (now ready)	160 "	35 "
Tale of Two Cities	144 "	20 "
Hard Times	185 "	35 "
Nicholas Nickleby (now ready)	340 "	35 "
Bleak House	340 "	35 "
Little Dorrit	330 "	35 "
Pickwick Papers (now ready)	326 "	35 "
David Copperfield	330 "	35 "
Barnaby Rudge	257 "	30 "
Old Curiosity Shop	220 "	20 "
Great Expectations (now ready)	184 "	25 "
Sketches and Pictures from Italy	270 "	25 "

On receipt of $4 50, we will mail to any address, as published, post-paid, the entire works of Charles Dickens, and also a

STEEL-PLATE PORTRAIT OF DICKENS,

printed on India paper, suitable for framing. The portrait will be mailed at once.

Either of the above sent FREE BY MAIL on receipt of the price.

EXTRAORDINARY OPPORTUNITY

For the Million to Secure a Library.

CLUB RATES.

One Set, 17 volumes	$4 50
Three Sets, "	12 50
Five Sets, and a copy to person forming the Club	19 00
Ten Sets, and a copy gratis for the getter-up of the Club	37 00

Mailed at our expense.

CANVASSERS

denominate this edition "THE POPULAR EDITION," as every man, woman, and child is buying it. For special terms to Canvassers, address the Publishers.

Religious Books.

A great variety of works in all departments of Religious Literature, such as Devotional Books, Bible Dictionaries, Sermons, Religious History, and Biography, Annotations, Commentaries, etc., published by the

PRESBYTERIAN BOARD OF PUBLICATION.

Also, a large assortment of Sunday School Libraries and Hymn Books, including THE HYMNAL, Presbyterian Psalmodist, Presbyterian Juvenile Psalmodist and Children's Praise, to which the Publishers call the attention of

SUNDAY SCHOOL TEACHERS AND OFFICERS,

And of all who desire books in any of these departments. All such are requested to call and examine the publications of the Presbyterian Board at the Depository for the Pacific Coast, which has been established at the store of

H. H. BANCROFT & COMPANY,
609 Montgomery Street, San Francisco, Cal.

Congregational Singing.

ROBINSON'S SONGS OF THE SANCTUARY. Hymns and Tunes for Congregational Singing. 35,000 copies already sold. Editions for Congregational, Presbyterian, and Baptist Churches. Price, $2 50. A liberal deduction to churches for first introduction.

HENRY WARD BEECHER'S PLYMOUTH COLLECTION. 75,000 copies sold. Congregational and Baptist editions, $2 50.

EPISCOPAL COMMON PRAISE. Appropriate Tunes for all the Psalms and Hymns in the Book of Common Prayer, with select chants. Just published. $2 75.

Corner of Battery and Bush streets, San Francisco, and 98 I St Sacramento.

Practical and Scientific.

AGRICULTURAL.

Farmers' Clubs.

We seriously believe one of the best means of improving agriculture in any farming community, is the formation of and properly conducting a farmers' club. And just now is an appropriate time for commencing the work. Will not you who read this, supposing you to be a farmer, call the attention of ten or twenty of your neighbor farmers to this subject, have a meeting appointed at your house, or at the school house, or any suitable place, and at this meeting organize a club? Don't have much formality. A simple constitution is sufficient. This was once recommended: "We agree to meet once a week to talk over our farming affairs." It will be well, however, to have a name, elect a President and Secretary, and appoint a regular time and place for the meetings. Where the club is small, it is well to meet at the residence of the members, when time allows, during the day, so as to examine the practice of each. Select some practical question, appoint some one to open the discussion, either in writing or orally, and let each member give his views on the subject. Discourage fine speeches, or essays, and encourage practical talks.

Let the Secretary briefly record the views of the talkers for future reference. It will give your club importance, please the members, and benefit other farmers if those reports are published, and every sensible agricultural paper will be glad to receive brief reports of useful discussions.

Such a club will awaken interest, and incite reading and reflection and bring out much practical and valuable information. No one farmer knows so much about any branch of his business that he cannot learn something from others. The social effects of frequent meetings of neighbors will also be good. Try the experiment in your neighborhood this season.—*Northwestern Presbyterian.*

Agricultural Colleges.

With each succeeding year we expect better results from, and, on the part of the great mass of farmers, a better appreciation and more hearty support of the State Agricultural Colleges already in working order in a number of states. Doubtless mistakes have been made and will continue to be made in their management, but we cannot doubt that they will do much good.

The oldest College of the kind in successful operation in the West is that at Lansing, Michigan. It is filled with students to the utmost capacity of its buildings, over 300 applicants being rejected this college year. Additional buildings are urgently demanded. The Illinois Industrial University, at Campaign, has opened with fine prospects, notwithstanding unwise efforts to destroy confidence in its management. The Iowa Agricultural College at Ames, is opened this week. It has a fine building. The Wisconsin University has a Department of Agriculture, with an able Professor, a farm, etc. Cornell University, at Ithaca, N. Y., opened this month, and is reported as having 400 students. The Massachusetts Agricultural College is doing well. That in Pennsylvania, always unfortunate, seems to have failed for the present.—*Presbyterian.*

Do Sheep improve Pastures?—We are acquainted with a pasture near the sea coast, which many years ago was an exceedingly foul piece of land, abounding in a great variety of bushes, among which were the barberry and many climbing-plants; and so closely laced and intertwined by the wild rose that they formed an almost impenetrable jungle. Twenty years afterward we saw the same pasture with a flock of sheep on it, grazing upon a close, compact turf covered with short, sweet grasses, and without a weed or bush of any kind upon it.

"How has this reclamation been accomplished?" we inquired, as we stood looking upon it.

"By the sheep," said our informant.

"Without plowing or seeding?" we asked.

"Yes by the sheep alone," was the reply.

The pasture was quite uneven and rocky, but the sheep had exterminated every vestige of wild plants, and clothed the surface with rich perpetual herbage. —*New England Farmer.*

Weeds in Fence Corners.—One of the greatest nuisances in farming, is the way weeds are encouraged and protected in the crooks and vicinity of fences, from which places their seed is scattered over the surrounding lands. The extent to which seed is scattered by high wind, proves that the negligent farmer may annoy hundreds of others by failing to exterminate the foul herbage. Could the evils be concentrated on the farm which nurses the weeds, the consequences would be a proper punishment for his carelessness and criminality—for criminal is any man who nurtures nuisances that thus injure the surrounding farmers. The fellow who keeps a bulldog that annoys, if he does not bite the passing travelers, may be reached by the law that is powerless to repress the injury occasioned to his neighbors by the nurseries of foul weeds which are harbored about his premises, especially in the vicinity of his fences.—*National Examiner.*

Remedy for Sandcrack.—The editor of the Veterinary Department of the *Western Rural* gives the following directions for the treatment of the troublesome and very serious complaint in a horse's hoof, known as sandcrack:

Sandcracks vary much in depth and extent, and the same treatment is not applicable to every case. A horse with a sandcrack should be shod with a bar shoe, as that transfers some of the weight from the wall to the frog. The edges of the sandcrack should be trimmed with a sharp drawing-knife, the crack filled with tar, and then some strong cord or tape should be wound round so as to cover the hoof and exclude the dirt from the sandcrack. A little acetate of cantharides rubbed around the coronet once a week will increase the growth of horn.

Fried Patties.—Mince a little cold veal and ham, allowing one-third ham and two-thirds veal; add an egg, boiled hard and chopped, and a seasoning of pounded mace, salt, pepper, and lemon-peel; moisten with a little gravy and cream. Make a good puff-paste; roll rather thin and cut into round or square pieces; put the mince between two of them, pinch the edges to keep in the gravy, and fry a light brown. They may also be baked in pattypans; in that case, they should be brushed over with the yolk of an egg before they are put in the oven. To make a variety, oysters may be substituted for the ham. Fry the patties about fifteen minutes.

The first cast-iron plow in America, patented by Charles Newborn in 1797, has recently been presented to the New York State Agricultural Society by John Black, of Mt. Holly, N. J. The plow consists of share, land-side, sheath, and mould-board, and was all cast in one piece. The point was very soon broken and was never used afterward. The inventor spent about $30,000 in perfecting and introducing his plow, and failed. A good is certain to win its way in the end.

Salt and Ashes for Horses.—Those keeping horses should twice a week, throw in to each a handful of salt and ashes. Mix them by putting in three parts of salt to one of ashes. Horses relish this, and it will keep their hair soft and fine. It will also prevent bots, colic, etc. A little ground sulphur, mixed with salt and ashes, and given once in two or three weeks, is also beneficial. All domestic animals will be thus benefited.

If a farmer in Wisconsin plants a row of trees along the road, he is exempt from the road-tax. Whoever hurts one of the little ones is fined $5; and the State Horticultural Society offers a premium of $100 for the best ten acres of forest trees, and $50 for the second best.

To Keep Iron Utensils or Implements from Rust.—Wash and rub over them a mixture of lard and turpentine. The paint-pot and brush should be kept and used by every farmer. All wood-work ought to be kept constantly well painted, especially the wood-work of wagons, plows, etc.

Beef Cake.—Pound some beef that is underdone with a little fat bacon or ham; season with pepper, salt, and a little shalot; mix them well, and make into small cakes three inches long, and half as wide and thick; fry them a little brown, and serve them in a good thick gravy.

How to Make Milk Biscuit.—Take four pounds of flour and butter rolled well; mix it with milk; add a little salt.

WEEKLY MARKET REPORT.

Wednesday, November 11, 1868.

Flour—Sales of 500 bbls Commercial (Oregon) Extra, full figure. This is a new brand in this market, and is said to compare favorably with the best Oregon descriptions. Sales of 1,000 bbls Superfine, interior brands, private. We quote jobbing rates for city brands as follows: Superfine, in sks, ₱ 196 lbs, $5@$5 25; Extra, in sks, $6@6 25.

Wheat—Sales of 516 sks good shipping, , $1 72½; 500 sks choice, $1 75; 2,000 sks do, in lots, $1 75; 10,000 sks do, prior to arrival, private. We quote the market quiet at $1 70@1 75 for good to choice shipping. At the close, 800 sks choice, $1 75 ₱ 100 lbs.

Barley—Very little doing, and quotations remain at $2 05@2 15 for feed, and $2 20@2 30 for brewing. Sale of 200 sks brewing, $2 20 ₱ 100 lbs.

Oats—Sales of 2,000 sks California in one lot, private; 1,000 sks Oregon, in lots, private. We quote California at $1 60@2, and Oregon $1 90@2 05 ₱ 100 lbs, outside figures for very choice.

Potatoes—Sales of 200 sks Tomales, 65c; 350 sks do, 60c; 1,000 sks do, 50c; 500 sks Bodega, 65c; 400 sks Monterey, 62½@75c. The arrival of the *Pacific* last evening, with 7,000 sks Humboldt, has completely upset the market for this description, and though the nominal range is given at 80c@$1, it would be difficult to place any considerable quantity even at the inside price. Carolina are a shade better, having sold on the wharf this morning at $1 20@1 25 ₱ 100 lbs.

Onions—Yellow range from $1 75 to $2 ₱ 100 lbs.

Beans—Sale of 400 sks assorted, private, We quote jobbing rates for first quality as follows: Bayo, 3¼@3¾; Butter, 4@4½c; small White, 3½@3¾c; Pink, 2¾@3c; Red, 2¾c ₱ lb.

Rye—Is firm, under speculative control, with $2 80 bid and $2 ₱ 100 lbs.

Buckwheat—Sale of 50 sks choice, $2 ₱ 100 lbs.

Corn—The deliveries of late have been free, causing prices for Yellow to settle to $1 75@1 80 ₱ 100 lbs.

Mustard Seed—There is no difficulty in getting 4c for choice California Black, while inferior qualities are slow of sale at 3½@3¾c; English White, 5@5¼c ₱ lb.

Flax Seed.—The mill continues to pay 4c ₱ lb for choice.

Bran—Sales of 100 tons, in lots, $21@22 ₱ ton.

Middlings—Fine are nominal at $35@40, and feed $28@$34 ₱ ton.

Oil Cake Meal—The mill continues to ask $30 ₱ ton.

Hops—The nominal range of the market is 25@32½ ₱ lb.

Hay—Sales of three cargoes, amounting to 85 tons at $10@$14 ₱ ton.

Dairy Products—California fresh roll Butter has advanced to 65@75c; California pickled, 45@50c, outside figure for extremely choice; Cheese is jobbing at 18@19c for both California and Eastern; Clear Lake, 20c ₱ lb. Sales for the week reach 20,000 lbs, within the range. Eggs have advanced to 80c for California and 55c for Oregon.

Provisions—Bacon is jobbing at 14@14½c for California smoked; Oregon do, 14@14½; California Hams, 16½@17c; Oregon do, 17@18c; California Lard, 13@13½c, and 14c ₱ lb for small tins.

Poultry—Live Turkeys are quoted at 16@17c, and dressed do 18@20c ₱ lb; Hens and Roosters, $6@6 50; Spring Chickens, $4@5; Ducks, $4@5; Quail, $1 12½@1 55 ₱ dozen; Geese, $2@$2 25 ₱ pair; Venison, 8@9c ₱ lb.

Wool—Sales for the week, by two of the leading receiving houses amount to 400,000 lbs, at 16½@18c for fair to choice shipping grades; small lots of extra choice, 19½c; burry, 11½@13½c ₱ lb.

Hides—Sales since last Wednesday of 2,500 California dry at 14@15c. We quote salted at 7c ₱ lb.

Tallow—Sales for the week to a single purchaser of over 30,000 lbs good Beef at 8c, though the nominal range of the market is 7¾@8¼c ₱ lb.

San Francisco Cattle Market.

The market exhibits a generally improved tone, consequent upon the advent of cooler weather.

We quote slaughterers' prices as follows:

Beef—American, 1st quality, 7½@8½c ₱ lb.
do 2d do 6½@7½c ₱ lb.

Veal—Quotable at 9@11c ₱ lb.

Mutton—Is steady at 6@7c ₱ lb.

Lamb—Nominal 7@9c ₱ lb.

Pork—Undressed, 4@5c; dressed, 6½@7c ₱ lb, outside figures for milk or grain fed.

—*S. F. Bulletin.*

MINING.

Do the Metals Grow?

This is a question which has been discussed somewhat within the last year or two among the newspapers and writers of the mining States and Territories, and it is now pretty well settled that gold, silver, copper, and some other metals, as well as their matrices, are now in process of formation or deposition. Abandoned silver mines in Peru have been found rich in aborescent deposits of the metals on the walls of the galleries unused for many years.

In the Siberian copper mines, not only the carbonate known as melachite, but the metal itself, is deposited on the walls, roofs, and floors of the galleries.

In California there are several well authenticated instances of the formation of quartz, both in the crystalline and uncrystalline form, having been deposited since the mines were worked. A few weeks ago one of the owners in the Idaho Mine at Rocky Bar related to us that, some months since they had occasion to explore one of the old galleries which had been unused for about two years, when, hanging upon and adhering to the under side of one of the timbers, as also upon the wall of the mine, was found a quantity of quartz crystals in a state of formation by the dripping of water that percolated through the granite walls. The crystals were soft, and through the carelessness of a workman in handling them, were unfortunately destroyed.

If the metal-bearing rocks are in a state of formation, the metals must likewise be formed with them. Some have gone so far as to believe that gold is being deposited in the streams and placers, and cite the fact that placers, after being cleaned, give good results for working again after the lapse of a few years; but that can more easily be explained by imperfect working the first time.—*Idaho Statesman.*

The Arizona Mine.—The new working level is completed and the track laid in a substantial and workmanlike manner. This tunnel will thoroughly ventilate and drain the mine and greatly facilitate the sending out of ore. The ledge is apparently well defined, and varies in width from four to six feet between the upper and lower tunnels, while the ore is regularly distributed through the vein and improves in quality as depth is gained. That this ledge will be permanent and lasting in its supply of pay ore there can now be no doubt, as the developments already made show it to be of sufficient strength to hold its own in any formation that may be encountered or met with in its course downward. —*Humboldt Register.*

Sweetwater.—A correspondent of the *Virginia Enterprise* says:

I am in the Sweetwater mines working like a tiger. I am taking out some of the richest rock that the earth ever produced. This country is going to make another California. We have the richest mines and the finest rock I have ever seen. There is but one mill here as yet, and this is not capable of crushing a twentieth part of the custom rock that is every day brought to the mill. There are two other mills on the way here from Chicago, Illinois, which will arrive in the course of 20 days, when we hope to have lively times.

Rich Quartz.—The Bavarian ledge, located on Rush Creek, and owned by Peter Coon, is one of the richest specimen ledges in this locality. A candle box full of specimens literally flaked with gold, has been taken out, and nearly a ton of first grade rock is ready for crushing. Peter is one of the most fortunate Coons we know of.—*Nevada Transcript.*

The Jim Mine.—For some time past workmen have been engaged in running a tunnel in the Jim mine near Eureka, and a short time since they struck a splendid five feet ledge. The quartz is said to be the best ever seen in the District.—*Nevada Transcript.*

Graniteville Mines.—We had the pleasure of conversing briefly with E. W. Nash, of this town, who had just come down from Eureka Mining District. He says that prospecting there is very brisk, and all the ledges show fine prospects. The Mutual Company have a large ledge, and last week made a crushing of forty tons of rock, which yielded about $38 per ton. The Birchville Company is crushing some splendid looking quartz. The Jim Crack Mine is being opened by a San Francisco company, and in sinking on the ledge, rock has been taken out which has paid $20 per ton.—*Grass Valley Union.*

Rich Ore.—Eight tons of ore, from the Stockwell and Little Rose, White Pine, were recently worked in Austin, yielding $450 per ton.—*Grass Valley National.*

PRACTICAL HINTS.

How to Use a Watch.

A watch should be regularly wound up as nearly at the same hour as possible. Always have a key with a good pipe, or square, and one that fits properly on the square of your watch: for if it does not fit good and firm, it will be apt to slip, often breaking either the chain, the ratchet, or the click. While being wound, the watch should be held steadily in one hand, so as to have no circular motion. It is better to keep a watch continually going, than to lay it by and wind it occasionally. The going of the watch keeps the oil in a limpid state, and the watch keeps its regulation better.

Be particular never to trifle with a good watch, or use it as a toy, but as a piece of delicate and complicated mechanism, requiring great care.

Before winding or setting your watch, it is advisable to see that the key and the inside of the pipe contain no dirt or dust that may get on the winding or setting square, and from thence to the wheels or escapement.

When a watch is hung up, it should be perfectly at rest. If hung on a round hook without further support, the motion of the balance will generate a pendulous motion of the watch, and will cause much variation in the time.

Should a watch stop, see if the hands rub on the dial, and are free from each other; if they are caught together, you may free them yourself by taking the point of a small knife blade and disengaging them.

Frequently after a watch has had a new glass put in, it will stop; that is through the glass being too flat, and touching either on the centre pinion, or by pressing on the hands. In that case, blame the person who put the glass in, and let him put another in. If anything is the matter with your watch which you cannot discover immediately, do not try to put it in order yourself, and meddle with the works, but show it at once to a good watchmaker. Watches should be opened as little as possible, merely to wind, set, or regulate them.

Should a watch get wet by falling in the water, or otherwise, if you are not near a watchmaker, as soon as possible open it, and pour in some oil—any kind will do in an emergency, but olive oil is the best; as soon after as convenient, place it in the hands of a watchmaker, and if attended to in time, the whole movement, or at least many parts, may be saved.

In setting your watch to time, always set it with the key on the square; never do it by pushing the hands, as in most cases you would break or bend them. Many persons think it injures a watch to set it back; it is a mistaken idea, as a watch will not be injured by it unless the pinion which carries the hand turns hard, in which case it would injure it as much to turn it forward as to set it back; and recourse must be had to a watchmaker.

Peculiar care should be taken to keep the works of a watch clean, even though perfectly free from dust; they ought to be taken to pieces and cleaned when the oil has become dry, as, without this precaution, the best watch would be spoiled. It is good watches that will continue to go, until friction and wear prevent their going any longer; they are the most liable to be neglected. Watches, under ordinary circumstances, should be cleaned every second or third year at the farthest.

To Purify a Sink.—In hot weather it is almost impossible to prevent sinks becoming foul, unless some chemical preparation is used. One pound of copperas dissolved in four gallons of water, poured over a sink three or four times, will completely destroy the offensive odor. As a disinfecting agent to scatter around premises affected with any unpleasant odor, nothing is better than a mixture of four parts ground plaster of Paris, to one part of fine charcoal, by weight.

To Subdue Mosquitoes.—It is said that by saturating a small piece of cotton cloth with the commonest whiskey or alcohol and hanging it over the pillows of the bed, our readers may rest in comparative peace, for mosquitoes cannot endure the fumes of intoxicating fluids.

Another Remedy.—To get rid of mosquitoes, the *New York Sun* says: "Take of gum camphor a piece almost one-third the size of an egg, and evaporate it by placing in a tin vessel and holding it over a lamp or candle, taking care it does not ignite. The smoke will soon fill the room and expel the mosquitoes."

FACTS FOR THE CURIOUS.

Pins—How they are Made.

The pin-machine is one of the closest approaches that mechanics have made to the dexterity of the human hand. A small machine, about the height and size of a ladies' sewing machine, only stronger, stands before you. On the back side a light belt descends from the long shaft at the ceiling that drives all the machines, ranged in rows on the floor. On the left side of our machine hangs, on a peg, a small reel of wire, that has been straightened by running through a compound system of small rollers.

This wire descends and the end of it enters the machine. This is the food consumed by this snappish, voracious little dwarf. He pulls it in and bites it off by inches, incessantly, one hundred and forty bites to a minute. Just as he seizes each bite, a saucy little hammer, with a concave face, hits the end of the wire three taps and "upsets" it to a head, while he grips it in a counter-sunk hole between his teeth. With an outward thrust of his tongue, he then lays the pin sideways in a little groove across the rim of a small wheel that slowly revolves just under his nose. By the external pressure of a stationary hoop these pins roll in their places as they are carried under two series of small files, three in each. These files grow finer toward the end of the series. They lie at a slight inclination on the points of the pins, and by a series of cams, levers, and springs, are made to play "like lightning." Thus, the pins are pointed and dropped in a little shower into a box. Twenty-eight pounds of pins is a day's work for one of these jerking little automatons. Forty machines on this floor make five hundred and sixty pounds of pins daily. These are then polished. Two very intelligent machines reject every crooked pin, even the slightest irregularity of form being detected.

Another automaton assorts half a dozen lengths in as many different boxes, all at once and unerringly, when a careless operator has mixed the contents of boxes from various machines.

Lastly, a perfect genius of a machine hangs the pin by the head in an inclined platform through as many "slots" as there are pins in a row on the papers. These slots converge into the exact space spanning the length of a row. Under them runs the strip of pin paper. A hand-like part of the machine catches one pin from each of the slots as it falls, and by one movement sticks them all through two corrugated ridges in the paper, from which they are to be picked by taper fingers in boudoirs, and all sorts of human fingers in all sorts of circumstances. Thus you have its genesis:

> "Tall and slender, straight and thin,
> Pretty, little, useful pin.

N. Y. Post.

General Selections.

Two Paths.

Let him whose soul is quick with thought,
Who walks aloof with high desire,
And glimpses through the smoke has caught
Of the ethereal inner fire,
Still keep the elevated way
Where he discerns the most of day.

Let him whose soul is dull and blind,
Who plods the slums of grosser sense,
And pierces not the earthy rind
To the sublimer recompense,
Still keep the lower path, nor sigh
To grope his way along the high.

For unto him of vision keen,
The lower path is base and void,
And all its 'broidery of green
Is mould, of dust and damp alloyed;
And all the flowers of praise that blow,
Exhale but odors vile and low.

And unto him of vision weak,
The upper path is bare and cold,
No interests to his nature speak,
No radiant promises unfold;
Nor does he hear the dulcet Voice
That bids the lofty soul rejoice.

To each the other's gold is dross,
Insane to each the other's greed;
Each counts the other's gain as loss,
And wise is each in his own creed:
Nor both are false, nor both are true,
And one will come to bane and rue.

—*W. A. Kendall.*

Concerning the late Earthquake.

The earthquake of the 21st still claims a large share of the public attention, and the frequent recurrence of lighter shocks following in its train, tends to make this subject essentially a live one. We make the following extracts from an article written by Dr. J. D. B. Stillman, for the *Overland Monthly:*

There is something so mysterious in the nature and origin of that physical force that convulses the earth, and in a few moments buries thousands of human beings amidst the ruins of their proudest fabrics, that the slightest display of its power appalls the stoutest heart. In vain we invoke philosophy to our aid: reason accepts the postulate that "what has been may be again," and the earthquake is a matter of fact after which philosophy gropes in obscurity unable to say to the mighty commotion, "Thus far shalt thou go, but no farther, and here shall thy proud waves be stayed."

Yet can science do something to check the wild revels of the imagination, confine it within the bounds of probability, and deduce such laws as will best serve to protect us from the destructive effects of force that we cannot control. Terrible as the earthquake is sometimes, at long intervals of time and space, it is not half so terrible in effects as are the fears that are needlessly engendered in those regions subject to it. These are not to be allayed by treating the subject with lightness and denying its facts, but by squarely meeting them, and from a careful consideration of their phenomena, learning to guard the people from disastrous consequences in the future. He who could contemplate the event of the 21st of October, 1868, with any other than emotions of profoundest awe, is either a brute or a fool.

It is assumed what few will now be disposed to deny, that *California is an earthquake country.* The lessons of history must not be forgotten, though avarice cries "hush!" and the artisan plasters from our sight the "deep scarred woe." Our State archives inform us that the Mission of San Juan Bautista, on the road from San Jose to Monterey, was destroyed by an earthquake in the month of October, 1800; that there were six or seven shocks in one day; that there was not a single habitation, although built with double walls not shattered from roof to foundation.

In the year 1808 a succession of earthquakes, continuing from the 21st of June to the 17th of July, were felt at the Presidio of San Francisco, some of which were so severe that, as was stated in the official report, the only limit to their destructive effects was the want of materials to destroy. In the year 1812 the Mission church at San Diego was thrown down, and six years afterward that at Santa Clara was also destroyed by earthquakes; and now the old church at San Jose, whose quaint walls have been an object of curiosity to the English-speaking race since their advent in California, and which has outlived all those who saw it rise, has fallen into ruin. The history of Upper California since its first settlement by Europeans, covers less than a century, and during that time there have been innumerable shocks of greater or less severity. Long intervals of rest have been followed by severe shocks.

Is it wise to willfully shut our eyes to these facts, from fear that the prospect of damage will check the rise in real estate, and that the credit of the State will suffer? The credit of a community, like that of an individual, is based upon its character for integrity. Let us deal with this matter as rationally as the people of Sacramento did after the great flood of 1861, and put ourselves beyond the reach of any possible danger from a disaster that sooner or later is certain to overtake us if we disregard the late lessons.

Whatever may be the true theory of its origin, there can be no dispute about the effects of the earthquake, or the manner in which these effects are produced. The knowledge of them may be gained in their proper place. There are some facts of practical importance that we should all know: that the primary shock, of which we have no warning (either through the barometer, thermometer, or magnet, any more than through our eyes or nose) is, when from great depth, followed by secondary waves at right angles to it, like the waves when a stone is thrown into the water, and which are often more destructive to buildings than the normal shock.

It is also known that the most destructive effects are felt on soil of low elasticity, as clay and alluvium, and least on firmest rock. The earthquake at Lisbon, in the space of a few minutes, destroyed sixty thousand lives in that portion of the city built upon the tertiary formations; *but not a building was injured on the secondary limestone, or basalt.*

Other things being equal, the shock would be more severe on the alluvial formation around the bay than on the rocky ground. These are the localities where subsidence is more apt to occur; over that part of the town where ships anchored twenty years ago, they may anchor again! Where the marble quay at Lisbon stood on the first morning of November, 1755, a line of a hundred fathoms failed to reach it forever afterwards.

However, it has been asserted by high authority in geological science that there is no evidence of permanent upheaval or subsidence anywhere on the coast of California during our present geological era; and it is said by Mallet that an earthquake however great, is incapable of producing any permanent elevation or depression of land whatever, (unless as secondary effects.)

All severe shocks are followed for a longer or shorter time by lighter ones, though generally their force is insufficient to cause much damage. In a few instances a second shock has been nearly as serious as the first. Such was the case in the Neapolitan earthquake of 1857, when many people were buried in the ruins of walls from which they had fled an hour before.

The security of a building depends less upon its height than upon the mode and material of its construction. In the Neapolitan city of Potenza, a building twenty-four feet square at the base and one hundred feet in height, was uninjured, "without even a fissure, or a tile disturbed," while at its side the cathedral, built of similar material, was fissured from base to summit, and unsafe to enter.

Were the earth-wave as slow in its transit as a sea-wave, and a building were to follow it as a ship, in its entirety, the higher the building the greater would be the danger of its fall; but such is not the case—the velocity of a wave has a direct relation to the elasticity of the medium through which it is transmitted, and the effect is to give an undulatory motion to that structure.

It is plain, therefore, that tall buildings may be built of brick, when the material is good, that will be perfectly safe, if the opposite walls are well anchored together, and are none the less safe for being tall. It is doubtful whether walls covering a considerable extent of ground can be built sufficiently strong of brick or stone to ride an earth-wave such as passed under this city in the late earthquake, without breaking; those into the construction of which iron entered to a considerable extent, even when built upon made land, are uninjured.

The well-built wooden buildings with balloon frames, the usual style of construction in California, may be considered perfectly safe from the severest shock ever yet experienced; but they should not be mounted upon stilts as most wooden buildings are. The chief danger to these has risen from the faulty mode of constructing the chimneys; owing to the greater inertia of brick than of the light wooden structure by which they are surrounded, they are very generally broken off at the roof. This danger can be entirely obviated by a galvanized iron chimney-top, secured by flanges to the roof boards or rafters, and lined with thin bricks continuous with the chimney below, to guard the iron from the erosive effects of acids generated by the combustion of fuel.

It is certain that entire safety may be assured to life and property on solid ground by proper attention to the construction of buildings, though we should have earthquakes as severe as are recorded; and it is as certain that all improperly tyed walls, of poor mortar and as poor bricks, will be tumbled down to the peril of human life, as that earthquakes will recur, as they have occurred in the past. Especially should all walls with fronts veneered with stone be immediately taken down. It is mean and cowardly to patch up these structures and plaster up the broken chimneys, trusting that the shock that will hurl them to the dust will not come in your time, or until you have sold the property. The terror inspired by an earthquake is measured by the lives that are lost; and if a falling wall or chimney should invariably come upon the head of the owner, it would be a sad thing, but it would be infinitely sadder that the blameless should be stricken down by so unnecessary and reckless a cause.

Religious Insanity.

Putnam's Magazine for November contains an essay entitled "Who of us are Insane?" in which the author attempts to show that insanity in its various modifications, is prevalent to a much greater extent than is commonly supposed, and that to its influence should be attributed many phenomena which generally cause no suspicion of its existence. Our readers will be interested in the following extracts:

Religious mania is a very requent and harrassing manifestation of cerebral disease, and one which requires the largest tact and patience in its management. Not a little of the extraordinary self-sacrifice and voluntary renunciation of the common enjoyments and aspirations of existence, so often exemplified under both the true and false religions, is due to disease of the brain, which is brought on by over-exercise, and over-excitement of the religious nature. This form of insanity is so familiar that it is hardly necessary for me to cite instances that illustrate it. It is met with in India, amid the darkness of Paganism, among the Mohammedans, as well as in all Christian countries both Catholic and Protestant. It appears among all nations who have any distinct idea of a God and a future state, but is especially liable to visit those who are possessed of a deep and earnest and absorbing religious nature that is wrought upon by trials and the influence of a partial or one-sided mental training.

Among the symptoms of religious monomania are the constant fear of the wrath of an offended God, and a disposition to perform extraordinary acts of self-mortification, extravagant dread of approaching death, and a painful consciousness of sin and unworthiness that can find no consolation in the Divine promise of mercy, persistent and wasting melancholy, and constant temptations to commit suicide. Some have a directly opposite experience, and are subject to agreeable and inspiring hallucinations. They imagine themselves in heaven, in direct communion with God. They declare that they are divinely commissioned to proclaim His will to men,

and go forth to found sects and reform the universe. They experience the most extravagant and ecstatic joy, break forth into rapturous songs or ejaculations in the midst of public assemblies, and by gestures, dances, physical contortions, recklessly violate the customs of society and public decorum. Sometimes religious lunatics are possessed with the idea that they should not only mortify their own flesh, but, so far as possible, should persecute to the bitter end all who differ from them in matters of faith. There is no doubt that the cruelty of the religious wars and persecutions of the world has oftentimes been greatly intensified by the insanity of those who were engaged in them.

Some of the most successful founders of religious sects were more or less insane. Francis d'Assisi, Loyola, and Mahomet, and some of the founders of our modern religious orders and denominations, exhibited very suspicious symptoms of cerebral disease. The rise and spread of Spiritualism and Mormonism have been attended with a very painful increase of religious insanity among all those classes who were influenced by these creeds, or who were drawn into the discussions which they called forth. There are about us, in every walk of life, persons who, in matter of religion, are unable to think a rational thought or speak a rational word, and yet, on all other subjects, uniformly show themselves to be perfectly sane and true. It would be hard to conceive of a severer form of earthly misery than is experienced by some of the religiously insane. A gentleman who was at one time under my observation used to depict the horrors of his spiritual condition in language that was at once graphic and appalling. He was harassed, as the religiously insane often are, with fearful doubts and skepticism in regard to the truth of inspiration, the destiny of man, and other dark problems of existence, and neither the advice and sympathy of his friends, nor his own honest efforts, seemed to afford him any ray of hope or joy. He would represent himself as "hanging by one arm over the verge of a precipice, that his strength was gradually failing, and that he must soon fall and be dashed to pieces;" as "surrounded on every side by a cordon of raging fires that were rapidly closing in upon him, and from which there could be no escape." But all this time he was pursuing his regular duties, and not even his intimate friends suspected him of insanity. By my advice he took an interval of rest; but before a year had elapsed it was found necessary to send him to an asylum.

INSANITY IN ITS RELATION TO CRIME.

This subject is too wide for discussion in an essay like this, but I may say in general, that the insanity which leads to the commission of crime is to be adjudged by precisely the same standard as any other manifestation of cerebral disorder. There are certain limits of criminality that no one can overstep without rendering himself liable to the just suspicion of insanity. When men who have sustained even a tolerable reputation in community suddenly commit some hideous outrage at which professed scoundrels would revolt, or execute some great fraud that is certain to be detected, or attempt any sort of crime that is repugnant to the general average of criminals, or from which they cannot reap any advantage, it is pertinent to inquire whether they may not be the victim of some type or degree of disease of the brain. Each individual case must, however, be studied by itself, and both judges and juries should be enlightened by the testimony of competent and reliable experts. The time is certainly not far distant when some of the judicial decisions of the past and present will be regarded as barbarous. There are sometimes arraigned before our courts unfortunate prisoners whose execution by the arm of law would be a greater crime than that for which they were convicted. We have no more right to take the life of a lunatic whose disease has allowed him to violate the laws of society, than we have to enter an asylum and drag its inmates to execution. The fault in such cases, if there be any, is with society itself, so far as it allows unrestricted and unwatched liberty to citizens of dangerous tendencies. It must be confessed, however, that many of the dangerous classes give no evidences of mental disease until they shock community by some terrific fraud or outrage, and therefore cannot in all cases be successfully guarded against. This fact is, perhaps, the weightest of all arguments in favor of the substitution of imprisonment for hanging in all capital offences. In cases where, in spite of unprejudiced care and the skill of experts, a lunatic may have been condemned to suffer punishment, a course of imprisonment might give opportunity for a full understanding of the culprit's mental condition, and the subsequent exercise of executive clemency.

If it be objected, as it may be by some, that the views here advocated would, if logically followed out, lead to the acquittal of many of our criminals, I can only give the familiar reply, that the worst use a man can be put to is to hang him. Confinement is a sure punishment for the really guilty, and a safe probation for the insane. It should be considered, however, that those who are affected with cerebral disease are oftentimes, and to a certain extent, responsible for their condition. When a man commits crime under the influence of ardent spirits, we hold him responsible for getting thus intoxicated. Insanity is likewise preventible in many instances, and those who from carelessness or wickedness allow themselves to fall into it, are to that degree responsible for the crime they subsequently commit. But the same can be said of all the diseases from which we suffer, and yet it is the recognized custom of our civilization to treat all cases of sickness—even those which directly result from vice and crime—with as much care and attention as if they were produced by causes entirely beyond the patient's control. The institutions of humanity teach us that any other course would be un-christian and brutal.

The Use of Political Excitements.

The *Dramatic Review*, a paper which often displays much originality in its articles, discourses as follows on the benefits to be derived from the excitement of a political campaign:

Without the agitation of storms, tides, and currents, the ocean would become stagnant. By such means its elementary particles are kept in motion and transferred from one portion to another, imparting qualities which go far perhaps in sustaining the life of the myriad residents therein. It has become common with some to deprecate our frequent political excitements. They seem to keep the people in disturbance and commotion, and to breed riot and ill feeling. Yet, with all their concomitant evils, we think the condition in the public mind brought about by them better than that of total apathy. The man who shouts for Grant and Colfax, or Seymour and Blair, may know nothing more of the nature of the questions involved in this contest than that he is deeply interested in the election of one or the other of the above mentioned candidates. Yet this zeal leads him more or less out of the all-absorbing interest of self. The very spirit of antagonism prompts him to deeds of comparative liberality. In the excitement of a political campaign many a dollar is expended which could not have been drawn out by any other means. This does a little in wearing away the thick crust of human selfishness. According to their ability, minds are exercised in the discussion of these political questions. True, there is vituperation and abuse. Yet, to many, the folly of this course is made apparent and a warning given for its avoidance. Extreme one-sided views are held. By this, a useful hint is given to the more reflective, in the discussion of any question. The banding together of the people in parties for a common purpose, does establish a sort of brotherhood. The rank and file, at least, are not actuated by motives of pure selfishness. Doubtless the most ridiculous views are held by the ignorant and wrong-headed of either party. Yet it is only by opinion warring and clashing with opinion, that the truth is finally wrought out.

We believe that in all these frequently recurring political agitations the people as a whole are gradually traveling up to higher and more liberal views of life and all therein involved. If there be political corruption it is being more and more exposed. Evils dragged to light are evils half cured. The contempt naturally felt for a total lack of principle may not expend itself wholly on the object pointed out. There comes to all, in some degree, the desire of maintaining self-respect. It may be hardly acknowledged, but so sure as we feel scorn for the turpitude of another, so sure is there lodged in our own heart, the germ of a desire to escape the inward consequences of this turpitude. Political excitements, we think, are productive of the following beneficial results:

First. The agitation of political questions stirs up the general mind to increased thought and reflection.

Second. Topics involving the interests of all in the community beget public spirit.

Third. The crimination and recrimination consequent on party warfare, and the consequent exposure of evil, bring such evil into increased contempt, and is one step towards its removal.

THE FAMILY PAPER OF THE PACIFIC COAST.

THE OCCIDENT.

In every true home there should be found a first class family paper—one to whose coming, father, mother, children will look with eagerness each week. Such a paper is

THE OCCIDENT.

Let all who desire such a paper, and are asking, "What paper shall I take?" read the following statement of facts:

THE OCCIDENT contains a greater amount and variety of reading matter than any other family paper on the Coast. It contains choice selections for all classes of readers. Both the child and the person of cultivated literary taste will find in each number matter which cannot fail to be interesting.

THE OCCIDENT is extensively quoted. No other weekly paper on the Coast furnishes so much matter, either original or selected, to the columns of other papers. Whole columns are frequently taken from one or another of its departments. No stronger proof of its excellence could be desired than the fact that it is so well appreciated by contemporaries.

THE OCCIDENT has a complete Agricultural Department, carefully culled from the best authorities, with all the current agricultural items of our own coast, and full market reports. The Mining Department is also very complete.

THE OCCIDENT gives a summary of Pacific Coast news and of Eastern and Foreign Telegraphic News. These items are not hastily thrown together, but are carefully prepared, and are consequently copied to a great extent. The Personal Department is the most complete collection of personal news to be found in the State.

THE OCCIDENT is the official organ of all branches of the Presbyterian Church, and contains full religious intelligence concerning the progress of all denominations. Although a religious paper, it is not sectarian. Its aim is to make men better and happier by the inculcation of the principles of the Christian religion.

THE OCCIDENT is universally admitted to surpass all other papers in the State, in typographical appearance and systematic arrangement of its contents.

Read what the papers say of

THE OCCIDENT.

"Has commenced its second volume, enlarged and improved and with excellent prospects. It is full of 'knows,' views, and family reading, and is ably edited."—*Brooklyn (N. Y.) Union.*

"It gives evidence of ability, tact, and judgment in its management."—*Cincinnati Presbyter.*

"An able paper of the same form as the *Statesman*."—*Philadelphia Statesman.*

"One of the best of papers."—*Zion's Herald, Boston.*

"Well filled with readable articles. An important accession to the literature of the coast."—*S. F. Bulletin.*

"Its typographical appearance is finer than that of any weekly paper published on this coast."—*Chronicle.*

"A periodical worthy of patronage."—*Sacramento Union.*

"It is already attracting a great deal of attention. Its original articles and judicious selections make it an intellectual treat."—*S. F. Fair Press.*

"The ability displayed gives promise of success."—*S. F. Times.*

"The best style of any weekly issued in San Francisco."—*Pacific Churchman.*

A Call to the Ministry.

Wanted, this way!
A man who does preaching for very small pay:
Who is young, learned, and brilliant, with graces endowed
For pleasing the critics and drawing a crowd—
Wanted this way!

No more ado!
Be off with the old love and on with the new;
The way must be cleared for the in-coming man,
And the present incumbent must shift as he can.
No more ado!

Send him away!
No matter how meanly ye stinted his pay—
How grudgingly gave when the reckoning came,
A sum that should crimson your face with shame—
Send him away!

Hustle him out!
He has wasted his life in your service, no doubt;
Has sown his best years in an ungenial soil;
And this is the reaping that follows his toil—
Hustle him out!

Set him aside!
What though, with his blessing, he gave you your bride;
On the brow of your children the chrism he laid;
And, when you were smitten, wept over your dead—
Set him aside!

Yes, turn him off!
Make duty a by-word and honor a scoff;
Turn your back on the past when these memories wake,
And tread on his heart strings, nor heed if they break;
Yes, turn him off!

Yet, one moment stay!
Those years of self-sacrifice, what shall repay?
What guerdon a life-long devotion receive?
For love so unstinted, what boon will you give?
One moment stay!

Ye may well blush for shame!
When gratitude comes to be merely a name—
When childish pursuit of the gay and the new
Can make you cast off the tried and the true—
Ye may well blush for shame!

The Death of Summer.

By the lengthening twilight hours,
By the chill and fragrant showers,
By the flow'rets pale and faded;
By the leaves with russet shaded;
By the gray and colored morn;
By the drooping ears of corn;
By the meadows overspread
With the spider's wavy thread;
By the soft and shadowy sky;
By the thousand tears that lie
Every weeping bough beneath—
Summer, we perceive thy death!
Summer, all thy charms are past;
Summer, thou art wasting fast;
Scarcely one of all thy roses
On thy faded brow reposes.
Thrush and nightingale have long
Ceased to woo thee with their song;
And, on every lonely height,
Swallows gather for their flight;
While the wild wind's dreary tone,
Sweeping through the valleys lone,
Sadly sighs, with mournful breath,
Requiems for sweet Summer's death.

—*Chambers' Journal.*

The Unseen Precipice.

I recollect one member of Congress, said Governor Briggs, in one of his speeches, who was rallying me about our Congressional Temperance Society:

"Briggs," he used to say, "I am going to join your temperance society as soon as my demijohn is empty."

But just before it became empty he always filled it again. At one time, toward the close of the session, he said to me:

"I am going to sign the pledge when I get home; I am in earnest," continued he; "my demijohn is nearly empty, and I am not going to fill it again."

He spoke with such an air of seriousness as I had not before observed, and it impressed me. I asked what it meant—what had changed his feelings.

"Why," said he, "I had, a short time since, a visit from my brother, who stated to me a fact that more deeply impressed and affected me than anything I recollect to have heard upon the subject, in any temperance speech I ever heard or read. In my neighborhood is a gentleman of my acquaintance, well educated, who once had some property, but is now reduced—poor! He has a beautiful and lovely wife—a lady of cultivation and refinement—and a most charming daughter.

"This gentleman had become decidedly intemperate in his habits, and had fully alarmed his friends in regard to him. At one time, when a number of his former associates were together, they counseled as to what could be done for him. Finally one of them said to him:

"'Why don't you send your daughter away to a certain distinguished school?' which he named.

"'Oh, I cannot,' said he; 'it is out of the question. I am not able to bear the expense. Poor girl, I wish I could.'

"'Well,' said his friend, 'if you will sign the temperance pledge, I will be at all the expense of her attending school for one year.'

"'What does this mean?' said he. 'Do you think me in danger of becoming a drunkard?'

"'No matter about that now,' said his friend; 'but I will do as I said.'

"'And I,' said another, 'will pay the rent of your farm a year, if you sign the pledge.'

"'Well, these offers are liberal—but what do you mean? Do you think me in danger of becoming a drunkard? What can it mean? But, gentlemen, in view of your liberality, I will make an offer. I will sign if you will.'

"This was a proposition they had not considered, and were not very well prepared to meet; but for his sake they said they would, and did sign, and he with them.

"And now for the first time the truth flashed into his mind, and he saw his condition, and sat down, bathed in tears.

"'Now,' said he, 'gentlemen, you must go and communicate these facts to my wife—poor woman! I know she will be glad to hear it, but I cannot tell her.'

"Two of them started for that purpose. The lady met them at the door, pale and trembling.

"'What is the matter?' she inquired. What is the matter with my husband?'

"They bade her dismiss her fears, assuring her that they had come to bring her tidings of her husband—but good tidings, such as she would be glad to hear.

"'Your husband has signed the temperance pledge; yea, signed in good faith.'

"The joyous news nearly overcame her; she trembled with excitement; wept freely, and clasping her hands devotionally, she looked up to heaven and thanked God for the happy change.

"'Now,' said she, I have a husband as he once was, in the happy days of our early love.'

"But this was not what moved me. There was in the same vicinity another gentleman—a generous, noble soul, married young, married well, into a charming family, and the flower of it. His wine-drinking habits had aroused the fears of his friends, and one day, when several were together, one said to another:

"'Let us sign the pledge.'

"'I will if you will,' said one to another, till all had agreed to it, and the thing was done.

"This gentleman thought it rather a small business, and felt a little sensitive about revealing to his wife what he had done; but on returning home, he said to her:

"'Mary, my dear, I have done what I fear will displease you.'

"'Well, what is it?'

"'Why, I have actually signed the temperance pledge.'

"'Have you?'

"'Yes, I have, certainly.'

"Watching his manner as he replied, and reading in it sincerity, she entwined her arms around his neck, laid her head upon his bosom, and burst into tears. Her husband was deeply affected by this conduct of his wife, and said:

"Mary, don't weep; I did not know it would afflict you so, or I would not have done it. I will go and have my name taken off immediately.'

"'Take your name off!' said she. 'Oh, no; let it be there. I shall now have no more solicitude in reference to your becoming a drunkard. I shall spend no more wakeful midnight hours. I shall no more steep my pillow in tears.'

"Now, for the first time, the truth shone upon his mind, and he folded to his bosom his young and beautiful wife, and wept with her."—*Presbyterian Banner.*

Posture in Prayer.

A Sunday-school superintendent, a short time since, requested the members of the school to bow their heads in prayer, as an act of reverential propriety. So unaccustomed were those composing the school and congregation to any uniform attitude in time of prayer, that it became necessary to repeat the request. Now, the question arises, Was this a reasonable request? and what do the Scriptures teach on this subject?

In the 95th Psalm, 6th verse, we have these words: "Oh! come, let us worship and bow down; let us kneel before the Lord our Maker."

Again, 1 Kings viii. 22: "And Solomon stood before the altar of the Lord in the presence of all the congregation of Israel, and spread forth his hands toward heaven." And in the 54th verse same chapter, it is recorded, "When Solomon had made an end of praying, he arose from before the altar of the Lord, from kneeling on his knees, with his hands spread up to heaven." There is, indeed, no intimation here of any change of the attitude of the congregation during the address of the people, and the utterance of this inimitable prayer of Israel's king: but immediately after it is written, "And when the children of Israel saw how the fire came down, and the glory of the Lord upon the house, they bowed themselves with their faces to the ground, upon the pavement, and worshiped, and praised the Lord, saying, For he is good; for his mercy endureth forever." Daniel kneeled three times a day, and prayed and gave thanks. Of Jesus, in his agony, it is written, "He kneeled down and prayed." So of Stephen, Peter, and Paul, on different occasions.

Concerning those of Paul's company, when on his way to Jerusalem, it is recorded, "And we kneeled down on the shore, and prayed." A few instances only of standing in time of prayer are to be found. One is that of the Pharisee and publican. No instance of sitting in time of prayer is anywhere to be found. The prayer of Elijah, 1 Kings xviii. 42, has sometimes been referred to as an example of the sitting posture. The words are as follows: "And he cast himself down upon the earth, and put his face between his knees." This is really only another instance of kneeling. How can the words, in any way, be construed to prove the attitude of sitting?

Now, aside from what the word of God teaches, what is the conviction and practice of men when in fear or trouble? We answer, They uniformly kneel in prayer. Rarely an instance has been known of any one refusing to bow his knees before God in time of great fear and distress.

In view, therefore, of what the Scriptures teach, and in view of what are the honest convictions of men in time of trouble, a reverential attitude in prayer cannot be regarded as a matter of little importance. It is not pretended that the foregoing quotations from the Bible conclusively prove that kneeling is an essential and indispensible attitude to acceptable prayer. This is nowhere affirmed. Kneeling, we think, is the scriptural example; and nothing less can be inferred than that a reverential attitude is eminently proper in time of prayer, and that a superintendent of a Sabbath school cannot do otherwise than inculcate and insist upon such posture, and that uniformity adds to and is essential to the greatest propriety and reverence.—*Christian Banner.*

Interference with Young Folks.

Children come in for an enormous share of interference, which is not direction, nor discipline, but simple interference for its sake. There are mothers who meddle with every expression of individuality in their young people, quite irrespective of moral tendency, or whether the occasion is trivial or important. In the fancies, the pleasures, the minor details of dress in their children, there is always that intruding maternal finger, upsetting the arrangements

of the poor little pie as vigorously as if thrones and altars depended on the result. Not a game of croquet can be begun, nor a blue ribbon worn instead of a pink one, without maternal interference; so that the bloom is rubbed off every enjoyment, and life becomes reduced to a kind of goose-step, with mamma for the drill-sergeant prescribing the inches to be marked. Sisters, too, do a great deal of this kind of thing among each other; as all those who are intimate where there are large families of unmarried girls must have seen. The nudges, the warning looks, the deprecating "Amy's!" and "Hush Rose's!" by which some seek to act as house-hold police over the others, are patent to all who use their senses. In some houses the younger sisters seem to have been born chiefly as training grounds for the elders, whereon they may exercise their powers of interference; and a hard time they have of it. If Emma goes to her embroidery, Ellen tells her she ought to practice her singing; if Jane is reading, Mary commends sewing as a more profitable use of precious time; if Amy is at her easel, Ada wants to turn her round to the piano. It is quite the exception where four or five sisters leave each other free to do as each likes, and do not take to drilling and interference as part of the daily programme.—*The Saturday Review.*

Young Folks.

Dreaming.

He lies 'neath the spreading apple boughs,
My little brother Jim;
No care from the busy world around
Casts its shadow over him.
The golden sheen of his tangled curls
'Mid the clover blossoms gleams.
He is floating out, on the tide of sleep,
To the happy land of dreams.

Dozing there, with his bare, brown feet,
Kissed by the autumn sun;
I think of the brave and earnest path
Our little boy may run.
Toilsome and rough to the idle throng,
Who shrink from the summer heat;
Of noble toil for those who tread
With true and patient feet.

I know there are snares for heedless feet
In the luring haunts of sin,
There is fruit so fair to the passing gaze,
But ashes and dust within.
And I kiss the sleeper's trustful lips,
With a swift and silent prayer,
That the God of his childhood's love and faith,
Be his leader everywhere.

Thus, with never a pang of fear,
With never a throb of pain,
Never a thought of his loyal soul,
As tarnished by spot or stain,
I trace his path up the "royal road,"
Through a vista long and dim,
My childish hero, my gallant knight,
My little brother Jim. —*Little Corporal.*

Up.

The oak-tree boughs once touched the grass;
But every year they grew
A little farther from the ground,
And nearer toward the blue.

So live that you each year may be,
While time glides swiftly by,
A little farther from the earth,
And nearer to the sky. —*Our Boys and Girls.*

What Stella could not Bear.

Estelle Saxton was a very sweet looking little girl, if sparkling nut-brown eyes, dimpled cheeks, clear complexion, and glossy curls can make a sweet face. And if a ringing laugh, and light, buoyant step, show a happy heart, Estelle was happy.

But there was one thing Stella could not bear. And who of you can guess what it was? Some people cannot bear pain. But it was not that, for Stella was very brave. Her mother would tell you, with delight, that Stella would sit right down, in a dentist's chair, and have a tooth drawn, and not shed a tear. Some people cannot bear disappointment. But it was not that. When Stella was going to a charming pic-nic, and her basket of cakes, and sandwiches, and jelly tarts was snugly packed, and tucked in by a snowy napkin under the cover, and her white frock was ready, and just then a big black cloud, that had been creeping up slowly, covered the sun, and big drops plashed against the pane, no drops came to Stella's eyes to mock them. She just looked out a few minutes, in a very womanly way, and then took up her last magazine, and sat down contentedly to enjoy its stories.

What was it then, that Estelle could not bear? Ah, I shall have to tell you. For what is more terrible than a dentist's chair, or worse than a storm at a pic-nic? It was just this: Stella could not bear *sudden good fortune.*

Just as long as Stella's father was "tolerably well off," and Stella had all she really needed, without any care herself as to where it came from, she was a very nice sort of a little girl—kind and gentle at home and school; glad to please others, and very easily pleased herself. But, when it became known through the papers that fortunate Mr. Saxton had from a grand speculation, just been made the happy possessor of one hundred thousand dollars, then it was that little ten-year-old Stella showed that there was something she could not bear. I don't know in how *many* ways she showed it—how many unheard of things she wanted at once; how her mother was teased for this and that from morning till night. But I am going to tell you *one* way in which she showed it; and when you read about it, won't you just stop and think, you Mary, and you Susie, and Lucy, and Hatty, whether you ever saw any one who, like Stella could not bear sudden good fortune. I hope it is not you, though I should like to have you have the good fortune, especially if you bore it like Stella's parents, or even her brother Tom; for they went right along, just as if nothing had happened.

Stella had among her schoolmates a "very special friend." It was Viola Crystal. I don't know whether she was named Viola when she was born because her blue eyes told of the sweet, retiring blossom that was to unfold from the precious bud. But it had unfolded in rare beauty, and every one loved Viola. Every one but Dame Fortune. Viola never slept on a bed of roses. Her father died when she was only three years old, and her mother had struggled hard to live, apparently, as nicely as she did when he was living. Yet she did it; and Viola went to a good school, and played as well on the piano as Stella, and read much better, and found time to be very obliging to all around her. She and Stella had walked, and rode, and slept together. But now there came a change. She could hardly believe it, but Stella was growing cold towards her. She had not been to see her for weeks, and there was something in her manner which, although Viola could not define, made her still feel very unhappy.

Viola's dresses looked so very plain now to Stella! Her plain ruffles and linen bands were so different from Stella's soft, "real" lace! Her hat was not just in style; and altogether, she thought she would not ask her to the party her mother had planned for her coming birthday. It was curious, but Viola had heard nothing about the party until she trod upon its heels in this way. She thought, one very pleasant afternoon, as she sat alone in her little room, after school had closed, "Perhaps I am foolish, after all, about Stella. She hasn't really said or done anything that I can call unkind. I will go and see her to-night, and spend the evening, as I used to do." Stella received her at the door herself, as she rang the door bell; but although with a smile and pleasant word, there was evident embarrassment. Viola wore her plain, spotted, muslin frock, with no ornament but a blue bow at the throat; and Stella looked elegant in her rich plaided silk, and handsome bracelets, and chain. Viola hardly thought of this, as she stood looking at some new books in a handsome case, in Stella's room, a present from her father; when pretty soon the door bell rang, and in a moment Bridget came up to say to Miss Estelle that Gabrielle Easton was in the parlor. "I will be down directly," she said, with a sly look at Bridget, which Viola noticed, but did not understand. Then another ring at the door; and this time it was Grace Floy, a cousin of Viola's, and a friend of both. The third time the bell rang; and then Stella said,—

"You must come down to the parlor with me—won't you Viola?"

"Is any one else to be here? Did you expect Grace?" Viola asked, a little hurriedly, as she noted Stella's annoyed look, and was herself partially thrown off her guard.

"Yes, there are a few girls coming in to-night. I suppose I ought to go down now. Won't *you* go down?"

Viola managed to say, "No, I thank you;" and contrived to get out of the front door between the ringings of the bell, and stole softly up to her own room.

It was the fact of its being Stella's birthday that had induced Viola to make the visit; and as she drew from her pocket the little miniature of herself she had carried with her as a token of love—for they had long exchanged birthday gifts—she looked at it, and burst into tears. "I tried so hard to get it; after all!"

Poor Viola! She found there was one thing very hard for her to bear—*change in a friend.* It was a hard lesson to Viola. She never forgot it; but she stood firmer for the shock. She turned to truer friends for deeper love, and, above all, to the "Changeless One," where, indeed, all must go for the surest, sweetest, most perfect peace.—*Our Boys and Girls.*

What Trying Did.

"Children, I want each of you to bring a new scholar to the school with you next Sunday," said the Superintendent of a Sunday-school to his scholars one day.

"I *can't* get any new scholars," said several of the children to themselves.

"I'll *try* what I can do," was the whispered response of a few others.

One of the latter class went home to his father and said:

"Father, will you go to the Sunday School with me?"

"I can't read, my son," replied the father, with a look of shame.

"Our teachers will teach you, dear father," answered the boy, with respect and feeling in his tones.

"Well, I'll go," said the father.

He went, learned to read, sought and found the Savior, and at length became a colporteur. Years passed on, and that man established *four hundred Sunday Schools*, into which *thirty-five thousand* children were gathered.

Thus you see what trying did. That boy's effort was like a tiny rill, which soon swells into a brook, and at length becomes a river. His efforts, by God's grace, saved his father; and his father, being saved, led thirty-five thousand children to the Sunday School.—*Rev. P. B. Power.*

The Brave Boy.

As two boys were on their way from school one day, in passing a corn-field, where were some plum trees full of fine, ripe fruit, Henry said to Thomas:

"Let us jump over and get some plums. Nobody will see us, and we can scud along through the tall corn and come out safe on the other side."

"I cannot do it," said Thomas; "it is wrong. I do not want plums if I have to steal them."

"You are a coward," said Henry; "I always knew you were a coward; and if you don't want any plums, you may go without them, but I shall have some very quick."

Just as Henry was climbing the fence, the owner of the field rose from the other side. On seeing him, Henry jumped back, and ran off as fast as his legs could carry him.

Thomas, who had no reason to be afraid, stood still. The owner, having heard the conversation, told Thomas to step over and help himself to as many plums as he wished.

The boy accepted the invitation, and very soon filled his pockets with the ripe fruit.

Which of these two boys was brave—the one who called the other a coward, but ran away himself, or the one who said that he was afraid to steal and stood his ground?

News Summary.

PACIFIC COAST ITEMS.

Railroad Items.—On the Central Pacific Railroad, rails are being laid by moonlight....A train on the Union Pacific road recently encountered a large band of elk, which followed the cars for several miles....The *Yreka Journal* says that the prospects are very favorable for the Northern Railroad to be extended northward soon, and the President has promised to build 150 miles next summer, which will bring it pretty close to Yreka....The railroad is completed between San Jose and Santa Clara, and the horse cars have commenced making their regular trips. The inferior cars now in use will be soon replaced by more convenient and elegant ones, which are being built in this city....Over 5 miles of the Los Angeles and San Pedro railroad have been completed....The Sacramento steamers now take freight for all points on the Central railroad....The cars are now running from Vallejo to Sacramento.....The railroad is now completed to Shoshone Point, about twelve miles above Argenta, and the work is being pushed with great vigor, as an abundant supply of iron has at last been obtained on the ground. ....The Suscol Branch Railroad has been incorporated, with the design to build a railroad from Suscol through Napa and Sonoma counties to some point on the Humboldt Railroad.

The town of Santa Cruz contains 47 stores, 3 hotels, 5 restaurants, one private boarding house, 27 saloons, 2 breweries, 2 livery stables, 3 temperance organizations, 2 lodges of Odd Fellows, one lodge of Masons, 6 churches, 2 public school houses, (in one district,) one seminary for young ladies, one foundry, one gas works, one barrel factory, 2 planing mills, 7 barber shops, 2 photograph galleries, 3 printing offices, one glue and soap factory, and one dancing academy, all within the town limits. The Public School library contains 300 volumes, and is valued at $335.—*Pajaronian.*

The beavers along the line of the Pacific Railroad seem disposed to do all in their power for the cause of civilization. The Laramie River is being dammed at different points to facilitate the work of procuring ties for the road, and after the workmen quit for the day, the beavers take their turn and work hard all night, repairing and extending the dam.

A writer in the *Overland* quotes Mallet to show that "an earthquake, however great, is incapable of producing any permanent elevation or depression of land, (unless as secondary effects)." How comforting must it be to the minds of our citizens, to feel that if they are ever submerged with their possessions beneath the waters of San Francisco Bay, it will be only "as a secondary effect!"

The *San Diego Union* says that active preparations are being made for the reception of the large number of whales which may be expected to pass that port some time in December. The whale captured in that region is of the species called "Devil Fish," and usually yields about 25 barrels of oil.

After many days' alternation of hope and fear in the ranks of the two political parties, it seems at last settled that the Republicans have gained a decided victory in California.

The Republicans are to have a grand torchlight procession to-night. The day for the demonstration on the other side has not, we believe, been settled.

The *Spectator* says that property in Placerville has depreciated *seven hundred per cent.* The *Chronicle* calls this "amazing arithmetic."

The Regents of the University have accepted the design for a three-story wooden building to cost $46,000.

The receipts of California flour and grain from July 1st to Nov. 1st, amount to 4,137,000 centals.

The first snow of the season fell on Mount Davidson, near Virginia City, last week.

The colored school in this city was re-opened last week.

The *Vallejo Chronicle* is now published as a daily.

TELEGRAPHIC.

Eastern.—A financial panic has prevailed in New York for the past week, but has been somewhat relieved by the action of the Secretary in re-issuing legal tender notes which have been redeemed, but not cancelled....The public debt is now $2,527,129,552 82....The President has accepted an additional 20 miles of the Central Pacific Railroad, making 370 miles east from the starting-point....The Surratt case is now ended.

Southern—The Governor of Florida has been impeached by a three-fourths vote of the Legislature. He will contest the case, not believing the Legislature to be a legally constituted body....2,000 stands of State arms were seized by unknown parties in Madison, Tenn., and destroyed....There is great danger of another collision between the whites and blacks in Savannah.

Personal.—Gen. Brooks succeeds Gen. Canby in the command at Washington....Gen. Canby takes command of the Department of Texas....Gov. Crawford, of Kentucky, has resigned....Gen. Dolce refuses the title of Duke offered him by the Provisional Government of Spain....Gen. Butler and John Morrissey are re-elected to Congress by large majorities....Gen Grant has gone to Washington. He declines the honor of a public reception.

Political.—Further returns from the elections in the East do not change the results as stated last week. Dispatches during the past week have consisted mostly of particulars respecting majorities in the several States, and of returns from Congressional Districts. Returns from the Southern States come in slowly. It is possible that the Republicans have carried one or two of them in addition to those already named, and they have elected several Congressmen in States carried by Democrats....Immense frauds in issuing naturalization papers are proved to have been committed in New York.

Foreign.—The Liberal party expect a majority of at least 100 in the new House of Commons....Many desertions from the Papal army are reported....9,000 soldiers are to be sent immediately from Spain to Cuba, to preserve order. ....There is a prospect of a new insurrection in Yucatan. ....The Spaniards in Mexico, generally favor the revolution in Spain....The Foreign papers generally regard Grant's election as a triumph of free government....The insurgents in Cuba favor annexation to the United States....The Italian minister will arrive in Mexico, soon.

SPECIAL NOTICE.

The leading Clothing House on the Pacific Coast is that of Heuston, Hastings & Co., Lick House Block, San Francisco. Fashionable Suits, Business Suits, Gentlemen's Furnishing Goods of all descriptions, may be found there at satisfactory rates. Give them a call and prove the truth of this statement.

Oakland Academy.

A CLASSICAL, ENGLISH, & MILITARY BOARDING SCHOOL

REV. DAVID McCLURE, Principal.

The Eighth Term of this Institution will commence on Wednesday, July 8th, 1868, in the new Academy building, recently erected on Telegraph Road, one mile from the Railroad Depot.

The location and plan of this new building have been made with the design of securing for the students a home of beauty and refinement.

Careful provision is made for thorough and extensive courses of study in English, Mathematics, Natural Science, and the Ancient and Modern Languages. A special course is also provided for those who are preparing for a commercial life.

In addition to these courses there is a daily military inspection and drill, together with vocal and light gymnastic exercises, under the instruction of a teacher. Every student is required to attend the military and gymnastic exercises, as a means of physical training.

For the mental, moral, and physical culture of each pupil committed to his care, the Principal holds himself responsible.

Further particulars may be obtained by addressing the Principal at Oakland,

ALLEN'S ORIGINAL AND GENUINE

Nerve and Bone Liniment.

The Nerve and Bone Liniment was originated by Geo. M. Allen, in the year 1884, and has lived entirely on its own merits without the aid of advertisements; but owing to the many counterfeit and worthless articles called Nerve and Bone Liniment, now upon the market, has induced the proprietors to advertise it. Many certificates of leading citizens who have used and constantly keep it in their houses, as a great family remedy, could be added to the advertisement, but knowing the many virtues of Allen's Nerve and Bone Liniment, and that one application will satisfy any one of its beneficial effects, deem it unnecessary to bring the certificates before the public. Allen's Nerve and Bone Liniment does not effect a cure in a minute, but acts upon the Nerve and the Bone of the patient by its penetrating properties, when used according to the directions on each bottle, and gives new strength to the parts affected, and thus acts as an agent in helping nature to restore the diseased parts to health. It is also invaluable in all diseases of horses.

Be sure to call for Allen's original and genuine Nerve and Bone Liniment, all others are worthless counterfeits, and should not be tolerated by the public.

CURRENT TOPICS.

In common with others, who are warmly devoted to the cause of education, we confess to entire misjudgment respecting the probable action of those gentlemen who are to control the State University. We erred because we thought it was to be a *State* University. We have been taught otherwise, and now understand that it is a party institution, in which party lines are most distinctly drawn at the very beginning, and in which politics is to be the presiding genius. General McClellan has been made President by a strictly party vote, and we should have regarded his election as equally unfortunate had he been elected by Republicans, as now that Democrats offer him the place. It is not the choice, but the spirit whose rule in the Board it so plainly indicates, which most affects us, and whether General McClellan accepts the position or not, it is not to be disguised that the Regents have lost the confidence of a large portion of the people, as being men devoted to the great trust committed to their hands. Perhaps they will recover it. We hope they will. Yet it is a serious calamity that an institution which commenced its life with such brilliant prospects should so soon have gathered a cloud over its future that might so easily have been avoided.

The Reformed Presbyterian Synod could hardly have expected that the summary expulsion of Mr. George H. Stuart and his suspension from the Church would be received with such universal condemnation, though, so far as we have observed, the papers of that denomination support the Synod in their action. A few weeks ago the venerable Dr. Duff, whose name has been known over the world for years past, wrote a long letter in which he most severely censures those who passed sentence upon a member in his absence, and without trial. And more recently a Presbytery of the Reformed Church in India passed resolutions that virtually declare separation from the jurisdiction of the Synod, while their course is justified. It is probable that such decided remonstrance from so many quarters may have effect to bring about a reconsideration of the case. Certainly, it would seem just that Mr. Stuart should have a hearing in his own defense, whether finally condemned or not.

Whatever may be the truth respecting the political result of the revolution in Spain, the prospect for general religious influence among the people has never been so cheering as now. The country is Papal, of course, and will be for years to come, but the power of priestcraft has been greatly diminished and there is opportunity to reach the masses with the truth. This is understood by those who are watching for all such changes in Europe, and they are making arrangements to do all in their power at once, for the evangelization of Spain. A union meeting was recently held, by the friends of the American Bible and Tract Societies, and the American and Foreign Christian Union, the object of which was to consider the best means for prosecuting this work. The feeling was general that there is an inviting field for colporteurs to circulate the Bible and Protestant literature, where until now it has been almost impossible to do this, and the purpose was expressed that there should be no delay. In England similar meetings have been held, and the probability of success seems to have awakened Christians everywhere to put forth some effort for a country, which has, by common consent, been left out of all calculations of Protestant progress.

It is proposed by some of the leaders in the Democratic party that the names of the defeated candidates be not introduced into the Electoral College, but that all the electors vote for Grant and Colfax. If a spirit of patriotism, or a disposition to bury party feeling, is the motive for this propostion, it may be welcomed as a cheering indication that we are about to come forth into better and brighter days. We most devoutly hope this may be true, and that the design of these men is not to embarrass the incoming administration by placing the President under a kind of obligation to those whose counsel he may afterward not feel at liberty to reject, if he believes it to be unwise. No time could be more appropriate for the exercise of those feelings which rise above all selfish and partisan considerations than this, in which great national interests are in jeopardy, and most difficult questions are to be settled. No sign of promise would be more cheering than the sincere union of all in the purpose that those upon whom Providence has laid the responsibility shall have the sympathy and, as far as possible, the co-operation, of their fellow-citizens in the attempt to harmonize and re-establish the disturbed elements of the Republic. We are willing to believe that prominent men of all parties are of this opinion, and that this has been the motive for the proposition to which we have alluded. Whether their counsel shall be accepted or not, let the spirit it may indicate become universal and the fears of many will be rapidly dispelled.

One marked effect of the late severe earthquake has been a change in the manner of building, both in the city and in the country. It had almost been forgotten that there is any danger from convulsions of the earth, and structures too frail even to withstand the winds, and often shaken by them to their foundations, were reared and dressed with ornaments, and accepted as homes and places of business, in all parts of the country. Those who still retained a wholesome memory of the past, and felt that the thing that has been is the thing that may be, were thought at least to be needlessly fearful; and the builders of plain, substantial, solid houses and blocks were regarded as old fogies, who were not up to the times in this new and fast country. Suddenly, old fogy ideas have become popular, and since the chief danger apprehended from earthquakes among us is that the buildings may not hold together, special pains are now taken to construct them so that they shall be as firm as possible. The teacher was not pleasant, but the lesson is most important.

The year 1868 will be memorable for some of the most remarkable natural phenomena of which there is any record. Storms and tornadoes in various portions of the world marked its earlier months; earthquakes and volcanic agitations that have been as fearful in some countries as any mentioned in history, and extended over a larger part of the earth than at any former time, have distinguished its middle months; and meteoric displays in the heavens, more brilliant than ever before observed and so general as to be reported in Europe and all parts of America, have thus far signalized its later months. What is yet to be, before the year shall end, cannot be foretold even by those who claim that they predicted these wonders, though they do not withhold their announcement of coming marvels. It is the part of philosophy to seek an explanation of the facts which have forced themselves upon our notice. It is the part of religion, reverently to bow before Him who so fearfully and grandly reveals His power in nature, and seek His favor. They should join hands in these respective offices, for religion is never more beautiful than when it is intelligent, and philosophy is never more worthy than when it is religious. These are not the times for skepticism, but for humble, yet earnest, deep-questioning faith.

The panic in New York in financial affairs, though not likely to extend now over the country, should warn us of the necessity that we become less reckless and extravagant in the use of money. That there will be a universal panic, and revulsions so wide-spread as to be dreadful in their effects, unless the habits of our people are radically changed, is only a question of time. Financial skill and expedients may put off the evil day. Devices however do not create gold, they only substitute something for it. In time, all that is bought, and used, or wasted, must be paid for. The substitutes must be exchanged for that substance which they represent, and then the superstructures of wealth based on these will come down with a crash. Such facts as have been furnished by Wall Street, during the last month, ought not to be without their wholesome influence over the land. Extravagance is likely to be more dangerous than any other evil, and our people will be wise if they check it while this is possible.

That the resources of the Pacific Coast are yet undeveloped could not be more clearly proved than

by the present excitement respecting the silver mines of White Pine. Undoubtedly many of the reports as to the amount of silver on the surface of the ground, and the ease with which it may be obtained by mining, are exaggerated. Yet there is no doubt that, notwithstanding all the prospecting of years through every accessible region, where it was supposed the precious metals could be found, there is a wide tract called by the general name of White Pine, in which almost unprecedented reward will come into the hands of those who search for the treasure that can scarcely be said to be hidden. Similar discoveries of other metals and minerals are often made in different parts of our territory, so that it has become almost literally true that nothing valuable that is furnished by any portion of the earth is wanting on the western slope of the Sierras. What is needed by us is a class of population sufficient for our broad surface; not of temporary residents, who will never be thorough, either in their explorations or their work, but of those who intend to remain in the country, and who will give time, and patience, and study to the work of revealing what may here be produced. This is true, even when the agricultural capacity of the country is considered, for none really comprehend yet what may be raised out of our soil in all its varieties, and new facts are made known every season which surprise all. Still more is it true respecting the universal products of the mountains. They are essentially undeveloped, and waiting to pour untold wealth into the hands of those who shall be able to unlock the storehouses.

Religious Intelligence.

PACIFIC COAST.

Y. M. C. A.—The new building of the Association, on Sutter Street, was formally dedicated on Monday evening, in the presence of as many friends and members as the Hall would accommodate. Rev. A. L. Stone, D.D., offered the dedicatory prayer, after which the Chairman of the Building Committee read his report. This report contained an account of the early efforts of the Association toward procuring a suitable lot and building, the many difficulties in the way, and the manner in which these difficulties have been met and at last overcome. The first movement looking directly to the erection of a building was the holding of a floral festival in 1859, which yielded $1,167. In 1861 a bequest in behalf of the building fund was made by Mr. Caleb Cameron. From that time until 1866, although efforts were made at different times, little progress was made, either in raising money, or courage to build without it, which, as is proved by the great rise in the value of real estate, would have been the wiser plan. The following extract from the report will be read with interest:

A committee was chosen to consider the expediency of purchasing a lot and the estimated cost of a building. That committee, consisting of James A. Banks, Charles Spencer (both since deceased) and the writer, met several times, and had under consideration the purchase of a lot opposite the present site of the Lick House, for the sum of $6,000. It was estimated that a building suited to the modest wants of the Association could be erected for a like sum. After much consultation, it was finally decided that the location, not being near enough to the centre of business, and out of the line of travel, was unsuited to our purpose. In the light of subsequent events how strange the decision! It was also considered poor financial policy to burden the Association with a debt of $12,000 against a credit of only $1,000. The time seemed inopportune and the risk too great of losing the whole under the weight of accumulated interest. It was deemed better policy to add to our funds from year to year, until a sufficient sum should be obtained to purchase what we wanted. In the meantime we should bend all our energies toward making the Association a *leading* institution in the community: foremost in *every* good work.

The writer records with shame that it was mainly owing to his opposition, for the reasons named, that this result was reached. He has lived to see the fallacy of former reasoning, and to learn by bitter experience that an association, like an individual, cannot be a power in a land without the means and appliances of power. The soul must have a body if it would walk a giant among men. This building, my brothers, is our material covering, our body, and it behooves us to show if there is a soul within, directing, animating and blessing, so that these walls may be made to speak for the honor and glory of God.

During the year 1866 the efforts of the Association were more successful, considerable money being raised by the expedient of raising the price of life-memberships from $25 to $100, and by giving a series of festivals in behalf of the cause. The lot on which the new building has been erected, was purchased on Jan. 23d, 1867, at a cost of $19,075.

A general description of the building has been given in The Occident. The total cost of the lot and building is stated to have been$80,375. The debt at the present time is $60,000, of which $45,000 is funded.

Rev. Jas. Eells, D.D., addressed the meeting after the reading of the report, and delivery of keys, &c., to the new President, and Rev. Dr. Stone pronounced the benediction.

A social reunion of the various Church Literary Societies took place at the Hall on Tuesday evening, which was an occasion of great pleasure to all present.

Episcopal Church in San Diego.—On the last steamer that arrived here from San Francisco, there came the Rev. Mr. Wilber, an Episcopal clergyman, for the purpose of organizing a church of his pursuasion here. Last Sabbath he preached a sermon in the Government Depot building. For a new place, his congregation on that occasion was a very large and respectable one. There were some 70 grown people present. Next Sunday there will be organized a Sabbath School for the "little folks" of the place. This will be a new feature here, being I believe, the first school of the kind ever organized in this place under Protestant auspices. Success to this, as well as all like enterprises. They are in the right direction, and do more for the permanent prosperity of a place than any other one thing that can be mentioned.—*Cor. S. F. Times.*

Bible Society.—The *Enterprise* says that the Storey County Bible Society is quietly but faithfully at work. They have established a depository at a store in Virginia City where Bibles and Testaments of all kinds can be obtained more cheaply than elsewhere. They have appointed Mrs. Stoutenburg as their colporteur, and she will very soon canvass the county for the sale of Bibles and Testaments.

The Third Annual Meeting of the California Prison Commission will be held in the Hall of the Young Men's Christian Association, on Sutter St., on Monday evening, the 23d inst, at 7½ o'clock. The Annual Report will be read by the Secretary, and short addresses may be expected from Rev. Dr. Lucky, Principal of the State Normal School, and Rev. Dr. Eells.

Change.—The Alamo *Presbyter*, the organ of the Cumberland Presbyterians on this coast, is to be removed to Stockton, after January 1st. It will also change its name, and appear as the *Pacific Observer*.

Portland.—The First Presbyterian church, under the care of Dr. Lindsley, seems to have started upon a new career of prosperity. By a recent effort the debt of $4,000 has been paid, and several hundred dollars have been raised for the purpose of repairing the church building.

Catholic.—The new Catholic church at Suisun, was dedicated on Sunday, 8th inst., by Archbishop Alemany, assisted by other priests.

EASTERN.

Inauguration of President McCosh.—The large attendance at Princeton on the day of Dr. McCosh's inauguration was a significant proof of the awakened interest felt in this venerable college. Numbers of distinguished and learned men from New York, Philadelphia, and other parts of the land were present. The First Presbyterian Church, in which the services were held, was filled to overflowing—the ladies filling the galleries, and the students, invited guests, and Trustees, with the Faculty of the college occupying the stage and the lower part of the church.

Governor Ward, the chief magistrate of the State of New Jersey, presided, and the Rev. Dr. Stearns, of Newark, New Jersey, Moderator of the General Assembly of the New School Presbyterian Church, opened the services with an invocation.

The address of welcome to Dr. McCosh, on behalf of the Board of Trustees, was made by the Rev. Charles Hodge, of Princeton; the address to the Alumni of the College by William C. Alexander, of New York City, and the response, in behalf of the Alumni, by ex-Governor Pollock, of Pennsylvania. The address of welcome, in behalf of the students was in Latin, and was delivered by J. Thomas Finley, of Alabama. All of these addresses were of unusual excellence and fitness.

The oath of allegiance to the Government of the United States and of New Jersey, and the oath of office, were administered to Dr. McCosh by the Hon. A. O. Zabriskie, LL.D., Chancellor of the State of New Jersey, after which the keys of the College, the charter, and a copy of the laws, were delivered to Dr. McCosh by the Rev. Dr. Maclean, the retiring President, with a few appropriate remarks.

Dr. McCosh then delivered his inaugural discourse, an elaborate and able discussion of the subject of "Academic Teaching in Europe," closing with a reference to the eminent position to which he had been called, and asking from the friends of the College the means for its sustentation and increased usefulness.

The concluding prayer was offered by the Rev. Dr. Musgrave, of Philadelphia, Moderator of the Assembly of the O. S. Pres. Church, the doxology sung, the Apostolic benediction pronounced by the Rev. Dr. Ferris, Chancellor of the University of New York, and the exercises of the day closed. In the evening, Dr. McCosh held a reception in the President's house, which was largely attended. The College buildings and grounds were illuminated, and were filled with promenaders. It was announced that Robert Bonner, of the New York *Ledger*, had given $10,000 to erect a gymnasium for the use of the students, and it was understood that two other liberal donations to the funds of the College had been made.

The welcome of Dr. McCosh was hearty and generous, and the best wishes of all go with him in his assumption of the high office to which he was thus inducted.—*Presbyterian.*

Synod of Kentucky.—The free conversation on the state of religion in the bounds of Synod revealed, with many causes of discouragement and many occasions of sorrow, not a few grounds of encouragement. The divisions and strifes of the past have created alienations which are not yet healed, and probably will not be for years to come. Bitterness of spirit has been engendered which is not yet allayed. Oppositions have yet to be encountered. Yet, in all these respects, the history of the past year shows signs of encouragement. The state of things in many of our congregations is better than it

was a year ago. The people of God in many places are brought nearer together; and a spirit of earnest longing is manifested among them for the return of God's Spirit in His quickening and reforming power. Nevertheless, the ways of Zion mourn; her desolations are grievous, and it behooves the children of faith to walk humbly before God, that He may return and visit us from on high.—*Western Presbyterian.*

How the Lutherans Decide Theological Questions.—One of the soundest and most learned Lutheran faculties now in the world is that of the University at Dorpat, in Russia. A few years ago the Synod of Iowa laid before this faculty certain questions in dispute in this country, requesting their judgment and opinion concerning them. Among the rest was one touching the relation of Chiliasm, and certain teachings about the Millenium and the Last Things, to the confessions of our Church, and to Lutheran doctrine in general. The learned professors of that University were so condescending as to take the points under careful consideration, and gave a long and able reply to each of them.—*Latheran.*

U. P. Church.—A new church edifice on Berkeley Street, Boston, Massachusetts, has been commenced by the Rev. Dr. Blaikie's Society. The First Church, Cincinnati, has given a call to the Rev. John Kinnear, of the Presbyterian Church, Ireland, now visiting this country. Mr. Wm. Getty, of Philadelphia, was nominated for Moderator of the Synod of New York, at its late session at Broadalbin. This was an unusual feature, to nominate a Ruling Elder for this office. He lacked but a few votes of being elected.—*United Presbyterian.*

Strength in Union.—The Oswego, N. Y., Congregational Association, at its meeting, Oct. 13th received a new church, that at West Monroe. This church was recently formed of members of a Presbyterian, a Methodist, and a Baptist church in the town, all which were pastorless and nearly spiritually dead. It is curious that, desiring to combine, they settled on Congregationalism. It was stated that before this movement there had not been a conversion in town for ten years.—*Independent.*

Baptist Home Missionary Society.—This society has received the past year $135,736, being $6,237 less than last year. This deficiency is in the freedmen's fund, which falls $12,000 short of last year. The society has sustained 331 missionaries, who have baptized during the year, 6,712 converts and gathered 11,519 members in the church. A larger number of colored theological students have received instruction than are collected in all the Baptist seminaries of the Northern States.—*Independent.*

First Sabbath in December.—A number of the Synods of our Church have joined in recommending the observance of the first Sabbath in December as a day of special prayer in behalf of missions, both foreign and domestic, and have directed pastors, and all persons supplying pulpits, to observe that day as a day for special instruction concerning the great enterprises of the Church, and the duty of all its members to assist in carrying out these enterprises.—*N. W. Pres.*

Resigned.—The Rev. Dr. W. L. Breckinridge has resigned the Presidency of Centre College, Ky., having accepted a call to the church at Pleasant Hill, Missouri. The Trustees of the college were reluctant to receive Dr. Breckinridge's resignation, but yielded to his own repeated wish to retire. Professor Ormond Beatty, Vice President of the college, will be the acting President until the vacancy is filled by the Board of Trustees.—*Presbyterian.*

Week of Prayer.—In prospect of the coming New Year, and mindful of the great blessings graciously vouchsafed by God in answer to the united supplications of His people, the Evangelical Alliance cordially renew their invitations to Christians throughout the world, to observe a Week of Prayer in January next.

Ordination in Missouri.—Ten young men were ordained at the late meeting of the Synod of Missouri, at Kansas City, by the Presbyterians of Kansas and Lexington, in one evening. Such an event was never before seen in the West, and its parallel has seldom, if ever, been seen in our whole land. The exercises were deeply interesting and solemn, and will not soon be forgotten by any who witnessed them.—*N. W. Presbyterian.*

Wilmington.—The Fifth Presbyterian Church was organized in Wilmington, Delaware, on Monday evening, October 19th. It starts with a membership of 97 persons, and a promise of nearly $10,000 from the Central Church.

Rev. Thomas Hill has resigned the Presidency of Harvard College, and his resignation has been accepted. Dr. A. P. Peabody has been chosen as his successor.

Call.—The congregation of the South Street Presbyterian church, Morristown, New Jersey, have called the Rev. Edward W. French, of Bergen.

Minnesota.—Nine new churches have been organized in the Synod of Minnesota during the last year, including three new Indian churches.

FOREIGN.

Council at Rome.—Private letters from authentic sources in Rome state that the bishops of the Greek, Armenian and Nestorian Churches are to be invited to attend the Œcumenical Council, and to take part in the discussions, but not in the voting. The reason for this is that the Catholic Church has always recognized the orders of these churches to be valid, although they are in schism. On the other hand, there never was any question of inviting the Anglican prelates to attend the Council, because the orders of that communion have always been deemed invalid, and both bishops and clergy looked upon as mere laymen. It is supposed that the government of Russia will do its utmost to prevent the bishops of the empire from attending the Council, for in that country, Erastianism, pure and simple, is the order of the day. The bishops of Greece proper will also very probably be prevented by Russian intrigue from attending; but from all parts of Turkey, Bulgaria, Asia Minor, Palestine and Syria, a great number of Greek prelates will proceed to Rome. In this connection it may be worth while to mention that Pius IX. has not abandoned all hope that the heretics may be brought back to the Roman Church. He is said by a cable dispatch to have addressed an Apostolic letter to all non-Catholic religious bodies announcing the Council and urging them to seize the occasion thus offered of joining the Church.—*Northwestern Presbyterian.*

Hinduism.—A striking proof that the influence of Hinduism is waning, was given at the late festival in honor of Juggernaut. The crowd of devotees, eager to draw the car, did not appear, and for a time it stood still. The next day the priests were enabled to move the car slowly, but no enthusiasm was manifested, and it was plain that the glory of Hinduism has departed.—*Congregationalist.*

The American Chapel in Paris.—Rev. Dr. Hedge writes from Paris that the preaching in that city in the English language—referring to that of Dr. Robinson, lately of Brooklyn—is very badly Calvinistic, and recommends that the Unitarians and Universalists here and in England unite in establishing regular services there. Dr. Chapin heartily approves the suggestion.—*Independent.*

The Wesleyans of Great Britain, last year, repaired and built 260 churches, at an expense of £289,822, or nearly $1,500,000 in gold. Seventy-eight of these new churches were built where formerly they had no church accommodations, thereby furnishing sittings for 22,139 persons.

Sound Doctrine at a Low Price.—An Englishman has opened an office for the manufacture and sale of sermons, "whereby every clergyman of the Church of England who subscribes to it can have it in his power to deliver a carefully-written, sound, orthodox sermon every Sabbath."

Formosa.—Serious difficulties have overtaken the Presbyterian mission in Formosa. A Chinese convert has been stoned to death, a native catechist is in prison, and a mission chapel has been destroyed. —*Independent.*

Oakland Academy.

A CLASSICAL, ENGLISH, & MILITARY BOARDING SCHOOL

REV. DAVID McCLURE, Principal.

The Eighth Term of this Institution will commence on Wednesday, July 8th, 1868, in the new Academy building, recently erected on Telegraph Road, one mile from the Railroad Depot.

The location and plan of this new building have been made with the design of securing for the students a home of beauty and refinement.

Careful provision is made for thorough and extensive courses of study in English, Mathematics, Natural Science, and the Ancient and Modern Languages. A special course is also provided for those who are preparing for a commercial life.

In addition to these courses there is a daily military inspection and drill, together with vocal and light gymnastic exercises, under the instruction of a teacher. Every student is required to attend the military and gymnastic exercises, as a means of physical training.

For the mental, moral, and physical culture of each pupil committed to his care, the Principal holds himself responsible.

Further particulars may be obtained by addressing the Principal at Oakland.

City Female Seminary,

CORNER OF MASON AND O'FARRELL STREETS.

REV. CHARLES RUSSELL CLARKE, A.M., Principal.

TERMS—$6, $8, and $10 per month. French, $2.

E. A. LAWRENCE,

No. 620 WASHINGTON STREET, ROOM 3,

SAN FRANCISCO,

Counselor at Law.

Particular attention given to Suits concerning Real Estate.

Correspondence.

From the Pacific Railroad.

Truckee, Cal., October, 1868.

This is a station on the Pacific Railroad, at the Eastern base of the Sierra Nevada mountains, and a short distance below the outlet of Donner Lake. Here the waters of Tahoe Lake unite with those of Donner forming Truckee River, a stream of surpassing clearness, beauty and grandeur of scenery. As it flows away eastward in its rapid course, to lose itself in the dry valleys of Nevada, a water power is afforded, sufficient to drive all the machinery needed in the region, for ages to come. Here dense forests composed of various species of pine, cover the long slopes of the Sierra Nevadas up to their very summit, and afford an inexhaustible supply of the choicest lumber. Without this immense supply of timber it is not easy to conceive how the western portion of the great Continental road could have stretched itself across the great basin towards Salt Lake. From the base of these mountains, stretching eastward for 2,000 miles, there is no timber adequate to Railroad and building purposes.

Forty-two steam saw mills have been erected in the vicinity of Truckee during the past season. These mills are now turning out about 2,000,000 feet of lumber daily, and for this purpose employ about 1,000 men. Connected with the railroad and other business, another 1,000 people are said to be here.

MY VISIT.

Our Committee of Church Extension on the Pacific, learning of the rapidly increasing interests at Truckee and also that the place had been visited by no minister of Christ, asked me, after our late meeting of Synod in San Francisco, to visit and explore the place, in view of sending a permanent missionary. One Sabbath has been spent and my visit has been one of much interest and apparent success. The place on the Sabbath was the most irregular and wicked camp that I have seen, the army not excepted. The 42 saw mills cease running on the Sabbath, and the 1,000 employés gather into the new town. Although the drinking places, billiard saloons and gambling holes are already quite numerous, yet they could not hold half who seemed desirous to enter; hence the street was also full of men engaged in all manner of foolish and blasphemous wickedness.

RELIGIOUS EXERCISES.

Arriving too late in the week to gain any intelligence, I learned on Sabbath morning that a few persons were making an effort to establish a Sabbath School. These were soon found and assisted, and at the hour for meeting, in addition to the few children present, I had a Bible class of twelve grown persons. Preached to these and some others after Sabbath School, and announced preaching again at eventide in a new school-house. At the hour the house was full.

After sermon, I stated to the audience the special object. Asked them whether, without any effort to have thrown in some healing leaven, they were content to have their new abode every Sabbath as this one, and finally invited all present who desired the coming of a missionary to rise. Every one in the house arose; one woman, in addition to rising, held up both her hands.

PUT HIM THROUGH.

Conversing with a group of those who had risen, yet none of them professors of religion, I said:

"Men, if a missionary comes, he may be a young man, fully furnished through study and seminary training, good and earnest; yet may this tremendous tide of worldliness and wickedness overwhelm him at first; and instead of making headway, he may be crowded into a corner, and perhaps sit down to weep over his supposed failure. Now, won't you rugged men remember this and help him?"

A stalwart lumberman, who seemed to comprehend the idea, replied, with great emphasis:

"Send on the young man, and we'll help to put him through!" A. M. Stewart.

The Heathen Among Us.—I. Our Opportunity to Convert them.

For more than two centuries, Jesuit priest and Protestant missionary have lived and labored in China, suffering, until lately, cruel persecution and martyrdom to convert the four hundred millions of its people from idol-worship to Christianity. Millions of money have been spent, and hundreds of noble lives sacrificed in that Empire, to make the tongue confess, and the knee bow at the name of Jesus. The faithful Christians of Europe and America have prayed earnestly, and contributed generously, that the heathen afar off might be converted. Their prayers and donations have not been altogether in vain. How many of us, as children and men, have had our hearts thrilled with the story of their superstition and idolatry, and have given something to the mission cause, in the earnest hope that, by God's blessing, it might be instrumental in winning a soul to Him.

It is no longer necessary to cross the ocean to preach the Gospel to the heathen. We have sixty-five thousand of them among us, and they worship hideous idols, and are as godless and superstitious in California as they were in Asia. They are among us. We see them every day. We buy of them, and they are our servants and laborers. We are in constant contact with them, and they with us. There are no unfriendly mandarins, or hostile rabble, to render it dangerous for us to approach them.

Verily, the heathen are at our door. Their souls knock, and God's command is upon us—open unto them. Shall we open wide the houses of God, and in His name bid them come in? We have not done it in the past; shall we do it now? Or shall we wrap ourselves in selfish sanctity, and let the heathen pass by? We are walking in light; they in darkness. We worship the ever-living God; they 30,000 *genii*, represented by millions of hideous images of wood and stone. We are enlightened in the only true knowledge of godliness; they are blindly ignorant. Will this always be so? God forbid, for our sakes, as well as for theirs. The gulf between us is indeed wide, but not impassable. If we will try, it can be bridged, and they brought over to us and numbered among the congregation of the Lord.

The vast number of godless heathen among us is a reproach to every Christian who makes no attempt to convert them. God has given us light, not to lock it up in our own souls, but to shed it abroad into all other souls about us. There is nothing so dark as the heathen mind. It will keep away from us if it can, for darkness flees before approaching light. We must go to the heathen, for he will not come to us, and give him the knowledge unto salvation which we have received.

If no Chinese heathen had ever been converted, still we should have reason to hope for success, nor should we be justified in thinking it useless to expend time, money, and labor in efforts for their conversion; but, as it is, we certainly have no excuse. There are 500,000 Catholic Christians in China, besides the Protestant converts, and their numbers are rapidly increasing. There are nearly 700 priests and Protestant missionaries striving zealously to bring the heathen of that great empire out of their darkness and idolatry, and we see that their labors have not been in vain. Surely, what has been accomplished there under greater difficulties than we can possibly encounter, is strong evidence of what we may do, if we will only try.

The difficulties of the work are not so great as many suppose. There is not one among the many thousand Chinese in our State, who would receive the missionary with disrespect, or refuse to listen to him. Wherever he goes, whomsoever he addresses, he may be sure of courteous treatment, and often a cordial reception. No house is closed to him. If he will enter, he may do so without fear. He may accost any one of our Chinese heathen without distrust.

Our opportunity is certainly great, and our responsibility is correspondingly serious. Let us be sure that God will hold us accountable for what we might do, if we would only attempt it. C.

Princeton College.

From the correspondence of the *Presbyterian* we take the following interesting account of the reception of Dr. McCosh, by the students, at Princeton:

Early in the morning of the 20th inst. it was rumored about Princeton that Dr. McCosh would be here during the day. Soon notices were up, throwing out all afternoon recitations, and ordering the students to meet at the depot at half-past three, to escort Dr. McCosh to his house, where it was said that he would give them a little talk. At three o'clock the depot became a centre of attraction, and by the time the half-hour was up, the student part of the population, both Professors and pupils, stood there waiting for the train. The college boys, in two lines, flanked the path.

When the Rev. Doctor came, Mr. Chapman, of the Senior Class, the marshal, proposed three cheers, which were given with a will. Then the Senior Class filed into column, the Professors of the College and Seminary came next, with Dr, Hodge and the President elect in their midst, and last, the three lower classes put on their hats and filed into line. Thus they walked quietly through the two streets to the house of the President elect, Dr. McCosh carrying his own bag, despite all who wished to help him. The house reached, the Seniors opened right and left, and stood with uncovered heads while the Professors passed through the porch. The rest of the line came into the yard, and at the same time the Professors disposed themselves about the middle of the porch on either side of the President elect. It was a sight long to be remembered. The bright young faces in the yard, the staid Professors on the porch, and at the front of the porch the sunny face of the Scotchman—a face combining sunlight with power, and gentleness with quickness—a face that you would like for a friend. The students, save for a little space just before Dr. McCosh, crowded close around to hear his first words. And by the way of a prelude, three cheers for him sounded out, followed by a tiger and a rocket, the last seeming to puzzle the worthy Doctor, who wondered when it would stop. All were on the tip-toe of eagerness. Dr. McCosh spoke somehow thus:

"I have of late had a great many farewells to say, many partings to make. I have bid good-bye to a dear country, and have left many relations and friends. You will easily understand that this has given me no little sadness. Now, however, this beautiful home and your hearty welcome cheer me greatly. To be received so warmly, goes far to make me feel at home, and I hope that the acquaintance so happily begun will be made closer and more intimate, and that as we know each other better, we shall like each other more.

"This place has not been of my seeking. You have called me here. I shall try to do my duty, and I hope to work here for you during the rest of my life. I have learned that the empire is moving westward. First a wave came and lifted me from Scotland across to Ireland; and now a huge wave has picked me up and rolled me clear across the Atlantic to Princeton, where I expect to stay as long as I shall live. Some sixteen years ago, when they sent for me to leave my native Scotland and go to Ireland, I felt some doubt as to whether or not I should be able to teach logic and metaphysics to the lively Irish boys. It turned out not to be so very hard after all. I was there sixteen years, and strove to make myself one of them—to enter into their feelings. Now I come to you with the same purpose. They said of me in Ireland that, though I still kept a little of the Scotch Doric, yet that the people really thought I was an Irishman. So here I shall try to enter warmly into your ways, and take part in your feelings. While I shall always keep some trace of my native Doric, and shall always be a Scotchman, yet I expect to be also an American. (Cheers.)

"For the last two weeks I have been on the ocean, and I tell you the Atlantic let me have a wild fortnight of it. The motion of the waters made many commotions without and within. (Laughter.) Hence I need a little rest. Moreover, I must not give you too long a lecture at first. I have a favor to beg from you. You know that next Tuesday I am to inflict on you an address, and I am afraid that it will go over the usual limit of lectures. The subject of University education is a broad one, and one to which I have given much attention, and to treat it fairly will take more than an hour. We need an hour and a bittock, as they say in Scotland; only I promise you that the bittock shall not be as long as the hour. In the meantime I beg of you a little rest, and on next Tuesday evening I wish every student to come to my house, and give me a shake of the hand. All are welcome, and may our friendship grow closer, and may we day by day like each other more. I do not know your ways here, but as they would do in my country, I propose three cheers for old Princeton."

They were given as the speaker waved his hat, and then he proposed three cheers for the Faculty, to which, of course, he did not yet belong. Those given, the speaker bowed and the students went off in high spirits, after three more ringing cheers for Dr. McCosh.

Every one was pleased with the new man. A game of foot-ball in the campus ended the afternoon for the students, while Dr. McCosh and the professors went into the house, and after a quiet greeting all around, the family were left to rest.

May the new home be full of joy, and second in thought only to the old home.

Congregational Singing.

ROBINSON'S SONGS OF THE SANCTUARY. Hymns and Tunes for Congregational Singing. 35,000 copies already sold. Editions for Congregational, Presbyterian, and Baptist Churches. Price, $2 50. A liberal deduction to churches for first introduction.

HENRY WARD BEECHER'S PLYMOUTH COLLECTION. 75,000 copies sold. Congregational and Baptist editions, $2 50.

EPISCOPAL COMMON PRAISE. Appropriate Tunes for all the Psalms and Hymns in the Book of Common Prayer, with select chants. Just published. $2 75.

CHILION BEACH,
Bookseller and Stationer,
84 Montgomery Street, opposite Lick House.

Heuston, Hastings & Company,

ARE THE

FASHIONABLE CLOTHIERS

OF

SAN FRANCISCO.

SPECIALITIES.

PRICE AND GUARANTEE.

The largest and most varied stock of Gentlemen's Clothing, Furnishing Goods, Trunks, Bags and Valises, on the Pacific Coast. Every article sold, being of our own manufacture, is guaranteed. Having contracts direct with European and American Manufacturers of piece goods, we thereby effect a saving of fully 50 per cent. in wholesale dealers' profits, and are thus able to offer superior Goods at less than second-rate prices.

STYLES.

Having agents in London and Paris, we introduce the new styles in San Francisco simultaneously with their appearance in New York.

GOODS MADE TO ORDER.

For the accommodation of such as may desire, we have secured the services of a celebrated European cutter, and are prepared to make up piece goods in a style superior to any other house on the coast. Shirts, Ties, Collars, etc., made to order at short notice.

COUNTRY ORDERS.

Goods forwarded by Express to any part of the Pacific Coast on receipt of orders and measures; send for directions for measurement.

Heuston, Hastings & Co.

LICK HOUSE BLOCK,

SAN FRANCISCO.

United States Life Insurance Comp'y,

IN THE CITY OF NEW YORK.

OFFICE, No. 40 WALL STREET.

CASH ASSETS EXCEED $2,700,000.

This Company, having a Stock Capital, makes Insurances and Endowments with or without profits. Dividends to Policies with profits are equal to, or larger than those of other, or "Purely Mutual" Companies in available present cash value.

NEW AND IMPORTANT PLANS OF LIFE INSURANCE HAVE BEEN ADOPTED BY THIS COMPANY. SEE THE NEW PROSPECTUS.

Life Assurances, Endowments and Annuities in every form. Profits available after Policies have run one year, and annually thereafter. The reserved Cash fund, for re-insurance, is the largest known to or required by, the ablest and most experienced authorities in Life Insurance, thus affording undoubted security. A liberal non-forfeiture system, as to whole Life or Endowment Policies.

Policy Holders in this Company can use or apply the Dividends of profits in a greater number of ways than is afforded to Policy Holders by any other Company.

The law under which the company is Chartered, provides that if the Capital should, from any cause, become impaired to the extent of Twenty-five Thousand Dollars, or more, the Stockholders SHALL BE CALLED UPON TO MAKE GOOD SUCH DEFICIENCY. This is the only Cash Company in America which affords this safeguard to Policy-holders.

The assured in this Company are not personally liable as in Mutual Companies, which have the power of assessing their members or of reducing the sums insured, in case of deficiency.

CLERGYMEN, insuring in this Company, are allowed a DISCOUNT of TWENTY PER CENT. on first year's premium, and a liberal commission will be given on all Insnrances influenced by them.

Agents wanted, on the most advantageous terms.

Forms and every information will be furnished by

San Francisco, Saturday, November 21, 1868.

THE PROVIDENCE OF GOD.

Men find no difficulty in understanding that God can do great things, but they think it detracts from His majesty to suppose that He does small things. It is worthy of infinite power and knowledge that worlds should be formed and guided, but unworthy that all that transpires in these worlds should be minutely arranged and ordered. In this sentiment appears the fact which is so often prominent in our attempts to define the attributes or acts of God, that we judge according to what would be true of men. The truth is, that to infinite powers there is nothing great or small; there is no limitation, as to matter, time or space, and within their boundless stretch is included the most inferior, as really as the most superior, object in the universe. It is hard for us to comprehend it, but it must be the same to God, to roll a planet in its path or to toss an atom in the sunbeam; to raise a tempest, and breathe the zephyr; to rock the solid earth beneath us, and to bend the grass which grows upon its surface; for what is infinite cannot know restrictions. Hence, the very terms by which we define God include the necessity that He make His providence universal.

There is something oppressive in the thought, yet it is the most glorious, and grand with which we can become familiar, that every being, every place, every act, every thought, every wish, every feeling, every influence, is known, is modified, is wrought into His own all-comprehending plan, by Him who looks not from point to point along the wonderful succession, but who has the whole present to His view at once, and to whom there is no succession. Penetrate the deepest recess of the primeval forest, and that leaf which is loosened from its stem and falls noiseless through the quiet air, is watched and directed by God. Send down your messenger to ocean's lowest depths, where no motion is ever felt, where no light has ever fallen, and bring up the tiny shell that may have lain there for ages, and it shall be God's witness that those countless myriads of existences which no other eye has ever seen, are cared for by Him. Wing your flight from star to star, till you reach the verge of occupied space, and though you may see no life, though you may hear no sound, though you may call and get no answer, if you find there a mote in the air, or a ray of light, it shall be proof that God is there; and that mote or ray of light is as truly within His guidance as are the suns and systems you have passed. This is not Pantheism. It does not identify the Deity with the universe, but reveals Him, distinct, ruling, displaying everywhere those attributes, and that conduct of affairs, which reason and revelation make necessary to God. So far from detracting from the majesty of Jehovah, this extent of His providence exalts Him more than any other manifestation. So far from being beneath the notice of the Great Ruler, that He takes direction of trivial matters is among the worthiest exhibitions of Divinity, and we are amazed at the sweep of that vision and rule, which is as sure to include the falling sparrow as the blazing world.

There is remarkable comfort for us in this truth amid the varied scenes of life, in which is mingled so much of trouble. There is comfort in its *general* influence, for since the trouble will be experienced, it is far more satisfactory to feel that though we may not see its uses, there is a wise and benevolent Being who orders all, than that all things occur without origin or object. But to the child of God, there is comfort greater than this, in the belief, the knowledge, that whatever may take place, his Father guides and orders, in all his lot. How sweet, and tender is the voice that comes to him from the cloud as he passes under it, compared with that which speaks of aimless, frigid fate! How unutterably precious is the assurance, though the heavens and earth may pass away, that keeps his soul in peace, "Fear not, for I will never leave thee, nor forsake thee!"

WITNESSES FOR GOD.

The glory of the Gospel is, that it has always had men who were willing to support its claims, and declare its nature, and obey its demands, at any cost. These have not all been alike, in ability or attainments or position, but they have been alike in their fidelity, and their testimony has been all needed, as one has confirmed another. There was need of men who could hold forth the Gospel system of truth, in opposition to the philosophy and false religion which were supported in its early history by the world's greatest minds. And there was need of those who could exhibit its wonderful spirit, under the persecutions of the world's most inhuman monsters. The arguments of Origen, and Athenasias, and Augustine; and the godly lives of thousands, whose representatives these leaders were, were mutually sustaining evidence in favor of Christianity. The mighty blows of Luther, and Zwingle, and Calvin; and the heroic devotion of humbler men, amid the tortures of the *Auto-de-Fé* and the Inquisition, alike contributed to the overthrow of the Hierarchy, and made a place for spiritual religion in the returning light of day, after the terrible night which had prevailed. The logic and eloquence of great men, and the earnestness and godly living of those in lower stations, are to be evermore united in support of the blessed Gospel, if amongst us it shall make advance against the multiplied and resolute foes it must encounter. Thus it is, that every sincere witness is important, wherever he may stand.

Think of the long line of true believers, winding through the centuries, the chief burden of whose life was to be witnesses for God. Yet, prominent among them all have been those patient, tearful, faithful ones, in obscure places, who have been true to duty. The Church has had a duty chiefly for their sake, and on account of their fidelity. The triumphs of the Gospel that have been the most powerful for its propagation, have been those the record of which is on altars, where consecrated souls have offered themselves to God. The testimony that none could gainsay has been that written on the tablets of men's character and acts, who were willing to serve anywhere, loved Jesus with a devotion which nothing could quench, loved His Kingdom with a fervor that thought not of their position in it, and obliged their fellows to feel that religion is a transforming, living, controlling power.

Position of the Bible Union.

Having shown, in a former article, that immerse, in order to represent the Scriptural idea of *baptizo*, must be taken in an accommodated sense, and one not known to the dictionaries, or to the *usus loquendi* of the English language, and that, by this license, the very principle of primitive meaning and literalism is yielded at the very outset by the scholars of the Bible Union, I now add, secondly, that the complex idea of immersion and emersion, essential to the Scripture idea of *baptizo* from the Baptist standpoint, though not found in immersion alone, was most perfectly represented in the homely Saxon term "dip," expressive, indeed, but not euphonious.

And thirdly, that so high authority as Dr. Carson was discarded in this rejection of dip for immerse; "for," says the latter, "my position is, that *baptizo* always signifies to *dip*, never expressing anything but mode." I proceed now to test the correctness of the scholars of the Union in giving us immerse as the synonym of *baptizo* by its use in this passage from the new version: "Arise, be immersed, and wash away thy sins, calling upon His name." (Acts 22: 16.)

It will be remembered that Prof. Hackett, thus comments on this passage: "Baptism is represented to have this importance or efficacy: to wash away sin;" while on the other hand, it is held by Dr. Conant and the Bible Union that immerse is used, in its ordinary secular sense—which we found to be to put under the water—to limit the extent of the application of *baptizo*. My purpose now is to inquire whether immerse, in its ordinary secular sense, expresses the idea of *baptizo* in this passage, even as set forth by Prof. Hackett and other Baptist scholars. The line of my inquiries will therefore run in this direction: Is there in the English word immerse, in its common secular meaning, anything which will represent to an ordinary English reader, the idea of cleansing or purification, which, according to Prof. Hackett, is found in *baptizo* in the passage under consideration.

Let us bear in mind, also, that this nature of the ordinance is no new power of the words *baptizo* and *baptismos*. Purification was in the superstitious washings of the Jews, for Jesus Christ found it there: "Now do ye Pharisees cleanse the outside of the cup and the platter," by their *baptismoi* of pots and brazen vessels. Paul found it in the ablutions of the Hebrews: "divers immersions, ordinances of the flesh;" or, as we learn in the 12th verse, "for the purity of the flesh." John, the forerunner, claimed it for his baptism: "I indeed immerse you in water unto repentance," while he proclaims the more efficacious baptism of Jesus: "He will immerse you in the Holy Spirit and fire, whose fan is in His hand; and He will thoroughly cleanse His threshing-floor." Now does the idea of cleansing and purification which attends the use of *baptizo* and its cognates, all the way through its use in the New Testament, whether applied to a Jewish superstition, a Hebrew rite, the baptism of John, or, according to Prof. Hackett, in the baptism of Paul, which, in the expressive terms used by him, is "the very nature of the ordinance," does, I inquire, the English word immerse, in its secular sense, which, according to Dr. Conant, limits the meaning of *baptizo* in the extent of its application, set forth to an English reader the idea of cleansing and purification which is signified by the original Greek *baptizo* and its cognates, as employed by the inspired writers And now, with the dictionaries before me, and with a general view of the use of the word by English writers and speakers, I affirm most decidedly that the idea of cleansing and purification does not belong to the English word immerse, the term selected by the scholars of the Bible Union as a synonym of the Greek *baptizo* in their translation of the New Testament. I invite my readers to the same sources of information which I have myself. Let them canvass Webster and Worcester, and the general scope of English literature, and they will find, as I have found, that there is no trace of any cleansing power about immerse in any one of its modifications. As

if the providence of God intended to forestall its ever being used to do service in the sanctuary, it never rises in ordinary use above this common idea of submergence, or aims to do anything refining or exalting. Having so much water at command to work with, it seems as if it might sometimes perform some cleansing work, but it does not. The ordinary speech of man rejects it for all such purposes, in the same way as it rejected its Latin parent. In a figurative use, we meet such expressions as these constantly: "immersed in the cares of this life;" "immersed in business;" "immersed in the filthy pool of politics." We do, indeed, say "immersed in studies," but I think no one says, "immersed in religion," because the idea of religion is not the idea of submergence and burial, but of activity and demonstrativeness.

A clergyman favorable to the new version might, indeed, with great propriety of language, beseech his congregation no longer to be immersed in the cares of this life, for in such phrase plead Bishops Taylor and Atterbury, and other great masters of the English tongue; but when he came to his application, and should add, in the words of the new version, "Repent, and be each of you immersed, upon the name of Jesus Christ," each of his hearers would feel the jar of the *non sequitur*, and be impressed with the conviction that there was a mistake somewhere; he might even notice the inconsistency of being immersed upon a name.

I then repeat my affirmation that when we come to apply immerse as a synonym of *baptizo*, and read, "Arise and be immersed, and wash away thy sins," if we give *baptizo* the sense of purification which Prof. Hackett gives it, there is nothing in the term immerse, in the restricted sense of Dr. Conant, which represents this idea to an English reader. Either Prof. Hackett must be incorrect in his statement that cleansing from sin is the nature of the baptismal ordinance, or, if he be correct, then the scholars of the Bible Union have failed to give to the English reader the idea of cleansing found in the original *baptizo*, in their restricted sense of the term immerse.

By this theory of Dr. Conant and the scholars of the Bible Union, that the scriptural term *baptizo* is limited in the extent of its application by the English "immerse in its secular sense," *baptizo* is stripped of all significance as an exponent of revealed mysteries, except so far as putting under the water is an ordinance of the Christian religion, nothing beyond that. When Paul, then, was baptized, or the eunuch by Philip, so far as the immersion was concerned, nothing more was done by *baptizo* than when Anacreon immersed Cupid (*baptizo*, in Greek) in a goblet of wine, all three were immersed in *baptizo*—nothing more, nothing less.

But will the Christian Church consent to see all sacredness of meaning stripped from the terms in which Jesus Christ and the Apostles instituted the ordinances of His Church, and baptism reduced to a mere physical operation. Strange and incongruous as it may seem, this is the scope and extent of the ordinance as hedged about and limited by the definition which the scholars of the Bible Union give to *baptizein*—"immerse in its secular use. It is not an ecclesiastical act. It is not a metaphysical act. "The moment the word goes beyond the mere physical operation of immersion, and has a religious sense, and signifies the mysteries of revelation, then it becomes ecclesiastical and metaphysical; but this is a license the scholars of the Bible Union have not yet asked for it.

But there are other evils more serious, on which I may not now dwell: 1st. That the idea of religious purification through the emblem of the cleansing element of water is lost in baptism.

2d. It no longer sets forth the cleansing efficacy of the blood of Jesus. F. B.

[NOTE.—By a typographical error last week, I was made to say, "I find in Webster the primary meaning of *baptize* to be, 'to put under the water.'" The word should have been *immerse*, instead of baptize.]

Current Literature.

Alexander's Evidences of Christianity.

Our object in calling attention to this well known work is not that we may add anything to the favor with which it has been received since it was first issued by its venerable author, but that we may induce some to read it and buy it for their families, who may not have given much study to the subjects it discusses. It is often charged, and sometimes with too much truth, that Christians accept the Bible and their religion only because their fathers did so, and that very few can give an intelligent reason for their faith, or really answer the objections urged by infidels. Especially do young Christians neglect to study the real foundations of the Christian system, and become early rooted and grounded, not in a blind credulity, but in a thoroughly established belief of those truths which compose it. There should be more instruction respecting the actual proof that the Scriptures are the Word of God, and the canon of Scripture, and the general evidences of Christianity. The pulpit should make these themes more frequent, the Bible Class and Sunday School should have these as oft-repeated exercises, and in the family the compends of argument on these points which may be obtained, should be read aloud and discussed, and made matter for thought, till both parents and children become familiar with them. For these uses we know of no better book, though we wish this was more simple and direct in some parts, than Dr. Alexander's work, published by the Presbyterian Board, and we commend it to our readers, with the hope that our suggestion will not be vain.

The work of Bishop McIlvain, on the same subject, and with the same title, and "Hopkins' Instructor," and several others that might be mentioned, are good, and may be studied with great advantage, if they are more accessible, but we think Dr. Alexander's the best adapted to the object to be gained. Sold by H. H. Bancroft & Co.

Wind-wafted Seed.

This most excellent book, published by Carter & Brothers, of New York, is a collection from the writings of Dr. Norman Macleod and Dr. Thomas Guthrie, of Scotland. No more than this need be said to give assurance of its value, yet it would be difficult to gather, even from these distinguished men, a more beautiful and useful series of articles than we find in this volume. We might quote largely from it, to the pleasure of those who read, but have space only for the following extracts from a chapter entitled "Faith Getting in and Giving out:"

Faith in the Christian life is, as to its place and functions, like the heart in the animal economy. Alternately it draws in, and sends forth. It is continually receiving and continually giving. Because it must put forth energy, it must take in supply; and because it takes in supply, it is able to put forth energy. This heart within a living body is always busy beating. Its ceaseless activity is not play: it is work—necessary, productive labor. Every throb draws in the necessary life-blood at one side, and forces out at the other side an all-pervasive impulse to the farthest extremities of the frame. It is because it gives out much that it is obliged to take in much: and because it takes in much, that it can afford to give much away.

Thus Faith lives and labors in the vitals of the new creature. It is in the regeneration, the organ which draws in a constant supply of life, and gives out a constant supply of energy, The spiritual is like the material instrument in this, that it does not depend for healthful action on an accurate reflective knowledge of its own constitution and methods. As a heart may carry on vigorously all the functions of nature while its possessor scarcely knows that he has a heart; so a true disciple, a member of Christ's mystical body, may draw life in a great continuous volume from the Fountain-head on high, and send forth a man-loving, God-glorying stream of beneficent effort on the world, while he could not logically define, or even intellectually comprehend, the nature and operation of faith.

Hence it follows, that if a Christian is to any extent straitened in receiving supply, he will be proportionately straitened also in contributing effort. He who gets little, gives little. The less that a Christian enjoys of his Redeemer's forgiving love, the less he can bear or do in the trials or duties of life. Based upon this law of the kingdom is that apostolic precept, "Save thyself, and them that hear thee." It is he who obtains and retains faith's fast hold of Christ for his own steadfastness, that is able to stretch out a helping hand to a fainting, falling brother. In the same sense the Master introduced into the commission of the twelve, when He first sent them forth, the clause, "Freely ye have received, freely give." Where great faith opens its mouth wide, and receives a "plenteous redemption," there faithfulness labors unwearied, unceasing, in hearing and doing the will of God.

Faith works by love. Through faith from God his Savior, a believer's own heart is filled; then and thereby, through love, he exerts a beneficent influence on the world. Standing in the midst between God and his neighbor, a Christian—not himself a motive power, but only a receptive vessel—gets on the upper side, and so gives on the lower side. By faith he receives, and by love he labors; thus, his life on earth alternates, like the heart that is beating in his breast, until, with the heart's last throb, the life leaps over into a larger place—a life full, free, eternal.

For sale by H. H. Bancroft & Co.

Fairy Tales from Gold Lands.—A. Roman & Co. published some time ago a little book with this title, written by May Wentworth. They have now published a "Second Series," of uniform appearance with the other, and with the books for children which we noticed lately in The Occident. The four volumes, taken together, form a beautiful set of California juvenile publications, and those who are seeking presents for their children, in the holidays, will be sure of what will please them if they buy these books.

The Freaks of Fortune.—This is the fourth of the serial stories that appeared in "Our Boys and Girls," written by that ever popular author among youth, Oliver Optic. The story was believed to be one of the best that Mr. Adams has written, when it was read in the Magazine, and it loses none of its interest now that Lee & Shepard, of Boston, have given it this more permanent form. Sold by H. H. Bancroft & Co.

LITERARY ITEMS.

A Dropped Letter.—A peculiar sensation is felt in dropping a letter, into the box of a Post office. One feels a sort of revulsion, as if a part of himself, as it were, had fallen into an unfathomable abyss, never to be recovered. This act strikes his heart like destiny, irreversible forever. If any error has occurred in the letter beyond correction; if any thing happens at the instant, which ought to make a change, there is no help for it. What is done is done, and past redemption. No repentance will avail. You would have something otherwise but it cannot be. It is too late. The missive has passed away; it is no longer yours, or subject to your alteration or control.

Frederic Hudson, so long the managing editor of the *New York Herald* is writing his recollections of journalism.

An Old Custom.—O couple of centuries ago it was the fashion for clergymen to write marginal notes to their sermons, to indicate what they might do in the pulpit besides preaching, and when it might be done. "Fall back in your seat," "Hem, hem," "Use your handkerchief," "Start up," "Shout," and "Cough here," are specimens of the physical relief ancient preachers allowed themselves, if certain old manuscript sermons may be regarded as authority.

The late Douglass Cooke, of the *Saturday Review*, left an estate worth $50,000. He commenced life as a poor boy, and accumulated the fortune by industry and the exercise of his sharp wits. No obituary notice has appeared in the *Review*, not even an announcement of Mr. Cooke's death, the managers being desirous of inducing the belief that no change has been made in the editorial conduct of the journal.

Perseverance Rewarded.—A conductor of a newspaper, speaking of a contemporary, says:

"He was formerly a member of Congress, but rose till he obtained a respectable position as editor—a noble example of perseverance under depressing circumstances."

The *Liberté* tells us that from the Amphictyonic League (1466, B. C.) to the treaty of Zurich, in 1859, not less than 8,697 treaties have been made, of which only *one* has been kept—the Methuen, between England and Portugal.

Let us go always beyond the duties marked out, and keep them within the pleasures permitted.

Educational.

Reforms in Education.

Many minor reforms in education may be pointed out, which, in the aggregate, would constitute a healthful revolution. One, in the theory of the art, as held by its professors. Let teachers at once drop the idea that their chief function is to convey knowledge, and adopt that of quickening and developing the faculties. Teachers are, properly, intellectual physicians and trainers, instead of stevedores and lightermen. Another, in public examinations. Let these be conducted, at least occasionally, in such a manner as to show the powers which the school aims to develop, instead of the branches which it pursues; with a programme of exercises compiled from the mental philosophy, instead of the cyclopedia. Another, in text-books. Let these cease to be constructed with a main eye to the presentation of the latest discoveries in the different sciences, but with an attention primarily to a presentation of the most elevating and developing aspects and facts of those sciences. Another, in apparatus. Let school apparatus be at once immensely augmented in quantity. Every box which the teacher can capture, let this be filled with objects themselves—with miniatures, or pictures; and then, let the whole be employed, in primary classes, and in illustration of life itself.

Another, in Mathematics. Let the quantity of mathematical study be reduced, but let its quality be improved by requiring the memorizing systematically of long lists of important and significant numbers like 1090 in science, and 1517 in history, and 1.3146 in mathematics. Another, and the most important of all, the study of Languages. Let the lexicon and the grammar change places in education. The former, now, is the book of reference, and the latter the book of study. Let this order be reversed, and the daily lesson in connection with reading, as well as the course introductory to reading, be assigned from the former, and the grammar used for reference. Let the terms of admission into college, and of advancement in public schools, be the mastery and familiar identification of a certain number of vocables,

and not of a certain number of paradigms, syntactical rules, or volumes. These are some of the separate reforms by the adoption of which educators may accomplish for themselves a quiet revolution in their art. And why hasten to accomplish it for themselves? Because the signs of the times portend a worse and an undiscriminating revolution to be forced upon them from without. C. R. C.

Personal.

REV. B. WISTAR MORRIS, of Germantown, Pa., has been elected Bishop of Oregon and Washington Territory. "This election," says the *Protestant Churchman*, "adds another vote to the dominant party in the House of Bishops."

MAYOR MCCOPPIN has vetoed the Resolution to rebuild the City Hall, which was taken down on account of damages by the earthquake.

REV. S. H. WILLEY, Vice President of the College of California, who has been dangerously ill for several weeks, is slowly recovering.

MR. JOHN P. BAILEY has been appointed Supervisor of National Revenue for Washington Territory, Montana, Idaho, and Oregon.

DR. J. A. VEACH, known in this State as a geologist, has been elected Professor of Chemistry in Willamette University, Oregon.

REV. THOMAS FRASER is spending a few weeks with the Presbyterian Church at Chico, preaching on the Sabbath at Wood's Hall.

CHIEF JUSTICE BEATTY, of the Supreme Court of Nevada, has resigned, and HON. B. C. WHITMAN appointed to take the position.

HON. W. H. RHODES lectured on Thursday evening at the Mercantile Library Hall, on the "Philosophy of Earthquakes."

GEN. O. H. LAGRANGE is spoken of as the man likely to be chosen to carry to Washington the electoral vote of California.

HON. ALFRED BARSTOW, Chairman of the Republican State Central Committee, was married at San Jose on the 11th.

MR. C. FINLEY, one of the pioneer citizens of Virginia City, Nev., has recently removed to Santa Barbara, Cal.

MR. A. S. GOULD, a pioneer citizen of California, arrived at Sacramento on the 13th, in 10 days from New York.

MR. R. R. MILLS has been elected President of the Trustees of the Good Templar's Home for Orphans.

CAPT. JOHN MCMULLAN, a prominent and respected citizen of Stockton, died on the 13th inst.

GEN. P. E. CONNOR has built and launched on the River Jordan a steamer to run on Salt Lake.

MAJOR NATHANIEL BOYCE has been commissioned Assistant Adjutant-General of California.

M. DE CAZOTTE, French Consul at San Francisco, arrived with his family on Monday.

MR. WILSON DUNLAP has been elected W. C. T. of the I. O, G. T., in Gold Hill, Nev.

REV. MR. LOOP, formerly of Santa Cruz, is permanently located at Los Angeles.

MR. E. B. WAITE is no longer connected with the *S. F. Times*.

BISHOP KIP has sailed from New York for California.

SENATOR CASSERLY has gone East.

PROF. JOHN LECONTE of Columbia, S. C., has been elected Professor of Physics in the University. Salary, $3,600.

REV. E. P. GRAY, Divinity Professor in St. Augustine College, Benicia, is expected soon to arrive from the East.

HOW often do you hear the complaint from mother and father, that their son or daughter is not well; that they have no appetite; that they feel languid; that their head aches; that they are growing thin and feeble, and that they have no life or energy left; that they are low-spirited, and perfectly incapacitated to participate in any pleasures, or perform any mental or physical duty. And the question is as often asked, what shall I do for them? or, what shall I give them? Our answer is, let them try PLANTATION BITTERS, moderately, three times a day, and, our word for it, they will recover.

The Popular Edition of Dickens.

Pacific Mail Steam Co's Steamships

— FOR —

NEW YORK, JAPAN AND CHINA

Will be Dispatched as follows:

LEAVE WHARF CORNER OF FIRST AND BRANNAN STREETS, at 11 o'clock A.M. of the following dates, for PANAMA connecting via Panama Railroad with one of the Company's splendid Steamers from ASPINWALL for NEW YORK.

the 6th, 14th, 22d, and 30th of each month.

Steamer leaving San Francisco on the 6th touches at Manzanillo. All touch at Acapulco.

Departure of the 14th is expected to connect with the French Transatlantic Company's Steamer for St. Nazaire, and English Steamer for South America. Through tickets can be obtained.

Departure of 14th is expected to connect with English Steamer for Southampton, South America, and P. R. R. Co.'s Steamer for Central America. Through tickets can be obtained.

Departure of the 6th connects with English Steamer for Australia.

STEAMERS FOR NOVEMBER, 1868.

The following Steamships will be dispatched on dates as given below.

November 15th—GOLDEN AGE, Capt. Lapidge, connecting with OCEAN QUEEN, Capt. King.

November 21st—COLORADO, Capt. Farnsworth, connecting with HENRY CHAUNCEY, Capt. Conner.

November 30th—SACRAMENTO, Captain Parker, connecting with ARIZONA, Capt. Maury.

Passengers berthed through. Baggage checked through—100 pounds allowed each adult.

An experienced Surgeon on board. Medicine and attendance free.

These Steamers will positively sail at 11 o'clock. Passengers are requested to have their baggage on board before 10 o'clock.

Through tickets to Liverpool by the "Cunard," "Inman," and "National" Steamship Lines can be obtained at P. M. S. S. Co.'s office in San Francisco, where may also be obtained orders for passage from Liverpool or Southampton to San Francisco, either via New York or St. Thomas—if desired, an amount of £10 to £20 will be advanced with the above orders. Holders of orders will be required to identify themselves to the Agents in England.

For Merchandise and Freight for New York and way ports, apply to Messrs. WELLS, FARGO & CO.

The Steamship CHINA, Captain Geo. E. Lane, will be dispatched on Thursday, December 3d, at 12 o'clock, noon, from wharf, corner of First and Brannan streets, for YOKOHAMA and HONGKONG, connecting with the COSTA RICA for SHANGHAE.

For passage and all other information, apply at the Pacific Mail Steamship Co.'s Office, corner of Sacramento and Leidesdorff Sts.

OLIVER ELDRIDGE, Agent.

Zion's Herald, Vol. XLVI.

THIS OLDEST OF CHURCH PAPERS STILL AIMS TO lead the column of the religious press. Its principles are Christ and His Gospel faithfully applied to the renewal of every human heart, and of the human race in all the life of God. It advocates Christian doctrine as preached in all ages by the evangelical church. It supports Prohibition as the chief duty of every State to its own citizens. It opposes Caste, and urges the liberty, equality and fraternity of all men. It seeks to spread Scripture Holiness in all its entire nature and work over all the land.

The editor in chief, Rev. Gilbert Haven, has few equals and no superior, as a brilliant writer and successful editor.

It has five editors, and not less than fifty contributors. Among these are the best newspaper writers: Abel Stevens, Theodore L. Cuyler, Theodore Tilton, Daniel D. Whedon, editor of *The Methodist Quarterly*, Nehemiah Adams, author of "Agnes," "Catherine," etc., Misses Warner, author of "Wide, Wide World," etc., Phebe Cary, E. O. Haven, President of Michigan University, "Warrington," J. D. Fulton, James Redpath, C. C. Hazewell, F. D. Huntington, Bishop Thompson, "Willy Wisp," B. K. Pierce, Lucy Larcom, Phebe Palmer, Judge Bond, etc.

THE CHURCH DOOR,

A new story, by Miss Anna Warner, author of "Queechy," "The Old Hamlet," etc., will commence with the next volume. Children's Home, Commercial, Agricultural, Foreign, Political and Religious, and all other departments of a first-class paper are carefully filled by the best pens. THE HERALD is printed in the best style, on a sheet the size and form of *Harper's Weekly*, cut and stitched.

Only two dollars and a half a year, in advance. Any one sending five new subscribers and twelve dollars and a half, shall receive a sixth copy gratis. Other premiums are offered. Specimen copies sent gratis. Send subscriptions to E. D. WINSLOW, Publishing Agent, 11 Cornhill, Boston.

RAILROAD CONTRACTOR.

Practical and Scientific.

AGRICULTURAL.

Education for Farmers—Its Uses.

The farmer without an education for his calling, remains a sort of drudge wherever he is, and he stands no higher in society than a mere hand-worker ought to. Properly educated for his business, he elevates his profession and himself exactly in proportion to his intelligence and general culture. Facilities for agricultural education are greatly increasing over the whole country, and it would be well for farmer-boys to see if they cannot in some way take advantage of them, even if they can do no more than attend a single course of lectures. The advantages to be gained would be some information from books and from other sources, and finally, how to make knowledge available. The Agricultural Colleges of Michigan and Massachusetts, the Scientific schools of New Haven, Rutgers and Dartmouth Colleges, offer such facilities. The Cornell University, with its unrivaled advantages, the University of Kentucky, and several other institutions, open their doors to those who would base their agricultural practice upon a broader foundation than that of their own and their fathers' experience.

Our successful commercial men, merchants, manufacturers, bankers, brokers, shippers, etc., as soon as they acquire wealth which they do not need in business, immediately buy country seats, or farms, which they have worked under their direction, or upon shares, either for the sake of drawing articles of daily consumption fresh from the fountain of natural supply, or to be used as summer retreats from din and dust, or for the profit they hope to gain by the rise in the value of the land. Thus there is and will be an increasing demand for intelligent young farm managers to superintend with profit to the owner of these estates. Good salaries will be paid for educated brains, and this demand, as soon as it is felt upon the farm, will keep our agricultural colleges and lecture-rooms full of attentive pupils, who choose farming as their trade.—*American Agriculturist.*

Poultry on a Large Scale.—A very deceptive idea often prevails. A man has many branches of business, and finding one to pay handsomely, he abandons all and gets rich. This we often see. The farmer thinks he can do the same. His wife tells him she has made a hundred dollars from the poultry, and that the cost was "next to nothing;" and it is argued why may he not do as the general business man does, raise poultry exclusively, and on a large scale? We see this subject is being earnestly discussed by some of our contemporaries; and although it is not recommended as a certainty, the probabilities of poultry fortunes for any who may embark in the business is gravely discussed. In the first place, the farmer's fowls pay by the waste they consume. This waste is limited, and beyond that it is doubtful whether they do not "cost more than they come to." And then, again experience is against it; for we have known two experiments on a large scale—one of them by an exceedingly sharp calculator, who made over a million of dollars on a railroad contract, but who could not make one cent by any poultry contrivances of this kind. The true profits of farming come in from its mixed nature. One thing works with and helps pay for another; yet to a certain extent specialities pay. Every farmer may find some one thing in which he may excel his neighbor, and in this he may push himself considerably; but as to going into any thing exclusively, with a view to immense profit, it will be found that a common advice in marketing, "not to put all one's eggs into one basket," is good common sense.—*Philadelphia Press.*

The Farmer's Life.

Look once more at a finer spiritual result of the condition of the farmer's life. See what pains he wisely takes to secure a perfect fruit. How cautiously he imports and examines the stock; how sagaciously he grafts and buds; how he hides the tree from the frost and nurses it in the sun; how he ponders and studies the habits and diseases of that fruit; how he toils to surround himself with perfect trees, that he may walk in the garden of the Hesperides whenever he goes into his own orchard. At last he plucks the pear in triumph. It is the glory of the Fair. The dimensions of that fruit fly round the world by telegraph, over the land and under the sea. It is photographed, engraved, and described in a hundred horticultural papers and magazines; the mouth of the public waters for that pear, and it bears the name of the happy grower forever. Is that all? Is there nothing more? Look! Not yet has the farmer reaped all his harvest of success, nor tasted the finest flavor of his fruit. But when walking under the trees in the cool of the day, God meets him in the thoughts of his mind—for when a man thinks a lofty thought, it is as if God met him—and says to him:

"You are a tree in my garden of the world, and if you sought the sweet fruit of character and a noble life as carefully as you trim, and water, and bud to produce a pear, the world would be again what it was when I walked in Eden."

Then the farmer has learned the last lesson of his calling—that it is the manhood and moral development of the farmer himself, wrought out by perpetual contact with the beautiful processes of nature, which is the crop of lasting value that grows on his farm, a crop whose harvest is human happiness.—*George W. Curtis, in The American Farmer.*

Crops—When to Sell them.

On looking through our exchanges from all parts of the country, it is clear that in everything, except, perhaps, oats, we are to be blest with a great abundance. From the wheat of Canada to the cotton and sugar of the Gulf States, the best average results resounded. In view of these facts, it is as well that the farmer should take a calm view of the situation. The speculators have always two opposite ways of working. When it is generally known that the farm crops are short, they magnify the deficiency, and thus induce the farmers to hold on for very high prices, while they quietly sell out at a very considerable advance over cost to them. The farmer only finds out when too late to realize that there is more stock on hand than he has any idea of.

But when crops are fair, the rule is to overrate the abundance, and the farmer, becoming frightened, is induced to sell at once at whatever he can get, much to his disgust a few months later, when the rise takes place.

It is wise not to heed too much what we hear about these things, but take up with any good offer when we are ready to sell. As a general rule, it is better to sell when we have the crops in marketable condition, than to hold on. Even though prices rise, the loss by weevil, rats, mildew, fire, and the many other contingencies of delays, are often as much as the advance. At the best, the stock lies dead; whereas, if sold and converted into cash, the money could at least be made to bring interest until wanted for use. To a small capitalist particularly, it is best to sell out quickly. Money is often worth twenty per cent. to him. He can buy and sell stock, turning his money over frequently while he is waiting for the lottery of a rise; and he can realize to the fullest extent the Englishman's maxim that the "nimble sixpence is worth four slow shillings."—*Forney's Press.*

Pork Making.—There is some inquiry about how many pounds of pork one bushel of corn will make. I have experimented a great deal with different breeds of hogs, and the most satisfactory was the Chester County hogs.

On the 1st day of March, 1866, I put up two Chesters, one weighing one hundred and twenty pounds, the other ninety pounds—weight of both, two hundred and ten pounds. I weighed out three bushels of corn in the ear—seventy-five pounds per bushel. I was very careful that the pigs had all the water they wanted, and no corn was wasted. When they had eaten the three bushels of corn, they weighed two hundred and sixty pounds, making sixteen and two-thirds pounds of pork for each bushel of corn fed.

I have never fed cooked feed, and do not know the difference between the two modes of feeding. I am more convinced every day that the Chester hogs are the best breed of large hogs that I know of. I have had some experience with the Berkshire, Suffolk, China, Poland, Russian, and other breeds; they all have some good qualities, but I should prefer the Chester for all uses. I don't think that there is a white hog in the country that is not claimed as a thorough-bred Chester by the owner.—*Ill. Cor. American Stock Journal.*

Goats are pronounced profitable to farmers if for no other purpose than clearing the land of noxious weeds, which they will devour with avidity in all stages of their growth.

WEEKLY MARKET REPORT.

Wednesday, November 18, 1868.

Flour—1,000 bbls Extra, local brands, principally in jobbing lots, current rates; 400 bbls Orange Extra, private. Standard brands of Oregon Extra are jobbing at $5 62½@5 75. At the close, 550 bbls Benicia City XX, (new brand,) for New York, private. We quote city mills as follows: Superfine, in sks, ℔ 196 lbs, $4 75@5 00. Extra, sks, $5 75@6 00.

Wheat—The market exhibits a manifestly improved tone chiefly on account of the deferred rain—at least this is the ostensible reason assigned. Sales include 650 sks fair shipping, $1 70; 1.000 sks choice, $1 75; 3,000 sks do, for export, $1 74½; 1,700 sks do, for local milling, $1 80; 1,500 sks do do, $1 30; 150 sks inferior cost, $1 32½. At the close, 4,500 sks shipping, $1 75 ℔ 100 lbs.

Barley—Feed is quotable at $2 05@2 12½, and brewing, $2 15 ℔ 100 lbs.

Oats—Sales of 250 fair, $1 70; 300 sks do, $1 75; 600 sks good, $1 80; quotable, as to range, at $1 65@2 for California and $1 80@2 05 ℔ 100 lbs for Oregon.

Potatoes—Sales of 600 sks Bodega, off condition, 50@60c; 400 sks good do, 65c; quotable at 55@70c; 502 sks Humboldt, 95c; 640 sks do, $4; 500 sks do, 80c; quotable at 80c to $1 for merchantable qualities; Pigeon Point, 90c@$1; 100 sks Carolina, from wharf, $1 37½ ℔ 100 lbs.

Onions—No choice Yellow in first hands; quotable at $2 50 ℔ 100 lbs.

Beans—We quote jobbing rates for first quality as follows: Bayo, 3½@3¾; Butter, 4@4½c; small White, 3½@3¾c; Pink, 2¾@3c; Red, 2¾c ℔ lb.

Corn—Sale of 100 sks good Yellow, large size, $1 75 ℔ 100 lbs.

Rye—Quotable at $2 75@2 80; jobbing at $3 ℔ 100 lbs.

Buckwheat—No sales reported; quotable at $3 ℔ 100 pounds.

Mustard Seed—Choice California Red, 4c; inferior qualities, 3@3½c; 40 sks common, 3c; English White, 5@5¼c ℔ lb.

Flax Seed.—Sale of 250 sks medium, private; 78 sks choice, 4c ℔ lb.

Bran—Sale of 50 tons at $19 50; quotable at $19@20 ℔ ton.

Middlings—Sale of 50 tons feed, $27 50; quotable at $27@32; fine descriptions, $35@37 50 ℔ ton.

Dairy Products—California fresh roll Butter is variously quoted at 65@75c, bulk of transactions being at 70c@75c; California pickled, 45@55c, as extremes, the medium prices being 50@55c. Cheese is jobbing at 18@19c for California, and 17@19c ℔ lb for Eastern. Eggs 75@77½c ℔ doz.

Poultry—Of all kinds is abundant, and prices lower. Live Turkeys are quoted at 15@16c, and dressed do, 16@17c ℔ lb; Hens and Roosters, $6@6 50; Spring Chickens, $4@5; Ducks, $4@5; Quail, $1@1 12½ ℔ dozen; Geese, $10@13. Venison, 8@9c ℔ lb.

Provisions—Bacon is jobbing at 13½@14c for California smoked; Oregon do, 14@14½; California Hams, 16@16½c; Oregon do, 17@18c; California Lard, 13@13½c for ordinary packages, and 14c ℔ lb for small tins.

Oil Cake Meal—Demand quiet at $30 ℔ ton, from mill.

Hay—No transactions reported; market firm at $12@$16 ℔ ton, for fair to choice descriptions, with tendency to advance; farmers holding back on account of dry weather.

Hops—The nominal range for California new is 25@32½c ℔ lb, the latter figure being jobbing price.

Wool—Sales for the week ending last evening aggregate 146,200 lbs, at 17@18½c; two or three small lots very choice, long staple, brought 19c; burry, 12@14c ℔ lb. Market continues active and prices firm.

Hides—Sales since last Wednesday of 1,400 Dry at 14½@15½c for usual selections; 200 California salted, 7c; 500 Mexican dry, ex steamer, in lots, 13½c ℔ lb.

Tallow—Sales for the week, not before reported embrace 20,000 ℔s good Beef at 8c; occasionally small lots of very choice are sold at 8¼@8½ ℔ ℔.

San Francisco Cattle Market.

Supply abundant and demand active; quotations essentially the same as last Wednesday.

We quote slaughterers' prices as follows:

Beef—American, 1st quality, 7½@8½c ℔ lb.
do 2d do 6½@7½c ℔ lb.

Veal—Quotable at 9@11c ℔ lb.

Mutton—Is steady at 6@7c ℔ lb.

Lamb—Nominal 7@9c ℔ lb.

Pork—Undressed, 4@5c; dressed, 6½@7c ℔ lb, outside figures for milk or grain fed.

MINING.

GOLD AND SILVER IN THE WORLD.—The *Bankers' Magazine* contains some interesting statistics of the production of gold and silver, and the amount at present supposed to be in use in the world.

From 1492 to 1848 it is estimated that the yield was equal to $8,300,000,000, of which only $2,621,100,000 was in gold, and $5,678,900,000 in silver. But the proportion of gold to silver has greatly changed in recent years; so that from 1854 to 1868 of $5,584,000,000 of the precious metals, $3,379,000,000 were in gold and only $2,194,000,000 in silver.

Of the gold produced between 1848 and 1868, America yielded nearly one-half; and the United States and Australia produced nearly four-fifths of the whole.

It is supposed that Europe and America possessed, in 1848, $6,000,000,000 of gold and silver, of which $1,900,000,000 were gold, and $4,100,000,000 silver. It is asserted that, owing to the enormous production of gold since 1847, after allowing for waste, destruction, use in manufactures, and export to Asia—for all losses, that is to say—the supply of gold in Europe and America is now $200,000,000 greater than that of silver.

MINING AT GRASS VALLEY.—The mines about Grass Valley are doing at least as well as usual, though election day broke in on regular industry. The new mill of the Idaho is running to the satisfaction of the owners. The North Star mine is paying largely. The Eureka mill keeps up its regular and enormous yield. Prospects at Union Hill are very encouraging. The John Bright mine, which has recently been opened near the old Ione, is paying well. Sixty-five loads, recently crushed, yielded $1,740. A ledge which has been lying unworked for several years, on Wolfe Creek, near Larimer's mill, is now yielding rock which will pay $40 to the ton. The winter promises, altogether, to be a busy season for our mines.—*Grass Valley Union.*

CONSUMPTION OF GOLD IN POTTERIES.—Nearly $50,000 worth of gold is annually consumed in the decoration of china and earthenware in England, by far the greater part of which is in the Staffordshire potteries, and the total amount used in decorating the pottery goods, and in gilding generally in England and France, is estimated to be 40,000 ounces. This is lost to the currency forever. To a large extent the gold is obtained in England, from the Bank of England, in the form of clipped sovereigns. The popular impression is that the light sovereigns go to the mint to be re-melted and re-coined, but a vast number of trades in England require standard gold for all sorts of purposes, and these regularly go to the bank to buy these cut sovereigns. —*Mining Journal.*

NEW PROCESS.—A miner in Inyo County is trying a new method of working ores. He puts the quartz, dry crushsd, into an iron cylinder, with a quantity of quicksilver. The cylinder is heated and made to revolve rapidly. The method works well with small quantities of ore.

HUMBOLDT COAL FIELDS.—Quite a large area of coal land has been located by coal prospectors at the place of the late discoveries. Some samples of the coal were sent to Sacramento, and the result of tests made were entirely satisfactory.—*Humboldt Register.*

WINNEMUCCA.—The first shipment of bullion from Winnemucca has been received in Virginia City. The *Safeguard* says that the prospects of miners in that section begin to look up.

A LUCKY FIND.—A handsome gold nugget, thickly veined and nearly one-half covered with gold, was found in the Lincoln Tunnel, Butte County. Its value was about $1,080.

ARIZONA EXTENSION.—The Arizona Extension boys have increased the force on their mines, and are now extracting from 8 to 10 tons of ore per day. —*Humboldt Register.*

NEW LODES.—The *Colorado Register* reports the discovery of some new lodes of very rich silver ore on the Platte, five miles below the forks, on the South Park road.

AUSTRALIA.—Quartz that yields $8 and $10 a ton gross, is estimated rich pay in Australia, and one and a half to two dollars a ton covers the average cost of mining.

RICH VEIN.—A quartz vein, which, for richness, bids fair to eclipse any lead yet prospected in Calaveras County, was discovered recently, near Railroad Flat.

NEW COUNTY.—The White Pine District of Lander County, Nevada, is to be formed into a new county.

USEFUL AND INTERESTING.

Sweets.

Lozenges are very simply made. The sugar paste is rolled out into thin sheets like pie-crust, the printing is done in carmine with a hand-stamp, and the lozenges then cut out with dies of the shape desired. What remains between them is reboiled for the next batch.

Gum drops are made of gum arabic and sugar, of which several hundred pounds are mixed in huge copper steam kettles, where they get a good boiling for a couple of hours. The mixture is then poured into small kettles, where it is colored and flavored, and then run out into sticks, or dropped in moulds, dried, and, in most gum sticks, crystalized on the outside. An imitation gum drop is made of five parts sugar and one starch. It is not so hard, and seems an improvement on the original. Of this sort are the large penny gum drops sold around the streets.

Coloring is a very simple matter. A great hue and cry is periodically made against candies because of the "horrible coloring," but the simple statement that a piece of red coloring matter the size of a gum drop will color five thousand pounds of candy, is sufficient to show the fallacy of such an idea. People may easily make themselves sick by eating either too much candy or too much pure sugar, but as to attributing the trouble to the coloring matter, this "poison" is so "slow" as to take longer than a life-time for its action. Carmine and cochineal are used for red, saffron for yellow, burnt sugar for dark brown, and this with carmine for orange color. These are all the colors in general use, except for decorating, wherein the ordinary water-color paints are used, but in such infinitesimal quantity as to produce no bad effect; the proportion being, we believe, considerably less than one-millionth.—*N. Y. Mail.*

HOW TO MAKE HARD SOAP.—The request in the February number of the *Agriculturist* for directions to make hard soap, has been answered by a generous pile of letters, for which our thanks are due. More than a dozen send the following; one sends a sample of the article, which is superior to much that is sold at the stores, and is quite cheaply made: Pour four gallons of cold water over six pounds of washing soda (sal soda) and three pounds of unslacked lime. Stir the mixture well, and let it settle until it is perfectly clear. It is better to let it stand all night, as it takes some time for the sediment to settle. When clear, strain the water, put six pounds of fat with it and boil for two hours, stirring it most of the time. If it does not seem thin enough, put another gallon of water on the grounds, stir and drain off, and add as is wanted to the boiling mixture. Its thickness can be tried by occasionally putting a little on a plate to cool. Stir in a handful of salt just before taking it off the fire. Have a tub ready soaked, to prevent the soap from sticking, pour it in, and let it settle until solid, when you will have from the above quantity of ingredients about forty pounds of nice white soap.

INTERESTING FACTS.—A legal stone is fourteen pounds in England, sixteen pounds in Holland. A fathom, six feet, is derived from the height of a full grown man. A hand, in horse measure, is four inches. An Irish mile is 2,240 yards; a Scotch mile is 1,984; a German, 1,806; a Turkish, 1,626. An acre is 1,840 yards, 1 foot, $3\frac{1}{2}$ inches, each way. A square mile, 1,760 yards each way, contains 640 acres. The human body consists of 240 bones, 9 kinds of articulations or joinings, 100 cartilages or ligaments, 400 muscles or tendons, and 100 nerves, besides blood, arteries, veins, etc. Potatoes planted below three feet do not vegetate; at one foot they grow thickest, and at two feet they are retarded two or three months. There are no solid rocks in the Arctic regions, owing to the severe frosts. The surface of the sea is estimated at 150,000,000 square miles, taking the whole surface of the globe at 190,000,000 square miles. Its greatest depth is supposed to be equal to the height of the highest mountain, of four miles.—*Scientific American.*

SOUND—ITS SPEED.—The moderate speed of sound in air is the cause of a number of curious facts which ignorant people might take for contradictions. For instance, if a row of soldiers form a circle and discharge their pieces all at the same time, the sound will be heard as a single discharge by a person occupying the centre of the circle. But if the observer stand at one end of the row, the simultaneous discharge of the men's pieces will be prolonged to a kind of roar. A company of soldiers marching to music along a road, cannot march to time together, for the notes do not reach those in front and those behind simultaneously.—*Scientific American.*

RHEUMATISM CURED BY LIGHTNING.—Some time ago in Fredericksburg during a great storm of lightning, thunder and rain, James Damson of that place, who was engaged in fixing a water spout, was severely stunned by lightning, and could not speak for eight or ten hours. Previous to the time he had been a great sufferer from rheumatism—prostrated in bed for a month at a time. It appears now he is free from the disease, and attributes it to the action of the electricity. We like the cure but do not feel inclined to try the remedy.—*Fredericksburg Herald.*

BRAZILIAN FIRE-ANTS—A STRANGE CUSTOM.—The fire-ants of Brazil are small, red insects, whose name is derived from their terrible bite, which produces the sensation of a coal of fire. Among some Amazonian tribes the Indian bridegroom is subjected to a curious test. On the day of his marriage, while the wedding festivities are going on, his hand is tied up in a paper bag filled with fire-ants. If he bears this torture smilingly, he is considered fit for the trials of matrimony.

HOW TO KEEP MEAT FRESH.—Simply immerse it in buttermilk. This will keep it for several days, when the milk should be changed, and fresh milk substituted. In this way beef, veal, etc., can be kept for several weeks, and it will be sweet and fresh as when first put in. Our butcher furnishes us with the receipt. The whole neighborhood is now saving its meat in this way. It is equally efficacious in the hottest weather.

THE screw-pile, for lighthouses, was invented to tether a cow that would pull up every stake to which she was tied. Its first important use was to moor a floating dock. Its inventor, Alexander Mitchell, died this summer. He was born in Dublin, Ireland, April 13th, 1780, and was blind from childhood.

THE ties of the Chicago and Quincy Railroad are all kyanized by immersion, for thirty hours, in carbolic acid, at 245°. They are, when so prepared, as black as charcoal, and believed to be practically indestructible.

CHEMISTS say that a single drop of iodine will impart color to seven thousand times its weight of water.

THE St. Louis (Mo.) artesian well, the deepest in the world, has reached a depth of 3,147 feet, and no water.

THE things to be desired for man in a healthy state are, that he should not see dreams, but realities; that he should not destroy life, but save it; and that he should be not rich, but content.

General Selections.

Fate.

"The sky is clouded, the rocks are bare;
The spray of the tempest is white in the air;
The winds are out with the waves at play,
And I shall not tempt the sea to-day."

"The trail is narrow, the wood is dim,
The panther clings to the arching limb;
And the lion's whelps are abroad at play,
And I shall not join in the chase to-day."

But the ship sailed safely over the sea,
And the hunters came home from the chase in glee;
And the town that was builded upon a rock
Was swallowed up in the earthquake shock.

—*Overland.*

Risking it.

This is the name of a short essay which we find in the last number of *Every Saturday*, taken from *Belgravia*, the following extracts from which are worthy of a place in our columns:

There is a sense in which all life is a risk. We live very much on trust; and probably quickened faculties would show us daily and hourly risks now undreamed of, hair-breadth 'scapes haunting the most guarded existence. The many enhale health in the country air, while one encounters a whiff of poison, sickens, and dies; thousands walk the streets safely, while one slips on the curb, and breaks his leg or back. What happens to the one might happen to hundreds. An accident of any kind always diffuses a sense of insecurity, the ground we tread on loses something of its stability, we experience a momentary qualm.

But it is impossible to avoid infinite forms of risks, and lives spent in the attempt are the most useless and miserable of all lives. There is an understanding in all occupied existencies that we must take our chance, that we must leave to custom and constituted authorities the guardianship, not only of the public health and well-being, but of our own, as far as it comes under their charge,—recognizing a class of risks which we cannot concern ourselves with but under the penalty of worse evils. In fact, we have no reason to suppose that, framed as we are, we should like the world any better without its uncertainties, and with all its risks avoidable by a strict system of precautions. Life too anxiously defended would be a burden. But our concern now is with two opposite classes of men to whom risks, as such, have a positive charm and relish; personal risks, we mean, for it is well understood that the risks of others constitute to multitudes their highest notion of pleasant excitement, the intensity of enjoyment rising with the imminence and peril of the hazard run for their diversion. The adventurous temper stands foremost as finding its stimulus in the whole scale of risks, from risks of comfort to risks of happiness or of life. It cares for no pleasure that fortune and fate have not a hand in, that does not stand out from some shadow of possible calamity.

"It may be that the gulfs will wash us down,
It may be we shall touch the Happy Isles."

Yet, in fact, the sluggish, passive temperament is more dependent on risks for its stimulus than the impetuous one; they furnish the utmost excitement compatible with the self-indulgence of its nature. It does not, it is true, seek them, but it lingers and waits till they come. Both sorts of people avow their resolve to run risks on a principle which is quite distinct from the resigned acceptance of risk as a condition inseparable from mortal life. They court it as a welcome stirrer of the blood.

There are times when *Laissez-aller* carries it with all of us. "I'll run the chance," "Let things take their course," "I'll risk it," are phrases not unfamiliar with the most prudent among us. Sometimes the feeling takes a pious form; we affect to recognize the Divinity that shapes our ends, declining the rough hewing which is man's appointed work. Sometimes it is mere weariness of a pains-taking course from which no brilliant results have come. Often it is jealousy of other people's success,—a success not, as we can see, earned by plan or forethought. Or it may be contempt of over-caution in others; if our friend won't stir out on the finest day without his umbrella, we face the threatening elements unprotected to show our bolder mettle. We have known it prompt to feats of conceited benevolence with no rational aim; what the wise man calls taking a dog by the ears, "which whoso doth," warns the commentator, "can scarce take care enough of his fingers."

Doubtless there is much in the constitution of things to justify that contempt of precaution which is the courage of some natures. It is a fact that things do often go on for an unaccountable length of time after a wise forethought has determined their career, and that in defiance of all calculation. The leaning wall is long before it falls. Those leaky barrels of gunpowder, which the men in charge knew to be leaky, went safe by a sort of miracle, till the transport of them became a pleasing excitement, infusing that spurious magnanimity which careless ignorance affects. There is in the indolent temper a disinclination to all processes of head or hand that may possibly turn out to have been thrown away, which greatly fosters the love of risk. Such a temper is pathetic over waste labor, which precaution must often seem to be. It must be granted that the provision against possible contingencies—possible but improbable—exercises a large share of the time and ingenuity of mankind. The most important and costly difference between good work and bad is not so much in finish as in the preliminary care to leave nothing to chance or luck. In detecting possible difficulties, and providing resolutely against remote hazards, a good artisan guards against dangers which another disposes of, if ordinarily conscientious, by the rule of ten to one—otherwise by the easier security, "as likely as not."

The passive lover of risks—the man who risks by not doing—however he may enjoy his snug hazards, is not as great a favorite with mankind as his more active brother. There is no dash in his successes, and his failures have a way of inconveniencing others more than himself, backed up as he is by phlegmatic endurance, and never willing to admit that anything signifies very much. Self-confidence, it is said, lies at the bottom of all great undertakings; the man who has faith in his luck, and pushes it to the utmost, will always pass for a hero; and this partly for want of discrimination in his admirers between his case and that of a runner of unavoidable risks. After working out a series or combination of probabilities, demanding the closest application of thought, all great enterprises must still depend upon fortuitous circumstances for a successful issue. All that the best general can do is to leave nothing to chance that brains and vigilance can master; when these have toiled their hardest, he must feel that the result is a toss-up. Nobody is fit to take a lead, or to have the well-being of others in his keeping, who leaves anything to chance which ought to be faced in all its bearings; yet, with many persons, a man who boldly trusts his luck, leaps in the dark, and wins, stands in the position of a great captain.

It was a trait thought worthy of perpetuating of an emperor that he would not duck before a cannon ball, because nobody ever heard of an emperor being killed by a cannon-ball; though there can be nothing really fine in losing the sense of manhood in the sense of rank and place.

The Dauphin whom De Quincy quotes as defying small-pox, because no Dauphin ever died of it, does not get the same credit, because, unfortunately, his confidence was shamed by the result.

All literature that is not distinctly didactic, and indeed much that is, encourages sympathy with rashness, which fiction can always bring off triumphant. Thus the hero of the German tale sells his soul to the devil, on the chance of finding some flaw in the agreement, and proves against all odds the better lawyer of the two. A brilliant youth of bold adventure is held up for admiration in much of the popular biography of our day, and the shattered manhood that succeeds it is kept out of sight; though the one follows the other by a natural consequence, for nothing so unhinges the character as a taste for running risks indulged for any time with impunity.

To make good use of life, one should have in youth the experience of advanced years, and in old age the vigor of youth.

MISCELLANEOUS.

Get Sleep Enough.

A young man in business must not fail to acknowledge one important mathematical fact:

He knows by experience about how many hours of sleep he needs to be as fresh one day as on the day preceeding, and he must acknowledge the fact that he cannot sit up late and rise early and get the requisite amount of sleep. There is a right mathematical obstacle to the accomplishment of such a feat. If he needs seven hours of sleep—as many young men do—or eight hours, as more young men do—he cannot get them between one and seven in the morning. If he insists on late hours, he must neglect either his sleep at night or his business in the morning.

Nearly every young man has sufficient mathematical acuteness at seven o'clock in the morning to appreciate the impossibility of taking one from seven and leaving eight. The question is whether or not he appreciates this impossibility in the evening when he is called upon to decide between a "jolly good time" and his bed.

One very frequent mistake is that lost sleep can be "made up." In the first place, whatever a young man may intend to do, he very seldom actually tries to "make up" for lost sleep. If he needs eight hours' sleep and gets but five, he usually makes up the lost three hours by sleeping about one hour longer than usual the next night. Or perhaps he depends on Sunday for balancing the week, and three hours extra sleep makes up for ten hours lost. In the second place one hour of regular sleep is worth, for purposes of recuperation, at least two hours "made up" slumber.

There is, practically, no such thing as "making up" lost sleep.

If a young man determines to dispense with three hours of his regular sleep, he must make up his mind to lose those three hours.

Every hour lost is a draft upon his physical and mental capital, his bodily vigor, his intellect. Now we would by no means say that a man should never draw upon his capital, but it is certainly very bad policy to do so frequently. Far better live upon that daily income of freshness and vigor which abundant and regular sleep insures.

We do not propose to preach a sermon on "healthy, wealthy, and wise." We simply protest against the idea that lost sleep can be "made up," and would remind our readers that however plausibly they may argue with themselves at 11 o'clock in the evening, figures will not lie for their accommodation in the morning.

The time at which temptation to keep late hours usually meets a young man is the early part of the evening, when he is still fresh and does not realize the necessity of sleep. At eight o'clock the theatres are opened. This is about the hour, too, that friends propose to "make a night of it," or to "have a good time." No need of sleep is felt, and nothing but memory suggests any disagreeable result of "a little fun." The question to be answered by the judgment at such a time is not so much a question of personal comfort as of health and vigor.—*New York Evening Mail.*

Velocipedes.

Something like a year ago I described the new mode of locomotion by velocipedes, and was probably laughed at for predicting that the days of the horse, except as a luxury for the table, were drawing to a close. Since then the velocipede has made its way up in the world. It has entered so completely into the everyday life of people, it has become so useful an element of conversation, that one wonders how the world did without it. Every family will soon have its velocipede. We are having races organized in every direction, the same as for horses and boats. Young men think nothing of running out to their country houses of a forenoon, at a distance of thirty or forty miles. The most expert make their twelve miles an hour, and at that rate we shall soon hear of velocipedes with cow-catchers.

We have also marine velocipedes. For a placid lake or river no more charming invention was ever

thought of. The first one may be seen on the lake of Enghein, twelve miles from Paris, and was constructed at St. Denis. Imagine two snow-shoes, so to speak, held together by iron rods at a yard's distance, and between these the propelling wheel, about a yard in diameter, with paddles eight inches long and four wide. Then behind and almost on a level with the top of the wheel—why would not a screw be easier to propel?—a saddle for the driver, and to the wheel on each side driving cranks for the feet, the wheel and seat covered with sheet iron to prevent wetting. Over the wheel is fixed a swivel-handle of iron for the hands, and to the ends of this handle the tillers for the two rudders.

With this simple machine, which is more difficult to upset than a boat, and which is always ready for use, since it requires no oars, or detached pieces, a man may outrun a boat, he may carry messages, go a fishing, or drive it for pleasure or exercise. It backs and turns with the slightest movement of the foot, and as the feet are always resting in place, there is no time lost, as in the lifting and adjusting of oars. The two perissoirs—we may as well make English sense of it at once—are six or eight inches in diameter, and made of mahogany about the thickness of book-binder's boards. This new invention is destined to a great success in all aquatic localities.—*"Malakoff," in N. Y. Times.*

A Practical Question.

If a man has the moral courage to establish a grocery store and exclude whiskey from the list of articles sold, how many are there in any community who will extend aid and assistance to sustain the worthy enterprise? It is a common saying, that a temperance grocery cannot live in any California town, and the indifference of Temperance and Religious people make the saying true.

If a man has moral conscience above the whisky trade, he rarely finds the manly principle appreciated or valued in the slightest degree by his neighbors. His competitor deals in whisky, and finds it profitable, and in consequence of the profit thus obtained, can sell other goods on more favorable terms, or keep a better stock or sell at lower figures, and the good people who bewail the ravages of rum, consult only their selfish interests, and starve the conscientious grocer, while the unscrupulous dealer grows rich. How many in any community of California have sought out the Temperance grocer and given him their patronage in preferance to aiding and sustaining the rumseller, who disguises his deadfall with an array of family groceries? We can answer in general terms, they are few.

Suppose, if you please, that there are one hundred families in the community who see and know the evil entailed upon mankind by the traffic in ardent spirits, is it not a burning shame that all these will permit the conscientious grocer to fail, because he will not sell rum, and the majority at least patronize his competitors, who care so little for the welfare of the community in which they live, that they will jeopardise its peace and welfare by selling strong drink. Our cause will languish until it rises above this dark reproach. Whoever believes the liquor traffic to be a curse owes it to his conscience to refuse it every direct or indirect support.—*Rescue.*

Curious Incident.—A Boston paper relates the following: "Many years ago, two brothers—Capt. Nathaniel Smith, of Gloucester, and Capt. Ammi R. Smith, of Ipswich—made many voyages in the European trade. It had so happened that while the one was at home the other would be abroad, and they had not seen each other for several years. One morning in the middle of the broad Atlantic, two ships sighted each other, one steering east and the other west, with a good breeze. The usual preparations were made for speaking, and upon ranging within hailing distance, the sails were thrown back, and there, trumpets in hand, stood the two brothers, face to face, each on his own quarter-deck. Affectionate greetings, with the tidings from abroad and the thrice welcome news from home, were exchanged, and after cordial wishes for each other's prosperity, the vessels filled away and stood upon their courses. They did not meet again, on sea or on shore for some years afterward.

THE FAMILY PAPER OF THE PACIFIC COAST.

THE OCCIDENT.

In every true home there should be found a first class family paper—one to whose coming, father, mother, children will look with eagerness each week. Such a paper is

THE OCCIDENT.

Let all who desire such a paper, and are asking, "What paper shall I take?" read the following statement of facts:

THE OCCIDENT contains a greater amount and variety of reading matter than any other family paper on the Coast. It contains choice selections for all classes of readers. Both the child and the person of cultivated literary taste will find in each number matter which cannot fail to be interesting.

THE OCCIDENT is extensively quoted. No other weekly paper on the Coast furnishes so much matter, either original or selected, to the columns of other papers. Whole columns are frequently taken from one or another of its departments. No stronger proof of its excellence could be desired than the fact that it is so well appreciated by contemporaries.

THE OCCIDENT has a complete Agricultural Department, carefully culled from the best authorities, with all the current agricultural items of our own coast, and full market reports. The Mining Department is also very complete.

THE OCCIDENT gives a summary of Pacific Coast news and of Eastern and Foreign Telegraphic News. These items are not hastily thrown together, but are carefully prepared, and are consequently copied to a great extent. The Personal Department is the most complete collection of personal news to be found in the State.

THE OCCIDENT is the official organ of all branches of the Presbyterian Church, and contains full religious intelligence concerning the progress of all denominations. Although a religious paper, it is not sectarian. Its aim is to make men better and happier by the inculcation of the principles of the Christian religion.

THE OCCIDENT is universally admitted to surpass all other papers in the State, in typographical appearance and systematic arrangement of its contents.

Read what the papers say of

THE OCCIDENT.

"Has commenced its second volume, enlarged and improved and with excellent prospects. It is full of 'knews,' views, and family reading, and is ably edited."—*Brooklyn (N. Y.) Union.*

"It gives evidence of ability, tact, and judgment in its management."—*Cincinnati Presbyter.*

"An able paper of the same form as the *Statesman*."—*Philadelphia Statesman.*

"One of the best of papers."—*Zion's Herald, Boston.*

"Well filled with readable articles. An important accession to the literature of the coast."—*S. F. Bulletin.*

"Its typographical appearance is finer than that of any weekly paper published on this coast."—*Chronicle.*

"A periodical worthy of patronage."—*Sacramento Union.*

"It is already attracting a great deal of attention. Its original articles and judicious selections make it an intellectual treat."—*S. F. Fair Press.*

"The ability displayed gives promise of success."—*S. F. Times.*

What is Said

In the last number of the *Vallejo Recorder*:

THE OCCIDENT—This elegant journal, the organ of the Presbyterian Church on this coast, published by Bancroft & Co., is worthy of a place in every household. Too much cannot be said in its praise.

Miners' Foundry and Machine Works,

Nos. 245 to 255 FIRST STREET,

SAN FRANCISCO.

HOWLAND, ANGELL, & KING, Proprietors,

Manufacturers of Machinery for

QUARTZ MILLS, SAW MILLS, POWDER MILLS, FLOUR MILLS, SUGAR MILLS, PAPER MILLS, STEAM ENGINES OF ALL KINDS, AMALGAMATORS OF ALL KINDS, MINING PUMPS, OIL WELL TOOLS, ROCK BREAKERS, HOISTING WORKS,

—AND—

Machinery and Castings of all kinds, either of Iron or Brass.
Boilers and Sheet Iron Work, in all its branches.

Shoes and Dies of White Iron, manufactured for, and imported by us, expressly for this purpose, and will last 25 per cent. longer than any other made on this coast.

Russia Iron Screens, of any degree of fineness. We are the only manufacturers on this coast of the "Hicks Engine," the most compact, simple in construction, and durable, of any Engine in use.

HYATT'S HAND-BOOK OF
Grape Culture in California,

Giving full and specific directions as to where, how, and when, to plant and cultivate a vineyard.

As the season is approaching for those who purpose going into the culture of the vine anew in California, or for those who wish to extend their vinicultural operations to make preparations therefor, they can find no better aid, and no source of information more valuable than to consult this highly approved Hand-Book of Grape Culture.

Following are some of the testimonials that have appeared in commendation of this useful and indispensable work:

A committee of the late Fair of the Mechanics' Institute of San Francisco, to which the work had been referred, speak thus:

"Your committee have examined Mr. Hyatt's Treatise on the Culture of the Grape, and believe it to be the BEST HAND-BOOK published on that subject for California vine culturists, and for which they recommend a Special Premium."

The California State Agricultural Fair, of 1867, awarded a Diploma to the author of this work, and also the San Joaquin Valley Agricultural Fair, at the same season.

OPINIONS OF THE PRESS.

The following are brief extracts from some of the elaborate notices of this work:

The San Francisco *Daily Evening Bulletin* says:—"The book contains a choice collection of the best foreign and native varieties of the grape cultivation in California especially, as well as at the East. The many excellent works on Grape Culture in the Atlantic States are of little or no value in California, where an entirely different system and practice are necessary in vine growing and wine-making. This Hand-Book is intended to supply this deficiency. The author has taken great pains to investigate this subject, and to aid in the improvement of viniculture in California. Its appearance is timely, and it can hardly fail to meet a large and ready sale. It is attractively printed and elegantly bound."

Sacramento Union—"Hyatt's Hand-Book of Grape Culture is a California production that will probably meet a common want. The author takes the experience of the most noted vine-growers in the State as the warrant for his conclusions and suggestions, turns to account the recorded results of experiments made by the pioneers of this branch of industry, and in addition to giving full and minute instructions in regard to the planting of vineyards and the manufacture of wines, presents statistics which will enable the beginner to calculate the probable profits of successful grape culture."

The *Mountain Democrat*, whose editor, Hon. D. W. Gelwicks, is the present State Printer of California, speaks thus:

"HYATT'S GRAPE CULTURE.—We have received from the publishers, H. H. Bancroft & Co., San Francisco, a copy of this interesting and valuable work—a work greatly needed on this coast, and which every grape-grower should purchase. We sent it to a gentleman well known in this community, for his examination—a gentleman familiar with the subject, and largely engaged in the culture of the grape. He gives it the following cordial endorsement, and his endorsement ought to secure it a large sale:

'The limited time in which to examine Hyatt's Grape Culture, published by H. H. Bancroft & Co., San Francisco, has been sufficient, however, to satisfy me that it is a work which every grape-grower should have. No matter how well fortified we may be in our own experience and theory, we must acknowledge that we may adopt many of the author's ideas and suggestions with profit. The merit of the work certainly bespeaks for it a ready sale.

Respectfully, CHAS. P. JACKSON.'"

The Golden Era: * * * "With this book in his hand, the intelligent agriculturist can engage in the business of grape culture with almost the same chance of success as one who has bought his knowledge by expensive experience. * * * The practical information contained in the book would cost many hundred dollars to obtain in any other way. We predict for it a ready and rapid sale."

S. F. Daily Dramatic Chronicle: "The book is emphatically a California production, being written by T. Hart Hyatt, of this city, editor of the *Rural Home Journal*, and bearing the imprint, San Francisco: H. H. Bancroft & Co. It contains a large amount of valuable information, and should be in the possession of every vine-grower and wine manufacturer in the State. The usefulness of the volume, and its convenience for reference, are very much enhanced by a full and carefully prepared index."

S. F. Mining and Scientific Press: * * * "The book professes to be a complete manual, with instructions for the management of the grape and the manufacture of wine, and is especially designed for California. * * * The book contains a considerable amount of valuable information which is not generally found in such treatises."

S. F. Daily Times: * * * "The author seems to have exhausted his subject, particularly as it relates to viniculture in this State, and as the grape interest is just beginning to attract attention which is soon to become paramount among farmers, we regard the publication of the work as most opportune. No ranchman should be without it."

N. Y. Daily Tribune: "The author brings the result of many years' experience in foreign countries to the preparation of his work, and from his observations in climates similar to that of California, arrives at the conclusion that California is singularly favorable to the culture of the grape, and to all semi-tropical fruits, and that it will hereafter be distinguished as the land of the vine, the fig, the orange, the olive and the palm. His volume forms a capital, if not a complete manual, on the care of a vineyard, and it is enriched with much industrial information connected with the subject."

Lacon (Ind.) Home Journal: "This work is most *apropos*. It comes just as thousands, without any practical knowledge of the business, having planted vineyards, find themselves destitute of that information their intelligent care demands. All over the country this interest is growing, and probably the time is not distant when America will produce more, if not better, wines than any country in the world. The author, Mr. Thomas Hart Hyatt, is an enthusiast on the subject upon which he writes so pleasantly, and his book embodies just what every grape-grower would like to know—what every one must know, to cultivate the vine successfully."

Colman's Rural World, St. Louis: * * * "We merely want to introduce a new and interesting treatise on this subject to our readers, from the far-off shores of the Pacific—the Golden State of California. Its author is T. Hart Hyatt, editor of the California *Rural Home Journal*. He has had a large experience and observation in California and in the Old World. His style is entertaining, his directions clear, plain, and practical."

Rural New Yorker: * * * "Although most valuable to the California viniculturist, yet it helps to widen our knowledge of the vine."

H. H. BANCROFT & CO., Publishers.

Family Reading.

Love of the Cross.

O Father! Let me bear the cross;
Make it my daily food,
Though with it Thou dost send the loss
Of every other good.

Take house and lands and earthly fame—
To all I am resigned;
But let me make one earnest claim:
Leave, leave the cross behind!

I know it costs me many tears,
But they are tears of bliss;
And moments there outweigh the years
Of selfish happiness.

The Cross is Love, to action given,
Love "seeking not its own;"
But finding truth and peace and heaven,
In good to others shown.

The Cross doth live in God's great life,
In Christ's dear heart doth shine;
And how without its pains and strife,
Shall God and Christ be mine?

—*Prof. T. C. Upham, D.D.*

The Old School House.

I remember it, just where it stood at the junction of the two roads, shaded by an old gnarled apple-tree, whose ripe, rich fruit was so highly prized by the little school children; I can see it all now, even to the little brook that ran foaming and fretting on its way, now in the shade, now flashing out in the bright sunshine, and so on for about half a mile, when it turned abruptly and fell over a little mound of rocks and emptied into the small pond, or by the more fanciful name of the school children, "Silver Lake." Again I see the old well with the ivy creeping all around it, and the old oaken bucket filled to the brim with clear, cold water, so much sweeter than could be found any place else. I see my old friend and ally, Millie, sitting by my side, with the long, black curls half shading the pretty perplexed look, as she bends still lower over the puzzling example.

Then when the hour of recess would come, how we would bound out of school, the boys making for the pond, that they might try and sail their miniature ships, and the girls making for the woods in which were hid their precious treasures. Millie and I had a house all to ourselves, and we would steal away from the others. The trees formed our roofing and the soft grass our carpet, and with a few pieces of broken crockery and one or two dolls, there were not two happier little girls in all the world. In that one hour we had morning, noon and night; breakfast and supper. The acorn formed our pretended food, and some of the bright, sparkling water mixed with a little dry earth so as to make it brown like chocolate, our pretended drink. I remember how surprised we would be, when the clear, silvery sounds of the bell broke in upon our playing. As the afternoon drew to a close, how eagerly we would watch for the slow slanting rays of the setting sun to strike through the little window, for then we knew our tasks for that day were done, and we had before us the pleasant walk home in the twilight. Sometimes we would take time for a hasty run to our little house, to see that all was right, before going home. This was generally on Saturday night, for this was in the old Puritan days, and we would as soon have thought of taking what did not belong to us, as to have gone there on Sunday.

And now I change from this bright picture, to the time of our parting. I was to leave the dear old place, and go to this great and populous city. The evening before I went, I remember that Millie and I stole down to the dear old school house for the last time, and sat down on the steps and tried to talk cheerfully of the time when we would visit each other; but in spite of all our efforts, the tears would come, and before we left, we had indulged in a good hearty cry. The quiet walk home I kept sacred in my memory, and now that I am threescore years and ten I have a strange fancy to visit the old place, although I know it would be sadly changed in all these years. Oh, those were happy, golden days in "The Old Red School House."—*Hall's Journal of Health.*

Cling Close to the Rock, Johnny!

A long train of cars, fourteen or fifteen in number, were, a few months since, passing over the Alleghany mountains, on their way eastward. They were crowded with passengers. As the iron horse snorted and rushed on, they began to feel that they had begun to descend, and needed no other power than the invisible power of gravitation, to send them down with terrific swiftness. Just as the passengers began to realize their situation, they came to a short curve, cut out of the solid rock—a wall of rock lying on each side. Suddenly the steam whistle screamed as if in agony, "Put on the brakes! put on the brakes!"

Up pressed the brakes, but with no apparent slackening of the cars. Every window opened, and every head that could be was thrust out to see what the danger was, and every one rose up in his place fearing instant destruction. What was the trouble?

Just as the engine began to turn in the curve, the engineer saw a little girl and her baby brother playing on the track. In a moment the cars would be on them. The shriek of the whistle startled the little girl, and every eye looking over could see them. Close to the rail, in the upright rock, was a little niche, out of which a piece of rock had been blasted. In an instant the baby was thrust into this niche, and as the cars came thundering by, the passengers, holding their breath, heard the clear voice of the little sister, on the other side of the cars, ring out,

"Cling close to the rock, Johnny! cling close to the rock!"

And the little creature snuggled in, and put his head as close to the rock as possible, while the heavy cars whirred past him. And many were the moist eyes that gazed, and many a silent thanksgiving went up to Heaven.

In a few hours the cars stopped at a station, where an old man and his son got out of the cars. He had come so far to part with his child, who was going to an eastern city to live, while the aged father was to turn back to his home. All the dangers that would harass the son seemed to crowd into the heart of the father, as he stood holding the hand of his boy—just now to part with him. He choked, and the tears filled his eyes, and all he could say was,

"Cling close to the Rock, my son!"

He wrung the hand of his child, and the passengers saw him standing alone, doubtless praying that his inexperienced son might "cling close to the Rock Christ Jesus!"—*Presbyterian.*

Resist Beginnings.

The trees of the forest held a solemn parliament, wherein they consulted of the innumerable wrongs which the axe had done them; therefore they enacted that no tree should hereafter lend the axe wood for a handle, "on pain of being cut down." The axe travels up and down the forest, begs wood of the cedar, oak, ash, elm, even to the poplar; not one would lend him a chip. At last he desired so much as would serve him to cut down the briars and bushes, alleging that those shrubs did suck away the juice of the ground, hinder the growth, and obscure the glory of the fair and goodly trees. Hereon they were content to afford him so much. When he had got his handle, he cut down themselves, too.

These be the subtle reaches of sin; give it but a little advantage on fair promise to remove thy troubles, and it will cut down thy soul, also. Therefore, resist the beginnings; trust it not in the least. Consider a sin, indeed it is, a crucifying of Christ; wilt thou say, I may crucify Christ a little? I may scourge his flesh, wound his side, pierce his heart a little. What man loves the Lord Jesus who would either say it or do it? Consider thy falling into sin: wilt thou say, I may break my neck a little? Consider it a casting thyself into unquenchable fire: wilt thou say, I may burn my soul and body a little? As suffering we think the least misery too great; so sinning let us think the least iniquity too great.—*Thos. Adams.*

Precious Moments.—That was a suggestive term which a contemporary applied to the six and a half minutes in which the great eclipse was visible in India. Precious moments, indeed. Astronomers traveled thousands of miles, spent months of time and thousands of dollars in preparation—all for the observations that could be made in that brief interval of darkness in midday. No money could have purchased the opportunities of those six minutes. Time is precious—sometimes. Who knows with what precious but quickly lost opportunities his *next* six minutes may be fraught to him?

The great eclipse suggests another apt simile, which we borrow: "If the sun be eclipsed for an hour, it attracts more attention than by its clear shining for a whole year. So of a good man's faults."—*Advance.*

We'll All Meet Again in the Morning.

Such was the exclamation of a dying child, as the red rays of the summer streamed through the casement: "Good-bye, papa, good bye! Mamma has come for me to-night. Don't cry, papa! we'll meet again in the morning!" It was as if an angel had spoken to that father, and his heart grew lighter under his burden; for something assured him that his little one had gone to Him who said: "Suffer little children to come unto me, for of such is the kingdom of heaven."

There is something cheerful to all who are in trouble in this: "We'll all meet again in the morning." It rouses up the fainting soul like a trumpet-blast, and frightens away forever the dark shades thronging the avenues of the outer life. Clouds may gather upon our path, disappointments gather around us like an army with banners; but all this cannot destroy the hope within us, if we have this motto upon our lips: "All will be right in the morning."

If you were to die to-night, would it be well with you in the morning?—*American Presbyterian.*

Business for Christ.

Many years ago, happening to be in South Wales, I made the acquaintance of a Welsh gentleman. He was then a landed proprietor, living in his mansion. He had been before carrying on an extensive business in a large town. By the death of a relative he had unexpectedly come into possession of this property. After considering whether he should retire from business, he made up his mind he should still continue to carry it on, though not for himself, but for Christ. I could not help being struck with the gleesomeness of a holy mind which lighted up his countenance when he said: "I never knew before what real happiness was. Formerly I wrought as a master to earn a livelihood for myself, but now I am carrying on the same work as diligently as if for myself, and even more so; but it is now for Christ, and every half-penny of profits is handed over to the treasury of the Lord, and I feel that the smile of my Saviour rests upon me." I think that is an example worthy of being imitated.—*Dr. Duff.*

That Word—Eternity.

A gentlewoman of this nation, having spent the whole afternoon and a great part of the evening at cards, in mirth and jollity, came home late at night, and finding her waiting-woman reading, she looked over her shoulder upon the book and said, "Poor melancholy soul, why dost thou sit here poring so long upon thy book?" That night she could not sleep, but lay sighing and weeping. Her servant asked her, once and again, what ailed her? At last she burst into tears and said: "Oh! it was one word that I cast my eye upon in that book that troubles me. There I saw the word Eternity. How happy were I if I were provided for Eternity!"—*Flavel.*

He Went Away Sorrowful.—The sorrow experienced was connected with going away from Christ. No one was ever made sorrowful by coming to Christ. Sooner shall the traveller, whose eyes have rested for days on the barren, burning sands of the desert, be made sorrowful by reaching the oasis with its refreshing waters, its green herbage, its oleanders and olives; sooner shall he who has been long an exile in foreign lands be made sorrowful by

approaching his native shores, and by crossing the threshhold of his home to find all his heart-treasures safe, than a guilty, wandering outcast, condemned sinner shall be made sorrowful by coming to Christ. Thousands have found peace and joy in believing. No one ever found sorrow.

Humility.—A farmer went with his son into a wheat field, to see if it was ready for the harvest. "See, father," exclaimed the boy, "how straight these stems hold up their heads. They must be the best ones. Those that hang their heads down, I am sure cannot be good for much."

The farmer plucked a stem of each kind, and said, "See here, foolish child! This stalk that stood so straight is light-headed, and almost good for nothing, while this that hung its head so modestly is full of the most beautiful grain."—*Presbyterian.*

Young Folks.

Somebody.

There's a meddlesome "Somebody" going about,
And playing his pranks, but we can't find him out;
He's up stairs and down stairs from morning till night,
And always in mischief, but never in sight.

The rogues I have read of in song or in tale
Are caught in the end, and conducted to jail;
But "Somebody's" tracks are all covered so well
He never has seen the inside of a cell.

Our young folks at home, at all seasons and times,
Are rehearsing the roll of "Somebody's" crimes;
Or, fast as their feet and their tongues can well run,
Come to tell the last deed the sly scamp has done.

"'Somebody' has taken my knife," one will say;
"'Somebody' has carried my pencil away;"
"'Somebody' has gone and thrown down all the blocks;"
"'Somebody' ate up all the cakes in the box."

It is "Somebody" breaks all the pictures and plates;
And hides the boys' sleds, and runs off with their skates,
And turns on the water, and tumbles the beds,
And steals all the pins, and melts all the dolls' heads.

One night a dull sound like the thump of a head,
Announced that one youngster was out of his bed;
And he said, half asleep, when asked what it meant.
"'Somebody' is pushing me out of the tent!"

Now if these high crimes of "Somebody" don't cease,
We must summon in the detective police;
And they in their wisdom, at once will make known,
The culprit belongs to no house but our own.

Then should it turn out, after all, to be true,
That our young folks themselves are "Somebody," too,
How queer it would look if we saw them all go
Marched off to the station house, six in a row.

—*Our Young Folks.*

Lost and Found.

Some years ago two boys, while playing upon a cliff near the sea, found a young sea bird which a dog was worrying. It would have been killed but for them. They drove away the dog, and carried the bird, which was nearly as large as a goose, safely home. There it was shut up in a coop, like the hens and chickens, and fed and kindly cared for. It soon became quite tame, and manifested constant affection for its little masters, who felt quite proud of their care; and thus weeks and months rolled on. In the fall of the year the bird became very tame, and the coop was occasionally opened and the prisoner permitted to go to the coast, near which the boys lived. But it came regularly home at night, receiving its supper along with the rest of the biddies, and crept to its nest to repose.

So the cold winter passed away and the spring came. One night the bird which had been cared for so well was missed. It did not come home. The next day and the next went by, and still the coop was empty. The fact was, the boys' bird had been coaxed away—I cannot really say into bad company; but it had joined a flock on its way north, and flown away with the rest. Presently the boys began to comprehend the difficulty., and, as a matter of course, they had to have a good cry about it. They had really learned to love their bird, and to part with it was, to them, a severe trial. That is all very natural, for kindness, no matter upon what creature bestowed, ever begets kindness, and to part with an object that we love is very painful.

Some of my readers will, no doubt, anticipate the end of my story, for many similar events are recorded.

One cold autumn day, as the boys were at play in their yard, they saw a flock of sea birds coming towards them. Nearer and nearer they came, until at last, to their infinite surprise, the whole flock settled upon the ground close at hand, and the largest waddled along towards them, quacking most curiously as she came.

It was the bird which had flown away in the spring, now returned with her young ones to claim hospitality for the winter! You may imagine, if you can the delight of the boys, and indeed that of their parents, at this instance of affection. Words cannot describe it. You may make up your mind that the flock was not turned adrift, though for a long time the young ones were pretty wild, and did not take to the boys as kindly as the mother did. Ah, well; they did not know them as well!—*Casket and Playmate.*

A Thorn in the Pillow.

How pleasant it is, when night comes, and we are weary, to lay our heads on a soft pillow and go to sleep.

But it often happens that our pillow contains a thorn! I have just read a paper about a child who found a thorn in her pillow, and it hurt her very much. Shall I tell you about it? Well, here is the story:

A little girl went to visit her grandmother, who lived at some distance from her mother and father's home. She seemed happy all day, for she had every thing to make her happy; but when her grandmother went to look at her after she was asleep, she saw tear-drops on her eye-lashes.

"Ah," said the old lady the next morning, "you were a little home-sick last night, my dear."

"O no, grandmother," Mabel replied, "I could never be home-sick here."

It was just so the next night, and the next. At length grandmother thought, as the child seemed troubled, that she would sit in the next room until she went to sleep. Presently, although Mabel was tucked up, she began to rustle the quilt, and shake her pillow, and her grandmother heard a little sob, so she went to her, and said:

"Mabel, my child, you have a thorn in your pillow; what is it?"

Then the little girl hid her face, and began to cry aloud. Her grandmother was very much troubled. At length Mabel answered:

"O, grandmother, when I am alone here, I cannot forget how I said, "I won't mother,' and I cannot unsay it; and mother is good and loves me so much, and—I was so naughty!"

And the tears streamed afresh down the child's cheeks. Here, then, was the thorn in her pillow, and she could not withdraw it. And so it will be, by and by, with the little boy who is selfish and unkind at home. When he is away among strangers, he will think of the home of his childhood, and the recollection of some unkind word or action will be a thorn in his pillow when he retires at night. And the little girl who does not care to help her mother now, will find a thorn in her pillow when that mother sleeps in the grave.—*Presbyterian.*

Effie's Confession.

"Oh, Laura, just see what I've done!"

Laura stopped running and came back to where Effie was standing and looking at a flower border.

"What's the matter?" asked she.

"Why I've broken one of these lovely lilies that father wanted to keep till Aunt Marian comes. As I was running past here I went too near this side of the path, and my dress caught and broke the stem."

"Oh, what a pity! What will your father say? Do you think he will scold?"

"I don't know. What shall I do about it?"

Laura thought a moment, and then said:

"I'll tell you! I've got a capital plan. Let's go and let Towser out of the house, and then come back here, and he will be sure to follow us, and then we can say he broke it."

"Why, Laura Graham, that would be telling a dreadful falsehood, and I won't do it."

"But what will you say if your father asks who did it?"

Effie looked at Laura and then at the broken lily. A bright thought seemed to strike her, and she said:

"I'm going right to father to tell him just how it was," and she walked off very fast, as if she were afraid her courage would give out, while Laura followed slowly.

They found Mr. Neville in the library, reading the newspaper, and Effie walked up to him and stood by his chair, waiting for him to look up. Presently he said:

"Well, Effie?"

Then she told him all about it, without trying to excuse herself. Her father waited for her to finish, then drawing her to him and kissing her, told her he had seen the whole from a window, and watched to see what she would do, and as she had been truthful and come and confessed her fault, he would gladly forgive her.

That night when Effie, as usual, read a chapter in the Bible before going to bed, she came to this verse:

"If we confess our sins, He is faithful and just to forgive us our sins."

She prayed that God, for Christ's sake, would pardon her sins, and make her one of His own children.—*Sunday School Visitor.*

I only Prayed for Him.

"Is it true, Arthur, that your father joined the Church last Sunday?" I said to a little boy whose father I had known was a drunkard.

"Yes, sir, and so did mother, and we are all so happy."

"Why, I thought he did not attend church, and used to spend Sabbath in the rum-shop."

"It is different now, sir. He has signed the pledge, and goes to church, and teaches in our Sunday School."

"How did this come about, Arthur? I knew you belonged to the Band of Hope, and went to school. What did you do for your father?"

"*I only prayed for him!* When father drank, he was so cross I was afraid to speak to him. One day, at our Band of hope meeting, the superintendent told us to ask every one we knew to sign the pledge, and if there were some we could not ask, then we should pray to God for them. So that night I wanted to ask father, but he was so cross. I, therefore, with Sarah and Gerty, before going to bed, prayed to God to get father to give up drinking and sign the pledge; and father gave up drink, and now with mother he has joined the Church. This was all I did; I only prayed for him."

Dear children, do any of your fathers, mothers, brothers, or friends drink, and do you want them to sign the plege? Then *pray* for them.—*The Banner.*

Being Useful.

"I really should like to be useful, and do good," said Earnest, a kind-hearted boy about seven years of age, as he stood thoughtfully looking out of the window. "But I don't see how I can. It is different with papa; when I am as old as he is, then I will do some good; but now I am too young."

"No, Earnest, do not say so," said some one who stood near and heard what he had just said. "There are many ways in which you may be useful, if you wish."

"Do tell me how: I should much like to know," said the boy.

"Well, then," answered his friend, "by being gentle and obedient, and by setting a good example to your companions: this is one way. Then, your brothers and sisters collect money for missions; could you not help them?"

Ernest resolved to do so, and began working heartily: and not long after had collected quite a large sum of money. Also, he does not forget to ask God to help him to be obedient.

Dear children, think about this: and ask yourselves, "Am I trying to be useful?" God never intends that anything which he has made should be useless.—*United Presbyterian.*

NEWS SUMMARY.

PACIFIC COAST ITEMS.

THE *Bulletin's* correspondent at White Pine says there are already three towns in the district, all containing about 2,000 inhabitants. These towns are called Hamilton, Shermantown, and Treasure City. The latter is the largest, and is situated on Treasure Hill, at an altitude of 8,000 feet. This writer confirms the accounts of the great wealth of the mines, but advises no one to go there until spring. The winters are very severe. The ground is already covered with snow.

THERE is not a public bar where intoxicating liquors are sold, on the stage road between Olympia and the Columbia River, a distance of over sixty miles. It is thought there is no other road of equal length with so much settlement through which it passes, and having the same amount of travel in the United States, of which the same can be said.

THE Board of Trustees of the Good Templars' Home for Orphans have decided to proceed immediately to the erection of a building, at an estimated cost of $20,000, It will be situated in Vallejo, where the Home has been endowed with 20 acres of fertile land.

A RAIN STORM of great severity was experienced on the coast of Mexico, lasting from the 16th to the 19th of October. Many towns and villages were washed away by the freshet, and the number of lives lost was very large.

THE British Government has conceded the points at issue concerning the San Juan business, by agreeing to withdraw from the occupancy of the island. This gives our Government control of Puget Sound and a fine harbor.

THE *Gazette* suggests that a good use for some of the money won by the citizens of Nevada on the late election, would be the purchase of a town clock, to be placed on the new school-house just completed.

THE unsold wheat crop of Napa is at the present time 16,000 tons, worth $560,000. The *Register* thinks that this accounts for the "plentiful lack" of money in circulation.

EGGS are scarce at $1 50 per dozen, in Virginia City.

THE schooner *Lulu*, said to be the finest vessel ever built on this coast, was launched at Port Madison, W. T., on the 13th inst.

SEVERAL of the papers in the State have been, as a contemporary terms it, "*ensmalled*" since the election.

ACCORDING to the number of votes polled at the late election, San Jose is the third city in the State.

A FORCE of 400 men will winter at the Summit, and try to keep the railroad free from snow.

THE 26th inst. has been appointed as Thanksgiving Day for California, by Gov. Haight.

FLAX-SEED to the amount of 20 tons has been raised on one ranch at Chico this season.

THE *Union* says that many Texan families are settling in San Diego County.

GRANT carried 26 and Seymour 24 counties in California.

THE new lighthouse at Cape Mendocino is completed.

THERE are 9 practicing physicians in Oakland.

TELEGRAPHIC.

EASTERN.—The financial panic in New York has partially passed away....The Wisconsin State Bank in Milwaukie, considered one of the soundest banks in the city, failed on the 10th inst....The cigar, shoe, and tobacco manufacturers in New York, are on a strike....There have been rumors of a filibustering expedition being fitted out in New York against Cuba. It was to be under the command of Gen. H. Hays, who denies, however, any connection with the affair. 6,500 men have been raised, and recruiting has ceased....A contract has been made in Boston, by the Turkish Government for 100 revolving guns....It is thought that the Broadway Railroad scheme will become a law, at the next session of the Legislature....The Womens' Rights Convention assembled in Boston on the 18th inst....Parties from Mexico are in Washington, trying to get a loan from the U. S. Government, on a mortgage of some of the Mexican States. ....The feud between the Erie and Central Railroad Companies has been revived.

SOUTHERN—Several of the leading men of South Carolina, including Wade Hampton, express their intention to accept the result of the election, and to support the Government, relying on the ballot to correct existing evils....The North Carolina Legislature met on the 16th....Rev. J. W. Rogers, a leader of ritualism in Tennessee, has declared himself a Roman Catholic....A claim of $27,000 has been made against the city of New Orleans for damages done in the late riots....Gov. Brownlow writes a message, congratulating the people upon the election of Grant, and the bountiful harvests....Gov. Clayton, of Arkansas, says that the State Government must be sustained, if necessary, by the bayonet.

PERSONAL.—Gen. Grant was offered a public reception by the Mayor and Aldermen of New York, but declined to receive it....Admiral Farragut is in New York....Prof. Goldwin Smith has arrived from England and entered upon his duties in Cornell University....Gen. Rosecrans and Gen. Longstreet have gone to Mexico....Mayor Hoffman of New York, has resigned....Ex-Gov. Todd of Ohio, died very suddenly on the 13th.

POLITICAL.—It is proposed to throw the Democratic electoral vote for Grant, thus making his election unanimous. Hon. A. H. Stevens is the originator of the scheme....Alabama has gone for Grant....The Kansas Senate is unanimously Republican....Negro suffrage is defeated in Missouri by 8,000 majority.

FOREIGN.—The peasants of Whalinca led by the Catholic clergy, have revolted against the Russian Commander. ....The Court of Common Pleas in London, has rendered a decision that the Common Law of England gives women a right to vote....The next Parliament will meet on Dec. 10th. ....The public sentiment in favor of a Republic seems to gain ground in Spain. The Pope refuses to recognize the new government....At a meeting of French Bishops and Cardinals in Rome, the proposition to allow marriage among the clergy, and to abolish the Latin liturgy, was favorably received....Nine-tenths of the drinking saloons in the Russian Empire are to be suppressed....The insurrection in Cuba is breaking up....Mt. Vesuvius is in violent eruption. ....Rossini, the great musical composer, died on the 14th. ....Russell and John Stuart Mill are defeated for Parliament.

ALLEN'S ORIGINAL AND GENUINE
Nerve and Bone Liniment.

The Nerve and Bone Liniment was originated by Geo. M. Allen, in the year 1834, and has lived entirely on its own merits without the aid of advertisements; but owing to the many counterfeit and worthless articles called Nerve and Bone Liniment, now upon the market, has induced the proprietors to advertise it. Many certificates of leading citizens who have used and constantly keep it in their houses, as a great family remedy, could be added to the advertisement, but knowing the many virtues of Allen's Nerve and Bone Liniment, and that one application will satisfy any one of its beneficial effects, deem it unnecessary to bring the certificates before the public. Allen's Nerve and Bone Liniment does not effect a cure in a minute, but acts upon the Nerve and the Bone of the patient by its penetrating properties, when used according to the directions on each bottle, and gives new strength to the parts affected, and thus acts as an agent in helping nature to restore the diseased parts to health. It is also invaluable in all diseases of horses.

Be sure to call for Allen's original and genuine Nerve and Bone Liniment, all others are worthless counterfeits, and should not be tolerated by the public.

CURRENT TOPICS.

At no time have the efforts for the removal from women of those disadvantages which have been continued for ages, in all countries, been more successful than within the past year. In England it is probable that they will have free access to all the facilities for education, general and professional, which may be enjoyed by men, and, from recent indications, it is not improbable that they may be permitted to vote before a long time. And in this country there has been manifest progress in the same direction. The President of the University of Michigan, in his annual report, takes bold ground in favor of the admission of women to all the privileges of that institution; and in several other universities, including the one about to begin its work in California, the question has become practical, and will probably be decided in favor of full liberty to those who have been excluded from these higher schools. The Trustees of the Boston Dental College, after thorough discussion, voted that females be allowed to graduate from that institution, and it seems to be popular to give them opportunity to test their equality with males, on all the arenas of scientific and practical life. We are glad to see signs of progress in the attempt to take away the restrictions that nature does not suggest, and to give women the widest range for improvement and usefulness. Those who entertain extreme views respecting their rights will be less likely to work evil, if they are permitted to possess what all may safely concede, and many interests may gain largely from the support of those who will thus be prepared for more extended service, and who are so generally on the side of right and truth.

Mormonism, though making loud protestations of zeal in maintaining its peculiarities, is believed by many to be more enfeebled than at any former time. A great number of those who have joined the saints in Utah declare that they have been deceived respecting the sentiments and practices that prevail among them, and some of these have abandoned their company. Others are already beginning to feel the disintegrating effect of business relations with the outside world, forced upon them by the railroad and the tide of inhabitants pouring within their bounds. The Elders, to be sure, have decided, in their annual conference, that no commerce be allowed with Gentiles, unless in case of absolute necessity; but they cannot wall out this tide by any resolutions, or prevent the people from availing themselves of the advantages thus brought within their reach. Brigham Young gave them some very good advice at this conference, in regard to conforming to the fashions and adopting the follies of those coming among them, but human nature is true to itself, whether seen in Mormon communities or elsewhere, and advice will not restrain the inclinations when strongly and constantly tempted. What will be the final consequence of the necessary change in their condition now that they are forced to come in contact with the world, cannot as yet be determined, though it has been said by some that they will probably break up at Salt Lake, and that Young, who is said to be worth several millions of dollars, will go to some other clime, where he can enjoy his wealth and indulge his peculiarities.

The breaking up and banishment of the order of Jesuits from Spain, in the new administration of affairs, is a fact but little less important than the change in the government itself. Immense domains, and property almost beyond value, and influence over the common people that was well-nigh absolute, have contributed to render the Jesuits a power in the land that must be conciliated, or banished. The attempt to conciliate them would have given them the opportunity to dictate in the new government. Hence, their entire overthrow was determined upon. If the attempt shall be successful, other nations, in which this Order has attained a feared and dangerous prominence, will be emboldened to adopt a like policy, and in this way, in addition to the many others which are becoming apparent, will the revolution in Spain be a blessing to mankind.

No living preacher on the other side of the Atlantic, unless it may be Mr. Spurgeon, has so warm a place in the respect and affection of American Christians as Dr. Guthrie. When it was announced last year that he would come to this country as one of the delegation from the Free Church of Scotland, thousands were delighted with the prospect of seeing one who had been preceded among us by so many beautiful and burning thoughts that had made us acquainted with him. But when his health was said to be unequal to the drafts of a sea-voyage, both himself and his American friends were sadly disappointed, and all supposed he would never attempt again to cross the ocean. In his farewell address to Dr. McCosh, however, he declares that he intends to come, if Providence is pleased to spare him a few years, even if he is obliged to remain on the hurricane deck of a ship for the whole voyage. The deep interest he expresses in this country will make him the more welcome here, and the frequent eloquent references he has made to our national difficulties, and prospects, during years past, will introduce him to all our people, while the Church will justly claim the special privilege of caring for so honored a servant of her Head. It is cheering to know that his health is gradually improving, and it is not improbable that he may be able to preach again with some regularity, greatly to the joy of the thousands in Scotland who have reason to bless God for so able and faithful a preacher of the Word.

It is said that conversions to the truth, and the purpose to proclaim and defend it, are much more frequent in the countries of Southern Europe than might be supposed by those who regard only the surface of things. Colporteurs, in their conversations with the people, are often surprised by most cordial welcome, and by evidences of intelligence and interest they did not expect. Such public presentation of the Gospel as is permitted is received by crowds of men who are willing to think, and anxious to hear, and it is much more difficult than formerly to confine even the common people within the limits of superstition and ignorance. These facts may in part account for a statement which has been read with the question, "How can it be?" by many who have not kept themselves informed repecting the condition of evangelical progress in those lands. This statement is, that sixty young men have offered themselves, with the best of recommendations, to be received as pupils in Protestant theology, from the northern part of Italy, while others, of piety and talents, are ready to follow their example. The process of undermining has been going on for years. Intelligence has gained a place among the common people. Light is producing its legitimate effects, and it will drive darkness away.

The President in his proclamation, appointing a day for national Thanksgiving, assigns this as one of the reasons why such a day should be observed, "we are permitted to hope that long protracted political and sectional dissensions are, at no distant day, to give place to returning harmony and fraternal affection throughout the Republic." Most happy results may speedily be expected, if the people of all parties and sections sincerely reciprocate this sentiment. The great need of the nation now, is the restoration of mutual confidence and love in its different parts. There must be a purpose to make our common country the bond of union. There must be a willingness to bury feelings, the exercise of which can only foment strife. Every consideration demands that in every State, "political and sectional dissensions give place to harmony and fraternal affection," and our Thanksgiving day just passed has had a blessed influence, if it has contributed throughout the Republic to a condition so greatly to be desired.

The triumph of the Liberal party in the elections in Great Britain will be attended by very important results. Those issues which have been so bitter and doubtful in the House of Commons will be settled in favor of the leaders who have been denounced by the aristocracy, and who were believed to be in a hopeless minority. The spirit of liberty, civil and ecclesiastical, will take fresh courage. The bonds between England and our nation will be multiplied.

The lovers of right, and of man, everywhere, will rejoice, and they will have occasion, in view of the present position of these two great nations, to hope much for the welfare of the race.

In anticipation of the General Council to be held next month in Rome, the Pope has addressed a letter to "all Protestants and other non-Catholics," in which he asserts their error in departing from the true faith, and invites them to return to the bosom of the Catholic Church. It is not probable that his invitation, though polite and cordial in its terms, will be very generally accepted; yet the fact that it has been issued has significance that should not be overlooked. It is a remarkable change that has illustration in arguments, and appeals, and invitations, in place of anathemas, and bulls, and excommunications. It is a new order of things when the Vatican sends forth persuasions, instead of thunders, and the letters of one who wears the tiara are accepted as the productions of an old man who can do no harm, when such letters were wont in other days to make kings tremble, and to hold the world in awe.

Surely, these last issues sound more like the gospel, and the entreaties of him who claims to be God's vicar are more appropriate than the threats that once had such power. Nothing in its history gives more certain proof that the world moves, than the changed position and altered tone of the Papal Church. We believe that much good will be accomplished by the Council soon to convene, and its approach should be the occasion not only of general concern respecting the themes which may be discussed, but of prayer that these discussions may result in decisions that shall mark Rome's advance. We will not go to the mountain, but we can pray that the mountain may come to us, though we may be obliged to wait long before it will traverse the whole distance.

Religious Intelligence.

PACIFIC COAST.

Church at Chico.—The Presbyterian Church of Chico has given a call to Rev. Alexander Fairbairn. It is believed that Bro. Fairbairn will accept this call. This Church is small, but composed of good working members. Ground for a church building has been donated by Gen. Bidwell.

The town is beautiful and growing, with a population of 2,000. The country in the vicinity is rich, and capable of supporting a large permanent population.

Bro. Fairbairn will find in Chico a field of unusual interest and great promise, affording ample scope and stimulus to all his energies. May God bless him and the people who have called him to be their pastor. T. F.

Prison Commission.—The exercises at the meeting of the Commission on Monday evening last, were of an interesting character, and consisted of introductory remarks by Gov. Haight, reading of a poem written by a prisoner, entitled the "Convict's Friend" and addressed to some one of the officers of the prision, addresses by Rev. Drs. Lucky and Eells, and report of the Superintendent. Notice was given of a project to furnish the prisoners with a thanksgiving dinner, which as we learn, has been carried out successfully.

Y. M. C. A.—A course of lectures is to be given at the hall of the Association in this city. The first of the course was given by Rev. Dr. Stone, on Tuesday evening, 24th.

An Association has just been organized in Marysville, which has favorable prospects for success.

The annual meeting of the Association in Stockton was held on Monday. Officers were elected for the ensuing year, and on Tuesday evening a public meeting was held at which several interesting addresses were delivered.

Thanksgiving.—The day was generally observed by the citizens of San Francisco. Services were held by nearly all the religious societies, including some of the Jewish and Catholic churches. The Congregationalists united and held a meeting in the Second Church, listening to a sermon by Rev. J. A. Benton. The Larkin Street and First Presbyterian societies held a union meeting with the Howard Presbyterian Church on Mission Street. Dr. Scudder preached a most eloquent and instructive sermon. Dr. Wadsworth preached at Calvary Church.

Methodist.—The ladies of the M. E. Church at Visalia have held a fair, from which $800 was realized for the completion of the new church.

The amount of $4,100 was subscribed at the close of the sermon on a recent Sabbath, for the payment of the debt of the Central Methodist Church in this city.

A festival given by the Methodist ladies at Petaluma yielded over $300.

Sacramento.—The Sabbath School connected with Grace Church held its 7th annual festival on last Sunday evening. The house was crowded and the occasion was in every respect a pleasant one, with the exception of an accident at the close, by which, the floor giving way, several persons were thrown into the cellar. No one was seriously injured.

Solano County.—The Solano Street Church at Suisun is being repaired. A parsonage is to be erected soon.

The new Congregational church at Rio Vista is progressing finely.

Church of the Advent.—The entertainment recently given for the benefit of the Sunday School connected with this church resulted in adding $250 to the school's funds.

Benevolent Society.—It is proposed to organize a society for the relief of the poor in Grass Valley.

EASTERN.

The Water Street Meetings.—The daily prayer-meeting commenced in August last is continued still, and promises to become even there a fixed institution. The interest in the meetings is not only sustained, but has been decidedly increased since the novelty of the dance-hall as a place of prayer passed away. More particularly has this been the case since the removal of the meetings from John Allen's, who seemed to be to many the object of attraction, to the dance-hall, 316 Water Street. There have never been less than 50, and more commonly from 80 to 100 men present during the hour. Earnestness in prayer has uniformly characterized the meeting, often a deep, wrestling spirit will prevail that God will bless the people of that neighborhood.—*Independent.*

Colored Presbyterians.—On Sunday afternoon, 11th inst., a Church—colored—was organized in Hope chapel, Utica, New York, consisting of 25 members. They adopted the Confession of Faith and Church Government of the Presbyterian Church. —*Presbyterian.*

Resignation.—At a special meeting of the First Presbytery of New York, on the 21st October, the Rev. Dr. James Harper and the Rev. Robert Armstrong resigned the pastorates which they have held so long, the former of the 7th Avenue Church, New York, and the latter of the First United Presbyterian Church, Newburg, New York.—*United Presbyterian.*

Gift.—Fifty acres of land, unencumbered by any condition, have been given to the Moravian church at New Dorp, Staten Island, by Commodore Vanderbilt. The burial vault of the family is in the grounds of this modest church.

Ordination.—Ten ordinations took place, two new Presbyteries were organized, and a new Synod planned at the late meetings of the Synod of Missouri and the Presbyteries composing it, at Kansas City.

Cincinnati.—A new Church called the Mt. Auburn Presbyterian, was organized on the 13th inst., with a membership of 68 persons, 5 of whom were elected elders.—*N. W. Presbyterian.*

Oldest.—It is said the Congregational Sabbath school of Bethlehem, Connecticut, is the oldest in this country, if not in the world, it having been organized in 1740.

Maine.—Of the 241 Orthodox Congregational churches in Maine, only 59 have pastors, and 79 have stated supplies.

MISSIONARY ITEMS.

West Africa.—Mr. Horton, in his "West African Countries and People," says:

"The Basle missionaries have completely renovated the aspect of the country, and the extreme savage and barbarous habits of the people, wherever they have labored; they have established the literature of the language, and made the rising generation to feel the beauty and pathos of their mother tongue when reduced to writing; they have introduced the cultivation of new plants in the country, and taught the people how to prepare them, some of which are now becoming staple articles of commerce—such as coffee, cocoa, Virginian and Kentucky tobacco. Besides teaching the people the value of agricultural pursuits, and affording them every opportunity of realizing the value of their produce, they teach the mechanical arts; they send out shoemakers, tailors, wheelwrights, carpenters, and coopers, to teach the people these useful employments, so that vast improvements are being made by the natives."

Methodist.—The General M. E. Missionary Committee appropriated $1,000,000 in 1866 for missionary purposes at home and abroad. For this year they appropriate but $850,000. While the large balance in the treasury in 1865 has been gradually consumed, the contributions have so far fallen off that, at the annual meeting in last November, they were in debt $178,525, and since then the debt has nearly doubled. Unless a grand rally is made during the next thirty days, the Board will close its next financial year with a debt of $350,000.—*Am. Presbyterian.*

Morocco.—The Empire of Morocco, though lying within sight of the mountains of Spain, skirted every year by thousands of Englishmen on their route to India, and receiving a constant influx of visitors, either for business or pleasure, contains not one preacher of the Christian faith, unless we except a small Romish monastery at Tangier, under the protection of the Spanish embassy. The Moors are a fine, manly race, devoted to their religion, and would, if converted, exert a mighty power for good in Africa.

Egypt.—The United Presbyterians are rejoicing over the prosperity of their work in Osiout, in Egypt. In this important town the Copts have split into parties favoring or opposing the Evangelical faith. Some native converts started an evening Bible-class, attended by quite a number of priests,

and two of the bishop's nephews, themselves priests. The opposition was great; but the leading members of the laity said that it was a laudable thing to study the Scriptures, and should be encouraged.—*Observer.*

THE REFORMED BOARD OF FOREIGN MISSIONS.—The statements of the Finance Committee of the Board shows that the treasury is indebted to the amount of $35,000; that on the 1st day of November drafts from the missions amounting to $7,000 will be due; on the 15th, $4,200, and on the 30th, $3,500, the total amount necessary to remove the debt and meet the expenses of the remainder of the year 1868 being about $50,000.—*Reformed Church Messenger.*

OHIO.—At a late meeting the Synod of Ohio adopted a plan and determined with a new energy and zeal to enter on the work of Home Missions within its own bounds. To carry out this plan the Synodical Committee of Missions have elected Rev. Alex. Scott, pastor of the church at Savannah, as general agent and missionary for the Synod. It is probable that he will accept.—*Presbyterian Banner.*

MEXICAN EVANGELICAL DIRECTORY.—This organization, as its name indicates, aims to give direction to the evangelical movement in the Mexican Republic. The central circle is in the City of Mexico, and holds a religious meeting every Sabbath, and aims at the establishment of a church, Sabbath-schools, theological seminary, and religious press, to circulate books, pamphlets, and papers.

A MISSIONARY NURSERY.—Near Basle, in Switzerland, is the Pilgrim Mission, where there are some sixty or seventy brethren receiving instruction in a three years' course of study, and fitting themselves for missionary work. Mission experience is gained in the sixty neighboring towns and villages. Manual labor is combined with mental pursuits.—*United Presbyterian.*

HOW MANY?—The Congregational and Presbyterian churches sustain one foreign missionary to about every 31 ministers and 3,000 members; while the Covenanters have one in foreign lands for every 60 members of their Church. In the same proportion, how many ought the Liberal Christians of America to sustain?—*Liberal Christian.*

FRENCH IN AMERICA.—The French population of New York alone is nearly fifty thousand; and yet there are but two French churches to accommodate them, one of which is Episcopalian. The French population of Chicago is somewhere about thirty or forty thousand; yet there is no French church in that great city.

PERSECUTION.—At one of the German missionary stations in South Africa, a fearful persecution is in progress. The heathen King of the province, becoming alarmed at the rapid advance and influence of Christianity among his subjects, ordered every Christian to be killed, wherever he might be found.—*N. W. Presbyterian.*

TOUNGOO.—Mr. Bunker, a Baptist missionary to the Karens in Toungoo, writes that there are 177 churches, with a membership of 5,372. He says that there are many Christian villages never yet visited by a white teacher. Seven Roman priests are now upon the ground, laboring among the heathen in the jungles.

FIRST MISSIONARY.—The first foreign missionary of the English Society for the Propagation of the Gospel was sent out in 1702 to the State of New Jersey. His name was George Keith, and he was a fellow-student of Bishop Burnet, in the University of Aberdeen.

THE Baptist churches in Sweden report during the last year 850 members by baptism. Nine new churches were formed, and the total number of Baptists was 7,478 in 191 churches.

SAILING OF MISSIONARIES.—The Rev. James W. Vandyke, a recent graduate of the Seminary at Princeton, New Jersey, with his wife sailed on the 9th ult., for Bangkok, Siam, to join the Siamese Mission of the Presbyterian church.—*N. W. Presbyterian.*

PROGRESS IN CHINA.—Bishop Williams of China, writes to the *Spirit of Missions*, New York, that the Emperor of China has issued an edict forbidding re-building of destroyed, and the repair of decayed temples, excepting the temples of Confucius.

REV. DR. KENDALL, Secretary of the Presbyterian Committee of Home Missions, has returned from his European visit.

AMONG the Choctaw Indians are sixteen Christian churches, 1,100 communicants, and 1,500 Sabbath School children.

AUSTRALIA.—The Moravian missionaries have penetrated 700 miles into the interior, among the aborigines.

THREE missionaries, Rev. E. M. Clark and wife and Mrs. Simons, have sailed from Boston for the East.

THE revolutionary movement in Bulgaria will unfavorably affect evangelistic labors.

Oakland Academy.

A CLASSICAL, ENGLISH, & MILITARY BOARDING SCHOOL

REV. DAVID McCLURE, PRINCIPAL.

The Eighth Term of this Institution will commence on Wednesday, July 8th, 1868, in the new Academy building, recently erected on Telegraph Road, one mile from the Railroad Depot.

The location and plan of this new building have been made with the design of securing for the students a home of beauty and refinement.

Careful provision is made for thorough and extensive courses of study in English, Mathematics, Natural Science, and the Ancient and Modern Languages. A special course is also provided for those who are preparing for a commercial life.

In addition to these courses there is a daily military inspection and drill, together with vocal and light gymnastic exercises, under the instruction of a teacher. Every student is required to attend the military and gymnastic exercises, as a means of physical training.

For the mental, moral, and physical culture of each pupil committed to his care, the Principal holds himself responsible.

Further particulars may be obtained by addressing the Principal at Oakland.

Religious Books.

A great variety of works in all departments of Religious Literature, such as Devotional Books, Bible Dictionaries, Sermons, Religious History, and Biography, Annotations, Commentaries, etc., published by the

PRESBYTERIAN BOARD OF PUBLICATION.

Also, a large assortment of Sunday School Libraries and Hymn Books, including THE HYMNAL, Presbyterian Psalmodist, Presbyterian Juvenile Psalmodist and Children's Praise, to which the Publishers call the attention of

SUNDAY SCHOOL TEACHERS AND OFFICERS,

And of all who desire books in any of these departments. All such are requested to call and examine the publications of the Presbyterian Board at the Depository for the Pacific Coast, which has been established at the store of

Correspondence.

From Salt Lake Eastward.

New York, Oct. 31, 1868.

The journey from Salt Lake to the western terminus of the Union Pacific Railroad we found exceedingly tedious and not without danger. Passing out of the great valley, our route lay through Parley's, Weber, and Echo cañons. The Divine Architect has furnished man with an easy natural road by these connected valleys, upon which he can travel with safety through the mountains.

Brigham Young and Bishop Sharp have taken the contract to grade sixty miles of the railroad, and wherever we came in contact with their operations, the stage-road, formerly so good, was in a wretched condition. This was especially the case in Echo Cañon, where the valley is so narrow that there is scarcely room for the stream on one side and the road on the other. Our path was like that of a ship across a stormy sea; at one time we were mounting up towards the stars, at another descending suddenly in the direction of the earth's centre. Nearly every stage which had gone before us for the last ten days had overturned, in several instances severely injuring some of the passengers.

Fortunately, we escaped such a calamity, though we were repeatedly as near to the catastrophe as possible without actually experiencing it. The general appearance of the country is more inviting than to the west of Salt Lake. Land suitable for tillage and pasturage may be found, and here and there you see the log hut of the settler relieving the dreary solitude of the scene.

In the vicinity of Fort Bridger we saw a remarkable geological formation which gives character to the whole region, in the shape of elevated bluffs, with a flat and apparently decapitated surface, as if some mighty leveling process had taken place when everything was in a plastic state.

Beautiful mountain streams abound in the neighborhood of the Fort, which is pleasantly located in the midst of a wide and grassy plain. It was only the want of time which prevented us from paying our respects to the Chaplain of the post—Rev. Mr. Leavitt—who is the solitary representative of Presbyterianism in all that region. We learned from the soldiers that his labors were appreciated, and that he was accomplishing a good work.

At midnight of our second day out from Salt Lake we were startled by a shrill sound which rose above the din and rattle of the coach, and announced the proximity of the iron horse.

Without regret we bade farewell to the tardy wagon which had borne us along these many weary days and nights, and accepted the proffered seat in a commodious car.

Green River, at that time the terminus of the road, now far in the rear, is 189 miles from Salt Lake, and about 1,000 miles from Omaha, but, although we had not made more than a third of our journey, we felt that the remainder was comparatively an easy trip. It was here the telegraph operator told us that San Francisco had again been disturbed by earthquakes, with more disastrous consequences than ever before. We hoped these tidings might be exaggerated, and yet our apprehensions were henceforth in constant conflict with our hopes.

From the car windows we saw frequent flocks of antelope feeding in the distance. When within range the ready rifle of the passengers was brought into use, happily without wounding a single one.

At each of the stations little mud forts, with their limited garrisons, made known to us that we were passing through a region where there was danger from the savage.

Coal measures are also opened within a short distance of the road which promise a supply of fuel adequate to its utmost necessities. In this circumstance we discover a remarkable evidence of Divine forethought, for there is such a scarcity of wood along the entire line that, without some substitute, it would be almost impossible to make the enterprise successful. God has opened up a path in the desert, and made a highway for the nations through the waste places of the earth, and He shows to man where are concealed the treasures he had prepared to this end.

From Council Bluffs, on the banks of the turbid Missouri, to Chicago we passed through a rich and beautiful land, rapidly filling up with inhabitants and still in the infancy of its development.

At Chicago we spent our second Sabbath, attending on the ministry of Rev. R. Patterson, D.D., whose large and costly church was filled with an attentive congregation.

We noticed here a want which is too characteristic of our people, namely: an apparent neglect to attend upon the stranger. I saw several young men come in at the door and stand in the vestibule, then turn away and depart, because "no man cared for them." How easy it would be for two or more brethren to stand in the vestibule and welcome, with a cordial shake of the hand, those who turn aside to worship. How much good might be done in this way, and how little it would cost! This is a duty which should not be left to the sexton, it belongs to the officers of the church.

From Chicago, by an easy two days' journey, we reached well known friends and our childhood's home, grateful for the care and guidance of a faithful God, who brings us by a way we knew not, and is able to keep us even to the end. J. S. W.

The Heathen Among Us.—II. The Difficulties Encountered by the Missionary.

Having the heathen thus among us ready to be approached, why has so little been done? The answer to this question must be found in the peculiar nature and difficulties of the work, and the manner in which it has been conducted.

The conversion of the Chinese is perhaps more difficult than that of any other people, owing to the character of their education, and their almost blind reverence for the past. They have few theories about religion, and do not need any. It is quite enough for them to know that their ancestors, the sages of the felicitous times of 2,000 years ago, worshipped just as they do. To overthrow this religion you must weaken, and, to a great extent, destroy their veneration for the past. It cannot need any argument to convince any intelligent person of the extreme difficulty of this. Yet without it success is impossible.

Perhaps a more serious difficulty than even this, is found in their ancestral worship. From earliest childhood they are carefully instructed in this, and taught to regard it as of the greatest importance, and a most imperative duty. They occasionally worship their living parents, and erect tablets to those deceased, daily burning incense and kneeling before them. This custom must be given up, and the convert forced, in the estimation of his countrymen, to commit a crime equal to murder, before he ceases to be an idolater, and can be received into membership in a Christian Church. The Jesuits have cunningly surmounted this difficulty by allowing them to continue this worship, which they excuse by calling it a mere ceremony of respect in memory of their dead.

The pride of the Chinese is another serious obstacle. They yield in national and individual vanity to no people in the world. They believe that their Empire absorbs nearly all the territory of the habitable globe, and all outside of it are tributary barbarians. Their government, that of an irresponsible despotism, is in their estimation the freest and best. Their philoshophers and sages are the wisest, and their military heroes the bravest of mankind. They have the same ideas in reference to their language, manners and customs, and religious belief and observances. To adopt the ideas of Outside Barbarians is humiliating, beeause it is a confession of weakness or error. Yet this acknowledgement must be made by the convert.

Conversion of the Chinese almost denationalizes them. They lose the prejudices and bigotry characteristic of their people. Yet, even more than this, because it brings with it pain and disability hard to be borne. The convert is regarded by his people with much less respect than before, and is by many held in contempt, and refused recognition as a friend or equal, for his heinous crime of forsaking the cherished faith of their ancestors. In many things, he is made to feel keenly his altered relations with his countrymen. The Chinese Christian makes a greater sacrifice for his faith than is possible for us. It requires a hard struggle and earnest faith to do it.

These are but a few of the more prominent difficulties encountered by the missionary. There are many which could not be enumerated without pages of elaboration. But, great and numerous as they are, they never have discouraged, and will not now discourage, a zealous and faithful Christian minister. They only render more pressing the necessity for surmounting them. Great as they are, they have all been overcome in many thousands of instances, and the prayers of Chinese converts in China and California have brought God's blessing upon the true missionaries, who, in spite of obstacles, discouraging to faint-hearted men, persevere in their work, doing their duty, and leaving the issue with God. C.

Church Music in Philadelphia.

In your issue of October 15th, you notice that a Baptist church in this city is about giving up its choir and returning to the old plan of congregational singing—the people to worship God themselves, without depending on paid deputies. You further refer to one church where about $2,000 is paid for the music yearly.

I have had occasion lately to make some inquiry as to the amounts paid by leading churches in this city, and the result is a little startling. In three prominent Episcopal churches the sums paid respectively are about $3,500, $3,000, and $3,000. In what are regarded as leading churches in our own denomination, one pays about $2,300, another $2,000, and another $1,900, while two are content with the "low" cost of $1,400 and $1,150. These are irrespective of the first cost of the organ and annual repairs.

Abstractly, good music is better than bad. The old Quaker told some truth when, on being twitted for giving money towards buying an organ for a church where violins and flutes had been used, he said, "if they will worship God with a machine, I would like them to have a good one;" and a good choir can make more pleasing music than a congregation, singing as they often do, without a competent leader and knowledge of the tune. But things good in themselves may be acquired at such a cost and with the loss of so many other essentials, that it would be better to do without them, and be content

with an æsthetically inferior article, provided the real object is obtained.

According to our view, the real object in singing is to give audible expression to the emotions of praise and love of the worshippers.

Delegated worship is no worship at all. Its value is in the fact that it is done by the worshippers themselves. The question arises with serious import, whether the tendency that is developing itself in our churches to secure accomplished musicians to conduct the music, regardless of the expense or of the character of the performers, has not the effect of destroying a proper sense of the service in the minds of the congregation, and leading them to depend more upon the form than upon the substance. My own experience is that it does. As far as I can judge from conversation with others, I believe that they are equally affected. When they speak of the singing, it is not of the tenderness and devotion of the words so expressive of Christian feeling towards a God and Savior, but of the exquisite harmony and modulations of the voices—the taste and appropriateness of the accompaniment. The shell, not the kernel, is the absorbing theme.

The grand old Presbyterian Church with its memories and its future, cannot afford to lay aside this means of grace. The united voices of its people have gone up in acceptable worship to God from hillside and glen in persecution, and from the battle field in time of trial; and we need it in the fight of spiritual religion against ritualistic forms, which is raging at the present day.—*American Presbyterian.*

Oxford Bibles.

The superior excellence of the Bibles printed at the Oxford University Press is proverbial among all who prize correctness of the text, and clearness and beauty of typography and binding. The Oxford editions are the standard from which other editions are copied, and are therefore acknowledged as superior.

The Subscribers, who act as

SOLE AGENTS IN THE UNITED STATES

for these Bibles, keep all varieties and sizes, from the 48-mo. to the Folio. They select the following, which they strongly recommend

United States Life Insurance Comp'y,

IN THE CITY OF NEW YORK.

OFFICE, No. 40 WALL STREET.

CASH ASSETS EXCEED $2,700,000.

This Company, having a Stock Capital, makes Insurances and Endowments with or without profits. Dividends to Policies with profits are equal to, or larger than those of other, or "Purely Mutual" Companies in available present cash value.

NEW AND IMPORTANT PLANS OF LIFE INSURANCE HAVE BEEN ADOPTED BY THIS COMPANY. SEE THE NEW PROSPECTUS.

Life Assurances, Endowments and Annuities in every form: Profits available after Policies have run one year, and annually thereafter. The reserved Cash fund, for re-insurance, is the largest known to or required by, the ablest and most experienced authorities in Life Insurance, thus affording undoubted security. A liberal non-forfeiture system, as to whole Life or Endowment Policies.

Policy Holders in this Company can use or apply the Dividends of profits in a greater number of ways than is afforded to Policy Holders by any other Company.

The law under which the company is Chartered, provides that if the Capital should, from any cause, become impaired to the extent of Twenty-five Thousand Dollars, or more, the Stockholders SHALL BE CALLED UPON TO MAKE GOOD SUCH DEFICIENCY. This is the only Cash Company in America which affords this safeguard to Policy-holders.

The assured in this Company are not personally liable as in Mutual Companies, which have the power of assessing their members or of reducing the sums insured, in case of deficiency.

CLERGYMEN, insuring in this Company, are allowed a DISCOUNT of TWENTY PER CENT. on first year's premium, and a liberal commission will be given on all Insurances influenced by them.

Agents wanted, on the most advantageous terms.

Forms and every information will be furnished by

THE WORTH OF MONEY.

There are some men who have little regard for anything except money. They graduate happiness, worth, life itself, according to the number of dollars they may possess, and they have no ambition but to get rich. Now, two things may be said to such men which, would they heed, they would be far more comfortable than they now are, and of far more use to the world. One is, that universal testimony proves that gold is a very poor medium through which to view what has most to do with our dignity and value as men, whether this life or the next be considered. It presents a true vision of this, as really as pieces of coin would block the sight, were they put in the place of the lenses in a telescope. Think of studying the great questions of philosophy and patriotism, through golden media; of making money your interpreter, when reading the Ten Commandments; of calculating the profit and loss as shown in your cash-book, when debating concerning the interests of your soul!

Accepted as a helper, money has marvelous ability to bless, but permitted to sit on the throne, it is one of the worst foes a man ever has. It obliges him to be limited in all worthy views, to reject all noble counsels, to cut the sinews of reform, to check the progress of religion, to dwarf the energies of the man, as to any grand, or good, or heavenly effort. This is the testimony of all touching its effect on any others than themselves.

The other thing which may be said is this: Those who have been the most distinguished, and done the most to bring them honor, as a rule, have at the beginning been poor. In the departments of state, of science, of professional life, of business, even, the eminent men have been those who began their career under the stimulating power of poverty, and, if they gained money as they advanced, found some channels through which a large part of it could flow forth upon the world. Yet it seems as true now as ever, though we may be thankful that God is teaching us some nobler lessons as the result of trouble, that many even decide whether a thing is right or wrong, according to its effect on their pecuniary interest. They may be honest, they may be earnest, but sometimes unconsciously they make their counting-rooms into laboratories, and their ledgers into crucibles, and their desire to succeed in business the furnace, and there they test political questions, and moral questions, and religious questions, so that the result, which seems perfectly just to them, shows very clearly to others the process by which it has been reached. The fact that they are sincere in their conclusions only proves how complete is the delusion under which they labor, and renders it more difficult to convince them that they are wrong.

But there are multitudes who are not sincere. They intend to make their own interest the test, they allow no other, and no issues are so vital to them as the per-cent of their income, or profits of their business. It need not be argued, that those who are thus controlled, must break the power of money over them, or fail entirely to attain what men should strive to possess. They are not fit to consider general questions. They cannot properly regard the rights of others, or their duty to God, and they never can, till they come forth from the narrow range of pure selfishness into the open ground of principle, considered in its abstract relations. God often employs strange methods to teach us that there are things worth more than money, and the truth becomes most beautiful when we really learn it. Integrity is worth more, honor is worth more, a clear conscience is worth more. And going out of ourselves, what shall we say of law, and right, and liberty, and religion? Will you weigh these against gold? Has gold any worth where these are not? Has business any security when these are disregarded? In any councils, private, social, political, is there any safety when the ruling elements, the power that will be obeyed, is money? We have no source of danger to our nation, that compares with this, which is at the base of most of our great national evils. There is no Moloch throughout our borders, on whose altars more amazing sacrifices of principle, and all dear and sacred interests, are piled, than upon those of Gold. There is necessity that in some way we be taught that duty and God will not always consent that their place be usurped.

If your pecuniary interest is standing between you and your serious regard for those great blessings for the race to which God is pledged; or, if this is preventing your attention to the welfare of your soul, be free from its power. For, rest assured, as God loves you, and will care for the eternal rather than the temporal, he will teach you in some way, that money thus valued is a curse, and that the sacrifice of all is a small price for the triumph of right, and personal salvation.

THE LITTLE THINGS OF LIFE.

Nothing will more surprise us at the last day than the long catalogue of those acts that have passed from our memory. We shall then learn, what we ought to bear in mind from day to day, that life is made up, for the most part, of little things. It is not that one does a few things that attract the notice of other men, but that in his everyday life he does his duty, which makes known his character. A man does not show his love for his wife by a splendid present once a year, and marked attention when in company, and running for a physician when she is sick, but by all the little acts of courtesy and kindness that may cheer their daily intercourse. You visit a picture gallery, and at first a few prominent features of the various paintings attract your notice. But as you study them carefully, you find it was not the bold dash of the brush, that made here a mountain and there a rock, which created the beauty of the landscape, but the thousand touches of the pencil, that have clothed the whole scene and made it true to nature. It is not the main outlines which form the charm of the portrait, but the delicate lines and shadows which distinguish the face.

You go to a concert-room and listen to a grand piece of music. It is not the high note of the trumpet, nor the bass of the trombone, or the emphatic strains of any instrument, that hold you entranced, but the blending of a multitude of tones, the sublime harmony of the high and the low, by the falling in of all the parts, themselves subordinate, yet making together all that you admire.

So there is no life of prominent parts alone. Life is the filling-up between these. Yet how few conduct themselves as if this were true. The way through which God will lead us, if we submit to His guidance, is one over which we must pass step by step. Every moment has its duty, every day its bearing on our life. Air castles rise before us in full form and beauty, in a moment, but real castles must be built, as stone after stone is laid in its place —the product of labor and expense for years. The Christian character is no air castle; it does not attain perfection at the will's command, but is erected slowly—the result of what is said, and felt, and done, from day to day. This is the difficult part of our religion. To do, now and then, a great thing; to give a large sum of money for the Church; to take a leading part in some important movement; to perform any act that men are disposed to praise, is not hard for those who have the ability thus to make themselves prominent. But to be a consistent, growing, everyday Christian is by no means easy, and many a man who is quoted widely as a noble exhibition of piety, would show a private and social history that would be a libel on religion—not because he resolves to neglect his minor duties, but because he finds it so difficult to do them. None should forget that the Lord's words are true respecting all of us: "He that is faithful in that which is least, is faithful also in much." It is not the warp of life which constitutes its substance, but the filling, the woof, and each one should be certain that this is of real worth.

Bible Union and Col. II: 12.

I quote from the new version, Col. ii: 12: "Being buried with Him (Christ) in the immersion, wherein ye were also raised with Him through faith in the working of God, who raised Him from the dead." I may not dwell long on the doctrinal teachings of this passage. I think all will admit that we are buried with Christ in the immersion (Greek: *baptisma*), that we are raised with Him in the same, and this through the power of faith. I think, also, I am justified in saying that in this *baptisma* (immersion) is signified—see previous verse—the circumcision of our fleshly lusts, the putting off the body of sin, and our spiritual resurrection to a new life in Christ Jesus, all through the character of faith; that is, baptism (immersion) signifies death unto sin in Christ and resurrection to a new spiritual life. Such, I believe, is the view the text sustains and teaches now, in place of the deep spiritual significance of the term *baptisma*, representing to us one of the sublimest and most glorious of the mysteries of Christian revelation. We are restricted, by the scholars of the Bible Union to a mere physical operation; for, by their view of the meaning of *baptizein*—the root of the *baptisma* of the text—we are shut out from the association of any spiritual power with the term *baptisma*.

The materialism which is inseperable from the primitive meanings of *baptizo* and immerse, which they have so positively adopted as the spiritual sense, in its application to *baptizein*, shuts us up to the reception of *baptisma* in a secular and ordinary sense, with the express understanding that no ecclesiastical or metaphysical meaning must be allowed.

I believe there is nothing more prominent in the faith of the Baptist Church, or no article of their faith more cherished or dearer to them, than the deep spiritual significance of baptism or immersion in the truth which they find taught in this text and the parallel passages in Rom. vi: 4. I may say I think, with perfect correctness, that these texts go more into consideration, in the separation of the Baptist Church from others than the whole Scriptures beside. They find in immersion the grave in which the old man of sin is buried, and from which the new man arises to newness of life in Christ Jesus, and in this spiritual view of *baptisma*, and the deep Christian mystery signified by it, the Church in general fully coincides, while they do not follow out the mode to the letter. It is cruel, then, that our Bap-

tist brethren should be thus wounded in the house of their friends, and, as it were, by the side of their very altars; for their chiefest scholars, and such as represent the Bible Union, declare that there is in *baptizein*—the root of *baptisma*—only such meaning as is found in the English word immerse in its ordinary and secular use, with an emphatic denial of any power peculiar to the Church, or anything beyond that which is strictly physical: "Not an ecclesiastical act; not a metaphysical act."—*Dr. Conant.*

It is hardly possible that the Baptist Church, as a body, will sit quietly by and see their sanctuary despoiled of its sacred things, and the very Christian ordinance which they are accustomed—may I not say—to glory in, that it was understood and performed by them alone in its strictly Scriptural sense, is, after all, a mere physical operation, limited in the extent of its application by immerse, in its secular and ordinary sense, so that when they go down into the water and are immersed, thinking that in the immersion they signify death unto sin, and in the coming out of the water, newness of life, they have only performed a physical operation, without spiritual significance. The spirit (see Scovel, as quoted by ———, Bible Union), "fixing the thoughts on immerse; nothing more, nothing less."

I go beyond this. I do not believe the Baptist Church, as a body, will consent to see the Holy Scriptures thus mutilated and despoiled, and the fulness of the idea which they have been accustomed to receive and entertain in baptism as a term of spiritual significance, stricken out from the Word of God by this literalistic and modalistic theory of the Bible Union, but that many will adhere to the view of Dr. Judson as correct and Scriptural, when he saw, with all other Christian people, a spiritual meaning in *baptizo*, which was far deeper and more comprehensive than could be embraced in any literal immersion, and therefore compounded terms in the Burmese language and formed a new word, that it might represent to the Burmese reader a new idea and a principle hitherto unknown to them—one of divine revelation—in the sacred, holy dipping of the Christian religion, corresponding, in its spiritual significance, to the *baptisma* of the original Greek, and the baptism of the English tongue.

Should the Baptist Church of the present day, however, decide to adopt the views of the Bible Union, they must throw overboard Dr. Judson and his views, as unscriptural and void by the new light of Dr. Conant and his associates; for the views of the two are perfectly contradictory and unreconcilable, and hence, one or the other must contain vital error. If the position of Dr. Conant be correct, then Dr. Judson, in affixing a spiritual meaning to *baptizo*, has added to the Word of God ideas which do not belong to it. But, on the other hand, if Dr. Judson were correct, then the employment by Dr. Conant of immerse, with its strict limitation to its ordinary sense, was the divine word of the sacred mysteries of Christian revelation, and leaves an ordinance of Christ's Church, by the very terms with which they define *baptizein*, as barren of spiritual significance as the immersion of Cupid by Anacreon.

And here there must be a division. *Baptizo* and its cognates cannot be shut up to a strictly literal sense by express limitation, and still have a spiritual sense beside. It must be open to the perception of every one that *baptizo* cannot mean with Dr. Conant immersion in its secular sense, and emphatically nothing more, and still mean with Dr. Hackett cleansing from sin; with Dr. Ripley, purification from sin; with Spurgeon, washing of sin; and with Judson, a sacred, holy dipping. Those who hold to the spiritual significance of *baptizo*, as used by the sacred writers, will be satisfied with baptize in English, and Dr. Judson's new compounded word in Burmese, but those who hold to the simple classical meaning of *baptizo* in the New Testament will demand immerse in English, and in Burmese the mutilation of the term of Dr. Judson till it shall no longer signify, as he would have it, "a sacred, holy dipping," but "the dip, and nothing but dip," of Carson.

It may be a matter of surprise to the simple minded Burmese Christians that the term given them for their faith by the revered Judson should need to be dismembered by innovators, but the work of reform must go on. If baptize must be left out of the English Bible and a word signifying nothing but the secular idea of immersion put in, consistency will demand that the same process be applied to the Burmese version, and the sacred, holy dipping of Judson be reduced down till it shall also represent to the reader nothing but the secular idea which was found in the term before Dr. Judson compounded it with other terms to represent a Christian ordinance.

It is a mystery to me why this iron-banded literalism should be demanded for *baptizo*, when the principle is admitted, without dispute, that other words take, in the use of the sacred writers, a spiritual sense. Dr. Conant finds it in *euvangelion*, and from its literal sense of good news it grows to signify, with him, the Gospel, the whole power of Christian revelation. *Proskuneo*, in his view, rises from simple prostration to mean divine worship. *Pneuma*, as all who can open the lexicon will see, from its primitive idea of wind, lifts in dignity and spiritual significance up to mean the third person of the Trinity, and this principle, so universal in its application, if it does not certify, at least affords a strong presumption, that *baptizo* rises also from its primitive sense by the use of the sacred writers, and is employed by them to set forth truths which are peculiar to the system of Christian revelation. F. B.

English Baptists.—The English Baptist Missionary Society supports 58 brethren and assistant brethren laboring in Norway, Africa, India, and the West Indies. There are under its care 105 native churches and 6,200 members, of which 600 were added last year. The income last year was £35,000.

The Unconscious Truth of the Four Gospels.

A book sometimes has a value beyond the mere truth it contains, or the direct influence of its contents. Indeed, its errors, if it has any, often become spurs to thought and investigation, and its wrong inferences suggest those which are correct. We have read the little work of W. H. Farness, of which the title is given above, published by J. B. Lippincott & Co., of Philadelphia, with the feeling that it is one of this class. The views of the author are in some cases vague and fanciful, and he gives some interpretations of Scripture, and explanations of fact, which we cannot accept. Yet his sentiments, when rejected, open the way for the truth more confirmed and beautiful than it seemed to us before, and his wrong interpretations seem only to make more clear what we are glad to receive as right. Moreover, there is much in the book which every thinking man will gladly welcome, as furnishing new light and stimulus in his study of the Gospel narrative respecting Jesus. It reminds us throughout of the books more than the world itself could contain, which John tells us might have been written, if the attempt had been made fully to illustrate the impression Jesus made upon His disciples by what He taught and what He was. The style of the author does not always bear criticism, and there is a want of definiteness sometimes in his propositions, and in his reasoning; yet his work has a charm that continues its influence to the end, and there will be a large balance of gain to every one who reads it. Here are some passages that present him as he appears throughout the book:

As I read the history of Jesus, He seemed to me, in a manner the most impressive, to have lived always from within, spontaneously, out of the unexampled fullness of his own being. It is in his wonderful personal force that I discern the divine presence and inspiration in Him. It is because he was always natural, human, that he impresses me with the conviction that the Highest was with him and in him just as it is with and in all Nature.

Jesus has all along been conceived of as if there were a divinity in him apart from his personality, something superadded and communicated to him from without, or, as if he always spoke and acted under an authority external to himself; whereas it is in the natural style or method of his thoughts, emotions, and whole bearing and conduct, in a word, in the man himself, that the Highest becomes visible. Extraordinary and original as he was, to speak, to do, and to be just as he spoke, did, and was, appears to have been as natural to him as his gait or his breathing. All flowed out spontaneously and irrepressibly from the very heart of him. This, I say, is a representation of him to which no justice has as yet been done. It has not been seen how much there is in the Gospels to warrant it. Indeed it has scarcely ever been remarked that he was original.

The time was, before I had studied the Gospels with special care, when I was continually at a loss to discover any natural sequence in the incidents and sayings which they narrate. I could not understand why Jesus said just what He is related to have said, why something, anything else, would not have been equally pertinent. But the more fully I have kept in view His nature as a man, thinking, feeling, speaking as a man, nay, more, when I only considered the significance of the words in which the story is told, the vital relation of one thing to another became visible to me. Then the letter, once so dead, began to start into life. And what a life!

Sold by H. H. Bancroft & Company.

Punctuation.

The one thing always to be borne in mind is that the duty of punctuation is not to obscure but to render clear the expression of thought, and that the success of one's efforts depends upon the completeness with which this duty is fulfilled. That pointing, then, best fulfills its important though subordinate office, which attracts the least attention to itself. On the other hand, it is a good rule to let the force of one's thoughts depend as little as possible on the punctuation marks; remembering the English custom of forbidding the use of points at all in the engrossing of certain documents, as a prevention of ambiguity. Undoubtedly, too, other things being equal, the less points one employs the better.

A general correctness in respect of punctuation may be acquired without much difficulty by everyone, and certainly should be acquired; but a knowledge of the real philosophy of the thing, a delicate perception of the meaning of the different points, and of the subtle shades of distinction which often pertain to apparently similar passages, and thus require different pointings,—all this, and much like it that need not be specified, only the closest observation and long experience can bring. It is the natural fault of printing-house punctuation, that though always in the main correct, it is not always or usually tasteful or delicate. It is too much after certain "rules" which a particular printer has adopted, and which to him have no exceptions. In a word, it lacks the individuality of the writer. The habit of entrusting the final pointing of a manuscript to the printer, may be compared to the habit of deputing the "reader" to re-write it, as is sometimes done. The fault in both cases is the same in character but differs only in degree. Aside from its bad effects on themselves, this ignorance of writers often causes others to suffer; for by relying for correct pointing entirely upon the printer, they force him into the habit of adapting to his own "rules" the marks of those who do punctuate correctly, and who, if unable to scrutinize the proof, are apt to be vexed by his variations from the "copy" prepared by themselves.

The comma is generally well enough used, though made to do more than its rightful duty by those who think it is always a "safe" mark to employ. They often make it take the place of the semi-colon which they are distrustful of, and sometimes of the colon which they avoid altogether, though the period is oftener used in the place of the latter. Printers are apt to depart from the "copy" when commas are used to indicate a parenthetical clause. They incline in such cases to omit one or both of them. When several adjectives come together and the last two are connected by "and," the writer may sometimes desire to express the comma before "and" and sometimes to omit it, but the printer is apt to follow one rule or the other without variation, not comprehending that there may be different shades of meaning in cases apparently so similar. The mistakes in using the period mark to indicate abbreviation are numerous and amusing. Notable among them from its frequency is the error of abbreviating *Doctor of Laws*, or the Latin *Legum Doctor*, by *L.L.D.*, pronounced *el-el-dee*. Inasmuch as the *L* is doubled to denote the plural of *law* or *lex*, it is of course absurd to punctuate or pronounce the abbreviation as if each *L* stood for a separate word. LL.D., pronounced *double-el-dee*, is therefore the only correct method of abbreviating *Doctor of Laws*. And yet people who profess to be educated, still cling to this senseless blunder and sometimes go so far as to assert its correctness. This example well illustrates the danger of leaving to the printer the decision of such matters. Mistaking the significance of the letters, he has, by his vicious punctuation, encouraged among men who should, and probably do, know better, an habitual mis-pronunciation of them, indicative of ignorance or carelessness. The apostrophe, indicative of the possessive case or of omitted letters, is also often misunderstood and misused.

The skilful employment of the marks of quotation is a difficult accomplishment. To say nothing of the nice judgment required in selecting a tasteful quotation, the right expression of it is by no means easy. Sometimes the inverted commas may invest a word with "biting-sarcasm," sometimes their removal from the accustomed place may have the same effect. What is true of punctuation in general, is especially true of this branch of it, in which any but the most general rules are utterly valueless, and everything depends upon the good judgment of the individual.

The exclamation point is perhaps as badly abused as any, by persons given to superlatives, and may be safely let alone entirely by those who do not comprehend its significance. The mark of interrogation is often misplaced at the end of a sentence, when it should stand in the middle, through some false notion of necessity. Both the symbols are frequently included in a quotation when they belong outside it, or the reverse; for printers rarely distinguish between cases in which the interrogation or exclamation is a part of the quotation or independent of it. The brackets are rarely misused, being in general employed only by those who understand them. The sins in regard to them, if any, are wholly those of omission. The marks of parenthesis, which the old spelling book used to say were interchangable with the brackets, seem to be gradually giving way to the dash, and sometimes to the comma, and even to the colon. Their clumsy appearance naturally tends to drive them out of use, yet there are cases where no other points can well take their place. The dash meets with perhaps as indiscriminate a usage as any of the points, not even excepting its friend the comma, which it so often supercedes. Like it, it is also thought to be an eminently "safe" mark to employ, and with many it takes the place of everything short of the full stop. Yet with the careful writer it has its own place, outside of which it is never allowed. The hyphen may be considered the opposite of the dash, as it joins rather than separates. The rule that it should only come between the different syllables of a word divided by the end of a line is, now generally disregarded in practice, for the greater convenience of printers. There seems at all events, no other reason for the neglect of so sensible a regulation, which in manuscript at least should always be observed. In what compounds the hyphen should be used and in what avoided, the writer's tact and experience must decide.—*Yale Literary Magazine.*

Educational.

Mental Exercise in Words.

Much mental exercise may be derived from the due mastery of words. Take examples: beginning with the word *sycophant*. We first master its orthography; this involves the use of the eye, and of the memory. Then we learn to pronounce it: which taxes the ear and the vocal organs. Then we call it a noun: which implies classification. Then, we take note of its derivation and elements. It means, literally, a fig-shower, fig-informer, "one who watched and informed against persons who exported figs from Attica contrary to law." Its popular meaning of one who does cringing things for the sake of winning favor from the great is only a natural expansion of the literal. But, thus to trace the origin of a word, with its amplifications of meaning, requires analysis and the pursuit of causes. Again, take the word *meerschaum*. Like the word sycophant, its due acquisition taxes seeing, hearing, utterance, memory, classification, analysis, and the discovery of causes. To apprehend the word fully, however, would require a further exertion of imagination. It means, literally, sea-foam, and to perceive the propriety of its application to a light, white clay, demands an effort of the comparative, or imaginative faculty. Again, take the word *velvety*. The due mastery of this word would call into play not only the faculties mentioned above, but also, and distinctively, the sense of touch. So with such words as *peppermint* and *vanilla*. The complete attainment of the ideas conveyed by them would demand an effort of the senses of taste and smell. Now, to review. The mastery of the words cited calls into play the powers of vision, touch, taste, smell, and hearing. But this is Perception. They also tax Memory and Imagination. They likewise require

the effort of classification and analysis, which are efforts of perception. They also involve the recognition of causes, which is a power of intuition. But these are all the mental powers, to wit: Perception, Memory, Imagination, Reflection, and Intuition.

C. R. C.

A Painting at Calistoga.

We find the following article in Rev. Mr. Sawtelle's *Spare Hour*. It belongs to a class of articles which have an important place both in self-culture and the training of others. One zealous of self-improvement will find it profitable to read such pieces and endeavor to reproduce to his mind's eye the scene described. One engaged in teaching will do well to require, as an occasional exercise in composition, the description of some accessible picture.

A trip to Calistoga, the young Saratoga of California, will pay, if nothing else were gained except to gaze upon Rubens' celebrated painting, the Brazen Serpent. It once adorned the drawing-room of Jerome Bonaparte, and was purchased by Mr. Brannan, the proprietor of this summer retreat, at an expense of $8.000. It was painted over 200 years ago, and has that subdued mellowness that age gives to pictures. It is 10x8 feet, and contains twenty-one figures.

Moses and Aaron, in sacerdotal garments, occupy the left. Subdued anxiety is depicted on their countenances, that all the murmuring, sin-stricken Israelites might look and live.

Some of those in the scene have already passed beyond hope. In the foreground are two athletic men who have tasted the bitter fruits of repining. Their bodies are encircled by the venomous serpent, and the blood oozes from their bitten limbs. The head of one rests on the lap of a loving wife, whose face is the picture of deep conjugal anguish. Plainly can be read the wish to die and be buried with the object of her affections.

Very near stands a blooming mother, holding aloft a precious boy of five or six summers, and endeavoring to turn his eyes to the only hope of salvation. This prominent female figure has the face of Rubens' second wife, to whom he was so tenderly attached that in every group he painted where there was a female face, she was the principal figure—a circumstance that Mr. Beecher says does more credit to his heart than to the fertility of his fancy.

A little in the back-ground is an aged, decrepit mother, her face marked by deep care lines, supporting the fainting form of a young and blooming daughter, her household jewel, and encouraging her to look and be saved from the jaws of death. The maternal anguish of that mother's features will long linger in our memory.

Fathers were there also, bearing their precious ones, and directing them to look and be healed.

One figure at the right, far distant from the High Priest, like scorners in the back seats of the church in times of revival, particularly attracted our attention. His folded arms and careless air told of his incredulity. His thoughts could be read from the expression of his lip and eye. He evidently regards the high priests as humbugs, and chooses rather to run the risk of losing his life than to try the *simple remedy* of turning his eyes to the lifted emblem of our Redeemer. Like Korah, Dathan, and Abiram, he dares the vengeance of God, and "rushes upon the thick bosses of his buckler."

In every other figure there is a mark of earnestness; intense interest of form, feature, expression, attitude, which makes the contrast of *one* stoical face the more striking. There is a sense of reality in the picture which burns into the memory. The study of such a work by the conception of one of the old masters, does the heart good and enlarges the mind. Never before have we so felt the force of these texts: "As Moses lifted up the serpent in the wilderness, even so must the son of man be lifted up." "And I, if I be lifted up from the earth, will draw all men unto me."

"High lifted on the cross
The spotless victim dies;
This is salvation's only source—
Hence all our hopes arise."

A Model College.—The Iowa Agricultural College opened last month. It receives pupils without distinction of sex. While the young men learn farming, the young women will learn to garden, to cook and keep house. This college is founded partly on the proceeds of the national grant of lands, and the State has determined the grant shall be impartially employed. It is a sound principle for an American State to recognize so emphatically that there shall be no distinction between the sexes in respect to the enjoyment of public educational advantages. With practical instruction for all alike, the problem of employment for a large class or women would be solved. Equal training for the uses of this workaday world would give equal readiness to meet in a courageous spirit all its difficulties; and while the best traits of true womanhood would not be impaired, the general character of the people would eventually be elevated. It has been stated that the University of California is to be conducted on this broad principle—at least to this extent, that if young women apply, with the proper qualifications, they will not be rejected.—*S. F. Bulletin.*

Personal.

Rev. A. Fairbairn, of Tomales, has received a call from the Presbyterian church in Chico, to become their pastor. It is understood that Mr. Fairbairn will accept the call and will commence his labors at once.

Mr. Alpheus Bull has been elected President of the California Prison Commission for the next year. Hon. E. W. McKinstry is Vice President.

Rev. J. W. Brier, pastor of the Congregational church at Clayton, will labor as an evangelist in Calaveras and Tuolumne counties.

Mr. W. C. Ralston has been elected a member of the Board of Regents, in place of ex-Gov. Low, resigned.

Rev. E. P. Gray has arrived and entered upon the discharge of his duties in the College at Benicia.

Rev. Mr. McLafferty lectured to a large audience in Petaluma on the 20th inst. Subject: China.

Senator Williams, of Oregon, has been presented with a silver brick by his friends in Idaho.

Rev. C. B. Wyatt, rector of Trinity Church in this city, is on his way from New York overland.

Pacific Mail Steam Co's Steamships

— FOR —

NEW YORK, JAPAN AND CHINA

Will be Dispatched as follows:

LEAVE WHARF CORNER OF FIRST AND BRANNAN STREETS, at 11 o'clock A.M. of the following dates, for PANAMA connecting via Panama Railroad with one of the Company's splendid Steamers from ASPINWALL for NEW YORK.

the 6th 14th, 22d, and 30th of each month.

Steamer leaving San Francisco on the 6th touches at Manzanillo. All touch at Acapulco.

Departure of the 14th is expected to connect with the French Transatlantic Company's Steamer for St. Nazaire, and English Steamer for South America. Through tickets can be obtained.

Departure of 14th is expected to connect with English Steamer for Southampton, South America, and P. R. R. Co.'s Steamer for Central America. Through tickets can be obtained.

Departure of the 6th connects with English Steamer for Australia.

STEAMERS FOR NOVEMBER, 1868.

The following Steamships will be dispatched on dates as given below.

November 15th—GOLDEN AGE, Capt. Lapidge, connecting with OCEAN QUEEN, Capt. King.

November 21st—COLORADO, Capt. Farnsworth, connecting with HENRY CHAUNCEY, Capt. Conner.

November 30th—SACRAMENTO, Captain Parker, connecting with ARIZONA, Capt. Maury.

Passengers berthed through. Baggage checked through—100 pounds allowed each adult.

An experienced Surgeon on board. Medicine and attendance free.

These Steamers will positively sail at 11 o'clock. Passengers are requested to have their baggage on board before 10 o'clock.

Through tickets to Liverpool by the "Cunard," "Inman," and "National" Steamship Lines can be obtained at P. M. S. S. Co.'s office in San Francisco, where may also be obtained orders for passage from Liverpool or Southampton to San Francisco, either via New York or St. Thomas—if desired, an amount of £10 to £20 will be advanced with the above orders. Holders of orders will be required to identify themselves to the Agents in England.

For Merchandise and Freight for New York and way ports, apply to Messrs. WELLS, FARGO & CO.

The Steamship CHINA, Captain Geo. E. Lane, will be dispatched on Thursday, December 3d, at 12 o'clock, noon, from wharf, corner of First and Brannan streets, for YOKOHAMA and HONGKONG, connecting with the COSTA RICA for SHANGHAE.

For passage and all other information, apply at the Pacific Mail Steamship Co.'s Office, corner of Sacramento and Leidesdorff Sts.

Practical and Scientific.

AGRICULTURAL.

Good Advice.

Farmers, recognize these facts, sufficiently at least to give them a trial. First systematize your time and labor; use more mind and more machinery than you have hitherto done. Have certain hours to work, and work with a will; have certain hours to read, and then think of nothing else; have certain hours to spend with your family in social talk, which may be made instructive as well as interesting, and from which both you and they may receive lasting benefit; and above all be always cheerful.

Take care of your health. Your occupation affords a rich variety of exercise, but other things are necessary; observe cleanliness, bathe often; eat slowly and regularly, and sleep in well ventilated apartments. See that every member of your family is strict in the observance of these rules.

Adorn your house and make it pleasant, comfortable and attractive; see that it is provided with books, pictures, papers, and enlivened with music. You say this will take money? Very well. Be assured that a reasonable amount invested in this way will return you a hundred fold. Let all your surroundings be clean and tasteful; observe order; plant trees for fruit; cultivate flowers and shrubbery; keep up the fences and keep the house painted; if a gate hinge or a door knob be broken or get out of order, repair it at once; if a pane of glass be broken do not make a substitute of an old hat; let nothing "go to rack."

All this may look formidable, or even impossible; but undertake it with a determination to succeed and the task will prove easier than you think. Nor will you be alone in the good work. Your wife will lend a helping hand; your children will become interested, and as a result your life will be happier and doubtless longer; your neighbors will point you out as a model farmer, and emulate your example; and, more important than all else, your children will grow up more refined and contented; they will cherish a stronger affection for you, and an attachment to the homestead that will make them cling to it and to you when old age comes on as it soon will if life be prolonged.

Heed the prompter and be happy.—*Congregationalist.*

Hints to Farmers.

Don't buy a piano for your daughters while your sons need a plow.

Don't let your horses be seen standing much at the tavern door; it don't look right.

Don't give the merchant a chance to dun you. Prompt payments make independent men.

Keep good fences—especially line fences; they promote good feelings among neighbors.

A decent, substantial clothing for your children makes them think better of themselves, and keeps the doctors away.

Don't starve your land; if you do, you will grow lean.

Don't buy patent rights to sell again.

Don't become surety for him who waits for the sheriff.

Buy a farm-wagon before a fine carriage.

If you have a yoke of oxen, don't be ashamed of them and give your note for a span of horses.

Don't run for constable; you may get it, and let the plow stand.

Teach your boys to look up and forward; never down or backward.

Don't leave to memory what should be written; it makes lawsuits.

When the labors of the day are past, let good books and newspapers invite the youngsters to the sitting-room.

How to Raise Turkeys.—A "Farmer's Wife" in the *Agriculturist* says: "In the first place, select a good kind. The autumn or early in winter is the most favorable time for that; just before the birds are sent to market. Keep them well during the winter; make pets of them if you like. Mine eat from my hand, and answer to my call. In the spring, a few days before they begin to lay (which is about two weeks after moulting,) put them in an inclosure, where it is most desirable to have their nests, and where they cannot get out. After they have made their nests they may be set at liberty without any fear of roaming or straying. Next, take good care of the eggs. They should be gathered carefully every day and placed between layers of flannel or cotton, in a place of uniformly cool temperature, and turned over every day. In spring, after the turkeys begin to lay, it is often cold enough to freeze the ground, when, if the eggs are suffered to lie out, they will become chilled, and will not hatch. In warm weather it is not so necessary to protect the eggs. As soon as the birds are hatched, feed them warm bread and milk, well peppered, with boiled eggs added; or with peppered milk thickened with cooked corn or canaile, (wheat middlings,) which is better. A little care in these matters will repay all efforts. Before I knew how to take care of the eggs, I set 30 eggs one year, and but one of them hatched! The next year I set 40 eggs, and nearly all of them hatched, and the birds lived."

What Kind of Wood to Buy.—As many western farmers have to buy their wood, it is advantageous to know something of the comparative value of the different sorts. People often pay little regard to the quality of the wood they purchase, but take that which is offered at the least price, as though there was no difference between one cord of wood and another. The truth is, the quality of wood is extremely variable, not only as between the different varieties, but as between specimens of the same variety.

Wood grown on high land is capable of generating much more heat than the same variety grown on low land. So, too, wood grown in a northern latitude is preferable to that grown further south. The wood of old, well matured trees is of greater value than that of those of younger growth. Wind-falls, that have been a considerable time on the ground, trees partially decayed, or wood that has long been piled in a damp place, is of comparatively little value as fuel, and should be bought at a very low price, if at all. It adds much to the value of wood if it is prepared for the stove when it is green, is then thoroughly seasoned, and finally placed under shelter. Care, however, must be taken not to pack it too closely, or to put it into a building badly ventilated, as it is liable to be injured by the dry rot.—*Prairie Farmer.*

Mildews on Grapes.—Dr. H. Schroeder, of Bloomington, Illinois, who has had much experience in raising grapes, writes to the *Country Gentleman* of a remedy which he has found effectual in preventing mildew on his vines. He says:

I will give you my experience, the last two years, on a part of my old Catawba vineyard. About 500 nine-year old Catawba vines, four by five and six feet, on an east slope, rotted several times badly before I selected them for my experiments. After turning the same properly and tying them to the trellises, I plowed the land well between the rows in April, and after the vines were out of bloom I covered the whole land four to six inches thick with straw. This kept the weeds down, kept the land moist and retained the heat. The bunches set well, were large, and the crop so full and healthy that it made an old radical's heart glad.

Now, then, the reason for covering the land. I found, many years since, that mildew appeared after a heavy, warm shower, mostly in the morning or forenoon. When the sun tried to spend all its heat, I saw a kind of mist rising from the fresh ground, and pressed down by the vines, to the reduction of fruit. The soil least congenial is a stiff clay.

Artificial Harvesting.—A process of artificially drying and curing hay and sheaves of grain in wet weather, has been brought before the notice of British agriculturists, by Mr. Gibbs, in a prize essay. The process, which Mr. Gibb has subjected to the test of actual experiment, consists in passing the hay or sheaves to be dried through a shed supplied by a furnace and fanned with a continuous current of hot air. The method is endorsed by the approval of some of the best agricultural scholars in the kingdom.

We often hear of farms "wearing out," but, instead of wearing out, land will improve if properly managed. In Europe, farms which have been under cultivation for centuries have been constantly improving. English farmers say that the man who cannot keep his land from wearing out is no farmer.

Slobbering in a Horse.—A correspondent of the *Boston Cultivator* recommends saltpeter for this disease, and has found it to cure the worst cases. He gives a tablespoonful in the morning, and in three days if not free from it, he gives another dose.

WEEKLY MARKET REPORT.

Wednesday, November 25, 1868.

Flour—Sale of 400 bbls Commercial (Oregon) Extra, from wharf, $5 75. We quote Oregon brands of Extra at $5 50@5 75. We quote city mills as follows: Superfine, in sks, ℔ 196 lbs, $4 75@4 87½. Extra, in sks, $5 75@$5 87½.

Wheat—Desirable lots for shipping are quite firm at $1 75@1 89. Sales include 2,100 sks southern coast, $1 50; 16,000 sks good shipping, $1 75; 24,000 sks choice shipping, $1 80; 2,000 sks prime milling, for local use, $1 82½. Leading shippers refuse to pay over $1 75@1 80 ℔ 100 lbs.

Barley—Market very quiet at $2@2 10 for feed, and for brewing $2 12½@2 25 ℔ 100 lbs, at which latter figure choice brewing, in small lots, was sold yesterday.

Oats—We have heard of no transactions up to noon to-day. The large quantity of Oregon in first hands, rather unsettled the market. The nominal quotations for California are $1 60@$1 90, and for Oregon $1 90@2 00 ℔ 100 lbs.

Potatoes—200 sks Bodega, 80c; 325 sks do, 75@80c; 150 sks Tomales, 77½c; 340 sks Humboldt, 90@95c; quotable as to range, at 90c@$1, latter an extreme figure. The lots of Humboldt by the steamer have been mostly closed out, while those per Staghound have not yet been discharged. There were no receipts of Carolina, this morning; quotable at about $1 12½@$1 25 ℔ 100 lbs.

Onions—Small sales of Yellow were made yesterday at $3 50@$4, while to-day at $4 12½ ℔ 100 lbs was offered. Supply light.

Beans—We quote jobbing rates for first quality as follows: Bayo, 3½@3¾; Butter, 3½@4c; small White, 3½@3¾c; Pink, 2¾@3c; Red, 2½@3c ℔ lb.

Corn—Sales of 150 sks Yellow, large size, in three lots, $1 75 ℔ 100 lbs.

Rye—Last sales from first hands were at $2 75; jobbing at $3@3 50 ℔ 100 lbs.

Buckwheat—The jobbing price has been advanced to $2 25@2 50 ℔ 100 lbs.

Mustard Seed—512 sks common Red, sold a few days ago, but not before reported, at 2½c; choice is quotable at 4c; ordinary descriptions, 2½@3½c; English White, 5@5½c ℔ lb.

Flax Seed.—The mill price is 4c, at which figure one or two small lots have been sold.

Bran—Sale of 20 tons at $00; quotable at $20@21 ℔ ton.

Middlings—Sale of 74 tons feed, in lots, $27@28; fine descriptions are quotable at $35@37 50 ℔ ton.

Oil Cake Meal—Is in fair demand at $35 ℔ ton, an advance.

Hay—There are no cargoes on the market to-day; quotable at $12@$16 50 ℔ ton.

Hops—California new are dull at 25@30c ℔ lb.

Dairy Products—California fresh roll Butter ranges 60c to 75c; California pickled, 50@60c. Cheese is jobbing at 18@20c for California, and Eastern dairies; Eggs are steady at 75c ℔ doz.

Poultry—The various stalls were liberally supplied this morning, in anticipation of Thanksgiving Day. Live Turkeys are quoted at 16c, and dressed do, 18@20c ℔ lb; Hens and Roosters, $6@6 50; Spring Chickens, $4@5; Ducks, $5@6; Geese, $12@13; Quail, $1 25 ℔ dozen; Venison, 8@9c ℔ pound.

Provisions—Bacon is jobbing at 13½@14c for California smoked; Oregon do, 14@14½; California Hams, 16@16½c; Oregon do, 17@18c; California Lard, 13@13½c for ordinary packages, and 14c ℔ lb for small tins.

Wool—Market dull at 17@18½c for best grades. Sales for the week have been about 200,000 lbs.

Hides—Since last Wednesday 1,100 California Dry have been placed at 14½@15½c. Salted, are quoted steady at 7c ℔ lb.

Tallow—25,000 lbs good Beef, to a single consumer, 8c; quotable at 8 @8½ ℔ lb.

Ripe Fuit—The Oregon Apples per John L. Stephens were of poor quality and sold at 65c ℔ box.

San Francisco Cattle Market.

Supply abundant and demand active; quotations essentially the same as last Wednesday.

We quote slaughterers' prices as follows:

Beef—American, 1st quality, 7½@8½c ℔ lb.
do 2d do 6½@7½c ℔ lb.

Veal—Quotable at 9@11c ℔ lb.

Mutton—Is steady at 6@7c ℔ lb.

Lamb—Nominal 7@9c ℔ lb.

Pork—Undressed, 4@5c; dressed, 6½@7c ℔ lb, outside figures for milk or grain fed.

—*S. F. Bulletin.*

MINING.

THE NEW QUICKSILVER MINES.—Twenty-one flasks of quicksilver came down from the Phœnix mines in Pope Valley on Thursday. The work on the mine is being prosecuted with vigor and with encouraging prospects of success. In the Valley mine, work has been resumed by sinking a shaft upon the level cleared away in previous explorations. We hear that the quality of the ore improves materially in going down. The reduction furnace, with capacity for 20 tons, is expected to be completed within two weeks and ready for operation. Two men are running a new tunnel upon the Oakville claim, with favorable prospects. If this claim proves what appearances indicate, its position near to the railroad will render it very valuable.—*Napa Register.*

BATTLE MOUNTAIN DISTRICT.—This new and promising district is situated about ten miles west of Argenta and five north of the Central Pacific Railroad. The deposit or belt of mineral known to exist in the district is comprised in an area of four miles in width and about seven to ten in length. Wood and water abound in sufficient quantities for practical purposes. Copper ore is found in great profusion at the base of the Battle Mountain Range, the working of which, owing to the proximity of the railroad may yet be made a remunerative business. There are about forty men in the district, all actively engaged in prospecting.—*Truckee Tribune.*

AN EXAMPLE.—The *Mountain Messenger* says that the owners of the Gold Bluff mine, near Downieville, have been for three years running a tunnel through flinty rock, at a cost of $50 per foot. A short time since, when they found they had gone 200 feet without striking the ledge, they had a survey made and found they must have gone about eighty feet too far. Coming back and raising up two hundred feet, they struck the ledge, finding rock which yields $400 per ton.

PRODUCTIVE MINES.—The receipts of bullion from the Amador mine last month were $46,000, and from the Eureka, $33,826. The Amador ore for the year ending September 30th averaged $22 02 per ton. The Keystone gold mine, near Otter Creek, Amador County, owned by a company in the Bay, produced $153,354 85 in bullion for the year ending on the 1st of July last, and paid $75,000 in dividends.

I. X. L.—The *Alpine Miner* says that the treatment of this ore at the Pittsburg Mill is not producting results creditable to the mine or mill. It is thought less than half the value of the ore is obtained. These ores, like those of the balance of the County, must be roasted.

OWEN'S RIVER.—The *Republican* speaks of the arrival at Los Angeles of 13,000 lbs of silver and gold bars. Most of the ore from these mines goes to Virginia City, Nev. The lead pays all expenses, and leaves the silver, $400 per ton, clear gain.

THE SEMINOLE MINE.—After a temporary suspension of work on this mine, the company has made arrangements to prosecute operations with vigor. A contract has been let to continue the tunnel 100 feet.—*Humboldt Register.*

QUITE a little excitement took place lately up towards Camp McDermitt, regarding the discovery of pretty good placer prospects on Willow Creek.—*Stockton Gazette.*

COE MINE, GRASS VALLEY.—Ten additional stamps are being put up for the mines. The rock which is very good, is now crushed at the Gold Hill Mill.

PENNSYLVANIA.—The *Marysville Appeal* says that good rock has been found in the old incline of the mine, and stockholders are hopeful.

ALASKA MINE.—The *National* says this mine is now down 146 feet in the soft ground. The rock yields from $12 to $200 per ton.

THE North Star Mine, of this place, says the Grass Valley *Union*, has not, as yet, been sold for £200,000 to an English Company.

SCIENTIFIC.

Shooting Stars.

The nature of the stars and planets it is comparatively easy to discover. They are always on hand, and the astronomer can examine them when he pleases. But a shooting star or a blazing fire-ball appears when you do not expect it, and is gone in a moment. By the time you have turned your telescope towards it it has vanished. It is almost impossible to discover its distance; for that requires two observers, distant from each other, who shall happen not only both to see it, but shall be able to describe just what was its track in the sky. It is not strange that this has long been a *terra incognita* in the domain of astronomy; but this region has of late been thoroughly explored by American astronomers, who have taken the lead in this department.

A fire-ball is a brilliant meteor, traversing the heavens, sometimes shining like a burning firebrand; occasionally bursting, with loud detonations, like distant thunder, and casting to the earth fragments either of stone or iron, which then take the name of meteorites, being called *siderites*, or *aerolites*, according as metallic or earthy elements preponderate in their composition. Their character, then, allies them to the asteroids. Some of these smaller planets are scarcely more than twenty miles in diameter, and some of the larger meteors have been computed to be a mile or two in thickness. They are simply, as Humboldt calls them, "pocket planets," pursuing their orbits and traversing the limits of the earth's atmosphere.

But what is the cause of their brilliant appearance? The heating effect of friction is familiar to all. A gimlet bored into wood becomes hot. A speck of steel broken off by striking a flint becomes incandescent. So is it with a meteoric mass. It comes from the region of intense cold, a cold calculated to exceed 200 degrees below zero. It strikes the upper regions of the air with a velocity sometimes of forty miles in a second, producing friction enough, even with the exceedingly tenuous atmosphere fifty miles above us, to melt instantly the outer surface, and, by the unequal expansion, to crack off successive portions of the outer crust. For this reason the pieces, when put together, have, in one case, been shown to form a hollow shell. When first picked up, they have sometimes been intensely cold, though showing on their blackened vitreous surfaces the action of intense heat.

The largest American collection of meteorites in the country, and one of the largest in the world, is that belonging to Professor Shepard, and preserved in the cabinet of Amherst College.

Shooting stars are of a different character from meteorites. They are composed of nothing more solid than the finest dust; for they produce no explosions, and drop no stones to the earth, and, though less brilliant individually than the fire-balls, they sometimes occur in such immense numbers as to form one of the most brilliant displays in nature.

A meteoric shower is simply the tail of a comet made visible. All the principal meteors have been identified with the previously known comets.

The number of these shooting stars is enormous. Prof. Newton computes that more than 400,000,000 shooting stars daily enter our atmosphere; of which many are not, so far as we know, connected with any rings or comets.—*Prof. Gilman in the New Englander.*

Chromo Lithography.

Without admitting all or nearly all that is claimed for it, we must admit that chromo-lithography is a wonderful art. Chromo-lithography gives a good picture at a cheap rate, for which it is justly entitled to praise. The process is a difficult one, although the principles upon which it is based are simple enough.

Lithography is the art of drawing upon stone, and taking impressions of the picture thus produced upon paper. The prefix *chromo* signifies colored. The art is entirely distinct from engraving. The stones from which the impressions are taken being perfectly *smooth*. Latterly, the last impression is taken from an engraved stone, by which a nearer approach to oil painting is secured.

The stone used is a peculiar species of limestone found in Bavaria, which is capable of receiving a very fine polish, besides possessing chemical qualities which render it adapted to the purpose. The stone is in plates of proper size, as many plates being requisite as the different colors necessary to complete the picture. Each of these plates has a separate portion of the picture drawn upon it. The drawing is executed with a colored chemical preparation which, upon the subsequent application of suitable re-agents, enters into combination with the stone itself, and becomes permanent. The drawings are so made that were they all superimposed upon each other, and the plates were transparent, by looking through them the entire picture would be shown complete. The lines which constitute the drawing have an oily surface which repels water, so that when the stone is dampened with water, and printers' ink or oil colors are applied, the ink or colors, being repelled by the moistened parts of the plates, adhere only to the lines of the drawing.

Every stage of the operation requires the most delicate and accurate manipulation. Conceive the difficulty of making a drawing on thirty different plates, each plate having upon its face numerous fragments of the entire picture scattered in different positions, the whole to be so accurately done that when one after another shall have been proved by an impression taken upon a single sheet of paper, a complete picture will be presented; and remember that a variation of a hair's breadth will destroy the work. Another difficulty is what is technically known to printers as "registering." This means the placing of any number of sheets, always in the same position, upon the plate or form, in the press. The greatest accuracy is required here, as all the preceding nicety of workmanship counts for nothing unless this is secured.

The final operation consists in embossing and varnishing. The former gives the rough grained appearance to chromos which is seen in oil paintings, and softens the outlines of the picture.—*Scientific American.*

Glass—How it was Discovered.

Pliny, who wrote in the latter part of the first century of the Christian era, in his Natural History, relates the circumstances to which he ascribes the discovery of glass, and which subsequently led to its manufacture for the many varied uses in which it is now employed. According to his account of the matter, a small merchant ship, such as was peculiar to the state of navigation in that age, was driven upon the shore of the Bay of Acre, and into the mouth of the river Belus. The crew disembarked for refreshments. A kettle was brought forth in which to prepare their food, and a fire was made. Stones were sought on which to support the kettle over the fire, but no stones could be found. The coast was a mass of pulverized silicious rock, or pure sand. The ship, however, was laden with fossil alkali, or shells from the sea, and some of these were employed for want of stones, and placed underneath the kettle and contiguous to the fire. The result was the vitrification of the alkali and silex, so as to produce pure, transparent glass. The discovery, of course, greatly interested the sailors, for the production was beautiful, and indeed rare. They reported their discovery, and others repeated the experiment, with the same result.

Soon after this, all the qualities of this substance, while in an incandescent state, were discovered, and the manufacture of glass into vessels of various forms, and into ornaments, was established in the city of Sidon, on the Mediterranean, whence it was made known to the whole civilized world.

ONE should know one's own ability.

GENERAL SELECTIONS.

Lines to a Skeleton.

The author of the following is unknown, although a reward of fifty guineas was offered for his or her discovery. They were found on a skeleton in the museum of the Royal College of Surgeons, Lincoln's Inn, London:

Behold this ruin! 'Twas a skull,
Once of ethereal spirit full;
This narrow cell was life's retreat,
This space was thought's mysterious seat,
What beauteous vision filled this spot!
What dreams of pleasure long forgot!
Nor hope nor joy, nor love nor fear,
Have left one trace or record here.

Beneath this moldering canopy
Once shone the bright and busy eye;
But start not at the dismal void:
If social love that eye employed.
If with no lawless fire it gleamed,
But through the dew of kindness beamed,
That eye shall be forever bright,
When stars and sun are sunk in night.

Within this hollow cavern hung
The ready, swift and tuneful tongue,
If falsehood's honey it disdained,
And where it could not praise was chained;
If bold in virtue's cause it spoke,
Yet gentle concord never broke,
This silent tongue shall plead for thee
When time unveils eternity.

Say, did those fingers delve the mine?
Or without envied rubies shine?
To hew the rock or wear the gem
Can little now avail to them.
But if the page of truth they sought,
Or comfort to the mourner brought,
These hands a richer meed shall claim
Than all that wait on wealth or fame.

Avails it whether bare or shod
These feet the depths of duty trod?
If from the halls of ease they fled
To seek affliction's humble shed;
If grandeur's guilty bribe they spurned,
And home to virtue's cot returned,
These feet with angel's wings shall vie,
And tread the palace of the sky.

Female Suffrage in Church and State.

The following are the views of the *Independent* on the subject of women's rights:

The system of Presbyterianism as embodied in the "Presbyterian Church of the United States," and defined by the Form of Government, while regarding the whole church as an organic unity, distinctly recognizes the existence, rights, and powers of the local congregations. The officers of "a particular church" are elders, deacons, and a pastor or pastors.

In respect to the election of elders and deacons, the Form of Government provides that "every congregation shall elect persons to the office of ruling elder, and to the office of deacon, or either of them, in the mode most approved and in use in that congregation. But in all cases the persons elected must be male members in full communion in the church in which they are to exercise their office." The church or congregation having the power to elect these officers is thus defined in the Form of Government: "A particular church consists of a number of professing Christians with their offspring, voluntarily associated together for divine worship, and godly living agreeably to the Holy Scriptures, and submitting to a certain form of government." The electors of elders and deacons in the local church are these "professing Christians," having the power to make their choice "in the mode most approved and in use in that congregation," and limited only to the selection of "male members" for church-officers. According to this provision, females, though not eligible to office, are as perfectly invested with the elective franchise as the male members of the church. The church—evidently the *whole* chuch, and not a part of it—has the right to fix the "mode" and "use" in the choice of its own officers. The Form of Government leaves the whole question with the local church; and this is just where it should be left.

In relation to the choice of a pastor, the same form, after providing for the method in which a church-meeting shall be convened and conducted, proceeds to say that "no person shall be entitled to vote who refuses to submit to the censures of the church regularly administered, or who does not contribute his just proportion, according to his own engagements, or the rules of that congregation, to all "its necessary expenses.". The plain inference from this clause is that *all* the other members of the church are electors in the choice of the pastor. The excepted classes are the only ones excluded from the ecclesiastical franchise, and of course, those not excepted must be included.

These are the only clauses in the Presbyterian Form of Government that refer to the question of suffrage in the local church. They contain not the remotest hint of any limitation or exclusion founded on the distinction of sex. For aught that appears, the elective franchise in respect to both sexes rests, as it should, on precisely the same basis. We have, moreover, examined the digest of the acts and deliverances of the General Assembly; and in no instance do we find a solitary decision adverse to the doctrine of female suffrage in the Presbyterian Church. With some opportunities for observation, we have never known a case in which the local church decided to exclude female members from the right of voting in the choice of its officers.

The actual *practice* in this branch of the Christian Church is various. In some congregations—probably the majority—the male members do all the voting; and in others—as we think an increasing number—both sexes share alike in this responsibility and privilege. Dr. Spear, a frequent contributor to the columns of *The Independent*, is the pastor of one of the largest and best-ordered Presbyterian churches in the city of Brooklyn—a church that has adopted the rystem of *rotation* in the office of elders and deacons, and hence holds annual elections to fill the vacancies which occur in these boards. In this church the female members vote for church-officers, without any restraint by usage, or any sense of delicacy lest they may be intruding upon the province of the other sex, or any departure from what is there regarded as good Presbyterian Church order.

We have recently recorded our earnest protest against an effort made in a Congregational church to deny to woman her right of suffrage in that church. There is no authority for such denial either in the Scriptures or in the Congregational order. Women are integral, personal elements in the visible church; and are admitted thereto upon the same tests of discipleship that apply to men. They are amenable to the same authority, and have the same interests in the organization; and, if so, we can see no reason, in common sense, or Christian sense, or any other sense that is really good sense, why they should be disfranchised, by their own delicacy, by church usage, or by any positive law. What harm can arise from their voting? They are quite as likely to vote sensibly as the men are; and moreover, the exercise of the right is well suited to increase their significance, and awaken in them a strong interest in the affairs of the church. We sincerely hope that the practice in Dr. Spear's church will become general in the Presbyterian Church. The argument is wholly on the side of the women. They ought to know what are their rights and duties in the church, asserting the one and performing the other. A proper consciousness on their part, followed by an appropriate expression would be very certain to place them in their true church position. It is a very great mistake for woman to welcome her own insignificance, and think this to be *womanly*. She has committed this mistake quite long enough to see its evils, and try a better method. Let her claim her legitimate rights in the Church of God; and then, as we apprehend, there are but few pastors or male members that will be disposed to dispute this question with her.

If it be objected that female suffrage in the Church leads, by parity of reasoning, to female suffrage in the State, then so be it. We hail the logical conclusion. We believe in suffrage in both relations. Women are an integral part of the State; they are subject to its laws. If they own property, they are liable to taxation; and, if so, we do not see why they should not have a voice in the choice of those who make the laws and levy the taxes. Taxation without representation is as strictly a violation of the democratic principle when applied to woman as it is when applied to man. There is no more and no less injustice in the one case than in the other. We are opposed to all forms of oligarchy, whether in the Church or the State; and that, too, whether founded on color, condition, or sex. We believe in equal rights for all human beings.—*Independent.*

The Rest Needed by Head-Workers.

Head-workers need more rest than hand-workers. The old saw precisely inverted the proprieties of the case, so far as it involved them, declaring that "seven hours' sleep sufficed the student, eight the laboring man, and nine the fool." Three hours of hard brain work destroy, as before observed, more nervous tissue, and cause a greater subtraction of the phosphates from the system, than an ordinary day's work at mere mechanical labor, the proportion in grains (of weight) being as 86: 77. Above everything else, brain-workers need sleep, early sleep and late sleep, and enough in the middle to feel "real stupid" at the end of it. Stupidity is precisely the condition into which this class of toilers should manage and devise and strive to get themselves for a time, longer or shorter, each twenty-four hours. Nothing rests the brain and the whole working system like it. Narcotic stupidity, the product of ale, tobacco, or wine, is not the thing referred to, though in emergencies this may be had recourse to as a medicine—but the quiet, reposeful readjustment of the nervous conditions, and the recharging with vital force of the nerve-batteries, the contacts not yet closed, the galvanic currents therefore not yet set in motion, but only filling up the system with a blind, diffused feeling of healthy sensations and reserved efficiency.

In particular, it is believed that all workers, both men and women, in all departments of labor, and especially in the department now in debate, will find it greatly to their advantage to *lie down*, for a time longer or shorter, during the day, preference being given to the hour just after dinner, and to lie long enough, if possible, to just fall asleep. Every other working animal than man, if left free, will, after having eaten at noon, lie down for a nap, or, if from any cause it fails to get it, shows decided abatement of efficiency during the rest of the day. Judicious teamsters teach their horses to lie down in their stalls, or compel them to, and many have to be compelled to it in such narrow quarters that they are liable to chafe or wound themselves in getting down or up. In a recumbent posture the pulse is slower by eight or ten beats a minute than in standing, and four or five slower than in sitting. The breathing, also, is less rapid and is deeper; digestion begins sooner and continues more rapidly. Accordingly the worker can recuperate faster in the recumbent than in any other position; and if in a quiet place, his nerves get composed more speedily and thoroughly in a given time. Working people understand this well enough, but not "feeling tired," they dislike to camp down on a bed or settee, it is such dull business. Dull enough truly, when the head is swarming with plans, work is ready to go on, and the worker feels ready to go on with it. But it pays well—this is our argument—it pays well by the day, year, month, or lifetime, and for the great majority of workers.—*Lippincott's Magazine.*

Passenger Postage.

Mr. Raphael Brandon is the author of a new scheme of railway organization, promising results as wonderful as ever the street-seller of Bisnagar vaunted of his carpet. It is simply an adaptation of Sir Rowland Hill's postoffice scheme to railway passenger traffic. He proposes to treat a passenger like a letter, and send him anywhere over the kingdom, regardless of distance, at a fixed minimum charge. A three-penny stamp shall take you, third-class, any journey, in one direction, you like to go, whether from Ludgate Hill to Sydenham, or from John o' Groat's to Land's End.

If you prefer second class, you will take a six-penny stamp; if you will luxuriate in a first-class, your postage will amount to one shilling.

This sounds as mad as the penny-postage sounded at first. But Mr. Brandon quietly proceeds to argue in his pamphlet that it would pay everybody, share-

holders, the public, and the Government, besides giving renewed impetus to industry of all sorts. The sum proposed to be charged for passenger postage looks ridiculously small. In reality it is not so much less than the average fare at present charged for the average journeys as might be supposed. In 1865, in round numbers, 3,500,000 passenger trains ran over 71,000,000 miles, carrying 252,000,000 passengers. The traffic produced £14,724,302, giving an average of nearly 21 miles and 73 passengers for each train, which is about 3½ passengers per mile, and an average for fare, at present paid, per average journey, of 14*d* only.

Now, says Mr. Brandon, give me a universal 3*d*. fare every where, and I will promise you six times the traffic, which will give the united railway interest an excess of £4,000,000 of receipts, with very little, if any addition to the expense of carrying an increased number of passengers. But this is merely supposing each person paid but 3*d*. It is calculated, however, that of the increased number of travellers one-seventh would ride first class at 1*s*., and two-sevenths second class at 6*d*. This would raise the annual return to £32,000,000 for the passenger traffic, instead of £14,750,000, as at present. Does some one say that the analogy between carrying a passenger and carrying a letter is false, because a letter is but half an ounce, and a passenger is really a meaty hundred-weight? Which is, by far, the most expensive part of the postal system? The transit of a letter or its delivery? Its delivery. Granted, then, that the transit of a passenger is something more expensive than that of a letter, the passenger saves the most costly part of the postal outlay, because he delivers himself; the balance is, therefore on the passenger's side, for the additional expense of transit is nothing to the saving in distribution and delivery.—*All the Year Round.*

Earthquakes.

"There is," says Humboldt, "no other outward manifestation of force known to us—the murderous inventions of our own race included—through which, in the brief period of a few seconds or minutes, a larger number of human beings have been destroyed than by earthquakes."

Lightning and storm, war and plague, are but weak and inefficient agents of destruction in comparison with the earth's internal forces. And as earthquakes surpass all other phenomena as agents of sudden destruction, so the impression which they produce on those who, for the first time, experience their effects, is peculiar and indescribably awful. Men of reputed courage speak of a feeling of "intolerable dread," produced by the shock of an earthquake, "even when unaccompanied by subterranean noises." The impression is not that of simple fear, but a feeling of absolute pain. The reason seems for a while to have lost the power of separating real from imaginary causes of terror. The lower animals are also thrown into a state of terror and distress. "Swine and dogs," says Humboldt, "are particularly affected by the phenomena of earthquake." And he adds that "the very crocodiles of the Orinoco, otherwise as dumb as our little lizards, leave the shaken bed of the stream and run bellowing into the woods.

Humboldt's explanation of the peculiar sensations of alarm and awe produced by an earthquake upon those who for the first time experienced the effects of the phenomenon, is in all probability the correct one: "The impression here is not," he says, "the consequence of the recollection of destructive catastrophes presented to our imagination by narratives of historical events; what seizes us so wonderfully is the disabuse of that innate faith in the fixity of the solid and surest foundations of the earth. From early childhood we are habituated to the contrast between the mobile element water, and the immobility of the soil on which we stand. All the evidences of our senses confirm this belief. But when suddenly the ground begins to rock beneath us, the feeling of an unknown mysterious power in nature coming into operation and shaking the solid globe arises in the mind. The illusion of the whole of our earlier life is annihilated in an instant.—*Cornhill Magazine.*

He tempers the wind to the shorn lamb.

THE FAMILY PAPER OF THE PACIFIC COAST.

THE OCCIDENT.

In every true home there should be found a first class family paper—one to whose coming, father, mother, children will look with eagerness each week. Such a paper is

THE OCCIDENT.

Let all who desire such a paper, and are asking, "What paper shall I take?" read the following statement of facts:

THE OCCIDENT contains a greater amount and variety of reading matter than any other family paper on the Coast. It contains choice selections for all classes of readers. Both the child and the person of cultivated literary taste will find in each number matter which cannot fail to be interesting.

THE OCCIDENT is extensively quoted. No other weekly paper on the Coast furnishes so much matter, either original or selected, to the columns of other papers. Whole columns are frequently taken from one or another of its departments. No stronger proof of its excellence could be desired than the fact that it is so well appreciated by contemporaries.

THE OCCIDENT has a complete Agricultural Department, carefully culled from the best authorities, with all the current agricultural items of our own coast, and full market reports. The Mining Department is also very complete.

THE OCCIDENT gives a summary of Pacific Coast news and of Eastern and Foreign Telegraphic News. These items are not hastily thrown together, but are carefully prepared, and are consequently copied to a great extent. The Personal Department is the most complete collection of personal news to be found in the State.

THE OCCIDENT is the official organ of all branches of the Presbyterian Church, and contains full religious intelligence concerning the progress of all denominations. Although a religious paper, it is not sectarian. Its aim is to make men better and happier by the inculcation of the principles of the Christian religion.

THE OCCIDENT is universally admitted to surpass all other papers in the State, in typographical appearance and systematic arrangement of its contents.

Read what the papers say of

THE OCCIDENT.

"Has commenced its second volume, enlarged and improved and with excellent prospects. It is full of 'knows,' views, and family reading, and is ably edited."—*Brooklyn (N. Y.) Union.*

"It gives evidence of ability, tact, and judgment in its management."—*Cincinnati Presbyter.*

"An able paper of the same form as the *Statesman*."—*Philadelphia Statesman.*

"One of the best of papers."—*Zion's Herald, Boston.*

What is Said

In the last number of the *Vallejo Recorder*:

THE OCCIDENT—This elegant journal, the organ of the Presbyterian Church on this coast, published by Bancroft & Co., is worthy of a place in every household. Too much cannot be said in its praise.

Miners' Foundry and Machine Works,

Nos. 245 to 255 FIRST STREET,

SAN FRANCISCO.

HOWLAND, ANGELL, & KING, PROPRIETORS,

Manufacturers of Machinery for

QUARTZ MILLS, SAW MILLS, POWDER MILLS, FLOUR MILLS, SUGAR MILLS, PAPER MILLS, STEAM ENGINES OF ALL KINDS, AMALGAMATORS OF ALL KINDS, MINING PUMPS, OIL WELL TOOLS, ROCK BREAKERS, HOISTING WORKS,

—AND—

Machinery and Castings of all kinds, either of Iron or Brass.

Boilers and Sheet Iron Work, in all its branches.

Shoes and Dies of White Iron, manufactured for, and imported by us, expressly for this purpose, and will last 25 per cent. longer than any other made on this coast.

Russia Iron Screens, of any degree of fineness. We are the only manufacturers on this coast of the "Hicks Engine," the most compact, simple in construction, and durable, of any Engine in use.

HYATT'S HAND-BOOK OF

Grape Culture in California,

Giving full and specific directions as to where, how, and when, to plant and cultivate a vineyard.

As the season is approaching for those who purpose going into the culture of the vine anew in California, or for those who wish to extend their vinicultural operations to make preparations therefor, they can find no better aid, and no source of information more valuable than to consult this highly approved Hand-Book of Grape Culture.

Following are some of the testimonials that have appeared in commendation of this useful and indispensable work:

A committee of the late Fair of the Mechanics' Institute of San Francisco, to which the work had been referred, speak thus:

"Your committee have examined Mr. Hyatt's Treatise on the Culture of the Grape, and believe it to be the BEST HAND-BOOK published on that subject for California vine culturists, and for which they recommend a Special Premium."

The California State Agricultural Fair, of 1867, awarded a Diploma to the author of this work, and also the San Joaquin Valley Agricultural Fair, at the same season.

OPINIONS OF THE PRESS.

The following are brief extracts from some of the elaborate notices of this work:

The San Francisco *Daily Evening Bulletin* says:—"The book contains a choice collection of the best foreign and native varieties of the grape cultivation in California especially, as well as at the East. The many excellent works on Grape Culture in the Atlantic States are of little or no value in California, where an entirely different system and practice are necessary in vine growing and wine-making. This Hand-Book is intended to supply this deficiency. The author has taken great pains to investigate this subject, and to aid in the improvement of viniculture in California. Its appearance is timely, and it can hardly fail to meet a large and ready sale. It is attractively printed and elegantly bound."

Sacramento Union—"Hyatt's Hand-Book of Grape Culture is a California production that will probably meet a common want. The author takes the experience of the most noted vine-growers in the State as the warrant for his conclusions and suggestions, turns to account the recorded results of experiments made by the pioneers of this branch of industry, and in addition to giving full and minute instructions in regard to the planting of vineyards and the manufacture of wines, presents statistics which will enable the beginner to calculate the probable profits of successful grape culture."

The *Mountain Democrat*, whose editor, Hon. D. W. Gelwicks, is the present State Printer of California, speaks thus:

"HYATT'S GRAPE CULTURE.—We have received from the publishers, H. H. Bancroft & Co., San Francisco, a copy of this interesting and valuable work—a work greatly needed on this coast, and which every grape-grower should purchase. We sent it to a gentleman well known in this community, for his examination—a gentleman familiar with the subject, and largely engaged in the culture of the grape. He gives it the following cordial endorsement, and his endorsement ought to secure it a large sale:

'The limited time in which to examine Hyatt's Grape Culture, published by H. H. Bancroft & Co., San Francisco, has been sufficient, however, to satisfy me that it is a work which every grape-grower should have. No matter how well fortified we may be in our own experience and theory, we must acknowledge that we may adopt many of the author's ideas and suggestions with profit. The merit of the work certainly bespeaks for it a ready sale.

Respectfully, CHAS. P. JACKSON.'"

The Golden Era: * * * "With this book in his hand, the intelligent agriculturist can engage in the business of grape culture with almost the same chance of success as one who has bought his knowledge by expensive experience. * * * The practical information contained in the book would cost many hundred dollars to obtain in any other way. We predict for it a ready and rapid sale."

S. F. Daily Dramatic Chronicle: "The book is emphatically a California production, being written by T. HART HYATT, of this city, editor of the *Rural Home Journal*, and bearing the imprint, San Francisco: H. H. Bancroft & Co. It contains a large amount of valuable information, and should be in the possession of every vine-grower and wine manufacturer in the State. The usefulness of the volume, and its convenience for reference, are very much enhanced by a full and carefully prepared index."

S. F. Mining and Scientific Press: * * * "The book professes to be a complete manual, with instructions for the management of the grape and the manufacture of wine, and is especially designed for California. * * * The book contains a considerable amount of valuable information which is not generally found in such treatises."

S. F. Daily Times: * * * "The author seems to have exhausted his subject, particularly as it relates to viniculture in this State, and as the grape interest is just beginning to attract attention which is soon to become paramount among farmers, we regard the publication of the work as most opportune. No ranchman should be without it."

N. Y. Daily Tribune: "The author brings the result of many years' experience in foreign countries to the preparation of his work, and from his observations in climates similar to that of California, arrives at the conclusion that California is singularly favorable to the culture of the grape, and to all semi-tropical fruits, and that it will hereafter be distinguished as the land of the vine, the fig, the orange, the olive and the palm. His volume forms a capital, if not a complete manual, on the care of a vineyard, and it is enriched with much industrial information connected with the subject."

Lacon (Ind.) Home Journal: "This work is most *apropos*. It comes just as thousands, without any practical knowledge of the business, having planted vineyards, find themselves destitute of that information their intelligent care demands. All over the country this interest is growing, and probably the time is not distant when America will produce more, if not better, wines than any country in the world. The author, MR. THOMAS HART HYATT, is an enthusiast on the subject upon which he writes so pleasantly, and his book embodies just what every grape-grower would like to know—what every one must know, to cultivate the vine successfully."

Colman's Rural World, St. Louis: * * * "We merely want to introduce a new and interesting treatise on this subject to our readers, from the far-off shores of the Pacific—the Golden State of California. Its author is T. HART HYATT, editor of the California *Rural Home Journal*. He has had a large experience and observation in California and in the Old World. His style is entertaining, his directions clear, plain, and practical."

Rural New Yorker: * * * "Although most valuable to the California viniculturist, yet it helps to widen our knowledge of the vine."

H. H. BANCROFT & CO., Publishers.

FAMILY READING.

Long Ago.

As through the poplar's gusty spire
The March wind sweeps and sings,
I sit beside that hollow fire,
And dream familiar things:
Old memories wake, faint echoes make
A murmur of dead Springs.

Ah, days when life had aim and meaning,
What buried years ago!
When friend—no shadow intervening—
Was friend, and foe was foe;
When life had youth, and love had truth,
And heart had faith to show.

Somewhere now woods are green and tender;
Somewhere hedgerows are filled
With buds; somewhere if winds befriend her,
The thrush begins to build;
Somewhere no fears has Spring, no tears
For hopes that March has killed.

Sing, thrush, your songs of praise and passion;
Fill all the budding wood
With music of that bygone fashion
My youth and heart so understood!
Now I am old, the world's grown cold,
And God alone is good.—*Chamber's Journal.*

The Unfinished Prayer.

"Now I lay me,"—Say it darling;
"Lay me," lisped the tiny lips
Of my daughter, kneeling, bending
O'er her folded finger-tips.

"Down to sleep"—"To sleep," she murmured,
And the curly head dropped low;
"I pray the Lord"—I gently added,
"You can say it all, I know."

"Pray the Lord"—the words came faintly,
Fainter still—"My soul to keep;"
Then the tired head fairly nodded,
And the child was fast asleep.

But the dewy eyes half opened,
When I clasped her to my breast,
And the dear voice softly whispered,
"Mamma, God knows all the rest."

O, the trusting, sweet confiding
Of the child heart! Would that I
Thus might trust my Heavenly Father,
He who hears my feeblest cry.

—*Congregationalist.*

A Mother's Words.

A youth of eighteen or nineteen years sat at an open window—a look of painful perplexity in his face, apparently occasioned by a letter he held in his hand. After sitting thus for some minutes, he muttered to himself:

"Yes, I must go; if I don't, Brown and Smith will be laughing at me, and calling me righteous overmuch; and, after all, there's no great harm in it, for I'll go to church in the morning, and it's only to be a sail down the river, and spend the day in the country."

Still, he pressed his hand on his forehead for an instant, then rising hastily, he said:

"There is no use of bothering about it; I must go."

As he rose, his eye lighted on the setting sun, and as it did so his whole expression changed; a sweet yet sad look played on his face—his thoughts were elsewhere—another scene was before his eyes. The dark street had disappeared, and in its stead a neat country cottage had risen. In thought he was there. Once more he saw the hills that rose near that cottage door; once more the blue waters of the distant lake glistened before him; once more he sat in the cottage garden with his widowed mother, and watched the setting sun.

Once more that mother's words sounded in his ears—"John, don't forget your God, and he'll not forget you. 'Remember his Sabbath day, to keep it holy.' Though sinners entice you to break it, consent thou not. O, when you're tempted to do wrong don't forget to pray! Never let the sun go down on a prayerless day. May the God of the fatherless guide you—may the Lord Jesus be your Savior!"

Yes, six months had passed since he heard these words, and yet they seemed to sound in his ears. Tears filled his eyes; and rising, he folded his hands and kneeled in prayer; then taking up his pen, he wrote thus:

"Thanks, Brown, for your invitation; but I cannot accept it. My duty to God is to obey his commands; and he hath said, 'Remember the Sabbath day, to keep it holy.' Spending the day in idle pleasure, is not doing this; and I wish you would think over the subject, and not go yourself."

How great is the influence of a pious mother's words. How wonderful the answers to her earnest prayers.—*Bible Class Magazine.*

Man and his Savior.

A very old German author discourses thus tenderly of Christ:—

"My soul is like a hungry and thirsty child, and I need his love and consolations for my refreshment. I am a wandering and lost sheep, and I need him as a good and faithful Shepherd. My soul is like a frightened dove, pursued by a hawk, and I need his wounds for a refuge. I am a feeble vine and I need his cross to lay hold of, and wind myself about it. I am a sinner, and I need his righteousness. I am naked and bare, and need his holiness and innocence for a covering. I am in trouble and alarm, I need his teaching; simple and I need the guidance of his Holy Spirit.

"In no situation, and at no time can I do without him. Do I pray? he must prompt and intercede for me. Am I arraigned by Satan at the Divine tribunal? he must be my advocate. Am I in affliction? he must be my helper. Am I persecuted by the world? he must defend me. When I am forsaken, he must be my support; when dying, my relief; when mouldering in the grave, my resurrection.

"Well, then, I will rather part with all the world, and all that it contains, than with thee, my Savior, and God be thanked, I know that thou art not willing to do without me. Thou art rich, and I am poor; thou hast righteousness, and I sin; thou hast cordials and refreshments, and I hunger and thirst.

"Use me, then, my Savior, for whatever purpose, and in whatever way thou mayest require. Here is my poor heart, my empty vessel, fill it with thy grace. Here is my sinful and troubled soul; quicken and refresh it with thy love. Take my heart for thine abode; my mouth to spread the glory of thy name; my love and all my powers for the advancement of thy honor and the service of thy believing people, and never suffer the steadfastness and confidence of my faith to abate, that so at all times, I may be enabled from the heart to say, "Jesus needs me, and I him, so we suit each other."

The Death of a Christian.

In a crowded alley and noisy district of a great metropolis, an old man of seventy-four lived alone in a small room on the ground floor. He was by trade a carpenter, but his working days were over, and the hour of rest was at hand. He felt one day that his end was rapidly approaching, and he earnestly desired to collect his thoughts, and commit his departing spirit into the hands of his heavenly Father.

But the boys in the alley were careering about, and their shouts and wild noises sorely disturbed the peace of the dying man. He managed to crawl to the door and hail a policeman who was passing.

"Can you get me," he said, "half an hour's quiet? I am dying, and I want to pray."

"Hush, boys," said the policeman, turning to them. "Death is coming into this court."

They crowded round like bees, with a mingled feeling of awe and wonder, and saw the aged death-stricken figure in the door-way.

"Yes, boys," the dying man found breath to say, "death is come into the court; but to me, death is only stepping from one room into another."

A solemn stillness fell upon these young spirits, and an hour of unwonted quiet was obtained, during which the old man breathed forth his soul into the hands of his Father in Heaven.

The dying injunction of the mother of Wesley was:

"Children, when I am gone, sing a song of praise to God!"

THAT life is long that answers life's great end.

Directness in Prayer.

When we are thoroughly in earnest do we use circumlocution? In the ordinary Sabbath service, certain forms and a certain order may be well, and prayer in regular form, but when we meet for a specific object, it is well to pray for that object.

We had met one day for a definite purpose. The time was short; we were to pray for one thing. And yet one brother began at the creation and the fall; he confessed our sins, original and actual, and he said, "doubtless Thou art our Father, though Abraham be ignorant of us, and Israel acknowledge us not," and so on. At the very close came one single petition for the object which brought us together.

I saw once a petition which was presented to the Governor of the State, for the pardon of one who had broken the law and was under sentence. It went to the point and asked for the pardon. The tone respectful, but the petitioners did not say, "doubtless you are the Governor, though the election was contested, and some deny your right to be there, and there are those who question our right to petition." No, they were earnest enough to ask for what they wanted in direct terms.

The few prayers recorded in the Scriptures are models; they are plain, simple, and to the point—and they are not very long, even on the most solemn occasion. They are not earnest Christians who expect to be heard "for their much speaking."—*Presbyterian Banner.*

WHAT IS NEEDED.—Robert Laird Collier, a Unitarian of Chicago—formerly a Methodist, we believe—has "spoken out in meeting, and spoken with much point and effect." In a late meeting of Unitarians in the Music Hall in Boston, he discoursed with remarkable freedom of the needs of the Unitarian body in this country, and summed up his statements in the following comprehensive manner:

"I said to my good friend Hale, recently, when he was spinning out one of his theories about a popular church, 'Hale, is that all we need?' He looked a little askew, and said:

"'Well, I suppose we need a little religion most.'

"Yes, dear brethren, that is the only trouble I find in my Church. When our people know the meaning of a household altar; when they know what it is to gather their children, morning and evening, and read to them the words of life from that hallowed, divinely-inspired Bible; when they know what it is to bow and ask God's blessing upon their family, and go to their closets morning, noon, and night, and pray as if they believed in God. *When our people have religion*—allegiance to God—then we can save the world."—*Religious Herald.*

Religious Conversation.

Christians abroad are more disposed to converse freely, and often on personal religion, than Christians are in the United States. Without the slightest violation of the most sensitive delicacy, but in harmony with the sweetest graces of the Christian character, the subject of personal religion is more frequently and fully conversed upon by good people in foreign lands than in our own. They glide into it as naturally as our men do into politics and business, or our women into the prices of dry goods and the fashions of the season.

We cannot speak comparatively, but we know that American Christians are quite too reticent on the subject of their personal experience. It should be one of the most delightful themes for conversation. And what more instructive than to learn from our own brethren how the Lord deals with those whom He loves?—how He chastises, and cheers, and sheds abroad His love in the heart, and gives the spirit of adoption? One of the finest sources of both comfort and edification is neglected by those who do not abound in such intercourse.—*N. Y. Observer.*

GUARD AGAINST VULGAR LANGUAGE.—There is as much connection between the words and the thoughts as there is between the thoughts and the actions. The latter are not only an expression of the former, but they have a power to react upon the soul, and leave the stain of corruption there. A

young man who allows himself to use one vulgar or profane word, has not only shown that there is a foul spot upon his mind, but by the utterance of that word he extends that spot, and inflames it, till, by indulgence, it will pollute and ruin the soul. Be careful of your words as of your thoughts.

If you can so control the tongue that no improper words are pronounced by it, you will soon be able also to control the mind, and save it from corruption. You extinguish the fire by smothering it, or by preventing bad thoughts bursting in language. Never utter a word anywhere which you would be ashamed to speak in the presence of the most refined female, or the most religious man. Try this practice a little while, and you will soon have command of yourself. —*United Presbyterian.*

Young Folks.

Thou God Seest Me.

Through all the busy daylight,
Through all the quiet night,
Whether the stars are in the sky,
Or the sun is shining bright—
In the nursery, in the parlor,
In the street, or on the stair—
Though I may seem to be alone,
Yet God is always there.
He knows each word I mean to speak
Before the word is spoken;
He knows the thoughts within my heart,
Although I give no token.
Whatever I may do, whatever I may be
Although I see Him not, yet He sees me.

—*Independent.*

Too Much Turkey.

"Two, four, six, eight, nine, ten, twelve of them! Oh, how nice! Just what I have been wanting! Ever since Johnny Mills' uncle gave him those ducks, I have wished and wished and wished for some turkeys. I'd rather have turkeys than ducks, because there is no water near our barn for ducks to swim in. Now, I'll take these eggs right home, and there's my old speckle just ready to set. How very fortunate! One step more and I should have landed plump in the middle of the nest. Whew! what a pretty nest I'd have made of it! Ha! ha!"

This was the way Willie Taylor talked to himself one spring afternoon, sitting astride the top rail of the fence which divided his father's farm from that of his next neighbor, Mr. Johnson, and looking down upon a nest full of great speckled eggs that filled the fence corner on Mr. Taylor's side. Springing down, Willie began to gather them up, putting them in his hat in place of a basket, still talking to himself in a train of exultation. Suddenly his thoughts took a new turn. Can any of you boys that read this story tell from whence came the questions that now seemed sounding in Willie's ear? "Are they yours? and by what right?"

Well did the boy know that the nest must belong to Mr. Johnson's white turkey, which he had chased through the woods just over yonder an hour or two ago.

"But," he argued to himself, "the eggs are mine, for I found the nest, and upon our land, too. Of course, if they had been on the other side of the fence it would not be right to take them away; but now there can be no doubt about it. How lucky it was that the old white turkey should have made her nest on this side, for I should hate to leave them, after being the first to find them; but of course I would not *steal* them."

Ah! was Willie sure about his right to the prize? Why, then, did he look so carefully around as he gathered up the coveted eggs, and removed all traces of the nest? Why, then, did he steal along so cautiously under the shadow of the high wall, and quietly place his eggs under the setting hen, instead of rushing into his mother's presence, as he was wont to do, when he had made any wonderful discoveries? Again, if Willie's conscience was perfectly at rest on that point, why did he start and stammer when the Eighth Commandment came to him to recite in Sabbath-school the next Sabbath? And was there any reason why he should turn so painfully red, and grow confused, when, a few weeks later, Mr. Johnson met him and addressed him in his usual kind and cheery manner? There can be but one answer to these *whys*—eh? boys.

The weeks passed, four of them, and one morning old Speckle marched through the poultry yard with half-a-dozen or more, scrawny, long-necked, turkey chicks toppling and tumbling after her. Here was a mystery, but Willie had foreseen that questions would be asked, and had prepared his answer.

"I swapped some of old Speckle's eggs for turkeys' eggs over at the Point," he said, looking boldly into his father's face as he uttered the *lie*. Mr. Taylor was satisfied, for he had never suspected his son of falsehood—how, then, could he suspect him at once of *falsehood* and *theft*? (There, boys, that's the right word at last; don't you think so?) It was the first lie, and how terribly he suffered—how he feared lest his sin should come to light—how he dreaded lest his mother should find it out. It was not punishment or reproach that he feared from her, but the thought of her grief was almost too painful for him to think of. Overwhelmed as he was with remorse, he grew to hate the sight of his turkeys, and wish them all dead. But in spite of all, they grew finely, and when Thanksgiving day came, a plump one was slaughtered, which mother stuffed and roasted, and father carved and served out in plentiful portions to all the hungry ones that gathered around the table. How delicious it tasted to all except Willie. To the astonishment of all, he declared his preference for chicken pie, or roast beef! Willie did not seem very thankful that day. He did not enter into the after-dinner romps with his usual spirit. It may have been, as he said, because his head ached; or it may be that he had *taken too much turkey!* I cannot tell. I think that Willie Taylor felt more of happiness and of freedom than he had for months, when one day soon after, Jerry Wilson came with his great market wagon, and took the turkeys all away. Still the sting of remorse was left, pricking him like a great, ugly thorn.

I am glad to be able to tell you that he did not grow up to be a bad man. I think that he tried to make his after-life atone for the sins of his boyhood, and he became an honored and respected man, holding positions of trust and influence—but how gladly would he have wiped out the acts of that bright springtime so long ago.

Twenty years later he wrote a letter to Mr. Johnson, who was now a white-haired old man, remembering Willie Taylor only as a promising boy, and hearing with pleasure of his well-doing in the world of men. After this grown-up man had made his tardy confession, he continued:

"This fault of my youth has haunted me all through my life. Sometimes, like a horrid skeleton, its memory has come to haunt me in my brightest hours. All the way up to manhood I carried the weight of that sin with me, for months dreading discovery, and after that fear died out, suffering acutely from the consciousness of having been guilty of a meanness. It was my first and last theft—the falsehoods growing out of it the first and last I ever uttered. I learned, through the severity of the lesson, that 'the way of the transgressor is hard.' I learned, too, to shun the sin of covetousness, for it leads to dishonor, falsehood, and treachery. I wonder now that, having taken that first false step, and thus started upon the down-hill road, I ever found my way back into the path of truth. I think that, under God, the remorse which drove me back must be attributed to the teachings of my mother, whose aim it was to give us correct ideas of right and wrong—to teach us to keep our consciences ever active and tender. I wish I might warn every boy in the land against trying the experiment. I would tell them how, even now, after so many years, my cheeks sometimes tingle with shame as the sudden recollection of that turkey's nest in the fence corner rushes over me. I would say, 'Boys, it is not a safe or pleasant thing to try. Every boy might not be so drawn back by cords of love. To-day I recognize and adore the Power that led me through so much distress into the safe way.'"

Boys, the story which Cousin Faye tells you here is true. The boy Willie still lives—he speaks to you here. Will you profit by his sad experience, so that when you are old, the flush will not rise to your cheek at the remembrance of some boyish folly or sin?—*Presbyterian.*

If I should Die Before I Wake.

"Mother, every night, when I go to bed, I say, 'Now I lay me;' and do you know, mamma, though I am four years old, I never thought what it meant until Fanny Grey died? I asked nurse if Fanny died before she waked; and she said, 'Yes, she went to bed well, and had a spasm in the night, and died before she knew anything at all.'"

"Now, mother," continued Rena, "I want you to tell me about 'Now I lay me,' so that when I say it I may know just what it means."

"Well, Rena, said her mother, I shall be glad to tell you. What does it mean when you say, 'Now I lay me down to sleep?'"

"Oh, that means, mother, that I'm just going to lie down in my bed, to go to sleep, till morning."

"Well, then, as you lie down to sleep, what prayer do you offer to God?"

"'I pray the Lord my soul to keep.' I want the Lord to take care of me, *all over*, mother! But, mother, if I should die before I wake, would the Lord be taking care of me then? Now it seemed to me, when Fanny died that God did not take care of her that night, and so she died."

"Oh, no, Rena! God did take care of her. The little verse says, 'If I should die before I wake, I pray the Lord my soul to take;' so that you see God took little Fanny's soul to himself; and when she awoke, she was in the arms of the blessed Jesus. Now Rena, when you say 'Now I lay me,' I want you to think in this way: 'Now I am going to bed and to sleep, and I want the Lord to take care of me. If I am not a good child, and do not pray to God, ought I to ask him or expect him to take care of me? Let me lie down feeling that I am in the Lord's care, and if I should die before I wake, that still I am the Lord's child; and I pray that he may take my soul to dwell with him.'"

"O mother! I will try and remember. Why, I used to say it slow, and clasp my hands, and shut my eyes; and yet I did not think about it. Thank you, mother dear. Please hear me to-night when I say my prayers."

Ah, little children! are there not a great many, who, like Rena, say their prayers without thinking what it means?—mere words, with no meaning in them? God cannot listen to such prayers. They are not for Him "unto whom no secrets are hid."

Think of what I have written about little Rena, when you say, "Now I lay me" to-night; and pray that God will watch over you, waking and sleeping. —*Intelligencer.*

How Jesus Comes.

One evening the children in Flake's Reformatory at Wesmer sat down to supper. When one of the boys had said the pious grace, "Come, Lord Jesus, be our guest, and bless what thou hast provided," a little fellow looked up and said:

"Do tell me why the Lord Jesus never comes. We ask Him every day to sit with us, and He never comes."

"Dear child, only believe, and you may be sure He will come, for He does not despise our invitation."

"I will set Him a seat," said the little fellow, and just then there was a knock at the door.

A poor frozen apprentice entered, begging a night's lodging. He was made welcome; the chair stood ready for him; every child wanted him to have his plate, and one was lamenting that his bed was too small for the stranger. The little one had been thinking hard all this time.

"Jesus could not come, so He sent this man in His place—is that it?"

"Yes, dear child, that is just it. Every piece of bread, and every drink of water that we give to the poor, or the sick, or the prisoners, for Jesus' sake, we give to Him."

"Inasmuch as ye have done it unto one of the least of these, my brethren, ye have done it unto me."—*Working and Praying.*

NEWS SUMMARY.

PACIFIC COAST ITEMS.

NEWSDEALERS and editors are complaining bitterly of the non-arrival of mail matter from the East. Their complaints are well founded. The manner in which the carrying of mails and passengers is managed is an imposition on the public. It is not probable, however, that any reform can be effected at present. When the railroad is completed, it is to be hoped that our troubles in this direction will cease.

GEN. HALLECK, in his report to the War Department recommends the establishment of military posts in Alaska to protect the inhabitants from attacks of Indians. He contends that agriculture will prove more profitable in that country than mining. He also proposes that the three southern counties of California shall be made a separate military district.

MORE than 50 persons have died of small pox in San Juan, Monterey County, during the past 6 weeks. The ravages of this disease among the poorer classes are described as terrible. Subscriptions have been taken in neighboring towns, and the clergymen of different denominations are doing their best for the relief of the sufferers.

THE Santa Cruz *Times* says that there is more redwood timber between Pescadero and Aptos creek, west of the mountains, than in the whole State beside. Much of the land is yet unclaimed and other tracts can be bought at a nominal price. It is, however, difficult to obtain perfect titles to these lands.

A TERRIBLE riot took place at Bear River City, Wyoming, on the 20th. A crowd of roughs burned the jail and the office of the *Frontier Index*, and were driven off by the citizens who killed 11 of them and wounded many more. The arrival of military forces stopped the disturbance.

A MOB at Clear Lake composed of men whose land had been overflowed by the waters of the lake, thinking that the courts were not disposed to do them justice, destroyed the dam to which they attributed their troubles, together with a flouring mill.

THE *National* advocates a course of lectures in Grass Valley. It doubts not that the services of the best lecturers in the State might easily be obtained, including "Caxton," Dr. Stone, Dr. Stebbins, and *J. Ross Browne*.

THE Chico *Courant* says that many farmers in that vicinity have sown their grain without plowing, merely harrowing the surface. They fear a dry season, and will thus get the advantage of the early rains.

A MAN who was in South America at the time of the earthquake, says that the shock there was not much more severe than that of the 21st ult. in California, but continued a much longer time.

THERE is not an institution of learning, outside the common schools, in Vallejo. The *Recorder* justly thinks that so flourishing a town ought to support at least a Boys' High School.

SAN FRANCISCO has also had her little riot the past week, which is indeed still going on at the Potrero, without any very disastrous results that we can hear of.

THE *Sage Brush* reports that not a single case of felony or misdemeanor has been placed on the records of the courts of Lassen County for the past year.

IT is said that the Western Pacific Railroad will tap the Central road about 20 miles east of Sacramento, so that trains will run direct to San Francisco.

A CITIZEN of Monterey refused to take in his hands a telegraphic dispatch from a town where the small-pox is raging. So says the *Democrat*.

SHOULD the weather be favorable, the cars will be running from San Jose to Gilroy early in the Spring.

THE Government has bought 10 acres of land at Santa Cruz, on which to build a light-house.

THE *San Francisco Times* appeared in a new and improved dress on Monday last.

THE distance from Halifax to San Francisco overland is 3,998 miles.

THE fare on the horse-cars from San Jose to Santa Clara is 10 cents.

EVERYONE prophesies a dry and pleasant winter.

GRIZZLY bears are plenty in Montana.

TELEGRAPHIC.

EASTERN.—The Central Lunatic Asylum, in Columbus, Ohio, was burned on the 18th, several patients perishing in the flames....Secretary Seward denies the truth of the report that the British Government has withdrawn her claims to the island of San Juan....The Erie controversy becomes daily more exciting. Numerous suits have been commenced in the courts, and it is thought that the case will come before the United States courts on the complaint of foreign stockholders....The stock market in New York has been excited and variable during the past week....A Fenian Congress met at Philadelphia on the 24th....The filibustering movement against Cuba seems to have been a humbug....Dr. Littlejohn has been elected Bishop of Long Island.....Drew is said to have lost over $1,000,000 in the Erie war.....The Missouri River is frozen over at Omaha.....Rev. Henry Ward Beecher preached last Sunday on "The Evils of Stock Gambling."....Gen. Butler is dangerously ill....40 acres of land in Westbrook, Me., slid into the river on the 23d.

SOUTHERN.—The Charleston *Mercury* has been discontinued....Gov. Holden of North Carolina, recommends an *ad valorem* tax on the property of the State to pay the interest on the debt....Ku-Klux outrages continue in Georgia.....The trial of Jeff. Davis will be held and regularly adourned, at Richmond soon....In Delaware on the 21st inst., several persons were tied to the whipping post and publicly whipped....H. R. Pollard, editor of the *Southern Opinion*, was shot dead in Richmond on the 24th.

POLITICAL.—Grant's official majority in Connecticut is 5,724, in New Hampshire, 7,153, in South Carolina, 17,679, in Illinois, 51,150....A resolution has been introduced in the National Christian Convention, congratulating General Grant upon his election....A. Oakey Hall is Democratic candidate for Mayor of New York....Weed and Raymond are trying to buy the *National Intelligencer*, which they will publish as a Republican organ.

WOMAN'S RIGHTS.—The session of the Woman's Rights Convention in Boston has just closed. Among those who addressed the Convention were Chas. Barnard, Fred. Douglass, Rev. J. B. Bolles, Rev. D. A. Wason, Lucy Stone, Dr. Blackwell, William Lloyd Garrison, and Senator Wilson. A resolution was passed, calling upon the two political parties to unite on the question of universal suffrage. It was decided to form a New England Woman's Suffrage Association, and officers were elected. Julia Ward Howe was chosen President. Among the Vice Presidents are Wm. Lloyd Garrison and J. G Whittier. Senator Wilson thought female suffrage sure to succeed, but would secure negro suffrage first.

FOREIGN.—Reports from Spain show that affairs in that country are still in a very agitated and precarious condition.....The insurgents seem to have the advantage in Cuba. Loud cries are made for aid from the United States....The eruption of Vesuvius is still increasing in violence....A horse railroad has been opened in Rio Janeiro by Americans.....Garibaldi is trying to have a finger in the Spanish pie. Lopez is said to have shot both his brothers....A great financial panic exists in New Brunswick....Lord Justice Ingles has been chosen Chancellor of the University of Edinburg over Hon. W. E. Gladstone....The Chinese Embassy has been presented to Queen Victoria.

Simple announcements of Marriages or Deaths inserted free of charge. Additional matter, such as Obituary Notices, or Poetry, inserted at the rate of ten cents per line.

MARRIED.

At Alamo, Contra Costa County, at the residence of the bride's father, on the 16th inst., by Rev. H. R. Avery, PETER MILLER, of San Francisco, to MISS ANNA G. DOANE.

At Clayton, Contra Costa County, on the 21st inst., at the residence of Wm. Kirkwood. ROBERT HASTIE to MRS. MARGARET BROWNLEE.

In Chico, Nov. 20th, by Rev. Thos. Fraser, MR. MARTIN V. B. FOY and MISS JANET A. CHALMERS, all of Chico.

ALLEN'S ORIGINAL AND GENUINE

Nerve and Bone Liniment.

The Nerve and Bone Liniment was originated by Geo. M. Allen, in the year 1834, and has lived entirely on its own merits without the aid of advertisements; but owing to the many counterfeit and worthless articles called Nerve and Bone Liniment, now upon the market, has induced the proprietors to advertise it. Many certificates of leading citizens who have used and constantly keep it in their houses, as a great family remedy, could be added to the advertisement, but knowing the many virtues of Allen's Nerve and Bone Liniment, and that one application will satisfy any one of its beneficial effects, deem it unnecessary to bring the certificates before the public. Allen's Nerve and Bone Liniment does not effect a cure in a minute, but acts upon the Nerve and the Bone of the patient by its penetrating properties, when used according to the directions on each bottle, and gives new strength to the parts affected, and thus acts as an agent in helping nature to restore the diseased parts to health. It is also invaluable in all diseases of horses.

Be sure to call for Allen's original and genuine Nerve and Bone Liniment, all others are worthless counterfeits, and should not be tolerated by the public.

Zion's Herald, Vol. XLVI.

THIS OLDEST OF CHURCH PAPERS STILL AIMS TO lead the column of the religious press. Its principles are Christ and His Gospel faithfully applied to the renewal of every human heart, and of the human race in all the life of God. It advocates Christian doctrine as preached in all ages by the evangelical church. It supports Prohibition as the chief duty of every State to its own citizens. It opposes Caste, and urges the liberty, equality and fraternity of all men. It seeks to spread Scripture Holiness in all its entire nature and work over all the land.

The editor in chief, Rev. Gilbert Haven, has few equals and no superior, as a brilliant writer and successful editor.

It has five editors, and not less than fifty contributors. Among these are the best newspaper writers: Abel Stevens, Theodore L. Cuyler, Theodore Tilton, Daniel D. Whedon, editor of *The Methodist Quarterly*, Nehemiah Adams, author of "Agnes," "Catherine," etc., Misses Warner, author of "Wide, Wide World," etc., Phebe Cary, E. O. Haven, President of Michigan University, "Warrington," J. D. Fulton, James Redpath, C. C. Hazewell, F. D. Huntington, Bishop Thompson, "Willy Wisp," B. K. Pierce, Lucy Larcom, Phebe Palmer, Judge Bond, etc.

THE CHURCH DOOR,

A new story, by Miss Anna Warner, author of "Queechy," "The Old Hamlet," etc., will commence with the next volume. Children's Home, Commercial, Agricultural, Foreign, Political and Religious, and all other departments of a first-class paper are carefully filled by the best pens. THE HERALD is printed in the best style, on a sheet the size and form of *Harper's Weekly*, cut and stitched.

Only two dollars and a half a year, in advance. Any one sending five new subscribers and twelve dollars and a half, shall receive a sixth copy gratis. Other premiums are offered. Specimen copies sent gratis. Send subscriptions to E. D. WINSLOW, Publishing Agent, 11 Cornhill, Boston.

CURRENT TOPICS.

The Inaugural Address of Dr. McCosh, on occasion of his assuming the presidency of Princeton College, has more importance than would be indicated by the occasion itself. His reputation as a man of learning as well as ability, and his known familiarity with educational affairs in Great Britain, has led many to anticipate that he would improve this opportunity to suggest such changes as might be adapted to the peculiarities of Americans, yet it was doubted by some whether he would really appreciate the difference between ourselves and his own countrymen so that his suggestions would be of much value. The publication of his Address has removed all such fears, and none can question that we have received a very great addition to the already brilliant list of eminent educators in this country. His views are practical and marked by common sense, while they are progressive and in favor of adapting education to the necessities of the time, and if he is able to carry out the programme he has announced, he will render the venerable College over which he is to preside one of most useful and prosperous in the land. Distinguished as a theologian and philoshopher, he brings to his new position a reputation which is regarded by a few as no advantage to a man placed at the head of an institution of learning, but the most of those who have sons to educate are wise enough not to object if men who are to be their models and instructors are good as well as great. While the pulpit will gain much from the residence among us of so able a preacher, it is believed that the College will not lose anything because its President is noted for his power as a Christian minister.

The Synod of New York and New Jersey does not seem to have regarded the signs of the times from the same stand-point with the Pope, if we may judge from the action called forth by his letter of invitation. He pronounces the great perturbations in human affairs that have prevailed in recent years, to be miserable and grevious; they declare them to be eminently hopeful and auspicious. He insists they have been occasioned by men's rejection of his authority as the viear of God, and their protest against it; they declare that all such claims and assertions on his part are to the last degree unfounded in fact, contrary to the truth, reason, and Scripture, and the whole genius of Christianity. He invited all persons and organizations to hasten to return to the only fold, meaning the Church of Rome; they resolve that facts abound which prove that this would be foolish as well as wicked, and that a Committee be appointed to correspond with other Protestant bodies respecting measures for the furtherance of free Biblical, Protestant Christianity. Moreover, this same Committee was instructed to consider the wisdom of sending a reply to the Pope's letter, to the effect that the Synod does not feel moved, for the above reasons which put them somewhat at variance, to accept his invitation. A very formidable Committee was appointed, of which Dr. William Adams is Chairman, and it is possible that the instructions of the Synod will be abundantly executed, nor is it likely that the demand of Protestantism that it be allowed to live outside "the only fold," will be very feebly or equivocally stated.

The Revolutionists in Cuba seem to be confident of success, and reject with spirit any propositions of compromise. They declare that they are not fighting for reform, but for independence, and the language in which they utter their purpose has no uncertain sound: "We assert most positively that, so far from being disposed to lay down our arms, we are about to strike a blow that will echo on the Continent. We will lay down our arms when Spain recognizes our independence, and not before, notwithstanding Spanish proclamations and rumors to the contrary." Private letters from Havana to prominent men in New York, express the opinion that the insurrection will prove a success, and that the insurgents will expel the Spaniards, abolish slavery, and establish a republic of their own. From the unsettled condition of things at home, it is doubtful whether Spain will be able to prevent this result, and we may soon hear of the Republic of Cuba.

As was to be expected, the sharp and severe review of the Baptist Bible Union translation of the Bible by Professor Jewett has awakened very considerable interest among those who approve it, and those who dislike it. We are not surprised that men who favor the purpose of the Bible Union to substitute this for our ordinary version should be disturbed by this review, but would it not have been better for some of them to answer it than for the Society to come down from its dignity to denounce it and proclaim that it is unworthy of regard? There are some who will still incline to the opinion that Prof. Jewett, and those who agree with him, have a show of argument on their side, notwithstanding this resolution. And there are many who will think that no gain is made for the Society by such an attempt to extinguish a really able criticism upon their work.

After the lapse of months, during which the small-pox has been prevailing in this city, the announcement is made by the Board of Health that the disease is increasing, more virulent, and more fatal than ever. The fact discloses culpable neglect of the means by which this fearful scourge may be stayed, on the part of the city authorities or the citizens, and proclaims the extreme folly of such neglect any longer. The history of small-pox elsewhere makes it certain that by vaccination and attention to cleanliness of the person, and of the city, it may be driven away. Let us hope that before it becomes any more destructive among us, these means of protection will be effectually employed.

We are quite surprised, and the surprise is attended with not a little pleasure, to notice, among other statistics, that more than 50,000 souls have emigrated to this continent during the past year from Norway, Sweden, and Denmark. A large part of these have settled in the States and Territories of the West, having purchased homes for themselves, and being resolved to be identified with the fortunes of their adopted country. Nine-tenths of these emigrants are Lutherans, and all of them are thoroughly Protestant, so that they can be relied upon in respect to the enterprises which must bear on the religious condition of the regions where they reside. They come, for the most part, without their teachers and pastors, but they are well taught and can read, so that with proper attention in distributing Bibles, and books, and papers among them, they may be readily continued in the faith and practice to which they were accustomed in their homes. It will not be long before the large number of our population of Scandinavian origin will become one of the most conservative and valuable elements of national strength.

It is difficult to see what gain can come from the expression in our papers of the abundant fears of men respecting a dry winter. All admit that about nothing are predictions more entirely unreliable than about the weather that is to be—especially in California. Each successive season proves those who regard themselves as wise in this direction to be wholly at fault, and no data seem as yet to have been established from which to form a judgment. It will be indicative of more folly than is usually manifested by farmers if they do not provide against any contingency that may affect their crops, so far as this is possible, and they know as much about the prospect as do those who find it very easy to express an opinion. The publication, therefore, of fears and theories on this subject can only check the purpose of those who have recently come here to buy land and make homes for themselves, and create a kind of distrust and hesitation among those who are inclined to the exercise of such feelings, when they should be stimulated to all the more effort and study of the means of success in this climate, because of its peculiarities.

Ritualism, if any one can tell what is really comprehended in this term, is awakening more interest than ever in the religious world. The extremes advocated by a portion of those who have been regarded as liturgical in their forms of service, whether these extremes have been in the introduction of more, or the removal of many of these forms, have convulsed the Church, both in Europe and in the United States. The questions supposed to be

affected by the excitement relate to the purity of worship, the honor of religion, the means of increase, and the personal profit of Christians. It is assumed on the one side that if ritualistic services are good, the more we have of them in public worship the better. It is assumed, on the other side, that if they are unhappy in their influence when excessive, the absence of them from worship will be a great blessing. The Presbyterian Church is not likely to be seriously affected by the decision of these questions, yet all who love God, and desire the prevalence of His Gospel, must mourn that what is really of so little consequence should be magnified into such a rock of offense. The chief evil is in the spirit which will not tolerate in others anything which we do not accept. If my brother can worship God with more genuine devotion and comfort in the use of a certain form of words, and when in a certain posture, and wearing a certain garment, than when employing the methods of approach to the mercy seat which are most valued by me, why should I object to his choice, beyond the Christian and fraternal attempt to convince him that there is a more excellent way? And why should he give me over to blindness of mind, and hardness of heart if I decline to adopt his modes of worship? Neither can claim any absolute warrant from God for our ways of approach to Him; which has the right to shut away the other from His grace? We do not so much object to ritualism if one intelligently and sincerely prefers it. But we do object to the assumption of the ritualist that his preference gives him the right to banish us from the smile of God. The result of the discussion and agitation now prevailing will be larger liberty and more general toleration.

Religious Intelligence.

PACIFIC COAST.

Sailing of Missionaries.—Rev. I. L. Nevius and wife, missionaries of the Presbyterian Board in China for ten years, have just passed through this city on their way to Hongkong. Mr. Nevius has been engaged for some years in the preparation of various religious works in the Chinese language, and his wife is the author of the book called "Our Life in China." Because of her ill health, they have been in this country for three years, but as she has now recovered, they are about to resume their missionary life for which they are fully prepared. Two young ladies—Miss Patrick and Miss Payson—accompany Mr. and Mrs. Nevius, to be permanently connected with the mission in Hongkong.

Prayer Meeting.—After the arrival at the Sailors' Home of the survivors of the late wreck of the Hellespont, a prayer meeting was held in the chapel, to offer up thanks to the Almighty for having spared their lives. Fervent prayers were offered by others, seamen responding with heart-felt earnestness, and as their voices joined in singing the hymn, "Praise God from whom all blessings flow," the deep fervor of their utterance, told plainly their sense of their narrow escape, and their eyes filled with tears at the contemplation of the sad fate of their officers and ship-mates so suddenly torn away from the companionship of the living and whelmed in the cold abysses of the pitiless sea.—*S. F. Chronicle.*

Thanksgiving.—The day was generally observed throughout the State, by the suspension of business and the holding of religious services in the churches.

Sacramento—Resignation of Rev. J. S. McDonald.—Rev. James S. McDonald has been constrained, by the failure of his health, to resign the pastoral charge of the Presbyterian church in Sacramento. This, to him and the Church, is a severe trial. Pastor and people are bound together in tender affection, mutual confidence, and by the delightful circumstance that both through many difficulties, by strenuous exertions and much self-denial, they have reached a position which gives to the Presbyterian Church in this community great strength and influence, with the prospect of large and increasing usefulness.

In four and a half years, Bro. McDonald has gathered a respectable congregation, formed a sound Church of now about eighty members—the whole number received under his ministry is 105—and, with some aid from friends in San Francisco, has secured a church property, free from debt, and worth $8,000. The church building, not quite finished, is comfortable, will accommodate 300 persons, and has one of the finest locations for a church in this city. Bro. McDonald, his people, and all who have aided them, have reason to be deeply thankful that so much has been accomplished.

An interesting Church, in the Capital of the State, able to give a good support to a faithful minister, is now vacant. May the Lord direct and speedily send the right man to this important field. T. F.

Resignation.—We learn with regret that Rev. Dr. Thomas feels constrained to leave the Pacific Coast, and that he announced his intention to resign his position as pastor of the First Baptist Church in this city last Sabbath morning. We have not learned the reasons, but, whatever they are, there are many who will be sorry that so able a preacher, and so agreeable a Christian gentleman is to remove from the midst of us.

Solano County.—During a recent visit to his old parish in the northeastern portion of Solano County, Rev. A. Fairbairn preached to large audiences, and found his old parishioners in a fine condition, materially and spiritually; anxious to have a minister come and dispense the Word to them. He also baptized six children during his visit.

Anniversary.—The Sunday School of the Third Congregational church celebrated their anniversary on Sunday last, with interesting exercises by the children, and addresses by Rev. Mr. Beckwith and Rev. Mr. Pond. There are 500 scholars and 30 teachers connected with the school.

Festival.—The Sabbath School connected with the Presbyterian church of San Jose, gave a festival on the evening of the 2d inst.

Also the Baptist Sabbath School held a concert on Sunday, Nov. 29th.

Central Presbyterian Church.—At the last communion of this Church, 5 persons were received as members, 4 by letter and one by profession.

EASTERN.

Free Will Baptist.—The General Conference of the Freewill Baptist denomination commenced at Buffalo, N. Y., October 7th. 69 ministers of the denomination have died since the Triennial Conference in 1865. This denomination is Arminian Methodist in theology, and Open Communion in their church practice, but regard immersion as the only valid form of baptism. In church polity they are congregational, with a tendency toward a more centralized authority and national organization. On questions of moral reform they have always taken an advanced position, being strongly anti-slavery. They control 2 colleges—Bates College, Lewiston, Me., and Hillsdale, in Michigan. They have a theological seminary in New Hampton, N. H., which last year graduated 6 young men, and a theological department in Hillsdale College. The net increase during the year has been 9,420 members; but this includes the addition of some General or "Free" Baptist Associations. There is a movement to combine all the members of the Free Baptist family in America, in a single organization. Hitherto they have had a single official newspaper—the *Morning Star*, of Dover, N. H. The *Christian Freeman* has been started at Chicago, as an independent paper, and asked for official recognition and $20,000 aid. The New York and Pennsylvania members also petitioned for aid to establish a local organ. After much debate and compromise, it was agreed to give the *Christian Freeman* $12,000 from the funds of the Printing Establishment, and to give $10,000 for the new paper in New York. The proposition to change the name of the denomination to that of Free Baptist, or United Baptist, was voted down by a small majority.—*American Presbyterian.*

Episcopal.—The Triennial Convention has adjourned, after a long series of proceedings, generally favorable to High Churchmen. The Evangelicals were powerless against the overwhelming majority against them. After skirmishing about the outposts about the change of the name Convention to Council or Synod, and on the change of Canons XI and XII so as to allow of an interchange of pulpits with ministers of other denominations, all of which questions were decided against the Evangelical party, the general engagement occurred in the discussion of the report of the Committee on Canons. The report was not a unit. There was a majority report, and also a minority report. The majority report held that it would be unwise and inexpedient to make any change at present in the Canon. An adherence to such vestments, ornaments, ceremonies, and practices as have heretofore belonged to their Church, was enforced, as contributing to order, decency, peace, and harmony. The minority report claimed the maintenance of wonted uniformity and simplicity of worship as exceedingly desirable. It provides for bands, gowns, surplices, cassocks, and stoles, but inhibits strange ornaments, incense burning, reverence to the table and the elements on it, and the lifting up of the elements. These it characterizes as Popish innovations, and seeks their extirpation. After a warm and protracted discussion, the majority report was adopted, and so the Church will go on in its ritualistic course.—*United Presbyterian.*

Acceptance.—Rev. J. L. Withrow, of Abingdon, Pennsylvania, has accepted a call to become the pastor of the Arch Street Presbyterian church in Philadelphia, formerly under the pastoral care of the Rev. N. W. Conklin, now of New York. It is understood that arrangements will be made for Mr. Withrow's installation early in December. It is also expected that he will, at the request of the Arch Street Church, deliver a sermon to it on the forenoon of Thanksgiving day, the 26th inst. This church has united in the selection of a new pastor in a spirit of delightful harmony and prayerfulness, and now has before it a fine prospect of prosperity, growth, and usefulness.—*Presbyterian.*

Places for the Poor.—The New York *Observer* says:—"Here is a good plan and example: A large and flourishing Presbyterian Church authorizes its treasurer to *let* pews and sittings in its spacious house of worship to all persons applying, and at such annual rent as the applicants are able to pay, themselves being the judges. And the price agreed on is known to no one but the treasurer and the party. This encourages the poor, and those not very poor, to come and take seats."

A Large Synod.—Less than one-half of the ministers belonging to the Synod of New York and New Jersey were present, and little over one-half of the churches were represented, at the late session yet 231 members were in attendance.

REFORMED PRESBYTERIAN.—The Theological Seminary of the Reformed Presbyterian Church was opened at the usual time—November 4th,—in Rev. Dr. Steele's church, Philadelphia. Dr. McLeod, Professor of Doctrinal Theology, delivered a popular lecture on the question, "What is it to be a Reformed Presbyterian?"

Three new students appeared, and others are expected.—*United Presbyterian.*

UNION OF PAPERS.—The *United Presbyterian*, of Pittsburg, and the *Presbyterian Witness*, of Cincinnati, have been united. The *United Presbyterian* is to be issued in Pittsburg, Pennsylvania, in an enlarged and improved form. The paper will still maintain and defend the principles of the United Presbyterian Church, and, judging from the past, will do so with undoubted earnestness and ability.

AMERICAN MISSIONARY ASSOCIATION.—The American Missionary Association has 522 missionaries engaged with the freedmen at the South, among whom it spent over $291,000 of its income of $350,000, during the year. It has property at the North, valued at $98,000, and at the South worth $188,885. It is in debt $88,726 59.

A REQUEST.—Graduates of Princeton College not in correspondence with the Faculty, are requested to send their addresses to J. H. Schenck, Mansion House, Princeton, New Jersey, who is compiling the post office addresses, and they will receive communications of special interest to every graduate.

NINETEEN persons were added to the First Reformed Presbyterian Church, New York City (Rev. Dr. McLeod's), on Sabbath, October 25th. 13 of these were admitted on profession of their faith—making 31 (18 by profession) within the last six months.

EPISCOPAL.—The new church of the Good Shepherd, built by Mrs. Colt, at Hartford, Connecticut will be finished and ready for consecration at Christmas. It has cost $150,000, and is considered one of the finest churches in the country.

UNITARIAN.—The Boston *Daily Advertiser* says, in alluding to the Rev. Mr. Alger's preaching services in the Music Hall, that "it is evident that this amusement meets a great popular want."

THERE have been admitted to the First Reformed Presbyterian church in Philadelphia, during Dr. Wylie's 25 years' pastorate, 1,700 persons, more than 77 anually.

REV. PHINEAS STOW, the well known Chaplain of the Baptist Seamen's Bethel in Boston, Massachusetts, has been placed at the Insane Asylum in Somerville.

THE Theological Seminary at Columbia, South Carolina, has opened its winter term with 25 students.

REV. DR. SECOR has accepted the call of the First Presbyterian Church at Brooklyn, N. Y.

A TENTH Congregational Church was recently organized in Chicago.

[List of Presbyterian Clergymen,

ON THE PACIFIC COAST, ALPHABETICALLY ARRANGED.

Rev. Jas. M. Alexander, N. S., San Leandro, Cal.

Oakland Academy.

A CLASSICAL, ENGLISH, & MILITARY BOARDING SCHOOL

REV. DAVID McCLURE, PRINCIPAL.

The Eighth Term of this Institution will commence on Wednesday, July 8th, 1868, in the new Academy building, recently erected on Telegraph Road, one mile from the Railroad Depot.

The location and plan of this new building have been made with the design of securing for the students a home of beauty and refinement.

Careful provision is made for thorough and extensive courses of study in English, Mathematics, Natural Science, and the Ancient and Modern Languages. A special course is also provided for those who are preparing for a commercial life.

In addition to these courses there is a daily military inspection and drill, together with vocal and light gymnastic exercises, under the instruction of a teacher. Every student is required to attend the military and gymnastic exercises, as a means of physical training.

For the mental, moral, and physical culture of each pupil committed to his care, the Principal holds himself responsible.

Further particulars may be obtained by addressing the Principal at Oakland.

Religious Books.

A great variety of works in all departments of Religious Literature, such as Devotional Books, Bible Dictionaries, Sermons, Religious History, and Biography, Annotations, Commentaries, etc., published by the

PRESBYTERIAN BOARD OF PUBLICATION.

Also, a large assortment of Sunday School Libraries and Hymn Books, including THE HYMNAL, Presbyterian Psalmodist, Presbyterian Juvenile Psalmodist and Children's Praise, to which the Publishers call the attention of

SUNDAY SCHOOL TEACHERS AND OFFICERS,

And of all who desire books in any of these departments. All such are requested to call and examine the publications of the Presbyterian Board at the Depository for the Pacific Coast, which has been established at the store of

Correspondence.

Letter from White Pine.

Treasure City, Nev., Nov. 1868.

The fame of this far-off and out-of-the-way mountain region of Nevada, called the White Pine District has no doubt reached the editorial sanctum. Last May these lone mountains were without inhabitants save the wandering Shoshone and Piute Indian. Now this place and vicinity swarm with 2,000 to 3,000 eager, bustling silver hunters. Chloride silver, of a very rich quality, was discovered in the side of what is now called Treasure Mountain, a mile and a half above the level of the sea.

In compliance to a request of our Church Extension Committee a visit of a few weeks has been made to this new city called from the supposed wealth of the place, Treasure City; in order to open the way for the introduction of regular gospel ordinances, and as soon as possible, the organization of a Presbyterian Church. No minister of Jesus, so far as known, has ever before been within a hundred miles of this region with an idea or intent to preach the Gospel.

DIFFICULTIES.

Never, perhaps, elsewhere on earth have these graphic declarations of Scripture had so literal and perfect a fulfillment as among this strange, mixed, eager mass of money-seekers: "He that is greedy of gain, troubleth his own house. An inheritance may be gotten hastily at the beginning, but the end thereof shall not be blessed. He that maketh haste to be rich hath an evil eye. They fall into temptation and a snare, and into many foolish and hurtful lusts, which drown in destruction and perdition." Not a person here who did not come, as well as the crowds which are still coming, with the cherished hope and intense desire speedily to acquire wealth, and then go elsewhere in order to spend it. Even the stray professor, who chances to find his way thither, comes not for good, neither to get nor do good, but for money. The intensity manifested by this mass of humanity after a single worldly object is deeply interesting to the Christian; a lesson of instruction to those who profess to follow after better things.

What way can we get the ear and attention of such a seething multitude in behalf of the Gospel? No printing press to give notice; no Church, hall, schoolhouse, or room, into which to invite an audience for religious service; winter too near at hand for comfort in the open air.

PREACHING.

My arrival was late on Saturday night. On Sabbath, at 2 P.M., without any previous notice, having secured two men and three women to sing, I got upon an empty goods box in the street, near the centre and most bustling part of the new city, and commenced service. Sabbath is the great weekly trading day here, and the city was thronged. The trading, drinking, swearing, bustling throng evidently at first supposed me to be some political haranguer, it being immediately before the Presidential as well as the Nevada State election, and various aspirants for office had lately been enlightening the people. There was soon a large audience gathered about me, and certainly a very attentive one during my preaching and prayer. The singing was as much a novelty—the first ever heard in the public praise of God in all this grand mountain region. Not a few in the crowd joined in singing the familiar tunes and hymns.

Preaching was announced again at 7 P.M. Our afternoon pulpit chanced to be in front of the largest store in the place—a combined dry goods, grocery, and whiskey saloon. Before opening our evening service, the owner of the store came to me and remarked:

"I want to say a word," at the same time mounting a box in his store door, the store being crowded with perhaps a hundred men. "Men: my store ought not to be open on the Sabbath; but now it is going to be devoted for an hour to public worship, during which time there will be no trading. I want you all to be quiet, and if you cannot be quiet, I want you to leave."

The Lord had touched his heart. My rostrum was his box in the store door. What a position! Under what strange conditions! Yet what a privilege then and there to preach Jesus. The fruit from the seed thus sown will be counted in *that day*.

A. M. Stewart.

The Heathen Among us.—III. Why so Little has been Done.

Aside from the difficulties necessarily encountered, the partial failure, or rather, imperfect success, of the mission work among the Chinese, for the sixteen years it has been established in California, must be ascribed to the manner in which it has been conducted—as a sort of private affair, interesting only to a religious corporation in the Eastern States. With proper efforts very much might, and should have been done.

We have not viewed the matter in the proper light. We have been thoughtless and indifferent; we have not gone to work in the right way: I mean with sufficient zeal and energy. I feel disposed to say that, until the last few months, we, as a Christian people, have not gone to work at all. We have rested satisfied with the knowledge that there is a missionary among us, whose special duty it is to endeavor to convert the heathen.

One missionary, or even two or three, can no more convert the 65,000 Chinese on our coast, than one minister can suffice for the entire population of our State. Nor can one missionary do all the necessary work of organizing and maintaining a vigorous and effective crusade against the heathenism in our midst any more than one superintendent, however zealous or able, can establish, organize, take full charge of, and teach all the Sunday Schools in our State. I know that this seems to be a sweeping statement, nevertheless, if the reader will think, he will find that it is true. One cause of failure then is utter inadequacy of labor.

Every Christian must be, to the full extent of his ability, a missionary to the heathen, by laboring among them, just as he works with the childen in the Sabbath School. Every church must organize a mission school within itself, for the Chinese. Brave, resolute, and earnest Christian men and women must make it their duty to see that Chinese are brought into their church, a school established for them, and that they are taught our religion. It is because this has not been done, that the mission work, confined to one man, and one church, has been comparatively unsuccessful. So it will continue to be, as long as the present indifference exists.

Eighty or ninety persons are receiving religious instruction in the Mission House. With our Chinese population of over 10,000 in San Francisco, we might have 1,000 in mission schools. There ought to be a mission school wherever there is a Chinese settlement in our State.

One might naturally suppose, from our indifference in the matter, that we considered the services and profits derived from the labor of the heathen, and the taxes paid by them, as our property, and their souls as the property of some eastern missionary society. They are *our* heathen, because they live among us, and it is our duty to care for their souls, just as we do for the bodies of sick and indigent white men. We should be ashamed to have any benevolent society in New York or New England establish and maintain our hospitals and poor houses. We ought to be equally ashamed to have them send and support missionaries here, to do our work and discharge our moral obligations. We can maintain our ministers and pay many of them liberal salaries. Why can we not support the few necessary paid missionaries to our heathen Chinese?

We may continue in this way for ages to come, allowing one solitary mission to the Chinese to struggle along as best it can, without our assistance, and the miserable fruits of the past sixteen years will be the result. We may not forbid the entrance of any adventurous heathen within the doors of the one mission house on the Sabbath, during the hours of service—even permitting them to try to sing a hymn or two, and listen to an explanation of some doctrinal point, about which they know nothing and care less, or some exhortation which does not take hold of their hearts, and they will go away as idolatrous as when they entered. We may distribute tracts by the thousand; a few possibly will be read, but most will be thrown away unopened. We may visit and converse with respectable, pleasant Chinese, and spend as much time with them as we choose, and yet not convert, or even work upon, a single soul.

We must recognize the work belonging to us, the people of California, and feel it the duty of every one of us to engage in it. It is your work, reader, and it is mine, just as much as it is the work of the regular missionary to the Chinese. When we know and feel these truths, and do our duty, and not before, we shall accomplish great results, and win many souls to Christ. C.

What One Man can Do.

In the winter of 1828–9 the writer of this article first set foot in Easthampton, Mass., on his way to enter Amherst College. It was then a mere hamlet, one of the very smallest and poorest of all the towns in Hampshire County. A dingy and dismal old "meeting-house" stood in the center of the unenclosed common, and two or three shops and stores, and about as many dwelling-houses clustered near it constituted the village. The rest of the township was sparsely peopled with plain and sensible, but rather unenterprising and not over-prosperous farmers. At a distance from the meeting-house lived the pastor, Rev. Payson Williston, on a farm which was given him as a "settlement," upon a salary which was originally $200, and never amounted to more than twice that sum. In another part of the same house, or an addition to it, resided Mr. Samuel Williston, who was then just beginning to manufacture, by hand, covered elastic buttons.

Yesterday I drove over to Easthampton, to attend the 56th anniversary of Williston Seminary. A little stream that used to run through the back part of that parsonage farm, and seemed hardly large enough to turn a grist-mill, is now lined by three successive factory villages, through which you drive into town. The old meeting-house on the common has given place to three elegant churches, which, with a fine high school, a large hotel, a magnificent town-hall now building, and handsome blocks of stores, enclose three sides of the common; while on the other side for imposing edifices, architecturally pleasing and model buildings for the purposes to which they are devoted, constitute the body or the habitation of Williston Seminary.

The Seminary itself is organized with a President and five professors, as they would be called anywhere out of New England, and the institution would be styled a university. But they modestly call themselves principals and instructors, and the institution a seminary, though it combines a first-rate scientific school or English college with a preparatory school that has no superior even in New England; and its five permanent instructors, or heads of departments, with the assistance of one tutor, and under the direction of a principal, who, being alike accomplished in literature and science, holds the balance evenly between them, give instruction in the classics and mathematics, the physical sciences and the modern languages, such as can be obtained in few of our colleges and universities.

The gymnasium is a characteristic feature of this institution. The students are all required to exercise daily under the direction of a professor of physical culture; just as they are required to attend prayers and recitations. So that here the culture and development of body, mind, and heart advance together with equal step, and the crowd of spectators at the anniversary are equally delighted with the exhibition of the mental and moral culture in the Church and the physical training in the gymnasium. At once a school of patriotism and a school of piety, it sent 321 men to the late war, 41 of whom died in the service, while still larger numbers have begun there the new Christian life, and devoted themselves to the service of the "better country" and the Divine Master.

The factories, the seminary, the beautiful villages that have grown up around them, the railroad that connects them with the great thoroughfares north, south, east, and west, and the marvelously increased wealth and prosperity of the whole town, are all the creation of the genius, wisdom, and enterprise of one man; and that man is the once poor son of that poor New England pastor.

And the beauty of it all is not so much the money he has made, as the use to which he has put it. The buttons, the rubber fabrics, the cotton yarn and thread, etc., etc., as fast as they are manufactured and turned into gold, are put into the seminary, where they are transmuted into the durable riches of the mind and heart, the lasting treasures of a good education. Nearly a quarter of a million has this prince of educators already given to the seminary that bears his name. And Williston Seminary is only one of many kindred institutions, for both sexes and of various grades, in every section of the country, to which he has contributed, in all, nearly as much more. Yet education—the higher mental, moral, and *Christian* education—though perhaps the chief, is only one among the objects of charity and benevolence to which he is constantly distributing his large income. While, then, I can most cordially and conscientiously recommend Williston Seminary to young men as a classical and English school which has no superior, let me invite men of all ages, and especially our rich men, to go to Easthampton, and learn what one man can do, not only for himself and his native town, but for education and religion; learn to be their own executors; learn the luxury of doing good in their lifetime, while they can direct the ways and means and enjoy the result; learn to lay foundations broad and deep for usefulness in coming generations till the end of time; learn, in short, that great lesson, especially for our times, *the true use of money.—Prof. Tyler.*

A CLERGYMAN and one of the elderly parishioners were walking home from meeting one frosty day, when the old gentleman slipped and fell upon his back. The minister, on being assured that he was not hurt, said to him: "My friend, sinners stand on slippery places." The old gentleman looked up, as if to assure himself of the fact, and replied: "Yes, I see they do, but I can't."

I EXPECT to pass through this world but once. If, therefore, there be any kindness I can show, or any good thing that I can do to any fellow human being, let me now do it. Let me not defer nor neglect it, for I will not pass this way again.

THE JOY OF PIETY.

When a man spends time with his family, only because he feels this to be his duty, his devotion to them is not to be trusted; other attractions will lead him away, for often pleasure is stronger than obligation. He who prefers his wife and children to all other companions, and gives his time and thoughts to his home, is he whose heart is held there by the cords of love. A Christian may begin the service of God, and perform many acts of obedience, moved by a sense of duty, but if he ever becomes a devoted man, breathing the spirit of religion everywhere, and giving proof that Christ abides in him, he must delight in this life. Let one be held back from sin, only by the feeling that he must not indulge in it, and he can know little about a life of piety. Let him take the wine cup in his hand, and wish that he dared to drink; let him stand at the door of a gambling room or a theatre, and long to go in, yet be driven away by the lash of conscience; let him attend meetings, or pray, or read the Bible, with the wish that he need not do these things; in short, let him encounter any temptation, or perform any duty, with the perpetual complaint of crosses, crosses, and he cannot be a worthy Christian, however often he may consecrate himself to God under the pressure of obligation. The soul that knows much of true piety is the soul that enjoys it. He need not be conscious that he is perfect; indeed, at every step he may know that he is not perfect, but he will take the highest pleasure in the assurance that he may hold intercourse with Jesus, notwithstanding. In his times of trial, it is bliss to feel underneath him the everlasting arms. In temptation, he rejoices that the word of his Savior will bid the tempter flee. When facing duty, he will be glad that he is guided by God. And it is wonderful how God adapts Himself to all the various classes of those who thus take pleasure in Him. The man of high station and wealth, who has this spirit, comes into the temple of the Lord to worship, and says, "this is my sanctuary," and the most obscure one of all comes with him, and says, "this is my sanctuary."

Sorrow falls upon him who dwells in the palace, and upon the poor widow in her cottage, and from beneath its gloom both alike exclaim: "I will fear no evil, for thou art with me." And when joy is sent into their households, and they are led to sing for gladness of heart, both have the same song to the same Father. To every pilgrim He is a Guide, a Friend, a Savior; to every place of succor and relief along their way He bids all alike welcome; to every spring of joy and hope all have equal access. And at the end, angels will bear all to the same home. Such Christians prefer the blessings thus enjoyed to all the good that can be offered from the resources of formalism, or the service of the world, and their feelings find expression in praise from day to day.

There is not enough of this radiant piety. Men have too much occasion to feel that religion imposes burdens, when they should be taught, by the experience and life of its professors, that it removes the burdens we all must bear as men. Devotion can be beautiful with the delight with which it shall fill the heart. The ways of duty along which a Christian walks with God may be vocal with his songs, and, as was true when Paul and Silas sang in the prison at Philippi, the men unaccustomed to such utterances of piety shall hear them, and be charmed by the spirit they are obliged to admire. No man who loves God, and believes God loves him, should go through the world with a heavy heart, or a head bowed down. He may be joyful always, and the grace he can cause to shine in his character and life shall bear him up in the midst of any scenes, and be the exceeding great reward for his fidelity and devotion.

THE PRESIDENT OF THE UNIVERSITY.

From time to time we have expressed our convictions, and hopes, and fears respecting the State University. There are none who have a more sincere regard for its welfare, or a more earnest desire for its prosperity, and hence we are glad to publish the following communication from a member of the Board of Regents, who thinks we have been mistaken in some of our fears. We trust it will be found that he is right, and though it is announced that General McClellan declines the appointment, the public may be glad to read this assurance from one who is confident that the Board of Regents have no design to drag the University into politics. They have ample opportunity to prove this:

"You express in your paper a regret that General McClellan has been offered the Presideney of the State University, and you say it indicates that the institution is to be a party institution. You say further that it is not the choice, but the spirit which the choice indicates, to which you object. As The Occident is not a partisan journal, it will perhaps give the other side a hearing on this subject. The choice of General McClellan was not dictated by partisan motives, nor made upon partisan grounds. Whether the choice was the best that could be made or not, the future will show, if he accepts; but however this may be, it is certain that he was elected solely because he was judged to be the best qualified man for the position. Hence his choice does not indicate that the University is to be partisan, nor that any spirit governs the Board of Regents but a pure desire to promote the success of the institution. It is not the *choice*, therefore, but the *objection*, which is partisan. There were four candidates: Frederick Law Olmstead, who received but one vote; Professor Henry, who is seventy-two years of age, and received but one vote; Mr. Stebbins, who received five votes; and General McClellan, who received twelve votes. It is well known that a very large portion, if not a majority, of the people object to the selection of a clergyman. The Catholics object to a Protestant clergyman, and the Protestants object to a Catholic priest as President. The evangelical Christians object to a rationalistic clergyman, and so on. With all respect for the clergy, it seems unfair to some portion of those who are taxed to support the University, that any teacher of theology should be placed at its head. What is unfair for one sect or church is unfair for another, and it will not be possible to secure the cordial support of all denominations if a clergyman of one church is chosen as its President.

"For President of the University is needed a man of pure character, not a clergyman or teacher of theology—a man of eminence in some branch of learning, of tact, and ability as an instructor, of decided organizing and administrative ability; one who will neither teach nor preach politics, who is not advanced in years and who is willing to devote himself to building up the institution as the business of his life. The majority of the Regents think General McClellan such a man if he accepts, and that he is above all others fitted by natural bent, by ability, study and observation, by eminent attainments in certain departments of science, by a catholic, liberal and tolerant spirit, and by magnetic power over young men, to be the President of the University. Few men in this country have enjoyed his advantages. He has distinguished himself as an instructor and organiser. For the past four years he has been pursuing his studies in Europe. He never was a politician and has more than once announced his resolution to refrain from any active participation in politics.

"The gentlemen who voted for him are for the most part business men who are not politicians. Although they have engrossing business they are devoting much time and labor to the interests of the University without the possibility of any selfish motive. They are men of some sense and intelligence. Is it not just possible that the partisan prejudice may be on the side of those who condemn their action?

"The language of your article implies that you do not object to the qualifications of the person chosen but to the motives which induced it, and even the *Bulletin* says in so many words that General McClellan is fitted to conduct with success an institution of high learning. Is it charitable or fair to assail the motives of gentlemen who can have no personal object to serve and who are actuated solely by the ambition of aiding to establish a University of a high order in California? Are men competent to conduct such an institution with success, so plenty that we can afford to pass by one eminently qualified, because of an irrational and obsolete political prejudice? If the gentleman chosen declines, there is an end of the matter, but if he accepts, the majority of the Board of Regents believe that he will conciliate all prejudices and that his administration will be a success. The correctness of this opinion can be best judged by the result."

Bible Union and 1 Pet. III: 21.

Let us now extend this examination to another passage of Scripture in which immersion occurs in the new version, and see whether, with the meaning given to it by the Bible Union, it will bear the burden of truth which the Holy Spirit lays upon it: "Which in an antitype, immersion, now saves us also" (See 1st Pet. iii: 21.) It will not be necessary to restate the positions of Dr. Conant and others as to the secular sense of immersion, but my inquiry will now be, having, by the ruling of Dr. Conant and the scholars of the Bible Union, this sense established for the term, what is the doctrine or teaching of the text under consideration? The conclusion is plain beyond controversy. "Immersion now saves us also." We have found heretofore how *baptisma* (immersion) washes away sin, in the case of Paul; how it signifies death unto sin and resurrection to a new spiritual life, in the teachings of that same Apostle; but here another Apostle exalts it to the climax of its excellence: "*Baptisma* (immersion) now saves us."

The Apostle Peter is careful, however, to direct our thoughts to two particulars: First. Negatively, it is not the common ordinary cleansing of the ordinance; this the Apostle will not admit for a moment. "Not," says he, "the putting away of the filth of the flesh." My readers will pardon me if I stop to inquire if *baptizo* had not been employed, as I have asserted, to signify the ritual cleansing and purification of the flesh, why did the Apostle caution his readers not to receive it in this limited and subordinate sense? But, to proceed: this baptism does not consist in or show forth these common external purifications. But, affirmatively, it does consist in and

manifest the purifying work of the Holy Spirit on the heart. Such a baptism (immersion), the inspired Apostle asserts, saves us.

And now let us regard immersion with the idea the Bible Union attaches to it, with the secular and physical sense which they attribute to it—the immerse of the dictionaries; nothing more and nothing less—and we have this result: the Apostle Peter teaching through the inspired Word, that immersion in this limited and secular sense, saves us. And now can the immersion of the Bible Union bear such a burden of truth as is laid upon it by the Apostle. Does not the Christian sense of my readers revolt from such a doctrine as salvation through the performance of a physical act, and demand for it a loftier and more spiritual sense. But this is all there is in immersion by the very terms in which the scholars of the Union give us the signification of *baptizo*, and this is the idea which they intend to carry into their version for the instruction of the English reader. "Total submergence," this is the term, "best expressed by immerse, a common secular word, used in the daily affairs of life to express the most familiar acts and conditions." Immerse is certainly fitted to express the idea of total submergence, which I am free to admit is the ordinary classical idea of *baptizo*; but, on the other hand, just as incompetent to express the scriptural idea of the same word as is wind, the English synonym of the Greek *pneuma*, to express the scriptural idea embodied in it, when applied to the third person of the sacred Trinity. The Apostle Peter, warning us as he passes not to suppose that *baptisma* has its ordinary sense of external purification, exalts the word to signify that transcendant spiritual grace which saves the soul, while the scholars of the Bible Union, disallowing indeed, with the Apostle Peter, any sense of fleshly purification, instead of elevating the term with him to a high spiritual significance, do the opposite, and tone it down and degrade it to a mere physical operation, and then give us this reading as the declaration and teaching of the Holy Ghost in this important passage: "Which in an antitype, immersion, now saves us also."

Surely, the impossibility of carrying out their idea of the physical nature of the act signified by *baptizo*, in this passage, should convince the Christian and evangelical men who give character to the scholarship of the Bible Union that they are in error in respect to their darling position.

It has been charged upon that body of professed Christians, who are called Disciples, that they believe in salvation by immersion, a charge which they indignantly deny as a slander, but no one need now so do, with the new version before him. He might have Gospel for the doctrine. The preacher might say, "Brethren, why hesitate; go down into the water and wash away your sins. Secure for yourselves salvation in the appointed ordinance, for immersion saves us; so read the Scriptures." 1st Peter iii: 21.

And now one comes in and tells us that though *baptizo* means "immerse, nothing more, nothing less," Christian baptism has a doctrinal signification and includes all these various graces which we have enumerated. I freely yield to the friends of the Bible Union all they can make of that position.

If when Jesus Christ said, "He that believeth, and is baptized shall be saved," when Paul writes, "One Lord, one faith, one baptism," and Peter, "even baptism doth now save us," if this *baptisma* be not Christian baptism, it will be difficult to tell where to find it, or if there be something in Christian baptism which Jesus Christ did not put into it when he appointed the ordinance, or the Holy Ghost when he directed Paul to be baptized and wash away his sins, or when through the inspiration of the same divine spirit, Peter wrote of the baptism which saved us, they are welcome to all they thus assume for it, but in so doing they must remember that if they put into Christian baptism more than there is in it by the terms by which it is set forth and described in the Holy Scriptures, they have, in so doing, deserted the principles which have always guided Protestants in their interpretation of Christian ordinances. Since as yet, however, they have not told us how they find authority to ascribe to a Christian ordinance powers which Jesus Christ did not give to it when he appointed the same, I will not charge them with assuming for the Church the prerogative of the Romanists, but nevertheless if the Bible does not put on the ordinance these powers, nor the Church, it will be difficult to say when the ordinance obtained the graces ascribed to it. F.B.

CURRENT LITERATURE.

If, Yes, and Perhaps.

There is no evidence of any special design in giving a book this title, unless it be, by its oddity, to attract attention to it. Yet, Edward E. Hale had no necessity to resort to such means to gain the favor of the public, when his name appears upon the title-page, and the book is a collection of such articles as, "The Children of the Public," The Old and New, Face to Face," and "The Man Without a Country," which were read with eagerness as they first appeared in several of the leading magazines of the land. The volume is published by Ticknor & Fields, of Boston, and none who have before seen any of its contents will be sorry that they are gathered in a form so attractive.

We are specially pleased with the article, "The Old and New, Face to Face," which is really a description of Paul's trial before Nero, as illustrating the ancient and the innovating forms of civilization thus brought into conflict, from which we take these extracts:

In a Roman audience-chamber, the old civilization and the new civilization brought out, at the very birth of the new, their chosen champions.

There is one man, the emperor, who is a precise type, an exact representative, of the old. That man is brought face to face with another who is a precise type, an exact representative of the new.

Only look at them as they stand there! That man who best illustrates the old civilization owes to it the most careful nurture. From his childhood he has been its petted darling. Its principal is concentration under one head. He is that head. When he is a child, men know he will be emperor of the world. The wise men of the world teach him; the poets of the world flatter him; the princes of the world bow to him. He is trained in all elegant accomplishments; he is led forward through a graceful, luxurious society. His bearing is that of an emperor; his face is the face of fine physical beauty. Imagine for yourself the sensual countenance of a young Bacchus, beautiful as Milton's devils; imagine him clad in splendor before which even English luxury is mean; arrayed in jewels, to which even Eastern pomp is tinsel; imagine an expression of tired hate, of low, brutal lust, hanging on those exquisite licentious features, and you have before you the type of Roman civilization. It is the boy just budding into manhood, whom later times will name as the lowest embodiment of meanness and cruelty! You are looking upon Nero!

He sits there, upon that unequalled throne, his face sickly pale with boyish debauchery; his young forehead worn with the premature wrinkles of lust; and his eyes bloodshot with last night's intemperance. He sits there, the Emperor-boy, vainly trying to excite himself, and forget her, in the blazonry of that pomp, and bids them call in the prisoner.

A soldier enters, at whose side the prisoner has been chained for years. The soldier is a tired veteran of the Prætorian cohorts. He was selected, that from him this criminal should not escape; and for that purpose they have been inseparably bound. But, as he leads that other through the hall, he looks at him with a regard and earnestness which say he is no criminal to him. Long since, the criminal has been the guardian of his keeper. Long since, the keeper has cared for the prisoner with all the ardor of a new-found son's affection.

They lead that gray-haired captive forward, and with his eagle eye he glances keenly round the hall. That flashing eye has ere now bade monarchs quail; and those thin lips have uttered words which shall make the world ring till the last moment of the world shall come. The stately Eastern captive moves unawed through the assembly, till he makes a subject's salutation to the Emperor-judge who is to hear him. And when, then, the gray-haired sage kneels before the sensual boy, you see the prophet of the new civilization kneel before the monarch of the old! You see Paul make a subject's formal reverence to Nero!

He stood at length before the baby Cæsar, to whose tribunal he had appealed from the provincial court of a doubting Festus and a trembling Agrippa.

And who shall ask what words the vigorous Christian spoke to the dastard boy! Who that knows the eloquence which rang out on the ears of the astonished Stoics at Athens, which commanded the incense and the hecatombs of wandering peasants in Asia, which stilled the gabbling clamor of a wild mob at Jerusalem,—who will doubt the tone in which Paul spoke to Nero! The boy quailed for the moment before the man! The gilded dotard shrunk back from the home truths of the new, young, vigorous faith: the ruler of a hundred legions was nothing before the God-commissioned prisoner.

That *faith* of his, now years old, has this day received its crowning victory. This day, when he has faced Nero and Seneca together, may well stand in his mind as undoing centuries of bloodshed and of license.

And in this effort, and in that spiritual strength which nerved him in planning it and carrying it through, was the "Asian mystery." Ask what was the secret of Paul's power as he bearded the baby Emperor, and abashed the baby Philosopher? What did he give the praise to, as he left the scene? What was the principle in action there, but faith in the new life, faith in the God who gave it!

Sold by H. H. Bancroft & Company.

Our Father's Business.

Dr. Guthrie has peculiar ability to quicken his readers, as we imagine he has to inspire his hearers, by the thoughts he expresses, and by the manner in which they are clothed. The practical, earnest discourses, of which the substance is given in the volume entitled "Our Father's Business," were designed to awaken in those who heard them a new conviction of the pressure upon every Christian of obligation to work for his Master. The book abounds in arguments, appeals, and illustrations, and we are glad to commend it to the careful and prayerful attention of all who are either indifferent to this obligation, or at a loss how they can discharge it. Indeed, the whole series of books which have been written by this venerable and honored man would form an excellent religious library for a family, or for an individual, who would be both taught and stimulated in the life of piety. Sold by H. H. Bancroft & Company.

LITERARY ITEMS.

ORIGINALITY.—Byron allowed that he was indebted to the hints of others for some of the most esteemed passages in his poetry. "I never," said he, "considered myself interdicted from helping myself to another man's ideas. I have Pope to countenance me in this. Pope was a hunter-up of grains of wheat in a bushel of chaff. Perhaps I have not been so laborious a searcher, but I have been no more scrupulous than he in making use of what fell in my way. Mankind have been writing books so long that an author might be excused for offering no thoughts absolutely new; we select, and call that invention. A writer at the present day has hardly any other resource than to take the thoughts of others, and cast them into forms of associations and of contrast. Plagiarism, to be sure, is branded of old, but it is never held criminal, except in a clumsy way, like stealing among the Spartans. A good thought is often far better expressed at second hand than at first utterance. If a rich material has fallen into incompetent hands, it would be the height of injustice to debar a more skillful artizan from taking possession of it and working it up. Commend me to a good pilferer. You may laugh at it as a paradox, but I assure you that the most original writers are the greatest thieves."

OLD HUNDRED.—It having been asserted that Luther took the grand measure we know as Old Hundred from the ballad music of the peasants of his time, a musician of antiquarian taste asserts that Old Hundred was not derived from ballad music, but appears to have been compiled from the Gregorian chants. There are four of these old chants in existence, and from which the whole of Old Hundred may be made up. Its compiler was not Luther, but most probably William Franc, who furnished the music to the Geneva Psalms, published in 1564. In that publication the tune in question was contained. It was originally known as One Hundredth Psalm, thence its present title.

HUGO'S NEW WORK.—Victo Hugo, for his new work, "*Par Ordre du Roi*," just finished, receives from his publisher, M. Lacroix, the snug little sum of 300,000 francs. Part of this outlay M. Lacroix makes up by selling to the Appletons the exclusive right of publishing it in the United States, both in French and English (the latter under the title, "By the King's Command"), and the rest by advance orders in Paris, where its publication will be the chief literary event of the year.

A GOOD PAPER.—Artemas Ward's notice of a "good paper," in which "the advertisements were well written, and the marriages and deaths conducted with signal ability," was not so "sarcastical" altogether as might at first appear. Much can be told of a paper's character by the study of its advertisements, and they are always worth glancing over. Of several papers which we have in mind, they form by far the most amusing and entertaining feature.—*Literary Magazine.*

REV. ANTOINETTE BROWN BLACKWELL, the first American woman ever ordained as a Christian minister, has been engaged for many years upon a work which, we are glad to learn, is soon to be published in this city, by Putnam & Son. It is entitled "Studies in General Science;" and it will, we feel certain, reward the close attention of earnest, thoughtful minds, of whatever sect or school.

A GIFT.—M. M. Hachette & Co., the well known Paris publishers, have made a gift of more than 100,000 volumes to the Minister of Public Instruction for the school libraries of the people. They consist of light reading and instructive works, and will be distributed among 3,000 establishments.—*Independent.*

BOOK KEEPING.—I never could keep books, or much else. I had a library of them once, but couldn't keep them. They were borrowed and carried away by people who could keep books better than I could. Nice people, though; my books were quite carried away with them.—*Fat Contributor.*

NONE THIS YEAR.—We see, with regret, that Mr. Dickens will not write a Christmas story this year. The holidays will hardly seem to be the genuine article without Mr. Dickens' appropriate and graceful "gift," to which we have been so long accustomed.

THE printer is a fair type of the present financial age. He does business on a metallic basis, yet delights in a paper currency and an extensive circulation. He profits by the credit system, and favors the broadest latitude in exchange.

THE Hindoos regulate their daily transactions according to their horoscopes, which are calculable by rules given in their national almanac, called *Notun Panjika*, a book of 270 pages, costing only 24 cents.

A RARE WORD.—"Its" is used but once in the King James version of the Bible—in Leviticus xxv—and how it came there is a mystery, as it was not in use in England when the translation was made.

LITERARY papers in Germany have largely decreased the book trade.

THE *Russian River Flag* is the name of a new paper published at Healdsburg.

BOOKS cannot always please, however good.

Educational.

Names and Attention.

Names are the autocrats of attention. Let me but once clothe an idea, a quality, or a thing, in the vestments of a close-fitting word, and ever after I will more surely notice its presence or absence. For example, I attach to a certain color, the name *solferino*; to a certain feeling, the name, *resentment*; or, to a certain object, the name *belemnite*; and afterwards I am far more certain that these things will arrest and hold my attention, as they occur in life. The philosophy of this is manifold. It is partly the power of habit. I have once delayed upon the color, or the sentiment, long enough to invest it in language; and my mind tends ever to be arrested by it afterwards. And it is partly the power of example. If an object has a name, it shows that some one else has made it a subject of attention: and we tend to imitate others. And it is partly the pride of power. We have once brought the object under the mastery of perception and of language; and we observe it infallibly, on any subsequent appearance somewhat as an officer attends to any notes of information relating to the enemy whom he has vanquished. So much for the exemplification and the philosophy of the principle stated. An experimental demonstration of it may be made as follows: At the beginning of your walk, with your boy, among the boats, explain some such term as *rowlock*; at the end, some other, such as *rudder*. Now, test him and see whether he has noticed most the rowlocks or the rudders of the boats passed. C. R. C.

Personal.

THE following Professors were elected at the last meeting of the Board of Regents: PROF. MARTIN KELLOGG, of Oakland, Professor of Ancient Languages; DR. R. A. FISHER, of Grass Valley, Professor of Chemistry, Mining and Metallurgy; PROF. JOSEPH LECONTE, of South Carolina, Professor of Geology, Botany, Mineralogy and Natural History. Salary of each, $300 per month.

REV. A. FAIRBAIRN has accepted the call to the church in Chico. At a meeting of the Trustees and members of Big Valley and Shiloh Presbyterian churches, Mr. Fairbairn's former charge, resolutions were passed, expressing reluctance to part with so efficient a pastor, and the hope that he may be useful in his new field of labor.

REV. T. H. ROUSE, pastor of the Congregational church in Jamestown, N. Y., arrived in this city by the last steamer. He visits California in consequence of impaired health.

THE resignation of REV. DR. THOMAS has not been accepted, but he has been granted a leave of absence to visit the East for the recovery of his health.

MR. H. M. WHITNEY, editor of the Honolulu *Commercial Advertiser*, arrived in this city by the last steamer from the Sandwich Islands.

MR. LECKETT has been chosen to take the place of Mr. DeMerritt, as instructor in Latin and Greek in the Methodist school at Santa Clara.

CAPT. JOHN PATY, a veteran sea captain, well known on the whole Pacific Coast, died at his residence in Hawaii, on the 11th inst.

BRIGHAM YOUNG is said to be the third largest depositor in the Bank of England.

GEN. MCCLELLAN declines the Presidency of the State University. The salary is not large enough.

REV. ELI CORWIN was installed last week, as pastor of the Congregational church at Oakland Point.

REV. J. M. WOODMAN will deliver a course of lectures on Babylon and Ninevah, to the people of Chico.

REV. J. A. BENTON has been confined to the house for two weeks past by an attack of erysipelas.

DR. H. GIBBONS delivered the second lecture of the Y. M. C. A. course on Tuesday evening.

HON. A. A. SARGENT has sold his law library to the county of Nevada.

CALISAYA BARK.—It is said that Messrs. Drake & Co., (proprietors of the PLANTATION BITTERS) are the largest importers of Calisaya Bark in this country, and that, with the exception of an occasional sale, all that they import is used in the compounding of their celebrated PLANTATION BITTERS, and to which they undoubtedly are indebted for their wonderful health-restoring properties. As a Tonic and Appetizer they are not surpassed, and we cheerfully recommend them. All first class Druggists keep them for sale.

HYATT'S HAND-BOOK OF

Grape Culture in California,

Giving full and specific directions as to where, how, and when, to plant and cultivate a vineyard.

As the season is approaching for those who purpose going into the culture of the vine anew in California, or for those who wish to extend their vinicultural operations to make preparations therefor, they can find no better aid, and no source of information more valuable than to consult this highly approved Hand-Book of Grape Culture.

Following are some of the testimonials that have appeared in commendation of this useful and indispensable work:

A committee of the late Fair of the Mechanics' Institute of San Francisco, to which the work had been referred, speak thus:

"Your committee have examined Mr. Hyatt's Treatise on the Culture of the Grape, and believe it to be the BEST HAND-BOOK published on that subject for California vine culturists, and for which they recommend a Special Premium."

The California State Agricultural Fair, of 1867, awarded a Diploma to the author of this work, and also the San Joaquin Valley Agricultural Fair, at the same season.

OPINIONS OF THE PRESS.

The following are brief extracts from some of the elaborate notices of this work:

The San Francisco *Daily Evening Bulletin* says:—"The book contains a choice collection of the best foreign and native varieties of the grape cultivation in California especially, as well as at the East. The many excellent works on Grape Culture in the Atlantic States are of little or no value in California, where an entirely different system and practice are necessary in vine growing and wine-making. This Hand-Book is intended to supply this deficiency. The author has taken great pains to investigate this subject, and to aid in the improvement of viniculture in California. Its appearance is timely, and it can hardly fail to meet a large and ready sale. It is attractively printed and elegantly bound."

Sacramento Union—"Hyatt's Hand-Book of Grape Culture is a California production that will probably meet a common want. The author takes the experience of the most noted vine-growers in the State as the warrant for his conclusions and suggestions, turns to account the recorded results of experiments made by the pioneers of this branch of industry, and in addition to giving full and minute instructions in regard to the planting of vineyards and the manufacture of wines, presents statistics which will enable the beginner to calculate the probable profits of successful grape culture."

The *Mountain Democrat*, whose editor, Hon. D. W. Gelwicks, a the present State Printer of California, speaks thus:

"HYATT'S GRAPE CULTURE.—We have received from the publishers, H. H. Bancroft & Co., San Francisco, a copy of this interesting and valuable work—a work greatly needed on this coast, and which every grape-grower should purchase. We sent it to a gentleman well known in this community, for his examination—a gentleman familiar with the subject, and largely engaged in the culture of the grape. He gives it the following cordial endorsement, and his endorsement ought to secure it a large sale:

'The limited time in which to examine Hyatt's Grape Culture, published by H. H. Bancroft & Co., San Francisco, has been sufficient, however, to satisfy me that it is a work which every grape-grower should have. No matter how well fortified we may be in our own experience and theory, we must acknowledge that we may adopt many of the author's ideas and suggestions with profit. The merit of the work certainly bespeaks for it a ready sale.

Respectfully, CHAS. P. JACKSON.'"

The Golden Era: * * * "With this book in his hand, the intelligent agriculturist can engage in the business of grape culture with almost the same chance of success as one who has bought his knowledge by expensive experience. * * * The practical information contained in the book would cost many hundred dollars to obtain in any other way. We predict for it a ready and rapid sale."

S. F. Daily Dramatic Chronicle: "The book is emphatically a California production, being written by T. HART HYATT, of this city, editor of the *Rural Home Journal*, and bearing the imprint, San Francisco: H. H. Bancroft & Co. It contains a large amount of valuable information, and should be in the possession of every vine-grower and wine manufacturer in the State. The usefulness of the volume, and its convenience for reference, are very much enhanced by a full and carefully prepared index."

S. F. Mining and Scientific Press: * * * "The book professes to be a complete manual, with instructions for the management of the grape and the manufacture of wine, and is especially designed for California. * * * The book contains a considerable amount of valuable information which is not generally found in such treatises."

S. F. Daily Times: * * * "The author seems to have exhausted his subject, particularly as it relates to viniculture in this State, and as the grape interest is just beginning to attract attention which is soon to become paramount among farmers, we regard the publication of the work as most opportune. No ranchman should be without it."

N. Y. Daily Tribune: "The author brings the result of many years' experience in foreign countries to the preparation of his work, and from his observations in climates similar to that of California, arrives at the conclusion that California is singularly favorable to the culture of the grape, and to all semi-tropical fruits, and that it will hereafter be distinguished as the land of the vine, the fig, the orange, the olive and the palm. His volume forms a capital, if not a complete manual, on the care of a vineyard, and it is enriched with much industrial information connected with the subject."

Lacon (Ind.) Home Journal: "This work is most *apropos*. It comes just as thousands, without any practical knowledge of the business, having planted vineyards, find themselves destitute of that information their intelligent care demands. All over the country this interest is growing, and probably the time is not distant when America will produce more, if not better, wines than any country in the world. The author, MR. THOMAS HART HYATT, is an enthusiast on the subject upon which he writes so pleasantly, and his book embodies just what every grape-grower would like to know—what every one must know, to cultivate the vine successfully."

Colman's Rural World, St. Louis: * * * "We merely want to introduce a new and interesting treatise on this subject to our readers, from the far-off shores of the Pacific—the Golden State of California. Its author is T. HART HYATT, editor of the California *Rural Home Journal*. He has had a large experience and observation in California and in the Old World. His style is entertaining, his directions clear, plain, and practical."

Rural New Yorker: * * * "Although most valuable to the California viniculturist, yet it helps to widen our knowledge of the vine."

H. H. BANCROFT & CO., Publishers.

Practical and Scientific.

AGRICULTURAL.

Drying Sweet Potatoes.

The extreme difficulty of keeping sweet potatoes in good condition, especially in the markets and storehouses of cities, exposed to constant changes of heat and moisture, is fully appreciated by housekeepers and dealers in vegetables. The wonderful productiveness of this esculent in the South, and its great value as a cheap, nutritious, and favorite food of all classes, has often suggested the wish that it might be more available as a food product. Dr. C. K. Marshall, in the Vicksburg *Times* of Sept. 4th, 1867, asked:

Cannot sweet potatoes, which our soil and climate are so wonderfully adapted to produce, be cut up into slices and so dried that they might be made an article of merchandise? Fruits and vegetables have been dried and prepared for shipment, and thus become valuable crops. If sweet potatoes can be treated so as to preserve the saccharine matter, and become an article of food, even though not as agreeable as the undried root in its best condition, they would pay as handsomely as any product of the southern soil.

This inquiry has been answered by Francis H. Smith, of Baltimore, who has dried sweet potatoes successfully in his drying tunnel, which is a chamber of lath and plaster twenty feet long and six feet in depth and breadth, with a peculiar furnace at one end, a chimney of boards at the other, capable of preparing twenty-five bushels of potatoes. Mr. Smith makes the following statement of his mode of procedure:

They are peeled by a little machine, and sliced three-eighths of an inch thick by another, with great rapidity. When dried, they have lost two-thirds of their weight, weighing twenty pounds; are white and so flinty that the knife makes but very little impression; but when cooked—steaming is the best method—they resume their original appearance, and are in every respect equal to the undried root in its best condition."

Specimens of this dried potatoe may be seen in the museum of the Agricultural Department. It is easily cooked, quite palatable, and if it should become popular, would prove of great utility and economical and agricultural value.—*Monthly Report on Agriculture.*

Training Animals for Work.

There is a great advantage in having all brood animals well and thoroughly trained. The offspring of such are more tractable, and have less natural fear of man. All animals, male or female, used for breeding, should be thoroughly domesticated, and taught to handle well, and have no fear of man. By this means their value for labor may be greatly increased, and their care rendered much more pleasant and satisfactory. In training animals, it is necessary to understand their nature and habits. Habit is with brutes, as with men, an iron-handed master. It is one of the essentials in early training to bring the animal to depend upon the driver. Feeding, watering, care, and training should be mainly by one person. There should also be a strong friendship, a familiar acquaintance, and the fullest confidence of the animal. There need be no fear of unrequited affection. All our domestic animals love naturally the hand that cares for them, and the voice that calls them.

The Trainer.—He who is not thoroughly under self-control, should never attempt to instruct the ignorant of either his own or a lower race of animals. He cannot succeed well. The voice, the eye, the lip and motion betray the ungoverned man. How can he govern others, and train in good ways, who cannot govern himself? He who would instruct, must never yield the slightest evidence of passion, anger, or even impatience. Reason is his strength, and good sense his best reliance. How important, then, that his mind be free from the dominion of bad habits, and enslaved by no excesses. No intemperate man should ever take charge of animals in training. Bad habits are mainly the result of want of care, or of mismanagement on the part of those having charge of animals. Animals have no knowledge of right or wrong, of cause and effect, or of hope and reason, to stimulate them to labor. Their labor is obtained through man's power over them. Let not that power be abused. By good judgment and kindness, show yourself worthy of the service of a well-trained, noble animal.—*New England Farmer.*

Will it Pay?

The farmer, perhaps, more than all other men, has occasion to ask himself and others before embarking in any new project, "whether it will pay." The reason of this is, that the great majority of farmers in this country are poor and hard-working, and they cannot afford to embark in any speculation which they are not pretty sure will yield them a profitable return. And while sometimes this question can be satisfactorily answered, at others no correct answer can be given that will cover the whole ground. The point is often raised whether cattle are better stock for land than sheep. This is one of those questions which will always remain undecided.

Some years ago, when many of our farmers in the Middle States went into sheep raising as a speciality, they learned that their pasture lands improved in appearance, and were led to believe that cattle were more injurious to the soil than sheep. But when wool-raising had had its day, and the raising of cattle was once more resorted to by them, they found the same result followed. Hence they learned by experience that a change from cattle to sheep, and *vice versa*, had a similar effect on the soil to a rotation in crops, and a lesson was learned which was not soon forgotten.—*Rural American.*

Liquid Manure Tanks.

As liquid manure is exceedingly beneficial to all vegetables, plenty of it should always be available, and without a liquid manure tank this cannot be obtained. For large gardens, a tank should be built exactly like a cistern; the bricks being closely cemented at the bottom, sides, and roof, to prevent the liquid from percolating through the soil, and also to keep surface water from entering the tank. The liquid should be conveyed to the tank by tile drains from the stable, byre, kitchen, etc., and be taken out by a pump. In small gardens a hogshead or large cask of any kind that will hold water may be sunk in the ground, and will answer on a small scale. In this, soot, guano, etc., may be converted into a valuable liquid manure, by dissolving them in a proportion of water, Manure is much more readily taken up by the roots of plants when in solution than when in a solid state. In fact solid manure has to be dissolved before it can enter the sponge like mouths of the roots.—*Western Herald.*

Tree Mignonette.—Sow a pinch of seed in the center of as many three-inch pots as there are plants required. When the young plants are strong enough, thin them by degrees to one plant in a pot, and that must be the strongest. Train that up a stake to the height required, pinch out all side-shoots and the heads of bloom, but do not divest the stem of its leaves until the plant has attained its full height. To form a head, leave about three shoots at the top, and pinch them in from time to time.

I have had tree mignonette four and five feet high, with heads two feet through, by sowing the seed as above described in August, and growing the plants for twelve months, shifting into larger pots when required. These were handsome ornaments in a conservatory, and afforded many cut flowers all winter. For ordinary sized trees the seed should be sown during the first week in May to bloom throughout the following winter. Different catalogues announce a giant variety for this purpose, but in growing the two I have found no difference.—*Farmer.*

Shade for Cows.—If pastures for cows, during the hot months are destitute of shade trees, the animals will suffer much from the effects of heat and the biting of flies. Their productiveness will he considerably diminished from these causes, consequently it will pay well to furnish a temporary shelter till trees can be grown at suitable points for the comfort of dairy stock.—*Rural New-Yorker.*

Milk.

The greatest quantity of cream is produced in the shallowest vessels, in proportion to the quantity of milk set.

The morning's milk is richer than that of the evening, and the stripping richer than that milked first.

In summer milk is best for cheese, and in autumn best for butter. Bitter milk is caused by long standing, and its consequences are bitter cream and bitter butter. To avoid this, use before it has stood too long; and, in order to draw all the cream in that time, put the milk where it will enjoy a uniform temperature of 50 to 60 degrees.

Contentment is the greatest bliss we can procure.

WEEKLY MARKET REPORT.

Wednesday, December 2, 1868.

Flour—Sale of 200 bbls Benicia XX, free on board, $5 75; 3,000 bbls Benicia Superfine, for export, private; 200 bbls Imperial (Oregon) Extra, $5 75; 550 bbls Genesee Extra, for local consumption, $5 75. We quote city mills as follows: Superfine, in sks, ℔ 196 lbs, $4 75@4 87½. Extra, in sks, $5 75@$5 87½.

Wheat—Sales include 1,300 sks coast, $1 50; 361 sks common, $1 55; 1,000 sks good shipping, $1 75; 530 sks choice milling, $1 80; 200 sks do, $1 85. Good to choice shipping is still quoted at $1 75@1 80. At the close, 5,000 sks shipping, private; 1,000 sks choice, $1 82½; 650 sks do, $1 85; 250 sks fair, $1 75; 10,000 sks No. 1 shipping, delivered on wharf, $ 85; 4,000 sks shipping, $1 77½; 16,000 sks do, $1 80 ℔ 100 lbs.

Barley—Sale of 2,500 sks coast, $2 05. We quote feed $2@2 10, and brewing $2 12½@2 25. At the close, 700 sks feed, $2 02½; 400 sks brewing, $2 20 ℔ 100 lbs.

Oats—Are in fair demand at $1 60@$1 90 for California, and $1 95@2 for Oregon. Sales of 229 sks Oregon, $1 97½; 400 sks do, $2 ℔ 100 lbs.

Potatoes—Sales os 150 sks Bodega, 90c; 800 sks Humboldt, sold last evening, $1; now quotable at $1@1 12½ ℔ 100 lbs.

Onions—Sales yesterday of about 200 sks Yellow at $3 87½; quotable to-day at about $4 ℔ 100 lbs.

Beans—We quote jobbing rates for first quality as follows: Bayo, 3½@3¾; Butter, 4c; Pea, 4c; small White, 3½@3¾c; Pink, 3@3¼c; Red, 2½@2¾c. Sale of 100 sks Pink, 3¼c ℔ pound.

Corn—Sales of 100 sks Yellow, large size, $1 75 ℔ 100 pounds.

Rye—Jobbing from second hands at $3 50 ℔ 100 lbs.

Buckwheat—The jobbing prices from store are $2 25@$2 50 ℔ 100 lbs.

Mustard Seed — Common California Red, 2½@3½c; choice do, 4c; English White, 5@5½c ℔ lb.

Flax Seed.—Small sales of choice to the local mill are reported, at 4c ℔ lb.

Bran—Quotable at $20@21 ℔ ton, at which figures the market is active.

Middlings—Fine descriptions $35@37 50; feed do, $27 @$28 ℔ ton.

Oil Cake Meal—On account of the increased demand, the mill price was last Wednesday raised to $35 ℔ ton.

Hay—Market continues firm at $12@$16 50 ℔ ton, with moderate sales.

Hops—California new are dull at 25@30c ℔ lb.

Dairy Products—California fresh roll Butter is quoted firm at 65c to 70c; California pickled is about out of the market; quoted nominal at 55@60c; Eastern firkin is supplied by jobbers at 45c. Cheese is jobbing at 18@21c as extremes, for California, and 51@22½c ℔ lb for Eastern dairies; Eggs are lower, quotable at 68c ℔ doz.

Poultry—Live Turkeys are quoted at 16c, and dressed do, 18@19c ℔ lb; Hens and Roosters, $6 50@7; Spring Chickens, $4 50@5; Ducks, $4 50@5 50; Geese, $12@15; Quail, $1 @$1 25 ℔ dozen; Venison, 8@9c ℔ lb.

Provisions—Bacon is jobbing at 13½@14c for California smoked; California Hams, 15½@16½c. Oregon Bacon is scarce at 14½c; no Oregon Hams in market; California Lard, 13@13½c and 14c ℔ lb for small tins.

Wool—The market of late has been less active, partly through reduced supplies. Sales for the week reach nearly 200,000 lbs, at 16½@18c for fair to choice shipping grades.

Hides—Sales since last Wednesday of 300 choice California Dry, in three lots, 15½c; 1,100 do fair to choice, 14@15½c. Salted, are quoted at 7c ℔ lb.

Tallow—Purchases for the week, by a single consumer, not before reported, of 20,000 lbs Beef, at 8c; quotable at 8 @8½c ℔ lb.

San Francisco Cattle Market.

The best quality of Americah Beef is by some dealears quored at 7½@10c, though the latter is probably an extrrme figure. The same parties quote Mutton at 7c, which is also an extreme price. The more general quotations are annexed.

We quote slaughterers' prices as follows:

Beef—American, 1st quality, 7½@9½c ℔ lb.
do 2d do 6½@7½c ℔ lb.

Veal—Quotable at 9@11c ℔ lb.

Mutton—Is steady at 6@6½c ℔ lb.

Lamb—Scarce and nominal 7@9c ℔ lb.

Pork—Undressed, 4@5c; dressed, 6½@7c ℔ lb, outside figures for milk or grain fed.

—*S. F. Bulletin.*

MINING.

THE CIMARRON MINES.—The *Colorado Register* says: Dr. Hobbs has just returned from the Cimarron mines. While he looks on that country as still a problem, he speaks in the very highest terms of some of its mines. He says he saw a single specimen weighing 12 pounds, from the surface of which $42 had been rubbed, so that it could be transported without loss, and that the gold remaining in sight on the specimen was variously estimated from $200 to $500. The surface of the specimen which produced it was 6x10 inches. We learn from other sources that the lode which produced this specimen capped twice in 20 feet.

AUSTRALIA.—There is much excitement concerning the silver mines. 5 tons of ore from the Almada Mine yielded 112 ounces of pure silver. On the river Thames in the Auckland gold fields, there are at present 14,000 miners. Some of the claims are yielding well. Large deposits of copper, as well as silver mines, and prospects for gold, have been found near the Gulf of Carpentaria in Queensland.

IRON ORE.—Large deposits of iron ore are found in many places in the Sierras, notably at a point distant seven miles from Tinker's Station, on the Pacific Railroad line, above Cisco. This ore is of the very best possible kind, and, without selecting or picking, yields, when smelted, 80 per cent. of pure iron, of a quality which is suitable for steel-making purposes.—*Mining Press.*

CROWN POINT.—A small streak of rich ore—some four or five inches in width, has been found in the 900 foot level of the Crown Point Mine. It is thought that this small vein will probably lead to a large deposit—that it is only one of the legs of a huge argentiferous spider that is lodged somewhere in the unfathomable profound.—*Nevada Gazette.*

NEW MINE.—The *Virginia Enterprise* says that a gold mine of extraordinary richness has been found about 45 miles south of Mammoth District. San Francisco capitalists are trying to buy the mine or portions of it but the lucky finders refuse to part with it. Other rich veins are known to exist in the vicinity.

ANOTHER GOLD DISCOVERY.—Rich gold fields have been discovered on the northern frontier of Norway and Russia, stated to surpass those of California. The severity of the climate will, however, prevent the placers being worked by emigrants from Southern and Middle Europe.

STARTING UP.—The Norridgewalk Mine is to be worked again. The shaft will be cleared, the rock at the mill crushed, and if the result is sufficiently encouraging, work will be continued.—*Grass Valley Gazette.*

RICH STRIKE.—Walcoch, Johnson & Co., struck a rich pocket of quartz in their claim, near Hunter's Valley, last week. Report has it that they have taken out $100,000 up to this time.—*Mariposa Mail.*

GRASS VALLEY.—The *Union* says that the North Star, Empire, and Eureka mines all improve as the workmen get down on the ledges, which fact demonstrates their permanence.

IDAHO.—The mines discovered 65 miles northeast of Oro Fino bid fair to exceed any in extent and permanent wealth that have ever been found in this part of the territory.

NEVADA COUNTY.—The mines of Nevada County promise a first rate yield with a favorable winter.

NEW discoveries of silver deposits of great value have been made in the vicinity of Belmont, Nev.

THE Primrose, Reis, and Union mines, in Sierra County, are paying unusually well this season.

THE New York Hill Mine, at Grass Valley, has been sold at Sheriff's sale, for $10,000.

A NEW mining district has been organized in Nye County, Nev., called Troy District.

THE amount of bullion received daily at Austin from White Pine is $9,000.

WAGES at White Pine are $5 per day; flour $15 per hundred.

PRACTICAL.

Toast—How to Make it.

Did the reader ever ask for toast at a hotel? If so, he probably was served with a piece of fresh bread, burned before the fire, the charcoal mostly scraped off, and served under the name of toast. It should always be made of stale bread; the heat drives off whatever acids may have remained in the loaf, but more than that, the starch of the flour is more or less converted by the heat into a more digestible substance—dextrine.

By nicely toasting a slice of bread, we save the digestive organs a certain amount of labor; hence toast is usually acceptable to invalids and those of impaired digestion. So much for the philosophy of the thing; now for the practice. Make the toast from a stale home-made loaf. Baker's bread will make an imitation of toast, but not the thing itself. Slice moderately thin, and place on the toasting-fork, or in a wire toaster, and hold it near the fire, until it is well warmed through. Then—here comes the rub—bring it near the fire where it will quickly become of a light brown, or rather of a deep golden yellow, turn and treat the other side the same, and serve. If buttered toast is desired, apply butter in moderate quantity while hot. Toast should not be piled upon a plate, as in that case the crispness is lost. If there is no toast-rack, lay the slices lapping over one another, shingle fashion, so that the moisture of the lower slices may escape, and not be absorbed by the others.—*Am. Agriculturist.*

To Young Housekeepers.

Be satisfied to commence on a small scale. It is too common for young housekeepers to begin where their mothers ended. Buy all that is neccessary to work skillfully with; adorn your house with all that will render it comfortable. Do not look at richer homes and covet their costly furniture. If secret dissatisfaction is ready to spring up, go a step further and visit the home of the suffering poor; behold dark, cheerless apartments, insufficient clothing, and absence of all the comforts and refinements of social life, and then return to your own with a joyful spirit. You will then be prepared to meet your husband with a grateful heart, and be ready to appreciate the toil of self-denial which he has endured in the business world to surround you with the delights of home; and you will co-operate cheerfully with him in so arranging your expenses, that his mind will not be constantly harrassed lest his family expenditures may encroach upon public payments.

Be independent; a young housekeeper never needed greater moral courage than she does now, to resist the arrogance of fashion. Do not let the A's and B's decide what you shall have, neither let them hold the strings of your purse. You know best what you can and ought to afford. It matters but little what people think, provided you are true to yourself, to right and duty, and keep your expenses within your means.—*United Presbyterian.*

Trunks no longer to be Smashed.

Some Yankee has invented an arrangement to prevent heavy trunks from being injured by careless handling. It is simply an india rubber ball on each of the eight corners. Strange it was never thought of before. We can imagine the fiendish look of rage and disappointment which passes over the countenance of the baggage-smashing porter, who for the first time sees one of these contrivances. The delight of his life is gone. The malighant chuckle with which he used to drop a lady's traveling trunk from his shoulder to the floor—in full view of the agonized but helpless owner—is "played out." It is stated that a trunk filled with books, if protected by this means may fall from a height of 20 feet without injury.—*Mining and Scientific Press.*

HOW TO CLEAN SOAPSUDS.—It is well known, says an Australian paper, that a little alum dissolved is very effective in clearing muddy water; but a short time since some alum was applied in a manner which from its novelty and its valuable results, is worthy of notice. In a place where water is scarce at present, a little alum was dissolved in hot water and thrown into a tub of thick soap-suds. In a moment the soap curdled, and accompanied by the muddy particles, sank to the bottom, leaving the water perfectly clear, pure, and devoid of smell. This was found very useful for washing clothing again, when poured off the sediment. A similar result was attained in a quick manner, by filling a boiler with soap-suds, placing it on a fire, and throwing a bit of alum into it. When the suds boiled the scum went over and left the water clear, soft, and as useful for washing clothes as it had originally been.

GOOD MEAT—HOW TO SELECT IT.—Good meat is neither pale, pinkish, nor a deep purple tint. It has a marble appearance, from a ramification of little veins of the internal organs especially, is firm, hard, and suety, and is never wet, whereas that of diseased meat is soft and watery. The feel of healthy meat is somewhat elastic, and hardly moistens the finger. Good meat has but little odor, and this is not disagreeable; whereas diseased meat smells faint and cadaverous. Good meat bears cooking without much shrinkage, or shrivels up and boils to pieces. This is due to the larger proportion of watery and gelatinous muscular substance in the meat. Under the microscope the fibre should be clear and well defined, and free from infusorial animalculæ; while that of diseased meat is sodden and tumid, as if it had been soaked in water, the traverse streaks being indistinct and wide apart, and animalculæ abound in it.

HOW TO BOIL MEAT.—When meat is placed in boiling water, the effect is to coagulate or harden the albumen upon the surface immediately. This coating resembles the white of a hard boiled egg, and serves to protect the albumen and juices of the interior from a like coagulating process. The conduction of heat to the interior is impeded, and the cooked meat is retained in a delicious, juicy condition. Cold water permeates the fibers of the meat, and as it becomes hot, heat is conducted through the pores, and the whole mass becomes hard from the coagulation of the albumen. It is therefore better to immerse meat to be cooked by boiling, in hot water at once.—*Journal of Chemistry.*

REMOVING A TIGHT FINGER RING.—It is seldom necessary to file off a ring which is too tight to readily pass the joint of the finger. If the finger is swollen, apply cold water to reduce the inflamation; then wind a small rag wet in hot water around the ring to expand the metal, and soap the finger. A needle threaded with strong silk can then be passed between the ring and the finger, and a person holding the the two ends and pulling the silk while slowly sliding it around the periphery of the ring may remove the ring. If the ring is a plain hoop, this process is easy; if it has a setting or protuberence, more care will be required.

AN INVALID'S CARRIAGE.—A London carriage-builder has invented an "invalid's carriage," the wheels of which are thickly coated with vulcanized india-rubber to obviate noise, and the springs so arranged, both inside and outside, that the patient can scarcely be conscious of the motion of the vehicle. The interior is fitted with every necessary, such as lavatory, *commode*, and spring-couch. The latter is so arranged that it can be fixed at any angle, for sitting, reclining, or reposing, and, being detached fron the vehicle, it can be carried by attendants into the house, that the patient may be lifted without inconvenience.

HONOR is more talked of than known by some.

General Selections.

The Guests of the Heart.

Soft falls through the gathering twilight
The rain from the dripping eaves,
And stirs with a tremulous rustle
The dead and the dying leaves;
While afar in the midst of the shadows,
I hear the sweet voices of bells
Come borne on the wind of the autumn,
That fitfully rises and swells.

They call and they answer each other—
They answer and mingle again—
As the deep and the shrill in an anthem
Make harmony still in their strain;
As the voices of sentinels mingle
In mountainous regions of snow,
Till from hill-top to hill-top a chorus
Floats down to the valley below.

The shadows, the fire-light of even,
The sound of the rain's distant chime,
Come bringing, with rain softly dropping,
Sweet thoughts of a shadowy time:
The slumberous sense of seclusion
From storm and intruders aloof,
We feel when we hear in the midnight
The patter of rain on the roof.

When the spirit goes forth in its yearnings,
To take all its wanderers home;
Or, afar in the regions of fancy,
Delights on swift pinions to roam,
I quietly sit by the fire-light—
The fire-light so bright and so warm—
For I know that those only who love me
Will seek me through shadow and storm.

But should they be absent this evening,
Should even the household depart—
Deserted, I should not be lonely;
There still would be guests in my heart;
The faces of friends that I cherish,
The smile, and the glance, and the tone,
Will haunt me wherever I wander,
And thus I am never alone.

With those who have left far behind them
The joys and sorrows of time—
Who sing the sweet songs of the angels
In a purer and holier clime!
Then darkly, O evening of autumn,
Your rain and your shadows may fall:
My loved and my lost ones you bring me—
My heart holds a feast with them all.

—*Chambers' Journal.*

Social Life in Germany.

Rev. Dr. Stevens writes as follows to *The Methodist* concerning the social aspects of life among the Germans:

I have said that the Germans are the most "comfortable" people, and contrive best to enjoy material life of all European communities. Their phlegmatic temperament has much to do, doubtless, with their easy, contented ways, but it does not prevent a somewhat eager endeavor to extract real enjoyment out of ordinary or daily life.

The Englishman's chief happiness is in his home. His house, according to the old common law maxim, is his "castle," and his life is spent in fortifying it and enjoying its security.

The Frenchman has no home, nor any word to express the English idea of home. He lives abroad, and only keeps lodgings in his house; society and gayety, the drive, the promenade, the theatre, are necessary for his daily life.

The Italian is a modified Frenchman. His home is a slight fact in his existence; sunlight, scenery, music, rural recreations, and, also, ecclesiastical pastime, with as little work as possible, make his ideal; and the Italian insists that his ideals shall always become realities.

The German, more thoughtful and more realistic, combines, in moderation, the advantages of all these his neighbors. Home is as genuine a fact with him as with the Englishman. Like the Frenchman, he appreciates the pleasure of society and out-door life, but he reserves only the latter part of the afternoon and the evening for them. The Italian does not excel him in the love of romantic resorts, of scenery, or music, or the dance. In all these relaxations, the German drops his natural phlegm and personal awkwardness, and enjoys himself perfectly—the more for having spent most of his day in sturdy labors.

A good German home is the best in the world. I say this peremptorily. German mothers are thoroughly maternal and extremely affectionate; German fathers are generally forbearing and moderate, and singularly inclined to "domestication." German children generally grow up, as by instinct with an admirable mixture of filial reverence and affection. The Germans love large families; the more children, the better, according to their philosophy of life; and they generally have an abundance of them. They despise the French and American misanthropy in this respect, and justly point to it as a proof of demoralization, unknown in their own better land. In their home-life they seem continually but unconsciously to be contriving agreeable surprises for each other, and this good feeling overflows the bounderies of home, and reaches all the intimacies of their lives—their kindred, their neighbors, their pastors, and their school-masters. No people make more pleasure out of *fete* days, birth days, wedding anniversaries, etc.

None know better how to make "presents," or to invent souvenirs. For a German not to know the birth-days and wedding anniversaries of all his intimate friends, and not to commemorate them by some token of affection, however slight (for the value is nothing compared with the sentiment,) is a barbarism, a sacrilege. In large families, these commemorations, reaching from the grand-parent to the yearling baby, and extending out to all dear friends keep up, of course, an almost continuous exercise of kindly intentions and forethought; and the Germans have quite universally a peculiar tact of closing these beautiful little things with dramatic surprise, so as to render the "manner" infinitely more precious than the "matter." The lowliest village schoolmaster's birthday is known to all his rustic flock, and his cottage on that day is a shrine of pilgrimage to all the little feet of the hamlet; flowers, books, cheese, loaves of bread, embroidered slippers, chickens, geese, even young pigs, are showered upon him. He is decked with boquets, and his humble home garlanded within and without; he is addressed in original doggerel, and serenaded with music and dancing. And thus, also, fares the village pastor; and all these things are done so heartily, so joyously, as to be evidently spontaneous, never ceremonious, as much a joy to the donors as to the recipients. Add to these domestic occasions, the public festive days of the Church and the State, and you can imagine that German life has holidays enough. Christmas and similar days, are occasions of incredible festivities throughout Germany. Santa Claus has no better dominion.

But, besides his commemorative occasions, the German, except in the most depressed class, and even there to some extent, claims an interval, however short, of almost daily relaxation. Every city, town, and village has its "Bier Gartens," and thither, towards sunset, resort, not idlers, hard-drinkers, pick-pockets, and ruined women, as at similar places in England and America, but the honest, respectable people—mothers with their joyous groups of children; merchants and comfortable mechanics; the professors of the gymnasia and universities; the grave thinkers and writers and pastors. They sit in groups at tables, drinking coffee or beer, eating brown bread and butter, or cake, smoking long pipes, conversing, and listening to superb musicians, who usually are stationed in a pavilion in the neighborhood.

I shall have something more to say about the German beer-drinking hereafter, but remark now that the cost of these refreshments is kept so low as to place them within the reach of the poorer classes. They become even a means of economy, as they usually take the place of "tea," or supper, and, with the exhilarating open air and music, are quite a good substitute. The German is too much a domestic man to go to these places without his family; wife and children sharing his recreation, they all go home usually at an early hour, relieved of careworn looks, and, as they have similar reliefs almost daily, amidst romantic scenery, and the greetings of neighbors and friends, they look to the close of each day's tasks with a delight which English and American families know only at long intervals, when Christmas, the Fourth of July, or some other great holiday, approaches. The whole medical faculty of Germany does not half the service for the general health that these frequent out-door relaxations afford; and more orderly and decorous scenes cannot be found in English or American social life. You see no drunkenness or any other disorders in these "Gartens," so far, at least, as I have observed them; but I must remind the reader that I have not seen them in the great northern German cities. I have never witnessed any dances at them, except (curious enough fact) at certain church celebrations. They are under good police inspection; but there seems to be in the German soul an instinctive sense of the importance af good order as a very means to real enjoyment, which renders public law and police superfluous among them.

Japan Warm Ocean Current.

All have read of the wonders of the Gulf Stream in the Atlantic Ocean, but few know of the existence of a similar, though warmer and more rapid current, in the Pacific. The following, from the *Presbyterian*, gives a clear idea of this current and of its influence on the climate of our northern coast:

One of the popular errors concerning the new territory of Alaska is the belief in the rigor of its climate; and on account of its great latitude, extending from 54° 40′ to 71° 30′, it is difficult to disabuse the popular mind by simple assertion to the contrary; and a great array of figures is frequently looked upon as fallacious. In this connection, it is curious to recollect how completely the question of climate was ignored pending the negotiations of the Oregon boundary in 1845–6, when the nation demanded "fifty-four forty, or fight," this very latitude being the southern boundary of Alaska. On the sea-coast of British Columbia, which we then claimed as part of Oregon, the climate is quite as severe as that of Alaska in the region of Sitka; the annual rain-fall at the mouth of the Columbia, between Oregon and Washington, is even six inches greater than at Sitka. The mean annual temperature of Sitka is a fraction higher than that of Montreal, Canada, and Portland, Maine; and the mean temperature of winter is only one and a third degrees below that of Philadelphia. These statements are not based upon isolated facts, but deduced from the results of systematic observations carried on hourly since 1847, by Russian officers, at regularly appointed observatories established throughout Europe, the United States, Canada, parts of Asia, at the Cape of Good Hope, St. Helena, and even Australia. The results are accepted throughout the scientific world, and personal examination of the observatory and observers at Sitka satisfied us of the trustworthy quality of the results. They may, however, appear delusive to the non-scientific mind until the deeper laws are made plain. If the rigor of the climate was as great as that of the same latitude on the eastern coast of America, or in the interior of the continent, the value of the territory would be very problematical, except in its political aspects; and therefore it seems essential to first demonstrate the causes producing such a comparatively warm sea-coast climate in such high latitudes.

There exists in the Pacific, a mighty ocean river of warm water, remarkably analogous to the Gulf Stream of the Atlantic, but of greater volume, greater velocity, and higher temperature. The main body of this Japanese warm stream stretches from the coast of Niphon, in latitude 35°, eastward and northward through the broad Pacific, 3,300 nautical miles, to about latitude 48°, and longitude 148°, where it is within 8 or 900 miles of the American coast. It there divides, and the greater part continues towards the coast of Queen Charlotte's, and the Vancouver's Islands, and thence down the coast of Washington, Oregon, and California, stamping well known peculiarities upon that coast climate. The smaller part continues to the coast of the Alexander Arcipelago, is thence deflected to the northward and westward along the shores of the great Gulf of Alaska, and, embracing the Kodiak group, it follows the south-east shores of the Alaska peninsula and outlaying islands, and thence continues southward and westward past the eastern part of the Aleutian chain. Here it joins the current coming through the middle

of the chain of islands from Behring Sea, and can be traced southward until it strikes the northern edge of the great stream, forcing it southward and underrunning it. Were observations wanting to sustain this deduction, the well-established fact of Japanese junks having been carried by the main stream between 4 to 5,000 miles to the coasts of Oregon and Washington, and there wrecked, would demonstrate it. As late as 1833 a Japanese junk was wrecked near Cape Flattery, in latitude 48°, on the coast of Washington; and about 1854 a junk was relieved in mid-ocean in the centre of this great stream, being slowly, but irresistibly carried to the American coast.

This great Japan stream, in longitude 165° west, or nearly 1,400 nautical miles from our coast, has a breadth of 1,200 miles, and a temperature of 78° on its southern limit in latitude 22°, and 64° on its southern limit in latitude 43°, being 11 to 13° warmer than the variable returning currents north of it. Off the Alaska coast, in latitude 57°, the temperature of the surface water was observed on this expedition to be from 50 to 52° in August and September, while the average temperature of the air was almost uniformly three degrees higher. In the Gulf of Alaska, the current of the northern branch has, at times, a velocity as high as 36 miles per day. Near the Sannakh Island we found an exceptionally strong current running three or four knots per hour, part of which, however, may have been tidal current towards the Unimak Strait into Behring Sea.

When the great Japan stream leaves the coast of Niphon, a small branch, called the "Kamschatka current," continues along the Asiatic coast, through the western part of Behring Sea and Behring Strait, to the Arctic Ocean, with a velocity at times of one and a half miles per hour through the strait. Part of this mass of water, just before reaching Behring Strait, is deflected eastward by the islands south of it, sweeps round the American coast, receives the waters of the great rivers Kvichpak, Kuskovin, etc., and circles southward and westward through the middle of the Aleutian chain, affecting their climate remarkably. At the island of St. Lawrence, in latitude 63°, the temperature of this warm stream is 47°; north of the Aleutians, 47°; near these islands and south of them, 49°. At the head of Unalaska Bay we observed the temperature of the surface water to be 45½° in the middle of September. Between this current and the Asiatic coast a polar current works its way southward, exactly as the polar current follows our eastern coast inside the Gulf Stream.

Two out of many remarkable proofs in the cumulative observations leading to the above deductions are, that north of the coast of Niphon, Japanese woods and disabled vessels are never thrown upon the Asiatic shores, but upon the western coast of the Aleutians, upon the American coast north of the Alaska peninsula, and even into the Arctic Ocean; and that icebergs are never carried by the current from the Arctic Ocean to Behring Sea.

The influence of these great volumes of warm water upon the coast climate of Alaska, as well as that further south, is perhaps even more marked than the influence of the Gulf Stream of the Atlantic upon the coast of Europe. The results of the condensation of the warm vapor-laden air, and the consequent precipitation of rain, by the colder and drier airs of the continent, are exhibited in the enormous and quick growth of the timber; the rapid development of grasses and plants; the carpet of moss that covers the sea coast region as far south as Vancouver Island; the high thermal condition of the air; the very small difference between the temperatures of the wet and dry bulb thermometers, indicating slow evaporation; the non-formation at Sitka, in latitude 57° 3′, of ice clear and solid enough for the California market; the existence of timber 7° further north than on our eastern coast; the "gay flowers," and "the rarest and most beautiful plants along the Arctic shore," that "make even Cape Lisburne, in latitude 58° 52′, look like a garden," &c.

IT is one of God's greatest mercies, that this world is full of troubles; for if we court her now she is foul, what should we do if she were beautiful.

To be really successful, become a Christian.

THE FAMILY PAPER OF THE PACIFIC COAST.

THE OCCIDENT.

In every true home there should be found a first class family paper—one to whose coming, father, mother, children will look with eagerness each week. Such a paper is

THE OCCIDENT.

Let all who desire such a paper, and are asking, "What paper shall I take?" read the following statement of facts:

THE OCCIDENT contains a greater amount and variety of reading matter than any other family paper on the Coast. It contains choice selections for all classes of readers. Both the child and the person of cultivated literary taste will find in each number matter which cannot fail to be interesting.

THE OCCIDENT is extensively quoted. No other weekly paper on the Coast furnishes so much matter, either original or selected, to the columns of other papers. Whole columns are frequently taken from one or another of its departments. No stronger proof of its excellence could be desired than the fact that it is so well appreciated by contemporaries.

THE OCCIDENT has a complete Agricultural Department, carefully culled from the best authorities, with all the current agricultural items of our own coast, and full market reports. The Mining Department is also very complete.

THE OCCIDENT gives a summary of Pacific Coast news and of Eastern and Foreign Telegraphic News. These items are not hastily thrown together, but are carefully prepared, and are consequently copied to a great extent. The Personal Department is the most complete collection of personal news to be found in the State.

THE OCCIDENT is the official organ of all branches of the Presbyterian Church, and contains full religious intelligence concerning the progress of all denominations. Although a religious paper, it is not sectarian. Its aim is to make men better and happier by the inculcation of the principles of the Christian religion.

THE OCCIDENT is universally admitted to surpass all other papers in the State, in typographical appearance and systematic arrangement of its contents.

Read what the papers say of

THE OCCIDENT.

"Has commenced its second volume, enlarged and improved and with excellent prospects. It is full of 'knews,' views, and family reading, and is ably edited."—*Brooklyn (N. Y.) Union.*

"It gives evidence of ability, tact, and judgment in its management."—*Cincinnati Presbyter.*

"An able paper of the same form as the *Statesman*."—*Philadelphia Statesman.*

"One of the best of papers."—*Zion's Herald, Boston.*

"Well filled with readable articles. An important accession to the literature of the coast."—*S. F. Bulletin.*

"Its typographical appearance is finer than that of any weekly paper published on this coast."—*Chronicle.*

"A periodical worthy of patronage."—*Sacramento Union.*

"It is already attracting a great deal of attention. Its original articles and judicious selections make it an intellectual treat."—*S. F. Fair Press.*

"The ability displayed gives promise of success."—*S. F. Times.*

What is Said

In the last number of the *Vallejo Recorder*:

THE OCCIDENT—This elegant journal, the organ of the Presbyterian Church on this coast, published by Bancroft & Co., is worthy of a place in every household. Too much cannot be said in its praise.

Miners' Foundry and Machine Works,

Nos. 245 TO 255 FIRST STREET,

SAN FRANCISCO.

HOWLAND, ANGELL, & KING, PROPRIETORS,

Manufacturers of Machinery for

QUARTZ MILLS, SAW MILLS, POWDER MILLS, FLOUR MILLS, SUGAR MILLS, PAPER MILLS, STEAM ENGINES OF ALL KINDS, AMALGAMATORS OF ALL KINDS, MINING PUMPS, OIL WELL TOOLS, ROCK BREAKERS, HOISTING WORKS,

—AND—

Machinery and Castings of all kinds, either of Iron or Brass.

Boilers and Sheet Iron Work, in all its branches.

Shoes and Dies of White Iron, manufactured for, and imported by us, expressly for this purpose, and will last 25 per cent. longer than any other made on this coast.

Russia Iron Screens, of any degree of fineness. We are the only manufacturers on this coast of the "Hicks Engine," the most compact, simple in construction, and durable, of any Engine in use.

Pacific Mail Steam Co's Steamships

—FOR—

NEW YORK, JAPAN AND CHINA

Will be Dispatched as follows:

LEAVE WHARF CORNER OF FIRST AND BRANNAN STREETS, at 11 o'clock A.M. of the following dates, for PANAMA connecting via Panama Railroad with one of the Company's splendid Steamers from ASPINWALL for NEW YORK.

the 6th 14th, 22d, and 30th of each month.

Steamer leaving San Francisco on the 6th touches at Manzanillo. All touch at Acapulco.

Departure of the 14th is expected to connect with the French Transatlantic Company's Steamer for St. Nazaire, and English Steamer for South America. Through tickets can be obtained.

Departure of 14th is expected to connect with English Steamer for Southampton, South America, and P. R. R. Co.'s Steamer for Central America. Through tickets can be obtained.

Departure of the 6th connects with English Steamer for Australia.

STEAMERS FOR NOVEMBER, 1868.

The following Steamships will be dispatched on dates as given below.

November 15th—GOLDEN AGE, Capt. Lapidge, connecting with OCEAN QUEEN, Capt. King.

November 21st—COLORADO, Capt. Farnsworth, connecting with HENRY CHAUNCEY, Capt. Conner.

November 30th—SACRAMENTO, Captain Parker, connecting with ARIZONA, Capt. Maury.

Passengers berthed through. Baggage checked through—100 pounds allowed each adult.

An experienced Surgeon on board. Medicine and attendance free.

These Steamers will positively sail at 11 o'clock. Passengers are requested to have their baggage on board before 10 o'clock.

Through tickets to Liverpool by the "Cunard," "Inman," and "National" Steamship Lines can be obtained at P. M. S. S. Co.'s office in San Francisco, where may also be obtained orders for passage from Liverpool or Southampton to San Francisco, either via New York or St. Thomas—if desired, an amount of £10 to £20 will be advanced with the above orders. Holders of orders will be required to identify themselves to the Agents in England.

For Merchandise and Freight for New York and way ports, apply to Messrs. WELLS, FARGO & CO.

The Steamship CHINA, Captain Geo. E. Lane, will be dispatched on Thursday, December 3d, at 12 o'clock, noon, from wharf, corner of First and Brannan streets, for YOKOHAMA and HONGKONG, connecting with the COSTA RICA for SHANGHAE.

For passage and all other information, apply at the Pacific Mail Steamship Co.'s Office, corner of Sacramento and Leidesdorff Sts.

OLIVER ELDRIDGE, Agent.

The Popular Edition of Dickens.

Family Reading.

Old Times.

There's a beautiful song on the slumbrous air,
That drifts through the valley of dreams;
It comes from a clime where the roses were,
And a tuneful heart and bright brown hair
That waved in the morning beams.

Soft eyes of azure, and eyes of brown,
And snow-white foreheads are there,
A glimmering Cross and a glittering Crown,
A thorny bed and a couch of down,
Lost hopes and leaflets of prayer.

A breath of spring in the breezy woods,
Sweet wafts from the quivering pines—
Blue violet eyes beneath green hoods,
A bubble of brooklets, a scent of buds,
Bird warblers and clambering vines.

A rosy wreath and dimpled hand,
A ring and a slighted vow,
Three golden links of a broken band,
A tiny track on the snow-white sand,
A tear and a sinless brow.

There's a tincture of grief in the beautiful song
That sobs on the slumbrous air,
And loneliness felt in the festive throng,
Sinks down on the soul as it trembles along
From a clime where the roses were.

We heard it first at the dawn of day,
And it mingled with matin chimes,
But years have distanced the beautiful lay,
And its melody floweth from far away,
And we call it now Old Times.

—*National Freemason.*

Worldly Organizations.

In every community there are a great many societies and organizations of various sorts, and instituted for various purposes. There are the political organizations, military and fire companies, the various secret societies and beneficial orders, etc., etc. Many of these have good and proper ends in view, and in a sense are necessary adjuncts to the welfare of society. But, like most other things which may be proper in themselves, they are liable to be made the occasions of sin and wrong. This is the case, for instance when any of these parties, societies, etc., are made a substitute for the Church of Jesus Christ. The Church is never to be compared with them, for it is not a beneficial society, nor an organization simply to promote friendship, etc., but the Christian Church is a band of people who acknowledge themselves to be poor, lost sinners, and who are trusting in the merits of Jesus Christ to save them. It is an institution which God and not man has established. The man therefore who stands aloof from the Church because he belongs to this or that society or order, is making his society, or order, the occasion of his eternal destruction, for God knows only one society, that which He Himself established.

In all these worldly organizations, also, we find many church members. Such, above all others, must be exceedingly careful they do not make their organizations the occasions of sin. Too often such persons cherish a stronger love and attachment to their party or society than to the Church which Christ loved. They often attend their meetings to the neglect of those which Christ requires of the Church in His word. If a political party, or a fire company, or a lodge holds a meeting at the same hour when the church may have some service, which gets the preference, the worldly society or the society of Christ? Alas! alas! that the world should have preference over Christ so often, among people who profess to have *renounced* the world and consecrated themselves to Him! Can we expect Him to confess us in Heaven, if thus we deny Him on earth, whenever He and the world come into collision? Many also will defend their party or society, or work for it, or give large sums to it, who do very little in either direction for the Church. Now we need not say this is wrong. Every man who has a conscience, or reflects for a moment, knows it well enough. No man can serve two masters. Therefore make Christ your master and the world your servant. Let our motto be, Christ and His Church first, always, and at all times; or, to use His own words, "Seek ye *first* the kingdom of God and His righteousness, and all these things, viz: the benefits received from worldly organizations, shall be added unto you."—*Philadelphian.*

The Author of "The Raven."

"My friend would be he who would take a pistol and blow out my brains, and thus relieve me of my misery."

So said Edgar Allen Poe. His lips curled bitterly. These were his dying words.

Such was the unhappy state of one whom dissipation had robbed of the pure enjoyments of life, and brought to hopeless ruin. He had been reared in the most elegant society, and educated in the most polished schools. He possessed poetic gifts of unwonted beauty and brilliancy. The productions of his muse were few and fragmentary, melancholy prophecies of what he might have been—but they made him a marked man among the lovers of poesy throughout the world. He lacked symmetry of character, and with all of these advantages that he possessed over others, he was wayward as a youth, passionate in maturer years, and always unmanned at the sparkle of the intoxicating cup. He blazed a while in the literary firmament the "comet of a season," but he left behind him an unworthy influence, a reproachful memory, and the admonition of a fearful end.

He was making a journey when his death occurred, and he was occupied with preparations for his wedding day. Better impulses warmed his heart and mollified his passions at the thought of his nuptials, and as the sunlight of the future gladdened again the vision of his mind. Golden days filled his fancy—days of the tenderness of conjugal love and the sweet habitudes of domestic bliss.

He stopped at the city of Baltimore. He met old companions, jolly fellows with whom he had passed convivial hours. The intoxicating cup glittered before him. The temptation was too great. He would spend one more revel ere he entered that purer sphere depicted in his dreams.

That cheerless November night he was found lying on the street, stupefied with drink, covered with dirt, and his face distorted with horror. His jovial companions had deserted him. He was taken to a hospital. A fearful dream arose upon him and fired his brain. Delirium, with her thousand demons, darkened his intellect, once beautiful with airy thought and poetic fancies. *Mania a potu* ensues. A clergyman is sent for. "Shall I send for your friends?" asked the pious man.

"Friends!" said the dying man, as though the word was a mockery, "my best friend would be he who would take a pistol and blow out my brains, and thus relieve me of my misery."

We hear men cavil at religion. What a treasure, beyond all estimate, early piety would have been to the soul of poor Edgar Allen Poe!—*Rescue.*

The Higher Christian Life.

However men may differ respecting the propriety or impropriety of using the phrase which heads this article, all nevertheless agree that the Church of Christ must have as a body a higher style of living and of doing than it now has, before it shall fulfil the predictions of the sacred Word respecting its glorious triumphs over the hosts of darkness.

The power of the Church, or of a church, is directly in proportion as it is filled with a spirit of love, and controlled by the mind of Christ. When it is endued with power from on high, no opposition formed against it can prosper or even stand. But if it be ruled by a low, worldly, calculating and servile expediency, and studies how it may give the least offence to pompous wealth or brainless fashion, while laboring to maintain the external forms of periodic devotion, then, for all Christian purposes, it is no better than Ephraim's half-baked cake.

There is, we fear, a gross misconception in the minds of many members of churches as to the nature of personal piety. They have been under-educated or shockingly mis-educated with respect to the evidences of conversion. They appear to think that the standard of Christian duty has been lowered and is not more than half so high as it once was. Beguiled by this delusion, they settle down into a dull, stagnant, inert slothfulness which declines every task savoring of self-denial, and every duty demanding energetic action. They are contented to hear, but have little or no conscience prompting them to do. The promises of the gospel are to them exceedingly great and precious; its comforts most delicious; it joys unspeakable; but they utterly forget how it is written, "If any man will come after me, let him deny himself, and take up his cross and follow me. For whosoever will save his life shall lose it; and whosoever will lose his life for my sake shall find it."

Where there is not a surrender of the whole life—of mind, body and estate—to the control of the Lord Jesus Christ, can there be a full conversion, according to the terms of the infallible teacher? And if many have once been only half converted, is it not high time for them to awake and come to a full knowledge of the truth that they cannot serve God and Mammon, Christ and Belial, the world and the Church at the same time?

The age demands a Christianity that shall no longer amuse itself with idle indulgences, but put on the whole armor of righteousness, and contend in the high places of the field for God and his cause. —*Lutheran.*

The Transplanted Flower.

One pleasant morning in the Spring-time, when the birds were singing a welcome to the flowers that first unfolded their delicate petals, a gardener gave me a little plant. He told me to place it in my nursery and take care of it for him. And then he said that after a while he would come to take it again, plant it in his own ground, and take care of it himself. I received the gift with a thankful heart, and planted it in my nursery. There it was my constant care. When night approached, fearing that the frost might touch the little thing, I placed my own garment over it.

Thus my little plant grew day by day. By and by it began to bloom, and I thought I had never seen such beauty. The flower seemed like a part of myself, I loved it so. I could sit and watch it playing with the breeze and never grow weary.

But the gardener came. I knew his object when I saw him coming, and I could not greet him as before. He came to take my flower, my precious, lovely flower. I knew it was his, and that I had no right to refuse when he asked me for his own; but oh! my affections had twined very strongly around the little flower, and it seemed hard to cut them loose.

I gave him what he asked for. It cost me a struggle; but it is over now and I rejoice. For in the garden above, where my flower is planted, there are no rude winds or nipping frosts. And the gardener told me that some day soon, I should be admitted where my little plant is to bloom forever.

Friends long separated here, may be re-united in the better world, where there are no tearful partings. Our loved departed are not lost, only gone before. At the shining gates they stand to welcome us home. —*Presbyterian Banner.*

True Now as Then.—That common-sense philosopher, Dr. Franklin, in his day, refuted an objection against a large taxation, by showing that our heaviest taxes are not imposed by government. In his "Way to Wealth" he represents a plain, clean old man, with white locks, called "Father Abraham," as being asked, "Will not these heavy taxes quite ruin the country? How shall we ever be able to pay them?" Father Abraham replied:

"Friends, the taxes are indeed very heavy, and if those laid by the Government were the only ones we had to pay, we might the more easily discharge them; but we have many others, and much more grievous to some of us. We are taxed twice as much by our own idleness, three times as much by our pride, and four times as much by our folly; and from these taxes the commissioners cannot ease nor deliver us by allowing an abatement. However, let's hearken to good advice, and something may be done for us. 'God helps them that help themselves,' as poor Richard says."

Quarreling.—If anything in the world will make a man feel badly, except pinching his fingers

in the crack of the door, it is unquestionably a quarrel. No man ever fails to think less of himself after it than before. It degrades him in the eyes of others, and, what is worse, blunts his sensibilities on the one hand, and increases the power of passionate irritability on the other. The truth is, the more peacefully and quietly we get on, the better for our neighbors. In nine cases out of ten, the better course is, if a man cheats you, avoid him; if he is abusive, quit his company; and if he slanders you, live so that nobody will believe him. No matter who he is, or how he misuses you, the wisest way is to let him alone; for there is nothing better than this cool, calm, and quiet way of dealing with the wrongs we meet with.

A Loving Rebuke.—John Howe once observed two men in a violent passion. Their mutual cursings shocked his religious sensibilities. He looked at them, raised his hat, and said in a solemn voice:

"I pray God to bless you both!"

This prayer so impressed the quarrelsome men that they ceased their strife, and thanked Mr. Howe for his supplication.

Young Folks.

Your Folks are Poor.

Years ago, when I was a boy, it was customary, and is now to some extent among school districts in the country, to have spelling-schools during the winter term. These gatherings were always anticipated with great interest by the scholars, as at these times it was to be decided who was the best speller. Occasionally one school would visit another for a test of scholarship in this regard. Ah, how the little hearts would throb, and the big ones thump, in their anxiety to beat the whole.

Once on a time, a neighboring school sent word to ours, that on a certain afternoon they would meet in our school-house for one of these contests. As the time was short, most of our studies were suspended, and at school and at home all heads were studying to master the monosyllables, polysyllables, abbreviations, etc., which the spelling-book contained.

At length the day arrived, and as our visitors were considered rather our superiors, our fears and anxieties were proportionately great. The scholars were arranged in a standing position, on opposite sides of the house, and the words pronounced to each side alternately, and the scholar that "missed" was to sit down. His game was up.

It did not take long to thin the ranks on both sides; in a short time our school had but eight on the floor, and theirs but six. After a few more rounds, the contest turned in their favor, as they had four standing to our two. For a long time it seemed as though these six had the book "by heart." At length the number was reduced to one on each side.

Our visitors were represented by an accomplished young lady, whose parents had just arrived from town, and ours by myself, a ragged little boy of ten summers, who had sat up night after night, while my mother, with no other light than that produced by pine-knots, pronounced my lessons to me. The interest of the spectators was excited to the highest pitch, as word after word was spelled by each. At length the young lady failed and I stood alone. Her teacher said she could not have understood the word. She declared she did; that the honor was mine and I richly deserved it.

That was a proud moment for me. I had spelled down both schools, and was declared victor. My cheeks burned, and my brain was dizzy with excitement.

Soon as school was dismissed, my competitress came and sat down by my side, and congratulated me on my success, inquired my name and age, and flatteringly predicted my future success in life.

Unaccustomed to such attention, I doubtless acted as most little boys would under such circumstances—injudiciously. At this juncture, Master G., the son of a *rich man* in our neighborhood, tauntingly said to me, in the presence of my fair friend and a number of boys from the other school:

"Oh, you needn't feel so big! Your folks are poor, and your father is a drunkard!"

I was happy no more—I was a drunkard's son—and how could I look my new friends in the face? My heart seemed to rise up in my throat, and almost suffocated me. The hot tears scalded my eyes, but I kept them back. As soon as possible, I slipped quietly away from my companions, procured my dinner-basket, and unobserved left the scene of my triumph and disgrace, with a heavy heart, for my home.

But what a home! "My folks *were* poor—and my father was a drunkard"—But why should I be reproached for that? I could not prevent my father's drinking, and assisted and encouraged by my mother, I had done all I could to keep my place in my school, and to assist her in her worse than widowhood.

Boy as I was, I inwardly resolved never to taste of liquor, and that I would show Master G., if I was a drunkard's son, I would yet stand as high as he did. But my resolves could not allay the gnawing grief and vexation produced by his taunting word and haughty manner. In this frame of mind I reached home, my heart aching, my eyes red and swollen.

My mother saw I was in trouble, and inquired the cause, I buried my face in her lap, and burst into tears. Mother seeing my grief, waited till I was more composed, when I told her what had happened, and added passionately, "I wish father wouldn't be a drunkard, so we could be respected as other folks."

At first mother seemed almost overwhelmed, but quickly rallying, said:

"My son, I feel sorry for you, and regret that your feelings have been so injured. G. has censured and taunted you about things you cannot help. But never mind my son. Be always honest; never taste a drop of intoxicating liquor, study and improve your mind. Depend upon your own energies, trusting in God, and if your life is spared, make a useful and respected man. I wish your father when sober could have witnessed this scene, and realized the sorrow his course brings on us all. But keep a brave heart, my son. Remember you are only responsible for your own faults, and don't grieve for the thoughtless and unkind reproaches that may be cast on you on your father's account."

This lesson of my blessed mother, I trust, was not lost on me. Years have gone since that day, and I have passed many trying scenes, but none ever made so strong an impression on my feelings as that heartless remark of G——. It was so unjust, so uncalled for. Now, little friends, always remember to treat your mates with kindness. Never indulge in taunting remarks toward any one, and remember that the son of a poor man, and even of a drunkard, may have feelings as sensitive as your own.

But there is another part of this story. The other day a gentleman called, and asked if I did not recognize him. I did not.

"Do you remember of being at a spelling school, at a certain time, and a rude, thoughtless boy twitted you of poverty, and of being a drunkard's son?"

"I do most distinctly," said I.

"Well," continued the man, "I am that boy. There has not a month passed since then but I have thought of that remark with regret and shame. And as I am leaving for another country, perhaps to end my days, I could not go without asking your forgiveness for that act."

Boys, I gave him my hand as a pledge of forgiveness. Did I do right? You all say yes. Well then, let me say again, my little friends, never twit another for what he cannot help.—*Western Rural.*

The Love of Gaming.

"Charley Rogers plays marbles for keeps, mother, and he certainly cannot care anything about them, he has so many things of his own, and all the money he wants to buy things with."

"He may care about those he wins, for all that," said mother, "if he allows avarice to take possession of his heart. You remember that elephant we saw at the menagerie, Walter. Was it an hundred pounds of hay the man said he ate every day, besides a bushel of grain, with a great tub of water? He is an enormous feeder, and yet you saw how eagerly he groped about with his trunk after the crumbs of cake and the peanuts the boys threw down in the straw for him. With the same trunk he picked up the great wisps of hay, drew up the gallons of water, and picked up the tiny nuts and apple cores."

Just so it is with these little gains to the avaricious person. When you begin to heap up things just for the sake of owning them, you begin to feel a fire that nothing but the grace of God can put out. The more you feed it, the fiercer it burns. The more you get, the more you want.

There is hardly any habit that grows upon one faster than a love of gaming. If you play for marbles, you will very soon learn to play for other things, and then for money. The gambler usually loses his interest in every thing else but his game. He will use his utmost arts to draw any one into his snare who has money, and then when it is all won away, he will coolly push him aside to make room for another victim. He cares nothing for the poor mother and childen left penniless, that his gains may be greater. He cares nothing if the distracted man he has robbed goes away to a suicide's death.

But God marks all these, and just his share of the guilt is surely charged to his account. He often punishes, even in this life, such evil workers. It is a rare thing, indeed, for a gambler to die rich. They are often reduced to great want and distress in their last days, dying alone and friendless, frequently by their own hands. Shun the first steps, Walter, and you will be safe from this sin. Never touch cards, even to build card houses with, or to play little tricks or games. I hope you may never become familiar with even their names or appearance.—*Presbyterian.*

Dying Sister.

Little Anna lay in bed, near the window. The deep flush of fever was on her cheeks. In the same room was her brother Robert, busily engaged in making a ship. His poor sister could ill bear the noise of the hammer, but he worked on as though he did not trouble himself much about her. Was he not an unkind boy?

"Do, please, dear Robert, give me a glass of water! My throat is so dry, and my head aches so very much," said Anna, in a gentle voice. Again was the loud knocking of the hammer heard; and once more Anna begged for a glass of cold water, when Robert called out sharply—

"Wait a minute, Anna; I can't fetch it yet." At last he poured out a glass, from a jug which was warm with standing where the sun shone brightly upon it.

"Oh, not that water, Robert; please fetch me a little fresh and cool from the spring."

"Don't plague me so, Anna, you see how busy I am. I am sure that this water is quite good enough."

Knock, knock, went the hammer again.

"Oh, my poor head," said the invalid, softly, as she took the glass, drank a little, and lay back on the pillow.

That was *the last time* that Anna asked Robert for a proof of brotherly love. The next day she died; and as the little coffin stood in the room ready to be carried to the grave, no one shed more bitter tears than the little boy who would rather have his own selfish way than listen to the wishes of his dying sister.—*United Presbyterian.*

Valuable Property.—One very busy day Johnny was sent to school to be put out of the way. At night he came home and jumped astride of his mother's lap.

"Ma, what did you do to-day without no pud-muddle and Johnny to wade in it?"

"I missed you," his mother said.

"Ha! you'll find out how much worth I am in this house."

NEWS SUMMARY.

PACIFIC COAST ITEMS.

THE *S. F. Chronicle* has been investigating the management of the City and County Hospital, and makes disclosures, apparently well founded, not very creditable to some of those who have charge of that institution.

IMMIGRATION to our coast will probably receive a new impulse. A dispatch was recently received in Chicago from this city, containing the information that for *two days* we had had no earthquakes.

LARGE numbers of thieves and desperadoes are moving west along the line of the railroad, being driven from the eastern towns by vigilance committees.

THE *London Illustrated News* published an engraving of the San Jose Court House, taken from a photograph forwarded by a subscriber in San Jose.

THE Chinese are rapidly becoming civilized. One of them became a bankrupt at Oroville, recently. His liabilities amount to nearly $15,000.

THE sum of $89,500 has already been subscribed in Stockton for the Tulare Railroad, and the sum will be soon increased to $100,000.

THE Electors of this State cast their vote on the 2d inst., appointing Westmoreland as messenger to Washington.

SUBSCRIPTIONS are being taken in all the neighboring towns for the relief of the sufferers in San Juan.

THE Central Pacific Railroad has crossed the South Fork of the Humboldt, 437 miles from Sacramento.

THE cost of the snow sheds now being built over the railroad in the Sierras is about $8,000 per mile.

THE *Union* boasts that San Diego has not yet had a shock of earthquake or a case of small-pox.

A MAN who was expelled from a Methodist church in this city has sued the pastor for damages.

THE Indians have commenced tearing up the track on the Union Pacific Railroad.

MORE than 2,000 olive slips will be cut in San Diego County this season.

THE M. E. parsonage at Woodbridge was destroyed by fire on the 1st inst.

THE cars are now running on the Wilmington and Los Angeles Railroad.

THE Female College of the Pacific is closed for a six weeks' vacation.

SLATE of good quality is being taken from a quarry at Copperopolis.

A PAPER to be called the *News* is about to be published at White Pine.

THE Indians call the Central Pacific trains "heap wagon, no hoss."

THE *Mercury* boasts of the prevalent good order in San Jose.

FOUR steamers run daily between Portland and Oregon City.

THE fare on the railroad from Napa to Calistoga is $1 50.

A FENIAN CONVENTION was held in this city last week.

THEY have an evening school in Sacramento.

THE population of Grass Valley is 4,100.

TELEGRAPHIC.

EASTERN.—A meeting of business men has been held in Chicago for the purpose of taking measures to open trade with China *via* San Francisco....They had a severe snow storm in New York on Thanksgiving Day. In Boston it was rain....They have had a slight earthquake in Massachusetts. ....The tunnel under the river at Chicago was lately broken by an anchor which dragged over it....920 miles of the Union Pacific Railroad have been completed....Attorney-General Evans has decided that Government officials may do as they choose about paying 8 hour men for 10 hours' work. ....A fresh war bids fair to break out between the rival express companies in New York....One of the Erie receivers has absconded with $8,000,000.

SOUTHERN.—The courts and Legislature of Florida are still busy with matters pertaining to the impeachment of Gov. Reed....The Republican State Convention of Mississippi met in Jackson on November 25th....Jesse Thompson has been arrested at Vicksburg for the murder of Gen. Hindman.

POLITICAL.—A Democratic mass meeting, to ratify the municipal nominations was held at Tammany Hall on the 27th of November...Seymour's official majority in Kentucky is 76,320....Stanton and Sherman say they will not accept a position in Grant's Cabinet.

PERSONAL.—Gen. Sherman will deliver the address of welcome at the soldiers' reunion, to be held at Chicago on the 5th inst....John B. Gough lately celebrated his silver wedding....Thurlow Weed is in poor health....Capt. E. W. Thompson was shot in Arkansas for voting for Grant. ....Schuyler Colfax is receiving much attention in New York....Parepa Rosa has arrived in Chicago....Garibaldi is coming to America....Gen. John O'Neil has been elected President of the Fenians....Commodore Kearny is dead.

FOREIGN.—The new postal convention with Great Britain has been signed by the President, and goes into effect on January 1st....The British Legation will, it is said, demand pay for the damages sustained by British subjects in the South during the rebellion. This is to be an offset to the Alabama claims....57 lives were lost by the explosion in the Arley Mines....It is rumored that another attack will be made on Rome by the Italians....It has been decided to establish a monarchy in Spain....Napoleon's health is, as usual, failing.

SPECIAL NOTICE.

HEUSTON, HASTINGS & Co., at their extensive establishment in Lick House Block, San Francisco, keep constantly on hand, and will sell at low rates, at wholesale and retail, a great variety of Fashionable Clothing for men and boys; also, Gentlemen's Furnishing Goods of every description.

Simple announcements of Marriages or Deaths inserted free of charge. Additional matter, such as Obituary Notices, or Poetry, inserted at the rate of ten cents per line.

MARRIED.

On November 24th, by the Rev. A. Fairbairn, WILLIAM MARTIN, of Santa Rosa Valley, and MISS CATHARINE MORROW, of Two Rock Valley, Sonoma County.

The Sabbath at Home

IS THE ONLY ILLUSTRATED RELIGIOUS MAGAZINE published in America. It employs the ablest Pens and Artists in giving interest to the *Study of the Bible*. It is, in a large measure, a YOUNG PEOPLE'S MAGAZINE, and every month there are Illustrated Bible Recreations for the YOUNG, and older Bible students. Price $2 00 a year.

SMITH'S BIBLE DICTIONARY

Will be sent FREE for six new subscribers.

LANGE'S COMMENTARY

Is a work for Biblical Students of all denominations. Price $5 00 a volume. Seven volumes are now ready, and will be sent to any person sending FORTY subscribers, or either volume for SEVEN subscribers.

THE LITTLE CORPORAL

Is one of the best Magazines published for boys and girls—sent free for one year for TWO new subscribers.

Our Premium List also contains

ELEGANT GIFT BOOKS

Suitable for Holiday Presents, and beautifully Illustrated Books for the young. Also, Maps of Palestine, Picture Cards and Books for Sunday Schools. We offer SEVEN EXTRA CASH PREMIUMS, the highest being

FIFTY DOLLARS

for the largest club for 1869.

ALLEN'S ORIGINAL AND GENUINE

Nerve and Bone Liniment.

The Nerve and Bone Liniment was originated by Geo. M. Allen, in the year 1834, and has lived entirely on its own merits without the aid of advertisements; but owing to the many counterfeit and worthless articles called Nerve and Bone Liniment, now upon the market, has induced the proprietors to advertise it. Many certificates of leading citizens who have used and constantly keep it in their houses, as a great family remedy, could be added to the advertisement, but knowing the many virtues of Allen's Nerve and Bone Liniment, and that one application will satisfy any one of its beneficial effects, deem it unnecessary to bring the certificates before the public. Allen's Nerve and Bone Liniment does not effect a cure in a minute, but acts upon the Nerve and the Bone of the patient by its penetrating properties, when used according to the directions on each bottle, and gives new strength to the parts affected, and thus acts as an agent in helping nature to restore the diseased parts to health. It is also invaluable in all diseases of horses.

Be sure to call for Allen's original and genuine Nerve and Bone Liniment, all others are worthless counterfeits, and should not be tolerated by the public.

CURRENT TOPICS.

Disraeli accepts the decision of the people upon the questions submitted in the late election as a judgment against his policy as Prime Minister, and has announced his resignation. He does not admit that he is wrong, but insists that the people are wrong, yet knows that the lack of harmony between himself and the majority of the new House of Commons would embarrass all departments of the government. The political papers of England comment upon this course according to their various sentiments on the questions involved, though all agree that it is unprecedented. It can scarcely be that Disraeli will consent so easily to pass out of public life, or that his ambition is quenched by this failure to carry his measures. He will bide his time, and when events shall favor his resumption of power, no doubt that the mighty mind that has made itself so prominent in British councils will again make its power felt. We need not fear, however, that the change in the popular sentiment just expressed will be reversed. The people are now the leaders, and the ministry must heed their will and shape their course according to their verdict, or be left in the rear. The issue was fairly presented, and fully discussed, and the advance it indicates will be permanent.

The oft-repeated theme for newspaper articles and general conversation, the Pacific Railroad, loses none of its interest. On the contrary, as the time draws near when it will be completed, all classes of persons and all departments of business seem to become identified with the great enterprise. It must be that the Central Road is regarded by those who manage its affairs as beyond danger of defeat in the race across the plains, even though they do not confine their whole attention to that portion of the works, for they have recently placed a large additional force upon the Livermore Pass in the Coast Range, and it is said that more men will soon be employed on this end of the line. The prophecy which was regarded as wild a year ago, that a train of cars will run through to New York by January 1, 1870, is now treated as the utterance of an old fogy, and we are assured that as soon as June next a train will be waiting for passengers. If the Road is thoroughly built, it cannot be finished too soon, marvelous as is the rapidity of its progress.

Congress has again assembled, and it is likely that before the session closes all of the States lately in rebellion will be represented in it. The outline of business may be easily determined, and there will be less delay than usual in disposing of it, because there is less occasion for the manufacture of political capital on the part of the members. The Message of the President makes as satisfactory an exhibit of public affairs as we could expect, especially with reference to our foreign relations. There is reason to hope that the difficulties with England will be adjusted soon, notwithstanding the disapproval of some parts of the basis prepared by our Minister, and the resignation of the British Ministry. The President calls particular attention to the unsetted condition of the Indian tribes on the plains of the West, and the inference from his remarks is that he advises a vigorous prosecution of war, in all cases where the Commissioners are unable to obtain reliable assurance of peaceful designs. Congress will expire March 4th, 1869, when the new administration will be fully inaugurated.

The youth who learned Greek by climbing a lamp-post, and holding himself up to the light with one hand while he held his book with the other, would have been well-nigh beside himself with joy, had he possessed the facilities for education enjoyed by the young of this city. In addition to the excellent day schools that have been our pride, we have now as excellent a system of evening schools, for those who are not able to attend in the day. Clerks, apprentices, all who are occupied with the work by which they gain support during the hours of labor, foreigners and natives, can meet in beautiful, well-ventilated rooms, under the tuition of accomplished instructors, and receive all the education they need for success in any department of ordinary business, without expense. These schools are in every respect an honor to our city. They are attended by nearly 500 pupils, among whom all classes are represented; they are orderly and studious, and the progress made by all is very encouraging. No young man who has failed to gain a respectable education in boyhood, should fail to avail himself of these advantages, which are so free, yet so valuable. We are surprised to learn that the cost to the city, of supporting these schools is only one dollar a month for each pupil. They are a cheap substitute for those other institutions in which we are obliged to support so many victims of ignorance and vice.

Another fearful collision of steamboats on the Ohio River bears its further testimony to the risk we run when we give our lives into the hands of those who control the means of public conveyance. Both the boats were burned in a few minutes, one of them being loaded with petroleum, and between 60 and 70 lives were lost, and the short account of the cause of the dreadful disaster is that there was "some mistake in the whistles!" As travel increases, making the multiplication of boats necessary on our own inland waters, we shall be more and more exposed to like peril. Indeed, there was a collision on the Sacramento River but a few weeks ago, with great danger to all, and with the loss of at least one person. Most stringent laws should perpetually remind men of their responsibility when they undertake to convey us from place to place, for familiarity with agents that may work terrible havoc seems to cause them to forget the danger, or to be reckless respecting it, till "a mistake in the whistles" may send scores or hundreds of souls into eternity in a moment.

While some men will forever have occasion to regret that they had large wealth on earth, there are a few who will forever rejoice that, having the disposition to do all in their power for the relief and benefit of their fellows, they were permitted to have money enough to do much. There is no class of men who deserve more honor than those who nobly use large sums of money, for the reason that the possession of money generally contracts the heart and renders one more selfish, in proportion to the amount he has gained. That a man should employ great abilities, or great influence, or a great reputation, in support of what may bless his race, is often a suggestion of selfishness. But this is rarely true of one who gives large sums of money for this purpose. He always gives what cost him something. A year or two ago, George Peabody gave £100,000 to the poor of London. Since that time, he has donated various immense sums to other benevolent objects, and we are now informed by telegraph, that with the coming on of winter he has given £100,000 more for the poor of London. May his coffers never fail, and may his heart never hesitate to use their contents for purposes that honor the donor, and do good to others!

We have received accounts of the National Christian Convention held in New York last month, from which we would be glad to make extracts, were it not difficult to select from such a mass of matter that is excellent, what may be adapted to our space. The effect of the Convention was inspiring, and will be felt long after its adjournment. A similar meeting held in this city would contribute directly, and we believe powerfully, to the spiritual welfare of our population on this coast. We trust the effort will be made to have one during the coming year.

The religious condition of this side of the continent should awaken the serious concern of all Christians. Along the line of the railroad, as it advances, and in the lower counties of this State, especially, population is rapidly increasing, towns are springing into existence, society is taking form; yet in most of the communities there is no regular public worship of God, and in many of them religion is not recognized. The late canvass of the State by the California Bible Society reveals the startling fact that one family in ten is without any portion of the Bible. In the mining districts churches are waning because of the floating character of the residents, and because of the open disregard of God that is so general among miners. Revivals of religion are reported in

but few churches of any denomination, while infidelity, in its refined forms of materialism among the intelligent, and in its grosser forms, whose name is legion, among the ignorant, is becoming organized in many places, and is greatly encouraged with the prospect. There is necessity for more attention to the general spiritual state of our people, and for earnest prayer to God that He will send upon us the reviving and converting influences of His grace.

Religious Intelligence.

PACIFIC COAST.

Methodist.—The *California Christian Advocate*, the organ of the Methodists in this State, is to be enlarged at the commencement of the next year. The publisher and editor have concluded to follow the advice of *Zion's Herald*, the leading Methodist paper in the East, and adopt for their paper the form of The Occident. They show good taste in choosing a model, and we doubt not that by this measure they will greatly increase both their subscription list and the usefulness of the paper.

From the last number of the *Advocate* we take the following information: The M. E. Church has in California 5,309 members, with 876 probationers; in Oregon, 3,416 and 989 probationers; in Nevada, 307 and 137 probationers. This makes a total membership of 11,054 on the Pacific Coast. There are 195 regular and 176 local preachers, and 138 places of worship, worth $576,100. The increase of church members during the past year has been 1,084.

A new Methodist Church was dedicated in South Salem, Oregon, on the 15th ult. A great revival is in progress at Albany.

The Ministerial Union.—The meeting of this body of ministers residing in San Francisco and its vicinity, held last Monday, was one of the largest and most interesting that we have attended. In addition to the usual exercises, resolutions were passed expressing the feeling of his brethren in view of the removal of Rev. Dr. Thomas from his pastoral relation to the First Baptist Church, and preparations were made for a union meeting in some central locality on Monday of the Week of Prayer, the first week in January.

This pleasant association of Christian brethren has many advantages, and they seem to be realized by all who compose the body. Both the pleasure and the profit would be increased if all the pastors of the city would habitually attend its meetings. After the regular duties were ended, a bountiful refreshment table, spread by some of the ladies of Dr. Scudder's church, on behalf of Rev. Mr. Woodworth, who was the host of the occasion, afforded a delightful opportunity for a half hour's social intercourse.

Benevolent Association.—During the month of November 563 persons have been assisted, at a cost of $2,131. Demands upon the charity of the Association will be greatly increased during the winter months, the applicants being mostly women and children. Donations of all kinds will be thankfully received.

The *N. Y. Independent* says: "If a Chinaman wishes to escape from missionary and Christian influences, his safest course is to migrate to New York or San Francisco;" and adds: "How long shall it be true?"

A Strange Item.—The last number of the *Pacific* contains the information that "Rev. F. Buel will give to the public, in book form, the substance of the series of articles which has appeared in the *Pacific* formerly, but more recently in The Occident, on the subject of the new Baptist version." This appears very much like a polite way of accusing the author of the articles in question, of a highly dishonorable action, in having palmed off on us as original, a series of articles which had already appeared in another paper. Mr Buel states that neither this series nor any other on the same subject, from his pen, has ever been published in the *Pacific*. In view of this statement, the meaning of the above quoted paragraph is not clear. It needs explanation.

Donations.—On the night before Thanksgiving, the people of Haywood assembled at the residence of Rev. B. N. Seymour, and after spending the evening in a pleasant way, left gifts worth $250, among which was a new pipe—for the pastor's chimney which had been thrown down by the earthquake.

Rev. Mr. Alexander of San Leandro, has also lately been the recipient of a donation from the people of his charge.

On Monday evening last, Rev. J. P. Moore received a donation from his friends in this city.

Episcopalian.—Bishop Kip, of California, says that when he landed in that State, 15 years ago, the Romanists had already three Bishops in the country and one Archbishop, and many active priests, while there was but one Episcopal clergyman, and he officiated in a small wooden building in San Francisco. Now there are 7 Episcopal churches in that city and 43 in the State, as well as a Theological Seminary for the training of the ministry.—*Christian Instructor.*

Repairs.—The Churches at Santa Clara and San Jose which were damaged by the earthquake, are being repaired as rapidly as possible, future occurrences of like nature being guarded against by the free use of iron rods.

The Congregational church on Taylor Street, in this city, is being repaired, no service was held there last Sunday.

Accepted.—The Presbyterian church at Sacramento have accepted the resignation of Rev. J. S. McDonald, expressing by resolutions their regret that the state of their pastor's health makes his dismissal necessary, and recommending him to the confidence and support of other churches, in more healthy localities, which may be in want of a pastor.

Memorial Chapel.—The Catholics will build a chapel at Sacramento as a memorial to the late Father Cotter. It is to cost $4,000.

Howard Presbyterian Church.—Thirteen persons were received as members of the church on last Sunday.

Benicia.—The Congregational Church were to dedicate their new building on Thursday evening, 10th inst.

EASTERN.

National Christian Convention.

We make the following extracts from a report of the proceedings of the Convention published in the *N. Y. Tribune:*

The first session of the National Christian Convention was held in the different churches in New York City, commencing with the Reformed Protestant Church, corner of Fifth Avenue and Twenty-ninth Street. The attendance was good. A prayer-meeting was held previous to the opening of the meeting.

The first topic was, "How can the Christian activities of the entire membership of any particular Church be best organized and developed?" and the discussion was opened by the Rev. J. T. Duryea. He said that proportionately the Gospel did not go to the people in the country as in the city. Something is wrong. If the Church of New York were to go to work in the spirit of God, every man, woman, and child in the city would know of the Gospel in twenty-four hours. It is better that some one outside of the Church should take the shew-bread out from the sanctuary and spread it over all the world, rather than have the people perish. The speaker did not believe in an exclusive priesthood. He exhorted his hearers to go back to their churches asking the help of their lay members in spreading the Gospel.

Upon the topic, "How and by whom can open air services be held most profitably?" Mr. Moody said: Any one who loves the salvation of his fellow men can preach in open air. The London Butcher, Henry Varley, is one of the greatest of out-door preachers. Out West, some of the best preachers are farmers. The Gospel first commenced by common men telling the story of the Cross, or giving a history of their own conversion. Christ called the very last persons that we would have thought of to preach the Gospel. The Lord called Elijah from behind twelve yoke of oxen, and told him to go to work for Him. Richard Weaver is doing a wonderful work, yet a few years ago he was a poor drunken sot. To-day the world is perishing for the want of Christ on earth, and in men's hearts. No Bishop is required to lay his hands on a man before he can preach. The Spirit of God is all that is necessary. Bishops are good, but what shall we do when we cannot get them out to preach among the poor? A chandelier is good, but a tallow candle is better than no light at all. "I," said Mr. Moody, "would rather preach in a vacant lot than preach to a church full of empty pews." [Applause.] Ned Carter could get a theater packed with thieves to hear him preach that no one else could touch.

The subject of "Woman's Work in the Church" was discussed. Mr. McDougall said the strength of the Catholic Church lay in the sisterhood which it had established. We should adopt all the advantages of the female department of the Catholic Church, leaving out the disadvantages. Mr. Trask of Massachusetts, said that notwithstanding the words of Paul, the orthodox folks were beginning to believe that a woman had a right to breathe, sing, and even speak in church. If they are not to talk, they should not be allowed to sing.

In speaking on the topic, "Why do so many Churches fail to reach the poor?" Dr. Waterbury of Brooklyn said, the key-note of Christianity was free religion, and he hoped the Free Church system would finally prevail. Christ set an example, which the Christians of this age would do well to follow. As ministers of the Gospel, we must go out ourselves and preach to the poor. One good sermon on the Sabbath is enough, and the rest of the day should be devoted to those who cannot go to church. Dr. Crosby said that in our anxiety for the poor we must not forget the rich. The rich of New York are worse heathen than the poor. We want to get at the rich. The only way to solve this question is, have the pew rents reduced to a small sum. In my church, said he, all come, both the rich and the poor. Dr. Blair said amen to what Dr. Crosby advocated. Dr. Trimble, of the Chapel of the Ascension, N. Y., said that the idea of building chapels and calling them mission chapels was a disgrace. We want to blot out this stigma which has been put on Christ's churches. [Applause.] The line of demarcation should be obliterated, and the poor made to feel that they are brothers and sisters in Christ Jesus.

Concerning the "Work of Young Men's Christian Associations?" Mr. Moody said that the great work of the Young Men's Christian Associations was to sweep off from the face of the earth Sectarianism. [Great and loud applause and cries of "Amen."] What we want to do is to fuse, to gather, not freeze. [Applause.] When I first joined the Church, said he, I thought all the religion in the world was in my Church or denomination; but now I begin to find out that there is some Christianity even in the Presbyterian Church. [Great applause.]

Rev. Henry Ward Beecher spoke as follows on "How to Make the Week-Day Meetings of the Churches Effective for Spiritual Purposes:" People should not come to prayer meetings to please themselves alone, by hearing good speaking, but should be glad to aid and encourage others. Sociability is a necessary element of prayer meetings. Many think that the priest should teach, but it is also true that the brotherhood should teach. Taste in speaking is good, but sincerity and fervor are better. Grammar is good, but something for grammar to carry is better. Get men to think what they feel, and say it. The mistakes of a child's prattle are entertaining, and so should be those of a church brother. Prayer meetings should be conducted in a conversational way, and the true prayer meeting takes place often when people gather round the stove, after the regular prayer meeting breaks up. A Church is a family, and should be conducted on the principle of household familiarity. Prayer meetings should be in small rooms, if the assemblage is small. A scattered audience is not receptive, and there is great power in contiguity. They should sit together. The speaker said he began his first meetings with but a few persons, and they now average 800, after 21 years of experience. During the first 5 years very few attended.

The Rev. Dr. McCosh of Princeton College, expressed his gratification at the good results of the Convention. The deep feeling which was manifested was an evidence that earnest Christians of every class and condition are coming forward to engage in the work of their Lord and Master. In England, Christian fervor was increasing, new churches were being established. It scarcely became him, only a half-made citizen to speak for this country. He could not help remarking, however, that there are a few people here who think that an estrangement exists between the English and American people. The old lady yonder, it is true, was scandalized some years ago when her daughter ran off with a Mr. Independence. Unfriendly feelings arising from past differences have nearly all died out, and Christian people in the old land are anxious to know more and more of their brethren here. There is a growing desire on both sides of the Atlantic for a strengthening of the ties which should unite Christians everywhere.

FOREIGN.

WOMEN IN INDIA—A NEW PHASE OF MISSION WORK.—A new phase of mission work in India is attracting much attention, and giving scope for the labor of Christian women. The women in the higher ranks are kept secluded in the residences of their husbands, which are as secret as nunneries. Even a physician is not allowed to see the wife of one of the babus, or native merchants; and only in extreme cases to feel her pulse, by reaching his hand through a heavy curtain. Entrance to these houses was gained warily. The lady missionary first succeeded in getting the consent of the husband for just a short call. After a little acquaintance, attractive specimens of needle work, and some handsome worsted patterns were introduced. These greatly interested and amused Zenana women. A gay cap or slipper has been shown the wife, which she would exhibit to her lord; he would be so entirely led captive by it as to yield a ready consent to regular visits of the missionary lady. But these regular visits this lady can make only on the condition that she takes the sacred Scriptures with her, and teaches them to her pupils. Very rarely have the Hindu babus been able to resist the fascination of the fancy work; and this, by God's blessing, has been the key to throw open as if by magic, many a secluded Zenana to gospel influences.—*Presbyterian.*

GEORGE MULLER'S WORK.—The report for 1867–8 shows that the receipts in money and goods for the year amount to $130,000 which has been expended on the Orphan Establishment at Ashley Down, near Bristol, and on the Scripture Knowledge Institution. The former embraces five large stone houses, containing twelve hundred orphan children and Muller is making an addition of two houses, which will enable him to receive 2,050. In thirty-three years he has received unsolicited contributions to the amount of £552,000, and although no year has been so trying to his faith as that just closed, the results confirm him in the belief that faith and prayer are the true method of eliciting the benevolence of God's people. Some one writes of him to *The Boston Journal*:—"He lives in the simplest style, and does not allow himself a lounge or a rocking-chair, unless he is sick. He was a poor man when he began, and is a poor man to-day, though he has handled millions of money, and could have spent it as he would."

WORK AMONG THE ARMENIANS.—Twenty years ago the American Board had 18 missionaries among the Armenians; now there are 44. Then there were 6 little churches, with 160 members; now there are 63, of which 36 have their own native pastors and 31 are self-supporting and independent. These churches report a membership of 2,766, average congregations on the Sabbath of about 10,000 persons, and Sabbath Schools with more than 8,000 pupils. The Protestant community—then first recognized by the firman of the Sultan—has become a power in the empire. From 22 stations occupied by missionaries, and 144 out-stations occupied by native evangelists, scattered all the way, at central points, from the Danube to the Tigris, streams forth the light of the Gospel upon surrounding communities. Four theological seminaries, and five female seminaries have taken the place of the institutions at Bebek and Pera. The common schools, then embracing an aggregate of 53 pupils of both sexes, now number 174, attended by more than 6,000 scholars. This, however, by no means represents the impulse given to education and social progress. The Armenian schools, established in imitation or in rivalry, are yet more numerous; the press is daily becoming more effective in diffusing intelligence; 300,000 copies of the Scriptures put into circulation, with a great number of other religious publications, are doing the work of enlightenment.—*Independent.*

ATROCIOUS PERSECUTION OF BELGIAN PROTESTANTS.—An extraordinary trial of seven colliers, for causing the death of two fellow-workmen by ill treatment, has just taken place at Antwerp. The motives for their cruelty were chiefly religious, the victims being Protestants, and their torturers Romanists. The punishment inflicted was a sort of crucifixion; that is to say, a cross was made to which the sufferers were suspended, bound with cords at their hands and feet, until they should do homage to the Virgin. One of the men who had died, named Steenbergen, had also been burnt with a hot iron and then plunged in water. This treatment brought on a violent fever, which terminated in death.

THE Free Church of Scotland, since its separation from the Establishment in 1843, when nearly 500 clergymen voluntarily resigned their homes and livings, has built 900 churches, 650 manses, 3 theological colleges, 2 normal or training institutions, and 500, schools. Her average annual income for the three years previous to 1868 has been £370,000, and during her 25 years of existence without State support the sum raised by her amounts to over £8,000,000 sterling.

List of Presbyterian Clergymen,

ON THE PACIFIC COAST, ALPHABETICALLY ARRANGED.

Rev. Jas. M. Alexander, N. S., San Leandro, Cal.
Rev. H. R. Avery, O. S., Walnut Creek, Cal.
Rev. B. B. Bonham, O. S., Sebastopol, Cal.
Rev. I. H. Brayton, N. S., Principal College School, Oakland, Cal.
Rev. W. W. Brier, N. S., Alvarado, Cal.
Rev. Fred. Buel, O. S., agent California Bible Society, 757 Market Street, San Francisco.
Rev. W. H. Cain, O. S., (Not preaching) San Francisco.
Rev. Charles Russell Clarke, O. S., Principal City Female Seminary, corner Mason and O'Farrell streets, San Francisco.
Rev. A. J. Compton, O. S., Watsonville, Cal.
Rev. Eli Corwin, N. S., Congregational Church, Oakland, Cal.
Rev. J. M. Dick, U, P., Eugene City, Oregon.
Rev. H. H. Dobbins, O. S., Sutter Creek, Cal.
Rev. Henry Durant, N. S., Professor College of California Oakland, Cal.
Rev. John Edwards, O. S., Visalia, Cal.
Rev. James Eells, D.D., O. S., pastor First Church, Stockton Street; residence, corner Stockton and Clay Sts., San Francisco.
Rev. Ben. E. S. Ely, O. S., Stockton, Cal.
Rev. J. G. Fackler, O. S., pastor Central Church, Mission Street; residence, 121 Fifth Street, San Francisco.
Rev. A. Fairbairn, O. S., Bloomfield, Cal.
Rev. Frederick Fox, N. S., pastor Emanuel Church, corner Folsom and Seventeenth streets, San Francisco, Cal.
Rev. Thomas Frazer, O. S., Santa Rosa, Cal.
Rev. S. D. Gager, U. P., Eugene City, Oregon.
Rev. Ed. R. Geary, O. S., Calapooya, Oregon.
Rev. M. M. Gibson, U. P., residence 608 Pine Street, San Francisco.
Rev. L. Hamilton, N. S., Oakland, Cal.
Rev. J. R. Hammond, O. S., Placerville, Cal. Visiting in the East on account of ill health.
Rev. Joseph A. Hanna, O. S., Eugene City, Oregon.
Rev. Silas S. Harmon, N. S., San Buenaventura, Cal. Temporarily absent in the East.
Rev. Oliver Hemstreet, O. S., Ione City, Cal.
Rev. I. N. Hurd, N. S., pastor Westminister Church, Hayes Street, San Francisco, Cal.
Rev. S. G. Irvine, U. P., Albany, Oregon.
Rev. T. S. Kendall, U. P., Albany, Oregon.
Rev. N. B. Klink, O. S., Vallejo, Cal.
Rev. A. L. Lindsley, D.D., O. S., Portland, Oregon.
Rev. A. W. Loomis, O. S., Missionary among the Chinese, chapel and residence, cor. Sacramento and Stockton sts., San Francisco.
Rev. B. Lowe, O. S., 10 Martin's Block, San Francisco.
Rev. W. F. B. Lynch, N. S., Alvarado, Cal.
Rev. James H. Marr, O. S., Calvary Mission, San Francisco.
Rev. David McClure, N. S., Principal Oakland Academy, Oakland, Cal.
Rev. Robert McCullough, O. S., Yreka, Cal.
Rev. J. S. McDonald, O. S., Sacramento, Cal.
Rev. W. C. McKaig, D.D., N. S., Marysville. Cal.
Rev. James McLaughlin, N. S., Gilroy, Cal.
Rev. J. H. McMonagle, O. S., pastor Larkin St. Church, residence, 1312 Jackson St. San Francisco.
Rev. W. J. Monteith, O. S., Albany, Oregon.
Rev. Joshua Phelps, D.D., O. S., 38 Stanley Place, San Francisco.
Rev. James Pierpont, N. S., San Francisco.
Rev. George Pierson, N. S., Brooklyn, Cal.
Rev. F. L. Nash, N. S., Alameda, Cal.
Rev. John S. Reasoner, O. S., Brownsville, Oregon.
Rev. Robert Robe, O. S., Brownsville, Oregon.
Rev. Henry M. Scudder, D.D., N. S., pastor Howard Church, Mission Street. Residence, 1 Vernon Place, San Francisco.
Rev. John Sessions, D. D., N. S., Oakland, Cal.
Rev. Anthony Simpson, O. S., Corvallis, Oregon.
Rev. W. R. Sloan, Steilacoom, W. T.
Rev. Townsend E. Taylor, N. S., Virginia, Nevada.
Rev. James S. Todd, O. S., Arcata, Cal.
Rev. Lewis Thompson, O. S., Astoria, Oregon.
Rev. P. V. Veeder, O. S., Principal City College, corner Geary and Stockton streets. San Francisco.
Rev. Charles Wadsworth, D.D., O. S., pastor Calvary Church, Bush Street; residence, 920 Pine St. S. F.
Rev. E. B. Walsworth, D.D., N. S., President of the Female College of the Pacific, Oakland, Cal.
Rev. L. P. Webber, N. S., Santa Clara, Cal.
Rev. S. T. Wells, O. S., agent Presb. Board of Publication. Depot at Bancroft's Bookstore, 609 Montgomery St.
Rev. Samuel Whiting, N. S., Mendocino, Cal.
Rev. A. F. White, N. S., Carson, Nev. Serving as State Geologist.
Rev. Geo. F. Whitworth, O. S., Seattle, W. T.
Rev. Ed. P. Willard, N. S., Columbia, Cal.
Rev. S. A. Willey, N. S., Vice President College of California, Oakland, Cal.
Rev. M. A. Williams, O. S., Jacksonville, Oregon.
Rev. S. Woodbridge, D.D., O. S., Benicia, Cal.
Rev. J. Worth, U. P., Brownsville, Oregon.
Rev. James L. Wylie, N. S., San Jose, Cal. Gone East for the recovery of health.
Rev. Richard Wylie, O. S., Napa, Cal.
Rev. James Wylie, O. S., Napa, Cal.

Oakland Academy.

A CLASSICAL, ENGLISH, & MILITARY BOARDING SCHOOL

REV. DAVID McCLURE, PRINCIPAL.

The Eighth Term of this Institution will commence on Wednesday, July 8th, 1868, in the new Academy building, recently erected on Telegraph Road, one mile from the Railroad Depot.

The location and plan of this new building have been made with the design of securing for the students a home of beauty and refinement.

Careful provision is made for thorough and extensive courses of study in English, Mathematics, Natural Science, and the Ancient and Modern Languages. A special course is also provided for those who are preparing for a commercial life.

In addition to these courses there is a daily military inspection and drill, together with vocal and light gymnastic exercises, under the instruction of a teacher. Every student is required to attend the military and gymnastic exercises, as a means of physical training.

For the mental, moral, and physical culture of each pupil committed to his care, the Principal holds himself responsible.

Further particulars may be obtained by addressing the Principal at Oakland.

Correspondence.

Letter from White Pine.

Treasure City, Nev., Nov. 30, 1868.

COLD WEATHER AND PROSPECT OF WANT.

I write you from an altitude of nearly 9,000 feet, and although the weather here is extremely cold, we have had but little snow thus far this season—about three inches in October, four or five November 6th, and about as much more on the 21st inst., the snow at this place now lying over six inches deep, with a much greater depth on the higher mountains, but none on the plains, or in the lower valleys. The thermometer here has already fallen to 22 degrees below freezing point, yet we look for a much greater degree of cold before the winter is over. The snow fell at this place last winter to a depth of 14 feet on a level, having been twice that depth and laid till the month of July in spots where badly drifted. From this it will be seen that we have a truly Siberian climate, and unless the coming winter proves milder than the two last past, which it is thought may be the case, there will be much suffering before it is over, not only from the extreme cold, against which the people have not been able to make adequate provision, but also, perhaps, from want of the more necessary articles of food. Compared with the number of inhabitants, the stocks of many leading articles of subsistence are small; and were it not that we still look for increased supplies, and possibly some reduction of population, there would be reason to apprehend a dearth before the winter is over.

HIGH PRICES, ROUGH FARE, AND A TOLERABLY ROUGH POPULATION.

The prices of everything here are enormous—from four to six times as much as in San Francisco, while the accommodations and fare are of the most wretched character. Sleeping arrangements consist of bunks, three or four tiers high and crowded into the smallest compass. Clean sheets and single rooms, or even bedsteads, are not to be had; many considering themselves fortunate to get a straw pallet, with a pair of blankets, spread on one of the shelves above mentioned. Anything like a bath, whether warm or cold, could not be had in the entire district. I have seen cases in which men arriving fatigued and covered with dust, would have cheerfully given five dollars for such a bath as can be obtained for two bits in San Francisco. Indeed, speaking of baths here, with water costing eight cents a gallon, is only to make one's self an object of wonder, if not of ridicule. And yet we have barbers and bootblacks, the former receiving a liberal patronage, and the latter being not altogether without customers. While milk and poultry are articles not to be had, fresh butter, fruits, and eggs are almost equally scarce, the only vegetables to be seen are potatoes. Beef of fine quality is abundant and not over dear, though the supply of pork and mutton is extremely limited.

The inhabitants of this district being largely composed of adventurers, prospectors, and other classes addicted to frontier life, without being vicious, are not particularly distinguished for their fastidious tastes or polished manners. Money being plenty, drinking, gambling and other fast practices are much in vogue, the scenes witnessed reminding one of the early days of California. There is, however, but little contention or fighting; the towns here having thus far escaped any acts of outrageous violence, such as murder, robbery or other aggravated crimes. So far as I can learn no effort has yet been made towards establishing any church or providing for regular religious worship here, though preaching has been had on several occasions by clergymen of the different Protestant denominations. For a wonder the Catholic clergy do not appear to have yet been on hand securing sites for churches and other religious institutions, as is their custom in most new places having the promise of a rapid growth before them. That they will soon make their appearance here soliciting donations of lands for these purposes after their usual urgent and importunate manner, seems altogether likely.

THE MINES

of this district, without being of the extravagantly prolific kind represented in some quarters, are nevertheless very rich and probably extensive; there being little doubt but this will prove, for some time at least, the most productive silver district ever yet discovered in the State. The Eberhardt Mine has already, and mostly within the past four months, turned out over $700,000 with comparatively little expense to the owners, there being for a certainty three times as much ore left in the mine as has been taken out. There is more rich ore in sight in this claim than could ever be seen at one time in any half-dozen of the best mines on the Comstock lode; it being the opinion of practical miners that more than $1,000,000 worth of ore could with a small force of hands be removed from this mine inside of a fortnight; its capacity for large and ready production being due not more to the extreme richness of the ore than to its great abundance and the facility with which it can be extracted. The absence of well-defined walls in this mine, and the vast extent of the ore deposits are construed by some as arguing against the probabilities of its continuity downwards. In many other mines in the district this defect is not so apparent and consequently greater confidence is felt in their permanency. Following the Eberhardt in the order of their supposed value, are the Keystone, Hidden Treasure, Pocotillo, (recently made conspicuous by reason of rich developments,) the two Auroras—North and South,—the Genesee, Iceberg, Indiana, Hidden Treasure South, the Pennsylvania, Charter Oak, Emersly, Virginia, Copper Silver Glance, and the Argyle, from nearly all of which large quantities of good ores have been taken, with considerable bodies still in sight. There are perhaps fifty other claims in the district from which small lots of ore varying in quantity from one to five or six tons are daily extracted, and which by mill process will yield from 200 to 600 dollars per ton,—a fair average of all the ore worked being about $500 per ton.

There was, of course, some doubt entertained at first as to the permanency of the ledges here; but this under the developments being made, is fast disappearing, nearly everything improving in this respect in proportion to the extent it is opened. To illustrate how rapidly mines here sometimes increase in value on favorable exploration, I may cite the case of the Pocotillo, which but two weeks ago was offered to a well known San Francisco capitalist for $10,000. Yesterday the owner was offered $20,000 for it and to-day $30,000, but refused to sell having for the present fixed his price at $50,000. This steady and rapid advance in price has not partaken in the least of a speculative character, having been due solely to the heavy and well-shaped body of rich ores laid bare during the two weeks mentioned. Other cases of nearly as rapid appreciation in the value of mining properties might be cited, being in every case based on similar causes. Comparatively little work, however, has yet been done on the most of the ledges here; wherefore it is too soon to pronounce upon their value one way or the other. All that can yet be affirmed about the district with certainty is that there are here a multitude of lodes exhibiting rich croppings and that a few of them at least afford satisfactory evidences of permanency.

MILLS AND SMELTING WORKS.

There are now two ten-stamp mills running in the district of White Pine, with two of five stamps, each in course of erection, and two or three others reported on the road. Two smelting works are also going up, the one situated at Shermantown and intended to reduce the ores of the Base Metal Range, and the other, two miles further east, designed to work such portions of the Eberhardt ores as are too highly impregnated with metal to admit of successful crushing.

EXTRAVAGANT STATEMENTS—WHEN TO COME TO WHITE PINE.

I perceive that the intemperate and often grossly exaggerated accounts given of these mines are likely to work a deal of mischief. Even if they were all that the most sanguine have represented, what can strangers expect to accomplish coming here on the verge of approaching winter. Let it be understood that nothing can be done here in the way of prospecting, and very little in the way of working the mines, except where claims are already opened, after the snow falls—an event that may occur almost any day, and that must inevitably happen before many weeks have elapsed. If men coming here with the intention of spending the winter have five or six hundred dollars to defray the expense of living, and are willing to submit to the deprivation of every comfort, it may be all well enough; but such as come expecting to be able to secure mining interests by prospecting, or to earn enough to subsist them through this long and inclement season, are almost sure to be grievously disappointed. For the next four months, we need look for little here except cold and stormy weather; the month of April being soon enough for any one to arrive who has not ample means or some certain object in view, or business to depend upon. The most of those who spent the last winter here have already left, or are preparing to do so—a fact significant of their opinions as to the policy of attempting to winter in these mountains. H.

Preaching in the Mines.

Silver Spring, Nevada, November, 1868.

Preaching the Gospel, if preached at all, in a new and excited mining region, like this White Pine District, must needs be under novel conditions. These 3,000 people have not hurried to these far away mountains in order to ask for, or even listen to, the Gospel. To obtain a hearing, Christ's ambassador must *push*; watch his occasion; use common sense, and be neither ashamed of his mission, nor afraid of men.

In a previous letter, mention was made as to the manner of introducing the Gospel into Treasure City.* Four miles down the western slope of the mountain from this place, and 4,000 feet below, in a romantic nook of a cañon, flow out a number of beautiful springs. Much water is needed in the various processes of crushing the ore and extracting the silver. There being no water higher up the mountain, various quartz mills are here erected, or in process of erection. Here, also, a compact little city, of about 500 people, has sprung up during the

past four months, and, on account of its waters, has received the pleasing appellation of Silver Spring.

THE SALOON.

In this, as in almost every mining town, seemingly indispensable, is a large, long room, having a bar on either hand as you enter, with gambling and billiard tables farther back. This at once becomes the assembly room of such towns, after the toil and bustle of the day. Few of the miners and laborers have any comfortable place of their own in which to spend their evenings. These saloons are always kept in an inviting condition—comfortably heated and cheerfully lighted. How wise in their generation are the children of this world. Would that the operations of our Young Men's Christian Associations, with their blessed and appropriate work, could extend thus far, and potently enough to have a reading-room and appropriate library, and it heated and lighted every evening. It would, no doubt, be the means of saving from wreck and ruin scores of strong men, who are far from home and any former helpful influences, and exposed to such fearful temptations. If spared to revisit San Francisco and our eastern cities, this matter will be pressed upon their vigorous associations of Christian young men, so that if possible, one example of a pleasant and free reading-room may be located in the great American Basin.

PREACHING.

Tnis large saloon in the new city of Silver Spring seemed the only available place for preaching. On application to the proprietor for license, his answer was:

"Certainly; preach, if you can."

By far the greatest crowd of the week in these places is collected on the Sabbath. At 7 P.M., and without any previous notice, the crowd of talkers, swearers, smokers, drinkers, gamblers, and silent lookers-on, was entered. Walking through the mass to the rear of the saloon, announcement was made in a voice loud enough to be heard by all that through leave of the proprietor I was about to preach.

"Wait," says one, "till I get a drink."

"Certainly, we'll wait."

A text was taken and without any delay or formality my message was delivered. The money was presently gathered from off the tables, the drinking stopped, the talking ceased, cigars were put out, and a queiter and more attentive audience minister never had. Bread thrown upon the waters. Those rugged, intelligent men if rightly approached, will listen to the story of the Cross.

When through, inquiry was made whether the way would be opened for preaching there at another time. The proprietor answered,

"Whenever you please to come."

Before closing, a man in the crowd says:

"Mister, isn't there going to be a collection?"

My reply was that I came to preach without any thought of money.

"But, Mister, you wouldn't object to a collection, would you?"

"Certainly not."

Through the crowd he started, hat in hand, into which the coin jingled most encouragingly. When through, he came to my little stand table and with loud rattle emptied upon it the contents of his hat, saying,

"*There*, come again and preach to us sinners, for we need it." A. M. STEWART.

BEGIN nothing of which thou hast not well considered the end.

San Francisco, Saturday, December 12, 1868.

A CHURCH FITLY FORMED.

Violent feeling has been fostered, high walls have been erected, Christian fellowship has been forbidden, because men have disagreed respecting the meaning of the Apostle's expression, "fitly joined together," when describing the body as an illustration of the Church. It is strange that they have failed to see that God never intended to tell us what is a Church fitly formed, or He would have done so most distinctly. He did not give the number of officers, with their rank, and name, and duties, beyond debate. He did not define the number and construction of ecclesiastical bodies, nor record in detail any of the peculiarities of mere form, which the Church must exhibit. The very terms by which He designates the officers are ambiguous, and their relations to each other are not positively stated. So that we have no pattern, according to which we must construct our organizations, as Moses had when ordered to build the tabernacle. He was left in no doubt. There was no opportunity for Aaron to think that one plan must be adopted, and Moses another, and the rest of Israel to be divided respecting the proper form. God intended to give an exact plan, and the order was clear: "See that thou make it according to the pattern showed thee in the mount."

The expression, "fitly joined," or framed together, therefore, must have reference to the time and place in which a Church is to be formed, not to the prescribed order of God. It is an injunction having a margin for adaptation to the ever-changing condition of men and eras, suggested by that wisdom which resolved to gain the most that could be gained by a healthy, vigorous body, at all times; and it teaches that that is fitly formed which will by its order most promote the growth and efficiency of the Church.

It is not likely that God purposed there should be the same mode of organization for all lands. We believe that our form of church construction is the best, for our people and country and age; we believe there is nothing in it opposed to the Bible view of a church, while we discover much in it which we believe to have been adopted by the Apostolic and primitive church. We should hold this opinion with intelligent firmness, yet with catholic regard for those who are not thus convinced. We should carefully and faithfully observe our own order, and commend others who observe that which they adopt, with equal intelligence and honesty. There should be no dogmatism, no bigotry, no jealousy, no disesteem growing out of a mere difference of interpretation of the Scripture, but the *results* fairly presented should always be the proof as to whether one form, or another, is the fit, or proper form. These results must be ascertained in answer to the questions that relate to the design of the church. Which tends to promote, to the highest degree, the spiritual life of the individual members? Which renders the body most vigorous, and efficient? Which enables all to work with the least friction, and most fully assures each of his privileges, and rights? Which most carefully guards and preserves the truth, as first delivered to the saints? That church only which furnishes the most satisfactory answer to these questions is "fitly framed together," according to Scriptural order, whatever may be the name which it adopts, or the claims by which it assumes to be the chief, or the only body of Christ on earth.

OUR CHINESE MISSION.

It is estimated that there are at least 60,000 Chinese on the Pacific coast. Many of these reside in San Francisco, and all of them regard this city as their central point from which they scatter, and to which, from time to time, they return. No one who has any just sense of the responsibility imposed on us by this fact can doubt that we by no means discharge our duty to men whom Providence has thus brought as heathen, to our own doors. As individuals, who come in contact with them in many ways; as families, who receive them into our homes where powerful influences for good might be brought to bear on them; as churches, in which there should be regular means adopted for the instruction and spiritual profit of as many as kindness and the manifestation of interest would attact within the Gospel's reach, we come far short of our duty to them. In sympathy with those who endeavor to benefit and teach them, and in co-operation with them in their labors, we are much less abundant than we are respecting the missionaries whom we send across the sea to enlighten those whom God has not brought to us. For sixteen years the Presbyterian Church has maintained a mission in this city, and while our churches have been willing to give money to support it, it is occasion for repentance, if not for shame, that so few of the members have been willing to teach in the Sunday school, or engage in any civilizing and evangelizing labors in connection with the Mission, or even to be faithful to those partially enlightened men and boys who are taken among us as servants. The statements of our correspondent who has furnished several recent articles for this paper, in these respects are true, and it is more than idle, it is wicked, to expect men who find so little to encourage them, and so many difficulties in their way, to make great advance in the mighty task of converting these heathen to a belief and acceptance of the Gospel.

If blame is to be placed on any, it should come in large measure on the Christians here, that our Mission has not made such progress as all should desire. Hence, we regret that the correspondent to whom we have referred, should seem to cast any censure upon the beloved brother who has for years had charge of the Mission, nor do we think that he has failed to employ those means which his long experience has taught him are most likely to be successful in leading the Chinese to a knowledge of the truth, and to the Savior, while we would be glad, if he were disposed to make more frequent and urgent appeals for assistance, through the papers, and by other means, and to force upon the notice of Christians a duty they seem so willing to neglect. We must do more than give money, while we largely add to our yearly contribution of this. We must prove that it is *our* Mission, as it really is, by giving prayer and toil, and interest, in its behalf. It affords an inviting field for missionary service, and experience fully proves that it will yield rich returns for all that faith and devotion will expend upon it; and those having its supervision directly in charge will be greatly encouraged, and rendered ten-fold more successful, by such hearty and reliable co-working.

Yet this kind of effort for these souls among us will not exhaust the measure of our responsibility. We endorse the sentiment that our Church Sunday Schools should be open to them, and pains should be taken to bring them within their influence. Our daily intercourse with them should be elevating and healthful. We should make the best methods of reaching them, and leading them to the truth, a daily *study*, and no Christian should gain his own consent to allow a heathen mind to come in contact with him week after week and month after month, without the knowledge that some light and advantage has been gained by him. There is no apology for the apathy upon this subject which has prevailed, and we trust that much more will be attempted and accomplished for the Chinese.

THE CHRISTIAN'S POWER.

The power of a Christian does not spring from his relations, his outside supports, his circumstances of any kind, but from his constant walk with God. He must rely upon divine aid, and make progress because Christ is abiding in him. This need not take him apart from other men, nor separate him from the scenes of business and pleasure which are proper in themselves, in which others mingle, but it will never separate him from Him whose smile, whose love, whose blessing, are worth more than all else.

Such a man is a lighthouse, not fitted with close shutters, and visited often enough to keep its lamps filled and burning, while their light shines only on him who sits within; but with shutters all open, sending its beams far out into the darkness, through clear glass. He is like Bunyan's "Great Heart," making his own pilgrimage with steady steps and firm hope, while at the same time he helps on Christiana and her children to the Celestial City. He cannot live in vain; he cannot but be seen, and on behalf of whatever is good, his prayers and labors tell. It matters little where he is, for there is work for him everywhere, and he proves that everyday religion is a mighty power in the world. Moreover, as in the case of Enoch, his life brings Heaven and Earth near to each other, and when God takes him, though no chariots of fire may bear him to the skies, before the vision of those who know him, his death will only be translative, as from walking with God below, he rises to eternal and blessed intercourse with Him, face to face. He is greatly honored of Heaven to whom is given the glory of such a life, the triumph of such a death.

The Heathen among us.—IV. History of the Mission to the Chinese in California.

[It has been suggested to me that some persons might draw conclusions from my previous article, and especially the last paragraph, unfavorable to the Presbyterian missionary. Such was not my purpose. As a sincere Christian and earnest missionary, Mr. Loomis is entitled to our confidence, and respect, and hearty co-operation. I intended to show the reader that these things, though good and necessary in themselves, are not enough. We need more effort, which must be exerted by many laborers. Not one man, or one Church, but many. Not to operate upon the Chinese by one line of approach, but in innumerable ways.]

It would perhaps be better before pursuing this subject further, and considering the manner in which we ought to go to work, that we should know what has been already done in the mission cause, and thus more clearly understand what remains for us to do.

In November, 1852, Rev. Wm. Speer and his wife arrived in this city. He had been a missionary of the Presbyterian Board of Foreign Missions in China for several years, and was familiar with the Chinese language. He went zealously to work. From the proceeds of lectures and contributions by the Christian citizens of San Francisco, he obtained means to purchase a lot on the corner of Stockton and Sacramento streets, and commenced the erection of a chapel, which was completed in the fall of 1853. The deficiency needed to pay for the building was given by the Presbyterian Board of Foreign Missions. The lot and house cost $25,000.

In November, 1843, a church was organized, with four members, who had been converted in China. Mr. Speer was joined by Lai Sam, a faithful helper, who remained with him until 1855, when he returned to China.

The Christian citizens of San Francisco appointed a committee, who aided and co-operated with Mr. Speer in his mission work, and greatly assisted him. A dispensary was opened in the mission house, for the gratuitous treatment of the Chinese; Doctors Coon, Ayres, and Downer volunteered their services. A school to teach our language to the Chinese was opened in the mission, as a part of its work.

In January, 1855, the publication of *The Oriental*, a missionary paper, and printed in both English and Chinese, was commenced. It was continued about two years, and did much to disabuse the minds of both peoples of erroneous opinions and unfounded prejudices against each other. In March, 1856, the first convert was baptized.

Rev. J. L. Shuck, who had been a missionary of the Baptist Church in China, arrived from that empire in 1854, and established a mission to the Chinese at Sacramento. He raised money by lectures and contributions, and purchased a lot and erected a small chapel in that city. He organized a church and mission school, and did much good.

In 1855, Rev. E. W. Lyle, who had been a missionary of the Episcopal Church in China, arrived in this city, and remained here until February, 1856, when he returned to Shanghae. He made no effort to establish a separate mission, but labored in co-operation with Mr. Speer, assisting him in his Church and paper.

Early in 1855, Thomas Cian, a Roman Catholic priest, born in China, arrived in San Francisco. It was reported at the time, and believed, that he came to organize a Catholic mission to the Chinese in this state. But, whatever his purpose might have been he soon returned to China, without having made any visible efforts to establish a mission.

After laboring with untiring zeal and signal ability to promote both the spiritual and temporal welfare of the Chinese, and having succeeded in doing much for them, Mr. Speer was compelled to leave his mission. In March, 1859, he returned to the Eastern states for the benefit of his health.

During the interim between the departure of Mr Speer and the arrival of his successor, Mr. Loomis, in September, 1859, a period of more than two years, the mission to the Chinese in California was wholly abandoned. Nothing was done to keep together the little band of worshippers who had been gathered into the mission chapel by Mr. Speer.

From the period of his first arrival, Mr. Loomis has continued in charge of the mission. He has devoted his whole time, energies, and abilities to the work, and has earnestly striven, with considerable success, to collect a congregation, draw the Chinese into Sunday Schools, bring them under missionary influence, and convert them. He has a native assistant.

While she lived, Mrs. Loomis zealously co-operated with her husband in the mission work, visited Chinese families, instructed classes of Chinese women and young men, and had induced a few young women to come to her for religious advice and instruction.

Mr. Loomis sends colporteurs throughout the State to distribute tracts among the Chinese. He visits them in their dwellings and lodging-houses, and sometimes goes to their camps in the interior of the state. Both himself and his wife have taught in the English school connected with the mission. There is now such a school in the mission house, supported at present by the mission, and taught by Mr. Loomis and an assistant. C.

Current Literature.

Sermons by Henry Ward Beecher.

It is so common to see sermons of Mr. Beecher reported for the papers that a collection of them in a volume does not possess the novelty that attends the publication of discourses by other eminent men. Still, very little of the prodigious amount of his productions fails to be read by multitudes, and these beautiful books now issued from the press of Harper & Brothers, would be gladly received, even were there no special reasons for satisfaction in reading them. They are published after the author's careful personal supervision, having been first selected by one of his personal friends, who is well qualified to decide what themes would be likely to be most useful to readers, and most fairly representative of Mr. Beecher's sentiments and style. We are told, in the Preface, that in preparing them, all idea of reconstruction was for the most part abandoned, only obvious faults being corrected, and therefore most of the sermons appear as they were originally delivered. All who have heard the distinguished preacher will agree with him in the feeling, that if he were to attempt to rewrite the majority of his discourses, they would lose in freedom and directness, which constitute their great charm, more than they would gain in literary excellence.

The purpose that ruled in the selection was that those might be given which would, as far as possible, give a correct view of the range of subjects he is accustomed to employ in his ordinary ministry. Hence, they are varied, while a large portion of them are intensely practical in their character, and some of them are rich with the peculiarities of thought and illustration, and expression that have made their author so noted. No man whom we have ever heard has such power to reach men's hearts, and bear upon men's conduct in daily living, as we have known Mr. Beecher sometimes to put forth, and as a practical preacher, dealing with duties and principles, he has few if any equals. Many persons have supposed that because this is true, he is not to be trusted as a teacher of truth, and that his views of Scripture are too loose to make it possible for his expositions of it to be reliable. Indeed, orthodox men in high places have denied his orthodoxy, founding their judgment on some single utterance, oftentimes, or from some sentiments expressed in the excitement of popular speech. And heterodox men have been eager to claim him as within their ranks, forming their opinion in much the same way.

We rejoice, therefore, for his own sake, and for the truth's sake, that he has taken pains to revise and stamp these sermons, several of which treat directly and definitely of those doctrines and points, respecting which he has been held in suspicion by those who have know him least. That one on the "Divinity of Christ;" that on "Crowned Suffering;" on "What will you do with Christ?" on "The Importance of a Correct belief;" on "The Incarnation;" and those on "Preaching Christ Crucified," will leave no doubt in the mind of an honest reader that their author may be trusted as a religious instructor of the people. A theologian may object to some of the forms of expression, and place upon them a meaning he never intended to convey, but the masses will not be radically misled, if they accept these teachings, and those who are converted as the result, will be humble, faithful, and worthy Christians.

These, however, constitute but a part of the collection. There are sermons addressed to the emotions, to the affections, to the experience, in all of which there are sentiments that will do good to any soul that seeks light, or relief, or rest, and those who never heard him who has thrilled thousands with his eloquence, will gladly avail themselves of these printed substitutes for the living preacher. We may hope they will speak for him and bless those who read, long after his voice is silent. Sold by H. H. Bancroft & Company.

Dallas Galbraith.—This story, by Mrs. R. H. Davis, appeared in numbers in Lippincott's Magazine, and has now been published by J. B. Lippincott & Co. of Philadelphia. Without being thrilling, or possessing those qualities, in plot and execution, which mark the works of genius, it is a pleasant and, in times of recreation, a useful book to read. The impression is wholesome, and the style agreeable, and we are inclined to say that the writer has not failed to do what, in the inscription, she announces as her purpose, viz: "To outline the coast chosen as the theater of her story, and the curiously genuine, kindly human life upon it."

Too True; a Story of To-day.—Among the articles in *Putnam's Magazine*, during the last year, those bearing this title have been always welcomed with special pleasure, and the volume in which they are all collected is even more attractive than the separate numbers seemed to promise. It is published by G. P. Putnam & Son, and, with the book last noticed, is for sale by Bancroft & Co.

Putnam's Magazine, for December, has been received from Bancroft & Co. A selection from its pages will be found in another department of our paper. We have also received the December number of the Overland Monthly, from A. Roman & Co., publishers. It contains its usual variety of interesting matter.

Literary Items.

The Chicago *Tribune*, in speaking of the library of the Young Men's Association says, among other things: "There are any quantity of religious journals of every shade of theology, and they are excellent reading no doubt; but persons get tired of perusing them all the time. That is where the mistake is made. The supposition that young men should read nothing but demure disquisitions on disputed points of religious beliefs, is absurd in the extreme." Where the *Tribune* makes a mistake is in being ignorant of the character and contents of religious journals. They devote very little space indeed, comparatively, to disquisitions on disputed religious points—not a tenth part as much, probably, as do most of the secular journals to prize fighting, horse-raceing, billiard playing, and other species of demoralization and gambling, to say nothing of theatres, beer gardens, and such other resorts of the vile and vicious, descriptions of which set them forth in such a light as to make them attractive and fatal to young men. On the other hand, the religious papers contain, in addition to their denominational intelligence, a great variety of choice literary, scientific and general reading, elevating and ennobling in its tone and tendency.—*N. W. Presbyterian.*

Hans Anderson.—The announcement that Hans Christian Anderson was to contribute new stories to an American magazine doubtless took some by surprise, since he existed in their minds almost as an ancient, as little likely to turn up in the guise of a regular contributor as Æsop himself. Anderson's stories have indeed been the nursery tales of two generations, yet the great story-teller is living still, and continues to weave his delightful tissues. He is not so very old, for he was born in 1805, in Odense, Denmark, and last year a great festival was held there on the occasion of Anderson being made citizen of honor, a popular demonstration toward one who has achieved a wider literary fame than any other native of Denmark. Anderson never married, and lives a rambling sort of life, sometimes in Copenhagen, but quite as often traveling in Spain, Switzerland, France and Holland. He is a great favorite at various courts, but his true distinction consists in the fact that every home is open to him, and the poor as well as the rich know his kindly nature.

Educational.

Knowledge Through Words.

Four great repositories of knowledge are nature, art, men, and books. Nature is one. That the sun rises about thirty times, while the moon is passing from full to full again, is a truth which nature herself is prepared to teach us, if we will but use our eyes. Art is another. That the surface and the interior temperature of the earth exert no material influence upon one another, I reason from the picture of Mt. Erebus, sending forth volcanic smoke amid the ice of the South Frigid Zone. Men are another. My acquaintance from Dalmatia boasts of the superior flavor and texture of the fish of his native country, and traces these qualities to the absence of tides, and consequently of muddy flats, along the coasts of the port, at least of the Adriatic. Books are another. That Cromwell's genius was rare indeed, since he combined much of the zeal of Paul with the military greatness of Napoleon, and the statesmanship of William III, I learn from history. These, then, are four of the repositories of knowledge. With the first two, nature and art, I am put in communication by the power of perception; with the last two, by the mastery of language. But of these things, perception and language, the latter induces and implies the former. Names are the autocrats of attention. Naming once means noticing afterwards. Even as an idea, or perception in the mind ever seeks expression in language, so a word in the mind ever seeks its proper encharging idea and companion thought. It is an image of clay, ever inviting its Promethean potter to some enterprise of observation in search of an elixir of life and spirit of quickening The primary step, therefore, in reaching the sources of knowledge is the mastery of language, the acquisition of words, the enlargement of the vocabulary.

C. R. C.

Personal.

Rev. B. B. Bonham of Healdsburg, is visiting his old home in the State of Nevada. He writes that he has held interesting religious services at the various towns through which he has passed.

Mr. H. C. Bennet has been removed from the Secretaryship of the Labor Exchange, and Mr. Swain appointed acting Secretary.

Judge Thompson Campbell, one of our most prominent and respected lawyers, died at his residence in this city, on Sunday last.

Rev. Dr. Scudder delivered the third lecture of the Y. M. C. A. course on Tuesday evening. Subject, "Braminic Priesthood."

Rev. G. V. Anthony is lecturing in Nevada County on "The Sandwich Islands," for the benefit of the Sunday schools.

Bishop Kip has arrived in this city and preached last Sunday in Trinity Church.

Dr. Letterman has been appointed Surgeon General of the State.

DR. MILES, ex-mayor of Marysville, has returned to that city, which he will make his permanent residence.

REV. B. S. MCLAFFERTY preached in the Baptist church at Marysville, on Sunday last.

JUDGE MCKINSTRY has given a decision in favor of the constitutionality of the Sunday law.

HON. A. A. SARGENT will sail for the East on the 21st inst.

GOV. BLASDEL of Nevada, is now stopping in this city.

S. T. —1860—X.—The unprecedented and extraordinary demand for PLANTATION BITTERS is evidently owing to their being prepared with pure St. Croix Rum, Calisaya Bark, etc. Our Druggists all complain that it is almost impossible to keep a supply, and their orders, owing to the great demand and limited supply, are but tardily executed. Be sure and get the genuine.

The Sabbath at Home

IS THE ONLY ILLUSTRATED RELIGIOUS MAGAZINE published in America. It employs the ablest Pens and Artists in giving interest to the *Study of the Bible*. It is, in a large measure, a YOUNG PEOPLE'S MAGAZINE, and every month there are Illustrated Bible Recreations for the YOUNG, and older Bible students. Price $2 00 a year.

SMITH'S BIBLE DICTIONARY

Will be sent FREE for six new subscribers.

LANGE'S COMMENTARY

Is a work for Biblical Students of all denominations. Price $5 00 a volume. Seven volumes are now ready, and will be sent to any person sending FORTY subscribers, or either volume for SEVEN subscribers.

THE LITTLE CORPORAL

Is one of the best Magazines published for boys and girls—sent free for one year for TWO new subscribers.

Our Premium List also contains

ELEGANT GIFT BOOKS

Suitable for Holiday Presents, and beautifully Illustrated Books for the young. Also, Maps of Palestine, Picture Cards and Books for Sunday Schools. We offer SEVEN EXTRA CASH PREMIUMS, the highest being

FIFTY DOLLARS

for the largest club for 1869.

☞Send ten cents for a specimen copy and premium list. EARNEST WORKERS wanted everywhere to canvass for subscribers. Address

HYATT'S HAND-BOOK OF

Grape Culture in California,

Giving full and specific directions as to where, how, and when, to plant and cultivate a vineyard.

As the season is approaching for those who purpose going into the culture of the vine anew in California, or for those who wish to extend their vinicultural operations to make preparations therefor, they can find no better aid, and no source of information more valuable than to consult this highly approved Hand-Book of Grape Culture.

Following are some of the testimonials that have appeared in commendation of this useful and indispensable work:

A committee of the late Fair of the Mechanics' Institute of San Francisco, to which the work had been referred, speak thus:

"Your committee have examined Mr. Hyatt's Treatise on the Culture of the Grape, and believe it to be the BEST HAND-BOOK published on that subject for California vine culturists, and for which they recommend a Special Premium."

The California State Agricultural Fair, of 1867, awarded a Diploma to the author of this work, and also the San Joaquin Valley Agricultural Fair, at the same season.

OPINIONS OF THE PRESS.

The following are brief extracts fron some of the elaborate notices of this work:

The San Francisco *Daily Evening Bulletin* says:—"The book contains a choice collection of the best foreign and native varieties of the grape cultivation in California especially, as well as at the East. The many excellent works on Grape Culture in the Atlantic States are of little or no value in California, where an entirely different system and practice are necessary in vine growing and wine-making. This Hand-Book is intended to supply this deficiency. The author has taken great pains to investigate this subject, and to aid in the improvement of viniculture in California. Its appearence is timely, and it can hardly fail to meet a large and ready sale. It is attractively printed and elegantly bound."

Sacramento Union—"Hyatt's Hand-Book of Grape Culture is a California production that will probably meet a common want. The author takes the experience of the most noted vine-growers in the State as the warrant for his conclusions and suggestions, turns to account the recorded results of experiments made by the pioneers of this branch of industry, and in addition to giving full and minute instructions in regard to the planting of vineyards and the manufacture of wines, presents statistics which will enable the beginner to calculate the probable profits of successful grape culture."

The *Mountain Democrat*, whose editor, Hon. D. W. Gelwicks, is the present State Printer of California, speaks thus:

"HYATT'S GRAPE CULTURE.—We have received from the publishers, H. H. Bancroft & Co., San Francisco, a copy of this interesting and valuable work—a work greatly needed on this coast, and which every grape-grower should purchase. We sent it to a gentleman well known in this community, for his examination—a gentleman familiar with the subject, and largely engaged in the culture of the grape. He gives it the following cordial endorsement, and his endorsement ought to secure it a large sale:

'The limited time in which to examine Hyatt's Grape Culture, published by H. H. Bancroft & Co., San Francisco, has been sufficient, however, to satisfy me that it is a work which every grape-grower should have. No matter how well fortified we may be in our own experience and theory, we must acknowledge that we may adopt many of the author's ideas and suggestions with profit. The merit of the work certainly bespeaks for it a ready sale.

Respectfully, CHAS. P. JACKSON.'"

The Golden Era: * * * "With this book in his hand, the intelligent agriculturist can engage in the business of grape culture with almost the same chance of success as one who has bought his knowledge by expensive experience. * * * The practical information contained in the book would cost many hundred dollars to obtain in any other way. We predict for it a ready and rapid sale."

S. F. Daily Dramatic Chronicle: "The book is emphatically a California production, being written by T. HART HYATT, of this city, editor of the *Rural Home Journal*, and bearing the imprint, San Francisco: H. H. Bancroft & Co. It contains a large amount of valuable information, and should be in the possession of every vine-grower and wine manufacturer in the State. The usefulness of the volume, and its convenience for reference, are very much enhanced by a full and carefully prepared index."

S. F. Mining and Scientific Press: * * * "The book professes to be a complete manual, with instructions for the management of the grape and the manufacture of wine, and is especially designed for California. * * * The book contains a considerable amount of valuable information which is not generally found in such treatises."

S. F. Daily Times: * * * "The author seems to have exhausted his subject, particularly as it relates to viniculture in this State, and as the grape interest is just beginning to attract attention which is soon to become paramount among farmers, we regard the publication of the work as most opportune. No ranchman should be without it."

N. Y. Daily Tribune: "The author brings the result of many years' experience in foreign countries to the preparation of his work, and from his observations in climates similar to that of California, arrives at the conclusion that California is singularly favorable to the culture of the grape, and to all semi-tropical fruits, and that it will hereafter be distinguished as the land of the vine, the fig, the orange, the olive and the palm. His volume forms a capital, if not a complete manual, on the care of a vineyard, and it is enriched with much industrial information connected with the subject."

Lacon (Ind.) Home Journal: "This work is most *apropos*. It comes just as thousands, without any practical knowledge of the business, having planted vineyards, find themselves destitute of that information their intelligent care demands. All over the country this interest is growing, and probably the time is not distant when America will produce more, if not better, wines than any country in the world. The author, MR. THOMAS HART HYATT, is an enthusiast on the subject upon which he writes so pleasantly, and his book embodies just what every grape-grower would like to know—what every one must know, to cultivate the vine successfully."

Colman's Rural World, St. Louis: * * * "We merely want to introduce a new and interesting treatise on this subject to our readers, from the far-off shores of the Pacific—the Golden State of California. Its author is T. HART HYATT, editor of the California *Rural Home Journal*. He has had a large experience and observation in California and in the Old World. His style is entertaining, his directions clear, plain, and practical."

Rural New Yorker: * * * "Although most valuable to the California viniculturist, yet it helps to widen our knowledge of the vine."

H. H. BANCROFT & CO., Publishers

Practical and Scientific.

AGRICULTURAL.

Grain Growing in Los Angeles County.

The preparations that are being made for the sowing of grain this season are such as will test the capabilities of our soil and climate for producing grain. Heretofore but few large tracts of land have been sown in cereals, and the production of small grain as a staple, particularly wheat, except in certain localities, has been to some extent doubted by many of our farmers. This year, however, the large accession to our farming population and the general introduction of gang plows and other agricultural and labor-saving machinery, will induce the sowing of such a breadth of grain generally throughout the country as will fix the reputation of Los Angeles County at once as a grain-producing county, should the result be what we have every reason to anticipate —a good crop.

Within the past few months quite a large number of practical farmers who have been engaged in raising wheat and other cereals in Napa, Sonoma, and Santa Clara counties, for several years past, have settled in this county, and are preparing with confidence to cultivate wheat upon a large scale—from whom we learn that the trouble arising from rust and smut, heretofore so very injurious to the growth of wheat in this county, was equally bad in what are now the best wheat counties in the State; but that deep plowing and early sowing, combined with care in the selection of seed, overcame the rust and smut in those counties where wheat is now so extensively raised. The surest protection against either rust or smut is early seeding. Preparations are now being made to raise grain on a very large scale in this county; the recent rains having moistened the land in many places sufficiently to admit of plowing, the country will present a very busy scene for some weeks to come, and if this season is as favorable as last, Los Angeles County will take place among the grain counties of the State.—*Los Angeles News.*

Raising Ducks.

I could never understand why our farmers did not keep ducks; as a matter of profit they are more profitable than hens. It may be the impression that in order to keep ducks a person must have a pond or stream of water near by, has deterred many from keeping them; but there is no need of anything of the kind. It is true that it is better to have a pond or stream, but you can raise ducks just as well elsewhere. I know of parties that are very successful in raising them, that have only a shallow tub set in the ground and filled from the pump occasionally. In fact, the trouble of raising ducks, and about the only one, is letting the young go into the water too soon after they leave the nest. When I speak of the profits from ducks I do not have reference to the common duck that is seen every day. I mean a breed of ducks that will weigh twelve pounds to the pair, alive, such as the Rouen and Aylesbury, and both excellent layers, easily kept and reared, and being very large and excellent for the market, and it costs no more to rear them than the common ducks that will only weigh on an average about eight pounds to the pair. The Rouen is a very handsome duck in plumage; the drake has a glossy green head and neck down to a white ring on his neck; the lower part of the body is a beautiful green brown grey, and shaded with brown on the back. The duck is of a beautiful brown, with about every feather shaded on the outer edge with black. They are acknowledged the best of the varieties, laying very early, and continuing through the season, and late in the winter. The Aylesbury is pure white, both the duck and the drake, and about the same size as the Rouen. Both become very familiar and being large and heavy, do not care to roam as much as the common kind.—*Maine Farmer.*

An Interesting Experiment.—A gentleman in Roxbury, Mass., observed that apples did not redden in that part of the fruit where a leaf happened to lie upon it. In 1852 he cut out letters from newspapers, and when the apples were yet green, he pasted the letters upon them with paste such as apothecaries use, made of gum tragacanth. The apples would redden in all parts not covered by the pasted letters. When the fruit had reddened to perfection, the letters were removed, and they would appear permanently outlined in green. So, again, when he pasted on the apple a paper in which the letters were cut out, the parts covered by the paper would be green, and the letters would appear, distinctly turned in red, the green ground surrounding them. The experiment is a very pretty one, and produces a happy effect; let our fruit-growers try it. How much sweeter must be the relish of an apple or pear if the name of a favorite should thus appear on it, as if written by the hand of Nature! What a superior price such fruit, so inscribed, would command in market, and what a pretty present it would be to any lady at a feast!—*Presbyterian.*

Ancient Agricultural Societies.—After the Britons were forced to retire into Wales, owing to the aggressive conduct of the Romans, it was enacted that no man should guide a plow who could not make one; and that the driver should make the ropes of twisted willows with which it was drawn. It was usual for six or eight persons to form themselves into a society for fitting out one of these plows, providing it with oxen, and everything necessary for the plowing; and many curious laws were made for the regulation of such societies. Amongst other singularities, it was enacted that if any person laid manure on a field, with the consent of the proprietor, he was by law allowed the use of the land, so manured, for one year. If the manure was carried out in a cart in great abundance, he was to have the use of the land for three years. Whoever cut down a wood and converted the ground into arable land, with the consent of the owner, was allowed the use of it for five years. If any one folded his cattle for one year, upon a piece of ground belonging to another, with the owner's consent, he was allowed the use of the ground for four years.—*Lutheran.*

Stringhalt in Horses.—This blemish in horses has been defined to be a "nervous affection for which there is no cure." Until recently this definition would have been accepted as genuine. A more thorough knowledge of the veterinary art, in connection with a closer anatomical knowledge of the horse, has rendered that version obsolete.

The affection is now shown to be, not one originating in nervous debility, but one arising from the strain and consequent inflamation of an elastic cord, extending from the hock to the hoof joint. This cord lies immediately under the main middle vein, and in case of strain the inflamation which ensues may affect the nerves and other parts in sympathy, calling off the mucous secretions, rendering this elastic, and thus causing a britch or halt.

If the skin is slit by a skillful and steady hand, four inches above the hoof of the affected leg, and this cord be carefully drawn out with an awl and severed, it will relieve the horse of all lameness as soon as the wound is healed, and experience has shown that no injury results from the operation. This incision should be washed often with warm castile soap suds, and annointed with sweet oil, or some healing ointment, and the horse kept quiet till the cure is affected.—*United Presbyterian.*

Give the Root Room.—The root is the most important part of the tree. If the roots have ample space to spread and extend themselves the trunk and branches will follow of course, and in due time the fruit will appear. Again, the power of the tree to resist winds, depends much upon the strength and circuit of its roots. If they are firm and spreading, but little damage will arise from high winds. In applying manure or ashes to the ground around fruit-trees, it must be remembered that the best effects come from those roots which are nearest the outer circle of leaves, instead of those branches nearest the trunk. The smallest roots are the most abundant, spread the widest and need the most food.

In planting, never content yourself with a hole just large enough to fit the root in; but dig deeply and widely. Holes for fruit-trees should be dug at least three feet deep and six feet wide, and the soil thrown in should be dry and friable.

Couldn't Fool Him.—I knew a nice old farmer who never had a paper in his house till he was fifty years of age. His father left him 200 acres of choice land which he worked as well as he knew how, and made a comfortable living. One spring the postmaster told him that if he would subscribe for an agricultural paper, read it carefully, and work according to instructions, that he would warrant him to clear a thousand dollars that year. On these conditions he paid for the paper, read it, worked faithfully, and at the end of the year he figured up carefully and found that he had cleared $960. He sued the rascally postmaster for the other $40, but by some dodge of the law the villian cheated him out of it. Ever since then the old gent has been down on postmaster and newspapers.—*Rural New Yorker.*

WEEKLY MARKET REPORT.

Wednesday, December 9, 1868.

Flour—Sales of about 500 bbls Extra, for local trade, current rates; 200 bbls Golden Age Superfine, $4 75. We quote: Superfine, in sks, ℔ 196 lbs, $4 75@4 87½. Extra in sks, $5 75@$5 87½.

Wheat—Sales of 1,800 sks good shipping, $1 75;@$1 77½ 200 sks coast, $1 55; 600 sks choice milling, $1 85; 800 sks good milling, $1 80; 650 sks fair, $1 75. The demand is light at $1 75@$1 80 for shipping and $1 80@1 85 for milling. At the close, 000 sks choice milling, private; 3,000 sks do, $1 80 ℔ 100 lbs.

Barley—Sale of 600 sks brewing $2 20; feed $2 10@2 15. At the close, 500 sks choice feed, $2 20 ℔ 100 lbs.

Oats—Sales of 1,000 sks California heavy, private; quotable at $1 80@2, with an upward tendency. Sales of 1,000 sks Oregon (last evening), $2 10; 300 sks do, $2 12½; 200 sks do, $2 15 ℔ 100 lbs.

Potatoes—Sales of 250 sks Bodega (yesterday), $1; 500 sks do, 87½@90c; 325 sks do, 90@95c; 600 sks Pigeon Point, $1 15; 725 sks Humboldt, $1 12½; 50 sks Carolina, $1 50 ℔ 100 lbs.

Onions—Small lots are reported at $3 50 ℔ 100 lbs for Yellow.

Beans—Are quiet at the following prices: Bayo, 3½@3¾ Butter, 4c; Pea, 4c; small White, 3½@3¾c; Pink, 3@3¼c; Red, 2½@2¾c ℔ lb.

Corn—Sales of Yellow, large size, are reported at $1 75 ℔ 100 lbs.

Rye—None in first hands; jobbing at 3½c ℔ lbs.

Buckwheat—The jobbing prices are $2 25@$2 50 ℔ 100 pounds.

Mustard Seed—Choice California Red scarce at 4c; common do, 2½@3½c; English White, 5@5¼c. Sale of 40 bags common Red, 2½c ℔ lb.

Flax Seed.—Sales of 50 bags choice, to the local mill, at 4c ℔ lb.

Bran—The local supply is well concentrated; mill price $22 50; jobbing at $25 ℔ ton.

Middlings—Feed descriptions have been advanced to $30@32 50 ℔ ton.

Oil Cake Meal—Demand good; mill price $35 ℔ ton.

Hay—One cargo of about 250 bales good sold this morning at $18 50; range of market $16@18 ℔ ton.

Hops—In moderate demand at 25@30c ℔ lb for California new

Dairy Products—California fresh roll Butter is quoted at 65c@70c; California pickled is scarce and nominal at 55c @60c; Eastern firkin is selling in a jobbing way at 45@47½c; California Cheese, 19@20c; Eastern do, 21@22½c ℔ lb. Eggs are dull and lower, say 55c ℔ doz.

Poultry—Live Turkeys are quoted at 14@15c, and dressed do 15@16c ℔ lb; Hens and Roosters, $6 50@7; Spring Chickens,$4 50@5 50; Ducks, $5 50@6; Geese, $11@12: Quail, $1@$1 25 ℔ dozen; Venison, 8@9c ℔ lb.

Provisions—Bacon is jobbing at 13½@14c for California smoked; California Hams, 15@16c; no Oregon in market; California Lard, 12½@13½c and 14c ℔ lb for small tins.

Wool—Stocks are nearly closed out and demand moderate at 16½@18c for fair to choice shipping grades. Sales for the week aggregate about 100,000 lbs, mostly for export.

Hides—Sales since last Wednesday reach about 2,500 California Dry at 14½@15½c, latter an extreme figure. Salted are firm at 7@7½c ℔ lb.

Skins—It is said that enough Seals have been killed the past season to supply the probable demand for this description of Skins for three years.

Tallow—Purchases for the week, by a single consumer, of 25,000 lbs Beef, at 8c; quotable at 8@8½c ℔ lb.

San Francisco Cattle Market.

Prices for most descriptions are the same as last week, though the market is generally firmer. Hogs are ½c higher, both for undressed and dressed.

We quote slaughterers' prices as follows:

Beef—American, 1st quality, 7½@9½c ℔ lb.
do 2d do 6½@7½c ℔ lb.

Veal—Quotable at 9@11c ℔ lb.

Mutton—Is steady at 6@6½c ℔ lb.

Lamb—Scarce and nominal 7@9c ℔ lb.

Pork—Undressed, 4½@5½c; dressed, 6¾@7¼c ℔ lb, outside figures for milk or grain fed.

—*S. F. Bulletin.*

MINING.

Rich Strike in the Yellow Jacket Mine.

Although it has been known for some days that rich ore was struck in the Yellow Jacket Mine, the great extent and immense richness of the deposits found was not generally known to outsiders until yesterday, when they were for the first time admitted. This strike is one of the most important ever made in the mine or upon the great Comstock lode. We say so for the reason that it is the first very large deposit of extraordinarily rich ore ever found at so great a depth upon the lead. Two big deposits have been found—one in the 900 and the other in the 800-foot level, but the former is by far the richest and in every respect the most important. The vein in the lower level is fully nine feet in width, and is composed of "sacking ore"—ore so rich that it is not rudely shoveled and tumbled about, as is the case with that of the lower grade, but is put up in sacks and tenderly cared for. It is ore that will yield some thousands of dollars per ton, and is just the next thing to finding the silver already moulded into bricks. The ore is composed of both chlorides and sulphurets, and is of a soft and crumbling nature. These strikes have been kept exceedingly close, for reasons best known to the principal stockholders.

Let us hope that the barren belt of the Comstock has at length been passed, and that at least one mine has entered upon the rich deposits of a second and more valuable belt than that found near the surface. This strike is certainly most encouraging to all mining companies holding ground on the Comstock, and we hope soon to hear of others striking down into the new White Pine of our own big lode.—*Virginia Enterprise.*

NO EXCITEMENT.—Very tamely our people receive the information that the seven tons of Black Morning Star ore just worked at the Pioneer Mill turned out of gold and silver $270 per ton, and 45 per cent. of copper, and that chlorination makes perfectly docile and tractable this terribly rebellious ore. Two or three years ago this announcement would have set all Alpine on its tip-toe, but now all are talking of White Pine as the place for a poor man. "Alpine will do for those who have capital to put in and wait its development; but for me, give me the place where if I strike anything, I can reap the benefit in dollars and cents." This is the cry, and Star success goes for naught with the masses.—*Alpine Miner.*

COPPER IN MISSOURI.—The copper fields of Missouri contain 50,000 acres and are three in number. These extend through the counties of Franklin, Crawford, Dent, Shannon, Iron, Wayne and Madison.

GOLD YIELD.—The gold yield of Nevada County is estimated by the *Nevada Gazette* at $60,000,000 for the last ten years, and the yield of the whole State in the same time at over $350,000,000.

NEW LEDGE.—A quartz ledge has been discovered on Diamond Creek. 30 tons of ore already crushed give flattering results. The ledge is called "Cocomongo."—*Grass Valley National.*

SOLD.—The claims of the Granite Tunnel Co. in Bridgeport have been sold to the owners of the Buckeye Hill claims for $50,000.

JOHN IN LUCK.—A Chinese company have struck a rich lead at Manzanita Hill, Sweetland, taking out $12,000 to $14,000 at each run.

GOLD IN NORTH CAROLINA.—It is estimated that the gold mines of North Carolina are yielding about $500,000 per annum.

BAY STATE.—The *Gazette* says that the "Bay State" is likely to prove one of the best mines in Nevada County.

SAFETY LEDGE is the name of a rich gold deposit just discovered in the outskirts of Grass Valley.

NEW ZEALAND.—More than $11,000,000 have been obtained from the New Zealand mines since 1865.

TIN MINES.—The *Los Angeles Star* says that the Temascal tin mines are yielding richly.

SCIENTIFIC.

Under the Sea.

The greatest depth to which a diver can descend, with the present appliances, in safety, is about 160 feet, and for this a burden of 100 pounds weight must be deposed about his person. The average depth at which he can work comfortably is about 90 feet, which is near the depth at which the operations on the *Royal George* were conducted. In water from 60 to 70 feet deep, the men can work for two hours at a time, coming up for ten minutes' rest, and doing a day's work of six or seven hours.

An English diver, encased in one of Siebe's dresses, went down in the Mediterranean to a depth of 165 feet, and remained there for 25 minutes; and we have heard that Green, the American diver, inspected a wreck in one of the Canadian lakes at a depth of 170 feet; but his experience was enough to convince him that he could not work on without danger to life.

At this depth the pressure of water on the hands is so great as to force the blood to the head and bring on fainting fits, while the requisite volume of air inside the dress to resist the outside pressure is so great that it would speedily suffocate the diver. Means have been tried to obviate these difficulties, but for the present a limit has been set to the extent to which man way penetrate the secrets of the deep. An ingenious Italian has brought to England plans for a sort of scale-armor dress, which would resist the pressure of water; but our submarine engineers think that this would not obviate the difficulties arising from the limits placed to human endurance.—*Our Own Fireside.*

The Eye.

The eye—the study of which alone, old Sturmius tells us, is a cure for atheism,—is perhaps one of the most marvellous constructions in nature. Its movements, its expressions, its protection, its chambers, its lenses, and the great delicacy of its component parts, have been the study of the anatomists of all times. How I wish I could show to the readers of this paper, one single portion of the human eye,—that part called the vitreous humor! It resembles half-molten crystal in its purity and brilliancy. And, above all, could I show you the beautiful adaption of every structure to the office it performs in the animal economy you would probably be lost in amazement. Imagine yourself for a single moment standing on a mountain eminence with an autumn landscape of 20 miles in extent before you, every constituent which goes to make up the beauty and the harmony of the scene is fully appreciated by yonr sense of vision, the great variety of color, the fields, the hedges, the foliage, the cottages, and the village spire in the distance, the river as it curves around the gentle slopes, and the clouds that float overhead. That landscape of 20 miles you take, and are able to see entire through an aperture an eighth of an inch in diameter.—*Atlantic Monthly.*

THE OLDEST TREE.—Dr. Jessup, of Syria, has given us some very interesting information with reference to the great cedar trees which still flourish upon the high table lands of Lebanon. If we remember, he dates their origin several hundred years before the Christian era. So far as authentic record is concerned, perhaps the oldest single tree is that known as the Cypress of Somma, in Lombardy. It was known, says an account, to be in existence in the time of Julius Cæsar, 42 years before Christ, and is, therefore, more than 1,900 years old. It is 106 feet in height, and 20 feet in circumferance at one foot from the ground. Napoleon, when laying down the plan for his great road over the Simplon, a lofty pass of the Alps, diverged from a straight line to avoid injuring the tree. The honor of superior antiquity, however, is claimed by some in behalf of the immense and venerable tree in Calaveras County, California, which is supposed, from the number of concentric circles in the trunk, and also from various other reasons, to be more than 2,565 years old! Compared with this, how insignificant the "by reason of strength," four-score years of man!

SIZE OF THE STARS.—How large are the stars, and are they alike, or do they differ in size? It used to be conjectured that they are of somewhat similar magnitude, presumably about as great as our sun, and that the differences of apparent size are due to differences of distance; but when astronomers came to discover that some of the smaller stars are the nearest to our system, this idea fell to the ground. A German computer has now, however, calculated the actual dimensions of one particular star, and finds that its mass is rather more than three times that of the sun. The star in question is less than the fourth magnitude—a comparatively small one. What, then, must be the size of the Sirius and Aldebaran class? The reason of its selection for this determination was, that it is one of the components of what is called a binary system—two stars revolving about each other like the sun and planet—and the motions of the members of such a system afford data for the computation. The star's distance from us is a million and a quarter times that of the earth from the sun, so that light takes twenty years to travel hither from it.—*Once a Week.*

MALLEABILITY OF SILVER.—In London once a grain of silver was beaten out so thin that it covered 98 square inches. This experiment proved that silver is more malleable than gold, for a grain of gold has never been spread over more than 75 square inches. If 1,100 of these films of paper had been laid upon one another, they would have formed a sheet about as thick as the paper upon which these words are printed. If it had been required to make a pile one inch high, about 320,000 leaves would have been necessary. Now, 320,000 sheets of good printing paper would make a stack as high as an ordinary church-steeple. If we desired to make a pile of those thinnest leaves of silver as high as that, we should require 400,000,000 or 500,000,000 of them. It was the opinion of those who conducted this experiment that even these inconceivably thin silvery films could be beaten out still thinner, if more delicate means could be devised for doing the work, for when the implements employed could effect nothing further, the malleability of the metal did not seem to be near exhaustion.—*Harper's Monthly.*

SPIRITUALISM IN THE LONDON POLYTECHNIC INSTITUTE.—Prof. Pepper has been doing, a great work before the thousands who nightly visit the above institution. Besides explaining the latest discoveries in electro-magnetism, light, and so forth, he discoursed on spiritual manifestations, pointing out the extensive impostures that have been practiced on the public in the name of mesmerism and spiritualism. He illustrates his lectures with startling illusions, such as the floating in the air of hats, tables, and even stout ladies. He does not only everything that ever spiritualists have pretended to do, but a great deal more; with this difference, however that he explains how it is done by well known natural and material means, whereas spiritualists pretend that they do it by unknown, supernatural and spiritual powers.

IMPURE AIR.—Dr. Smith and Mr. Dancer have been examining the air of Manchester, England, by the aid of the microscope, and have found it to be full of spores and other organic germs, the presence of which in probably all air leads, no doubt, to the phenomena imputed to spontaneous generation, and is probably the cause of the epidemic character of many diseases. The air was first washed by shaking it in a bottle with distilled water, and in a drop of the water it was reckoned that there were about 250,000 spores, and these only require to be lodged in suitable situations to spring into activity. In the quantity of air respired by a man in ten hours it was reckoned that there would be about 37½ millions of these spores or organic germs.

Providence does not run on broken wheels.

General Selections.

Woman Suffrage.

The following are short extracts from a letter written by a mother to a daughter, published in the December number of *Putnam's Magazine:*

It is one of my chief hopes for the future that the day will come when men will choose to associate with themselves, in the performance of all the more perilous duties that have heretofore been assigned to them alone, their wives and mothers, who, by nature, are less tempted than themselves to serious defections from virtue. To mothers as well as fathers should be entrusted the management of those numberless cases of wrong-doing which call for moral legislation and penalty; and nothing will do more to hasten the day of moral purity than a general conviction that boys and young men should be taught as carefully to avoid sights and sounds of contamination as their young sisters, and that modesty is by no means an exclusively feminine virtue.

It is not my opinion that when the right of suffrage is granted to women there will be an end to political troubles. So far from this being the case, I look with anxiety to the immediate results of such an experiment, and have only hope in the long future. And my hope is based on moral grounds purely, viz: the, to me, immutable doctrine that personal responsibility is the best educatory scheme that God has Himself been able to devise for erring man. Starting with this, and allowing, as I think we must, that women constitute a large branch of the human family, I urge that they should be put upon their responsibility anywhere and everywhere that human activities come in; and I see no place where a limitation could be made without relieving them by so much of an obligation that they owe to themselves, their families, and their God.

Look at the popular objection, that if women were voters this moment, the state of parties would remain the same, the numbers in them only being doubled. This might be so at first, perhaps, but soon that party most nearly representing justice and morality would certainly be the gainer. But suppose it were not so. What I affirm is, that both parties and all parties, when made up of active men and women, will represent a higher grade of thought, feeling, and action, than they now do. Granted that the men and women of a family will always vote alike, now and forever: the *men* will not vote precisely as they would have done had there not been an intelligent discussion of the principles of political and moral economy in the family; and thereby we have made the great gain of which I speak.

I can see no reason for closing any avenue of thought, study, or action to her, and every reason in the world why she should not only be permitted, but encouraged to address herself to any pursuit which commends itself to her judgment and taste. That every young woman should limit her expectation of happiness and her ideas of duty by her possible wifehood and motherhood, is as absurd as that a young man should limit himself after the same fashion, especially since the duties of a citizen, when far more faithfully performed than they now are by a majority of men, are neither engrossing nor exhaustive.

There is no training, either mental, moral, or physical, which is good for a boy, that is not, with some slight modifications, good for a girl also; and it is because girls, in accordance with a true spirit of progress, have been invited to a higher mental culture, while still under old-time limitations as to physical exercise, out-door sports, and games, that they seem in some cases to break down under hard study. So long as boys and girls, in our country schools, are considered young enough to play and romp together in the open air, they are equally uninjured by studious application; it is only when the exactions of young ladyhood come in, that there is evidence of over-brainwork; and the comparative frequency of this is much exaggerated, I think.

And as to laborious occupations: it seems desirable, certainly, that men should reserve these for themselves, and that women should be relieved of them, so far as they make excessive demand upon bone and muscle. Children born of overworked mothers are liable to be a dwarfed and puny race. I am inclined to think, however, that their chances are better than those of the children of inactive, dependent, indolent mothers, who have neither brain nor muscle to transmit to either son or daughter.

As to the fact that low and uneducated women will be brought into power by the ballot, as well as the really noble ones, I can only say that they need the education of personal responsibility quite as much as any, and that they peculiarly need the protection in their own households, which such power of equal choice would furnish.

I have a good deal of hope that some time, in the cheerful future, our election-days may come to have the appearance of our best holidays—our Sundays even; and that every man, knowing that he is probably to accompany to the polls or meet there his mother, wife, sister, or sweetheart in her best attire, will be driven to wash clean his own hands, and array himself in his best also, as is meet when all are going to the performance of a duty as sacred as any the world knows.

The idea that women are going to desert their babies and their homes, and rush for political offices, the moment they become responsible for a ballot, is simply preposterous. When the Great Father desired to express the infinite depths of His own faithfulness towards His human children, He found no better words than these, "Can a mother forget her sucking child?" and we may safely leave all her personal matters, as He has ever done, to her truly divine instincts. There is every reason to hope and believe that these will not only prevent her from an unconscientious acceptance of offices whose duties she cannot perform without sacrificing higher duties at home, but that in case of her acceptance they will enable her to regulate both her actions and speech according to the true standard of womanly excellence.

I cannot forbear noticing, too, the official responsibility put upon women, in that venerable church, which is, in some sort, the mother of us all, and whose vitality has been a subject of wonder and speculation up to the present moment. No less a person than Lord Macaulay has made the suggestion that the Roman Church may have owed its success largely to the opportunities it has always opened to women, for honorable work and the attainment of authoritative positions.

In fact, Christian churches everywhere should, it seems to me, lead the way in this reform, as in all others, where the moral elevation of mankind is proposed. And were not authority and tradition arrayed against it, they would hardly be so far behind their privilege in this matter as they are.

Is it not the duty, then, of the women of this day, as a part of their contribution to human progress, to maintain this doctrine of individual freedom and responsibility, even at some cost to their personal comfort? At first glance this may seem to imply a greater sacrifice of feeling than the case requires; but you will agree with me when I say that nothing could be much more trying to a woman of delicacy and sensibility than such assertions of herself as are commonly stigmatized as immodest, unfeminine, unnatural, and the like; especially if she be the mother of sensitive children, on whom the coil of rebuke may fall so heavily as to more than double her own pain. And does not this become the best of reasons why men should prepare the way for her in these matters, rather than call upon her to make a way for herself? Of course they must do this, so far as mere legislation is concerned, they only having the power; but in all departments of life, how easily can they invite her companionship, without incurring any loss or bringing any odium to themselves; whereas, she must suffer in various ways, if left to claim and actually enforce her rights and privilege, as a free, responsible being, owing, like man, allegiance to God and her own conscience alone. It is on this account that I would call upon man, rather than because he seems to me to be, *par excellence*, a wrongdoer, or even the wilful cause of his own present acknowledged supremacy.

THERE are more people who can forget themselves than govern themselves.

The Limits of Materialism.

The following is an extract from the Inaugural Address of Prof. Tyndale before the British Association for the Advancement of Science:

"You see I am not mincing matters, but avowing nakedly what many scientific thinkers more or less believe. The formation of a crystal, a plant, or an animal, is in their eyes a purely mechanical problem, which differs from the problem of ordinary mechanics in the smallness of the masses and the complexity of the processes involved. Here you have one-half of our dual truth; let us now glance at the other half. Associated with this wonderful mechanism of the animal body we have phenomena no less certain than those of physics, but between which and the mechanism we discern no necessary connection. A man, for example, can say, *I feel, I think, I love*; but how does *consciousness* infuse itself into the problem? The human brain is said to be the organ of thought and feeling; when we are hurt the brain feels it, when we ponder it is the brain that thinks; when our passions or affections are excited it is through the instrumentality of the brain. Let us endeavor to be a little more precise here. I hardly imagine that any profound scientific thinker, who has reflected upon the subject, exists, who would not admit the extreme probability of the hypothesis, that for every fact of consciousness, whether in the domain of sense, of thought, or of emotion, a certain definite molecular condition is set up in the brain; that this relation of physics to consciousness is invariable, so that, given the state of the brain, corresponding thought or feeling might be inferred; or given thought or feeling, the corresponding state of the brain might be inferred. But how inferred? It is at bottom not a case of logical inference at all, but of empirical association.

You may reply that many of the inferences of science are of this character; the inference, for example, that an electric current of a given direction will deflect a magnetic needle in a definite way; but the cases differ in this, that the passage of the current to the needle, if not demonstrable, is thinkable, and we entertain no doubt as to the final mechanical solution of the problem; but the passage from the physics of the brain to the corresponding facts of conscience is unthinkable. Granted that a definite thought, and a definite molecular action in the brain occur simultaneously, we do not possess the intellectual organ, nor apparently any rudiment of the organ, which would enable us to pass by a process of reasoning from the one phenomena to the other. They appear together, but we do not know why. Were our minds and senses so expanded, strengthened and illuminated as to enable us to see and feel the very molecules of the brain; were we capable of following all their motions, all their groupings, all their electric discharges, if such there be, and were we intimately acquainted with the corresponding states of thought and feeling, we should be as far as ever from the solution of the problem.

"How are these physical processes connected with the facts of consciousness?"

The chasm between the two classes of phenomena would still remain intellectually impassable. Let the consciousness of *love*, for example, be associated with a right-handed spiral motion of the molecules of the brain, and the consciousness of *hate* with a left-hand spiral motion. We should then know when we love, that the motion is in one direction, and when we hate that the motion is in the other; but the 'why?' would still remain unanswered.

"In affirming that the growth of the body is mechanical, and that thought, as exercised by us, has its correlative, in the physics of the brain, I think the position of the 'Materialist,' is stated as far as that position is a tenable one. I think the materialist will be able finally to maintain this position against all attacks; but I do not think, as the human mind is at present constituted, that he can pass beyond it. I do not think that he is entitled to say that his molecular groupings and his molecular motions explain everything. In reality they explain nothing. The utmost he can affirm is the association of two classes of phenomena, of whose real bond of union he is in absolute ignorance. The problem of the connection of body and soul is as insoluble in its modern form as it was in the pre-

scientific ages. Phosphorus is known to enter into the composition of the human brain, and a courageous writer has exclaimed, in his trenchant German, '*Ohne Phosphor kein Gedanke.*' This may or may not be the case; but even if we knew it to be the case, the knowledge would not lighten our darkness. On both sides of the zone here assigned to the materialist he is equally helpless. If you ask him whence is this 'matter' of which we have been discoursing, who or what divided it into molecules, who or what impressed upon them this necessity of running into organic forms, he has no answer. Science also is mute in reply to these questions. But if the materialist is confounded and science rendered dumb, who else is entitled to answer? To whom has the secret been revealed? Let us lower our heads and acknowledge our ignorance one and all. Perhaps the mystery may resolve itself into knowledge at some future day."

MISCELLANY.

WHAT IT COSTS TO KEEP A HOTEL.—A New York correspondent gives some interesting facts as to what it costs in the course of a year to keep a first class hotel. He says:

The bills of a first class hotel, for supplies, are enough to support a good many small families, especially if they practice economy, and don't keep dogs and horses, and Saratoga trunks. For example, I will give you some items from the balance-sheet of the Astor House, the oldest first class hotel in the city. The Astor House pays $75,000 a year for groceries, including $8,000 for flour and $22,000 for butter. The marketing bill is about $150,000—they pay one man from $55,000 to $60,000 for beef alone, and the balance of the $150,000 goes for mutton, veal, pork, poultry, vegetables, fish, etc. The milk and cream for the Astor cost $14,000, about two-thirds of it being for milk and one-third for cream. Eggs cost about $12,000, the average use being 100 dozen daily, or 35,000 dozen annually. The gas bill is $14,000, and the coal bill pretty much the same; friction matches cost $1 50 a day, or about $500 a year; a good many of these are not used in the house, but find their way into the pockets of the patrons. Who would think of paying for wooden tooth-picks, when any body can whittle one with little trouble? A million are used every year in the Astor House, at an expense of something less than $100. The bill for liquors for the bar-room is a heavy one, but, fortunately for the proprietor, the amount received from patrons is a great deal more.

PARK IN PARIS.—The Bois de Boulogne, which is the pride of Paris, is a park of magnificent distances. It contains over 2,300 acres, and has a thick growth of various kinds of forest trees. Indeed, since the improvements were commenced in 1851, more than 200,000 trees are said to have been planted in the Bois. It is also abundantly watered, its lakes and little streams being supplied by an artesian well at Passy, which springs from a depth of 875 feet. There are no less than fourteen lakes in this renowned pleasure-ground, the largest being about a mile in length. Many of them are well filled with fish, which flourish remarkably. There are nearly 70 miles of carriage-roads, and over 30 miles of shady paths for horseback riders. Moreover it contains one of the largest race-courses in the world. There are in this park some immense oaks and cedars, which are supposed to be four or five centuries old. No wonder the Parisians are proud of the Bois de Boulogne.

AN INCIDENT IN THE EARLY HISTORY OF MAINE.—This whole country suffered in early times from the Indians. In one of these Indian raids in colonial times, a farmhouse was visited by the savages while the occupant was in the cellar drawing beer. Coming up, and placing his earthen mug upon a table, he was seized, bound, and taken to Canada. Some years after he was permitted to return, and found his humble dwelling standing, and the mug upon the table where he had placed it, years before. The mug is still in existence, an heir-loom in the family whose ancestor was thus made captive, and the visitor had the satisfaction of drinking therefrom an invigorating draught of the pure water that comes bubbling, springing up, hard by, where deeds of blood were once done, and the wild whoop of the savage mingled with the murmur of the ever-sounding sea.—*American Presbyterian.*

AMONG the natives of Australia, if any person dies, the survivors will never speak his name afterward. Some think the evil spirit which killed him will kill any one who repeats his name. This causes a constant change in the language, as has been observed by Prof. Max Muller in reference to some other Australian tribes. Thus, if a man bearing the name of "Water" dies, they will invent a new word for water. A Moravian missionary says that, having once, at a service among the blacks, given out a hymn beginning "Jesus, God's and David's Son," he was surprised that scarcely any one joined in the singing, quite contrary to their general custom, as they delight in music. But subsequently he learned that a boy named David had lately died, and they would not pronounce his name.

THE FAMILY PAPER OF THE PACIFIC COAST.

THE OCCIDENT.

In every true home there should be found a first class family paper—one to whose coming, father, mother, children will look with eagerness each week. Such a paper is

THE OCCIDENT.

Let all who desire such a paper, and are asking, "What paper shall I take?" read the following statement of facts:

THE OCCIDENT contains a greater amount and variety of reading matter than any other family paper on the Coast. It contains choice selections for all classes of readers. Both the child and the person of cultivated literary taste will find in each number matter which cannot fail to be interesting.

THE OCCIDENT is extensively quoted. No other weekly paper on the Coast furnishes so much matter, either original or selected, to the columns of other papers. Whole columns are frequently taken from one or another of its departments. No stronger proof of its excellence could be desired than the fact that it is so well appreciated by contemporaries.

THE OCCIDENT has a complete Agricultural Department, carefully culled from the best authorities, with all the current agricultural items of our own coast, and full market reports. The Mining Department is also very complete.

THE OCCIDENT gives a summary of Pacific Coast news and of Eastern and Foreign Telegraphic News. These items are not hastily thrown together, but are carefully prepared, and are consequently copied to a great extent. The Personal Department is the most complete collection of personal news to be found in the State.

THE OCCIDENT is the official organ of all branches of the Presbyterian Church, and contains full religious intelligence concerning the progress of all denominations. Although a religious paper, it is not sectarian. Its aim is to make men better and happier by the inculcation of the principles of the Christian religion.

THE OCCIDENT is universally admitted to surpass all other papers in the State, in typographical appearance and systematic arrangement of its contents.

Read what the papers say of

THE OCCIDENT.

"Has commenced its second volume, enlarged and improved and with excellent prospects. It is full of 'knews,' views, and family reading, and is ably edited."—*Brooklyn (N. Y.) Union.*

"It gives evidence of ability, tact, and judgment in its management."—*Cincinnati Presbyter.*

"An able paper of the same form as the *Statesman.*"—*Philadelphia Statesman.*

"One of the best of papers."—*Zion's Herald, Boston.*

"Well filled with readable articles. An important accession to the literature of the coast."—*S. F. Bulletin.*

"Its typographical appearance is finer than that of any weekly paper published on this coast."—*Chronicle.*

"A periodical worthy of patronage."—*Sacramento Union.*

"It is already attracting a great deal of attention. Its original articles and judicious selections make it an intellectual treat."—*S. F. Fair Press.*

"The ability displayed gives promise of success."—*S. F. Times.*

"The best style of any weekly issued in San Francisco."—*Pacific Churchman.*

"An attractive sheet and ably edited."—*Placerville Mountain Democrat.*

"A welcome visitor in the homes of our people."—*Woodbridge Messenger.*

"A neatly printed and ably edited sheet."—*Alameda County Gazette.*

What is Said

In the last number of the *Vallejo Recorder*:

THE OCCIDENT—This elegant journal, the organ of the Presbyterian Church on this coast, published by Bancroft & Co., is worthy of a place in every household. Too much cannot be said in its praise.

Pacific Mail Steam Co's Steamships

— FOR —

NEW YORK, JAPAN AND CHINA

Will be Dispatched as follows:

LEAVE WHARF CORNER OF FIRST AND BRANNAN STREETS, at 11 o'clock A.M. of the following dates, for PANAMA connecting via Panama Railroad with one of the Company's splendid Steamers from ASPINWALL for NEW YORK.

the 6th 14th, 22d, and 30th of each month.

Steamer leaving San Francisco on the 6th touches at Manzanillo. All touch at Acapulco.

Departure of the 14th is expected to connect with the French Transatlantic Company's Steamer for St. Nazaire, and English Steamer for South America. Through tickets can be obtained.

Departure of 14th is expected to connect with English Steamer for Southampton, South America, and P. R. R. Co.'s Steamer for Central America. Through tickets can be obtained.

Departure of the 6th connects with English Steamer for Australia.

STEAMERS FOR DECEMBER, 1868.

The following Steamships will be dispatched on dates as given below.

December 5th—MONTANA, Capt. West, connecting with ALASKA, Captain Gray.

December 14th—GOLDEN CITY, Capt. Wm. H. Hudson, connecting with RISING STAR, Capt. King.

December 22d—CONSTITUTION, Capt. Cavarly, connecting with HENRY CHAUNCEY, Capt. Conner.

December 30th—COLORADO, Capt. Farnsworth, connecting with ARIZONA, Capt. Maury.

Passengers berthed through. Baggage checked through—100 pounds allowed each adult.

An experienced Surgeon on board. Medicine and attendance free.

These Steamers will positively sail at 11 o'clock. Passengers are requested to have their baggage on board before 10 o'clock.

Through tickets to Liverpool by the "Cunard," "Inman," and "National" Steamship Lines can be obtained at P. M. S. S. Co.'s office in San Francisco, where may also be obtained orders for passage from Liverpool or Southampton to San Francisco, either via New York or St. Thomas—if desired, an amount of £10 to £20 will be advanced with the above orders. Holders of orders will be required to identify themselves to the Agents in England.

For Merchandise and Freight for New York and way ports, apply to Messrs. WELLS, FARGO & CO.

The Steamship GREAT REPUBLIC, Captain S. Doane, will be dispatched on Monday, January 4th, at 12 o'clock, noon, from wharf, corner of First and Brannan streets, for YOKOHAMA and HONGKONG, connecting with the COSTA RICA for SHANGHAE.

For passage and all other information, apply at the Pacific Mail Steamship Co.'s Office, corner of Sacramento and Leidesdorff Sts.

OLIVER ELDRIDGE, Agent.

The Popular Edition of Dickens.

D. APPLETON & CO.

Nos. 443 and 445 Broadway, New York,

Are publishing

A POPULAR EDITION OF THE

WORKS OF CHARLES DICKENS,

FOR THE MILLION.

Clear Type. Handsomely Printed, and of Convenient Size, comprising the following Volumes, at the annexed Prices, varying in Price according to the number of Pages:

Oliver Twist (now ready)	172	pages	25 cents.
American Notes (now ready)	104	"	15 "
Dombey & Son (now ready)	348	"	35 "
Martin Chuzzlewit	330	"	35 "
Our Mutual Friend	330	"	35 "
Christmas Stories (now ready)	190	"	35 "
Tale of Two Cities	144	"	20 "
Hard Times	185	"	35 "
Nicholas Nickleby (now ready)	340	"	35 "
Bleak House	340	"	35 "
Little Dorrit	330	"	35 "
Pickwick Papers (now ready)	326	"	35 "
David Copperfield	330	"	35 "

Family Reading.

Voices of the Dead.

When the hours of day are numbered,
And the voices of the night
Wake the better soul that slumbered
To a holy, calm delight;

Ere the evening lamps are lighted,
And like phantoms, grim and tall,
Shadows from the fitful firelight
Dance upon the parlor wall,

Then the forms of the departed
Enter at the open door—
The beloved, the true hearted,
Come to visit me once more.

He, the young and strong, who cherished
Noble longings for the strife,
By the roadside fell and perished,
Weary with the march of life!

They, the holy ones and weakly,
Who the cross of suffering bore,
Folded their pale hands so meekly
Spake with us on earth no more!

And with them the being beauteous
Who unto my youth was given,
More than all things else to love me,
And is now a saint in Heaven.

With a slow and noiseless footstep,
Comes that messenger divine;
Takes the vacant chair beside me,
Lays her gentle hand in mine;

And she sits and gazes at me
With those deep and tender eyes,
Like the stars so still and saint-like,
Looking downward from the skies;

Uttered not, yet comprehended,
Is the spirit's voiceless prayer;
Soft rebukes in blessing ended,
Breathing from her lips of air.

Oh, though oft-depressed and lonely,
All my fears are laid aside,
If I but remember only
Such as these have lived and died.

—*Henry W. Longfellow.*

Trust and Religion.

"No one ever called Colonel Ridgeley a religious man, but I believe he has in his heart a living, personal trust in God, like that of a child in its father, which is life and strength in the time of trial, though hardly felt when all goes well."

This description of a fictitous character, we quote from a story in one of the monthlies. What a strange idea of trust in God it presents! When all goes well, it is hardly felt, but in trial it exerts its power! This, we are persuaded, is a very prevalent error. Trust in God, with the religion which is its expression, is a very good thing for affliction—for suffering, adversity and death. "Let me die the death of the righteous." But in health and in strength, in prosperity and in success, a man need hardly feel that trust, and practice that religon. Under the influence of this, men live self-dependent, active for themselves, neglecting duties to God, and making no profession of religion, in the indolent hope that when trial comes, and especially in the moment of death, this childlike trust will come into exercise, and be life and strength to bear them across the dark waters. How different the exhibition which the Bible presents of the true God-given trust! It does support and comfort in affliction; but it is also emphatically an active principle, which works by love and obedience to God. The 11th chapter of the chapter of the Epistle to the Hebrews exhibits it in both these aspects. Man needs to feel it, and act under its influence, while he is strong and energetic, as well as when thrown helpless on the waves of sorrow.

And he who has it really in his heart cannot but be a religious man; for what is religion but "godliness or real piety in practice, consisting in the performance of all known duties to God and our fellow men, in obedience to divine command, or from love to God and his law?" And can any one have in his heart a living personal trust in God, without thus exhibiting it in his life? The two cannot be disassociated; and they who think they can possess this childlike dependence on God, and yet neglect the practice of religious duties in connection with the divinely established Church, indulge an error which is exceedingly deleterious in its influence on their own spiritual welfare, destructive in the example which it sets before the profane, and dishonoring to God. The declaration of the inspired Word, "If thou shalt confess with thy mouth the Lord Jesus and shalt believe in thine heart, thou shalt be saved;" and they who make this confession, and are strong in faith, glorify God thereby both in active doing and in passive suffering. True religion, as it appears before men, is simply the outward expression of the heart-trust. It brings the soul into communion with God, and depends upon him for strength to obey his commands and endure his fatherly chastisements. We cannot have the trust and yet be irreligious, any more than we can have blood and life in the heart and yet continue destitute of pulse and strength through the body.—*Presbyterian.*

A True Hero.

The city of Marseilles, in France, was once afflicted with the plague. So terrible was it that it caused parents to forsake children, and children forgot their obligations to their own parents. The city became as a desert, and funerals were constantly passing through its streets. Everybody was sad, for no one could stop the ravages of the plague. The physicians could do nothing, and as they met one day to talk over the matter, and see if something could not be done to prevent this great destruction of life, it was decided that nothing could be effected without opening a corpse, in order to find out the mysterious character of the disease. All agreed upon the plan, but who shall be the victim? it being certain that he who should make the examination would certainly die soon after. There was a dead pause. Suddenly one of the most celebrated physicians, a man in the prime of life, rose from his seat and said:

"Be it so; I devote myself for the safety of my country. Before this numerous assembly I swear, in the name of humanity and religion, that to-morrow, at the break of day, I will dissect a corpse, and write down as I proceed what I observe."

He immediately left the room, and as he was rich, he made out a will and spent the night in religious exercises. During the day a man had died in his house of the plague, and at daybreak on the following morning the physician, whose name was Guyon, entered the room, and critically made the necessary examinations, writing down his observations. He then left the room, threw the papers into a vase of vinegar, that they might not convey the disease to another, and retired to a convenient place, where he died in twelve hours.

Was not this a true hero? While we all admire the bravery which appears on the battle-field, let us not forget that there is an opportunity for the heroic in other places as well.—*Student and Schoolmate.*

Tell Your Wife.

If you are in trouble or a quandary, tell your wife—that is, if you have one—all about it at once. Ten to one her invention will solve your difficulty sooner than all your logic. The wit of women has been praised, but her instincts are quicker and keener than her reason. Counsel with your wife, or your mother, or sister, and be assured light will flash upon your darkness.

Women are too commonly adjudged as verdant in all but purely womanly affairs. No philosophical student of the sex thus judges them. Their intuitions, or insights, are the most subtle, and if they cannot see a cat in the meal, there is no cat there. In counseling a man to tell his trouble to his wife, we would go farther, and advise him to keep none of his affairs secret from her. Many a home has been happily saved, and many a fortune retrieved by man's full confidence in his "better half." Woman is far more a seer and prophet than man, if she be a fair choice. As a general rule, wives confide the minutest of their plans and thoughts to their husbands, having no involvements to screen from them. Why not reciprocate, if but for the pleasure of meeting confidence with confidence? We are certain that no man succeeds so well in this world as he who, taking a partner for life, makes her the partner of all his purposes and hopes. What is wrong of his impulses or judgment, she will set right with her almost universally right instincts. "Helpmeet" was no insignificant title, as applied to man's companion. She is a meet help to him in every darkness, difficulty, and sorrow of life. And what she most craves, and most deserves, is confidence—without which love is never free from shadow.—*United Presbyterian.*

True Happiness.

If you were to see a man endeavoring all his life to satisfy his thirst, by holding up one and the same empty cup to his mouth, you would certainly despise his ignorance; but if you should see others ridiculing the dull satisfaction of one cup, and thinking to satisfy their own thirst by a variety of gilt and golden empty cups, would you think that these were the wiser or even the happier or better employed, for their finer parts? Now, this is all the difference you can see in the happiness of this life. The dull and heavy soul may be content with one empty appearance of happiness, and be continually trying to hold one and the same empty cup to his mouth all his life. But then let the talented men of the world lay all their heads together, and they can only show you more, and various, empty appearances of happiness; give them all the world into their hands, they can only make a great variety of empty cups; for, search as deep as you will, there is nothing to be found here nobler or greater than eating and drinking, rich dress and applause, unless you look for it in the wisdom and laws of religion.

Reader, reflect upon the vanity of all orders of life who live without godliness, and see how all the ways of the world are only so many different ways of error and blindness, that you may be earnest at a throne of grace to be turned from the creature, and seek for happiness in the Creator.—*Commonwealth.*

Obduracy of the Heart.

"Oh!" says the good old Thomas Adams, "how hard and obdurate is the heart of man, until the rain of the Gospel falls on it! Is the heart covetous? No tears from distressed eyes can melt a penny out of it. Is it malicious? No supplication can beg forbearance for the least wrong. Is it given to drunkenness? You may melt his heart into dropsy before his heart into sobriety. Is it ambitious? You may as well treat with Lucifer about humility. Is it factious? A choir of angels cannot sing him into peace. No means on earth can soften the heart; whether you annoint it with the supple balm of entreaties, or thunder against it the bolts of menaces, or beat it with the hammer of mortal blows. Behold, God showers this rain of the Gospel from Heaven, and it is suddenly softened. One sermon may prick him to the heart. One drop of the Savior's blood, distilled on it by the Spirit in the preaching of the word, melts him like wax. The drunkard is made sober, the adulterer chaste, Zaccheus merciful, and raging Paul as tame as a lamb."

Young Folks.

The Beautiful Garment.

"Oh, grandmother, see my beautiful new dress!" exclaimed a gaily attired little girl, skipping into her grandmother's bed-room.

"See how it sets, and how becoming it is!"

She walked to and fro before her grandmother, and turned around this side and that.

"Very pretty," said her grandmother, smiling faintly; "but it is not what I should choose for you."

"Oh, father says pink is so becoming to my complexion! What color should you choose, grandmother?" and the little girl fingered the trimmings on her pink robe as if no trimming equalled hers.

"I should choose white, pure and shining white," said her grandmother. "I know of such a dress which I should be very glad to have you wear."

"Mother says I tear white dresses so, I do not deserve to have one," answered the little girl.

"That which I speak of will never tear."

"O grandmother, think how awfully I look in my outgrown white dress!" and the child seemed to shrink from the thought of another white dress.

"This you could never outgrow."

"Always fit me! why, grandmother, you don't mean so!"

"Yes, my little girl, it will always fit you."

"Now, grandmother, you are making fun!"

Yet the little girl looked into her grandmother's face, and saw that it looked as mild and serious as it ever did.

"Could I burn it?" asked the little questioner, for she remembered that on a cold winter's day what a hole the stove made in her new plaid dress.

"No fire can burn it," answered the grandmother.

"No sun fade it?"

"No; neither can the rain wet it."

"O grandmother! I know now; it's made of asbestos—you mean an asbestos dress," and she leaned upon her grandmother's knee, looking up into her face.

Perhaps all children know that asbestos is a mineral that can be made into threads and woven into garments which heat cannot consume.

The grandmother shook her head.

"If it's such a beautiful white, I should soil it very easily, I suppose."

"Yes, you can easily soil it; even a thought, a a wrong thought, would sully its delicacy."

"O grandmother!" cried the little girl, looking very incredulous; "how funny! I should be afraid to wear it."

"But it will shield you from harm."

"I should like that. Is it so very strong then?"

"So strong my little girl would never wear it out, and then it becomes more beautiful the longer you keep it, if you keep it carefully," said the good old lady.

"How careful Nancy would have to be in washing it," exclaimed the child.

"I do not think it will ever need washing."

"Oh, grandmother! Well, will it be becoming? Shall I look pretty in it?" asked the little girl eagerly.

"You could wear nothing so beautiful. It has precious ornaments a great deal handsomer and more costly than your gold chain, or your coral necklace."

The eyes of the child danced with delight.

"Are they always worn with it?"

"Yes, always. You shall never lay them aside, for fear of losing them.

"Why, I never saw such a dress," and she looked thoughtfully. "Where can I buy one?"

"There is one already bought for you, my child."

"Oh!" and she looked surprised. "Oh, I am so glad! Who *did* buy it for me?"

"Your best friend."

"You, grandmother! did you buy it? How very, very good of you," said she, earnestly regarding her grandmother's face.

"No, it was not I—a better friend than I," and she spoke solemnly.

"Oh, you mean something, grandmother!" cried the child, Please tell me what you do mean. What is this dress, so wonderful? I am sure I want one."

"This dress, so wonderful, is the *garment of salvation*. It was bought by Jesus Christ at a great price—even His life; its ornaments are a meek and quiet spirit. Will my dear little girl wear this beautiful garment?"

The sweet and solemn earnestness of the old lady touched the child's heart.

"I wish I could," breathed the little one, her head bowed low.

"Then you would have a wardrobe for eternity, my Mary, fitting you for the company of the heavenly hosts of the world to come, where the redeemed shall sing their songs of praise," and the grandmother pressed the little girl to her bosom and breathed over her the prayer of love.

Who will not wear this beautiful little garment? Who will get ready his wardrobe for eternity.—*United Presbyterian.*

Kind Manners.

"Will you lend me your knife to sharpen my pencil, George?" asked little Mary Green of her brother, who was sitting at the opposite side of the table.

George drew the knife from his pocket, and pushed it rudely towards her, saying at the same time:

"Now don't cut your fingers off."

The knife fell upon the floor, and as it was evening, it took Mary some minutes to find it, and her brother made no offer of assistance. He was studying a geography lesson for the next day, and seemed to be very much engaged with it. At length he closed his book and atlas, exclaiming:

"Well, I'm glad that lesson is learned."

"And now will you please to show me how to do this sum, before you begin to study again," said Mary, who had been for some time puzzling over a sum in subtraction, which appeared to her very difficult.

"You are big enough to do your own sums, I should think, Miss Mary," was the answer.

"Let me see. What! this simple question. You must be stupid if you cannot do that. However, I suppose I must help you. Give me the pencil."

The sum was soon explained, quite to Mary's satisfaction, and several hints were given her as to those which followed, which prevented her meeting with further difficulty. Her brother did not mean to be unkind. He loved to help her. It was only his manner which seemed harsh and cross.

Presently his mother took her sewing and sat down at the table where the children were studying. George wished for the large dictionary which was in the book-case at the farther end of the room, and he took the lamp and went to took for it, leaving his mother and sister to sit in darkness until his return.

"That is impolite, George," said his mother, "there is another lamp upon the mantle-piece, which you can light if you wish to use one."

George made no reply, but instantly replaced the lamp and lighted another. After finding the dictionary, he returned to his seat and hastily blew out the lamp, instead of placing the extinguisher over the flame. The disagreeable smell of the oil filled the room, and his father, who was sitting near, reading the newspaper, looked up and said:

"You are impolite again, my son. Have you not often been told that it is not good manners to blow out a lamp in that way?"

"I cannot always think about manners," replied George, rather rudely.

"And yet they are of great consequence, George. A person whose intentions are really good, and who desires to be of use to his fellow beings, may impair his usefulness very much by harsh and unkind manners."

"If we do what is right father, I should not think it much matter how we do it."

"You are mistaken, George. It makes a vast difference in the amount of good we perform. I will tell you of a little instance which will show the truth of this. I visited this morning a very poor woman in the neighborhood. My means did not enable me to do a great deal for her relief, but for the little I gave her she appeared deeply grateful. Finding that she had formerly been employed as a washerwoman by a gentleman whose office is near mine, and whom I knew to be wealthy and benevolent, I asked why she did not apply to him for some relief. The tears came into her eyes as she replied, 'Indeed, sir, I know the gentleman is very kind, and he has helped me before this when things were very hard; but, indeed, I would rather suffer, than go to him; he has such a harsh way of speaking to a poor body. A kind word is a good thing, sir; it comforts the troubled heart. A penny from some is worth a pound from others."—*Commonwealth.*

A Thoughtless Boy Punished.

I shall never forget an incident of my childhood by which I was taught to be careful not to wound the feelings of the unfortunate. A number of us school boys were playing by the roadside one Saturday afternoon, when the stage-coach drove up to a neighboring tavern and the passengers alighted. As usual, we gathered around to observe them. Among the number was an elderly man with a staff, who got out with much difficulty, and, when on the ground he walked with most curious contortions. His feet turned one way, his knees another, and his whole body looked as though the different members were independent of it and of each other, and every one was making motions to suit itself. I unthinkingly shouted—

"Look at old rattlebones!" while the poor man turned his head with an expression of pain which I can never forget.

Just then to my surprise and horror, my father came round the corner, and immediately stepped up to the stranger, shook his hand warmly, and assisted him to walk to our house, which was but a little distance. I could enjoy no more play that afternoon, and when tea-time came, I would gladly have hid myself, but I knew that would be in vain, and so tremblingly I went into the sitting-room. To my great joy and relief the stranger did not recognize me, but remarked pleasantly to my father as he introduced me—

"Such a boy was really worth saving."

How the words cut me to the heart! My father had often told me the story of a friend who had plunged into the river to save me as I was drowning, while an infant, and who in consequence of a cold then taken, had been made a cripple by inflamatory rheumatism; and this was the man whom I had made a butt of ridicule, and a laughing stock for my companions! I tell you boys and girls, I would give many dollars to have the memory of that event taken away.

If ever you are tempted as I was, remember that while no good can come of sport whereby the feelings of others are wounded, you may be laying up tor yourselves painful recollections that will not leave you for a lifetime.

"I gladly tread the narrow path,
While light and grace are given;
Who meekly follow Christ on earth,
Shall reign with him in heaven."

What Mary Gave.

When the contribution comes round in church, boys and girls throw in money which their parents have given them for that purpose. The money is not their gift, but that of their father and mother. They have just as much to spend for their pleasure as they had before. And so I once heard a kind-hearted girl complain that she had nothing of her own that she could give. I will tell you what she gave in one day, and you will see that she was mistaken.

She gave an hour of patient care to her little baby sister who was cutting teeth. She gave a string and a crooked pin and a great deal of good advice to the little three-year old brother who wanted to play at fishing. She gave Ellen, the maid, a precious hour to go and visit her sick baby at home; for Ellen was a widow, and left her child with its grandmother while she worked to get bread for both. She could not have seen them very often if our generous Mary had not offered to attend the door and look after the kitchen fire while she was away.

But this was not all that Mary gave. She dressed herself so neatly, and looked so bright, and kind, and obliging that she gave her mother a thrill of pleasure whenever she caught sight of the young, pleasant face; she wrote a letter to her father, who was absent on business, in which she gave him all the news he wanted in such a frank, artless way that he thanked his daughter in his heart. She gave patient attention to a long tiresome story by her grandmother, though she had heard it many times before. She laughed just at the right time, and when it was ended, made the old lady happy by a good night kiss. Thus she had given valuable presents to six people in one day, and yet she had not a cent in the world. She was as good as gold, and she gave something of herself to all those who were so happy as to meet her.—*Reformed Ch. Messenger.*

Settle while you are Young.—Think of this, my good friend, and as you have kind affections to make some good girl happy, settle yourself in life while you are young, and lay up, by so doing, a stock of domestic happiness against age or bodily decay. There are many good things in life, whatever satirists and misanthropes may say to the contrary; but probably the best of all, next to a conscience void of offense (but without which, by-the-bye, they can hardly exist), are the quiet exercise and enjoyment of the social feelings, in which we are at once happy in ourselves, and the cause of happiness to those who are dearest to us.—*Sir Walter Scott.*

NEWS SUMMARY.

PACIFIC COAST ITEMS.

NEW MINT.—The new, elegant, and commodious Branch Mint, just erected at Carson City, Nevada, is built of sandstone, quarried near the locality, and is described as being one of the finest edifices on the Pacific Coast. The material is rather soft when first quarried, but hardens upon exposure to the air. The building is 90 feet front by 60 feet deep, and its architectural beauty is mentioned in terms of praise. The edifice alone cost $190,000 in currency, and with all its machinery and appliances in running order, will cost a quarter of a million, currency.—*Alpine Miner.*

A CORRESPONDENT writing from Petaluma says: "Weather fine; old crops coming out; plowing and harrowing; new crops going in; county improving; railroads grading and surveying; education and religion not wholly dead."

THE *Stockton Gazette* warns the people that their stock of fuel, both of wood and Mount Diablo coal, will be exhausted before many years, and urges farmers to plant a portion of their land with forest trees.

A LITTLE girl was killed at Washoe on the 6th inst., by the discharge of a gun in the hands of her brother. He supposed the gun not to be loaded, and pointed it at her head in sport.

THE *Territorial Enterprise* says that prospecting in the vast Indian country south of White Pine will be carried on to a greater extent than ever before, in the Spring.

A ROUTE for a wooden railway from Reno to Virginia City has been surveyed. The *Enterprise* thinks the road will be built.

THE Central Pacific Railroad Company received $640,000 in bonds from the Secretary of the Treasury on the 4th inst.

THE Young Men's Christian Association will borrow $12,000 by mortgaging their property on Sutter Street.

IN Los Angeles County there are 15,000 acres under cultivation, of which 10,000 have to be irrigated.

IT now appears certain that the Central will distance the Union railroad in the race for Salt Lake.

DURING Thanksgiving week not a single accident happened on the Central Pacific Railroad.

WELLS, FARGO & Co. are said to have decided to put a stop to the racing of stages in Nevada.

OVER $10,500 have already been contributed for the establishment of the Italian Hospital.

THE College of California will have a vacation, commencing on the 16th inst.

LARGE quantities of marble are being shipped from Columbia to this city.

A NEW and improved style of horse-car has been introduced in this city.

LAND is rented in Alameda County at $6 to $7 per acre this season.

THE Empire Imperial shaft is now down 1,082 feet in soft rock.

THE Oakland Directory will appear in January.

THE small-pox is abating in Monterey County.

TELEGRAPHIC.

EASTERN.—General Grant has been spending some time in Boston....The Union Pacific Railroad is only 120 miles from Monument Point....Jeff. Davis' trial has been regularly postponed....Gen. Custer's Indian victory is charged by his enemies to have been upon peaceful tribes... Yellow Smoke, a peaceful Omaha chief, was murdered by whites in Dunlap, Iowa, on the 3d inst....A heavy snow storm prevailed at Chicago on the 3d....75 or 80 persons were killed by a steamboat collision on the Ohio River, on the 3d. Both boats, valued at $474,000 were wholly destroyed....Gen. Cole has been acquitted of the murder of Hiscock, on the ground of insanity....Secretary McCullough's report favors the resumption of specie payments by the legalization of gold contracts. It also favors an increase of the whiskey tax.

SOUTHERN.—General Howard thinks that military force will be required in the South for several years to protect the freedmen....The Governor of Georgia has sent a communication to Congress, stating that the Reconstruction laws have not been carried out, and asking that body to take such steps as it may think best....The town of Augusta, Arkansas, has been taken possession of by the militia, who forbid the sending of telegraphic messages. No reason given.

POLITICAL.—Seymour's official majority in New York is 9,166. The number of fraudulent Democratic votes in New York and Brooklyn is supposed to have been about 30,000. ....Pres't Johnson read his message from the manuscript, some one having stolen the printed column....Senator Pomeroy of Kansas, is preparing an amendment to the Constitution, providing for universal suffrage without reference to color or sex....47 Senators were present at the first meeting of the Senate on the 7th. In the House, 164 members were present....In the Senate the matter of admitting the Senator from Georgia was debated and postponed. A resolution was introduced in the House censuring Reverdy Johnson. It was referred to Committee on Foreign Affairs.

FOREIGN.—Disraeli has resigned, because the people have shown, by their vote, that they do not approve his policy.... It is thought that Gladstone will be made Premier....The prospects of the Republicans in Spain are improving....It is said that the revolutionists in Cuba have met with serious reverses....The Revolutionists in France still compel Napoleon to keep up his large armies. They tried to make a demonstration on the anniversary of the *coup d' etat*....There are accounts of great floods in Mexico....George Peabody has given another £100,000 to the poor of London....Bismarck and Minister Bancroft have had a long interview.... The Cuban insurgents are charged with committing great outrages....The steamship *Hibernia* was lost on the Irish coast, and many lives lost.

SPECIAL NOTICE.

Pain Killer.

No article ever attained to such unbounded popularity.—*Salem Observer.*

An article of great merit and virtue.—*Cin. Nonpareil.*

We can bear testimony to the efficacy of the Pain Killer. We have seen its magic effects in soothing the severest pain, and know it to be a good article.—*Cincinnati Dispatch.*

A speedy cure for pain—no family should be without it.—*Montreal Transcript.*

Nothing has yet surpassed the Pain Killer, which is the most valuable family medicine now in use.—*Tenn. Organ.*

It has real merit. As a means of removing pain, no medicine has acquired a reputation equal to Perry Davis' Pain Killer.—*Newport (Ky.) Daily News.*

It is really a valuable medicine—it is used by many physicians.—*Boston Traveler.*

ALLEN'S ORIGINAL AND GENUINE

Nerve and Bone Liniment.

The Nerve and Bone Liniment was originated by Geo. M. Allen, in the year 1834, and has lived entirely on its own merits without the aid of advertisements; but owing to the many counterfeit and worthless articles called Nerve and Bone Liniment, now upon the market, has induced the proprietors to advertise it. Many certificates of leading citizens who have used and constantly keep it in their houses, as a great family remedy, could be added to the advertisement, but knowing the many virtues of Allen's Nerve and Bone Liniment, and that one application will satisfy any one of its beneficial effects, deem it unnecessary to bring the certificates before the public. Allen's Nerve and Bone Liniment does not effect a cure in a minute, but acts upon the Nerve and the Bone of the patient by its penetrating properties, when used according to the directions on each bottle, and gives new strength to the parts affected, and thus acts as an agent in helping nature to restore the diseased parts to health. It is also invaluable in all diseases of horses.

Be sure to call for Allen's original and genuine Nerve and Bone Liniment, all others are worthless counterfeits, and should not be tolerated by the public.

CURRENT TOPICS.

From time to time, we have called attention to Robert College, an institution founded a few years ago by the contributions of several Christian gentlemen in this country and Great Britain, prominent among whom was he whose name the College bears. It is located near Constantinople, and one of our most successful American missionaries is the President, and religious instruction is largely mingled with the study of various languages, science, philosophy, rhetoric, history, and other elements of a thorough, liberal education. Its first graduating class left the College this year, at the Commencement in July; and the two young men who composed it are Christians, and will be retained for a time as tutors. There are 100 students, representing 14 nationalities, a fact which makes known without comment the powerful influence for good of a Christian school, patronized from such a wide extent of country. We say patronized, for this is not a free College. Last year the income from students paid the current expenses, although about $2,500 were remitted to those who were needy, so that the permanent fund of $100,000 may be employed for various material improvements necessary to the continued prosperity of the institution. It is doubtful whether the same amount of money has ever been given for missionary purposes which was so directly effective in introducing the kingdom of light among men as is that which endows this College in Turkey. We see the beginning of its usefulness, but the good it may do during the years to come is beyond computation.

We are glad to observe that our Congregational brethren seem to appreciate fully the exigency which calls for the expenditure of large sums of money in the support of missionaries and feeble churches, just at this time in California. The American Home Missionary Society now sustains 25 missionaries in this State, seven more than have been sustained here in any former year. These have preached regularly to 30 congregations, and as a partial reward for their labors, five churches have been organized, two have become self-sustaining, three houses of worship have been completed, and six others are about to be erected. They have reason to be encouraged, and it will not be many years before from what is now missionary ground returns of money and influence will mingle with the contributions from the Eastern churches, for the salvation of the regions beyond, now lying in darkness. Money and labor are wisely expended for the establishment of Christianity in California, in these early years.

Life insurance need not be advocated, much less need it be defended, in these days, though the time was when many good persons regarded it as defying Providence to provide in this way for those who would otherwise be dependent. What we wish to do in this reference to the subject is not to urge men generally to avail themselves of the opportunity thus afforded to bless their households, should they be taken away, but to suggest to churches that they may greatly relieve the fears of their pastors, if they will present them with a policy of life insurance, paid up for such a term of years at least, as will give them the belief that their own death will not leave their families paupers. The salaries of most ministers are so small that they cannot afford to pay an amount each year sufficient to obtain a policy and continue it, while the congregations to which they minister might do this without feeling the tax. Such a present would drive away his most anxious feelings from the breast of many a devoted, faithful servant of God, and cause his work to be the more effective, because he would be freed from the burdens that now weigh him down. If you know that what you give your pastor is only enough to keep himself and his family alive, add to this as we have suggested, what will greatly cheer the hearts of them all, and you will have your reward.

We see it stated, on the authority of the New York *Tribune*, that the Republic of Liberia is really a slave-holding power. The Republic has made conquests of the interior tribes, until it now has a population of 600,000 souls, and the *Tribune* says that it has permitted the continuance of slavery in these tribes on a very extensive scale. President Roberts, who is now in this country soliciting aid for the Liberian College, admits that the wealth of the interior chiefs, like that of the savage tribes of Africa, is measured by the number of their wives and slaves. It is certainly a remarkable fact that a colony which was founded as an asylum for emancipated slaves should be liable to such a change, and the Christian public, to whose benevolence Liberia is indebted for its existence, and in large measure for its prosperity, should demand an explanation of what seems to furnish foundation for it. It will be sad, indeed, if America when freeing herself from from slavery, has contributed to establish it on the other side of the globe.

Figures often arrest attention, when statements in other forms are unheeded. In 1867 there were distilled, brewed, and manufactured in the United States, 350,000,000 gallons of spirituous and malt liquors, and wines. At the wholesale price per gallon, this amount of strong drink would purchase the food and clothing of all the people of the country, if we include in these items, beef and pork, flour and meal, boots and shoes, and ordinary garments, and leave a surplus of several millions of dollars. This amount was more than sixty times as much as was spent for educational and religious purposes during last year. Are we likely to misrepresent, when we declare intemperance to be an enormous curse, even if we leave out of view its political and moral influence? Is zeal misdirected which strives to diminish, if not entirely stay, such a fearful drain upon the resources of the country? The figures would be appalling, were we to present all the results that can be directly traced to the use of these drinks, for one year. There ought to be a general and powerful revival on the subject of temperance, and it ought not to be delayed.

The recent comers into Lower California are not the only enterprising men who expect to render valuable those regions of country which have long been regarded as worthless. They do not doubt that where water is necessary, but wanting, an adequate supply can be obtained from artesian wells, and they are proving by experiment that their confidence is well founded. In the Abyssinian expedition across the sand-plains, the army was supplied with water by driving tubes through the sand into springs below. And now we are told that an Italian engineer, after a long residence in Africa, proposes to convert the great Desert of Sahara into fruitful fields by means of water thus obtained. We are so accustomed to marvels that they do not excite astonishment as they would have done in the days of our fathers. Yet, even our generation will be somewhat amazed if that vast waste shall be made to bud and blossom as the rose. Whatever may be true in Africa, experiments in all parts of the world assure us that all our territory that is worth the expense can be made productive by artesian well boring. We need only wait for the population to occupy these lands and they will be made fertile.

May not physicians be too unmindful of the consequences when they advise patients who are in feeble condition to habitually use liquors as a medicine? This advice is much more general now than it was fifteen or twenty years ago, and it may be a sad commentary on this fact that the number of confirmed drunkards, and of those who drink liquor as a beverage, has greatly increased within that time. It is a fearful responsibility for a physician to assume, in view of the possible results, unless there is absolutely nothing else that may be prescribed for the attainment of the object sought. There is hardly a sick room in which whiskey or brandy is not found, to be taken regularly by the patient, and hardly an invalid who does not take these, or ale, or wine, as habitually as he takes his meals. Cannot some substitute be employed, from which there will be less danger?

Lay-preaching has now been proved to be successful in so many instances that there is no necessity for argument in its favor, when the men are found

who are fit for the service, and are willing to engage in it. In London, laymen have done great good by carrying the Gospel to the poor, gathering assemblies in the streets and addressing them, going to manufacturing establishments at hours when work was suspended and talking with young men and old, distributing testaments and tracts, and, as they had opportunity, seeking to lead men to repentance. One man, said to be actively engaged in business, and of large wealth, has gathered an immense congregation of regular attendants, to whom he preaches on the Sabbath, and often in the week, and the number increases so rapidly that he has resolved to employ an assistant, to act as missionary, and devote himself wholly to their spiritual wants. When asked if his business did not suffer from his giving so much attention to the poor, he replied that he found God the best partner he had ever had, and, under His management, he had no doubt of success. This single preacher has been instrumental in the conversion of more than 1,500 of those who had long been neglected, and were almost heathen. All who attempt such labor may not be successful as he, but one such instance should incite many to imitate his example.

Religious Intelligence.

PACIFIC COAST.

Salinas City,—Prospect of Establishing a U. P. Church.—It is with pleasure that in compliance with your request the following statements are given respecting my recent visit to Salinas City and vicinity:

Aware of the fact that several families connected with the United Presbyterian Church had during the former part of the Summer arrived on our coast from Western New York and located on the Salinas Valley, it was deemed advisable to look after them. On Sabbath morning, Nov. 8th, I preached in Sotoville—a brisk little village about 30 miles north of Salinas City,—and at 3 P. M., in a school house adjacent to the last mentioned place, the only place in the town suitable for services being occupied.

After the exercises, we proceeded to ascertain what encouragement there was in attempting an organization, and after a pretty thorough canvass we succeeded in getting *twenty-seven names*, of persons ready to encourage the enterprise with their hearty support. About one-half of these are members in full standing in one or the other branch of the Presbyterian family, though principally United Presbyterians. This nucleus will almost of itself be able to sustain a laborer in the field, though I have it in mind shortly, to visit Castroville—10 miles this side of Salinas City on the stage route to Watsonville—and see what can be done towards an organization there, and unite the two in one charge which will then doubtless be self-sustaining from the start.

Communication has been opened with a prominent citizen near Castroville in relation to the matter, and I expect to carry out my intentions as soon as the small-pox abates in Watsonville and the valley beyond.

On the strength of what has been done and the encouraging prospects as to what may be done, with the blessing of God, a request has been sent to the Executive Committee of the U. P. Board of Home Missions, to send a man into this field as soon as possible, which it is my prayer, may be speedily done.

The field is ripe. No Presbyterian minister so far as I could learn, had ever preached in that part of the valley of which Salinas City is the center.

I hope we shall have the sympathy and prayers of all sister churches of the Presbyterian family on this Coast, and in fact of all God's people everywhere, in this enterprise. M. M. Gibson.

All Presbyterians will heartily sympathise with Brother Gibson in the pleasure he feels on account of such a cheering result of his care and labor. His success in this instance should stimulate all who are in position to do so, to take more pains to become acquainted with the spiritual wants of neighborhoods that have heretofore been neglected. And this evidence of fidelity to the interests of the Church should encourage those in the East, who are associated with him in the U. P. Branch, to give Brother Gibson substantial aid in the prosecution of missionary work. There ought to be no delay in furnishing this new church with an able and earnest minister.

Conversion of the Chinese.—A few weeks since, we published an account of the work proposed to be done by Rev. O. Gibson, the Methodist missionary. Mr. Gibson informs us that, acting according to his original plan, he has already organized Sunday and evening schools in San Francisco, Sacramento, Stockton, and Santa Clara, in which about 200 Chinese are being taught to speak, read, and write our language, It is intended to extend this system of schools all over the coast, as rapidly as possible.

In addition to the original plan, it is now proposed to establish a "Central School" in this city, which shall be a permanent institution of high grade, developing ultimately into a College for Asiatics. About $20,000 will be needed to found the institution, a large part of which is expected from the steamship and railroad companies which make use, to a great extent, of Chinese labor, but all are requested to aid, by their contributions, in carrying on the work. This school, we are assured, will not be in any sense a partisan or denominational institution. Mr. Gibson and the cause he represents deserve the support of all.

Dedication of the Congregational Church at Benicia.—On December 10th a new Congregational Church edifice was dedicated in Benicia. Sermon by Rev. Dr. Stone; prayer by Rev. Dr. Dwinell; historical statement by Rev. C. T. Mills, from which we learn that the edifice—55x36 feet, with lecture-room, bell, and furnishings complete—cost about $6,800, all of which was provided for, so that it was consecrated free from debt. The Church numbers 33 members, and, under the efficient lead of their estimable pastor, Rev. C. H. Pope, have shown great energy and enterprise.

A neat parsonage, adjoining the church, built by individuals, and held in trust for the Society, makes the establishment complete. R.

EASTERN.

Christian Party.—On the subject of having a Christian Party in Politics, the *Church Union* says that "universal suffrage and universal fellowship must precede all other steps," and then says:

We desire to purify our government. There is no purity out of Christ. It has got to be established, this dogma, that nothing but Christ can cure our republic of all its diseases. New York will never be swept clean by women, even, and we believe woman to be the purest. Woman, with Christ, can do the work in an hour. What we wish to accomplish in New York is to get every one to voting, woman with the rest, and this because she is the purest and the best. Then we need to combine all Christians, have for once a Christian Mayor, a Board of Aldermen, and Common Council, and Judiciary of Christians, and then down goes the bad, come from what source it may. These things will not come of themselves. A party must be formed. 1872 ought to give such a party prominent mention. Let some few men band themselves together, and take steps to organize a party. Do not wait for numbers. Twelve is all there were to begin the mightiest revolution of any age. Nor need there be great men. Fishermen and publicans did once; they will do again the work."

Free Seats.—The *Northwestern Advocate* publishes the plea for free seats made by the Rev. Robert Colyer, pastor of Unity Unitarian Church in Chicago, which is now in course of erection. The *Advocate* laments that so many Methodist societies are giving up this good practice. "Other churches," it adds, "are cultivating extempore speaking and congregational singing, and making seats free, while we are swaying back to their cast-off customs."

Some time ago the First Presbyterian church, Cincinnati, Ohio, adopted the plan of making all the pews of the church free, relying upon the voluntary gifts of the people for the support of the minister. The Fifth Presbyterian church of the same city, has adopted the same plan, and inaugurated it with good promise of success, and of the enlargement of the congregation.

Not Scared.—Rev. Charles Howard Malcolm does not seem to be at all intimidated by the close-communion resolutions now being so fiercely passed by the various associations of his denomination. Upon a recent Sunday, being out of his own church at Newport, on account of repairs going on, he attended service at the Congregational church in the morning, and at the Methodist church in the afternoon, and upon each occasion assisted the pastor in the celebration of the ordinance of communion. As actions are said to speak louder than words, it is evident from this that Mr. Malcolm does not intend to retreat from his position on the communion question.—*Independent.*

Theological Seminary.—The Synod of Iowa have taken measures towards the establishment of a Theological Seminary, with a Preparatory Department for the special benefit of those whose course of study must be partial. They will, both in curriculum and system of training, seek "to avoid the errors of the present system of theological education, supply its defects, and adapt it in all respects to the demands of the age in which we live."

Ministerial.—Rev. Dr. John Hall, who was, about a year ago, installed pastor of the Fifth Avenue church, N. Y., is attracting such large audiences to hear him that the pews cannot hold the people, and camp chairs are regularly placed in the aisles for the accommodation of strangers. Among those who went to hear him yesterday afternoon was Henry Ward Beecher.—*The Evening Post.*

Methodist Idea of Divorce.—One good thing the Episcopal Convention did which our General Conference declined to do: it forbid its ministers from marrying persons divorced for any other than the sole Scriptural reason. It is time that the Church spoke out on the subject of divorce. Members and ministers of our Church are living, according to Christ, in concubinage.—*Zion's Herald.*

Amusements.—The Sunday School Union of this Church, in Hamilton County, Ohio, unanimously adopted a resolution that "any officer who shall so far forget himself and the influence of his example as to attend the theatre, negro minstrel exhibitions, circuses, dances, or dancing parties, or other places of sinful amusement, shall forfeit his position, and cease to be a member of this Board."

Iowa.—New School Presbyterians are only one-sixth as many as the combined Old School and Congregational bodies in Iowa, but they are growing the most rapidly and are giving more money in proportion than the other two bodies.

METHODIST.—The Methodists are less than half as strong as the Congregationalists in Massachusetts.

The entire increase of the M. E. church during the year ending last spring, is stated to be 95,410. This increase has been almost entirely in the South and in the Border States. In the North the increase has been but 4½ per cent.

YOUNG FOLKS.—Last year the children of the Presbyterian Church, Old School, by special effort, contributed to the Board of Foreign Missions the handsome sum of $45,000, being nearly one-tenth of the whole contribution of the Church for that cause. The *Presbyterian* says that the children actually saved the Church from an appalling debt of $27,000.

BAPTIST.—A young man named Stephens, died on October 18th, during his baptism by immersion in the Platte River, Missouri. A physician who was called in, supposed the death to have been produced by the physical shock upon the nervous system, causing syncope, or fainting, immediately after immersion.

NEW COLLEGE.—The Old School Presbyterians are about building a new college at Wooster, Ohio. The people of Wooster and Wayne counties have contributed a site for the building, and $116,000 as an erection fund. It is proposed to raise $500,000 as a permanent endowment fund for the institution.

THE SOUTH.—There are over 100 young men in attendance at Davidson College, North Carolina, representing nearly every southwestern State. Not less than 30 of the students are candidates for the ministry, and several of them expect to labor in heathen lands.

FEMALE PREACHER.—Mrs. Chapin, of Mount Pleasant, Iowa, preached in Rev. Robert Colyer's pulpit, in Chicago, recently, making a very favorable impression. It was the first time that Chicago had witnessed such a sight.

MISSION SCHOOLS.—The people of Dr. Duryea's church in Brooklyn, N. Y., have established two mission Sabbath Schools within a few weeks, one in Atlantic Avenue, and both not very far from Flatbush Avenue.

NEW SCHOOL.—The New School Committee on Domestic Missions has undertaken to raise $50,000 at once, for work among the Freedmen.

CHURCHES.—The *N. Y. Observer* notes the organization of 13 Old School churches in one week; part of them in Kansas, Missouri, and Tennessee.

FOREIGN.

RELIGION IN BOHEMIA.—This is one of the northern provinces of the Australian empire, and has been 4,000,000 and 5,000,000 people. Prague is the capital, a city of some 70,000 inhabitants—famous for its University, which has been the resort at times of more than 2,000 students. As long ago as 1526 a large portion of the inhabitants of Bohemia were Protestants, but coming under Austrian rule they suffered, through a long series of years, the severest persecutions. But the new aspect of affairs in Austria is causing a brighter day to dawn on Bohemia. There are about 200,000 Protestants in the country. A deputation was recently sent to England and Scotland, and returned from those countries and gave such an account of the prosperity of freedom and religion as greatly to stimulate and animate the people in behalf of their own religious rights and wants; while the late action of the Emperor in behalf of the liberties of the people has greatly contributed to the enthusiasm of this long oppressed population. A vigorous effort is being made to establish a theological seminary, which shall religiously train their young men at home, and save their exposure to the moral danger assailing them elsewhere

THE FIRST.—The Presbyterian church of New South Wales have lately appointed their first missionary, the Rev. J. D. Gordon, who is at work among the New Hebrides.

RELIGIOUS TOLERATION IN SPAIN.—Senor Vargas, who was imprisoned at Malaga for preaching the Gospel, writes; "I am free. I teach publicly now—not, as before, within closed doors, for fear of the police. I have just distributed 200 Bibles and tracts. I hope soon to be able to re-open my school." The expulsion of the Queen of Spain indefinitely postponds his trial. Three days after her flight, the revolutionary junta gave permission to open a Protestant house of worship in Seville, the seat of the Inquisition, and the birthplace of the new dogma of the Immaculate Conception.

AFRICA.—The Gaboon mission of the American Board, situated just on the equator in Western Africa, is in a very depressed spiritual condition. Several members had been excommunicated within two years, and on July 26th, 17 more were cut off as dead branches. This must leave the number of natives in present communion with the church very small, and indicates how sore have been the disappointments, and the "perils among false brethren," of the missionaries in that field."

PAMPRESBYTERIANISM IN ENGLAND.—A conference of the two great sections of the Presbyterians in England has just been held. These are the United Presbyterians of England and the English Presbyterian Church. These two bodies have no real difference, and it would be hard to tell why they remain apart. The probability is that the union will take place in a year or two at the furthest.

List of Presbyterian Clergymen,

ON THE PACIFIC COAST, ALPHABETICALLY ARRANGED.

Rev. Jas. M. Alexander, N. S., San Leandro, Cal.
Rev. H. R. Avery, O. S., Walnut Creek, Cal.
Rev. B. B. Bonham, O. S., Sebastopol, Cal.
Rev. I. H. Brayton, N. S., Principal College School, Oakland, Cal.
Rev. W. W. Brier, N. S., Alvarado, Cal.
Rev. Fred. Buel, O. S., agent California Bible Society, 757 Market Street, San Francisco.
Rev. W. H. Cain, O. S., (Not preaching) San Francisco.
Rev. Charles Russell Clarke, O. S., Principal City Female Seminary, corner Mason and O'Farrell streets, San Francisco.
Rev. A. J. Compton, O. S., Watsonville, Cal.
Rev. Eli Corwin, N. S., Congregational Church, Oakland, Cal.
Rev. J. M. Dick, U. P., Eugene City, Oregon.
Rev. H. H. Dobbins, O. S., Sutter Creek, Cal.
Rev. Henry Durant, N. S., Professor College of California Oakland, Cal.
Rev. John Edwards, O. S., Visalia, Cal.
Rev. James Eells, D.D., O. S., pastor First Church, Stockton Street; residence, corner Stockton and Clay Sts., San Francisco.
Rev. Ben. E. S. Ely, O. S., Stockton, Cal.
Rev. J. G. Fackler, O. S., pastor Central Church, Mission Street; residence, 121 Fifth Street, San Francisco.
Rev. A. Fairbairn, O. S., Bloomfield, Cal.
Rev. Frederick Fox, N. S., pastor Emanuel Church, corner Folsom and Seventeenth streets, San Francisco, Cal.
Rev. Thomas Frazer, O. S., Santa Rosa, Cal.
Rev. S. D. Gager, U. P., Eugene City, Oregon.
Rev. Ed. R. Geary, O. S., Calapooya, Oregon.
Rev. M. M. Gibson, U. P., residence 608 Pine Street, San Francisco.
Rev. L. Hamilton, N. S., Oakland, Cal.
Rev. J. R. Hammond, O. S., Placerville, Cal. Visiting in the East on account of ill health.
Rev. Joseph A. Hanna, O. S., Eugene City, Oregon.
Rev. Silas S. Harmon, N. S., San Buenaventura, Cal. Temporarily absent in the East.
Rev. Oliver Hemstreet, O. S., Ione City, Cal.
Rev. I. N. Hurd, N. S., pastor Westminister Church, Hayes Street, San Francisco, Cal.
Rev. S. G. Irvine, U. P., Albany, Oregon.
Rev. T. S. Kendall, U. P., Albany, Oregon.
Rev. N. B. Klink, O. S., Vallejo, Cal:
Rev. A. L. Lindsley, D.D., O. S., Portland, Oregon.
Rev. A. W. Loomis, O. S., Missionary among the Chinese, chapel and residence, cor. Sacramento and Stockton sts., San Francisco.
Rev. B. Lowe, O. S., 10 Martin's Block, San Francisco.
Rev. W. F. B. Lynch, N. S., Alvarado, Cal.
Rev. James H. Marr, O. S., Calvary Mission, San Francisco.
Rev. David McClure, N. S., Principal Oakland Academy, Oakland, Cal.
Rev. Robert McCullough, O. S., Yreka, Cal.
Rev. J. S. McDonald, O. S., Sacramento, Cal.
Rev. W. C. McKaig, D.D., N. S., Marysville. Cal.
Rev. James McLaughlin, N. S., Gilroy, Cal.
Rev. J. H. McMonagle, O. S., pastor Larkin St. Church, residence, 1312 Jackson St. San Francisco.
Rev. W. J. Monteith, O. S., Albany, Oregon.
Rev. Joshua Phelps, D.D., O. S., 88 Stanley Place, San Francisco.
Rev. James Pierpont, N. S., San Francisco.
Rev. George Pierson, N. S., Brooklyn, Cal.
Rev. F. L. Nash, N. S., Alameda, Cal.
Rev. John S. Reasoner, O. S., Brownsville, Oregon.
Rev. Robert Robe, O. S., Brownsville, Oregon.
Rev. Henry M. Scudder, D.D., N. S., pastor Howard Church, Mission Street. Residence, 1 Vernon Place, San Francisco.
Rev. John Sessions, D. D., N. S., Oakland, Cal.
Rev. Anthony Simpson, O. S., Corvallis, Oregon.
Rev. W. R. Sloan, Steilacoom, W. T.
Rev. Townsend E. Taylor, N. S., Virginia, Nevada.
Rev. James S. Todd, O. S., Arcata, Cal.
Rev. Lewis Thompson, O. S., Astoria, Oregon.
Rev. P. V. Veeder, O. S., Principal City College, corner Geary and Stockton streets. San Francisco.
Rev. Charles Wadsworth, D.D., O. S., pastor Calvary Church, Bush Street; residence, 920 Pine St. S. F.
Rev. E. B. Walsworth, D.D., N. S., President of the Female College of the Pacific, Oakland, Cal.
Rev. L. P. Webber, N. S., Santa Clara, Cal.
Rev. S. T. Wells, O. S., agent Presb. Board of Publication. Depot at Bancroft's Bookstore, 609 Montgomery St.
Rev. Samuel Whiting, N. S., Mendocino, Cal.
Rev. A. F. White, N. S., Carson, Nev. Serving as State Geologist.
Rev. Geo. F. Whitworth, O. S., Seattle, W. T.
Rev. Ed. P. Willard, N. S.. Columbia, Cal.
Rev. S. A. Willey, N. S., Vice President College of California, Oakland, Cal.
Rev. M. A. Williams, O. S., Jacksonville, Oregon.
Rev. S. Woodbridge, D.D., O. S., Benicia, Cal.
Rev. J. Worth, U. P., Brownsville, Oregon.
Rev. James L. Wylie, N. S., San Jose, Cal. Gone East for the recovery of health.
Rev. Richard Wylie, O. S., Napa, Cal.
Rev. James Wylie, O. S., Napa, Cal.

Oakland Academy.

A CLASSICAL, ENGLISH, & MILITARY BOARDING SCHOOL

REV. DAVID McCLURE, PRINCIPAL.

The Eighth Term of this Institution will commence on Wednesday, July 8th, 1868, in the new Academy building, recently erected on Telegraph Road, one mile from the Railroad Depot.

The location and plan of this new building have been made with the design of securing for the students a home of beauty and refinement.

Careful provision is made for thorough and extensive courses of study in English, Mathematics, Natural Science, and the Ancient and Modern Languages. A special course is also provided for those who are preparing for a commercial life.

In addition to these courses there is a daily military inspection and drill, together with vocal and light gymnastic exercises, under the instruction of a teacher. Every student is required to attend the military and gymnastic exercises, as a means of physical training.

For the mental, moral, and physical culture of each pupil committed to his care, the Principal holds himself responsible.

Further particulars may be obtained by addressing the Principal at Oakland.

The Sabbath at Home

IS THE ONLY ILLUSTRATED RELIGIOUS MAGAZINE published in America. It employs the ablest Pens and Artists in giving interest to the *Study of the Bible*. It is, in a large measure, a YOUNG PEOPLE'S MAGAZINE, and every month there are Illustrated Bible Recreations for the YOUNG, and older Bible students. Price $2 00 a year.

SMITH'S BIBLE DICTIONARY

Will be sent FREE for six new subscribers.

LANGE'S COMMENTARY

Is a work for Biblical Students of all denominations. Price $5 00 a volume. Seven volumes are now ready, and will be sent to any person sending FORTY subscribers, or either volume for SEVEN subscribers.

THE LITTLE CORPORAL

Is one of the best Magazines published for boys and girls—sent free for one year for TWO new subscribers.

Our Premium List also contains

ELEGANT GIFT BOOKS,

Suitable for Holiday Presents, and beautifully Illustrated Books for the young. Also, Maps of Palestine, Picture Cards and Books for Sunday Schools. We offer SEVEN EXTRA CASH PREMIUMS, the highest being

FIFTY DOLLARS

for the largest club for 1869.

☞Send ten cents for a specimen copy and premium list. EARNEST WORKERS wanted everywhere to canvass for subscribers. Address

SABBATH AT HOME, 164 Tremont Street, Boston.

Correspondence.

Letter from New York.

Since my last letter, I have been taking my *otium* amid the scenes of childhood. "The old familiar faces" are around me, and the quiet spell which lingers beside the home of youth rests on my soul.—

> "But oh, for the touch of a vanished hand,
> And the sound of a voice that is still."

At my feet the beautiful Hudson, swollen with the rains of Autumn, glitters like a silver thread beneath the morning sun. Willard's Mountain, a peak from whose summit I have surveyed the surrounding country repeatedly in former days, lifts his head, snow-capped, in the north. The forests on either hand are leafless and silent, and everywhere there are evidences that Nature is preparing for the repose of Winter.

It is a pleasant thing to enter in and worship in the place where the most important events of one's religious experience connect themselves. This pleasure I now enjoy. I am impressed, however, with the change which has passed upon the congregation. The pews are the same; the pulpit is as high and uncomfortable as ever. Those grim and unoccupied galleries still shut out the sunlight and frown from above; but how changed the worshippers; the "fathers, where are they?" "The young men, whither have they gone?" Another voice speaks from the sacred desk; another sexton tolls the loud-toned bell, and when I look at the old pew, where, with parents and brothers, I was accustomed to sit, it is occupied by strangers.

Still, I must not give way to these painful reflections, because it could not be otherwise; time must make changes, and these are more obvious to the returning wanderer. It is gratifying to observe signs of progress equally apparent. Where there was but one church, there are now two, with all their necessary appliances for maintaining the institutions of religion. And not a few who years ago were numbered among the ungodly are now found "sitting, and in their right minds," among the people of God.

Thanksgiving Day, with all its pleasant memories and occasions for gratitude, is just at hand, calling upon the people everywhere to return unto the Lord that praise which is His due.

You in California have experienced recently some of the terrible manifestations of God's power. The stroke has fallen with special force upon my own beloved flock, and well-nigh destroyed their beautiful sanctuary. There is reason to believe that, unlike Elijah's experience, "the Lord was in the earthquake," and certainly there is reason for reverence, in view of his awful majesty. Is it not a delightful reflection for the Christian, that he at least is "a citizen of that Kingdom which cannot be moved; therefore will we not fear, though the earth be removed, and though the mountains be carried into the midst of the sea."

I notice that the Rev. Mr. Withrow has been called to the Arch Street Church, Philadelphia, formerly Dr. Wadsworth's. Mr. Withrow is a graduate of Princeton College and Seminary, a promising man. The Rev. Jas. M. Ludlow has resigned the First Church, Albany, and accepted the call to the Collegiate Church, N. Y., filling the vacancy made by Dr. Duryea's withdrawal from the associated ministry of that church. Mr. Ludlow received a salary of $7,000 a year with a parsonage. How true it is, in the language of Scripture, with reference to ministerial support, that "to him that hath shall be given, and he shall have more abundantly, while from him that hath not, (the poor missionary on our Western prairie, for instance,) shall be taken away even that which he seemeth to have." Witness the retrenchments made upon their starvation salaries, in too many instances. The Presbyterian Church at Hart's Fall's is still vacant, Rev. Charles Kellog declining the call, his present charge at Bacon Hill exerting themselves with commendable zeal to retain his services.

I spent a very pleasant Sabbath recently at Cohoes, on the Mohawk, with Rev. Wm. Johnson, the efficient pastor of the N. S. Presbyterian Church in that prosperous town. The congregation is made up of an excellent element, and everything about the church proclaims progress and efficiency. A large and vigorous Sunday school draws out the activities of the members, and the constant growth of the city adds daily to the attendance upon the means of grace. I could not but contrast the attractions of such a field, with the trials and discouragements presented in very many of the parishes in your State, where there are but few who care at all for the Church, and the minister is compelled to bear many a cross too weighty to be borne. And yet it cannot be otherwise, probably; the foundations must be laid in troublous times, the seed must be sown in tears, and bye and bye we may hope the edifice will arise in its perfected glory, the golden harvest shall wave in a rich ingathering for God. May the Lord hasten it in His time, and meanwhile let us not be weary in well doing. J. S. W.

Letter from Santa Cruz County.

Watsonville, Dec. 8, 1868.

We are wading through deep waters in this section. The pestilence "which walketh in darkness and wasteth at noonday," is now desolating our beautiful valley.

Within three weeks, we have had in town about 60 cases of small-pox, with 12 deaths. It is thought, so far as our town is concerned, that the loathsome disease has about spent its force. Our congregation has suffered deeply, several of our Sabbath School children and one teacher being numbered among the deaths.

Your correspondent was incarcerated for some two or three weeks with varioloid, but, providentially, none of the other members of the family took it. One of the children was sick at the same time, and it was impossible to get help. One of the Trustees of the Church offered $5 a day to any woman who would go into the house and do the work while my wife nursed the patient; but none of them even who had had the disease would venture.

Families flocked to the country by wholesale. The citizens of our sister town of the Holy Cross became frantic and tore up the celebrated Aptos bridge, for fear some stricken Watsonvillian, or an infected family might seek refuge under the shadow of that sacred city. This energetic conduct on their part is amazing when we remember that they have had the disease for many months, more or less, while we have, until lately, been exempt.

To add to our already deep distress, the typhoid fever has gone through many families and carried off quite a number; among them one of our most prominent merchants, a young man of great worth and promise. Surely, God is visiting this people. We have long prayed that He would come and turn us from the service of Mammon to the True Life. We trust that great searchings of heart may follow; that we may be able to say, "It is good for me that I have been afflicted, that I might learn Thy statutes."

Business is prostrated. Our church has been closed for four weeks, and no one can tell when the curse will be removed. Our citizens have acted nobly and promptly in taking care of the sick, besides contributing to our worse smitten neighbor, San Juan, where the mortality has been almost unparallelled.

Four Sabbaths ago was to have witnessed our quarterly communion, at which time four persons were to have connected themselves with the Church, one formerly a Ruling Elder of a Church in Iowa, long since dissolved, its membership being dispersed by the war and emigration.

Things look gloomy now, but we will look to our Father in faith, and hide ourselves in His Pavilion until this dark cloud be overpast." A. J. C.

Our Chinese Mission.

In The Occident of last week an article with this heading, together with some kind words for the Chinese missionary, contained a mild rebuke to "the beloved brother," for not doing more of another kind of work than that in which he is engaged. It says: "We would be glad if he were disposed to make more frequent and urgent appeals through the papers and by other means, and force upon the notice of Christians a duty they seem so willing to neglect."

The brother begs to say that formerly he did more in the direction indicated than he has been doing recently, while he confesses to a constitutional aversion to appear before the public in such a manner as might seem like throwing himself and his humble labors into notice. Nevertheless, we have always been, and still are, ready to speak for our Mission at Monthly Concerts and Missionary Meetings when opportunity has been afforded, and we will still be glad to do so; also, if desired, we are ready to present the subject in any church on the Sabbath and to receive the collection, providing that such an arrangement would not interfere with previous engagements, and involve the necessity of being in two places at the same time.

It is known to most readers of The Occident that it has been the policy of our Board of Missions to rely very much upon the zeal and fidelity of the the pastors in the matter of raising funds, and in awakening and sustaining an interest in the Missionary cause amongst the people.

Foreign missions were called into being by the churches; churches are the parties especially concerned in sustaining them; while the missionaries are only the servants of the churches, receiving their instructions, doing their work, and coming home when the Church seems not to desire their services longer, and so withholds their supplies.

It was enough for our soldiers in the time of the war to do their duty in the field; the quartermaster's department and the recruiting service were entrusted to other hands; while brief reports from those in the active army were all that was necessary to sustain the enthusiasm of the people, and to keep their purse-strings loose. We have not withheld such reports.

The *theory* is that the "Home and Foreign Record" and the "Foreign Missionary" are taken in all the churches, and the desire is that a copy shall be placed in every family. We have reported voluminously through these organs.

But we will not take up time in defenses or excuses, and will say that, instead of being displeased,

we are glad to be thus asked to appeal personally to the people of this coast to come forward now and help; and we do now appeal the more boldly because we have not troubled them much before; and here we say—this is our appeal—we say: begin at once to do what you can for the Chinamen who are in this country. Those within reach gather into your Sabbath Schools; take them to church with you; teach them in your families; ask them to come in when the family is gathered for morning and evening worship. Teach them to read in English; let your children teach them. You will meet with many who are anxious to learn. Having learned to read, you can place the Bible in their hands, and the Holy Spirit can take those things of Christ and show unto them. Having learned to understand our language, they may be profited by your instructions and by sermons.

We appeal to all good people to treat the Chinamen kindly, if they hope to benefit them spiritually; also to use their influence to induce others to treat them properly.

We appeal to all Christians to pray for us, and for all who are laboring for the same cause of missions among the Chinese. We need sympathy and co-operation. We need teachers in our Sabbath School in the Mission House. We need to have all these matters brought to the notice of the pastors. Therefore, we beg the pastors to be faithful in urging their people to the performance of the duties indicated.

We appeal for pecuniary aid; and we do this now without timidity, because we have been publicly called out to such a service by THE OCCIDENT. Still more are we pressed to do so, because of the present embarrassed condition of the finances of our Board of Missions. But the Board itself has appealed, and we cannot do better than to let it speak for itself, as it does, through its Treasurer:

MISSION HOUSE, Oct. 10, 1868.

The receipts of the Foreign Board, as compared with last year, are as follows: Total receipts to October 1, 1867, $73,711; total receipts to October 1, 1868, $41,707; showing a decrease in five months of $32,004. To meet this deficiency, we have been obliged to borrow $30,000. Our average monthly payments thus far have been $26,000, and our average receipts about one-third of this. It is evident that neither the treasury nor its treasurer can stand such a pressure long.

The Treasurer proceeds with a brief statement of the operations of the Board, especially in regard to the fresh laborers sent out, which, of course, demands increased expense, and shows, also, the determination of these servants of the Church to go on building the Lord's House, even in troublous times, and then he says:

Thus, our work is going on—but all this takes money. With a debt of $27,000 to begin the year with, and an accumulating debt every year since, the situation here is becoming very embarrassing.

We hope much from the action of our Synods, but much more from the benevolent hearts of those who love the Savior, and have the ability to minister to his cause among the heathen.

If this is not an appeal then we know not how to define the term. We wish that this appeal, even the naked statement if nothing more, might be taken by all our mimisters and read to their congregations.

We remember once to have heard the Rev. E. N. Kirk, of Boston, on his return from France remark something like this: "Before leaving France, the brethren flocked around me and said: 'Now tell us just how we can frame such an appeal to your American Christians as to draw out toward us their sympathies, their prayers, and their contributions.' I answered them, saying, 'We Americans are a matter of fact people, we don't care so much for fine speeches as to know whether the thing proposed is feasible and will reward the outlay; therefore you have only to give us the fact and figures, and you may keep your rhetoric for those who need it more.'"

Mr. Rankin has given us the facts and figures, and a practical people like the Californians know what use to make of them without being detained to read any of our remarks upon them, and we shall only state two or three reasons why we think the California people will at once come forward and relieve the Board of a part of their burdens.

1st. The churches at the East have long been supporting, to a large extent, the Mission to the Chinese in California, but now there are churches here which are well established, and there is abundant wealth in the country.

2d. The people here, we think, are able not only to support this Mission, but to pay back before long, what the Eastern churches have been sending here, so that they will be better able to carry forward missionary operations in heathen lands.

3d. We have recently enlarged the operations of our mission to the Chinese in California, and our expenses are proportionately increased. This is an additional reason why the churches here should do at once what THE OCCIDENT urges upon them, viz: prove that this is *their* mission. It says: "We must prove that it is *our* mission, as it really is, by giving prayer, and toil, and interest in its behalf." How we thank THE OCCIDENT for these warm words! How glad we are to be thus owned as a member of the family.

I believe that those prayers, and toil, and that interest will be bestowed hereafter without interruption. YOUR MISSION.

Heuston, Hastings & Company,
ARE THE
FASHIONABLE CLOTHIERS
OF
SAN FRANCISCO.

SPECIALITIES.
PRICE AND GUARANTEE.
The largest and most varied stock of Gentlemen's Clothing, Furnishing Goods, Trunks, Bags and Valises, on the Pacific Coast. Every article sold, being of our own manufacture, is guaranteed. Having contracts direct with European and American Manufacturers of piece goods, we thereby effect a saving of fully 50 per cent. in wholesale dealers' profits, and are thus able to offer superior Goods at less than second-rate prices.

STYLES.
Having agents in London and Paris, we introduce the new styles in San Francisco simultaneously with their appearance in New York.

GOODS MADE TO ORDER.
For the accommodation of such as may desire, we have secured the services of a celebrated European cutter, and are prepared to make up piece goods in a style superior to any other house on the coast. Shirts, Ties, Collars, etc., made to order at short notice.

COUNTRY ORDERS.
Goods forwarded by Express to any part of the Pacific Coast on receipt of orders and measures; send for directions for measurement.

United States Life Insurance Comp'y,
IN THE CITY OF NEW YORK.
OFFICE, No. 40 WALL STREET.
CASH ASSETS EXCEED $2,700,000.

This Company, having a Stock Capital, makes Insurances and Endowments with or without profits. Dividends to Policies with profits are equal to, or larger than those of other, or "Purely Mutual" Companies in available present cash value.

NEW AND IMPORTANT PLANS OF LIFE INSURANCE HAVE BEEN ADOPTED BY THIS COMPANY. SEE THE NEW PROSPECTUS.

Life Assurances, Endowments and Annuities in every form. Profits available after Policies have run one year, and annually thereafter. The reserved Cash fund, for re-insurance, is the largest known to or required by, the ablest and most experienced authorities in Life Insurance, thus affording undoubted security. A liberal non-forfeiture system, as to whole Life or Endowment Policies.

Policy Holders in this Company can use or apply the Dividends of profits in a greater number of ways than is afforded to Policy Holders by any other Company.

The law under which the company is Chartered, provides that if the Capital should, from any cause, become impaired to the extent of Twenty-five Thousand Dollars, or more, the Stockholders SHALL BE CALLED UPON TO MAKE GOOD SUCH DEFICIENCY. This is the only Cash Company in America which affords this safeguard to Policy-holders.

The assured in this Company are not personally liable as in Mutual Companies, which have the power of assessing their members or of reducing the sums insured, in case of deficiency.

CLERGYMEN, insuring in this Company, are allowed a DISCOUNT of TWENTY PER CENT. on first year's premium, and a liberal commission will be given on all Insurances influenced by them.

Agents wanted, on the most advantageous terms.

Forms and every information will be furnished by

INCREASE AND EDIFICATION.

It should never satisfy the members of a Church that they are in comfortable condition, and can maintain the institutions of the Gospel by which they are blessed. The first and most important object to be sought by a Church is addition to its number of such as shall be saved. We are to be ever filled with the conviction that there are lost souls on every side, whom we must try to rescue. There is one marked difference between the ark of Noah and the ark of Grace; that floated among the struggling, drowning thousands, with closed hatches, and no attempt on the part of those within to save a soul; this moves among as many in equal danger, to take up all who will seize the offers of relief that are made to them. We are to arrange ourselves in this blessed ark, so as to do the most for dying men. The pulpit, the services, the efforts of the members, should bear on the salvation of others, and there is question respecting the worth of any church economy which depends for increase only upon those trained under its immediate influence, or those converted elsewhere who are induced to accept its order. We must make increase from without, if the world is ever to be redeemed. We must gain those with us who have been the enemies of Christ; and this is impossible, except to a living, spiritual, devoted Church. All other objects dwindle in comparison with this.

A minister once said that he did not care to preach to more than a select few, who could appreciate his efforts, and be homogeneous in their tastes, and give him a comfortable support. And there are professors of religion who appear to think this the perfection of a Church, when a few congenial spirits may have a pastor whom they like, the forms that please them, and the comfort in which they may be undisturbed! Imagine such a pastor and such a Church, in a world like this, and you have before you a disgrace to the name and the Gospel of Jesus, and a misrepresentation of religion's noblest aim. There should be no select and satisfied few, wafted toward Heaven in selfish disregard of others, among the many for whom the Savior died. Loud should be the proclamation: "Salvation is full and free!" Universal and ceaseless should be the effort to redeem the perishing. These souls must be gathered in, and there should be unanimous consecration to this as the chief work of the Church. These are the materials with which we are to build, and who shall fear lest we have too large a temple? *Increase* should be the motto of the Church of Christ. Not proselyte; not attract from others those who are already Christians; not grow by any unnatural, or unhealthy process; but add souls whom you have led forth into the light—whom you have brought to the Cross. Let them be intelligent or ignorant, rich or poor, young or old, whatever may be their work, or past relations, add them all to the Church when they give evidence that they love our Lord and Savior in sincerity.

Then, as these various classes are received, the next object to be sought is their edification. They must be taught, in the Sunday School, in the Bible Class, from the pulpit, and as we have opportunity, respecting the truths of the Bible. They must be developed in graces, by the encouragement and sympathy and example and co-operation of those who with them enjoy church privileges. This building up of the members should ever be prominent, as a design in our constitutional arrangements. And it is to be done by the church, including the pastor; not by the pastor, excluding the church. All should think more of this personal growth, and cultivate each other, and rejoice in advance. A spirit is sometimes manifested, which seems to be jealous of such progress, and would hold back all to the height attained by those who have done little for their development. This is as though a dwarf should be unwilling that his children shall be any larger than himself; as though the blind should be anxious that their children shall never see. What right has such a spirit in the Presbyterian Church, of all others? Our whole constitution is in reference to the edification, the training, culture, growth, of the members. Provision is made for all to have a share in this effort towards progress, and we should expect to place our successors on a higher level, with stronger, more intelligent, and more effective forces with which to do work for the Master, than have distinguished us. This will be true, if we carry out the theory of church efficiency which we have adopted, each one doing his own duty in his own place. The body will be vigorous, and will grow, while every member will be wiser, and better, and more useful, because of His connection with it, and by all, the Divine Head will be glorified.

The Heathen among us.—V. What has been Accomplished.

The question is naturally asked, what has been accomplished in these sixteen years of missionary labor in California? I answer, apparently little, in fact, much. Very little considering the length of time the mission has been established, the large heathen population in our State, and what might, and ought, to have been done with proper effort. Much, as the work of two men almost unaided by our people. The difficulties of the work, and the causes of its imperfect success have been already explained.

The work has necessarily been a preparatory one, always long and difficult among any heathen people. To some extent, it has prepared the way for us, so that when we, as a Christian community, earnestly set ourselves to work in the mission cause, we will have fewer difficulties to contend against than if we were missionary pioneers.

We have learned by the experience of the mission, much of what we must do, and shun. Its example will enable us to know how to organize and teach our own mission schools, and to judge of the results we may expect from them, if properly conducted.

There are sixteen members of the church, about one-half of whom are in this city, the others being scattered in various parts of this coast. Ten of these were converted in California; less than one a year. The remaining six were converted in China, before coming to this State. Four other members have returned to China, and two of them are studying at Canton for the ministry. A number of others, perhaps 12 or 15, have become convinced of the truth of our religion, and the falsity of theirs, and will, in time, join the Church. Others are being instructed in Christianity.

Much of the results of this work is only known to the missionary, who has opportunities of seeing many things hidden from our sight. Many Chinese who are not regular attendants at either the Sunday School or Church, have renounced their own religion. They occasionally (some regularly) attend Church and prayer meetings. Though they have not yet made any professions of Christianity, they are prepared to receive the Gospel, and many of them may in time be gathered into Christ's fold.

From 80 to 100 attend the Sunday School, and the chapel is often crowded. There is an average church congregation of from 45 to 50. Colporteurs traverse every part of our city and State, where Chinese can be found, and at least make the existence of a Christian Church known to them. Thousands of tracts have been, and are now being distributed among the Chinese.

The mission has been well organized and firmly established, as a part of the religious system of our country. It is perhaps as flourishing, and doing as well, as—considering our inactivity in the past—we could have reason to expect.

But the mission would not be an utter failure if it had accomplished no more than the commencement and keeping alive of this Christian work. It has done much in at least making an effort, though a feeble one, to bring the truths of our religion to the knowledge of the heathen, and to lift them out of their darkness towards God. Let us who have not engaged in the work refrain from harsh criticism of the long, solitary mission to the Chinese in California, lest we condemn ourselves for not even making an attempt to obey Christ's command, to "preach the Gospel to every creature." C.

Recapitulation—Spiritual Idea of Baptism.

It has been my endeavor in the last few articles, to show, 1st, that *baptizo* and its cognates had in the New Testament, a meaning peculiar to the Hellenistic dialect of the Greek tongue as used by the sacred writers, and understood by those who were conversant with that dialect.

2d. That this meaning was adopted for *baptizo* and confirmed in it when Jesus Christ employed these terms to signify and set forth spiritual purification in an ordinance of his Church, comprehending in it a mystery of divine revelation.

And 3d, that I was sustained in this claim, for the high spiritual meaning of *baptizo* and *baptisma*, by the very highest authority in all branches of the Christian Church, including the Baptist, in opposition to the lower, degraded and materialistic view of scholars of the Bible Union, who held and taught that in *baptizo* there was no ecclesiastical act, but that immerse, a word in common secular use limited and measured *baptizo* in the extent of its application in the New Testament, so teaching, and transating in accordance with their teaching, in the version which they have given to the world.

I do not now recapitulate the facts and arguments heretofore advanced, I only announce the result, and hold that this secular and materialistic view of *baptizo* and *baptisma* saps the Christian ordinance of of its spirit and vitality as a mystery of divine revelation and that the translations of the Bible Union limiting the Greek terms by immerse in English, a term chosen confessedly for its ordinary and secular meaning, in opposition to an ecclesiastical sense, have by the use of immerse, as the English representative and synonym of the Greek *baptizo* kept back and concealed from the ordinary English reader the spiritual sense put into the Word of God by the power given to the term in its employment by Jesus Christ, and the Apostles.

BAPTISMOS AND BAPTISMA.

Let me now proceed to consider another proposition. I find in the Word of God various ablutions in which the element of water is used ritually—such

as the superstitious washings of pots and vessels by the Pharisees; the ceremonial washings of the Hebrews; the baptism of John, and Christian baptism. I find these ablutions set forth in the Word of God by two distinct terms, which are never interchanged. I therefore announce this proposition: that, as the sacred writers have, in the original text, distinguished certain ordinances by distinct terms, that this distinction should be preserved and certified with the same discrimination in the translation which it was pleasing to the mind of the Spirit to make in the original text.

It has pleased the author of inspiration that *baptismos* should be used by the sacred writers to express the superstitious ablutions of the Jews and the ritual services of the Hebrews, once, perhaps, ablutions in general (but never to represent the particular Christian ordinance of baptism); also, that *baptisma*, while it represents the Christian ordinance, including the baptism of John, never is employed to represent these inferior ablutions included and designated by *baptismos*. The distinction between these two sets of ablutions is therefore most marked and positive in the Word of God, the Christian ordinance having a term of its own, which the Holy Spirit never employs to indicate either the purifications of the flesh, of the temple service, or the washing of pots and brazen vessels of the Jewish superstition, saving it for the baptism of repentance of the Forerunner, and the ordinance which Christ appointed for His Church, as the symbol of the salvation procured by Him, and received as the answer of our faith. Now these two ablutions, as wide apart in their essential meaning as the heavens and the earth—the baptism that saves us, and a Jewish superstition, touching only at one point—external mode—set forth by two distinct terms by the Holy Ghost, the scholars of the Bible Union have expressed to the English readers, by one and the same term only, to wit: immersion, so that by this means the discrimination and distinction which the Holy Ghost made between these two sets of ordinances is entirely lost to the English reader, though plainly made and declared in the original. What is the more marked and peculiar about this phase of translation is, that the internal significance of these two sets of ordinances, represented in Greek by *baptismos* and *baptisma*, diverging as broadly as a saving Christian ordinance and a Pharisaical wash of pots and vessels of brass, this distinction, though manifested in the use of the two terms by the word of inspiration in the original Greek, is kept back and concealed from the view of the English reader, while the external mode in which alone they correspond, is made the matter of prime importance by the scholars of the Bible Union, and indicated by the employment of the term immersion, expressly limited to its secular and non-ecclesiastical use.

If there be another such example of servile bondage to the letter, and neglect of the spirit, since the days of the Judaizing Christians, I should be as sorry to record it as I am to record this of Christian men and scholars whose praise is in all the churches.

That I am sustained by the authority of Biblical scholars in this view of the distinction between *baptismos* and *baptisma*, let me quote from standard writers and commentators, "In the New Testament the form *ho baptismos* is never used for the religious rite of baptism either of John or of Christ, *but always to 'baptisma.'*"—*Knapp's Christian Theology.*

"*Baptismos* is a comprehensive term which at Chapter 9: 10; Mark 7: 8, denotes the Jewish washing, *while the specifically Christian baptism is in the New Testament, always called baptisma.*"—*Lange's Commentary on Hebrew* 6: 2.

"Baptisms for doctrines were received by those who devoted themselves to the sacred doctrines of the Jews, therefore by the additions of doctrines they were distinguished from the other Levitical washings."—*Bengel, on Hebrew* 6: 4.

But it is competent for anyone with a Testament before him to note the use of *baptismos*, Mark 7: 4–8; Hebrew 6: 2 and 9: 10, and he will find that in each case the term refers to the Hebrew ordinances, or a Jewish superstition, except in Hebrews 6: 2, where, it is held by some commentators, that it is used as a general term, including all religious ablutions, while *baptisma* is used in every other case in the New Testament and signifies a spiritual baptism, either the baptism of repentance, or the Christian ordinance of baptism, but between the washing (immersion) of brazen vessels and the Christian ordinance, the translators of the Bible Union make no distinction to the English reader, though one is plainly made in the original.

If I should ascribe the neglect of this distinction to the ignorance of the scholars of the Bible Union, I should reflect on the scholarship of the translators; but what shall I do? No man in his senses can believe that there is not so broad a distinction between a Jewish superstition (*baptismos*) and a Christian ordinance (*baptisma*), a distinction signified by the use of these two terms by the Holy Ghost, as that the same distinction could not be made plain to the English reader, but the English reader is left in the dark in this matter because the translators of the Bible Union have represented these two widely different ideas represented by two terms in the original—by one and the same term in this translation.

F. B.

Oxford Bibles.

The superior excellence of the Bibles printed at the Oxford University Press is proverbial among all who prize correctness of the text, and clearness and beauty of typography and binding. The Oxford editions are the standard from which other editions are copied, and are therefore acknowledged as superior.

The Subscribers, who act as

SOLE AGENTS IN THE UNITED STATES

for these Bibles, keep all varieties and sizes, from the 48-mo. to the Folio. They select the following, which they strongly recommend

A. Campbell, Esq.,	Erwin Davis, Esq.,
A. J. Ralston, Esq.	

The Departments of Instruction are as follows, viz:

CHEMICAL LABORATORY AND SCHOOL OF PRACTICAL CHEMISTRY AND ASSAYING.

Thomas Price, M.D., Professor of Chemistry; assisted by W. B. Johnston and A. C. Gunter, in the Laboratory.

COLLEGE.

Rev. P. V. Veeder, A.M., Acting President, and Professor of Mental and Moral Philosophy.
Rev. Thomas Kirkland, A.M., Professor of Ancient Languages.
T. A. Robinson, Professor of Mathematics.
G. C. Arnold, Ph.D., Professor of Physics and Modern Languages.
A. Conlon, Professor of French and Drawing.

THE COLLEGE SCHOOL.

SENIOR ENGLISH AND CLASSICAL DEPARTMENT.
Rev. Thomas Kirkland, A.M., Master, with three Assistants.
JUNIOR ENGLISH AND CLASSICAL DEPARTMENT.
L. W. Reed, Master, with three Assistants.

PRIMARY DEPARTMENT.
Miss M. G. Clark and Miss. L. Wells.

☞ Book-keeping carefully taught in the Junior and Senior Departments.

☞ Instruction in French, Spanish, German, and Drawing, given in all departments of the School.

The Chemical Laboratory, on Stockton Street, has been fitted up with costly furnaces and the best appliances for the practical study of Chemistry, in all its branches. Courses of Lectures on Chemistry, Metallurgy, and Mining are given by Prof. Price, during the first four months of the year. The Institution is provided with ample Buildings, valuable Philosophical and Chemical Apparatus, spacious Play-grounds, and an open-air Gymnasium.

For Terms and further particulars, address
REV. P. V. VEEDER.

ROBERTS, McNISH & CO.

Importers and Wholesale dealers in

Boots and Shoes.

Sole Agents for the Pacific Coast for the sale of the

CELEBRATED RUBBER BOOTS,

Manufactured by the National Rubber Company.

Have always on hand a complete assortment of Seasonable Goods.

216 AND 218 CALIFORNIA STREET.

Books

Of all kinds, on all subjects, conveniently classified, occupy one half of the first story and the entire second floor of BANCROFT'S BOOKSTORE.

Stationery

Of every description, including all kinds of Writing Papers, Envelopes, Inks, etc., is sold at wholesale and retail at BANCROFT'S.

The American Tract Society

Is represented, in both its New York and Boston branches, by a large stock of its publications, at BANCROFT & COMPANY'S, who are the general agents for this coast.

The Presbyterian Board of Education

Has a Depository of its Works at BANCROFT'S BOOKSTORE, which is their headquarters for the Pacific Coast.

Sunday School Libraries

In great variety, supplied at the lowest wholesale prices. A fine assortment to select from at the Book and Stationery House of

Sole Agents for Barstow's Pat Improved Metalic Burial Caskets and Cases.

Current Literature.

Our Life in China.

Mrs. Helen S. C. Nevius, who was for ten years a missionary of the Presbyterian Board in Shanghai, and who has spent the last three years in this country, for her health, having only within a few weeks returned to the land of her adoption, has published a book with the above title, descriptive of many details in a missionary's life that are not usually given in the reports sent home from the heathen field. She has succeeded in making the work instructive and pleasing, and no one unfamiliar with Chinese character and habits can fail to learn much from its perusal. The desire is often expressed by those who know something about the really spiritual department of a mission to learn more about the everyday life of those who spend their days in the midst of people so strange and unlike ourselves. Mrs Nevius has gratified this desire, as respects a life in China, and we read the book as a grateful supplement to the ordinary letters published in strictly missionary periodicals. Here, for example, is an extract which exhibits the varied exercises of those who are ready to adopt all means by which they may gain and increase their influence with the natives:

I know that I have been able to give only a very imperfect view of the multiplied duties and employments of missionaries generally. Except when they go away from their stations for the express purpose of recreation and rest, their work is never done. Their evenings are apt to be occupied either with services, teaching Bible classes, conversing with inquirers or visitors, or in no less exhausting labors in their studies. There are exceptions to this; some persons feel that, in the end, they accomplish more by devoting fewer hours to work, and giving up every evening to rest and relaxation; and perhaps they are wise in doing so.

Aside from the ordinary routine of preaching, studying, book-making, and so forth, missionaries have frequent demands upon their time and energies of a different character. In most of the open ports, the United States Consulates have heretofore been without interpreters, and the consuls, having no knowledge of Chinese, have been obliged to ask assistance from their clerical friends in transacting official business. In several instances missionaries have accepted the office of consul, for a longer or shorter time, though they generally regret being obliged to step aside from their more important work of preaching the gospel. Their services, too, are often required to sit as jurors in consular courts.

And here is another paragraph, which we commend to the attention of these who are willing to think that the Chinese are lacking in mental capacity, or that those whom we see among us are a fair average in this respect.

It is rather late in the day for any one to be startled by the fact that a China boy, or man, shows signs of "intellect." I presume, if our distinguished countryman, Mr. Burlingame, were interrogated on this subject, he would speak of the Chinese in much more flattering terms than I dare use, for fear of being thought guilty of exaggeration, and that, too, while he would feel deeply their need of true religion, and of greatly advanced attainments in those arts and sciences which are the pride of civilized Christian nations in this nineteenth century.

Several years since a young Chinese gentleman graduated at Yale College, who took the first prize for *English* composition, and that, as I have been assured, not in any measure in consideration of being a foreigner, but because of the real excellence of his production; while only a few months ago, another young Chinese, at another college, had the Greek "valedictory." There is now in China a native physician who received his medical education in Scotland. He became not only exceedingly well qualified for his profession, but an excellent botanist. These, and other familiar cases which I might mention, prove, to say the least, that the Chinese, if given the same opportunity for improvement, will not be very inferior in intellectual attainments to our boasted Anglo Saxon race.

The volume is printed in the neat and attractive style for which Carter & Brothers are noted, and is sold by A. Roman & Co.

Margaret Russel's School.—The Carters have also just sent out this story, abounding in material from which both character and life may be nobly and beautifully constructed, furnished in a form that will render it welcome, especially with the young, for whom it was chiefly designed. The author is not announced, but there is no need of his name that the book may win a place for itself, and do good. It can be bought of A. Roman & Co.

Talks with a Child on the Beatitudes.—Rarely does a writer give evidence that he knows how to talk with children about religious things and Scripture truth. There are many who attempt this, but few who succeed. Among these few must be classed the author of this beautiful little book, published by J. B. Lippincott & Co. In the form of conversation, the lessons of those passages so often quoted, yet so little understood, are illustrated and explained and enforced, with really charming ability and skill. Those who are no longer children may learn much from these pages, and those for whom particularly the talks are intended will only mourn that they are so few and so short. Sold by H. H. Bancroft & Company.

A new and very finely engraved Map of Central California, comprising all the territory within a radius of about 80 miles around San Francisco, has just been published by H. H. Bancroft & Co. Full details are given, according to the very latest surveys, of 13 counties, which contain over half the population of the State. The people of this part of California have long felt the need of a map showing accurately the location of the different cities and towns, railroads—both constructed and projected—carriage roads, etc., together with the natural features of the country. This map fully supplies this need. Its completeness of detail shows much care and labor on the part of the compiler, Mr. Wm. H. Knight, while its beautiful mechanical execution, and the convenient forms in which it is published—one with neat cases for the pocket, another on card-board for the wall—will make it acceptable to all.

Periodicals Received:

San Francisco Municipal Reports for the year ending June 30th, 1868. Published by order of the Board of Supervisors. Printed by J. H. Carmany & Co. The volume, in addition to a large amount of other interesting matter, contains a valuable map of the outside lands.

Literary Items.

Journalism.—It is remarkable, that while many young men are being educated for the professions of theology, law and medicine, few or none are fitting themselves for journalists. A few years ago, the business of journalism was not included among the learned professions. It was generally supposed that a printer of ordinary intelligence could easily go from his case and edit a newspaper, and that the business could be successfully carried on by persons who had too little ability to succeed in other professions. But of late, the public press has assumed a vast importance among the institutions of the country, and it requires the services of able and educated men. If one of ablest lawyers or clergymen were called suddenly to conduct the *Bulletin*, the *Union*, or other influential papers, he would find himself wholly unprepared for his duties, he would know nothing about the business; much valuable time would be lost in learning what is really a difficult art, and in the mean time he would probably be considered a failure, both by his publisher and his cotemporaries. He would be able to write a first-rate article perhaps; but writing an article is only a small portion of the journalist's business.—*Oakland Transcript.*

Modern Speaking with Tongues.—A friend of mine called on a celebrated German philologist here, who "speaks English." Thus the conversation opened:

"I believe you talk English, Professor?"

"Guess!" said the philologist; "a few."

Many of the stores here advertise "English spoken here." I called at one of them, and the Englishman of the establishment said:

"Although I a teacher of English been have, I have it much oblivirt."

I thought he had, but I groaned inwardly as I reflected, "I a teacher of German been have also." Another English speaking bookseller, who also speaks our language, as a general thing, fluently and correctly, rather startled me the other day, when I called to inquire for a certain book that he was to procure for me, by saying:

"I have not got it now, but I have sent my angel for it."

It was with difficulty that I kept my countenance, but I was sobered by the reflection that probably I am every day taxing the politeness of my German friends.

The missionaries in China are liable to make strange mistakes in learning the language. The same word may have utterly different meanings according as it is more or less drawled, or is pronounced on a higher or lower key. One of the Presbyterian missionaries tells how he asked for a hammer, and had a pole brought to him. Another sent for some steak, and received three sheep-tails. A request for hoarhound candy brought a rusty hatchet.

Educational.

Old Mother Brown.

This old lady is representative. Her candy shop is located on the plaza toward North Beach. It is a unique establishment. It consists of a window—hardly more. Said window is the front one of her humble domicile, and is well stocked with home-made confections. Chief among these is her boasted Dandelion Cough Candy. But the window is all. Ushered into the front room, to which this window belongs, you involuntarily take off your hat and sit down. The expected shop, with counters and shelves, is missing, and in its place appears the ordinary furniture of a humble sitting and sewing room. Mentally you hope you don't intrude. Soon the lady with the ancient and maternal name appears. But, here another disappointment. She is not so venerable after all! Smothering a certain sense of lav-

ing been entrapped, just here, by your respect for the aged, you purchase some of the candy out of the window. It is weighed out on scales which venture just a little to emerge from the publicity of the window into the privacy of the sitting room. You accept your bundle and go forth with a bewildering doubt whether you have been visiting or shopping.

But Mother Brown is not alone unique; she is representative. She represents the group of simple pleasures. The rewards meted out to children are too often graduated to the morbid tastes of pleasure-worn adults. Because anything less than the theatre, the race-course, the long Yosemite tour, or the mountain hunt and camping out, would fail to overcome the *ennui* of the man, it is too hastily concluded that the appetite of childhood demands the same. This is a great and injurious mistake. It is great, because to childhood even the simplest matters are novelties, and the simplest novelties exciting to a superabundance of animal spirits. It is injurious, because it creates a taste for expensive and exciting pleasures, which, in their gratification, exhaust prematurely the power of joyousness itself. Mother Brown is better than the Big Trees,—at least for children. Better exhaust the pleasures attending such simple tours as those to unique candy shops before resorting to gold watches and ponies. The latter have their time, and for that they should be reserved. Mother Brown also represents the quaint and Dickens-like. This element in things has a great fascination for children. Few are the oldsters who can wander long in imagination among the scenes of youth without encountering with a peculiar amusement some quaint-spoken peddler, odd-looking dependent on the family, or shop-keeper, whose eccentric ways were his best capital because his best charm for the boys and girls. So here is a good advertisement for Mother Brown, under the guise of a small lecture on the training of children.

C. R. C.

Personal.

REV. FRANKLIN B. RISING, formerly pastor of the M. E. Church in Virginia City was drowned in the Ohio River, last week. It is supposed that he was on board of one of the steamers *America* or *United States* and was a victim of the terrible accident by which 75 lives were lost.

DR. CANFIELD, of Monterey, is said to have the finest collection of shells on this coast, including several thousand varieties. About 400 varieties have been found on the beach near Monterey.

REV. C. E. RICH, of the M. E. City Mission has organized a Sunday School of 50 scholars on Larkin St., and one of 45 scholars on Bush St.

REV. LEWIS THOMPSON formerly of Astoria, Oregon, has become pastor of the Presbyterian churches of Bloomfield and Valley Ford.

WE are very glad to learn that the health of REV. J. S. WYLIE of San Jose, is being much improved by his visit to the East.

MR. CHAS. L. WIGGIN has been appointed Supervisor of Internal Revenue for California, Utah, Nevada, and Arizona.

MR. S. W. LEIGH having closed his connection with the *Stockton Gazette*, has become editor of the *Monterey Democrat*.

REV. DR. WOODBRIDGE, of Benica, lectured on temperance, to the citizens of Vallejo on Sunday evening last.

MR. JOHN WHITE has been elected Secretary of the Labor Exchange, in place of MR. H. C. BENNETT.

REV. JAMES WYLIE of Napa, preached in the Presbyterian church at Sacramento on Sunday last.

MR. D. W. GELWICKS of the *Placerville Democrat* has purchased the *Stockton Gazette*.

MR. R. D. HOPKINS, a lawyer of Vallejo, has become the editor of the *Recorder*.

REV. J. S. MCDONALD preached at Tomales last Sabbath.

THE NEW YORK TRIBUNE says the reason why PLANTATION BITTERS are so generally used is owing to the fact that they are always made up to the original standard, of pure materials, let the price be what it will. The TRIBUNE just hits the nail on the head, for PLANTATION BITTERS are not only made of pure material, but the people are told what they are made of as the receipt is wrapped around each bottle. Don't go home without a bottle.

HYATT'S HAND-BOOK OF

Grape Culture in California,

Giving full and specific directions as to where, how, and when, to plant and cultivate a vineyard.

As the season is approaching for those who purpose going into the culture of the vine anew in California, or for those who wish to extend their vinicultural operations to make preparations therefor, they can find no better aid, and no source of information more valuable than to consult this highly approved Hand-Book of Grape Culture.

Following are some of the testimonials that have appeared in commendation of this useful and indispensable work:

A committee of the late Fair of the Mechanics' Institute of San Francisco, to which the work had been referred, speak thus:

"Your committee have examined Mr. Hyatt's Treatise on the Culture of the Grape, and believe it to be the BEST HAND-BOOK published on that subject for California vine culturists, and for which they recommend a Special Premium."

The California State Agricultural Fair, of 1867, awarded a Diploma to the author of this work, and also the San Joaquin Valley Agricultural Fair, at the same season.

OPINIONS OF THE PRESS.

The following are brief extracts fron some of the elaborate notices of this work:

The San Francisco *Daily Evening Bulletin* says:—"The book contains a choice collection of the best foreign and native varieties of the grape cultivation in California especially, as well as at the East. The many excellent works on Grape Culture in the Atlantic States are of little or no value in California, where an entirely different system and practice are necessary in vine growing and wine-making. This Hand-Book is intended to supply this deficiency. The author has taken great pains to investigate this subject, and to aid in the improvement of viniculture in California. Its appearence is timely, and it can hardly fail to meet a large and ready sale. It is attractively printed and elegantly bound."

Sacramento Union—"Hyatt's Hand-Book of Grape Culture is a California production that will probably meet a common want. The author takes the experience of the most noted vine-growers in the State as the warrant for his conclusions and suggestions, turns to account the recorded results of experiments made by the pioneers of this branch of industry, and in addition to giving full and minute instructions in regard to the planting of vineyards and the manufacture of wines, presents statistics which will enable the beginner to calculate the probable profits of successful grape culture."

The *Mountain Democrat*, whose editor, Hon. D. W. Gelwicks, is the present State Printer of California, speaks thus:

"HYATT'S GRAPE CULTURE.—We have received from the publishers, H. H. Bancroft & Co., San Francisco, a copy of this interesting and valuable work—a work greatly needed on this coast, and which every grape-grower should purchase. We sent it to a gentleman well known in this community, for his examination—a gentleman familiar with the subject, and largely engaged in the culture of the grape. He gives it the following cordial endorsement, and his endorsement ought to secure it a large sale:

'The limited time in which to examine Hyatt's Grape Culture, published by H. H. Bancroft & Co., San Francisco, has been sufficient, however, to satisfy me that it is a work which every grape-grower should have. No matter how well fortified we may be in our own experience and theory, we must acknowledge that we may adopt many of the author's ideas and suggestions with profit. The merit of the work certainly bespeaks for it a ready sale.

Respectfully, CHAS. P. JACKSON.'"

The Golden Era: * * * "With this book in his hand, the intelligent agriculturist can engage in the business of grape culture with almost the same chance of success as one who has bought his knowledge by expensive experience. * * * The practical information contained in the book would cost many hundred dollars to obtain in any other way. We predict for it a ready and rapid sale."

S. F. Daily Dramatic Chronicle: "The book is emphatically a California production, being written by T. HART HYATT, of this city, editor of the *Rural Home Journal*, and bearing the imprint, San Francisco: H. H. Bancroft & Co. It contains a large amount of valuable information, and should be in the possession of every vine-grower and wine manufacturer in the State. The usefulness of the volume, and its convenience for reference, are very much enhanced by a full and carefully prepared index."

S. F. Mining and Scientific Press: * * * "The book professes to be a complete manual, with instructions for the management of the grape and the manufacture of wine, and is especially designed for California. * * * The book contains a considerable amount of valuable information which is not generally found in such treatises."

S. F. Daily Times: * * * "The author seems to have exhausted his subject, particularly as it relates to viniculture in this State, and as the grape interest is just beginning to attract attention which is soon to become paramount among farmers, we regard the publication of the work as most opportune. No ranchman should be without it."

N. Y. Daily Tribune: "The author brings the result of many years' experience in foreign countries to the preparation of his work, and from his observations in climates similar to that of California, arrives at the conclusion that California is singularly favorable to the culture of the grape, and to all semi-tropical fruits, and that it will hereafter be distinguished as the land of the vine, the fig, the orange, the olive and the palm. His volume forms a capital, if not a complete manual, on the care of a vineyard, and it is enriched with much industrial information connected with the subject."

Lacon (Ind.) Home Journal: "This work is most *apropos*. It comes just as thousands, without any practical knowledge of the business, having planted vineyards, find themselves destitute of that information their intelligent care demands. All over the country this interest is growing, and probably the time is not distant when America will produce more, if not better, wines than any country in the world. The author, MR. THOMAS HART HYATT, is an enthusiast on the subject upon which he writes so pleasantly, and his book embodies just what every grape-grower would like to know—what every one must know, to cultivate the vine successfully."

Colman's Rural World, St. Louis: * * * "We merely want to introduce a new and interesting treatise on this subject to our readers, from the far-off shores of the Pacific—the Golden State of California. Its author is T. HART HYATT, editor of the California *Rural Home Journal*. He has had a large experience and observation in California and in the Old World. His style is entertaining, his directions clear, plain, and practical."

Rural New Yorker: * * * "Although most valuable to the California viniculturist, yet it helps to widen our knowledge of the vine."

H. H. BANCROFT & CO., Publishers.

Practical and Scientific.

AGRICULTURAL.

Under the Flail.

The old barn stands 'mong the strutting stacks,
As full as the harvest could make her,
And laughs through a hundred straining cracks,
At the wealth of many an acre.
The reaper's song, with his tuneful hymn,
No longer keeps time with the sickle;
But now she laughs in a merrier chime—
The flails are beginning to tickle!

A Word for the Boys.

When I was a boy, I remember how glad I was one morning when my father told me that he had concluded to give me a piece of ground to farm for myself. This was early in March, before the ground was in a condition to be stirred, and I at once began to lay my plans for the coming season.

The piece consisted of little over an acre in a by-corner of one field, and I was to have the entire proceeds of the crop, to use as I pleased. I made a map of the ground, and marked off, on the paper, a certain portion for corn, so much for potatoes, so much for beans, onions, etc. I anxiously awaited the approach of Spring, and when at last the ground was fit to plow, I eagerly commenced operations. As I had laid my plans beforehand, I did not stop to consider what was the best plan here, or what would grow best there, but followed closely the plan I had already marked out.

I raised a pretty fair crop of corn, but my potatoes were "small and few in a hill." I managed to sell enough of my crops to buy some things that my boyish fancy told me I wanted, and had enough corn left to raise a couple of pigs that had been given me. I was very proud of my success at farming, and could hardly tell whether I lived with my father, or my father with me.

Until that time I had almost concluded to be anything but a farmer; but after trying it in this way for myself, I concluded that it was as good a business as any I could follow. I believe I learned more about farming in this one season than I had ever know before, and certainly took more pains with my own crop than I did with that of my father.

Now, boys, if your father has not been in the habit of giving you a piece of ground to work for yourselves, go to him at once and tell him that he must "shell out" and give you a piece.

He will do it, of course, and not miss it, and you can raise enough on it to buy you a great many things that you want. You can raise corn enough on a small piece of ground to keep several pigs, a calf, or even a colt. If you farm for yourself in this way, when you get the proceeds of your work you will not think that farming is such poor business after all.

Ask your father to let you have a piece of ground to see what you can do anyhow.—*Journal of Agriculture.*

Experience with the Barberry as a Hedge-Plant.

P. Allyn, Benton Harbor, Mich., writes to the American Institute Farmers' Club as follows: I want to say a few words about the barberry. One fact is worth half a dozen guesses; and I have experimented on barberry for ten years and cannot see its character as some do. Ten years ago, or about that, I planted 100 barberry bushes in Delaware County, Iowa. The following winter, on 30 different days, the mercury sank down from 10 to 38 deg. below zero, and it did not injure the barberry. This ought to establish its hardiness. Four years ago I planted ten rods of small barberry plants for a hedge on my place. That hedge now appears like a perfect fence. Man or beast would try more than once before passing through it. Two years more of such growth as it had last year would make it hog-tight, horse-high and bull-strong. As to its blasting crops, I have raised wheat, corn, sugar-cane, potatoes, and many varieties of fruit, right along beside the barberries; and the only thing I ever knew blasted was a few *blasted* English gooseberries, which always blasted, even when far away from the barberries. One writer complains of the sprouting from the root, and becoming a nuisance. I deny that one plant of the barberry ever sprouted from the root. It does, it is true, throw up each year straight sprouts from the collar of the plant. The second year said shoots throw off lateral branches, which lock and interlock with the previous growth. All of these sprouts unite below the collar in one central root, which at the depth of eight or nine inches branches out into proper roots; but I have never seen but one bud on the root of any plant of the barberry. I fully believe that the barberry is yet destined to become the great hedge-plant of America.

When to Manure Trees.—Inquiry is often made as to the frequency and amount of manuring or cultivation for trees. The answer must be: Act according to circumstances. The question again recurs: How shall we know what our soils need? The answer is: Observe the results of growth. An examination or analysis of the soil will be of little use. But the trees will tell their own story. If the soil is so rich that they make annual shoots of two or three feet or more in length, without any cultivation or manuring at all (which, however, is rarely the case), then it will be needless to give additional care. The annual growth is the best guide to treatment. There are very few apple or other orchards which, after reaching a good bearing state, throw out annual shoots more than a foot and a half long, and many not half this length. The owner may lay it down as an unalterable rule that, when his trees do not grow one foot annually, they need more manuring or cultivation, or both. By observing the growth, he can answer all questions of the kind referred to without difficulty.—*American Fruit Culturist.*

The Potatoe Rot.—As Professor Johnson, of Yale College, has publicly endorsed the fungus theory announced by some of the German botanists, perhaps some of our readers will like to compare their own theories and observations with the following statement: These investigators have not merely looked at the blighted leaves and seen the fungus there, but have watched the fungus as it rapidly sends out its branches into the still healthy portions of the leaf, which it literally devours—appropriating the juices to its own nourishment, and leaving behind a disorganized and decayed mass, as the track of its desolation. It is easy to see with the naked eye that the fungus travels over the potato leaf before the blight. If the observer carefully regards one of the brown, bright spots, when the disease is spreading, he will see that its borders are extending over the still green leaf, in a forest of tiny mold plants, which cover the leaf with a greenish down. This is the true potato fungus—the *Pronospora Infestans*, as it is now botanically designated.

Hay Required for Cows.—Otis Brigham, of Westborough, Mass, after seventy years' experience in farming, says, in the *New England Farmer*, that good cows will eat on an average twenty pounds of hay per day, when giving milk, and fifteen pounds when dry—not by guess-work, but tested by actual weighing for months at a time. Then it is easy to calculate the cost of milk. In the neighborhood of New York, the average value of hay is one cent a pound, and the average quantity of milk not over sixty quarts. At 3½ cents a quart, it will pay the hay bill and one cent a day over. If other feed is given, the increase of milk must pay for that. The manure will be worth at least the cost of attendance and milking. If the milk is worth more than 3½ cents, it gives a profit; and if less, a loss.

Keep House Plants Clean.—The *London Cottage Gardener* relates an experiment, showing the advantage of keeping the leaves of plants from dust. Two orange trees, weighing respectively 18 and 20 ounces, were allowed to vegetate without their leaves being cleaned for a year; and two others weighing respectively 19 and 20½ ounces had their leaves sponged with tepid water once a week; the first increased in weight less than half an ounce each, while of the two latter, one had increased two, and the other nearly three ounces. Except the cleaning, the plants were similarly treated.—*English Paper.*

How to Raise a Shepherd Dog.—In the course of some conversation in relation to dogs, Governor Anderson, of Ohio, related a Texas practice in training dogs with sheep. A pup is taken from its mother before its eyes are opened and put with an ewe to suckle. After a few times the ewe becomes reconciled to the pup, which follows her like a lamb, grows up among and remains with the flock, and no wolf, man, or stranger dog can come near the sheep, and the dog will bring the flock to the fold regularly at half-past seven o'clock in the evening, if you habitually feed him at that hour.—*Presbyterian.*

It is said that Bonner feeds his horses from a box sitting on the floor, as he believes it is natural for them to take their food from a level with their feet.

WEEKLY MARKET REPORT.

Wednesday, December 16, 1868.

Flour—Sales of 500 bbls Family Extra, local trade, current rates. We quote: Superfine, in sks, ₱ 196 lbs, $4 75@4 87½. Extra in sks, $5 75@$5 87½.

Wheat—Sales 400 sks inferior, $1 47½; 850 sks good milling, $1 82½; 1,200 sks choice, $1 85; 5,000 sks good to choice, $1 80@$1 85 ₱ 100 lbs.

Barley—Sale of 410 sks inferior, private; 500 sks feed, $2 20. We quote feed, $2 15@2 20 and brewing $2 25@2 27½ ₱ 100 lbs.

Oats—Market continues firm at $2@2 20 for California, and $2 10@$2 25 ₱ 100 lbs for Oregon.

Potatoes—Sales of 500 sks Bodega, 85@90c; 725 sks Humboldt, 90c@$1; 50 sks Carolina, $2 00 ₱ 100 lbs.

Onions—Sales of 100 sks Yellow, in lots, $3 ₱ 100 lbs.

Beans—Market firm and active. We quote jobbing rates for first quality as follows: Bayo, 3½@3¾c; Butter, 4½c; Pea, 4¼@4½c; small White, 3¾@4c; Pink, 3@3¼c; Red, 2¾@3c ₱ lb.

Corn—Sales of 125 sks Yellow, large size, $1 75 ₱ 100 pounds.

Rye—Scarce; jobbing at 3½c ₱ lbs.

Buckwheat—None in first hands; jobbing at $2 25@$2 50 ₱ 100 pounds.

Mustard Seed—Common California Red 2½@3½c; choice do, 4c; English White, 5@5½c.

Flax Seed.—The local mill continues to pay 4c ₱ lb for a good article.

Bran—Firm and active $22 50 from the mill; jobbing at $24@25 ₱ ton.

Middlings—Feed descriptions are firm $30@32 50, and fine $37 50@40 ₱ ton.

Oil Cake Meal—Demand good at $35 ₱ ton from the mill.

Hay—Sales of three cargoes within the range of $15@23 ₱ ton.

Hops—Demand moderate at 25@30c ₱ lb for California new.

Dairy Products—California fresh roll Butter is quoted at 60c@70 and 75c for choice; California pickled is scarce and nominal at 55@60c; California Cheese, 18@21c; Eastern 21@22½c ₱ lb. Eggs have declined to 47½@52½c; ₱ doz.

Poultry—Live Turkeys are quoted at 15@16c, and dressed do 17@18c ₱ lb; Hens and Roosters, $6 50@7; Spring Chickens, $4 50@5; Ducks, $5@6; Geese, $10@12! Quail, $1@$1 25 ₱ dozen; Venison, 9@10c ₱ lb.

Provisions—Bacon is jobbing at 14@14½c for California smoked; Oregon do, 14½@15c; California Hams, 14½@15½c; no Oregon in market; California Lard, 12½@13½c and 14c ₱ lb for small tins.

Wool—Stock on the market is quite light and demand good at 17@18½c for clean shipping grades. Sales for the week amount to 50,000 lbs.

Hides—Sales since last Wednesday reach about 1,500 California Dry at 14½@15½c, and 300 Mexican at 13½c. We quote Salted at 7@7½c ₱ lb.

Skins—It is said that enough Seals have been killed the past season to supply the probable demand for this description of Skins for three years.

Tallow—Market seems to be firm at 8@8½c ₱ lb for fair to choice Beef. Sales for the week aggregate about 30,000 lbs, within the range, though chiefly at the inside figure.

San Francisco Cattle Market.

The market is apparently firm for all descriptions, though fancy stock is being held back for the holidays, for which extensive preparations are being made. We have to note a still further advance of ½c in undressed, and 1c ₱ lb in dressed Pork.

We quote slaughterers' prices as follows:

Beef—American, 1st quality, 7½@9½c ₱ lb.
do 2d do 6½@7½c ₱ lb.

Veal—Quotable at 9@11c ₱ lb.

Mutton—Is steady at 6@6½c ₱ lb.

Lamb—Scarce and nominal 7@9c ₱ lb.

Pork—Undressed, 4½@5½c; dressed, 6¾@7¼c ₱ lb, outside figures for milk or grain fed.

—*S. F. Bulletin.*

MINING.

Great Finders Poor Keepers.

In White Pine, some of the men who first located sold out for a song, and the pioneer who has given his name to fame as the locator of the richest mine in Treasure Hill, and perhaps in the world, does not own a foot in the Eberhardt! 'Tis the history of nearly every prominent discoverer on the coast. Marshall, who first opened to the eyes of the world the auriferous treasures of California, is eking out an obscure and indigent career in her foot-hills. Downey, Carson, McKenny, and hundreds of others, whose names were once famous in the placers of our sister State, have passed from public view, and have less of the glittering wealth which they first opened to the world than the Chinamen who are now working the tailings of their rockers. So it has turned out on the Comstock ledge. The men who once possessed all the vast wealth of that peerless lode, with rare exceptions, have sunk into obscurity. It will doubtless be the same at White Pine. Eberhardt, as we see, owns nothing of the famous claim that bears his name; some of his companions sold out their interests for a trifle, and the few that still hold have been lucky enough to strike it so rich that the commonest sanity would prevent them from sacrificing their evident wealth. But these will prove exceptional cases. We see that capitalists have already found their way there, and that the work of transfer is going on. Capital will soon absorb the best portions of the district, and in a year or two the men who are now selling their claims will be working by the day for the shrewd men who are buying them up.—*Enterprise.*

THE SOAP MINE.—A company is working the recently discovered Soap Mine in Sonoma County. The *Democrat* is informed that, a few days since, they shipped ten tons of their rock to San Francisco, and more will soon follow. Arrangements have been made for the erection of a manufactory upon the mine.

RICH LEDGE.—The "Champion" is spoken of by the *Nevada Gazette* as of immense value. It is from 8 to 10 feet wide and may be traced for miles. The rock pays $45 per ton of free gold. The sulphurets pay $225 per ton.

THE mines of the "English Company" on the Truckee River are said by the Virginia *Enterprise* to be a humbug. One silver brick is all the bullion ever obtained. It cost $276,000, and is worth nearly $30.

THE mines of Meadow Lake are assuming an attitude of respectability: they are beginning to pay. Truckee has many days of prosperity before it.—*Tribune.*

A MINER on Rush Creek near Nevada, struck a pocket recently, which yielded $23 per pound.

A GOLD nugget weighing 19½ ounces, was recently found in White County, Ga.

THE prospects of the Pennsylvania Mine in Brown's Valley, are encouraging.

THE prospects are favorable for a prosperous season in the Diamond Creek Mines.

DURING the last 12 years, 12,500 lives have been lost in British coal mines.

GOOD mines in White Pine are valued at from $3,000 to $72,000.

THE Golden Chariot Mine, at Owyhee, W. T., employs 60 hands.

THE surface diggings in Coos County, Oregon, are paying well.

THE Belmont Mine in Colorado is being worked extensively.

WORK is almost entirely suspended at Sweetwater.

MISCELLANY.

THE SECRET OF SUCCESS.—The basis of success in all occupations which involve the relations of employer and employed is, that the employer should have an accurate knowledge of the work to be done, what it consists in, how to do it, and how long it should take. A man of business who neglects this, places his interests entirely in the keeping of irresponsible agents, and, human nature being what it is, arrives in due time at insolvency. This is why the self-made man, who has been sternly initiated into the whole mystery by having himself stood in the ranks of the employed, outstrips those who seem to start so fair from the vantage-ground of education and capital, and builds a fortune where these kick one down. And the mistress of a household who neither understands what a servant's duties are (except, perhaps, those which, affecting her immediate comfort, force themselves upon her notice), still less how and when they are best fulfilled, will certainly not get them fulfilled in the best manner, or by the smallest number of hands, and hence will manage—or rather mismanage—her income in a wasteful, ineffectual manner. This is an inevitable result.—*Alpine Miner.*

A SLATE HOUSE.—A correspondent of an Eastern paper describes a novel house recently built at Brownville, Me.:

"This house is not only shingled, but clapboarded with slate. It is a slate edifice, fire-proof and indestructible. The slates are put on to the boarding of the walls with only paper between. They are in the form of segments of a circle overlapping each other, and have a very ornamental effect. The natural color of the slate is pleasing to the eye, and no paint is needed. If it were, the slate would furnish it, for when ground it makes an excellent paint, which Mr. Sparrow has used on his barn with good effect. The whole establishment is elegant in appearance, and shows what can be done with native materials. The front steps are of beautiful slabs of slate; the sinks, mantles, shelves, are of slate; the woodwork is of brown ash, a native wood, which makes a handsome finish. In short, this is a real State-of-Maine house, and shows the wealth of her resources. The slate costs little, if any more than clapboards. When the railroad brings the materials to us, slate houses must become fashionable."

MIXED RACES.—The principle is laid down by many scientific men that crosses between distinct species prove inferior, and either are infertile, as in the familiar case of the mule, or degenerate and disappear in a limited number of generations; while, in the case of mere varieties, the crossing produces a progeny vitally superior to either progenitor. It will be readily seen what would be the bearing of such a law on the question of the unity of the human race. If the races of men are separate species, mongrel races ought to degenerate; while they ought to be hardy and potent if of a single species. Agassiz, in his Journey in Brazil, strongly asserts that the numerous mongrel races between Spaniards, negroes, and Indians, are far inferior in intelligence and moral qualities to the pure races. The same is asserted by Darwin, who quotes Humboldt to the same effect. Dr. Livingston quotes a common saying in Africa, that "God made white men and negroes, but the Devil made half-casts."—*Independent.*

WORKING MEN.—According to a recent calculation as to the condition of the working people of the United States, the average life of American mechanics is estimated at 46½ years, and the average number of days of work in this climate, at 250 in each year. The average expenses of an adult for board and clothing in the seaboard cities are calculated at about $300 a year. On the supposition that a laborer is paid on the average $3 per day for his work for the 250 working days, he will receive $750 a year. Deduct price of board and clothing, $300, and there is left $450 for all expenses of keeping a family, for amusements, education and contingencies. The sum, it is asserted, is insufficient in many instances. The average working years of a laboring man being estimated at about 20, his total earnings in an average lifetime, with 250 working days in the year, at $3 per day, would be $15,000.

INTERESTING TO SPORTSMEN.—The *Siecle*, of Paris, publishes an article very interesting to sportsmen, and states that, with a little care, many accidents could be avoided. Out of one hundred cases of a double-barreled gun bursting, ninety-five can be traced to defects in the left barrel. The reason is, that the right is most frequently used and reloaded, perhaps ten times to the left one being discharged once. Every time the barrel is discharged, the gunpowder in the left is pulverized more or less by the shock, which, therefore, leaves a space between the charge and the wad by settling. Naturally, when the left barrel is discharged, it frequently explodes. These accidents can be avoided by sending the ramrod home with one or two smart blows into the undischarged barrel every time the other is reloaded.

"IN this wreck of the powers," says Seguin, "one human, irresistible impulse remains: low as we find the idiot—far lower than the brute in regard to activity and intelligence—he has, like all the rest of the human race, *what no other animal possesses*, his hobby, his charm, his amulet, the object toward which his human centrifugal power gravitates; and this, be it a broken piece of china, a thread, a rag, an unseizable ray of the sun, he will spend his life in admiring, kissing, catching, polishing, or sucking, as the case may be. Take away that amulet—the occupation of his life is gone."

General Selections.

Ascent of Vesuvius.

Prof. Newhall contributes to *Zion's Herald* an account of a visit to Vesuvius in its present state of eruption, from which we take the following:

Early on a bright April morning we set out from Naples to make the ascent of Vesuvius. At the time of our visit the mountain was not in a state of intense activity. It lay drowsily smoking before us, every few minutes casting up a volley of stones into the air. By night, looking on the mountain from the streets or housetops of Naples, we had seen these stones shoot into the heavens like rockets, while the red lava stream slowly flowed from the crater, at every fresh burst casting a fiery glare upon the blackened sky. By daylight, however, no fiery appearance was visible from the base of the mountain.

Our ascent began through beautiful groves of orange and lemon, which hung their bright green leaves and golden fruit over the orchard walls. Soon we came to vineyards fenced in by walls of lava, where peasant girls were trimming and training the vines; pretty little cottages, built of lava and pumice, snugly nestled on this mountain-monster's breast; humble homes, at whose doors happy mothers sang, and dark-eyed children played and prattled; where, at any moment, the cinder storm or lava torrent may shrivel their homes to ashes, or bury them in a fiery grave. In perhaps an hour we came up to the blackened track made by the great eruption of 1857, and over this great lava deposit our road for a long distance lay.

It was a scene of appalling desolation. The lava that at that time had poured in rivers down the mountain flanks, consuming every living thing and devouring every vestige of soil in its path, now hardened and ridged, stretches its long black fingers into the beautiful valleys below, as with a fierce and cruel clutch at the gardens, and cottages, and vineyards that belt the base of the mountain with beauty and life.

Yet at every little rise in the path, when our eyes were lifted up from the hideous desert around us, we saw one of the loveliest landscapes in this lovely land, for the Bay of Naples lay before us in all its indescribable charms. The blue waters, studded with dazzling sails, flashed around the rocky islets and broke in long curves upon the beach. The white villages shone brightly in the green setting of the vine-clad slopes and hills, and here and there blue round lakes showed where ancient volcanoes once gaped with fiery mouths.

In due time we arrived at the Hermitage, dismounted, and refreshed ourselves for the real work of the ascent. An half hour's ride farther brought us to the base of the cone, where the horses were left. This is the cone that was thrown up in the great eruption that gave the mountain its present form, the eruption that in the year 79 A. D., destroyed Pompeii and Herculaneum. Previous to the year 79 Vesuvius is described by the Roman historians as a truncated cone, 30 miles in circumference at its base, and with a vast hollow in its summit, a rocky cavity with fragments of scoria in its sides, clothed with wild vines, and perhaps also with trees. The ancient geographers, from the resemblance of this hollow to the crater of Ætna, concluded that Vesuvius had once been a volcano. This cavity was several miles in extent, ample enough to accommodate the army of Spartacus, which encamped here 70, B. C. The great eruption which took place in the year 79, the first of which there is any historic record, broke down the greater part of the walls of this ancient crater, leaving a semi-circular ridge, some two miles in extent, which forms the present Mount Somma, and throwing up the great cone so often described by travelers. This cone is composed of black ashes and fragments of lava, very steep, giving the traveler an hour's hard climb. At its summit, when an eruption takes place, a small cone is thrown up, which is called an eruptive cone. This eruptive cone falls back again when the eruption subsides, leaving a tunnel-shaped cavity where it rose. The eruptive cone varies in height from one to six hundred feet. Thus the mountain is several hundred feet higher when in activity that when in repose.

Up the great cone we now climbed. It is a hard ascent, as the feet constantly slip in the black ashes, and the boots and hands are cut by the sharp lava fragments, the progress often being almost on all fours.

In a little more than an hour we were at the summit of the great cone, and at the base of the smaller and much steeper cone thrown up by the present eruption. We now stood upon a crust of lava which had flowed from the craters but a few days before. It was cracked into fissures on the surface, and through them we saw the glowing mass beneath, a river of liquid fire into which we thrust our sticks, at which the smokers of our party lighted their pipes and cigars, and at which the guides offered to roast eggs. Fumes of sulphur rose plentifully from holes and cracks around us, and the black rocks were beautifully encrusted with the yellow and orange crystals. Our position was entirely safe, for the stones that flew from the summit every few minutes, from one to two or three hundred feet into the air, although they rattled down the steep sides of the smaller cone that rose before us, did not reach the spot where we stood. In fact our position seemed so entirely safe, that some of us missed the spice of danger that usually somewhat flavors such an expedition, and proposed ascending the smaller cone. To this our guide most earnestly objected, but curiosity at last overcame our prudence, and four of us started on the ascent. It was much steeper than the great cone, and composed of finer materials; so that we sank to our knees, and slipped back at every step. Our guide followed when he saw that we were resolute, but his earnest entreaties, poured forth in those high, touching semitones so peculiar to Italy, made us more than once pause and waver. He directed us, however, where the lava fragments were coarser, so that we could get a better foothold, and in less than half an hour we found ourselves on the lip of the cavity from which the stones flew. No lava was issuing from this point, so that we found no caldron of melted rock, but simply a deep conical shaped cavity, whose bottom and sides were lined with stones. Once in three or four minutes, there was an explosion; a cloud of black smoke and sulphurous fumes burst up from below, and in fact the whole bottom of the cavity rose up bodily towards us, a great number of the stones around the centre or axis of the cavity being shot to a great height above our heads, many of them dropping back into the hole, and many rattling down the sides of the cone. We saw no very large stones actually flying in the air, none larger than a man's head, although we passed one that had been flung down the great cone, so large that our whole party might have sat down to lunch in its shadow.

Meanwhile our guide, who stood with us on the brink, ceased not to urge our immediate return, earnestly warning us, as near as we could understand by the aid of his passionate gestures, that the spot where we stood might at any moment slide into the abyss, or be overwhelmed by a shower of stones. But our ignorance of the real peril of our position, joined with a distrust, which may be carried too far, of all statements made by Italians, made us linger, and even to contemplate venturing along the shelving edge of the cavity, in order to obtain a better view. While consulting on the matter, one of our party started off a few paces along the lip of the abyss. The guide cried after him and to us in an agony of entreaty, and, turning at his cry, we saw the poor Italian cross himself, sinking on his knee, and casting his eyes to heaven in a perfect paroxysm of prayer, "Jesu! Maria!" bursting from his lips. This was too much, and we all rushed down the cone, yet with a vague suspicion that we had been needlessly scared. Our suspicions were soon set at rest, however, for we had hardly left the spot when we heard a loud explosion behind us. "See!" shouted the guide; and turning, we saw a shower of red-hot stones drop on the very place where we had been standing less than two minutes before.

As we descended the mountain, the glorious bay lay before us in all the soft and fairy-like charms of an Italian sunset. The purple islands swam in a sea of dazzling silver, which changed through manifold gorgeous hues to liquid gold. The long curved lines of heaving water, the white villages that stood as gravestones of the long lost cities buried beneath them, flashed back the long rays of the sunset light. The snowy Appenines glowed like coals, and then smouldered away in the ashes of the dying day.

The Bottom of the Ocean.

In 1853, Lieutenant Brooke obtained mud from the bottom of the North Atlantic, between Newfoundland and the Azores, at a depth of more than 10,000 feet, or two miles, by the help of his sounding apparatus. The specimens were sent for examination to Ehrenberg, of Berlin, and to Baily, of West Point, and those able microscopists found that this deep sea mud was almost entirely composed of the skeletons of living organism—the greater proportions of these being just like the Globigerinæ, already known to occur in the chalk.

Thus far the work had been carried on simply in the interests of science, but Lieut. Brook's method of sounding acquired a high commercial value when the enterprise of laying down the telegraphic cable between Great Britain and the United States was undertaken. For it became a matter of immense importance to know not only the depth of the sea over the whole line along which the cable was to be laid, but the exact nature of the bottom, so as to guard against chances of cutting or fraying the strands of that costly rope. The Admiralty consequently ordered Captain Dayman, an old friend and shipmate of mine, to ascertain the depth of the whole line of the cable, and to bring back specimens of the bottom. In former days such a command as this might have sounded very much like one of the impossible things which the young prince in the Fairy Tales is ordered to do before he can obtain the hand of the princess. However, in the months of June and July, 1827, my friend performed the task assigned to him with great precision, without, so far as I know having met with any reward of that kind. The specimens of Atlantic mud which he procured were sent to me to be examined and reported upon.

The result of these operations is that we know the contours and nature of the surface-soil covered by the North Atlantic for a distance of 1,700 miles from east to west, as well as we all know that of any part of the dry land.

It is a prodigious plain—one of the widest and most even plains in the world. If the sea were drained off you might drive a wagon all the way from Valentia, on the west coast of Ireland, to Trinity Bay, in Newfoundland. And, except upon one sharp incline, about two hundred miles from Valentia, I am not quite sure that it would even be necessary to put the skid on, so gentle are the ascents and descents on that long route. From Valentia the road would lie down hill for about 300 miles to the point at which the bottom is now covered by 1,700 fathoms of sea-water. Then would come the central plain, more than 1,000 miles wide, the inequalities of the surface of which would be hardly perceptible, though the depth of the water upon it varies from 10,000 to 15,000 feet; and there are places in which Mount Blanc might be sunk without showing its peak above water. Beyond this, the ascent on the American side commences, and gradually leads, for about 300 miles, to the Newfoundland shore.

Almost the whole bottom of this central plain (which extends for many hundred miles in a north and south direction) is covered by a fine mud, which, when brought to the surface, dries into a grayish white friable substance. You can write with this on a blackboard, if you are so inclined, and to the eye it is quite like very soft, grayish chalk. Examined chemically, it proved to be composed almost wholly of carbonate of lime; and if you make a section of it in the same way as that of a piece of chalk was made, and view it with a microscope, it presents innumerable *Globigerinæ* embedded in the granular matrix. Thus the deep sea mud is substantially chalk.—*Prof. Huxley.*

Tea Tasters.

Not the good ladies who chatter about the prices of Young Hyson on the counters of country stores, or discuss its flavor at sewing circles, but those to whom the ability to taste well is the condition of a good salary. Says the *Scientific American*:

The two senses of tasting and smelling are usually considered mainly as servants capable of contributing to our luxurious pleasures, rather than as aids to business success; yet some departments of business could hardly be conducted without their employment. The sale and purchase of liquors and wines are consummated almost entirely by the help of taste and smell. In the great wine marts of Europe, the business of wine tasting is a distinct profession. Tobacco and hops are judged by the purchaser fully as much by smell as by sight and touch; and it is wonderful what expertness is attained by professional judges, by the cultivation of this sense; their judgment being practically infallible.

But the testing of tea exhibits, in a more marked manner, the use of taste and smell in mercantile transactions. In every wholesale tea house will be found a row of tea cups, with a little furnace or lamp for heating water. There is no sugar or milk. In the side of every chest of tea, ranged in tiers along the walls, is a small hole stopped by a cork. The taster draws the cork, takes a few grains of tea in his hand, smells it, then puts it in a cup, pours a little hot water on it, tastes, and his judgment is formed, the character of the tea is fixed. Frequently, the smelling is sufficient, and it is remarkable how absolutely and decidedly the professional taster declares the character of the article he has tasted. Not less remarkable is the fact that there is seldom any marked disagreement between the estimates made by different individuals.

The profession of tea-taster in our large cities is frequently quite lucrative. Merchants purchase largely, relying implicitly on the representations of the expert; and it is seldom their confidence is misplaced, whatever "tricks of the trade" there may be attempted to deceive the taster.

The gift, if so it may be called, of being a successful tea-taster, is not general, although it might be supposed that experience would be all that is necessary to insure perfection, or at least an approximation to it. The profession is severely taxing to the nervous system, affecting the subject similarly to alcohol or tobacco, when used to excess.

THE FAMILY PAPER OF THE PACIFIC COAST.

THE OCCIDENT.

In every true home there should be found a first class family paper—one to whose coming, father, mother, children will look with eagerness each week. Such a paper is

THE OCCIDENT.

Let all who desire such a paper, and are asking, "What paper shall I take?" read the following statement of facts:

THE OCCIDENT contains a greater amount and variety of reading matter than any other family paper on the Coast. It contains choice selections for all classes of readers. Both the child and the person of cultivated literary taste will find in each number matter which cannot fail to be interesting.

THE OCCIDENT is extensively quoted. No other weekly paper on the Coast furnishes so much matter, either original or selected, to the columns of other papers. Whole columns are frequently taken from one or another of its departments. No stronger proof of its excellence could be desired than the fact that it is so well appreciated by contemporaries.

THE OCCIDENT has a complete Agricultural Department, carefully culled from the best authorities, with all the current agricultural items of our own coast, and full market reports. The Mining Department is also very complete.

THE OCCIDENT gives a summary of Pacific Coast news and of Eastern and Foreign Telegraphic News. These items are not hastily thrown together, but are carefully prepared, and are consequently copied to a great extent. The Personal Department is the most complete collection of personal news to be found in the State.

THE OCCIDENT is the official organ of all branches of the Presbyterian Church, and contains full religious intelligence concerning the progress of all denominations. Although a religious paper, it is not sectarian. Its aim is to make men better and happier by the inculcation of the principles of the Christian religion.

THE OCCIDENT is universally admitted to surpass all other papers in the State, in typographical appearance and systematic arrangement of its contents.

Read what the papers say of

THE OCCIDENT.

"Has commenced its second volume, enlarged and improved and with excellent prospects. It is full of 'knews,' views, and family reading, and is ably edited."—*Brookiyn (N. Y.) Union.*

"It gives evidence of ability, tact, and judgment in its management."—*Cincinnati Presbyter.*

"An able paper of the same form as the *Statesman.*"—*Philadelphia Statesman.*

"One of the best of papers."—*Zion's Herald, Boston.*

"Well filled with readable articles. An important accession to the literature of the coast."—*S. F. Bulletin.*

"Its typographical appearance is finer than that of any weekly paper published on this coast."—*Chronicle.*

"A periodical worthy of patronage."—*Sacramento Union.*

"It is already attracting a great deal of attention. Its original articles and judicious selections make it an intellectual treat."—*S. F. Fair Press.*

"The ability displayed gives promise of success."—*S. F. Times.*

"The best style of any weekly issued in San Francisco."—*Pacific Churchman.*

"An attractive sheet and ably edited."—*Placerville Mountain Democrat.*

"A welcome visitor in the homes of our people."—*Woodbridge Messenger.*

Pacific Mail Steam Co's Steamships

—FOR—

NEW YORK, JAPAN AND CHINA

Will be Dispatched as follows:

LEAVE WHARF CORNER OF FIRST AND BRANNAN STREETS, at 11 o'clock A.M. of the following dates, for PANAMA connecting via Panama Railroad with one of the Company's splendid Steamers from ASPINWALL for NEW YORK.

the 6th 14th, 22d, and 30th of each month.

Steamer leaving San Francisco on the 6th touches at Manzanillo. All touch at Acapulco.

Departure of the 14th is expected to connect with the French Transatlantic Company's Steamer for St. Nazaire, and English Steamer for South America. Through tickets can be obtained.

Departure of 14th is expected to connect with English Steamer for Southampton, South America, and P. R. R. Co.'s Steamer for Central America. Through tickets can be obtained.

Departure of the 6th connects with English Steamer for Australia.

STEAMERS FOR DECEMBER, 1868.

The following Steamships will be dispatched on dates as given below.

December 5th—MONTANA, Capt. West, connecting with ALASKA, Captain Gray.

December 14th—GOLDEN CITY, Capt. Wm. H. Hudson, connecting with RISING STAR, Capt. King.

December 22d—CONSTITUTION, Capt. Cavarly, connecting with HENRY CHAUNCEY, Capt. Conner.

December 30th—COLORADO, Capt. Farnsworth, connecting with ARIZONA, Capt. Maury.

Passengers berthed through. Baggage checked through—100 pounds allowed each adult.

An experienced Surgeon on board. Medicine and attendance free.

These Steamers will positively sail at 11 o'clock. Passengers are requested to have their baggage on board before 10 o'clock.

Through tickets to Liverpool by the "Cunard," "Inman," and "National" Steamship Lines can be obtained at P. M. S. S. Co.'s office in San Francisco, where may also be obtained orders for passage from Liverpool or Southampton to San Francisco, either via New York or St. Thomas—if desired, an amount of £10 to £20 will be advanced with the above orders. Holders of orders will be required to identify themselves to the Agents in England.

For Merchandise and Freight for New York and way ports, apply to Messrs. WELLS, FARGO & CO.

The Steamship GREAT REPUBLIC, Captain S. Doane, will be dispatched on Monday, January 4th, at 12 o'clock, noon, from wharf, corner of First and Brannan streets, for YOKOHAMA and HONGKONG, connecting with the COSTA RICA for SHANGHAE.

For passage and all other information, apply at the Pacific Mail Steamship Co.'s Office, corner of Sacramento and Leidesdorff Sts.

Family Reading.

No Great and no Small.

There are no trifles. Arks as frail
As bore God's prince of old,
On many a buoyant Nile stream sail,
The age's heirs to hold.
From Jacob's love on Joseph shed
Came Egypt's wealth and Israel's bread;
From Ruth's chance gleaning of the corn,
The Psalmist sung, the Christ was born.

Each spirit weaves the robe it wears
From out life's busy loom,
And common tasks and daily cares
Make up the threads of doom.
Wouldst thou the varied future read?
The harvest answereth to the seed.
Shall Heaven e'er crown the victor's brow?
Ask tidings of the battle now.

—*Rev. Wm. Morley Punshon.*

Aunt Rachel.

It was a very warm day of the warm summer of '62, that I sat pondering on the past and regretting my dear old home in San Francisco; exchanged now for a mountain cottage, at the extreme slope of the Sierras. The air was like a blast from a hot oven, and the noon culminated in a brazen glare of unshaded sunlight, trying alike to the sense of sight and feeling. But the eventide came at last, and as I sat on the porch, thankful for shadows from the few trees, as yet planted, an old colored woman came up the avenue with a heavy basket upon her arm.

She was very black, and yet the honest old face had a good, wholesome smile on it, and the greeting was warm and cordial, reminding me of my old "mammy," who sojourned with us for so many years.

"I see, honey," she said, "as how you was a new comer, and 'pears like you'd be lonesome like, so I thinks I'd bring one of my good melons along, and come see you," and she seated herself on the porch step, while she unwrapped a huge golden-sided cantelope—the first I had seen, and offered it to me.

It was a very grateful gift from the dear old heart—if it was held in a black casket—and as we sat there in the shining glow of a gorgeous sunset, the old lady told me of her strange, sad history, and this is it, only, as her language was often quaint and strikingly original, I fear I cannot write it as it was spoken.

"Why, bless you, honey," she said, in reply to a question of mine, "I wasn't a born slave; I was kidnapped from Baltimore, or near there, and the men gagged me and took me away down South. Montgomery City, Alabama, was where I was some part of the time, and some part on a plantation. Oh, but I was an awful woman then. I'd as lief killed them men that swore away my liberty as not. Why, before the judge they kissed the Book, and said I was their born slave. But I want to tell you how God pardoned and forgive my sins. I found 'twant no use [after giving me some of the painful details of her life on a plantation] to strive again it, and so I just prayed—yes, I prayed day and night, night and day, that I might be saved; and when Jesus forgived me, I knowed it. Yes, honey, I knowed it. It didn't take no words to tell me. I knowed he was mine—my own dear Master and Lord—and I leaned on Him, and He made me strong."

The old woman had forgotten all but the hour of her redemption, and rising to her feet, she poured out a flood of impassioned, and even exalted eloquence, that thrilled me.

"Oh!" she said, "even after I was forgive my sins, I did wrong many, many times, and then I saw the blood poured out for *me* from that stricken side, and *I* was helpin' to crucify the dear Lord, and then when I felt all humble and good, I see the *water* mingled with the blood, and in that water I washed and was clean."

She was a remarkable old woman, as I learned after, from some of the neighbors, and seemed to have followed the leadings of her Divine Master in strange and peculiar ways. In coming to California with her mistress she was assured, she said, all would be well, and her people she had left behind would be free. Some years before the civil war between North and South, she foretold many of the events connected with it, and predicted the extinction of slavery as its result. This was related to me by the lady to whom she told it, about a month after the attack on Sumpter, with the assurance that Aunt Rachel had told her this two years before, and she confidently expected the rest of her prophecy to come true as she had never known her predictions to fail.

She seemed at times inspired, would tell of her "visions," as she called them, with singular earnestness, and often after I became better acquainted with her, wanted me to write them down.

The evening was coming on, and Aunt Rachel still lingered over the reminiscence of the time when she learned what it meant to "bear another's burdens."

"I was asleep in the quarters," she said, "in my cabin, when I seemed to see a great light, and out of that light came, oh! such a beautiful white hand, and it reached forth and began to pick cotton, and it put into one slave's basket, and another slave's basket, till they all was full; and then I woke, and I knew what the minister meant when he said, 'We must bear one another's burdens.'

"So I got up, and then I remembered that the overseer had threatened, if the baskets were not all full next day, he would flog every one of those who lacked any of the weight. I put on my clothes and hurried off to the cabin and there was five or six of us converted ones, and the moon was shinin' bright and I thought it was about midnight, and I told 'em all my dream and that they must go and pick cotton and put it in them weak ones' basket, and that I *knowed* there'd be no more such awful whippin' on that place, so we all got up and went out under the shinin' stars, and picked and put in the baskets, till there was about a third in the weak ones' basket, so that they could fill 'em up same time we all got done. Ah! honey, I 'member it like as 'twas yesterday, and that next day that same overseer left the plantation, and another one come, and we was all saved from any more dreadful whippins."

It was with sad and humiliating feelings I heard this old, lame, whipped, scarred creature telling *me*, who all my life had scarce known a want, of her *blessings* and of God's goodness to her, and praising Him for her deliverance from the bondage of sin. And as the calm, beautiful evening came on and Aunt Rachel with humble courtesy, asked me to come down some day to her little home. "For," she said, apologetically, "I has to ax white folks to read the Bible to me, and them passages I spoke I is got all marked with bits of paper, though I *can't* read 'em."

One Sabbath afternoon some weeks after, I walked over to the neat quiet, comfortable home of the old woman. It was as clean and nice and tidy a place as I was ever in, though humble and simple enough; a great fire-place filled half the kitchen, and the best room was clean and comfortable. Delighted were she and her "ole man," to see me, and after a time she opened a drawer and drew out a little, worn, battered Bible. Years and years ago some kind mistress had given it to the old woman, and cherished as a precious treasure it had been ever since. "White folks" who came to see her were asked to read its contents, which were eagerly listened to and quoted often from memory, and striking many of them were. "On Canaan's happy shore," came trembling from her lips at first when I asked her to sing a hymn, but carried away by the fervor of the theme her voice swelled and rose, and the solemn tones were as sweet to the ears of listening angels I have no doubt as the sublime anthem of organ and choir.

Poor old Aunt Rachel! good old Aunt Rachel! never shall I forget the long tramps she took to help me in my domestic perplexites, trials on in sickness, and I may yet tell more of my humble neighbor. N.

Being his own Pilot.

A bright boy who loved the sea entered on a sailor's life when very young. He rose to quick promotion, and while quite a young man was made the master of a ship. One day a passenger spoke to him upon the voyage, and asked if he should anchor off a certain headland, supposing he would anchor there and telegraph for a pilot to take the vessel into port.

"Anchor! no, not I. I mean to be in dock with the morning tide.'

"I thought perhaps you would signal for a pilot."

"I am my own pilot," was the curt reply.

Intent upon reaching port by morning, he took a narrow channel to save distance. Old, bronzed and grey-headed seamen turned their swarthy faces to the sky, which boded squally weather, and shook their heads. Cautious passengers went to the young captain and besought him to take the wider course, but he only laughed at their fears and repeated his promise to be in dock at daybreak. He was ashore *before* daybreak. We need not pause to dramatize a storm at sea; the alarm of breakers shouted hoarsely through the wind and the wild orders to get the life-boats manned. Enough to say that the captain was ashore earlier than he promised—tossed sportively upon some weedy beach, a dead thing that the waves were weary of—a toy that the tempest was tired of playing with, and his queenly ship and costly freight were scattered over the surfy acres of an angry sea. How was this? The glory of that young man was his strength; *but he was his own pilot.* His own pilot! There was his blunder—fatal, suicidal blunder.

O, young men, beware of being your own pilot. Take the true and able Pilot on board who can stride upon those waves, who can speak, "Peace, be still," to that rough Boreas, so that "with Christ in the vessel you may smile at the storm." To be emptied of self, that is your need. Send a message to heaven for help. Telegraph for a pilot. You won't ask in vain. And encouraged by the help that is vouchsafed once, you will ask again and again, and seek grace to help in every time of need. —*Christian Instructor.*

Slurs on Women.

At a recent dinner at which no ladies were present, a man, in responding to the toast on "Woman," dwelt almost solely on the frailty of the sex, claiming that the best among them were little better than the worst, the chief difference being in the surroundings.

At the conclusion of the speech, a gentleman present, rose to his feet and said:

"I trust that the gentleman, in the application of his remarks, refers to his *own* mother and sisters, and not to *ours.*"

The effect of this most just and timely rebuke was overwhelming; the maligner of women was covered with confusion and shame.

This incident serves an excellent purpose in prefacing a few words which we have for a long time had it in mind to say.

Of all the evils prevalent among young men, we know of none more blighting in its moral effects than the tendency to speak slightingly of the virtue of

women. Nor is there anything in which young men are so thoroughly mistaken as the low estimate they form of the integrity of women—not of their own mothers and sisters, thank God, but of others, who, they forget, are *somebody else's* mothers and sisters.

As a rule, no person who surrenders to this debasing habit is safe to be trusted with an enterprise requiring integrity of character.

Plain words should be spoken on this point, for the evil is a general one, and deep rooted. If young men are sometimes thrown into the society of thoughtless or even lewd women, they have no more right to measure all other women by what they see of these than they would have to estimate the character of honest and respectable citizens by the developments of crime in our police courts.

Let young men remember their utter chief happiness in life depends upon their utter faith in woman. No worldly wisdom, no misanthropic philosophy, no generalization can cover or weaken this fundamental truth. It stands like the record of God himself—for it is nothing less than this—and should put everlasting seal upon lips that are wont to speak slightingly of women.

Young Folks.

Hans Federkop.

In the great city of Amsterdam, situated upon the Zuyder Zee, in Holland, there once lived a little Dutch boy, called Hans Federkop. Hans was a little square-built paunch of some fourteen years, with a white tow-head and copper-toed shoes.

Hans was a very cute little chap, droll and good-humored, but as lazy and useless a scamp as could be found in all the eleven provinces of Holland.

School was his terror, and work his abomination. He played truant at the one, and slighted the other, till he was given up as the most incorrigible scapegrace in the neighborhood. His honest father, Jacob Federkop, a hard-working potter, coaxed, and begged, and thrashed, and sent him to school, and put him to work, and even sent him to sea, in hopes of breaking up his intolerable habits, but a day or two would generally find him back again, looking as innocent and unconcerned as though nothing had happened.

And O, how he could fib! Such excuses he could make, and such explanations he could give! What pitiful stories he could tell, and adventures relate, concerning himself! Indeed, if his own account could be credited, Hans Federkop was one of the best doing, but worst used boys in all Amsterdam.

Well, one day, Hans was sauntering listlessly along the red tiles of his native city, prowling about for some object of interest or mischief, when his attention was drawn to a rag-shop. Peeping through a crack of the door, he discovered that the rag man, old Pete Lagerfass, was packing up his weekly collection of rags, and bones, and brass, and bottles, etc., to sell them at the rag warehouse.

Well, he hadn't looked long till he discovered the trick of the rag business. Pete was busily engaged in wetting the rags in the center of the bundles, and filling the linings with sand to make them weigh heavier.

When Hans saw this, a new idea struck him; and struck him so hard that he struck his head against the door, which, in turn, brought old Pete upon him before he knew, who, seizing him by the collar, gave him such a drubbing as soon convinced him how little Pete relished to be watched at his work. In a moment, however, old Pete let him go, and from beating suddenly changed to caressing him, lest the boy's tongue might spoil his future profits. The issue of this was, that old Pete and Hans became sworn friends.

After this a change appeared in Hans; he affected to reform, and become a better boy. But it was observed after this that he always had money, though nobody could account for the way he got it; and moreover, about one night in every week he was either out very late, or out all night; but then, when his father, the honest Jacob, brought him to task about it, Hans had such a plausible story ready for the occasion that there was no finding him out.

This went on for some months, when one night Hans was brought home nearly killed. His head was cut open, and one of his arms had a compound fracture.

And it happened thus: On the night in question, the clerk of the warehouse where old Pete sold his rags was a little later than common at the office settling up his accounts. He was just about to leave, with the bar of the gate in his hand, when he heard a strange noise in the rag-shed. Hurrying out there, what was his astonishment to behold one of the rag bales rolling and tumbling about the floor, as though it were alive, and emitting smothered, and, to his startled ear, unearthly shrieks.

Being very superstitious, he at once concluded that it was a spook, and, between terror and confusion, he dealt the bale a rousing thwack with the bar. Instantly the rolling ceased; a loud cry was heard, and out tumbled the rumpled form of the unlucky Hans, half smothered, and now bruised and bleeding.

For a long time it was not known whether or not Hans was going to live. For many weeks he rolled in fever, and in his delirium he talked incessantly of old Pete Lagerfass, and rags, and bones.

At length reason returned, and with it very painful reflections, and finally a resolution to reform, and become an honor to his parents, instead of a disgrace, in case he recovered.

His first duty, however, was to confess everything to his father; and you may guess the good old potter's astonishment to learn how Hans got his money, and the true cause of his mishap.

The idea that struck Hans, when watching old Pete, was this: If Pete can cheat the warehouse out of a groschen or two, by making his bale weigh heavier, why cannot we make it a thaler or two, by making it heavier still?

"Ah, but," said old Pete, "if you put a *stone* in, they'll find it when the bale is opened, and block that game very quickly."

"But," answered the young rascal, "put a *living* stone in the bale, that can creep out before it's found, and the game will do. I'll be the stone, Pete. Just you tie me inside, so that I can breathe, and sell your bale so late in the day as to prevent its being opened that evening, and I'll worm myself out, and make my escape from the warehouse during the night, and nobody will be the wiser."

This was the way Hans got his money—by selling himself once a week, as old rags, at so much a pound, old Pete getting one-half the rogue-money, and he the other.

And so he might have gone on for years, but for old Pete dumping him out of the scale, head downward, on the night in question, which well-nigh smothered him, and led to his discovery.

Well, to make a long story short, old Pete fled into a neighboring province, where he was arrested for drunkenness and vagrancy, and died in prison; and Hans, on account of his youth and suffering, was pardoned on condition of reform. And reform he did. But his character had been so bad, that it took him long to do it.

He was so ignorant that the school boys called him "No. 1. Jack;" and because he had been so bad they called him "rag-bag," and "spitz booby," and many other bad names. But he bore it all famously. Your Dutch boys are just the kind to do what they undertake—slow, but sure.

Well, he persevered till he became the best scholar in the school, and never was called "No. 1. Jack" again; and he soon grew so honest and kind, that nobody could find in their heart to call him "rag-bag," or "spitz booby."

After this he learned his father's trade, and became so skillful in moulding and enamelling his work, that *his* pottery sold far higher than anybody else's.

After this again, he learned the secret of making porcelain from an escaped workman of the royal manufactory of Vienna, and by means of his great talent, and industry and honesty, he improved that concealed art so much, that he became the finest porcelain artist and richest man in Amsterdam.

Well, when Hans became a great man, he used to tell this story to all his boys and apprentices, and how the breaking of his head was the providential means of saving him. And he would always give them this advice:

1. Never *deceive* your parents.
2. Never grow up *idle*, for that's the devil's opportunity.
3. Cease your bad ways just as soon as you find them out; and
4. Persevere in doing well, even if bad children should call you "rag-bag," and "spitz booby."—*Presbyterian.*

A Pig that had a Chance.

Most pigs never have any chance to be respectable. They are fed on the coarsest food and shut up in a dirty pen, where they have no freedom and no society, and not even pure air and a clean bed. If a little boy should be shut in a pig-pen and fed upon slops, and should have nobody to teach him or talk to him or play with him, he would grow up coarse and brutal if he lived to grow up at all. I once knew a pig who had a good time for the first half-year of his life, and as it is a true story I will tell you all about it.

When he was a month old he was very plump and pretty, with white bristles over a pink skin, and the farmer who owned him took a fancy to him and resolved to give him a chance to improve. So he took him from his dirty little brothers and sisters, and gave him a nice little shed all to himself; in the shed was a soft bed of clean straw, and the door was left open. It was only the pig's bedroom where he slept at night and in wet weather. In pleasant days he ran about the yard and over the green in front of the house, and he would have gone into the house if a friend of his had not taught him better. This friend was Mattie, the farmer's little daughter. She had entire charge of the pig, and fed him three times a day with sweet brown bread and milk, and often ran and played with him as if he had been a dog. He was very fond of Mattie, and when she sat down in the doorway he would come and lay his head in her lap. It was a clean head, for his bed was clean and his food was clean, and he was very often washed; we have seen many boys and girls in Springfield who were dirtier than this little pig.

He knew a great deal, too, and he had but one fault, but that was a sad one and made his friend Mattie a great deal of trouble. He insisted on following her wherever she went, except when she went in the house. If she picked violets or strawberries he was always with her, and she never could visit her little playmates without his "tagging," as children call it. One day she set out when he was fast asleep and ran down the road out of sight round a turn. Very soon she heard piggy trotting after, so she climbed a wall and hid herself behind it, waiting till he should go by. But she could not deceive him in that way. When he came near where she was he stopped and said "ugh! ugh!" and began to smell in the bushes, and soon after there was a great clatter among the stones, and the head of the pig came over the wall where the child was hiding. He was delighted to find her, and she could not make him understand that he was troublesome. So at last this bad habit was the cause of his death. He grew larger and heavier than herself, and often knocked her down in his clumsy gambols, without in the least meaning it; she was obliged to complain to her father, and the pet pig went where all other pigs go. He died and was buried in a pork-barrel. *Springfield Republican.*

Religious Books.

A great variety of works in all departments of Religious Literature, such as Devotional Books, Bible Dictionaries, Sermons, Religious History, and Biography, Annotations, Commentaries, etc., published by the

PRESBYTERIAN BOARD OF PUBLICATION.

Also, a large assortment of Sunday School Libraries and Hymn Books, including THE HYMNAL, Presbyterian Psalmodist, Presbyterian Juvenile Psalmodist and Children's Praise, to which the Publishers call the attention of

SUNDAY SCHOOL TEACHERS AND OFFICERS,

And of all who desire books in any of these departments. All such are requested to call and examine the publications of the Presbyterian Board at the Depository for the Pacific Coast, which has been established at the store of

H. H. BANCROFT & COMPANY,
609 Montgomery Street, San Francisco, Cal.

NEWS SUMMARY.

PACIFIC COAST ITEMS.

CORN MEAL is now the main staff of life in Prescott, there being no flour for sale in the town. We raise the corn and make the meal ourselves, and those who do not like the bread made from it should remember that every mouthful of it that is eaten by them saves nearly a cent to the Territory. So long as we are dependent on California for flour, it is bound to be scarce sometimes, and dear at all times.—*Miner.*

Two of the Supervisors of this city made arrangements to fight a duel this week, but one of them proved not to be so brave as he thought, and the affair was given up. The laws say that by this act they lose the right to vote or hold office. The law should be enforced.

IN San Juan and the adjacent country, there have been 300 cases of small-pox and 96 deaths. In this city the disease is still prevalent. The city authorities are said to be preparing to get ready to consider the propriety of taking some steps to check its ravages.

ACCORDING to the *Real Estate Review*, 20 individuals or companies in this city pay over $3,300 land-tax; 15 pay over $5,000; 10 over $7,000; 5 over $8,600; while two—Michael Reese and James Lick—pay respectively $16,927 and $21,041.

THE *Flag* says there are several fields between Santa Rosa and Healdsburg in which the wheat is two or three inches high, notwithstanding the dry season.

THE Merced Falls Woolen Manufacturing Company have superseded the Chinese help in that establishment by white operatives, male and female.

EFFORTS are being made at San Rafael to enforce the Sunday Law by closing all places of business on the Sabbath.

ALLEN'S ORIGINAL AND GENUINE

Nerve and Bone Liniment.

The Nerve and Bone Liniment was originated by Geo. M. Allen, in the year 1834, and has lived entirely on its own merits without the aid of advertisements; but owing to the many counterfeit and worthless articles called Nerve and Bone Liniment, now upon the market, has induced the proprietors to advertise it. Many certificates of leading citizens who have used and constantly keep it in their houses, as a great family remedy, could be added to the advertisement, but knowing the many virtues of Allen's Nerve and Bone Liniment, and that one application will satisfy any one of its beneficial effects, deem it unnecessary to bring the certificates before the public. Allen's Nerve and Bone Liniment does not effect a cure in a minute, but acts upon the Nerve and the Bone of the patient by its penetrating properties, when used according to the directions on each bottle, and gives new strength to the parts affected, and thus acts as an agent in helping nature to restore the diseased parts to health. It is also invaluable in all diseases of horses.

Be sure to call for Allen's original and genuine Nerve and Bone Liniment, all others are worthless counterfeits, and should not be tolerated by the public.

CURRENT TOPICS.

As one of the questions deemed important in connection with the subject of union in our Church is the control of the theological seminaries, it is wise to observe the difference of sentiment upon it. By most of the New School branch, it has been believed best to confine the supervision of them to Presbyteries and Synods, since our system provides the means, by review and control, of securing the judgment of the whole Church when any question may arise which renders this necessary. By many in the Old School branch, it is thought that they should be directly responsible to the General Assembly, and that the Professors should be appointed by that body. At a late meeting of the Synod of Virginia, however, a proposition to transfer the Union Theological Seminary in that State to the care of the Assembly, after long discussion, was laid on the table, and some of the leading papers support this decision, chiefly on the ground that the men and the churches, or the Presbyteries and Synods, that found and endow these institutions should have the direction of them. Should this view be generally taken, it will be likely to relieve the Seminary of the Northwest of the difficulty by which it is embarrassed. Mr. McCormick, who offered some time since to donate $100,000 upon certain conditions, and declines to give the last quarter of this sum because the conditions are not fulfilled, and he and his friends are denied a voice in its management, would then have no cause for hesitation. The agitation of the subject can do no harm, for our seminaries will be most successful when they are controlled in the way most likely to gain the confidence and affection of the churches, and to secure the instruction that will be a pledge of orthodoxy and complete preparation for the ministry.

While some churches are making the experiment of support from the voluntary contributions of worshippers, all occupying free seats, the result of which must be learned after years, and not months, have passed, one church in New York seems to us to have adopted a more safe and satisfactory expedient. The treasurer is instructed to *let* the pews and sittings, but to be certain that all persons applying be furnished a seat at some price, the applicants themselves being the judges as to what they are able to pay. This gives them a place in church which they can call their own, cultivates that attachment to it which is connected with what phrenologists call locality, permits families to sit together, and yet leaves to each one the amount he shall pay, as really as does the free pew system. Certainly, some measures should be adopted by which those of small means and the poor may not only be induced to attend church, but also may be made to feel interest in it, as *theirs;* and this plan is the best for this end of all that have been suggested.

Two facts have come to our notice which have more relation to each other, and are more suggestive when taken together, than might at first be supposed. One is that in Protestant England a Roman Catholic Bishop, when laying the corner-stone of a church edifice, congratulated his audience on the progress of ritualism among the sects, as he saw in this the promise of success for the only church. The other is, that in Catholic Austria laws have been passed respecting education, the burial of Protestants, and the interference of the bishops and the Pope, which are the clearest proof of the prevalence of light and truth. Bibles and books are freely circulated and extensively read, and the priests have so little power with their pomps and forms that the New York *Tablet* says: "We are sorry for poor Austria; she has ceased to be a Catholic nation, and the wicked are in ecstacies over her." Can any one, with his mind upon history and upon existing facts, doubt in which of these countries the progress is most cheering, as thus indicated, to those who pray for the elevation of man and the supremacy of truth?

It is indicative of good that Bible Classes for adults, and even for whole congregations, are being established in some of our churches. Probably the largest class in the world is that conducted in connection with Mr. Spurgeon's church in London, which began with three persons eight years ago, and now has 700 regular attendants. The most encouraging fact related of it is, that 700 persons have been received into the Church from this class. Rev. Dr. Todd, of Pittsfield, Mass., has recently organized a Bible Class for young and old, to be held once a week, and to take the place of the long established Wednesday evening lecture. It is quite probable that a similar change in many congregations would be welcome to many, and might be the occasion of great good. These weekly lectures are often the most dull exercises of the week, but the study of the Bible, conducted with care and a degree of enthusiasm, might be the means of saving some, while all would be more thoroughly rooted and grounded in the faith.

Those who hold that there is to be no essential reform in Popery, no removal of what is evil in it, while what is good is retained, and more good is grafted on the system, must have read with some surprise a dispatch lately sent over the Atlantic cable. It announces that at a meeting of French Bishops and Cardinals at Rome, several reformatory measures were introduced, which were favorably received by the majority. One of these relates to the celibacy of the Catholic clergy, and another was to abolish the Latin liturgy, and substitute for it the language of the nation in which the service is performed. These measures are to be reported to the General Council soon to be held, and will call forth evidence there, also, that there are progressive spirits in the Romish Church, and that the whole vast body may yet be quickened into spiritual life, and be devoted to the salvation of men. A reformed priesthood, and an instructed laity, would represent a different Church from that which now claims to be the embodiment of Christianity, and the pillar and ground of the truth.

The days when men's "honor" required defence and satisfaction by the use of pistols and bowie-knives, we had hoped were gone, and that this might be regarded as one evidence that civilization is really making some progress. If gentlemen who are deemed worthy to be made Supervisors of the city, however, may be taken as exponents of the sentiment among honorable men, we have been mistaken. We barely escaped a duel between two of these officials, last week, and there are indications that they are not yet satisfied. The merits of the case are not understood by us, nor do we care to investigate on this point, for we assume that, in these days, *nothing* can justify a duel. It is not necessary to give reasons for this. The conviction is almost universal, that such fighting is a relic of barbarism, utterly without warrant under a government of law.

The action of the House of Representatives in respect to the wages of women in employ of the Government, is both wise and just. There is no good reason why labor should not receive its adequate reward, without reference to the hands which have performed it, for the only question to be asked is concerning the manner in which it is done. If a female teacher, or clerk, or printer, or book-keeper does as much, and does it as well, as a male, her sex should be no bar to her obtaining the wages he would have for the same work. There are some departments of work, in which women are more successful than men, and in these they should not be forbidden to compete with those whom they may excel. Let the standard in all cases be independent of the persons who attempt to meet its demands, and there will be no ground for complaint on the part of any.

Rev. Dr. Van Dyke, the eminent missionary in Syria, states some facts respecting the blind in that country, which are enough to awaken the sympathy of all. After saying that the mission had opened a dispensary where the poor could receive gratuitous medical attention, he speaks particularly of those afflicted with diseases of the eye, which constituted the majority of all who came as patients. In Beirut alone, in about two months, five hundred pairs of eyes were lost, the most of which could have been saved, or at least a degree of vision saved, by appropriate treatment. The difficulty is that after an

operation by the surgeon they could not be properly cared for, and therefore most of them were dismissed as hopeless. Had there been in the dispensary a place for half a dozen beds, where the poor creatures could have been looked after for a couple of weeks, or a month, seventy-five per cent. of them could have been given a fair degree of sight. Very naturally Dr. Van Dyke appeals to Christian philanthropists in this country to furnish the money needed to supply such facilities. He says that $500 would set up a small opthalmic hospital of ten or twelve beds, and $1,500 a year would sustain it. Such an institution would be a most important adjunct to the mission, and the greatest temporal boon that could be conferred upon the people of Syria and Palestine. John A. Brown, Esq., of Philadelphia, has given the sum needed for the erection of the hospital, and others are invited to contribute for its support for the first year. Money may be forwarded to Rev. Dr. Adams, Pastor of the Madison Square Church, New York, or to the editors of the New York *Observer*.

Religious Intelligence.

PACIFIC COAST.

Donation.—A large number of the good people of Sutter Creek visited the house of Rev. H. H. Dobbins, on the evening of the 11th, and after spending a social evening left a liberal supply of family stores and a well-filled purse of money with which to add to the enjoyment of their minister's family during the coming winter.

Tulare County.—A correspondent says that the Methodists and Catholics are building churches in Visalia and the former have commenced a new church at Vandalia, on Tule River, 30 miles south of Visalia.

Church Named.—The congregation collected by Rev. C. G. Ames at San Jose during the past two years, has been called by unanimous consent, Unity Church, by which name it will hereafter be known.

Revival.—We learn that much religious interest exists at this time in the University at Salem, Oregon.

EASTERN.

Week of Prayer.

From the 3d to the 10th of January, 1869, a week of prayer is besought, under the authority of the Evangelical Alliance, over the whole world. The following is the evangelical edict:

Beloved Brethren in Christ of Every Land: In prospect of the coming New Year, and mindful of the great blessings graciously vouchsafed by God, in answer to the united supplications of his people, the Evangelical Alliance cordially renew their invitation to Christians throughout the world to observe a Week of Prayer in January next.

Very gratifying reports have been received of the observance of this annual Week of Prayer in different distant countries, still there is reason to know that in many towns and cities of our own and foreign lands Christians have not in this way been brought into sympathy with the universal Church of Christ. The Evangelical Alliance, therefore, desirous of manifesting the union of all true Christians, and of extending the benefits which in various ways have attended these annual assemblies for united prayer, affectionately call upon the children of God everywhere to take counsel, and to make arrangements for observing it in their respective localities. The Alliance feel assured that thereby the hearts of Christians will be refreshed and the hands of those brethren strengthened who in other places at home and abroad, plead before God for the gifts of His grace, and the outstretching of his arm to bless his church and convert a perishing world.

Fellow-Christians, let us with one accord, if spared to see the commencement of a new year, encircle the world with our faithful, fervent, and united prayers. Let us, then, gather around the throne of our Heavenly Father forgetful of our differences of language, nation, and ecclesiastical system. Let us plead, in the name of our one Lord, Redeemer, and Intercessor, for blessings which the circumstances of our times show to be most needful, urgent, and important.

"If two of you agree on earth as touching that they shall ask, it shall be done for them of my Father which is in heaven.

"O Thou that hearest prayer! unto Thee shall all flesh come."

The following topics, among others, are suggested as suitable for exhortation and intercession on the sucessive days of meeting:

Sabbath, January 3d. — Sermons — Subject: "The Intercession of the 'High Priest over the House of God' the Motive and Model of United Prayer."—Heb. x. 19—22.

Monday, January 4th.—Confession of sin, and thanksgiving for special and general mercies during the past year to nations, churches, and families.

Tuesday, January 5th.—Nations, for their temporal and spiritual prosperity; edifying intercourse and the maintenance of peace; for increased opening for the Gospel; for the removal of social evils; for the observance of the Lord's Day, and for kings and all in authority.

Wednesday, January 6th.—Families: for children of Christian parents; for a blessing on home influences; for all seminaries of Christian learning —universities, colleges, and schools; for Sabbath schools and private instructions; and for a blessing on Christian literature.

Thursday, January 7th.—The Church: for more knowledge of God's Word, and increase of spiritual life; for sound and faithful preaching, adapted to rich and poor; growing love to Christ; a more earnest love to Christians of varied name of all nations; snd for the sending forth of more laborers into the harvest.

Friday, January 8th.—Missions: for the conversion of the heathen and Mohammedans; for the growth of missionary zeal; for the removal of hindrance to preaching the Gospel among all nations; for recent converts, and for all who are suffering persecution for the truth.

Saturday, January 8th.—General: for the conversion of Israel; for the circulation of the Holy Scriptures; for Christian philanthropic societies; and for the outpouring of the Holy Spirit on Christians and Christian churches throughout the world.

Sabbath, January 10th. — Sermon — Subject; "The duty of the Christian Church in Relation to the Religious Wants of the World."

Temperance Discipline in Old School Churches.—A contemporary having charged Old School Presbyterian churches with admitting to membership persons engaged in the manufacture and sale of intoxicating drinks, the organ of that Church replies that the charge seems to it exaggerated, but if any such persons have a place in Presbyterian churches, it demands the prompt action of sessions in the way of discipline. It says that "any session which will receive into the communion of the Church any man who 'manufactures and sells intoxicating liquors for drinking purposes,' is guilty of a grievous offence against the law of the Church, the law of God, and the present and everlasting welfare of their fellow-creatures." Such action, moreover, would accord with the instructions of the General Assembly on the subject, that "the churches must purge themselves from all participation in sin, by removing from their pale all who are engaged in the manufacture and sale of intoxicating drinks for use as a common beverage."

A man engaged in this business, in this day of light and knowledge, the same paper reasons, cannot present credible evidence of Christian character, such as should admit him to the Church. "He should not be received into the communion of the Church if he is engaged in the business when he makes the application; neither should he be continued in communion if he enters the business afterwards, nor be certified to any other Church as a member in good standing."—*Evangelist.*

Synod of Chicago.—My object in referring to this ecclesiastical gathering is to call attention to the progress which the Church has made in the city and in the whole Synod of Chicago since the body met here nine years ago. Geographically, the Synod occupies the same ground now as it did then, extending westward to the Mississippi River, and embracing the whole northern sections of the State of Illinois. Then it had three Presbyteries; now it has five. Then it consisted of 67 ministers and 87 churches; now it has 116 ministers and 104 churches. Then it numbered 4,882 communing members; now it has 7,473,and probably more, as I follow the enumeration of the year before the last. Then we had but two churches in the city; now we count six—five of them being in energetic working condition and with good prospects of a rapid and healthful growth. During this period of nine years, many handsome and costly church edifices have been erected in various parts of the Synod. These statistics show that our ministers and churches have not been asleep.—*Cor. of N. Y. Observer*

Home Missions among the Wesleyans.—In the 86 circuits of the British Wesleyan Conference, to which home missionaries have been sent, the average annual increase for the last three years has been 21,397. In these circuits 34 additional ministers have been appointed, and 56 new chapels built in the same time. "Wesleyan Methodism owes its recent increase, and its improved prospects, in a large measure, to home missionary operations."—*Zion's Herald.*

Work of Grace in Matawau, N. J.—Last Sabbath, Oct. 25th, witnessed a scene of rare interest here, in that twenty-seven presented themselves for admission, professing recently to have found Jesus —among them husband and wife, parents and children, brothers and sisters, and some of the most interesting of our Sabbath scholars.—*Cor. Home Journal.*

Y. M. C. A.—The first Young Men's Christian Association was formed at London, on the 6th of June, 1844. The first in America was formed in Cincinnati in 1848, and from these two points the institution has spread over two continents.

Rev. Dr. Ludlow of Albany has accepted the call of the Collegiate Presbyterian church of New York. Salary $5000, and a parsonage.

Maine.—Three of the strongest churches of the State, viz, Saco, State Strert, Portland, and the First Church in Bangor are without pastors.

FOREIGN.

Catholc and Protestant Countries Compared.—Taking Great Britian and Pruisia as Protestants countries, and France and Austria as Catholic nations, we find that where 20 can read and write in the former, but 13, or little more than half as many, can do so in the latter. In 16 European countries 1 in every 10 are in schools in the Protestant nations, and but 1 in 124 in Catholic countries, or more than twelve times as many Protestants as Catholics are thus educated. If we take six leading Protestant countries in Europe and six Catholic, in the former 1 newspaper or magazine is published to every 315 of the inhabitants, while in the latter there is but 1 to every 2,715. That is, about ten times as many newspapers and magazines, in proportion to the population, are published in these Protestant countries as in the Catholic.

The value of what is each year produced by industry in Spain is $6 to each inhabitant; in France, $7 50; in Prussia, $8; and in Great Britain, $31, or nearly five times as much as in Spain and France. There are about one-third more paupers in the Cath-

olic countries of Europe than in the Protestant, owing mainly to the numerous holidays and the ignorance, idleness, and vice of Catholic lands.

Three times as many crimes are committed in Ireland as in Great Britain, although there are three times as many inhabitants in Great Britain as in Ireland. There are in Ireland six times as many homicides, four times as many assassinations, and from three to four times as many thefts as there are in Scotland. In Catholic Austria there are four times as many crimes committed as in the adjoining Protestant kingdom of Prussia.—*Observer.*

CHINA.—INSULTS TO MISSIONARIES—REDRESS DEMANDED AND GRANTED.—The English authorities made an energetic demand for redress for the recent outrage on the missionaries at Yangchow. A slip from a Shanghai paper contains the following:

The *Rodney*, *Rinaldo*, *Slaney*, and *Icarus* reached Nankin, November 15th, and the next morning Mr. Medhurst, H. B. M. Council, with a guard of marines, called on Tsen-kwo-Fan and demanded full reparation for the insults offered to the missionaries at Yangchow. Tseng proposing to delay the discussion, he was informed that if he did not comply by 3 P. M. that day the Chinese gunboat *Tien-ki*, then anchored at Nankin, would be seized; alarmed at this he complied with the demands.

List of Presbyterian Clergymen,

ON THE PACIFIC COAST, ALPHABETICALLY ARRANGED.

IF men or women could but find the fabled fountain which is said to restore health, and strength, and beauty, with what eagerness they would rush to drink its waters. It is found in the S. T.—1860—X. The sale of the PLANTATION BITTERS is without a precedent in the history of the world. They are at once the most speedy, strengthening health-restorer ever discovered. It requires but a single trial to understand this.

Oakland Academy.

A CLASSICAL, ENGLISH, & MILITARY BOARDING SCHOOL

REV. DAVID McCLURE, PRINCIPAL.

The Ninth Term of this Institution will commence on Wednesday, Jan. 4th, 1869, in the new Academy building, recently erected on Telegraph Road, one mile from the Railroad Depot.

The location and plan of this new building have been made with the design of securing for the students a home of beauty and refinement.

Careful provision is made for thorough and extensive courses of study in English, Mathematics, Natural Science, and the Ancient and Modern Languages. A special course is also provided for those who are preparing for a commercial life.

In addition to these courses there is a daily military inspection and drill, together with vocal and light gymnastic exercises, under the instruction of a teacher. Every student is required to attend the military and gymnastic exercises, as a means of physical training.

For the mental, moral, and physical culture of each pupil committed to his care, the Principal holds himself responsible.

Further particulars may be obtained by addressing the Principal at Oakland.

The Sabbath at Home

IS THE ONLY ILLUSTRATED RELIGIOUS MAGAZINE published in America. It employs the ablest Pens and Artists in giving interest to the *Study of the Bible*. It is, in a large measure, a YOUNG PEOPLE'S MAGAZINE, and every month there are Illustrated Bible Recreations for the YOUNG, and older Bible students. Price $2 00 a year.

Saloons and their Influence.

In the early days of California history, it was a peculiarly painful sight to see the ingathering, toward nightfall, of the young men into the saloons fronting the Plaza on all sides. The glare of light; the bewildering music; the highly colored pictures on the walls; the rich curtains at the windows, and the warm glow of the fire-light, throwing its illumination on the street without, all combined to render very seductive and tempting to the senses these haunts of sin and wickedness. Piles of yellow dust, fine specimens of gold and bullion, and the bright fifty-dollar pieces, then in circulation, were alluringly spread out, as "snares for the feet of the unwary," and many a promising youth, and many a husband and father, away from the protecting influences of home, yielded to the temptation to enter these haunts who would once have said, "Is thy servant a dog, that he should do this thing?"

Especially on cold, rainy evenings would the brightness within contrast with the dismalness without, and merely to pass away time, to look on, or to partake of the cheering warmth, would one after another enter, till the crowded room could scarce accommodate the throng. Then the company dispersed hither and thither, around the tables where the excited players were staking their gold—winning or losing, as the case might be; cool, confident men; eager, impetuous novices, whose consciences had not become callous, and those who could rob their victims of thousands, congregated in these misnamed saloons, till it became almost a thing of respectability to frequent them.

What could arrest the tide sweeping these on to destruction, became the serious thought of the few who were anxiously endeavoring to check the evil.

Those who had homes gladly availed themselves of such opportunities of frequent social invitations, as time and means would allow, and chief among the noble women, who set this example, was Mrs. Judge Waller. In all elevating aims, co-operated with by her husband, this lady became the directing spirit of a little band, whose object was to gather in to Churches and Sabbath Schools, those who had wandered from these, in this land of money-getting, and to renew the social influences of far away homes, by making her own a pleasant and attractive place for the young.

By degrees, slowly, imperceptibly, the curtains excluded gazers from the streets; the music was a shade less boisterous (for even that partook of the character of these places); the lights were shaded, and as a more settled community congregated in in San Francisco, the saloons were less demonstrative in character. Alas! how many, bidden to them when the excuse of "no where else to go," served as a flimsy cover to the inclination, had learned to find pleasure in the keen excitements of the gaming table, and were irretrievably lost to a career of patient, honest labor, or persevering industry! Alas! how many a victim to intemperance tasted the first glass in these miserable haunts of vice and profanity!

Saloons still exist, somewhat different in appearance from those of the olden time, but as corrupting in their influences. Monté and faro are now veiled under the specious pretenses of oysters and liquors, and the curtain is only dropped, behind which the card players pursue their "games of recreation."

If young men could look forward to the fearful havoc these practices make of virtue and morality, surely they would pause at the *first* step. The very entrance into such places is demoralizing. Familiarity with coarseness and vice, renders it less obnoxious. This is observable in the constant use of slang phrases, so common in California, as to excite remark only among strangers. The constant repetition of oaths; the concealment of the vice of Intemperance, under the name of "a smile" for a dram of whiskey, or a drink of brandy; the invitation to toss up, for a treat, are all so many instrumentalities of Satan against morality and religion.

The old Puritanical "notions" as they are now called rendering an individual's respectability doubtful, who frequented, or was even seen to enter groggeries and gambling houses, are much more to be desired in their restrictiveness than the careless latitude of the present day.

"I wish it was not the custom for every man one meets to expect you to take a 'drink with him,'" said a young man a few days since; whose breath denoted he was scarcely sincere in his wish.

"Why do you yield to a custom you believe to be injurious?" I replied.

"Simply because it is a custom, and it seems churlish to refuse."

A poor reason for a foolish act, yet how many are weak enough, thoughtlessly to incur a habit which ends in a rooted vice. The social errors which society recognizes, are more difficult to eradicate than those which wear a mask. Let the young lady consider it degrading to associate with gentlemen who are known to frequent saloons as places of recreation, and one great corrective is exercised, for the quiet and dignified influence of woman is more potent than she is herself aware of.

In the interior towns of California the influence of saloons is still more perceptible for evil than in the large cities. In these congregate all the idle, unemployed, and the class generally known as loafers. Beside these the business men, and very often even church members, "drop in" to meet those they wish to see for any particular object, instead of being sought in their own places of business, and thus is worn away any obloquy otherwise resting upon them. Boys invariably are to be found in them, and a card table and bar are the indispensible accompaniment of the saloon. Can any one question that these are schools of vice for the boys? During the late political canvass how many of these young minds were tainted by the constant betting going on between political opponents, day after day and evening after evening, always enforced with the invariable *drink*. Innocent recreation, as a preventive of crime, has of late, I am glad to see, become a topic in some of our leading religious papers, and the various Young Men's Christian Associations connected with different denominations, have provided and are providing reading rooms, and courses of lectures calculated to impress the popular mind. I have often wished some gifted and eloquent thinker and speaker, who has seen the devastating waste of morals engendered by saloons and their influence, would warn young men of the downward path whose entrance lies at their doors.

N.

The Heathen among us.—VI. Other Missionary Efforts in the State.

As already stated, Rev. J. L. Shuck labored for several years among the Chinese in Sacramento, and the mining counties of this State. His missionary school in that city was at one time large and flourishing, but when he left this State, it was discontinued.

A few years ago, a brave Christian lady of Sacramento, seeing the opportunity, and impressed with the duty of teaching the heathen around her, determined to establish a mission school for them in the church with which she was connected. One Sunday afternoon she went out in the street to gather scholars. With great difficulty she induced three or four Chinese to accompany her to the church; she left them for a short time to collect a few more, to make up a class. When she returned the second time, her first pupils had all disappeared. But she was not to be discouraged. She persevered in her good work, and God blessed her efforts as he always does those of faithful, zealous, working Christians, and in few months she had a large and flourishing Sunday School. It now numbers about 35 scholars, and still continues under her superintendence. Such a Christian woman is worth a hundred half-way, faint-hearted Christian men.

A mission school has been organized at Santa Clara by a lady, and still remains under her charge. It now has nearly 30 scholars, and, considering the small Chinese population of that town, has met with exraordinary success.

In August of the present year, Rev. Otis Gibson, who has been for ten years a missionary of the Methodist Church in China, arrived in this city, to organize a mission of his church to the Chinese in this State. By his energy and zeal he has infused new life in the work. He has organized a mission school in this city, and has awakened an interest in the cause in other churches. He purposes traveling through the interior of the State, establishing mission schools for the Chinese wherever he can.

A mission school for the Chinese has been established in the Episcopal Church of the Advent in this city. It has grown quite as rapidly as was expected, and promises to become large and successful. Other churches are moving in this matter, and some of them contemplate the speedy establishment of these schools.

Let the good work go on. Let all our churches be fired with a noble zeal and emulation not to be behind their neighbors in this holy work, until every one in our State, into which Chinese can possibly be drawn, has a mission school for their conversion.

C.

The Duty of the Hour.

Now that the political campaign is over, it is time to enter upon a religious campaign—a general effort for the millions of our countrymen. Political agitation is subsiding, and the thoughts of men are turning in other directions. It is the part of wisdom to seize upon the favorable moment, and direct them in the right channels. That reaction which follows intense excitement, affords an inviting occasion to present the claims of sacred truth. It is the time to give new emphasis to the Gospel message, to call back the thoughts of men to neglected duties, to set before them the claims of religion upon their time, their talents and their wealth, to make them feel that the chief end of man is indeed to glorify God and to enjoy Him forever.

A nation's well-being depends upon religion. Even human sagacity can see this. Even if political movements resulted—as they do not—in always placing the right men in the right place, there is but little security for them unless they are sustained by a sound public sentiment. The Gospel alone can hold political corruption in check, can insure peace, good order and industry, and all those elements which combined make a nation's wealth and its prosperity. The Church of Christ is the bulwark of the State, and the good pious man, is the best citizen.

What may not united Christian effort accomplish for a nation like this! A nobler field than our broad continent was never opened in the history of the world. How wonderful has been our national

progress. From the very beginning we have been led along by the guidance of heaven, even as the Israelites of old were led by the cloud and pillar of fire. Who does not feel his own littleness as he looks forward to the future, and contemplates the problem of our national destiny?

And what does this broad land need most? It needs above all else the Gospel of Christ. It needs Christian churches, active and prosperous. It needs Christian schools and colleges, that while they impart science and learning shall inculcate that fear of the Lord which is the beginning of wisdom. It needs Christian citizens, governed by a sense of duty, and sworn by the vows of their holy profession to do justly, to love mercy, and to walk humbly with their God. It needs Christian statesmen and legislators and judges, who will rule justly and in the fear of God. It needs a Christian public opinion which will make up for the want of political safeguards, and in the atmosphere of which vice and crime cannot live.

Let every member of the Church of Christ feel that something of that awful trust rests upon him. Let him "stand in his lot," and do his duty, in his own family, his own little neighborhood and community. Let him work for Christ, and pray while he works. Let him not forget that the Great Master of us all is calling him to "work to-day in his vineyard." Let him hearken to the cry which comes up from all our religious wastes, which demands that the rich shall give of their abundance, and the poor of their poverty, and all, of their prayers. This is the campaign to which we are summoned now, and let no man's political zeal in the past shame the coldness with which he commits himself to the noblest of all enterprises.—*Evangelist.*

The Occident.

San Francisco, Saturday, December 26, 1868.

OUR FIRST YEAR.

With this number The Occident closes the first year of its existence. It has been a year of difficulties and experiments and labors such as are incident to the commencement of all religious papers, yet a year of satisfaction and success beyond what we anticipated at the beginning. We undertook its editorial management without experience, and distrusting our ability to furnish, week after week, what we well knew to be necessary that it might be a welcome and useful visitor in the families of our people. We were aware of the difficulty to be overcome, if the paper should be a proper representative of the several branches of the Presbyterian Church, from which it would receive a large portion of its support. We knew that, in proportion to the population on this Coast, a large number of papers had already been established and were striving for permanent position. Yet we believed Presbyterians deserve an organ here, and that they would sustain one, if such a one could be produced as would in any measure answer the wishes of those who have a commendable pride in our faith and polity and name, as a denomination. Against our will, and almost in spite of our remonstrance, we were put in charge of the enterprise, and while we are grateful for the co-operation we have received, and for the success by which we are encouraged, none of our readers are more conscious than are we of the many defects to which we plead guilty in the aggregrate.

Our chief reason for failure to accomplish all we hoped to do, is that we have been obliged to bring to the editorial room only the time and strength that were left after other and important duties had been performed. Our chief reason for the belief that it will be much more worthy of patronage during the year to come, is that we expect to place an editor in control of its pages within a short time, who will devote his whole time and strength to its demands.

To our subscribers, to a generous public, and to God, with gratitude for favor already shown, we commend The Occident for the year to come, and move on to its cares, its duties, and its rewards.

THE USES OF TRIAL.

A fruitless vine laments that it bears no clusters, yet bitterly complains of the hand which prunes its worthless branches, and digs about its roots. A wild brier-field would yield some valuable products, but when the bushes are cut off and burned, and the rough plow tears up their roots and mellows the soil for other seed, it groans, and bewails its fate, and thinks it hard that it should suffer such harsh treatment. There is need of patience. By and bye, the loaded vine, rejoicing in its luxurious fruitage, shall thank the hand which now it blames; and the waving harvests shall be the waste's testimony, that the fire and plow were the means of its higher worth.

We shall soon disappear. The lives we live will be forgotten, our names will be unknown, our very graves will be trodden upon by the generations to come. What we have done, and what we have suffered, will be of little consequence, except to ourselves; yet to us our short career will be full of momentous interest. The trials we endure will then be regarded as no small portion of our inheritance forever, for they will be changed into priceless blessings; and as we look back from eternity, nothing in all our life below will seem so intimately connected with its joys as the sorrows that were sanctified to us while we passed through them—those low places of humiliation, and suffering, and temporary gloom, where we were most trained for the skies.

The Historical Evidences of Christianity.

The internal evidence of the truthfulness of revelation will ever be the most satisfying to the great majority of Christians. It is to our deep moral want, our highest spiritual aspirations, what light is to the eye, sound to the ear, or food to the hungry. A soul thus inwardly fed and nourished, no more needs external proofs of its supernal origin than you do a treatise on optics to tell you when it is morning. "Who thinks of asking if the sun is light, observing that it lightens?" This intuitive discernment of its fitness and beauty is its highest certificate of divine origin. It is a voice the dullest may hear, and the lowliest understand. But you cannot, therefore, afford to neglect and despise the external evidences of Christianity. You need a basis of fact a historical basis, as an outward occasion and incentive to quicken and sustain your devotional feeling. A religion without such historical basis, to embody and perpetuate its vitalizing truths, will soon become vague, loose, and unsatisfactory. It will not be safe to forget the tree when you feed upon the goodly fruit that has fallen from its branches. Then, too, in the day of doubt, temptation, and fierce assaults upon your faith, you will feel the need of the great facts of revelation to steady and support you.

And then, again, the internal evidence you so highly prize is so intimately bound up and vitally interwoven with the historical records of Christianity that it must share their fate. Break the historic vase that contains the life of Jesus, and that life will evaporate out of the world. The traveler may admire the images of the Apostles carved upon Italian cathedrals, and the lovely Madonnas and splendid cartoons frescoed upon the ceilings, more than he does the massive architecture of the building. But how soon would these fine sculpturings and beautiful designs mildew and fade were the roof to become wind-shaken and leaky! All this sumptuous adornment would perish were those walls to crumble to decay. In like manner would all the moral perfection and glory of Christianity, that many now so ardently laud and admire, perish were the great temple of its historical credibility allowed to fall into ruins.

Then it should be borne in mind that the moral character greatly unfits them for duly appreciating the force and beauty of the internal and experimental evidences of Christianity. Sin blunts the perceptions, warps the judgment, and muddies the intuitions. Suppose some tourist should find in his European travels a fine piece of painting, which he claims to have been the work of Raphael. From the nature of the piece, the conception, the finishing, and the general style and tone, one familiarly acquainted with the genius of Raphael could frame an argument of great weight. But only an artist could make such an argument. Only an amateur could appreciate it. Many a man is competent to settle the high claims of the piece upon historical ground, by examining the character of the persons who had had it in custody, and the nature of the facts and traditions which are presumed to connect it with the name of the illustrious author, who could not feel the force of an argument resting upon a fine analysis of the picture as a specimen of high art.

This case, I think, is precisely analagous to the claims of Christianity. The moral perfections of God "shine in darkness," unless men will come to the light that their deeds may be reproved. It is an evidence that is "spiritually discerned." It is only those who walk with the Savior by the way, that feel their hearts inly burn as He opens the Scriptures.

It is only those who go up into the mount of worship, prayer, and trust, that ever see these blessed pages transfigured in the "glory of the only begotten of the Father, full of grace and truth." But we cannot safely trust the defence of Christianity to this kind of evidence, precious and glorious as it is to the recipient. It is too exclusive. It belongs to the consciousness of the individual, and cannot be made available for popular use. It is for this reason that we must not neglect or despise the worth of the historic evidences of our religion. It is a line of proof that lies level to every thoughtful mind. Men can weigh its external claims, examine its witnesses, sift its traditional authority, and scrutinize its documents, who would be unable fully to apprehend the weight of an argument built upon the conscious attestation of Christians.

The age in which our lot is cast especially demands that we give greater prominence to the historical evidences of Christianity than has been common among us. The battle of our day seems to be between a religion developed from the spiritual consciousness, and a religion derived from a historical revelation. We are told on every side to go up into the Mount of Vision and talk face to face with the Infinite Father for ourselves and not contentedly feed like imbeciles upon the crumbs that fall from Hebrew tables. Christianity is only an odorous blossom of the intuitions of the True, the Beautiful, the Good, and the Lovely, and each soul possesses in itself the germs of this efflorescence.

Our religious literature has felt the fascination of this idealizing tendency. It has been gradually forgetting the value of the historic basis and outworks of our faith in its zeal to expand and eulogize the moral forces of Christianity.

While we should not deny nor disparage the intuitional powers of the soul, we should not forget that our nature is not limpidly pure enough to rise unaided into a direct perception and communion with God. Earthly disturbances cloud our moral perceptions, and depraved tendencies drag the soul downward whenever it seeks to rise, and left to itself it must ever wander in painful uncertainty whether its powers are sufficient to achieve the ends of its being, until it sinks into the inaction of despair or indifferance. In order to restore the soul to the insight and fellowship of God a Redeemer, sustaining power is needed. In order that this Redeemer may be recognized as a proper object of love and trust he must come into our midst clothed with divine anthority, clad in human form and speaking to us the thoughts and purposes of God, in symbols of speech we can understand. That is, in short, he must be a historical person, grounding our faith upon a fixed unchanging historical basis. And now let us seek to produce a re-action against the attractive idealism which would reduce all religion to a phase of religious consciousness, a sort of sultry, tropical mist that rises from the mind, whisked by every capricious breeze into every imaginable shape, by constantly asserting on every occasion, the great historical facts of Revelation.

W. McK.

We publish with The Occident this week, a Title Page and Index, for convenience in binding.

Current Literature.

The Philosophy of Domestic Life.

Dr. W. H. Byford, of Chicago, has written, and Lee & Shepard of Boston, have published a little book with this little, which a hasty and cursory reading inclines as to please. It is evidently written under the conviction that such a work is needed, not merely that it will sell, and the author while saying many curious things, in language very direct and unequivocal, gives the impression of both ability and honesty which should always accompany a book of this kind. He informs us at the outset, with what feelings he undertook the work. "I have for a long time been convinced, by a somewhat intimate acquaintance with society in almost all its phases, that there is no methodized knowledge, among the people at large, of the principles which govern our Domestic relations, and their relative importance as compared to our other positions toward each other; and as a consequence, the purity and efficiency of the family are becoming less, constantly. It is my purpose, therefore, to set forth first, the general ideas which are recognized in our political, legal, and family relations; second, their absolute and relative importance to us, immediately and collectively; and third, to insist upon proper educational reform, whereby the wrongs that are so rapidly establishing themself may be righted, and prevented in the future." The book consists of ten Chapters, having a logical connection with each other, and presenting the subjects indicated in the above programme so that they can be understood, at least. Our feeling, when reading it, was that it might be useful to multitudes, who really seems to have no just idea of the dignity and value of the family relation, and that it would be an excellent body of advice for those who are beginning wedded life. In youth we feel but little interest in domestic affairs, and therefore few persons have informed themselves with reference to them, even when contemplating marriage, and thinking about a home. The attempt to remedy this ignorance, and to give all the benefit both of experience and study should be commended. Sold by Bancroft & Co.

Appleton's Juvenile Annual.

So many worthless books in gaudy binding and with attractive illustrations are offered for sale just now for Holiday gifts, that one scarcely expects to find a volume that he can safely give to his children, unless in the list of known and standard works. The addition has special value, therefore, if one can be recommended as both pleasing and instructive, and such a book is furnished by the Appletons, as their Annual for 1869. That it should be elegantly bound would be expected since it is issued by these well known publishers, and there is not an objectionable sketch or story in it, while many of them convey reliable information upon natural history, and other subjects. Nor is the style that of feeble variety so common in Holiday books. But whether the theme is some animal or fowl, or the ascent of the Jung Frau' or the Fellahs of Egypt; or sponge-fishing, or Advice to a Bear, the language is worthy of im itation, and the vivacity and variety cultivate the taste and impress the facts related. The illustrations are unusually fine, also, and a father who hands the beautiful volume to his son, or daughter, is not obliged to apologize to himself, if not to them for giving them mere trash as a present. It may be bought of H. H. Bancroft & Co.

LITERARY ITEMS.

The Invention of Envelopes.—It is related in *The Stationer*, that these conveniences were first introduced as follows: About 40 years ago there lived at Brighton, in England, a bookseller and stationer of the name of S. K. Brewer, and he used to place in his shop window piles of paper, beginning at the largest, up to the then smallest size, 16 mo.; but to finish off the pile he cut cards, so as to bring them up to a point. Ladies used to go in and ask for that "dear little paper," which induced him to cut paper in small sizes. Then came the difficulty of the place for address; and the result was he invented the envelope, and had metal plates made for cutting them to shapes and sizes. This just pleased the ladies, and orders came to him for the little paper and envelopes from all parts. This at length became such a demand upon his time that he got Dobbs & Co., of London, to make them for him. Such was the beginning of the envelope trade, now extending over the world, and in which millions of dollars are invested.

Here is a curious inquiry: "Which is correct—learning by *heart*, or learning by *art?* The former is the usual expression, but it is by no means clear that it conveys the intended meaning. He who compresses words, or sentences, or aught else, upon his brain by rote, as it is called, uses some acquired or instinctive trick of memory for the purpose. Schoolboys, actors, singers, and their likes, have various artifices for committing matters to memory, and their learning is by *art;* the heart has nothing to do with it. If learning by heart means anything at all, it certainly signifies a principle the very opposite to that it is used to designate, the profound acquirement of knowledge, the understanding of facts and experiences without regard to the symbols by which they are presented to the mind."

A change in a firm so long and widely known as that of Ticknor & Fields is an event of considerable interest. Thousands of volumes, many of them the choicest productions of the times, have made the firm-name literally a household word. The house was founded in 1833, and the firm was then Allen & Ticknor, so that the name of Ticknor, father and son, has been connected with it for thirty-five years. It now gives place to another. The new house is Fields, Osgood & Co. Mr. Osgood has been connected with the firm for four years, and has done much to give it its present reputation and success.

Good Advice.—James Redpath, in a paper on "Ethics for Occasional Contributors," published in the *Round Table*, thus tells how to write a successful newspaper article:—"The great secret of successful newspaper writing consists largely in the mastery of the difficult arts of beginning and leaving off. To excel, you must write an article as you take a plunge bath in winter—jump in, all over, instantly, and out again, and off, without wasting a sentence or a syllable." Our contributors are requested to take notice that we endorse these directions.

Educational.

Improving as Parents.

In all work, there should be improvement on the part of the worker. In every relation of life men should grow more perfect in the discharge of duty. This principle is fully recognized in most of its applications. The painter ought to improve in painting. Because we so fully feel this, we experience surprise as we read of Benjamin West, that "he composed, in his ninth year, a picture which, 67 years afterward, in the plenitude of his fame, he asserted, contained touches never subsequently surpassed by him." The poet ought to improve in the character of his poetry. Hence the growth of the genius of Shakspere even becomes a legitimate object of study; and judgments like the following are not impertinent: "Richard III is one of his earlier characters, and, though excellent of its kind, its excellence has been approached by other dramatists." "The meridian of Shakspere's power was reached when he created Othello, Macbeth and Lear." The instructor, also, ought, as one has said, "to enlarge his own foundations perpetually, as a scholar and as a teacher." And all feel that it is a reproach to the profession if such a question as the following must be answered in the affirmative: "Do not many of even our so-called higher professional teachers, like the mass of our other educated men, come to be quite stationary in all elements and forms of mental advancement, at a very early period?"

So much, then, for the accepted applications of this principle. But there are others not acknowledged so freely. One of these is that of parents in the training of children. We feel that the artist ought to improve in his fine art; the poet in his poems; and the teacher as a teacher; but we do not concede to ourselves as easily that the parent should in like manner grow more and more perfect as a parent? Do we expect little Septimus to be much better trained than his big brother? And yet, why not? Is the training of the young not an art? If an art, is it wholly a lost one? If known, should not those who practice it, like other artists, constantly improve upon earlier efforts? C. R. C.

Napa Seminary.—The Napa Ladies' Seminary under the direction of the Misses McDonald, assisted by a corps of able teachers, concluded, on Wednesday of last week, its second half-yearly session for 1868. The examinations and exhibition were of the usual character and interest, reflecting the highest credit on both pupils and instructors. The institution is deservedly growing in popularity. W.

School at the State Prison.—A school has been organized at the State Prison, which is proving very successful. 65 scholars joined the school at the commencement, on the 6th, and the attendance has already reached 125. The pupils are of all ages, and most of them seem anxious to learn. This is an important enterprise and there ought to be no difficulty in obtaining funds for carrying it forward.

Personal.

Rev. Jacob Knapp, Dr. J. B. Thomas, Hons. A. A. Sargent, F. M. Pixley, Thomas Fitch, Gen. McCook, Col. Coey, and E. G. Waite, sailed for New York on Tuesday.

Dr. Rowell, Health Officer, after contact with virulent cases of small-pox, disinfects his clothing by carrying a vial of chlorine. Strange that the disease does not disappear!

Rev. Dr. J. B. Thomas lectured for the benefit of the Sabbath School in San Jose last week. He preached his farewell sermon on Sunday evening.

Elders C. C. Riley and F. C. Richardson, says a correspondent of the *Evangel*, will serve as evangelists in Oregon during the coming year.

Hon. Newton Booth delivered the fourth lecture of the Y. M. C. A. course, on "Morals and Politics."

Rev. H. H. Rhees has resigned as pastor of the Baptist church in Marysville.

Rev. J. V. Lentell has been called to the Baptist church at San Pablo.

General Selections.

Rural New England Fifty Years Ago.

Being the elder son of a poor and hard-working farmer, struggliug to pay off the debt he had incurred in buying his high-priced farm, and to support his increasing family, I was early made acquainted with labor. I well remember the cold summer (1816) when we rose on the 8th of June to find the earth covered with a good inch of newly fallen snow,—when there was frost every month, and corn did not fill till October. Plants grew very slowly that season, while burrowing insects fed and fattened on them. My task for a time was to precede my father as he hoed his corn, dig open the hills, and kill the wire-worms and grubs that were anticipating our dubious harvest. To "ride horse to plow" soon became my usual vocation; the horse preceding and guiding the oxen, save when furrowing for or tilling the planted crops. Occasionally the plow would strike a fast stone, and bring up the team all standing, pitching me over the horse's head, and landing me three to five feet in front. In the frosty autumn mornings, the working teams had to be "baited" on the rowen or aftermath of thick, sweet grass, beside the luxuriant corn (maize,) and I was called out at sunrise to watch and keep them out of the corn while the men ate their breakfast before yoking up and going afield. My bare feet imbibed a prejudice against that line of duty; but such premature rising induced sleepiness; so if my feet had not ached, the oxen would have had a better chance for corn.

Burning charcoal in the woods, south and southwest of us, was a favorite, though very slow, method of earning money in those days. The growing wood, having no commercial value, could usually be had for nothing; but the labor of cutting it down and reducing it to the proper length, piling it skillfully, covering the heaps with sods, or with straw and earth, and then expelling every element but the carbon, by smothered combustion, is rugged and tedious. I have known a pit of green wood to be nine days in burning, and every pit must be watched night and day till the process is complete. Night-watching by a pit has a fascination for green boys, who have hitherto slept soundly and regularly through the dark hours; but a little of it usually suffices. To sit or lie in a rude forest hut of boards or logs, located three or four rods from the pit, with a good fire burning between, and an open, flaring front looking across the fire at the pit, is a pleasant novelty of a mild, quiet evening; and many a jovial story has been told, many a pleasant game of cards, fox-and-geese, or checkers, played, and (I fear) some watermelons lawlessly purveyed from neighboring fields and gardens by night—watching charcoal-burners. But the taste for turning out, looking for and stopping the holes that are frequently burnt through the covering of the pit, is easily sated; while a strong wind that drives the smoke of fire and pit into the open mouth of your shanty, and threatens to set fire to the straw flooring on which you recline, is soon regarded as a positive nuisance, especially if accompanied by a pelting storm. In a wild night your pit breaks out oftener than in calm weather, requiring constant attention and effort to keep it from burning up altogether, thus consuming the weeks of arduous toil. And after a week of coal-burning, you find it hard to return to regular sleep, but hastily wake every hour or so, and instinctively jump up to see how the pit is going on.

Picking stones is a never-ending labor on one of these rocky New England farms. Pick as closely as you may, the next plowing turns up a fresh eruption of boulders and pebbles, from the size of a hickory-nut to that of a tea-kettle; and, as this work is mainly to be done in March or April, when the earth is saturated with ice-cold water, if not also whitened with falling snow, youngsters soon learn to regard it with detestation. I filially love the "Granite State," but could well excuse the absence of sundry subdivisions of her granite.

"Hop-picking" was the rural carnival—the festive harvest home—of those old times; answering to the vintage of southern France or Italy. The hop matures near the first of September, when the vines are cut near the ground, the poles pulled up, and laid successively across forked sticks lengthwise of a large bin, into which busy fingers from either side rapidly strip the hops—each pole, when stripped, being laid aside and replaced by another. The bin having been filled, the hops are drawn to the kiln, where they are cured by exposure for hours to a constant, drying heat from a charcoal fire below; after which they are pressed, like cotton, into bales so compact and dense as to defy easy disintegration. The pickers are mainly young women—the daughters of neighboring farmers—and the older children of both sexes; while the handling of the poles demands masculine strength and energy; the work is pushed with ardor, often by rival groups, employed racing to see which will first have its bin full. The evenings are devoted to social companionship, and rustic merry-making; friends drop in to enjoy and increase the festivity, and if hop-picking is not now an agreeable labor, despite the sore eyes sometimes caught from it, then rural life in hop-growing districts has lost what was one of its pleasantest features half a century ago.—*Horace Greeley.*

Hidden Power Developed by Excitement.

All men are conscious of the operation, and of the opening up, in some of the faculties, of great powers which do not belong to their ordinary exercise. For example: There are few who have not known of the swell and energy there is in anger, and how much more every part of a man's nature seems to be intensified under its influence. A man in the ordinary drawl of a good-natured life seems half the time not a man, but when he is roused up by an indignation that touches him to the bottom, he feels as if he had in himself the being of at least twenty men—such is the energizing power of even so low a passion as anger. The power of fear, and the irresistibleness with which it controls the whole mind, is also well known. So with the exhilaration of hope and cheerfulness. When some surprising good news breaks upon us, how are we lifted above all aching and complaining. There are hours, in the experiences of men, when they feel that all the world could not hurt them, so happy and blessed are they. These are single instances of what surprising power there is hidden in the faculties, that does not ordinarily show itself, but that does come out once in a while, showing that it is there, and showing that when developed it has a scope and a power that does not belong to its ordinary development. Men are conscious that in their higher moods, the faculties when excited, display and open up ranges of power, and create experiences which they never would have suspected, judging from the average experiences of ordinary life; and hence it is that men seek this exhilaration. It may seem very strange to say that dissipation itself and the revelries of life are only blind and stupid reachings after this higher life; but it is so. Men are conscious that there is brought out by ordinary influences, and they are all the time seeking in blind, crude, and often mischievous ways, to touch that secret, inward power, and bring it out. They seek it, it may be, wrongly, and bring out the lower power, or they may seek to bring out the true power by wrong agencies, or they may bring it out in unregulated ways; but after all, the strife shows that there is in mankind a consciousness that there is a hidden, inward, mysterious power greater than that which belongs to common every-day life. This is the motive of the chase; this is the motive of war.

A man that is in the tide of war—especially an old chief—has a consciousness of manhood a thousand-fold more than would belong to the dullness of an insipid peace. And it is not cruelty that leads men to love war—it is excitement; and it is not simply ordinary excitement, but it is the excitement that discloses to them depths of power, and evidences of manhood far greater and richer than belong to the lower levels. I perfectly understand how old warriors despised men of peace as ignoble, because, when *they* tried peace they were stupid, and when they tried war they were opened up into a manhood, low in its moral character, to be sure, but it was full of sensations and experiences of conscious powers and dignities that did not belong to ordinary life. So men seek dissipation, and the stimulation of opium, of tobacco, in certain stages, and of alcoholic drinks. They thus seek to get out of themselves more than there is of ordinary life. They are feeling in this way after this evidence of power that there is in every man. It is said that modern society lives on excitement, and it is made a criticism. The civilization and the power of a people are measured by the amount of excitement they generate. An individual, or a community that can generate but little excitement, is low down in the scale, and is not far from the savage state; and communities that can generate the most, and stand the most, are highest in the scale. It should be said rather, that mankind have a confused consciousness of the stores of pleasurable excitement within themselves, and that they ignorantly seek to develop it by irregular and wasteful methods. But these very irregularities point to a great moral truth, that there lies folded up in man a power which, when developed, immeasurably augments his being, and makes him thoroughly the master of his hours, of his place, and of his circumstances; if he could wear it at all times, he would always be so, but he is so as long as he wears it.—*H. W. Beecher.*

Religion in our Colleges.

In Scotland the Established Church long claimed an authority over the colleges, and over all their teaching, and provided a form of religion. I can testify that it was little more than a form, and this not always the form of sound words. For years the control of the Church of Scotland over any thing but the theological professors has been taken away, and with it all that remained of the form has disappeared; and now the Scottish colleges profess to give nothing more than secular instruction, men of piety always seeking to imbue their whole teaching with a religious spirit. The keen battle being at present fought in Scotland is likely to terminate in the same issue. But good men, concerned about the religion and morality of young men, cannot allow things to continue in that state. How, then, is religion to be grafted on State colleges open to all, whatever their religious profession? I have thought much on this subject, and labored with some success to realize my idea in Belfast. Let the State provide the secular instruction, and the churches provide the religious training in the homes in which the students reside. But passing from foreign topics, this College has had a religious character in time past, and it will be my endeavor to see that it has the same in time to come. Religion should burn in the hearts, and shine, though they wist it not, from the face of the teachers; and it should have a living power in our meetings for worship, and should sanctify the air of the room in which the students reside.

And in regard to religious truth, there will be no uncertain sound uttered within these walls. What is proclaimed here, will be the old truth which has been from the beginning; which was shown in shadow in the Old Testament; which was exhibited fully in the Old Testament as in a glass; which has been retained by the one Catholic Church in the darkest ages; which was long buried, but rose again at the Reformation; which was maintained by the grand old theologians of Germany, Switzerland, England, and Scotland, and is being defended with great logical power in the famous theological seminary with which this college is so closely associated. But over this massive and clearly defined old form of sound words I would place no theological doctor—not Augustine, not Luther, not Calvin, not Edwards, but another, and far fairer face, lifted up that it may draw all eyes toward it—"Jesus, at once the author and the finisher of our faith."

A religion of a neutral tint has nothing in it to attract the eye or the heart of the young or the old. I believe that the religion which can have any power in moving the minds and moulding the character of students, or of others, must be the pure evangel of Jesus Christ. But you will expect of one descended from the old Covenanter stock, who fought so resolutely for the rights of conscience, and whose blood dyed the heathen hills of Scotland; from one who was brought up in a district where there are martyr's graves in every churchyard; from one who was connected for so many years with the Irish system of national education, which allows no one to tamper with the religious convictions of pupils—that he shall

take care that every one here shall have full freedom of thought; that whatever be his religious creed or political party—be he from the North, or be he from the South, be he of a white or a dark color; he shall have free access to all the benefits which this College can bestow; and that a minority, nay, even a single conscientious individual, shall be protected from the tyranny of a majority, and encouraged to pursue his studies without molestation, provided always that, not being interfered with himself, he does not interfere with others.—*Dr. McCosh's Inaugural.*

A. ROMAN & CO.

THE FAMILY PAPER OF THE PACIFIC COAST.

THE OCCIDENT.

In every true home there should be found a first class family paper—one to whose coming, father, mother, children will look with eagerness each week. Such a paper is

THE OCCIDENT.

Let all who desire such a paper, and are asking, "What paper shall I take?" read the following statement of facts:

THE OCCIDENT contains a greater amount and variety of reading matter than any other family paper on the Coast. It contains choice selections for all classes of readers. Both the child and the person of cultivated literary taste will find in each number matter which cannot fail to be interesting.

THE OCCIDENT is extensively quoted. No other weekly paper on the Coast furnishes so much matter, either original or selected, to the columns of other papers. Whole columns are frequently taken from one or another of its departments. No stronger proof of its excellence could be desired than the fact that it is so well appreciated by contemporaries.

THE OCCIDENT has a complete Agricultural Department, carefully culled from the best authorities, with all the current agricultural items of our own coast, and full market reports. The Mining Department is also very complete.

THE OCCIDENT gives a summary of Pacific Coast news and of Eastern and Foreign Telegraphic News. These items are not hastily thrown together, but are carefully prepared, and are consequently copied to a great extent. The Personal Department is the most complete collection of personal news to be found in the State.

THE OCCIDENT is the official organ of all branches of the Presbyterian Church, and contains full religious intelligence concerning the progress of all denominations. Although a religious paper, it is not sectarian. Its aim is to make men better and happier by the inculcation of the principles of the Christian religion.

THE OCCIDENT is universally admitted to surpass all other papers in the State, in typographical appearance and systematic arrangement of its contents.

Read what the papers say of

THE OCCIDENT.

"Has commenced its second volume, enlarged and improved and with excellent prospects. It is full of 'knews,' views, and family reading, and is ably edited."—*Brooklyn (N. Y.) Union.*

"It gives evidence of ability, tact, and judgment in its management."—*Cincinnati Presbyter.*

"An able paper of the same form as the *Statesman.*"—*Philadelphia Statesman.*

"One of the best of papers."—*Zion's Herald, Boston.*

"Well filled with readable articles. An important accession to the literature of the coast."—*S. F. Bulletin.*

"Its typographical appearance is finer than that of any weekly paper published on this coast."—*Chronicle.*

"A periodical worthy of patronage."—*Sacramento Union.*

"It is already attracting a great deal of attention. Its original articles and judicious selections make it an intellectual treat."—*S. F. Fair Press.*

"The ability displayed gives promise of success."—*S. F. Times.*

Machinery and Castings of all kinds, either of Iron or Brass.

Boilers and Sheet Iron Work, in all its branches

Shoes and Dies of White Iron, manufactured for, and imported by us, expressly for this purpose, and will last 25 per cent. longer than any other made on this coast.

Russia Iron Screens, of any degree of fineness. We are the only manufacturers on this coast of the "Hicks Engine," the most compact, simple in construction, and durable, of any Engine in use.

W. H. HOWLAND, H. B. ANGELL, E. T. KING, CYRUS PALMER

Pacific Mail Steam Co's Steamships

— FOR —

NEW YORK, JAPAN AND CHINA

Will be Dispatched as follows:

LEAVE WHARF CORNER OF FIRST AND BRANNAN STREETS, at 11 o'clock A.M. of the following dates, for PANAMA connecting via Panama Railroad with one of the Company's splendid Steamers from ASPINWALL for NEW YORK.

the 6th 14th, 22d, and 30th of each month.

Steamer leaving San Francisco on the 6th touches at Manzanillo. All touch at Acapulco.

Departure of the 14th is expected to connect with the French Transatlantic Company's Steamer for St. Nazaire, and English Steamer for South America. Through tickets can be obtained.

Departure of 14th is expected to connect with English Steamer for Southampton, South America, and P. R. R. Co.'s Steamer for Central America. Through tickets can be obtained.

Departure of the 6th connects with English Steamer for Australia.

STEAMERS FOR DECEMBER, 1868.

The following Steamships will be dispatched on dates as given below.

December 5th—MONTANA, Capt. West, connecting with ALASKA, Captain Gray.

December 14th—GOLDEN CITY, Capt. Wm. H. Hudson, connecting with RISING STAR, Capt. King.

December 22d—CONSTITUTION, Capt. Cavarly, connecting with HENRY CHAUNCEY, Capt. Conner.

December 30th—COLORADO, Capt. Farnsworth, connecting with ARIZONA, Capt. Maury.

Passengers berthed through. Baggage checked through—100 pounds allowed each adult.

An experienced Surgeon on board. Medicine and attendance free.

These Steamers will positively sail at 11 o'clock. Passengers are requested to have their baggage on board before 10 o'clock.

Through tickets to Liverpool by the "Cunard," "Inman," and "National" Steamship Lines can be obtained at P. M. S. S. Co.'s office in San Francisco, where may also be obtained orders for passage from Liverpool or Southampton to San Francisco, either via New York or St. Thomas—if desired, an amount of £10 to £20 will be advanced with the above orders. Holders of orders will be required to identify themselves to the Agents in England.

For Merchandise and Freight for New York and way ports, apply to Messrs. WELLS, FARGO & CO.

The Steamship GREAT REPUBLIC, Captain S. Doane, will be dispatched on Monday, January 4th, at 12 o'clock, noon, from wharf, corner of First and Brannan streets, for YOKOHAMA and HONGKONG, connecting with the COSTA RICA for SHANGHAE.

For passage and all other information, apply at the Pacific Mail Steamship Co.'s Office, corner of Sacramento and Leidesdorff Sts.

OLIVER ELDRIDGE, Agent.

The Popular Edition of Dickens.

D. APPLETON & CO.

Nos. 443 and 445 Broadway, New York,

Are publishing

A POPULAR EDITION OF THE

WORKS OF CHARLES DICKENS,

FOR THE MILLION.

Clear Type. Handsomely Printed, and of Convenient Size, comprising the following Volumes, at the annexed Prices, varying in Price according to the number of Pages:

Oliver Twist (now ready)	172 pages	25 cents.
American Notes (now ready)	104 "	15 "
Dombey & Son (now ready)	348 "	35 "
Martin Chuzzlewit	330 "	35 "
Our Mutual Friend	330 "	35 "
Christmas Stories (now ready)	160 "	35 "
Tale of Two Cities	144 "	20 "
Hard Times	185 "	35 "
Nicholas Nickleby (now ready)	340 "	35 "
Bleak House	340 "	35 "
Little Dorrit	330 "	35 "
Pickwick Papers (now ready)	326 "	35 "

denominate this edition "THE POPULAR EDITION," as every man, woman, and child is buying it. For special terms to Canvassers, address the Publishers.

Family Reading.

Greatness in Little Things.

That is not greatness, calmness, strength of soul,
When, once for all, thou dost experience
Some sudden, terrible calamity,
Some last, decisive blow of fate,
The loss of reputation, of estate,
Of those thou lovest, of health, of happiness,
And still remainest patient and composed—
That is necessity laid on thy soul;
The suffering of violence humbles thee,
But if thou bearest all the lesser cares,
Burdens and torments of each passing day,
Nor feel'st them bitter—if, serene and strong,
Thou bearest little trials, blessing God,
That, only that, dear soul, is greatness, strength,
Collectedness of spirit, godly walk.
For little griefs thou *mightest* not endure,
But scorn them, prove thyself inferior
Ev'n to thy destiny. Then use, O heart,
Courage and strength, mildness and cheefulness,
When only thou canst do it; in little things.

—*Evangelist.*

Growth in Grace.

Growth is the law of life. The plant that lives, grows, the tree that lives spreads its branches wider, lifts its head higher, makes its shade richer and deeper while it grows. The child that lives grows. He creeps, walks, works, and becomes a man in muscle, nerve, and noble deeds. Spiritual life in the soul follows the law of natural life in the body, in the tree, in the plant. It grows and develops.

At first spiritual life is but a spark of grace, as it were, then it becomes a live coal, and then a vitalizing flame. At first it is seed sown in the garden of the heart, then it is the tender "blade, then the ear, and the full corn in the ear." It is a little leaven hid in three measures of meal which goes on leavening until the whole lump is pervaded. Faith, which is an element of the spiritual life, feeble at the first, becomes strong through exercise and conflict. Hope brightens by experience, and love warms and glows in the discharge of duties enjoined by the author of this new life.

The grace of Christ in the heart reveals itself in the outward life of the Christian. His walk will become more circumspect. "The path of the just is a shining light, which shineth more and more unto the perfect day." His knowledge shall increase. "Then shall ye know, if ye follow on to know the Lord, and his coming unto you shall be as the early and the latter rain unto the earth." His works shall become richer in spiritual power, so that "others seeing your good works shall be led to glorify your Father which is in Heaven."

Growth in grace, Christian reader, it is well to remember, is a *gradual* work. It increases little by little. This is the general law. There are some exceptions to show the working of God's mighty power, but these rare exceptions only establish the rule more fully and should lead Christians to put confidence in the usual mode. And it is usually important to remember the simple arrangements by which it is usually attended, to wit: "They that wait on the Lord renew their strength." "Wait on the Lord and He shall give thee the desires of thy heart."—*Christian World.*

What I Have Seen.

I have seen a woman, professing to love Christ more than the world, clad in a silk dress costing $75; making up and trimmings of same, $40; bonnet, $35; velvet mantle, $150; diamond ring, $500; watch, chain, pin, and other trappings, $300; total, $1,100. I have seen her at a meeting in behalf of homeless wanderers in New York, wipe her eyes upon an expensive embroidered handkerchief at the story of their sufferings, and when the contribution-box came round, take from a well-filled porte-monnaie, of costly workmanship, *twenty-five cents* to aid the society formed to promote their welfare. Ah, thought I, dollars for ribbons, pennies for Christ.

I have seen a man who had long been a member of the visible church, rush to his business after a hastily-swallowed breakfast, without a prayer in his family for God's blessing through the day, spend hours in the eager pursuit of that which perishes with the using, speaking not a work save of stocks and bonds and mortgages, and when business hours were over return to his home exhausted and petulant, turn from a sad story of want and suffering with, "I am tired and cannot hear it!" I have seen him sleep away his evening without a pleasant wore for either wife or children, and retire to rest with no more apparent thought of God his Maker, than if his meeting him at the last great day were an idle tale. Ah, thought I, days and years for mammon, but not a moment for Christ.

I have seen a young lady who had taken the solemn vows of God upon her, rise late in the morning, and without time for more than a hasty word of prayer, go forth to shop, drop in to chat with friends, come home home to dine, go out again to ride, and return to make an elaborate toilette for an evening party, pausing longer over the great question, "What shall I wear?" than her conduct seemed to evince she had over, "What shall I do to be saved?" I have seen her when asked to take a class of young immortals in the Sabbath School, to point them to the Savior she had vowed to honor before the world, shake her head and answer, "No, I cannot; I have no talent for that kind of thing." Ah, thought I, is there not danger that at last she will find that like the foolish virgins she has no oil in her lamp?

I have seen a professedly Christian mother more wrought up by the mud brought in upon her carpet by her boy's shoes than over the lie which sullied his conscience, and proclaimed him a coward. I have seen her exhibit more anxiety, when detained from church, to hear from her daughter's lips how this and that one was dressed, than what the man of God said concerning the great themes of death and eternity. Ah, thought I, will she, through her instrumentality, find these children at the right hand on the last great day?

Young Folks.

Stones and Glass Houses.

Harry Owen was an only child, and of course but little used to the society of other boys; and, in consequence, his cousins at Clifford fancied he must be girlish, which was far from being the case, his parents having taken much trouble to make him bold and manly. This was his first visit to Clifford; and no doubt, he was a little shy amongst his cousins to begin with, as they were almost strangers to him. The three Ainslie boys—Eustace, Willie and Alick—commented freely, when alone, on the manner and appearance of their cousin.

"He's up to nothing," said Eustace, "better call him missie."

"He's good at foot-ball, though," said Willie.

"And a first rate runner," chimed in Alick. "Why Eustace, he beat you out and out, and yet he's nearly two years younger."

Now, one of Eustace's great failings was the belief in his own cleverness. He liked to be considered first in everything, and being the eldest was accustomed to be looked up to. So he colored as his brother spoke of Harry having won the race; and not being able to deny the truth of it, he changed the subject by saying,

"For all that, I maintain he's a muff, and will be frightened in the dark for fear of ghosts."

The remark called forth a laugh, and the boys separated; but Eustace sat revolving a plan whereby to test his cousin's bravery. His anger about the race had passed, and now he thought more of the fun of playing off a joke on his cousin than any other thing.

The room in which Harry was to sleep was one adjoining that which the boys occupied, and a broad ledge outside ran in front of the two rooms, and when a young companion slept there, it was often a great play of the boys to run from one room to the other by the outer ledge, rather than by the passage—entering by the windows instead of the door.

Now, Eustace's plan was this: to test his cousin's bravery by the well known foolish trick of a pumpkin scooped out, with a light inside, availing himself of the outer ledge to reach the window of his cousin's room. Harry was a town boy, and, so Eustace thought, less likely to know the trick.

During the evening the conversation turned on ghosts, and Eustace tried hard to find out if his cousin was really the coward he fancied him; but he could make nothing of him. He listened to their talk, joined in it, told some stories he had heard, but not one word of his own belief.

Night came; the boys retired to rest; and Eustace, pulling out from a secret nook his pumpkin, with the candle in it, initiated his little brothers into the trick he was going to play. Like all boys, they enjoyed the idea of a joke, but still persisted that they did not believe Harry would be frightened one bit. Had they seen the earnest way in which, ere going to bed, Harry Owen knelt in prayer, seeking the protection of his Heavenly Father through the coming night, and heard him repeat to himself the words of the text, "The angel of the Lord (even Jesus) encampeth round about them that fear Him, and delivereth them," they would have known that he possessed a strong Deliverer from all foolish fears.

The pumpkin was all prepared, cut into a fearful-looking face; the candle was lighted, and Eustace, covering himself up in a white sheet, making, as he said, as good a ghost as Professor Pepper's, set off along the ledge, followed by his brothers, who were secretly hoping that Eustace would find himself mistaken as regarded Harry's cowardice. On they slipped, suppressing their inclination to laugh. Harry's bed faced the window, so that as he lay in the dark, the lighted face, with the large holes for the eyes, glared on him. We will not say that, for one moment, at the unexpected sight, the boy's heart did not beat more than usually quick; but it was for a moment only. The trick of the pumpkin was new to him; but an instant's thought convinced him of the folly of fear. He rose quietly, and boldly advancing to the window, threw it up so unexpectedly that Eustace dropped the pumpkin in alarm, and fled, leaving his long sheet behind him.

"There was no cowardice yonder," said his brothers; "as brave a little fellow as ever lived. But what a goose you were, Eustace, to drop the pumpkin! Why he'll get it and show it to Mr. Maxwell or papa, and we'll get into a scrape about it. I wish you had never tried the joke at all."

In the meantime, Harry had picked up the pumpkin and examined it, laughing the while at his cousin's absurd appearance as he ran off; then, folding up the sheet and putting out the lighted candle, he stepped into bed and went to sleep. In the morning he took the pumpkin and the sheet and gave them to Eustace, only saying,

"You've hardly pluck enough for a ghost, Eustace. You should try some other character."

Eustace felt thoroughly ashamed; but his brothers said, "Harry was a regular good little fellow, never to say a word to Mr. Maxwell or papa about the story."

Two days passed; the cousins got on well, and Harry was rising even in the estimation of Eustace.

Harry had quite forgiven his cousins; indeed, he had always looked on the story merely in the light of a joke. But he liked a piece of fun as well as any one, and was resolved to play off a trick on Eustace in return. Now, he was not long in discovering that Eustace's besetting sin was vanity, and laid his plans accordingly.

The game of the menagerie was a new one to the Ainslies, and Harry volunteered to teach them it. Calling his cousin Edith to his aid, and telling her the secret of the game, he obtained what was necessary. A large mirror was set behind the window-curtains of the parlor where the children played, and the curtains were closely drawn over it; a chair was placed in front of it, in which the visitors to the menagerie were requested to be seated. Edith and Harry were the show people, and the others were only admitted one by one; but once initiated into the mystery, they were allowed to remain to see the amazement of the new comer. Eustace was purposely left last, so that all might see his surprise. Slowly he walked in, glancing at the assembled company—his brothers, cousins, and sister, Mr. Maxwell, papa and mamma. He seated himself as desired; listened as Harry and Edith told him that, "concealed behind these curtains was one of the most wonderful menageries ever seen; he had only

to name any animal in the world, and it should be shown to him; but only one at a time could be seen. Now, sir, do us the honor of telling us what animal you desire to see."

Eustace thought for a moment, then said:

"At present I particularly wish to see a donkey."

The curtains were quickly drawn aside, and there, reflected in the mirror Eustace saw himself! A loud peal of laughter broke forth, and exclamations of, "Look at the donkey! look at the donkey!" were heard. Eustace colored scarlet, and muttering something about childish nonsense, coupled with the name of Harry Owen, he left the room, and, refusing to join the children in any more games, sat and sulked as we have described him.

Was he not very silly to give a joke and yet not be able to take one? Such was the question he began to put to himself, after Mr Maxwell's words. Do what he liked, he recalled the fable of the stork and the fox, and how foolish he had thought the fox, and how he had been as bad, nay, more silly than Reynard. You see, the fox had thought it would be a good joke to ask the stork to a dinner, where all the food was minced meat served up on an earthen platter, from which he knew the stork could not eat. The stork said nothing; and when Reynard taunted him with eating so little, he merely said he was off his food, but invited Reynard to dine with him the next day. Reynard was delighted to go, for he knew that his friend kept a store of dainty meat.

"And none can think the stork to blame,
To push the joke so far;
But all they had for dinner, came
Served in a long-necked jar!"

The fox was much abashed, and sorely disappointed; but at least not so foolish as to be sulky, as Eustace had been. Eustace saw his error now; and determined to make amends, put on his cap, ran down to his companions, and boldly went up to Harry and asked him to forgive him for so foolishly taking ofience. And the next time that Mr. Maxwell entered the school-room, he found it vacant, and saw with pleasure that Eustace was joining heartily in the sports of his companions, having learnt a lesson from the proverb, "Those who live in glass houses should't throw stones;" somewhat equivalent to the Scripture one—

"Whatsoever ye would that men should do to you, do ye even so to them."

"There is a rule I think the best,
Which *you* should also make one,
That man should never give a jest
Who can't with patience *take one.*"

—*School Day Visitor.*

GO TO SLEEP EARLY.—Many children, instead of being plump and fresh as a peach, are as withered and wrinkled as last year's apples, because they do not sleep enough. Some physicians think that the bones grow only during sleep. This I cannot say certainly; but I do know that those little folks who sit up late at nights are usually nervous, weak, small, and sickly. The reason you need more sleep then your parents is because you have to grow, and they do not. They can use up the food they eat in thinking, talking, and working, while you should save some of yours for growing. You ought to sleep a great deal; if you do not, you will in activity consume all you eat, and have none, or not enough, to grow with. Very few smart children excel, or even equal, other people when they grow up. Why is this? Because their heads, if not their bodies, are kept too busy; so that they cannot sleep, rest, and grow strong in body and brain. Now, when your mother says, Susie, or Georgey, or whatever your name may be, it is time to go to bed, do not worry her by begging to sit up "just a little longer." But hurry off to your chamber, remembering that you have a great deal of sleeping and growing to do to make you a healthy, happy, useful man or woman.—*Rural New Yorker.*

The Little Lamps.

I know two or three boys and girls who have, I hope repented of their sins, and given their hearts to God; and I want them to remember now that they are like little lamps, that hold the precious light of God's grace.

In ancient times lamps, with oil in them, were lighted and placed on candle-sticks. Some of these lamps were very costly and beautiful, and rested upon tall, golden candle-sticks, ornamented with precious stones; others were small and plain, and placed on coarse, cheap candlesticks; but all were for the same purpose—to give light to those around them.

Now, every child who has grace in his heart is a lamp. He may be a very plain and humble one, and his situation in life may be plain and humble too; but he is to give light to those around him—not by talking and preaching, not by reproving others, but simply by acting right. He is to show by his own conduct that he has light in him; he must be humble, for he is simply the plain little lamp; but he has the grace of God in his heart, and he is to let his light shine that "others, seeing his good works, may glorify not him, but God."—*United Presbyterian.*

HYATT'S HAND-BOOK OF
Grape Culture in California,

Giving full and specific directions as to where, how, and when, to plant and cultivate a vineyard.

As the season is approaching for those who purpose going into the culture of the vine anew in California, or for those who wish to extend their vinicultural operations to make preparations therefor, they can find no better aid, and no source of information more valuable than to consult this highly approved Hand-Book of Grape Culture.

Following are some of the testimonials that have appeared in commendation of this useful and indispensable work:

A committee of the late Fair of the Mechanics' Institute of San Francisco, to which the work had been referred, speak thus:

"Your committee have examined Mr. Hyatt's Treatise on the Culture of the Grape, and believe it to be the BEST HAND-BOOK published on that subject for California vine culturists, and for which they recommend a Special Premium."

The California State Agricultural Fair, of 1867, awarded a Diploma to the author of this work, and also the San Joaquin Valley Agricultural Fair, at the same season.

OPINIONS OF THE PRESS.

The following are brief extracts fron some of the elaborate notices of this work:

The San Francisco *Daily Evening Bulletin* says:—"The book contains a choice collection of the best foreign and native varieties of the grape cultivation in California especially, as well as at the East. The many excellent works on Grape Culture in the Atlantic States are of little or no value in California, where an entirely different system and practice are necessary in vine growing and wine-making. This Hand-Book is intended to supply this deficiency. The author has taken great pains to investigate this subject, and to aid in the improvement of viniculture in California. Its appearence is timely, and it can hardly fail to meet a large and ready sale. It is attractively printed and elegantly bound."

Sacramento Union—"Hyatt's Hand-Book of Grape Culture is a California production that will probably meet a common want. The author takes the experience of the most noted vine-growers in the State as the warrant for his conclusions and suggestions, turns to account the recorded results of experiments made by the pioneers of this branch of industry, and in addition to giving full and minute instructions in regard to the planting of vineyards and the manufacture of wines, presents statistics which will enable the beginner to calculate the probable profits of successful grape culture."

The *Mountain Democrat*, whose editor, Hon. D. W. Gelwicks, is the present State Printer of California, speaks thus:

"HYATT'S GRAPE CULTURE.—We have received from the publishers, H. H. Bancroft & Co., San Francisco, a copy of this interesting and valuable work—a work greatly needed on this coast, and which every grape-grower should purchase. We sent it to a gentleman well known in this community, for his examination—a gentleman familiar with the subject, and largely engaged in the culture of the grape. He gives it the following cordial endorsement, and his endorsement ought to secure it a large sale:

'The limited time in which to examine Hyatt's Grape Culture, published by H. H. Bancroft & Co., San Francisco, has been sufficient, however, to satisfy me that it is a work which every grape-grower should have. No matter how well fortified we may be in our own experience and theory, we must acknowledge that we may adopt many of the author's ideas and suggestions with profit. The merit of the work certainly bespeaks for it a ready sale.

Respectfully, CHAS. P. JACKSON.'"

The Golden Era: * * * "With this book in his hand, the intelligent agriculturist can engage in the business of grape culture with almost the same chance of success as one who has bought his knowledge by expensive experience. * * * The practical information contained in the book would cost many hundred dollars to obtain in any other way. We predict for it a ready and rapid sale."

S. F. Daily Dramatic Chronicle: "The book is emphatically a California production, being written by T. HART HYATT, of this city, editor of the *Rural Home Journal*, and bearing the imprint, San Francisco: H. H. Bancroft & Co. It contains a large amount of valuable information, and should be in the possession of every vine-grower and wine manufacturer in the State. The usefulness of the volume, and its convenience for reference, are very much enhanced by a full and carefully prepared index."

S. F. Mining and Scientific Press: * * * "The book professes to be a complete manual, with instructions for the management of the grape and the manufacture of wine, and is especially designed for California. * * * The book contains a considerable amount of valuable information which is not generally found in such treatises."

S. F. Daily Times: * * * "The author seems to have exhausted his subject, particularly as it relates to viniculture in this State, and as the grape interest is just beginning to attract attention which is soon to become paramount among farmers, we regard the publication of the work as most opportune. No ranchman should be without it."

N. Y. Daily Tribune: "The author brings the result of many years' experience in foreign countries to the preparation of his work, and from his observations in climates similar to that of California, arrives at the conclusion that California is singularly favorable to the culture of the grape, and to all semi-tropical fruits, and that it will hereafter be distinguished as the land of the vine, the fig, the orange, the olive and the palm. His volume forms a capital, if not a complete manual, on the care of a vineyard, and it is enriched with much industrial information connected with the subject."

Lacon (Ind.) Home Journal: "This work is most *apropos*. It comes just as thousands, without any practical knowledge of the business, having planted vineyards, find themselves destitute of that information their intelligent care demands. All over the country this interest is growing, and probably the time is not distant when America will produce more, if not better, wines than any country in the world. The author, MR. THOMAS HART HYATT, is an enthusiast on the subject upon which he writes so pleasantly, and his book embodies just what every grape-grower would like to know—what every one must know, to cultivate the vine successfully."

Colman's Rural World, St. Louis: * * * "We merely want to introduce a new and interesting treatise on this subject to our readers, from the far-off shores of the Pacific—the Golden State of California. Its author is T. HART HYATT, editor of the California *Rural Home Journal*. He has had a large experience and observation in California and in the Old World. His style is entertaining, his directions clear, plain, and practical."

Rural New Yorker: * * * "Although most valuable to the California viniculturist, yet it helps to widen our knowledge of the vine."

H. H. BANCROFT & CO., Publishers.

NEWS SUMMARY.

PACIFIC COAST ITEMS.

THE *Napa Register* says that the largest source of supply of wood for San Francisco is from Napa County. An association of city capitalists with a capital of $500,000, owns 18,000 acres of the best woodland in the valley, on which the trees are felled by steam, 4 engines being employed. The wood is carried by railroad to Suscol, and is shipped to San Francisco, at the rate 600 cords per week.

THE *Commercial Herald* says that one year ago a farmer bought a farm of 160 acres at Salinas for $3,700. On the land he raised wheat, barley, potatoes and flax seed. He has sold his barley for a sum sufficient, after deducting cost of harvesting, etc., to pay the cost of the farm, and has left 1,500 centals of wheat, 1,000 sacks of potatoes, and 140 centals of flax seed.

QUITE a large number of patriots left our coast on Tuesday morning for Washington, where they hope by their presence to cheer and sustain the newly-elected President in the trying scenes through which he is in a few months to pass. Some do not hesitate to call these men office-seekers.

SEVERAL sticks of laurel, 30 feet long, and 20 inches in diameter, cut in Russian River Valley, recently passed through Napa for Government use at Mare Island.

THE number of deaths from small-pox reported during the past week was 35. The real number is not known outside the Board of Health.

AN appropriation of $300 was made by the Supervisors to give the patients in the Almshouse and Hospital a Christmas dinner.

THERE is said to be more anxiety on the part of Congressmen to get on Pacific Railroad Committees than on any others.

CALIFORNIA consumes annually 12,000 tons of salt of which more than half is produced on the tide lands of Alameda County.

BITS of decayed wood have been discharged from an Artesian well in Alameda County, from a depth of nearly 100 feet.

THE merchants and barbers of Suisun have agreed to close their places of business on Sundays.

THE rain is said to have been sufficient in many parts of the State to fit the ground for plowing.

IRON for 20 miles of the Stockton and Tulare Railroad has been ordered from England.

BENICIA aspires to the honor of being the terminus of the Union Pacific Railroad.

THE railroad bridge over the American River has been completed.

THE streets of Chico and Yreka are lighted by gas.

ALLEN'S ORIGINAL AND GENUINE

Nerve and Bone Liniment.

The Nerve and Bone Liniment was originated by Geo. M. Allen, in the year 1834, and has lived entirely on its own merits without the aid of advertisements; but owing to the many counterfeit and worthless articles called Nerve and Bone Liniment, now upon the market, has induced the proprietors to advertise it. Many certificates of leading citizens who have used and constantly keep it in their houses, as a great family remedy, could be added to the advertisement, but knowing the many virtues of Allen's Nerve and Bone Liniment, and that one application will satisfy any one of its beneficial effects, deem it unnecessary to bring the certificates before the public. Allen's Nerve and Bone Liniment does not effect a cure in a minute, but acts upon the Nerve and the Bone of the patient by its penetrating properties, when used according to the directions on each bottle, and gives new strength to the parts affected, and thus acts as an agent in helping nature to restore the diseased parts to health. It is also invaluable in all diseases of horses.

Be sure to call for Allen's original and genuine Nerve and Bone Liniment, all others are worthless counterfeits, and should not be tolerated by the public.

Current Topics.

It is a token for good that over the whole Christian world the Week of Prayer is observed with more and more regard for its object year after year. When it was first suggested by the Evangelical Alliance, only a few were disposed to devote so long a time to special prayer for the redemption of the world, yet there were evident marks of God's favor among those who were willing to do this. Soon after, came the great revival which extended over all Christian lands, and the invitation was more generally heeded, with blessed results. Since that time, local revivals have commenced with the observance of this week, and now many look anxiously for the return of God's special presence with His people, in answer to their prayers when they thus unite with others in their approach to His throne of grace for blessings which He has promised. The same experience begins to cheer the hearts and strengthen the faith of those who engage in this concert, that has given such confidence of hope from the observance of the day appointed for Prayer for Colleges and Schools. When all who really love to pray shall give themselves to the exercises appropriate to the object, during these first days of each year, we may expect great things at the hand of Him who has promised to answer prayer.

With much gratification we notice that ex-President Roberts denies the story to which we alluded in a recent issue, that Liberia is practically a slave-holding Republic. The charge was that though there are no slaves within its proper territory, the government permits slavery among the interior tribes which it has conquered, and makes gain from the evil. In reply to this charge, President Roberts says: "The only accession of any native tribe to the Republic for a number of years, was that accession by the union of the settlement of Cape Palmas with the Republic a few years ago, and which brought within its protection several large sea-board tribes, greatly enhancing its population. But, singularly enough, these tribes never engaged in the sale of slaves to foreign dealers; and as far as I know, never tolerated domestic slavery among themselves. The people of Liberia abhor and detest slavery in any form, and the fundamental law of the land absolutely prohibits it. To say that slavery is tolerated in Liberia is a most unjust imputation against the Government of that Republic." We are only assured of what we were convinced must be true before, by these positive declarations, and trust that the *New York Tribune*, with which the story seems to have had its origin, and other papers which have referred to it, will give free circulation to the denial.

The fears of those who were looking for a drought, and the advice of those who have been counseling farmers to keep back their grain for high prices during a famine year, and the predictions of those who have declared that the sewers would continue to breed pestilence for months, and multitudes would be its victims, have all been set at naught by the delightful and abundant rain that extended to all parts of the State, so far as we have learned, during the past week. The absence of rain for one season is always a severe affliction in this country, but it would have been especially unfortunate this year, when so many things are conspiring to determine the future of California. Now that another season of large crops is morally certain, and the mining interests of the Coast are more attractive than ever, and the railroad is about to afford us a market for our fruits, as well as our cereals, it needs no prophet to indicate what will be the prosperity of the Pacific States. Those who have contemplated removal to this side of the continent may come without hesitation, and their money, and industry, and skill will bring them bountiful returns. We trust that a large portion of the increase in our population will be wise and liberal in the support of all needed charitable, and educational, and religious institutions, having their eyes on future times, no less than on present necessities. Such residents will be warmly welcomed, and there has never been a region in which they could do more for God and man than in this which is open to them here.

Some have believed that, though Protestants would decline to send representatives to the General Council, in compliance with the invitation of the Pope, the Greek Church would do so, and the result would be a union between those great divisions of the Ritual Church which have so long been separate. The reply of the head of the Eastern Church, however, removes all occasion for fear in this respect. There is only the discovery of designed insult in the very terms of the Pope's invitation, and the Patriarch of Constantinople, with his clergy, has returned a very short answer, which will tend to widen rather than diminish the distance between them.

About a year since, seven prominent clergymen in the West were appointed a committee to inquire into the orthodoxy and reliability of the *Independent* as a Congregational paper. After taking time enough, certainly, to form a judgment in view of the facts, they have published a long statement which leaves no doubt respecting their opinion. They declare that the *Independent* cannot be regarded as an advocate of the truths commonly known as evangelical; that its conductors have pursued a course which renders them unworthy of support from those who value these truths; and that there is no ground for hope of better things from it in time to come. Taking occasion, from this formidable document, other papers are free to say some quite hard words concerning the "defection to indifferentism, rationalism, and practical Universalism, if not infidelity, of what was once a bright and shining light in the evangelical journalism of the land." Nevertheless, the perverse *Independent* refuses to die, and even continues to flourish, adding this year to its already immense proportions, and asserting that its patrons are more numerous than ever. We have long thought it unfortunate that a paper in some respects so good, should not be more free from what we are obliged to condemn. As a religious journal, it is not, by any means, a model. Still, we incline to believe that the course adopted is hardly the one to reform it, and surely it is not likely to kill it. It is a mighty power in this country, and we should like to see a kind, and earnest, and wise effort to make it in all particulars a power for good. We are unwilling to believe that such an effort would be unsuccessful.

In a letter of Rev. Albert Williams to the *New York Observer*, we notice some remarks respecting the power of Brigham Young among his followers, which show how thoroughly autocratic he is in the exercise of his office. Mr. Williams says: "On my inquiring about the power possessed by the two counselors, who also bear the title of President, and particularly what, in the event of any difference of opinion, is the relative authority of each, I was assured, 'There are never any differences.' Once in six months there is a formal election of officers for the leading positions of authority and influence, very democratic in mode, but still directed and controlled by the will of one who is supreme. For before the assembled voters the President takes his position, and when the nominations are made, Mr. Young's hand is first raised, and then the uplifted hands of thousands present, immediately follow in approval. And so the affairs generally of the Mormon community are administered."

The President has proclaimed pardon to all who were engaged in the Rebellion, and they are to be restored to their former position as citizens, except as this is affected by the restrictions imposed by the Constitution. This proclamation will not have much practical effect, for none have supposed for a year past, at least, that any of the leaders in the war would be seriously punished by law. The time for any such attempt has gone by, and perhaps it is well that as soon as possible all memorials of the war be destroyed, save those which as individuals we must ever retain. Pardon now can do very little harm, and it is probable that it will do much good.

Not long since, the women of Germany met in a convention at Stuttgart to consider some of the practical questions in woman's domestic and social life. They discussed the physical education and care of children, the best methods of most effectually

attaining all that in the family should be sought, the best way to reform the abuses and absurdities of fashion, and other matters akin to these. They adopted a platform, as men are wont to do in their conventions, and as we see no reason why it is not as appropriate for Americans as for Germans, we give some of its prominent planks. It declares that nothing shall be regarded as old-fashioned which has been found useful, proper, and becoming; that nothing new shall be adopted until it has been proved to be suitable and in good taste; that all garments and appliances of the toilet that are hurtful to health be put aside; and that there be inquiry whether a large saving may not be made in articles of dress. Not to specify any other items, were these to be accepted generally, and made practical by those who admit their good sense, there would be a change in female character and habits which few would really disapprove. Conventions of a like kind might be held among us with great advantage.

Religious Intelligence.

PACIFIC COAST.

United Presbyterian Mission in Oregon.—Rev. T. J. Wilson writes as follows to the *United Presbyterian* of Pittsburg:

Salem, where it is proposed to establish this mission, is the capital of the State, having a population of 4,000. It is the seat of the Oregon University and other State institutions, and is a center of influence to a large district of country. The town is situated on the Willamette river, some fifty miles above its mouth, and near the centre of the fertile valley of that name.

In Salem there are several churches belonging to different denominations, but none of the Presbyterian order—none maintaining the truth as set forth in the Westminster standards. There are, I learn, a few families of O. S. Presbyterians in the place; but these owing to the fact that they were the less numerous, have signified their intention to yield their preferences, and unite with our people in their organization, provided that it is effected in a reasonable time. Of our own people there are from fifteen to twenty in full membership in the church, one of them a ruling elder. These few, who have gone from our churches here to find homes in that far off region, have not abandoned the cause of Christ. Nor have they forgotten the church privileges they formerly enjoyed, but are now anxious, and to-day more than ever, to have a preached gospel and the other ordinances of the Lord's house dispensed among them, and also the opportunity afforded them of laboring in an organized capacity for Christ and the good of souls.

For years they have been pleading with the church to send them a missionary, and pledging toward his support at least $500 in coin, or an average of more than $30 per member. In 1865, and again in 1866, the Assembly considered their appeal and made an appointment for that field. Each, time, however, the hopes of the little band were excited to be in a little time blighted by the declinature of the Assembly's appointee.

But, although cast down, they were not in despair, and still louder and more earnest was their call for one to break to them the bread of life. In 1867 they importuned the Executive Committee of the Board of Home Missions to send them a minister; and, although having the disposition to grant the request, it had not the means to give it practical effect. This year again the Assembly was pleased to take further action, increasing the appropriation of former years, and renewing the appointment of the Executive Committee previously made. That appointment was conferred upon the writer and has been accepted, and during the month of January, God willing, I propose to sail with my family for the new field of labor.

The Pacific.—Our contemporary publishes in its last issue some very interesting information respecting The Occident, its financial prospects, etc., together with the details of a private meeting recently held by its patrons. We are obliged for this, as for other notices lately published in the same paper, and intended, as we are assured, to be *compliments* to us and our contributors. We are acquainted, through private sources, with some details concerning the *Pacific* which would perhaps prove of interest to our readers, but as we have not been authorized to publish them, we should consider it a breach of courtesy to do so. Still we would by no means seem wanting in a desire to compliment our neighbor, although we confess our inability to present a compliment in such delicate language as that paper employs to express its appreciation of our merits. The able manner in which the *Pacific* manages its own affairs, as well as the affairs of others, deserves the highest credit, and if persevered in, will doubtless ere another 17 years shall have passed away, make that paper a financial success.

Miscellaneous.—Methodism is prospering in Humboldt County....Kidd & Co., bankers, gave $200 to the Sabbath School in Nevada as a Christmas present to be expended in books....The Congregationalists of Cloverdale, Sonoma County want to organize themselves into a church....Rev. Jas. Bush, Rector of Grace Church in this city, received from his congregation as a Christmas present, $1,000 in gold....The Episcopalians intend to build a new church in the Spring, to be located about midway between Suisun and Fairfield....10 members have been added to the Congregational church at Benecia. ....The Catholics have bought the Miel Institute at San Rafael, and will establish a college.....On Tuesday evening, the Howard Social and Literary Circle gave an entertainment at the Howard Presbyterian Church for the benefit of the building fund of the church.

Annual Holiday Festival of the First Church Sunday School.—It would be difficult to find a more happy company of children and their friends than assembled in the First Church of this city, on Tuesday evening last. The house was full, and the exercises were delightful, but rather too long for some of the little ones. After the first part of the programme had passed off, the festival part was voted by the children to be an entire success, and all went home pleased. It is well to assure children from time to time, that the Church takes interest in their happiness as well as in their instruction.

Chico.—A correspondent gives us the following information concerning the Presbyterian Sabbath School lately organized in connection with our Church in this place. Mr. John R. Kennedy was elected Superintendent; Mr. Ramage, Secretary; Mr. Dean, Assistant Superintendent; Master Wayland, Librarian. This school starts under favorable auspices, having an energetic set of officers, the good will of the community, and, in less than a month, we have reason to believe, it will have about 70 or 80 members.

Ministerial.—The next meeting of the San Francisco Ministerial Union will be a public union prayer meeting in the "Week of Prayer," to be held in Rev. Dr. Scudder's Church, on Mission, near Third Street, on Monday, January 4th, at 2 P.M. Rev. Dr. Eells will conduct the services. It is hoped that all the different ministers and congregations in the city will, as far as possible, attend.

Land Sale.—A correspondent of the *Advocate* writing from Santa Clara says that since the last Conference, University lands have been sold to the amount of $30,000. Enough of these lands have now been sold to pay the cost with interest, and $75,000 worth of land is left as the net profit of the speculation. Buildings will soon be erected on these grounds.

Westminster Church.—We are pleased to learn that this church, situated in Hayes Valley, is in a flourishing condition. The congregation is steadily increasing. A new bell has recently been purchased for the church. For notice of change of pastors in this church, see Personal column.

New Church.—The stockholders of the Banner Mine have given a lot in Bannerville on which is being built a neat little church which is to be under control of the Methodists, and is also to serve temporarily as a school house.

Orphan Asylum.—Donation boxes are open at the *Bulletin* and *Alta* offices for the benefit of the Protestant Orphan Asylum. Considerable sums of money have already been contributed.

California-made Bell.—A bell weighing 900 pounds and costing $550 has just been cast in this city for the Westminster Presbyterian Church at Hayes Valley.

Dedications.—A new M. E. church at Crescent City, which cost $2,596, and the new Catholic church at Martinez, were dedicated on Dec. 6th.

EASTERN.

Unitarian.—Dr. Bellows, in his sermon at the Unitarian National Conference, said: "I cannot join those enthusiastic Liberals who proclaim Puritan theology utterly departed; Trinitarian and Calvinistic, Lutheran and Wesleyan opinions, essentially abandoned, mere theological figments—death's-heads, wherein cunning jewels hold the place of eyes that once glowed and ruled. I have been far and wide in this country, from Atlantic to Pacific, and I have not found the old altars cold, or in want of worshipers; only I have found many thousands who would not join the many other thousands that loved and honored and served them. We need neither waste our pity upon, nor indulge our contempt towards that great orthodox body which has done, and is still doing, the chief religious work of Protestant Christianity."

Spanish Church in New York.—According to the *Evening Post*, there is in New York an Episcopal church, founded in 1866, and composed entirely of Cubans, Mexicans and Spaniards. Its membership has advanced from 20 to more than 300, and large distributions of the Scriptures have been made through its agency.

Strict.—An exchange states that the Rev. H. W. Nelson, rector of one of the Episcopal churches in Hartford, Conn., lately informed his congregation that any member of the church who attended the Grand Duchess or Blue Beard operas, would be refused communion for six months, and that his Bishop sustains him.

List of Presbyterian Clergymen,

ON THE PACIFIC COAST, ALPHABETICALLY ARRANGED.

Rev. Jas. M. Alexander, N. S., San Leandro, Cal.
Rev. H. R. Avery, O. S., Walnut Creek, Cal.

The Chemical Laboratory, on Stockton Street, has been fitted up with costly furnaces and the best appliances for the practical study of Chemistry, in all its branches. Courses of Lectures on Chemistry, Metallurgy, and Mining are given by Prof. Price, during the first four months of the year. The Institution is provided with ample Buildings, valuable Philosophical and Chemical Apparatus, spacious Play-grounds, and an open-air Gymnasium.
For Terms and further particulars, address
REV. P. V. VEEDER.

Oakland Academy.

A CLASSICAL, ENGLISH, & MILITARY BOARDING SCHOOL

REV. DAVID McCLURE, PRINCIPAL.

The Ninth Term of this Institution will commence on Wednesday, Jan. 4th, 1869, in the new Academy building, recently erected on Telegraph Road, one mile from the Railroad Depot.

The location and plan of this new building have been made with the design of securing for the students a home of beauty and refinement.

Careful provision is made for thorough and extensive courses of study in English, Mathematics, Natural Science, and the Ancient and Modern Languages. A special course is also provided for those who are preparing for a commercial life.

In addition to these courses there is a daily military inspection and drill, together with vocal and light gymnastic exercises, under the instruction of a teacher. Every student is required to attend the military and gymnastic exercises, as a means of physical training.

For the mental, moral, and physical culture of each pupil committed to his care, the Principal holds himself responsible.

Further particulars may be obtained by addressing the Principal at Oakland.

Books

Of all kinds, on all subjects, conveniently classified, occupy one half of the first story and the entire second floor of BANCROFT'S BOOKSTORE.

Stationery

Of every description, including all kinds of Writing Papers, Envelopes, Inks, etc., is sold at wholesale and retail at BANCROFT'S.

The American Tract Society

Is represented, in both its New York and Boston branches, by a large stock of its publications, at BANCROFT & COMPANY'S, who are the general agents for this coast.

The Presbyterian Board of Education

Has a Depository of its Works at BANCROFT'S BOOKSTORE, which is their headquarters for the Pacific Coast.

Sunday School Libraries

In great variety, supplied at the lowest wholesale prices. A fine assortment to select from at the Book and Stationery House of

Correspondence.

Letter from White Pine.

A MILD WINTER, THUS FAR.

As in California, the winter has thus far proved mild and pleasant. Since my last letter to The Occident, dated on the 30th ult., we have had but one slight fall of snow, about three inches falling here, four at Treasure City, and ten or twelve on the higher mountains, all of which are of a dazzling whiteness. The weather, though some days pretty severe, has not been extremely cold for the last ten days, and is now quite mild, though threatening a storm. This pleasant weather has been of immense advantage to the residents of White Pine, enabling them to push ahead improvements of every kind, far beyond what was expected. Had the winter set in as early and with as great severity as it usually does, it is not probable that any of the towns here would have attained one-third their present size, nor would the population have numbered more than half of what it now does. Last year there was, before this time two feet of snow on the hill where Treasure City now stands, and nearly as much at this place, with the thermometer down to zero, and the snow drifting in a terrific manner, the weather the preceding year having been much like it. The few men who wintered here last year tell me that they were unable to perform more than one month's labor in four, being compelled to spend so large a proportion of their time getting wood, and being for many days in succession unable to get from their cabin to the claims on which they were working. If we are to have anything like such weather as they speak of the coming winter, a very large proportion of the people here will be obliged to leave, as they have been unable, owing to scarcity of lumber, to build comfortable houses, or otherwise provide against an inclement season.

PEOPLE COMING IN.

Notwithstanding the usual severity of the winter climate in this region, people are coming here quite rapidly. Three lines of stages running between this place and Austin have more passengers than they can carry, while considerable numbers arrive by other modes of conveyance. There are now about 3,000 people in the district, the additions to the population being at the rate of 50 or 60 daily. A good many are also leaving, the departing stages being generally pretty well filled. These consist of persons who have come here merely to take a hasty look at the mines, of a few who are going out on business, or to spend the holidays, intending to return, and of an occasional disappointed or disgusted adventurer, this last class being comparatively small. Hamilton now contains 150 houses and places of business, such as they are, many being very rude and temporary structures; Treasure City, with its more straggling outskirts, is somewhat larger; while Shermantown, better built up than either, consists of about 100 houses.

PROVISIONS AND GOODS

Of all kinds are coming in quite freely under the apprehension that they will be scarce and dear before the winter is over. Prices, however, keep up to enormous figures, owing in part to the cost of freight —$9 per hundred from Wadsworth here—and in part to the fact that, having been advanced to these rates several weeks ago, when there was a real necessity, it has since been found difficult to reduce them. The cost of hauling goods from the railroad here must continue high until next summer, owing to the excessive prices teamsters have to pay for hay and grain—$200 per ton for the former, and $14 per 100 pounds for the latter. Lumber, under a constantly increasing demand, has gone up to $225 per 1,000 feet at this place, and to $250 at Treasure City; choice lots brought in from abroad commanding from twenty to thirty per cent. advance on these figures.

THE MINES

So far as opened, are exhibiting satisfactory signs of wealth; and if in the end, the deposits here only prove permanent, this must become a very valuable mining district. In any event it must prove a highly productive one for a few years at least, as no number of mills likely to be brought here within that time can possibly exhaust the ores that may fairly be presumed to exist. With even this prospect a large population will be gathered here, towns will be built and business of all kinds will be active. Quartz mills in large numbers will be put up and run with profit, and large quantities of bullion will be produced speedily, certainly and at a comparatively small cost. So much can be counted upon with confidence, leaving the question of permanency out of sight altogether. Taking this practical view of matters the people here are going to work intending to take advantage of this promised activity, leaving the more distant future to look out for itself. Satisfied that the deposits here, however superficial, will for the present yield well, they do not trouble themselves about fissure veins and ore supplies for another generation, being determined to turn what they have to account, and render it immediately and to the fullest extent, available. To individualize a little, it may be stated that

THE EBERHARDT COMPANY,

Having completed their ore-house, road, and other improvements required for successfully working their mine, are again engaged in raising ores, bringing to the surface from 8 to 10 tons daily; just sufficient to keep their ten-stamp mill running; there being no object, in the absence of mining facilities, for raising any greater quantity. This ore, after the very rich portions, amounting perhaps to 10 per cent. of the entire bulk, have been taken out, yields in the battery about $600 per ton, the portions reserved going from $3,000 to $10,000 per ton. A considerable amount of low grade ore, running from $40 to $60 per ton, is thrown on the dump pile as worthless at present cost of reduction. A hundred tons of ore and even more might be extracted from this mine daily were there any object in taking it out. The Keystone Company are also raising small lots of ore of about the same quality as that from the Eberhardt Mine, lying along side it. They might largely increase the bulk were they so inclined, being restrained only by the reasons above mentioned. In fact, considerable quantities of ore might be taken from a considerable number of

OTHER MINES

In the district, and there would be if there were only mills in reach for working it. As it is, limited quantities are being raised from perhaps 50 small claims on Chloride Flat, as well also from a number of larger mines such as the Auroras, Pocotillo, Hidden Treasure, etc. From the Aurora South, recently purchased by A. P. Stanford of San Francisco, some 30 tons are being brought to the surface; and it would not be at all exhaustive of the capacities of this mine were there three times that quantity sent out, at which rate it is the intention of the present owner to work it whenever there is mill power at hand for reducing it. This ore, without any classification, mills at the rate of about $200 per ton. From the Pocotillo a grade equal to the ordinary run of the Eberhardt is being raised; the proprietor of that mine having had the good fortune to lay open a large and fertile ore channel, marked by more positive evidences of durability than any other deposit in the district. Among the multitude of claims located here quite a number exhibit promising features of value; there being, at the same time, many more that present only the faintest indications in this respect; while not a few are without a shadow upon which to rest the claims they advance to bring mineral deposits. If I were required to indicate the various lodes here, that I might conscientiously believe entitled to be placed in the rank of second and third claims, judging of them from the display of ore they now make, I should, omitting all locations on Chloride Flat, place in the category first named the Charter Oak, Emersly, the several extensions of the Pocotillo, and of the Hidden Treasure, the Potomac, Featherstone, Copper, Silver Glance, North Point, Ætna, Comstock Nos. 1 and 2, with the Neptune lying between them and capable of being worked advantageously as one property, the Radical, Silver Treasure, Argyle, Empire, Hamilton, Hornet, Colehis, Crown, White Pine, Stanhope, Eastern Slope, Palenque, Veta Madre, Tabasoca, Pine Tree, Ediva, Dandee and West Virginia while to the second group might perhaps, justly be assigned the Mudsill, the Mahogany, James Stewart, Republican, Poorman, the Bantopilas, Alleghany, Argent, Chloride, Hope, and Ben Lomond. The foregoing is a list only of such claims as I have been enabled to examine with some care; and even a portion of these I have been admitted to a place here more on the strength of their good local reputation than from any certain knowledge I have of them personally. That there is still a large number entitled to recognition as belonging to one or the other of these classes I am certain, though of their names I am ignorant or they do not now occur to me.

Repeating the cautions contained in my last letter to The Occident, against people coming here this winter, I have only to super-add, at this writing, a warning to every class against buying into claims here of which they have no knowledge or well authenticated information. The extraordinary character of several of the leading claims in this district, and the very flattering prospects afforded by a multitude of others are likely to serve as a luring temptation to reckless, or at least hasty investments here; for it should be remembered that little or nothing is known of one claim in twenty; a vast number having been put on record which make but a dubious showing, and which, for that very reason, will be offered most freely for sale, and at almost any figures that purchasers may be pleased to offer, but which would be dear at any price, being sure to prove only a nuisance to the buyer.

THE SNOW AT LAST.

Since commencing to write this letter the impending storm has burst upon us, and it is now snowing furiously, with a cold, driving wind that puts an end to out-door labor and forces every one to seek shelter. Should this storm continue for any length of time, raging as at present, the apprehended evils alluded to will soon be upon us, freezing up our energies and causing a general stagnation of business. Already men who had counted on a sojourn of some weeks are taking their departure by the first oppor-

tunity; all the seats in the outgoing stages being engaged for a day or two in advance; and it is to be hoped that this additional admonition will have a restraining effect upon such as contemplate making a journey here this winter, with any other view than to a temporary stay and some specific object. H.

The Heathen among us.—VII. How we may Go to Work.

Perhaps the reader will say: "All this is very well. You have told us what to do, but we want to know how to do it." Having had some little experience in organizing and conducting a mission school for the Chinese, such as I have recommended, and having practically tested the difficulties and necessities of the work, I can offer a plan of operations which is at least, better than none.

Let the working Christians in every one of our city and country churches, where Chinese can be found, meet and resolve that a mission school shall be at once established in each of their respective churches. The volunteers for the work should be divided into visitors and teachers. It must be the duty of the first to call upon the Chinese in the neighborhood of the Church, and bring them into the school, and of the second to receive and teach them.

The visiting should always be done on Sunday, while the school is open. When the scholar is obtained, he must be at once brought into the school, and his tuition commenced. The books needed are primers and first readers, profusely illustrated if possible, as they make the lessons more intelligible. The Chinese need to be taught like children. After a few week's attendance they will become attached to their teachers, and interested in their lessons.

The school need not cost $20 a year. Being in the church there is no rent to pay. Though books should be ready in the church, they will be purchased from you by the scholars. A few large Bible pictures, and large cards containing the Lord's Prayer, and Commandments will be useful. When the scholars are sufficiently advanced the New Testament may be used as a reader.

Teachers will learn, after a little experience, if they do not accept it at once, as an axiom, that in this matter they must make haste slowly. The heathen do not come to the mission school for the purpose of being converted, nor do they desire to be; but simply to learn to read and write our language. For a few weeks their instruction should be confined to this. After they have attended the school for five or six weeks, their Christian education may commence. The Lord's Prayer, the Commandments, and the fundamental principles of our religion may then be taught them.

When the school has been commenced, let the pastor of the Church be informed of the fact. Let him notify his congregation of the establishment of a mission school, and earnestly request all who have Chinese in their service—especially as house servants—to *bring*, not *send* them to the school. If Christians heed this notice as they should, most of our principal churches can in this way secure from ten to fifteen scholars, for their mission schools. C.

DELIGHT IN GOD.

We have been asked to give a sentiment, at the commencement of the year, which may be received as kind of motto, or key-note, for the weeks and months as they pass. It is with no hesitation that we suggest *habitual delight in God.* This is more than delight in His works, in His providence, in His character, in His blessings; more than submission and resignation under His discipline, and trust in His ability and goodness. It is all these, stricken through and made to glow with love for Him, and desire to be like Him. It is the spring of the highest pleasure when we contemplate what He has done for us; while it fills the spirit, when all this is out of sight and only Himself is seen.

You have seen a little child, seated on the floor, surrounded with toys, enjoying them all, and happy as only such infants can be, suddenly throw all aside and, stretching its little arms towards a door that has just closed, cry as though its heart would break. Its mother had passed through that door, and the light of the babe's world has gone. Its playthings have lost their charm, its content is at an end, and the great tears declare its sense of loss. Soon, the mother comes back again, and how beautiful is the transformation at once! The whole soul of the child seems to shine through its tear-marked face, the light is restored to its world, and with hands and feet and sweet, though unspoken language, it makes known its delight in the mother, as the source of its pleasure in the objects around. She takes it in her arms, and toys of all kinds are forgotten. She presses it to her bosom, and its happiness is complete.

This, in kind, is the delight in God of which we are speaking. While He is with us, and we can lift our eyes to His smile when we will, the things around us have charms and interest; friends delight us, prosperity, wealth, success in any form, is a real blessing which we value. But, when He has gone, the sun has disappeared from our sky. Our longing is for Him, or highest joy is in communion with Him, and our greatest comfort, when we need this, is found in His presence and love.

So is it that joy in God seems to be the flowing together of all other joys. As, when you listen to the waterfall, it is a pleasing sound; and to the warbling of birds, it is beautiful music; and to each separate voice in nature's anthem of praise, it it truly pleasant; but what constitutes the charm of the scene and renders the whole well-nigh enchanting, is the indescribable, yet most impressive harmony of all these in one delightful chorus, each sound lost in the melody; so do all separate joys blend in this blissful feeling, called, d*elight in God,* which hallows and cheers and beautifies all the varied circumstances in which we are, and adds to the power of every thing to bless us. It finds its expression in prayer, when our wants are felt; in praise, when God's glory and exaltation are perceived; in hope, when we think of the future; in calm and peaceful self-surrender, at all times, desiring nothing so much as that we may be purified, and then translated into that holy state, where without interruption we shall receive of His fulness, and be enraptured with His smile, and dwell in His presence. We desire no greater good for our readers during the year to come, than that this may be their perpetual experience.

Stretch not too far the wide mercy of Heaven.

The Neglect of the Intellect.

One of the most noble and distinguishing endowments of man is his intellectual power. No lower nature possesses anything akin to it. The birds sing, but they never compose music. The bee and beaver build, but they have no system of architecture. The cattle graze in bands, but they possess no forms of government. In poetic language instinct may be considered as a dim harbinger of the understanding, as it seems to be the power of selecting and applying the proper means to secure the immediate ends of life; though Bonnet says, "that philosophers will in vain torment themselves to define instinct until they have spent some time in the head of the animal without actually being that animal." Be this as it may, we know that instinct can never in any degree become identified with an intelligent will or become a conscious share-holder along with us in the heritage of thinking, freely and wisely directed. As the lawyers say, there can be no such confusion of goods as this between man and his dog, Huber and his bees, Audubon and the birds.

But it is only by judicious exercise that man can come into the full realization of his power. To eat, drink, sleep, and pace through the daily routine of domestic care, compelling reason to turn the windlass of trade and profit is not life, it is but little removed from the instinct that knows how to feather its nest for the winter. Idleness and reverie are but a running of the soul to weeds and leaves. Our best thoughts, noblest emotions, finest ideals do not grow wild or come up without labor. "A man," says Emerson, "with a capacity undeveloped, is only an organized day-dream, with a skin on it." Indeed the word *age* is derived from *agere*, to do; and is used by Tacitus in the sense, "to live."

> "We live in deeds, not years; in thoughts not breaths;
> In feelings, not in figures on a dial.
> We should count time by heart-throbs. He most lives
> Who thinks most, feels the noblest, acts the best."

But we live by eating, and wisely directed thought is certainly a mode of mental nourishment. And as the robust laboring man needs strong food at regular intervals to supply rich blood and muscular energy, so too, no one can hope to possess vigor of mind, agility of thought, fixedness of the attention and facility of communication who does not regularly furnish the mind with good and wholesome aliment. You can easily judge of the state of your physical health from the quality of food your appetite demands. If it needs appetizers, bitters, pastry-cooking, hot and savory, you are certainly in a bad way; but if it keenly relishes the staples and solids of life, and you feel refreshed after each meal, you have reason to be thankful that you are in a thriving condition. If curiosity, the appetite of the mind, is widely awake to the beauty and wealth of nature, loves the taste of the green fields, the piney mountains, the voice of birds and brooks, the music of winds and waves, and can take enjoyment in works of science, history, travels, and art, you have good evidence of mental health and growth. But if the common-place conversation, the items of a morning paper, neighborhood gossip, market and money quotations, a pungent novel, the latest fashions, the last sensation upon the stage, is sufficient to amuse and entertain you, then your intellect may as well speak for its shroud.

A well stored mind gives dignity, weight, solidity and independence to character, enriches conversation, adorns domestic and public life, and qualifies one to be a ready and safe counsellor as a friend, citizen, and Christian. It is also the source of a perennial enjoyment. This is why Lessing made that rather startling remark: "Did the Almighty, holding in His right hand Truth, and in His left hand Search after Truth, deign to proffer me the one I should prefer, in all humility, but without hesitation, I should request Search after Truth."

This language is a little strained, but it embodies the valuable lesson that it is only in wise and useful activity the soul finds any permanent enjoyment. One hour devoted to the pursuit of truth, to a healthy recreation in arts, science, and literature, is worth more than a whole lifetime spent in frivolity and day-dreaming. It is also the safest of our possessions. He who knows how to live with ideas is above the contingencies of place and time. He has secured a retreat that sorrow cannot molest, nor poverty destroy. "To have always," says Disraeli, "some secret darling idea to which we can have recourse amid the noise and nonsense of the world, and which never fails to touch us in the most exquisite manner, is an art of happiness that fortune cannot deprive us of." And yet this secret, darling recreation all may find. Almost anywhere a thoughtful mind can gather the Nepenthe, or lie down in the shade and feed on the lotus of enduring pleasure.

And yet, how many, even among the educated classes, never seriously and regularly exercise the mind in search of mental wealth? After the drill of school days is over, how many allow themselves to fall into the habits of desultory reading; mincing at all kinds of books, nibbling at the merest truth, until their minds fall into a literary epicurism, which is to the soul what low sensualism is to the body. The mind degenerates into a curiosity-shop, full of broken fragments, the odds and ends of things, bits of ribbons, pieces of queer colored glass, ravelings, cast-off clothes, "the worse for being worn." How easily and unconsciously men allow themselves to become dwarfed to the size of their business and profession. Their conversation is bounded by the city, the topics of the market, the prospects of trade, the results of a ward election. Ladies and gentlemen of leisure, standing on this escarpment of eternity, where every tree, and star, and leaf, and flower, is on "fire with God," may be heard to complain of *ennui*, and wonder whether we will have a lively season for balls, operas, plays, negro minstrelsy, rope-walking, sleight-of-hand shows, and such like amusements. No one can look over the city on the Sabbath, or any evening, after the toils of the day are over, and see how many, made in the image of God, whose souls possess "the power of an endless life," and who are within a pulse-beat of the bar of eternal retribution, are seeking to kill time with cards, billiards, whiskey, ribald songs and jests, without sorrowfully asking, "Why this wide-spread deprivation of taste? What fell enchantress has blinded them from the discovery of their noblest powers?"

Were this an empty world, a monstrous plain, uncheered by a tree, flower, or single spear of grass; were the skies, hills, forests, and waves mantled in one dull, uniform color; were all voices harsh, all sounds unmusical, then there might be some excuse for this melancholy waste of intellectual powers. But when so much has been done to awaken thought, stimulate desire for knowledge, and regale the imagination upon visions of unearthly beauty, how wicked and inexcusable is the folly that contents itself in thinking about low and transitory things. It seems a shameful extravagance that will let a single hour of conscious existence die unused. "Each day is a vessel," says Goethe, "into which a great deal may be poured, if we will actually *fill it up.*" And yet, who has not wasted days—yes, squandered weeks

and months in mere revery, superfluous sleep, castle-building in the clouds, frivolous amusements, that might have been filled with glorious thoughts, emotions, and generous deeds? And yet men seem to be insensible to shame at this disgraceful waste of mental energy. They would be greatly mortified were you to pass by their half-cultivated farms, slovenly fences, frowzy lanes, and dilapidated barns, but the bramble-covered desolation within the soul, stirs no compunction. We need to cherish the fact, that our intellectual powers are the gift of God, and that no one can claim to be a Christian who does not, as far as his time and secular duties will permit, realize their fullest possibility. Add to your faith knowledge, and to knowledge manly energy, says the Apostle. "The Scriptures are distinguished from all other writings pretending to inspiration," says Coleridge, "by the strong and frequent recommendation of knowledge and a spirit of inquiry." It was on the wings of the cherubim, or intellectual energy, according to the Hebrew doctors, that men reach the highest empyrean. Love and truth must be fueled by knowledge or they will burn feebly and die out.

Thus it becomes a religious duty to be economical of our time, parsimonious of our moments of leisure and interludes from secular business, that we may enrich our minds, and give them the largest possible amplitude; for if it is on the wings of love and faith we are borne forward to noble action and spiritual excellence, it is intellectual force that propels the wings and guides the movement. W. McK.

Recapitulation.

I have now gone over the ground which I proposed to myself when I entered upon this discussion. I have traced the ritual use of the element of water as a symbol of religious purification common to the religious services of mankind until we have found it culminate in the ordinance of Baptism, appointed by the Lord Jesus Christ to signify the cleansing and sanctifying power of the Holy Ghost on the heart. We have seen what peculiar virtue even the heathen found in their lustrations, and how the latter walked hand in hand with their sacrifices, expiation and purification, serving always together at the same altars. This same idea of mental purification signified by the cleansing efficacy of water, enters continually into the language of the sacred writers. God also introduced the ritual use of water into the temple service to secure the manifold purification of the flesh demanded in the Hebrew Church, and the coming of the promised Messiah is predicted in His work as a purifier. Thus, all through the Old Testament this idea of purification, symbolized by the use of water, is most notable. It takes its place in the worship of the temple by God's own appointment, and by the same divine appointment, it symbolizes the peculiar work of the promised Messiah.

We found the idea of purification entering from the Old Testament into the baptisms of the new through two channels: 1st, the ceremonial ablutions of the Hebrews, sanctifying to the purifying of the flesh, were called by the inspired apostle, "*baptismo.*" We found the essential idea could not be the specific mode, since the modes of purification were various in the temple service, hence that *baptismos* was the general term for the purification of the Hebrew ritual. 2d, that the specific work of the Messiah, as foretold by the prophets and declared by them to be purification, was set forth by the same term: "He shall baptize you with the Holy Ghost, and with fire, thoroughly purging his floor. While the word *baptismos* thus stood for purification, by the appointment of the Holy Spirit, and the nature of the work performed by the Messiah, called baptism, was purification, we found also that, in the language of the people of the times, the term signified purification, for when the Pharisees marvelled that Jesus had not washed — baptized himself, he who could not be mistaken as to the meaning of words, replied, not as if to a matter of mode violated, but clearly as to a question of purification omitted. Now, while the Holy Spirit had adopted this word *baptizo* to signify in Greek the temple purification of the Hebrews; while it set forth Christ's own work of purification; while Jesus himself responded to the term as if replying to the idea of purification, when the people reasoned as if baptism and purification were then, identical terms, then, with this idea of purification attached to the term and inherent in it, Jesus Christ appointed baptism an ordinance of his Church.

We held also that the point made by our Baptist friends that the meaning of words should be decided by the "*usus loquendi*"—that is, the way in which the people who used them, understood them, was a point exceedingly well taken, and we showed in this connection, that while *bapto* was used in the Greek of the New Testament to signify an ordinary dipping: "He that dippeth his hand with me in the dish," "Let Lazarus dip the tip of his fingers," yet when the ritual use of water was signified, another term, *baptizo*, was used invariably. That is to say in brief, when in the Hellinistic Greek, in which the New Testament was written, *baptizo* meant to purify, among the people who spoke that tongue; when Jesus Christ replied to the term, in response to the idea of purification in it; when the spirit of inspiration confirmed that meaning by employing *baptismos* as the synonym of unification of the Hebrews at this time, we showed that Jesus Christ employed the term *baptizo* to signify one of the distinguishing ordinances or sacraments of his Church. We found also, *baptizo* having already by the use of the people who employed the term, the idea of purification in it, that this same idea was intensified and spiritualized, first, by His authority who employed it to signify and set forth by a special ordinance, His gracious work in the heart of man. Second, by the agency through which that work was to be accomplished; "He shall baptize you, (*autos humas baptisei*) with the Holy Ghost and with fire." "He will immerse you in the Holy Spirit and fire," new version. 3d. In the spiritual work wrought in the heart of man, signified by baptism, which we found was the washing away of sins, in Acts 22:16; death unto sin and resurrection to a new spiritual life in Rom. 6:4, and salvation, 1st Pet. 4:21.

We also showed that we were sustained in holding to this spiritual sense in baptism by the highest authorities of the Christian Church, both by Baptists and others; while on the other hand, denying that *baptizo* signifies an ecclesiastical act, or a metaphysical act, the scholars of the Bible Union hold to the predominant idea of total submergence, limited in its application in English, by a word in common and secular use, claiming that its whole meaning, as used in the New Testament, was comprehended in one English term, to wit: immerse; "nothing more, nothing less."

Total submergence being the idea of *baptizo* as held by the scholars of the Bible Union, while its English synonym was to limit in the extent of its application, we found that immerse in English was admirably fitted for this purpose, both from the definitions given in our dictionaries and from its ordinary use, in the language of man, but at the same time we queried whether total submergence and immersion filled out the whole idea of the ordinance of baptism, even from a Baptist stand-point, since the "total submergence" of the subject always is, and always must be followed in practice, by a subsequent emersion, showing a complex idea of immersion and emersiom, which the term immersion in its ordinary, non-ecclesiastical sense is totally inadequate to exhibit, but which was most clearly set forth in the common Saxon word dip, preferred by Carson, for says he, "my position is that *baptizo* always signifies to dip; never expressing anything but mode." I held that in rejecting dip for immerse, the scholars of the Bible Union—"even Homer was sometimes known to nod"—had sacrificed Philology to Euphony. I did not stop to inquire with what consistency this ecclesiastical sense is allowed to immersion, while it is denied to *Baptizo.* I supposed my readers would do that naturally, for it must be evident to all, that if to the ordinary significance of immersion which the dictionaries give us, there be not added an ecclesiastical significance so as to include emersion in the ordinance as well as immersion the subject in the performance of the ordinance would be exposed to asphyxia and subsequent dissolution, finding thus after all, at the very outset that an ecclesiastical sense is essential to carry immerse into the New Testament, to the contempt and disparagement of the homely Saxon term dip.

RENEWED AND NEW SUBSCRIPTIONS.—As this number begins the second year of THE OCCIDENT, we take occasion to urge all who are interested in its more extended usefulness to be prompt in renewing their own subscriptions, if they already take the paper, and in soliciting others to do so who have not taken it heretofore. Pastors who have superintended the matter of obtaining subscriptions in their congregations, we hope, will not fail to give it their attention without delay; and there are many others who have often expressed a desire that it may reach a larger number of readers, who can easily gratify their desire by taking pains to introduce THE OCCIDENT among their friends, both on this coast and in the East. Of course, it will not be expected that the paper will be sent unless the money is forwarded; let all, therefore, manifest their regard for its prosperity by immediate response to its appeal for liberal support from our people.

Current Literature.

The Overland Monthly, for January.

It has been with much pleasure and not a little pride that we have observed the progress, and in the highest sense at least, the success of this Pacfic Magazine. The six months through which it has passed are always the most trying part of its existence for such a periodical, and that it has steadily advanced both in merit and patronage during these months gives a warrant for its future ability, and, we trust, for its permanence. The number before us has several articles of more than ordinary worth, among which we distinguish *A Talk about Letters*, *Journalism as a Profession*, and *The Unconscious Painting*.

The article entitled *Something about the Bible*, has features which give it some importance, and it will be well if it shall stimulate any to a more thorough study of the book of which the writer says that "few have more than a verbal, parrot-like acquaintance." Still there is such an oracular method of statement, and such a show of learning with certainly no more support in fact than should be apparent when matters of such moment are discussed, and such a disposition to assume that most believers of the Bible are utterly ignorant of what they believe, that we were at first amused as we read, and then sorry that one whom we may suppose to be desirious of doing good with his pen should so effectually prevent himself from doing it. The absolute ease with which the writer disposes of certain points which have engaged the thought and study of the greatest critics who have examined both the text and the claims of the Bible, is really refreshing. For example, there is a verse in one of the Epistles respecting whose right to a place in the Canon of Scripture there has been, and is, most serious and earnest debate, not among idiots, but among men who have made thinking and study their business for years. The arguments on both sides are weighty. The reasons why some desire that a verse so explicit respecting certain doctrines may be ruled out of the book are so evident, when their creeds are considered, that their opinion has been doubted by others. In short, the entire subject is still open for discussion, except that a recent translation has omitted the verse, no doubt expecting thus to settle the question. Yet, observe with what entire assurance this writer puts the whole aside. "There is a certain verse in King James' version of the Bible, which has been printed ever since the time of Erasmus, and which is a *forgery*. Since 1800 at least, the fact that it was a forgery has been known by every clergyman not absolutely illiterate; yet the old version has been allowed to retain the passage, and Christians have thought it a matter not worth mentioning, that their fellow-worshippers, wherever English is spoken, have been bamboozled into accepting for a revelation of God respecting himself the mischievous conceit of some unknown person." It will be the extreme of folly for any one after this to read 1st John v: 7 with any idea that it can possibly be anything more that a lie!

There is proof throughout the article that its author has little favor for the accepted translation, and that he would be glad if that of "the powerful Baptist sect," which, in the translation it offers the public, "has the spirit of Christ stronger than the spirit of custom," could come into general use. Nevertheless, as we have said, there are some excellent features in the article, and we heartily endorse such a sentiment as this: "It is a silly propensity of these days to try how little of the Bible one can believe; but a better thought will teach us to try how much we can believe. It may be, to some people, a trivial thing to see the leading periodicals, more and more, putting on an air of patronage when they speak of the Church and the Bible; but to certain others it is a matter of deep regret, who look back and see that Church and that Book, at which any youngster, nowadays, will fling his pinchbeck wit, so nobly guiding our western civilization from the time of Constantine."

The heart that thus expresses itself is right respecting the vital truths of God's Word. But the man in whom even such a heart bears sway, may be in danger of some errors, both of inquiry and inference; and the most serene confidence that this cannot be true will not prevent others from discovering these errors, though it be with regret.

LITERARY ITEMS.

Good English.—The ability to speak and write good English is supposed to be a slight accomplishment, inasmuch as it is shared by so many people. In truth, however, it is a most rare and difficult one, and it is even startling to find how those whom we are are accustomed to consider as models fail in this particular. The accomplishment is undervalued, like that of reading well, or is assumed to be a natural gift, so that cultivation is almost superfluous. The Dean of Canterbury supposed himself to be qualified to write a treatise on the "Queen's English," in which he exposed sundry vulgar errors of even great writers; but the Dean himself was taken to task by a Mr. Moon, who showed that the former had made shocking havoc with the language he was presuming to use, and use critically.

A Mr. Gould has written a treatise called "Good English," but certain critics have appeared who are ready to prove that Mr. Gould's English is very bad. Even Lindlay Murray does not escape censure, inasmuch as Mr. Moon shows conclusively that, although a good grammarian, he did not write good English, but in practice constantly violated his own rules. Mr. Moon proves beyond dispute that the great grammarian uses a plural verb after a subject in the singular, misplaces his adverbs, violates the rules for the agreement of pronouns, and so on through a long list of grammatical, or rather ungrammatical sins. So celebrated a writer upon the English language as Mr. George P. Marsh comes in for very severe criticism, and is convicted of divers most inexcusable offenses. Let no one hereafter esteem it a slight or easy attainment to be able to write English correctly.—*Northwestern Presbyterian.*

Extempore Speaking.—Extempore speaking is a very popular and very delusive phrase. Perhaps the majority of those who use it mean nothing more than speaking without a manuscript, and in such a sense it is very well. But speaking effectively without preparation, is a thing which can be done but few times by any man. Henry Ward Beecher says he is accustomed to arrange carefully the plan of his discourses in copious written notes, but for their literary dress and many of the illustrations to depend upon the inspiration of delivery. This inspiration of delivery means a life-long experience, which has developed a copious diction and a ready flow of illustrations, such as none but a practiced speaker can depend upon. Lord Brougham used to say that every perfect oration must be partly written and partly extemporized from the spirit and inspiration of the occasion. This is a recognition of the two great sources of power in a public address, the connected and systematic development of a subject, which can be secured only by previous thought and elaboration, and the fire and impulse of the occasion which comes as the speaker warms with his theme. Power in the latter respect can rarely be attained save as the fruit of long effort. The brilliant success of a few who have rare gifts and great experience has made it seem that the inferiority of others, which is due to many causes, ought to be attributed almost alone to this most striking difference of method.

Obituaries.—*Packard's Monthly* in describing the manner in which *The Tribune* is conducted gives the following curious item:

In the bottom drawers of this cabinet we find a series of carefully-written obituaries of distinguished live men, all arranged alphabetically, and in charge of Dr. Wood. They are curiosities in their way. Here is a bulky one, and as long as your arm. It is marked "Peter Cooper." Here is a second—a Lilliputian roll, small enough to go into a needle-case. We find this labeled "The Life of Walt. Whitman." These obituaries are found valuable when news of a celebrated person's death is received at an early hour in the morning. Thaddeus Stevens died at Washington, at midnight, yet a four-column sketch of his life appeared in the *Tribune* of that morning. It had been put into type and was "standing" when the news of his death was received. This was the case with Buchanan and Martin Van Buren, though the latter cheated the office so long that the type was distributed, and the old man with singular perverseness, died within two days thereafter. The Biographical Bureau is, indeed, a rare feature.

A Successful Literary Work.—The late King of Prussia once sent to an aide-de-camp, who was brave, but poor, a small portfolio, bound like a book in which were deposited five hundred crowns. Some time afterwards he met the officer, and said to him,

"Ah, well, how did you like the new work I sent you?"

"Excessively, sir," replied the soldier.

"I read it with such interest that I await the second volume with patience."

The king smiled, and when the officer's birth day arrived he presented him with another portfolio, similar in every respect to the first, but with these words engraved on it. "This work is complete in two volumes."

Book Trade at the Capital.—It is said that one of the most important kinds of business carried on in Washington is the trade in public documents. The regular booksellers do a good deal in it; the *prowling* dealers much more; while here and there you may find a government clerk clandestinely engaged in the business. Books are purchased there directly from Congressmen for a mere trifle, and then sold to distant purchasers for fabulous prices. One dealer in old books, named Hunter, has no less than three establishments in Washington alone.

The misuse of superlatives is a common error of speech. A recent writer gives the following example of this:

A gentleman once thus began a letter to his bride: "My *dearest* Maria."

The lady replied:

"My dear John: I beg that you will mend either your morals or your grammar. You call me *dearest* Maria; am I to understand that you have other Marias?"

The Jews of Abyssinia claim to have lived there since the destruction of the temple at Jerusalem. Their book of laws is in the Ethiopian language. They have the same sacred books as all Israelites, with the exception of the Book of Esther, which they place among the Apocryphal works. They are said to form the most useful and industrious inhabitants of the country.

Idle men are dead all their lives.

WM. CULLEN BRYANT, the veteran poet and editor, has been chosen President of the National Copyright Association, with H. W. Longfellow, Horace Greeley, G. W. Curtis, and others, Vice Presidents.

Educational.

A Word-Course of Study.

A word may be considered either as a reproduction, or a reagent, or a representative, or a repository. Considered as a reproduction of letters, it gives rise to Orthography. Considered as a reproduction of radicals, it yields the study of Derivation, or Philology. Considered as a reagent, bearing certain relations to other words, it gives rise to Syntax. Considered as a reagent, suffering changes by contact with other words, it furnishes the study of Inflection. Considered as a representative of sound, it gives us the study of Prosody, including Pronunciation and and Metre. Considered as the representative of an idea, or several unrelated ideas, it gives us the study of Empirical Lexicography. Under this falls the study of Classification. Considered as the representative of several related idcas, it gives us the study of Scientific Lexicography. Under this falls the study of Figurative Language. Considered as the repository of history, poetry, or philosophy, it gives rise to that agreeable exercise initiated by Trench, in his "Study of Words." Our modern dictionaries give us glimpses of words in all these different aspects. The most condensed of them yet aim at correctness in Orthography, relative completeness in Empirical Lexicography, and fulness of Pronunciation. The larger editions deal satisfactorily with Derivation; touch somewhat upon Classification, Scientific Lexicography, and Figurative Language, and embody much that is interesting in connection with the history of words. Our grammars supplement our dictionaries by giving a full exhibition of Inflection, Syntax, and Metre. In other words, our dictionaries regard words as reproductions, representatives, and repositories; while our grammars contemplate them chiefly as reagents, or holding certain relations, and producing certain changes in one another.

A course of study might be framed whose basis would be the different aspects of words. In the primary part of the course, words would be studied as reproductions of letters. This means Orthography. They would also be studied in their representative character. As representatives of sounds, they yield us the study of Prosody, which includes Pronunciation and Metre, of which the former falls within an introductory course of instruction. Representing simple meanings, words yield us a primary study, in the form of plain Definition, or Empirical Lexicography. The intermediate part of the course would regard words, still further, as reproductions, to wit: as reproductions of radicals. This would give the study of Derivation. To equip the pupil for this, he would need to be made familiar with several foreign alphabets. In the senior department, the study of words in their representative character would be completed. This would give the study of Metre; it wovld also yield the study of Classification. Here, too, we would have Scientific Lexicography, or Definition, no longer of a simple character, but more philosophical; the relations of different meanings to one another would be shown. It would also yield the study of Figurative Language. Words would also here be considered as repositories; or the history, poetry, and philosophy crystallized in them would be considered. Finally, they would be studied as reagents; or this would be the point at which would be introduced the study of Inflection and Syntax.

C. R. C.

ARITHMETIC.—The *Am. Educational Monthly* has a suggestion on the subject of arithmetic in the common schools which is worthy of the attention of parents and teachers: "The old fable of the camel who having begged permission to put his nose in his master's tent, thrust in his head, then his body, and finally crowded the master out, is nearly paralelled by the aggressions of arithmetic in the public school. The camel was a useful beast, but his owner found it possible to have too much of him. Just so with arithmetie. The several series of arithmetical textbooks have become so 'exceedingly valuable,' so 'nicely graded,' so 'full and complete,' that they have to monopolize at least half the pupil's time—in many schools, three-fourths of it—to the exclusion of more profitable studies."

Personal.

REV. T. E. TAYLOR, of the Presbyterian Church at Virginia City, has been obliged, by the state of his health, to leave his work in that place. He is now making a trip in the Southern counties.

REV. A. H. SLOAT has become pastor of the Presbyterian Church on Hayes Street, in place of Rev. I. N. HURD, who is at present preaching in the Presbyterian Church at the Potrero.

CAPT. EMERSON, of the British ship *Kingston*, which has just arrived in this port, died during the voyage from Bombay, and was buried at sea. He was a native of Bucksport, Me.

REV. CALEB MORGAN, formerly pastor of the Congregational Church at Murphy's, Calaveras Co., but lately acting pastor of the church at Eureka, died at the latter place last week.

REV. MR. Rouse, whose arrival from the East we have previously noticed, has received a call from the Congregational Church at Grass Valley.

REV. HORATIO STEBBINS demonstrated in a lecture in Sacramento, last week, that "one truth cannot contradict another."

REV. S. B. BELL, formerly of Oakland, in this State, is settled, as we learn from *The Pacific*, at Lyons, New York.

REV. S. S. HARMON arrived from the East on the last steamer, and has joined his family at San Buenaventura.

GEN. MCCLELLAN writes a letter to the Board of Regents, formally declining the Presidency of the University.

REV. B. S. MCLAFFERTY, of Petaluma, preached his farewell sermon to the Baptist Church on Sunday last.

JUDGE MCKINSTRY gets much praise for his late decision in regard to the Outside Land Committee.

MR. D. W. GELWICKS retires from the editorship of the *Mountain Democrat*.

DR. C. F. COLLINS, of Grass Valley, committed suicide on December 23d.

NATHANIEL GRAY. H. M. GRAY.

HYATT'S HAND-BOOK OF

Grape Culture in California,

Giving full and specific directions as to where, how, and when, to plant and cultivate a vineyard.

As the season is approaching for those who purpose going into the culture of the vine anew in California, or for those who wish to extend their vinicultural operations to make preparations therefor, they can find no better aid, and no source of information more valuable than to consult this highly approved Hand-Book of Grape Culture.

Following are some of the testimonials that have appeared in commendation of this useful and indispensable work:

A committee of the late Fair of the Mechanics' Institute of San Francisco, to which the work had been referred, speak thus:

"Your committee have examined Mr. Hyatt's Treatise on the Culture of the Grape, and believe it to be the BEST HAND-BOOK published on that subject for California vine culturists, and for which they recommend a Special Premium."

The California State Agricultural Fair, of 1867, awarded a Diploma to the author of this work, and also the San Joaquin Valley Agricultural Fair, at the same season.

OPINIONS OF THE PRESS.

The following are brief extracts fron some of the elaborate notices of this work:

The San Francisco *Daily Evening Bulletin* says:—"The book contains a choice collection of the best foreign and native varieties of the grape cultivation in California especially, as well as at the East. The many excellent works on Grape Culture in the Atlantic States are of little or no value in California, where an entirely different system and practice are necessary in vine growing and wine-making. This Hand-Book is intended to supply this deficiency. The author has taken great pains to investigate this subject, and to aid in the improvement of viniculture in California. Its appearence is timely, and it can hardly fail to meet a large and ready sale. It is attractively printed and elegantly bound."

Sacramento Union—"Hyatt's Hand-Book of Grape Culture is a California production that will probably meet a common want. The author takes the experience of the most noted vine-growers in the State as the warrant for his conclusions and suggestions, turns to account the recorded results of experiments made by the pioneers of this branch of industry, and in addition to giving full and minute instructions in regard to the planting of vineyards and the manufacture of wines, presents statistics which will enable the beginner to calculate the probable profits of successful grape culture."

The *Mountain Democrat*, whose editor, Hon. D. W. Gelwicks, is the present State Printer of California, speaks thus:

"HYATT'S GRAPE CULTURE.—We have received from the publishers, H. H. Bancroft & Co., San Francisco, a copy of this interesting and valuable work—a work greatly needed on this coast, and which every grape-grower should purchase. We sent it to a gentleman well known in this community, for his examination—a gentleman familiar with the subject, and largely engaged in the culture of the grape. He gives it the following cordial endorsement, and his endorsement ought to secure it a large sale:

'The limited time in which to examine Hyatt's Grape Culture, published by H. H. Bancroft & Co., San Francisco, has been sufficient, however, to satisfy me that it is a work which every grape-grower should have. No matter how well fortified we may be in our own experience and theory, we must acknowledge that we may adopt many of the author's ideas and suggestions with profit. The merit of the work certainly bespeaks for it a ready sale.

Respectfully, CHAS. P. JACKSON.'"

The Golden Era: * * * "With this book in his hand, the intelligent agriculturist can engage in the business of grape culture with almost the same chance of success as one who has bought his knowledge by expensive experience. * * * The practical information contained in the book would cost many hundred dollars to obtain in any other way. We predict for it a ready and rapid sale."

S. F. Daily Dramatic Chronicle: "The book is emphatically a California production, being written by T. HART HYATT, of this city, editor of the *Rural Home Journal*, and bearing the imprint, San Francisco: H. H. Bancroft & Co. It contains a large amount of valuable information, and should be in the possession of every vine-grower and wine manufacturer in the State. The usefulness of the volume, and its convenience for reference, are very much enhanced by a full and carefully prepared index."

S. F. Mining and Scientific Press: * * * "The book professes to be a complete manual, with instructions for the management of the grape and the manufacture of wine, and is especially designed for California. * * * The book contains a considerable amount of valuable information which is not generally found in such treatises."

S. F. Daily Times: * * * "The author seems to have exhausted his subject, particularly as it relates to viniculture in this State, and as the grape interest is just beginning to attract attention which is soon to become paramount among farmers, we regard the publication of the work as most opportune. No ranchman should be without it."

N. Y. Daily Tribune: "The author brings the result of many years' experience in foreign countries to the preparation of his work, and from his observations in climates similar to that of California, arrives at the conclusion that California is singularly favorable to the culture of the grape, and to all semi-tropical fruits, and that it will hereafter be distinguished as the land of the vine, the fig, the orange, the olive and the palm. His volume forms a capital, if not a complete manual, on the care of a vineyard, and it is enriched with much industrial information connected with the subject."

Lacon (Ind.) Home Journal: "This work is most *apropos*. It comes just as thousands, without any practical knowledge of the business, having planted vineyards, find themselves destitute of that information their intelligent care demands. All over the country this interest is growing, and probably the time is not distant when America will produce more, if not better, wines than any country in the world. The author, MR. THOMAS HART HYATT, is an enthusiast on the subject upon which he writes so pleasantly, and his book embodies just what every grape-grower would like to know—what every one must know, to cultivate the vine successfully."

Colman's Rural World, St. Louis: * * * "We merely want to introduce a new and interesting treatise on this subject to our readers, from the far-off shores of the Pacific—the Golden State of California. Its author is T. HART HYATT, editor of the California *Rural Home Journal*. He has had a large experience and observation in California and in the Old World. His style is entertaining, his directions clear, plain, and practical."

Rural New Yorker: * * * "Although most valuable to the California viniculturist, yet it helps to widen our knowledge of the vine."

H. H. BANCROFT & CO., Publishers.

Practical and Scientific.

AGRICULTURAL.

The Sacramento Beet Sugar Experiment.

W. Wadsworth, who went to Europe to study the methods of beet sugar making, writes as follows to the *Bee*, from Valenciennes, France:

I am now at the principal seat of the manufacture of beet sugar in France. This place and Lille—a half hour by rail to the north—each claim to stand at the head of this great industrial interest. Certainly, either may well be proud of its achievements in this department of agricultural manufactures. Having gained all the information possible, during a three weeks attention to the routine of German sugar making, I came here to graduate in my new profession. I shall not be long in obtaining my diploma, and then, after a run by rail of a half day to Paris, will be off for New York on the 18th. I think I have everything right, for the success of beet sugar making in California. I have even more confidence in its success than when I left Sacramento. I have bought and forwarded three casks—equal to six barrels—of the three best known varieties of beet seed, two French and one German variety; each admitted to be the best for certain localities, including their adaption to soil and climate, their saccharine and keeping qualities. I have made arrangements for an annual supply of seed, if we should want it. Have contracted with a German engineer of Cœthen, who has already put in successful operation five large sugar making establishments, to come to California and superintend the erection of our works, if we want him. He will bring all the necessary machinery with him for the working up of sixty tons of beets in a day, all to be made new, with every new improvement that has been made to the present time, on giving him four months time for its completion, at a cost of less than forty thousand dollars. I have agreed with him on the amount of salary he is to receive, and one practical engineer, who superintends the making of the machinery, and will be necessary to the placing of the same in position. I have examined carefully into all the conditions favorable and unfavorable to our success; have seen large establishments and small; some working by one process and some by another; and yet all working successfully. I have examined the methods of growing, gathering and keeping beets for working up fresh during the winter months, different modes of drying the beets, by which the factory can be kept running either on fresh or dried beets, during the whole year, and much other useful information to the Sacramento Valley Beet Sugar Company, that could not have been obtained except by personal examination and survey, all of which will be given to our Company in a printed report, immediately on my return to Sacramento.

Not the least among my scholastic French attainments; is the methods complete for the preparation of what is known in commerce as burnt onions, which are extensively manufactured in France, and sent to all parts of the world. It is the onion of a particular variety, deprived of everything about it disagreeable to the taste or smell, and rendered exceedingly nutritious and palatable.

How Cattle Kill Trees.

It is a noticeable fact that a tree ever so thrifty, and of whatever kind, to which cattle gain access, and under which they become habituated to stand, will very soon die. In the case of a solitary shade tree in a pasture or by the roadside, this is of common occurrence. The query may have been suggested. To what is this owing? In the first place, rubbing a tree by the necks of cattle is highly pernicious, and if persisted in, it will commonly destroy them sooner or later; but if the body of the tree be cased so that their necks cannot touch it, death will ensue just as certainly if they are allowed to tramp the earth about it. But why should tramping the earth destroy the tree? The reason is one of wide and important application to the laws of vegetable growth. The roots of plants need air, if not as much, yet just as truly, as the leaves and branches. Their case is analogous to that of fishes, which, though they must have water, must have air, also: viz., just as much as permeates the water. If it be all shut off, so that none which is fresh can get to them, they will exhaust the supply on hand, and then die for want of more. So the roots of trees and vegetables want air. When the earth is in a normal or natural condition it is full of interstices and channels, by which air gets to them. But if the cattle are allowed to tramp down the earth, and the sun aids their work by baking it at the same time, a crust like a brick is formed, wholly impervious to the atmosphere, and the tree yields to its fate. So a tree cannot live if its roots are covered with a close pavement. They will struggle for life by creeping to the surface, and hoisting out a brick here and a stone there, or find a crack where their noses can snuff a little breath; but if fought down and covered over, will finally give it up. So if a tree be thrust into a close clay, or its roots are kept under water, it refuses either to be an aquatic, or to put up with its aluminous prison. It will grow as little as possible, and die the first opportunity. — *Prairie Farmer.*

Farm Notes.

A Hamburg, N. Y., farmer, who has had large experience in feeding cabbage and turnips to cows, says his practice is to feed immediately after milking—never before—and he has never been troubled with the milk being flavored. He also says he feeds turnips whole with the tops on, as there is no danger from choking when fed in this way.

Sorrel, which is a pest to any field, may be eradicated by the judicious application of lime or ashes. The souring principle of sorrel is oxalic acid; if this is removed from the soil, sorrel cannot grow.

Flax seed occasionally given to horses or cattle will make them shed their old hair, and whether old or young, soon get sleek and fat. It is the only thing which will fatten some old horses.

From statistics received at the Department of Agriculture at Washington, it is estimated that the average yield of wheat to the acre throughout the United States is 12 bushels.

Mr. L. F. Allen in his American Cattle, favors leaving shade trees in pastures, while giving the objections urged against the plan their due weight.

It is estimated that there are 7,000,000 head of stock cattle in Texas. This is nearly ten to each man, woman and child of that territory.

Never feed your cattle in the yard without a "rack." Economy rightly enough shrugs her shoulders at so slovenly a practice.

Pack winter apples in dry sand placed in a cellar; they will keep plump and fresh, and rot but little.

Stay on the Farm.

The cities and villages are already over crowded, and every kind of business languishes more than the cultivation of the earth. In the cities the labor market is overstocked, and one can get any desired number of hands for any conceivable job. Clerks from the country have to serve two or three years before they can get living wages. The city throngs with unemployed men and women, waiting for something to turn up. Those who find employment have no security for permanence. Mechanics lose their places and have to lie idle for weeks and months together. All the products of skill and labor are relatively cheaper than provisions and breadstuffs. The great material want of the nation is cheaper meats, grain, and vegetables. We have merchants, mechanics, and middlemen enough, but far too few farmers. The best cultivated State abounds in uncultivated lands. Even in the vicinity of our large towns and cities, cheap lands abound, and splendid chances for enterprising young men to win homes and fortune. Once settled upon his own acres, the farmer has constant, profitable occupation before him. Nowhere is unskilled labor so sure of sustenance, nowhere will intelligent industry so surely win a happy home and competence. In the country one never need to lack labor, and labor brings there the necessaries and comforts of life.—*American Agriculturist.*

Measure Your Land.—No farmer would be the loser in the end, if he should measure every acre that he has under cultivation. The personal satisfaction to be derived from knowing just how many acres of land he has under cultivation, will overbalance the time and labor spent in gaining the knowledge desired. This indefiniteness, as regards the exact measurement of certain pieces of ground, is sometimes a source of actual loss to the owner.

Native Tea.—It is asserted that the fine green leaves of the red raspberry, gathered in a fair day and cured in an open room, are not inferior to the China teas; and furthermore, if they were shipped to China and back they would be superior.

WEEKLY MARKET REPORT.

Wednesday, December 30, 1868.

Flour—Market dull and prices largely nominal. We quote Oregon brands of Extra at $5 50@5 75 and city brands as follows: Superfine, in sks, ℔ 196 lbs, $4 75@4 87½. Extra in sks, $5 75@$5 87½.

Wheat—Is quotable at $1 55@1 65 for coast; $1 70@$1 75 forfair to good shipping, and $1 80@1 82½ for good to choice milling, latter figure for small lots. At the close, 400 sks fair, $1 70. On 'Change to-day good shipping (Club) was offered at $1 72½ and very choice Santa Clara at $1 85, without buyers. For the last named lot $1 80 ℔ 100 lbs was bid, which is probably the highest figure at present obtainable.

Barley—Coast feed is quoted at$2 20@2 25; other descriptions, $2 25@2 30; brewing, $$2 30@2 35. At the close, 440 sks brewing, $2 30; 750 sks do, $2 32½ ℔ 100 lbs.

Oats—Market continues firm at $2@2 20 for California, and $2 10@$2 25 ℔ 100 lbs for Oregon.

Potatoes—Receipts of Humboldt for the past week aggregate over 12,000 sks. Sales to-day of 2,500 sks Humboldt in lots, 90@95c; 300 Pigeon Point, 95c; 720 sks Bodega, 85@90c. At the close, 450 sks Point Arenas, 90c ℔ 100 lbs.

Onions—Sales of 100 sks Yellow, in lots, $3 ℔ 100 lbs.

Beans—Market firm and active. We quote jobbing rates for first quality as follows: Bayo, 3½@3¾c; Butter, 4¼c; Pea, 4¼@4½c; small White, 3¾@4c; Pink, 3@3¼c; Red, 2¾@3c ℔ lb.

Corn—Sales of 125 sks Yellow, large size, $1 75 ℔ 100 pounds.

Rye—Choice is scarce; jobbing at 3¾c ℔ lb.

Buckwheat—None in first hands; jobbing at $2 25@$2 50 ℔ 100 pounds.

Mustard Seed — Common California Red 2½@3½c; choice do, 4c; English White 5@5½c.

Flax Seed.—The local mill continues to pay 4c ℔ lb for a good article.

Bran—Firm and active $22 50 from the mill; jobbing at $24@25 ℔ ton.

Middlings—Feed descriptions are firm $30@32 50, and fine $37 50@40 ℔ ton.

Oil Cake Meal—Demand good at $35 ℔ ton from the mill.

Hay—The market is steady at $16@22 ℔ ton for fair to choice.

Hops—Demand moderate at 25@30c ℔ lb for California new.

Dairy Products—California fresh roll Butter is quoted at 60c@70 and 75c for choice; California pickled is scarce and nominal at 55@60c; California Cheese, 18@21c; Eastern 21@22½c ℔ lb. Eggs have declined to 47½@52½c; ℔ doz.

Poultry—Live Turkeys are quoted at 15@16c, and dressed do 17@18c ℔ lb; Hens and Roosters, $6 50@7; Spring Chickens, $4 50@5; Ducks, $5@6; Geese, $10@12: Quail, $1@$1 25 ℔ dozen; Venison, 9@10c ℔ lb.

Provisions—Bacon is jobbing at 14@14½c for California smoked; Oregon do, 14½@15c; California Hams, 14½@15½c; no Oregon in market; California Lard, 12½@13½c and 14c ℔ lb for small tins.

Wool—Transactions for the week have been insificant, chiefly for want of stock. The year will close upon a lighter supply than has been known in California for years.

Hides—Sales since last Wednesday reach about 2,500 California Dry at 14½@15½c, and 300 Mexican at 13½c. We quote Salted at 7@7½c ℔ lb.

San Francisco Cattle Market.

Quotations are essentially the same as last Wednesday. Fancy Beef is still held at 12½@13c; other descriptions as quoted below. Some dealers quote Veal at 12½c, an outside figure. Pork is easier at ¼c decline.

We quote slaughterers' prices as follows:

Beef—American, 1st quality, 7½@9½c ℔ lb.
do 2d do 6½@7½c ℔ lb.

Veal—Quotable at 9@11c ℔ lb.

Mutton—Is steady at 6@6½c ℔ lb.

Lamb—Scarce and nominal 7@9c ℔ lb.

Pork—Undressed, 4½@5½c; dressed, 6¾@7¼c ℔ lb, outside figures for milk or grain fed.

—*S. F. Bulletin.*

MINING.

MINING DEVELOPMENT.—It is customary to con-der the mining era over in California and the agri-ltural era begun. It would be no grief to believe is, since the permanent prosperity and welfare of e State depend more upon its soil than its mines. et there is little scientific knowledge going to show at the precious metals may not still be found in eat abundance in this State. All discoveries of ld and silver deposits seem to have depended more on luck than science; and whither Fortune's wand ay next point no one can tell. One thing, however, ems certain. The great intramontane basis is to a busy theater of mining development, and this ll help California as much as would new discover-s within her own borders. The new openings at e White Pine district are nearly in the midst of is vast basin. There are already mines to the rth of it, mines to the south of it, mines to the st and mines to the west. By some lucky chance nebody has struck at the very heart of these vast posits. The surrounding region, indeed the great-part of the intramontane basin appears to be of e same geological origin and have the same miner-gical character. If what geologists say of the mstock lode be true, there is good reason to sup-se that fissure veins of similar character and of ual richness may be found in or near any of those d-looking dromedary humps which abound through-t Nevada, Arizona, Utah, Idaho and Oregon. As railroads approach from either side, the opportu-y for prospecting this mining realm will greatly prove, and discoveries will greatly benefit Califor-, because California must be the feeder and mer-nt of this vast region.—*Sacramento Union.*

IMPROVEMENTS.—The Butte Ditch Company ve recently made great improvements in their rks near Jackson, Amador County, by laying an n pipe 1,400 feet long, from the mouth of the ne, which is capable of conveying 2,000 inches water.

ARIZONA.—Ore has been struck in the lower level the Arizona Mine surpassing anything yet found quality and abundant in quantity. The Arizona ple are wearing a broader smile and walking re erect than ever, so says the *Humboldt Register.*

STRONG BOX.—The *Sacramento Union* speaks the region the other side the Sierras, as the strong or mint of the Republic, set away between ntain barriers, and none allowed to come near ut those engaged in actually coining the dollars.

WHITE PINE.—A rich strike has been made in Herman Claim about half a mile from the Eber-lt, to which it is said to be equal or superior in ness, the ore being worth about $1,500 per ton.

SILVER BEND.—The *Champion* says that if the Dorado South Mine could be transferred to ite Pine, its owners might readily exchange it for ions of dollars.

COAL.—The *Olympia Tribune* says that a valua-vein of coal three feet thick was lately discov-l in Nisqually Valley on McAllister's Creek.

EXPLOSION.—The Smartsville Mining Company l off their big blast last week. 1,200 kegs of der were ignited by a galvanic battery.

WOMAN'S RIGHTS.—Two ladies took a walk re-ly in Calaveras County and discovered a rich rtz ledge.

PLATINCA.—This rich silver lode, which is near Sterling, in Arizona, is to be worked again soon.

THE Oro Fino and Morning Star Mining Com-y, Owyhee, (I. T.,) has gone into bankruptcy.

THE Baker claims, on Mill Creek, Plumas county, e been sold to parties from Poorman's Creek.

IT has rained sufficient in Calaveras county to set every miner capable of handling a pick at work.

GOLD is found in 25 counties in North Carolina, and the annual yield is estimated at $500,000.

DULL.—Mining at Scott Valley, Nevada, was rather dull before the late supply of water.

THE North Bloomfield Gravel Company have completed their ditch to Columbia Hill.

THE La Grande *Sentinel* asserts that Eagle Creek is the richest quartz district in Oregon.

EUREKA.—The average yield per ton of rock from this mine for the last year was $32 80.

THE mines in the Benton district, Mono county, are looking better than ever before.

CENTRAL AMERICA.—The mines in Nicaraugua are more prosperous than usual.

BUSINESS is lively at the mines located in Brown's Valley, Yuba county.

PRACTICAL.

HOW TO UTILIZE VIGOROUS EFFECTS.—When a man is tired, he is tired all through—the stomach not less than his legs. Now what is the usual custom? After a walk of twenty miles, or a day at haying, when every fiber of the body is exhausted, the stomach is stuffed with hearty food.

The man goes to bed with flushed face and rapid rapid pulse, and awakens in the morning with a bad taste in his mouth, loss of appetite and a sense of languor. If he had taken a cup of tea and a slice of toast, he would find himself the next morning none the worse for the previous day's work and pers piration.

We all understand well when the body is weak from fever, that the stomach partakes in the general weakness, and must not be overloaded. But when the body is exhausted from labor, and every part is pleading for rest, then we crowd the stomach full of beef, pudding, pies and fruit, and spend the next day in declaring to our friends that exercise is not what it is cracked up to be.

When we are tired, we should seek restoration in sleep; not in calling upon the legs, the arms, the back, the stomach, or any other part, to undertake five or six hours of hard, consecutive labor.

The laboring man would find himself much better in the morning if the third meal were made one small in quantity and easy of digestion.—*Dr. Lewis.*

THE TEETH—HOW TO CARE FOR THEM.—We think it safe to say that a majority of people pay too little attention to their teeth, and the result is, that dentists find plenty of employment, and numerous are the diseases of the teeth and gums. The teeth should be cleansed at least twice a day with a soft tooth powder (precipitated chalk is the best) and a little soap. Unless this care is taken tartar is liable to form upon them, and if suffered to accumulate, it causes inflammation and absorption of the gums and gradual loosening of the teeth, which can only be prevented by observing the above simple practice. When tartar, which is a deposit of salts of lime and organic matter from the saliva, is allowed to accumulate, it becomes hard, and can only be removed by the scaling instruments of the dentist.

A USEFUL cement is made by taking two parts of finely sifted unoxydized iron filings, mixing them with one part of perfectly dry and finely powdered loam, and kneading the mixture with strong vinegar until a perfectly homogeneous plastic mass is formed, when the cement is ready for use. It must be made as wanted, for it quickly hardens, and when once set is never fit for use again. The cement is said to resist fire and water.

LIGHTS SPOIL THE AIR.—Ordinary artificial lights injure the atmosphere in two ways—by removing its oxygen, which is so essential for respiration, and by producing carbonic acid gas. A single six-foot burner will yield as much of this poisonous gas as eight or nine persons would expire in quietude, while it would abstract more oxygen from the surrounding air than they would absorb in the same time. Look well to your ventilation, then, after your lamps or gas-burners are lighted at evening—especially in rooms where these are to burn all night.—*Evangelist.*

POISONS IN COMMON USE.—The English papers are discussing the subject of poisonous stockings. The Magenta dye used in some of the gorgeous socks and other underclothing exercises a very deleterious influence upon the skins of the wearers, producing irritation and an eruption, and leading, if persisted in, to actual sores. Much of this Magenta dye used to consist of arseniate of roseine, being not, properly speaking, contaminated with arsenic, but actually consisting of an arsenical compound.

The Sabbath at Home

IS THE ONLY ILLUSTRATED RELIGIOUS MAGAZINE published in America. It employs the ablest Pens and Artists in giving interest to the *Study of the Bible.* It is, in a large measure, a YOUNG PEOPLE'S MAGAZINE, and every month there are Illustrated Bible Recreations for the YOUNG, and older Bible students. Price $2 00 a year.

SMITH'S BIBLE DICTIONARY

Will be sent FREE for six new subscribers.

LANGE'S COMMENTARY

Is a work for Biblical Students of all denominations. Price $5 00 a volume. Seven volumes are now ready, and will be sent to any person sending FORTY subscribers, or either volume for SEVEN subscribers.

THE LITTLE CORPORAL

Is one of the best Magazines published for boys and girls—sent free for one year for TWO new subscribers.

Our Premium List also contains

ELEGANT GIFT BOOKS

Suitable for Holiday Presents, and beautifully Illustrated Books for the young. Also, Maps of Palestine, Picture Cards and Books for Sunday Schools. We offer SEVEN EXTRA CASH PREMIUMS, the highest being

FIFTY DOLLARS

for the largest club for 1869.

☞Send ten cents for a specimen copy and premium list. EARNEST WORKERS wanted everywhere to canvass for subscribers. Address

SABBATH AT HOME, 164 Tremont Street, Boston.

GENERAL SELECTIONS.

Looking Out into the Night.

Looking out into the night,
I behold in space afar
Yonder beaming, blazing star;
And I marvel at the might
Of the Giver of the rays,
And I worship as I gaze,
Looking out into the night.

Looking out into the night,
I espy two lovers near,
And their happy words I hear,
While their solemn troth they plight,
And I bless the loving twain,
Half in pleasure, half in pain,—
Looking out into the night.

Looking out into the night,
Lo!—a woman passing by,
Glancing 'round with anxious eye,
Tearful—fearful of the light;
And I think what might have been
But for treachery and sin,—
Looking out into the night.

Looking out into the night,
I behold a distant sail
Roughly beaten by the gale,
'Till it vanishes from sight;
And I ponder on the strife
Of our fleeting human life,—
Looking out into the night.

Looking out into the night,
I bethink me of the rest
And the rapture of the blest
In the land where all is light;
Sitting on the heavenly shore,
Weeping never—never more
"Looking out into the night!"

—*John G. Saxe.*

Intolerance.

The following views on the subject of religious intolerance are not only sound in themselves, but derive special interest from the source from which they come, being parts of a discourse preached recently at Westminster Abbey by Rev. Henry Alford, D.D., Dean of Canterbury:

Let us not conceal from ourselves the truth, however unwelcome to a self-satisfied and boastful Church, that want of singleness of heart and devotion simply to God's work is the cause of most of the wars and fightings which are grievously prevailing within our own body, and of the unsympathizing spirit which we show towards those who, differing in their outward forms, are as much servants of Christ as ourselves. If the commandment be one and have one end, then I submit to you that it is impossible that this end can be attained any more than other ends in life, except by those whose energies are centered towards its attainment. But is this so with us? Is not our judgment of one another, is not our judgment of those without, evermore complicated by considerations over and above the simplicity which is in Christ? 'He may be never so devoted a servant of Christ; but if his opinions are not mine, if he takes not the same view as myself of that Church of which we both are members, I will not love him, I will not sympathise with him, I judge hardly of his motives; I will look coolly upon and counteract his endeavors for good.' This is the language; not which men speak or write—that they are afraid or ashamed to do—but on which they act each towards his neighbor; and who does not see that this kind of feeling is even becoming systematised and embodied in public action in the organs of the various Church parties, whose vocation it is far too often to thwart and villify one another? Now this singleness of heart is even more conspicuously wanting in our conduct towards those who serve and love the Lord Jesus Christ, but with our outward forms, for here we exhibit not only the accretion of secondary aims over the one single aim of the Christian heart, but also a demonstrable inconsistency and doubleness in our words and acts which is wholly unworthy of earnest or intelligent men. In our graver estimate of these our brethren, we never for a moment deny them the title of Christians; we never presume to doubt their part in Christ, nor their co-operation with us in the work of God in the world. In our more serious moments, and when we speak and write before the public, these are our professed sentiments, but in private and in social life many of us cast such thoughts entirely aside. Coldness of behavior and disparaging words take the place of our former generous admissions. Nay, more than this, many are content to violate the first laws of liberty, of conscience, and as far as their influence goes in matters of patronage and support to make a neighbor suffer for the fact of his belonging to a different Christian body than themselves. It is impossible, my brethren, that this self-contradiction can spring out of the pure heart insisted on in my text. A fountain cannot send forth out of the same chink sweet waters and bitter. The fountain must have two sources, not one only, which can thus flow in two streams of a complexion and taste so diverse. Nor, again, can such conduct be cleared of guilt of another kind in the sight of Almighty God. What is this loving Him and His work a little, and loving our own Church and our own party in that Church more, but a setting up in our heart of idols other than Him? What can a Church expect which in the main thus approaches Him, but to be answered according to the multitude of its idols? And, my brethren, has it not been so with us, and is it not so now? Can we say that He has blessed, can we say that He is blessing our agencies for good at home and abroad? Ample reason, indeed, for humble thankfulness we have that he is pleased to use us in any degree for His work in the world; but my question regards the relative condition of that work and its prospects, and I answer it without fear of contradiction, that neither here in England nor in our colonies have we as a Church at this time any cause for self-congratulation; that a blight seems to be resting upon us rather than a blessing. And among the reasons for this I cannot but reckon this our divided hearts in God's service, this love of ourselves rather than of Him, this setting up of the idols of our position or emolument, and the accidents of our ecclesiastical and liturgical traditions as a barrier to our attaining the end of His commandment, "Love out of pure heart." We are verily guilty concerning our brother, and of that guilt we are reaping the consequences in coldness and confusion and distrust among ourselves, paralyzed action at the present, and dark misgivings for the future.

The Suez Canal.

Rev. Edward Abbott writes for the *Congregationalist* the following account of this great enterprise, which is second only to the Pacific Railroad in its importance to the commercial interests of the world:

This great public work which is destined to divide two continents and unite two oceans, is certainly an enterprise of vast magnitude. Projected by French heads, and to be executed, in spite of British fists, under the Napoleonic thumb, and with the help of New York, Vienna, Berlin, and Frankfort pockets, by the hands of 50,000 Egyptian fellahs; it partakes of an international charachter, and excites, therefore, a wider interest.

Centuries before the Christian era it appears that the Pharaohs constructed a canal from Bubastis on the Nile, around the Bitter lakes to the Red Sea but this primitive ditch, only a hundred feet wide, and four deep, soon fell into disuse and decay, and the spasmodic efforts of succeeding rulers failed to make it any more than temporarily available.

In 1854, M. De Lesseps, a French gentleman of intelligence and wealth, while traveling over the ground, conceived the plan of opening a canal direct from the Mediterranean to the Red Sea, across the Isthmus of Suez, a distance of 90 miles, and although English engineers, among whom was Stephenson, had pronounced the scheme impracticable for many reasons, he succeeded in enlisting the approval and co-operation of the Viceroy of Egypt. A stock company was at once formed in France, with M. De Lesseps at its head, to which immense grants of land, men, money and privilege were made by the Viceroy, and after several preliminary explorations and surveys, the work was actually begun in August 1859. Barring one considerable interruption in 1863, the work has steadily progressed until the present time.

The Mediterranean terminus of the canal is at a point on a sandy bar which, extending from the site of the ancient Pelusium to Damietta, separates the waters of a spacious bay that formerly lay between these points, from those of the sea itself, thus forming a broad lagoon, known as Lake Menzaleh. The first step in the construction of the canal was to open a channel across the bar, connecting the Medit erranean with the lake. About this channel, has sprung up Omaha-like, the town of Port Said, now nine years old, but with a population of 10,000, marking, as it will be seen, the northern gateway of the canal.

The canal proper, after leaving Port Said, passes in a S. E. direction through Lake Menzaleh, the embankment on either side being formed of silt excavated from the bottom. For this labor stupendous dredging machines were employed, a dozen of which do the work of 30,000 men, and throw out 24,000 cubic feet of soil a day. These embankments are several hundred feet in width, and as the traveler sails along between them, he looks over them on either side upon the broad surface of the lagoon.

The distance across the lake to the point where the canal strikes the main land is about 30 miles, and here again the work of excavation has been performed by the dredging machines with marvelous rapidity. Forty-five miles from Port Said the canal enters lake Tenseh, a beautiful sheet of water lying, as it will be seen, just half way between the two termini. This inland lake has been formed in the process of construction, by the flowing of the waters of the Mediterranean into a natural basin, supposed to have been the dry bed of an ancient body of fresh water, know as Crocodile Lake. On its shores, which are moderately high and verdant, the town of Ismaila has come into being since the opening of the canal, and destined, as it is, to be its half-way station, is already a place of some importance. It is at present the connecting point of two railroads; one from Suez, the other from Cairo on the Nile. The spot being one of great beauty, the Viceroy has built him a palace here, and many pretty cottages occupied by gentlemen connected with the canal, adorn the borders of the Lake. The scene is an oasis of fertility, thrift, and intelligence, amid general barrenness, indolence, and degradation.

Up to this point the Canal may be regarded as completed, and has been opened for some time to traffic, which already proves to be considerable. From this point to Suez, the Southern terminus on the Red Sea, a good deal remains to be done,—though the projector promises that it shall be open throughout its entire length in October 1869. The old town of Suez, has a rival in a new one of the same name sprung up at a little remove. Here the Company have laid out a harbor of magnificent proportions, making vast areas of solid ground, and constructing docks and quays on the most extensive scale, Indeed Port Said and Suez, bid fair to become two of the most remarkable cities of the age.

And now when this huge canal, 90 miles in length, 309 feet in width, and 26 in depth, shall have been finished, at a cost of $75,000,000,—what advantage will it afford? Much, every way. The commercial distance between Europe and the East, will be shortened by 9,000 miles. The 1500 vessels which are said to pass every year to and fro around the Cape of Good Hope between New York and India China and Japan, will find 5000 miles taken off their voyage. As voyages shorten, so will commerce increase, and new avenues of trade will open in every direction. But trade and commerce open the way for civilization and Christianity. Already Egypt is feeling the impulse of this enterprise, and a better day is dawning upon her. May it not be expected that what the Canal has done at Lake Tenseh, it will do on a larger scale all over that degraded land,—opening the way for streams of fertilizing influence, that shall make the desert blossom as the rose. Hasten on, then, ye Maritime Canals, ye Continental Railroads, ye Oceanic Telegraphs! Belt the world with your channels of communication and your bonds of fellowship, and thus prepare the way of Him who shall ere long bring in His universal reign.

CONVERSATION teaches more than meditation.

Practical Jokes.

The *fun* of a practical joke consists in the opportunity given to enjoy the physical or mental suffering of the victim. Of course such enjoyment is cruel, in a greater or less degree, and just so far as civilization grows toward perfection, the disposition to enjoy the pain of others disappears. Practical jokes will always probably be enjoyed by boys—who are naturally young savages, and delight in tormenting all weaker animals—but, we are glad to see, are ceasing to be popular among "grown-up people." *Chambers' Journal* has a collection of practical jokes which are, for the most part, quite new:

"The ancients used to indulge in practical jokes to a considerable extent; for instance, the Thracians, at their drinking parties, sometimes played the game of hanging. They fixed a round noose to the bough of a tree, and placed underneath it a stone of such a shape that it would easily turn around when any one stood on it. Then they drew lots, and he who drew the lot took a sickle in his hand, stood on the stone, and put his neck into the halter. The stone was kicked away, and if he could cut himself down with his sickle, well and good; but if he was not quick enough, he was hanged outright; 'and the rest laughed, thinking it good sport.'

"Nero's jests were likewise very practical. 'What a fat fellow that Senator is" he observed one day to a courtier. 'See me cut him in two!' and he did it in the most facetious manner.

"A French auditor of accounts in the 17th century, was a great practical joker all his life, and even played a trick after he had lost the power of enjoying it, for he left four large candles to be carried at his funeral, which had not been burning fifteen minutes before they went off as fireworks.

"When a lady condescends to play a practical joke, it is generally a very neat one. M. Boncourt, the rich financier, was very stingy to his wife in the matter of pin-money. One day a lady, closely veiled, called upon him and borrowed a large sum, leaving her diamonds as a pledge. It was his wife!

"The French thieves sometimes used to steal so cunnily that even their victims were half inclined to pardon them.

"The Duke of Frousac, nephew of Marshal Richelieu, was coming out of the opera one night in a splendid dress embroidered with pearls, when two thieves managed to cut off his coat-tails. He turned into his club, where everybody laughed at him, and so he found out what had happened and went home. Early the next morning a man called at the Duke's hotel and demanded to see him at once, on a matter of most vital importance. Monsieur de Frousac was awakened.

"'Monseigneur,' said the visitor, 'I am an officer of police. Monsieur the lieutenant of the police has learned the accident which happened you yesterday on leaving the opera, and I have been sent by him to request you to order the coat to be placed in my hands that we may convict the offenders by comparing it with the mutilated tails.'

"The dress was given up, and the Duke was in raptures with the vigilance of the police. But it was a new trick of the rogue who had stolen the tails, by which he possessed himself of the entire garment."

THE FAMILY PAPER OF THE PACIFIC COAST.

THE OCCIDENT.

In every true home there should be found a first class family paper—one to whose coming, father, mother, children will look with eagerness each week. Such a paper is

THE OCCIDENT.

Let all who desire such a paper, and are asking, "What paper shall I take?" read the following statement of facts:

THE OCCIDENT contains a greater amount and variety of reading matter than any other family paper on the Coast. It contains choice selections for all classes of readers. Both the child and the person of cultivated literary taste will find in each number matter which cannot fail to be interesting.

THE OCCIDENT is extensively quoted. No other weekly paper on the Coast furnishes so much matter, either original or selected, to the columns of other papers. Whole columns are frequently taken from one or another of its departments. No stronger proof of its excellence could be desired than the fact that it is so well appreciated by contemporaries.

THE OCCIDENT has a complete Agricultural Department, carefully culled from the best authorities, with all the current agricultural items of our own coast, and full market reports. The Mining Department is also very complete.

THE OCCIDENT gives a summary of Pacific Coast news and of Eastern and Foreign Telegraphic News. These items are not hastily thrown together, but are carefully prepared, and are consequently copied to a great extent. The Personal Department is the most complete collection of personal news to be found in the State.

THE OCCIDENT is the official organ of all branches of the Presbyterian Church, and contains full religious intelligence concerning the progress of all denominations. Although a religious paper, it is not sectarian. Its aim is to make men better and happier by the inculcation of the principles of the Christian religion.

THE OCCIDENT is universally admitted to surpass all other papers in the State, in typographical appearance and systematic arrangement of its contents.

Read what the papers say of

THE OCCIDENT.

"Has commenced its second volume, enlarged and improved and with excellent prospects. It is full of 'knews,' views, and family reading, and is ably edited."—*Brooklyn (N. Y.) Union.*

"It gives evidence of ability, tact, and judgment in its management."—*Cincinnati Presbyter.*

"An able paper of the same form as the *Statesman*."—*Philadelphia Statesman.*

"One of the best of papers."—*Zion's Herald, Boston.*

"Well filled with readable articles. An important accession to the literature of the coast."—*S. F. Bulletin.*

"Its typographical appearance is finer than that of any weekly paper published on this coast."—*Chronicle.*

"A periodical worthy of patronage."—*Sacramento Union.*

"It is already attracting a great deal of attention. Its original articles and judicious selections make it an intellectual treat."—*S. F. Fair Press.*

"The ability displayed gives promise of success."—*S. F. Times.*

Pacific Mail Steam Co's Steamships

—FOR—

NEW YORK, JAPAN AND CHINA

Will be Dispatched as follows:

LEAVE WHARF CORNER OF FIRST AND BRANNAN STREETS, at 11 o'clock A.M. of the following dates, for PANAMA connecting via Panama Railroad with one of the Company's splendid Steamers from ASPINWALL for NEW YORK.

the 6th 14th, 22d, and 30th of each month.

Steamer leaving San Francisco on the 6th touches at Manzanillo. All touch at Acapulco.

Departure of the 14th is expected to connect with the French Transatlantic Company's Steamer for St. Nazaire, and English Steamer for South America. Through tickets can be obtained.

Departure of 14th is expected to connect with English Steamer for Southampton, South America, and P. R. R. Co.'s Steamer for Central America. Through tickets can be obtained.

Departure of the 6th connects with English Steamer for Australia.

STEAMERS FOR DECEMBER, 1868.

The following Steamships will be dispatched on dates as given below.

December 5th—MONTANA, Capt. West, connecting with ALASKA, Captain Gray.

December 14th—GOLDEN CITY, Capt. Wm. H. Hudson, connecting with RISING STAR, Capt. King.

December 22d—CONSTITUTION, Capt. Cavarly, connecting with HENRY CHAUNCEY, Capt. Connor.

December 30th—COLORADO, Capt. Farnsworth, connecting with ARIZONA, Capt. Maury.

Passengers berthed through. Baggage checked through—100 pounds allowed each adult.

An experienced Surgeon on board. Medicine and attendance free.

These Steamers will positively sail at 11 o'clock. Passengers are requested to have their baggage on board before 10 o'clock.

Through tickets to Liverpool by the "Cunard," "Inman," and "National" Steamship Lines can be obtained at P. M. S. S. Co.'s office in San Francisco, where may also be obtained orders for passage from Liverpool or Southampton to San Francisco, either via New York or St. Thomas—if desired, an amount of £10 to £20 will be advanced with the above orders. Holders of orders will be required to identify themselves to the Agents in England.

For Merchandise and Freight for New York and way ports, apply to Messrs. WELLS, FARGO & CO.

The Steamship GREAT REPUBLIC, Captain S. Doane, will be dispatched on Monday, January 4th, at 12 o'clock, noon, from wharf, corner of First and Brannan streets, for YOKOHAMA and HONGKONG, connecting with the COSTA RICA for SHANGHAE.

For passage and all other information, apply at the Pacific Mail Steamship Co.'s Office, corner of Sacramento and Leidesdorff Sts.

FAMILY READING.

A Moss Agate.

BY MRS. JAMES NEALE.

Many an ocean wave and billow
O'er this little stone has passed,
But I found it, round and polished
Resting on the shore at last.

Thro' the depths, and through the hollows,
It was safely borne to land,
For God held the beating waters
"In the hollow of His hand."

Thus perchance the waves pass over
Us, upon our sea of life;
Thus we breast the surging billows,
And the struggle and the strife

Only bring us near, and nearer
To that calm and boundless shore,
Where the depths are never sounded,
For "the sea shall be no more."

Holiness and Humility.

Holiness and humility are inseparably connected together. The nearer the soul comes to God, the more completely it is humbled, subdued, and overpowered. It was when Job heard the voice of the Lord out of the whirlwind, that he exclaimed, "I abhor myself, and repent in dust and ashes." When the "still small voice" of God spake to the exiled prophet in his cave, he wrapped his blushing face in his mantle, and his whole being bowed before the divine presence and power. It was when the evangelical prophet Isaiah saw the glory of the Lord, and heard the six-winged seraphim crying to one another, "Holy, holy, holy is the Lord of hosts," that he cried out, "Woe is me, for I am undone." It was after Paul had been caught up into the third heaven that he said of himself that he was the least of all the saints. And it was the beloved disciple, whose head had leaned on the bosom of Jesus, and whose eyes had beheld his glory in apocalyptic vision, whose meek, childlike spirit has been the admiration of ages. Thus it is with every saint of God on earth, and it is so with every glorified spirit in heaven. The higher the soul rises in holiness, the deeper it sinks in humility and self-abasement. So sings Montgomery:

"The bird that soars on highest wing,
Builds on the ground her lowly nest;
And she who doth most sweetly sing,
Sings in the shade when all things rest:
In lark and nightingale we see
What honor hath humility."

"The saint that wears heaven's brightest crown
In lowliest adoration bends;
The weight of glory bows him down
The most when his soul ascends:
Nearest the throne itself must be
The footstep of humility."

An Old and True Friend.

A gentleman played off a rich joke on his better-half the other day. Being somewhat of an epicure he took it into his head that morning that he should like a first rate dinner. So he addressed her a note, politely informing her that a gentleman of her acquaintance—an old and true friend—would dine with her that day. As soon as she received it, all hands went to work to get everything in order. Precisely at twelve o'clock she was prepared to receive her guest. The house was as clean as a new pin—a sumptuous dinner was on the table, and she was arrayed in her best attire. A gentle knock was heard, and she started with a palpitating heart to the door. She thought it might be an old friend, perhaps a brother, from the place whence they once moved. On opening the door she saw her husband with a smiling countenance.

"Why, my dear," she said in an anxious tone, "where is the gentleman of whom you spoke in your note?"

"Why," replied the husband complacently, "here he is."

"You said a gentleman of my acquaintance—an old and true friend—would dine with us to-day."

"Well," said he good humoredly, "am I not a gentleman of your acquaintance, an old and true friend?"

"O," she cried distressingly, "is there nobody but you?"

"No."

"Well, I declare, this is too bad," said his wife, in an angry tone.

The husband laughed immoderately, but finally they sat down cosily together, and for once they had a good dinner without having company.—*Lutheran.*

The Exact Truth.

Two young masons were building a brick wall—the front wall of a high house. One of them, in placing a brick, discovered that it was a little thicker on one side than on the other.

His companion advised him to throw it out. "It will make your wall untrue, Ben" said he.

"Pooh!" answered Ben, "what difference will such a trifle as that make? You're too particular."

"My mother," replied his companion, "taught me that 'truth is truth,' and ever so little an untruth is a lie, and a lie is no trifle."

"Oh," said Ben, "that's all very well; but I am not lying, and have no intention of doing so."

"Very true; but you make your wall tell a lie; and I have somewhere read that a lie in one's work, like a lie in his character, will show itself sooner or later, and bring harm, if not ruin."

"I'll risk it in this case," answered Ben, and he worked away, laying more bricks, and carrying the wall up higher, till the close of the day, when they quit work and went home. The next morning they went to resume their work, when behold the lie had wrought out the result of all lies. The wall, getting a little slant from the nature of the untrue brick, had become more and more untrue as it got higher, and at last in the night had toppled over, obliging the masons to do all their work over again.

Just so with every little untruth in your character—it grows more and more untrue, if you permit it to remain, till it brings sorrow and ruin.

Tell, act, and live in the exact truth always.

Forgotten.

Generation after generation have felt as we feel, and their fellows were as active in life as ours are now. They passed away as a vapor, while nature wore the same aspect of beauty as when her Creator commanded her to be. And so likewise shall it be when we are gone. The heavens will be as bright over our graves as they are now around our path; the world will have the same funeral wind on its way, and the attraction for offspring that she had once for ourselves and that she has now for our children. A little while and all this will have happened. The throbbing heart will be stilled, and we shall be at rest. Our prayers will be said, and the grave clods will be thrown in, and our friends will all return, and we shall be left behind to darkness and to the worm. And it may be for some short time we shall be spoken of; but the things of life will creep in, and our names will soon be forgotten. Days will continue to move on, and laughter will be heard in the very chamber in which we died, and the eyes will glisten again with joy; and even our children will cease to think of us, and will not remember to lisp our name. Then shall we have become, in the language of the Psalmist, "forgotten and clean out of mind."—*United Presbyterian.*

THE COLD EYE.—We read in an Eastern paper that a man recently hung, said on the scaffold: "I am a sinner; I am guilty of the murder charged upon me. For one little error in my life, my relatives and friends turned upon me a cold eye," and he wept like a child.

These few words told the man's life. He erred. No kindly words of forgiveness fell upon his ear. No soft looks of encouragement met his gaze. The cold eye met him in his path. He fell before it. He arose. But it still haunted him. It was photographed in his sleeping and waking hours. It stared at him from every corner of daily existence. It drove him from the altar of repentance, from the fount of good resolves, from the fragrant vase of hope. He left the free and upright walks of life and sauntered in meditation, regrets, and despondency, in the haunts of vice. The good had turned against him. The bad invited him on. He was but a poor, weak man. One kind word, one friendly look, might have snatched him from the sea of crime which led him to the gallows. Who may tell his struggles? Who may tell the conflict in his heart where vice triumphed? He was the victim of a cold eye. Every day repeats the story.

Influence of Children's Prayers.

In one of the darkest periods of the Reformation when Luther, Melancthon, and others were assembled to consult what should be done, Melancthon retired from the council under great dejection of spirit. After a short time he returned, his countenance beaming with confidence and joy; and when all were surprised, at the change, he told them that he had just seen a sight which assured him of success. He had seen some little children engaged in prayer for the Reformation. Their mothers, who were assembled for the same purpose, had brought them together; and were assured such prayers would be heard of God. Courage in the needful hour for the greatest work ever accomplished by uninspired men was thus breathed into the soul by children's prayers. Such prayers the Church needs yet. Children, do you pray—not only for father and mother, for brother and sister, but also for the Church of God, and for the world?—*Visitor.*

Rest.

Rest! How sweet the sound! It is melody to my ears! It lies as a reviving cordial at my heart, and from thence sends forth lively spirits, which beat through all the pulses of my soul! Rest! Not as the stone that rests on the earth, nor as this flesh shall rest in the grave, nor such a rest as the carnal world desires. O, blessed rest! where we "rest not day nor night, saying, Holy, Holy, Holy, Lord God Almighty!" where we shall rest from sin, but not from worship, from suffering and sorrow, but not from joy. O blessed day! when I shall rest in knowing, loving, rejoicing, and praising! when my perfect soul and body shall together perfectly enjoy the most perfect God! when God, who is Love itself, shall perfectly love me, as I rest in my love to him; and rejoice over me with joy, and joy over me with singing, as I shall rejoice in him!—*Baxter.*

Young Folks.

Study-Table Talk.

"Is that flour you rub into your paper when you scratch out a word?" asked papa's eight-year old little curly-head, as she stood by his study-table, watching him use the eraser and pounce.

"No, dear, I don't use a dredging-box," replied her father, pleasantly.

"But you shake it out, and it's white," persisted curly-head. "Is it chalk?"

"That comes a little nearer to it," replied Mr. Asbury, lifting "Toy" upon his knee, while he shook some of the white powder upon his open palm.

"Toy! Toy!" called a voice from the foot of the stairs. "Come and set my animals in a row towards the ark, Toy!"

I can't do *anything* for that child!" said Antoinette, with the demure air of a matron of forty. Then, sliding from her father's knee, she called from an open door:

"You must be still now, you little 'holler-box! I want to talk and learn with papa."

"I *aint* a 'holler-box' at all—come *now!*" called back the persistent little Nellie, who followed Toy about as closely as a U follows a Q, (If you don't know how closely that *is*, see how many Q's you can find without a U next to them,)

"I'm learning: you can come up, too!"

So Nellie, with her fists full of broken-eared elephants and three-footed dogs and camels, and with a headless "Japheth," plodded her way up to the study and listened earnestly enough to redeem her from

Toy's nicknames, given because she would call her back to play, when she (four years older) wanted to be reading and studying alone.

"Do you know what papa has in this box," asked Toy.

"No."

"Well, it isn't flour, nor *all* chalk."

"What then?" asked Holler-box.

Toy looked at her father, for that was as far as she had got.

"It is something mixed with chalk—it is powdered tears."

Toy laughed. "I've heard," she said, "of putting tears in a bottle, but I did't know they could be *powdered*. I thought tears were always wet."

"*Mine* are," said Nellie, putting her fat finger up to a very dry eye.

"These are tears from a tree."

"I didn't know trees could cry," said Nellie.

"You have seen clear-looking spots of gum on plum trees, Toy?" said Mr. Asbury.

"Yes, and eaten it."

"Well, the tears or gum of a tree in Africa—a kind of pine—are called Sandarach; they are sold in shops, and made fine and mixed with chalk to be used as 'pounce.'"

"What is your pounce-*box* made of?" asked Nellie.

"Two can ask twice as many as one," said Mr. Asbury; but I will tell you."

"Suppose," said Toy, you tell us about every wooden thing on your table, for *this* lesson."

Mr. Asbury glanced over the various little articles about him, then at his watch and newly-tied sermon paper, and then cheerfully "accepting the situation," began:

"This pounce-box is made from a very hard, fragrant wood—the Chinese citron. The fruit of the tree is very rich and fragrant, but too sour to be pleasant to eat; so it is chiefly used for sweetmeats. If you should go into a Chinese parlor, however, you would be apt to find a silver basket or china-dish of them on a side-table, to make the room fragant with their delicious odor. There are many varieties of the citron tree, but this is one of the most rich and beautiful. This box was given me by a sailor-friend, and turned from a block of this wood, and polished and oiled."

"What is this reddish black ruler made from?" asked Toy.

"That is from the same wood as a certain little girl's work-box."

"Rosewood?"

"Yes."

"Is that a rose-tree, or a big rose-bush?" asked Nellie.

"No. There are different kinds of trees called rosewood; some of them having the odor of roses. They do not grow in our country, but are brought here in large pieces—halves of trees, sometimes. One kind of rosewood is a species of sensitive plant, or mimosa. You have seen that, Toy?"

"Yes, the delicate thing that could not bear to be touched? I tried to press a spray of the leaves one day, and although I had my book opened and close to the stem when I picked it, I could not get it in to press until the leaves were half shut up."

"There are many varieties of the mimosa—some very large trees. They grow in South America, and from there we get this rich, reddish striped rose-wood."

Toy's fingers were busy with the brass fastening to her father's box of mathematical instruments."

"What is this V shaped piece of smooth, black wood, father?"

"That is ebony," said Mr. Asbury, smiling. "I did not know your sharp eyes had ever noticed it. An ebony triangle."

"Is ebony always black?"

"No. The kind which is considered most valuable is black. There is a green and a red ebony. The tree grows in different islands, in Madagascar, in the Indian Ocean, and in Ceylon."

"Here is just *one more* thing," said Toy, holding up a carved paper-cutter—book-mark.

"That is from the white holly. The wood is white, fine-grained and hard. It is used for making boxes, and many fancy articles, such as your Aunt Lou's glove-box."

"The one she painted the blue-bells on?"

"Yes."

"There are many varieties of holly. It is an evergreen. I have seen one variety in the Southern States, with its beautiful scarlet berries, bright all winter. I have seen them made into vases, with the clear, wax-like berries of the mistletoe; and against the rich, dark leaves nothing could be prettier for a winter boquet."

"I should like them for beads," said Nellie.

"They would make fine enough necklaces for a queen. The leaves as well as the berries of the holly vary in color and beauty. Some berries are yellow, some white, others crimson. Some holly leaves are edged with gold; some spotted and blotched with silver and deep yellow."

"I did not know that there were so many kinds of curious and pretty wood."

"This is enough for two little heads at one time. But there are more wonderful and valuable kinds of trees than you could count up in a day. Sometime I will tell you about more of them."

"Thank you," said Toy, and "Thank you," echoed "Holler-box," as they went down to the nursery. —*Advance.*

Sinning and Repenting.

When I was about twelve years old, my father sent me one pleasant Autumn day, into the woods to cut a pole to be used in beating off apples from the trees. It was wanted immediately to supply the place of one that had been broken. I took my little hatchet and hied to the woods to execute my important mission. I looked in every direction for a long slender tree that would answer my purpose, and every time I stopped to examine a tree, a taller and straighter sapling caught my eye farther on. What seemed more surprising to me was that the little trees that looked so trim and upright in the distance, grew deformed and crooked as I approached them. So it is with human life. Both men and trees often lose their beauty as we approach them.

Frequently disappointed, I was led from tree to tree, till I had traversed the entire grove and made no choice. My path opened into a clearing, and near the fence stood a young cherry tree loaded with fruit. Here was a strong temptation. No house was near, no person in sight. None but God could see me, and I foolishly forgot that His eye looked down upon me. I resolved to taste the forbidden fruit. I climbed the tree and began to pick the rich, ripe cherries. I found no pleasure in the taste of them, I was so fearful of surprise and detection. Some one might come and find me in the tree. I resolved, therefore, to break off some richly loaded boughs and feast upon the cherries as I hurried home. The top of the tree was bowed with the weight of its fruit. I climbed as high as I could, and bending down the top, attempted to cut it off with my knife.

In my eagerness to secure my prize, I did not guard my left hand, which held down the top of the tree. My knife slipped from the yielding wood to my fingers and passed with unspent force across all the fingers of my left hand, cutting the flesh to the bone. I never could look at fresh blood without fainting. My eyes caught sight of the red drops that oozed from every finger; and my heart began to die within me. I slipped, like a serpent, through the limbs of the tree to the ground. The shock of the fall drove away the faintness, and I soon stood upon my feet. I wrapped my handkerchief about my bleeding fingers and hurried home. My mission was worse than useless. I had not accomplished the purpose for which I was sent; I had committed a crime and disabled myself for work. I was wanted as an apple picker. I found no sympathy from anybody. My father reproved me and threatened; and my mother, who dressed my aching fingers, said it was good enough for me; it would be a good lesson to me; and my sisters thought I might have known better. Nobody seemed to have the least regard for my tears but old Aunt Thompson; she said I was too lame to work, and she would go out and pick apples for me. But there was no excuse for me. I was compelled to work with one hand while the other hung in a sling.

That was a sad day to me. It required some weeks to heal the deep gashes make by my knife, and the scars are as bright after forty years as they were when the wounds were just closed. If the scars in the flesh were all, it would be comparatively a trifle. The soul was wounded as well as the body. The conscience was defiled with guilt which no human agency could remove. Tears of repentance could not wipe away the stain. Nothing but the blood of Christ could give health to the wounded spirit.

A Mohammedan mother once besought her profligate son to drive a nail into the ceiling of his room every time he was conscious of committing a wicked deed; and to draw out a nail every time he performed a good deed. He consented to do so; and soon his ceiling was black with nails. He became alarmed at his own follies and resolved to reform. He began the work in earnest, and slowly, one by one, the nails were withdrawn. When the last nail was taken out he hastened to his mother with the joyful tidings. "Mother," he exclamed," the nails are all removed."

"Ah, my son," said the mother, "*but the prints of the nails are there!*"

So do youthful sins leave the traces of their existence on the soul. Like the scars from the healed wound, they disfigure and weaken the soul. The recollection of early follies cripples the powers of mature manhood. Every sin of childhood hangs, like a weight, upon the neck of manhood. The way of young transgressors is hard; the way of old transgressors is terribly hard when the burdens of youth are laid upon the shoulders of age.

A. ROMAN & CO.

Publishers, Booksellers & Stationers,

417 & 419 MONTGOMERY STREET,

SAN FRANCISCO,

Desire to invite attention to their extensive stock of

PRESENTATION BOOKS,

Suitable for the approaching Holidays.

THEIR STOCK OF

STANDARD WORKS,

A liberal discount made to Sunday Schools, Teachers, and Clergymen.

Constantly on hand "SONGS OF THE SANCTUARY."

CHILION BEACH,
Bookseller and Stationer,
34 Montgomery Street, opposite Lick House.

NEWS SUMMARY.

PACIFIC COAST ITEMS.

THE *Westminster Review* relates the following anecdote concerning the early history of our city:

At one time a lady could hardly walk through the streets of San Francisco without having every one pause to gaze on her, and a child was so rare that once at a theater in the same city, where a woman had taken her infant, when it began to cry, just as the orchestra began to play, a man in the pit cried out, 'Stop those fiddles, and let the baby cry: I haven't heard such a sound for years!' The audience applauded this sentiment, the orchestra stopped, and the baby continued its performance amid unbounded enthusiasm.

THE *Sacramento Union* thinks that society would be immeasurably benefited, and woman's aspirations in a great measure satisfied, if we had "some industry of a general character in which women could participate with profit to health, beauty, and purse," and points out the introduction of silk-culture as "precisely the desideratum required to conduct our California society to this much needed reform."

THE Mormon children, it is said, learn to read from books printed in a peculiar alphabet which is very different from that used by other children in this country. Some 10,000 school books printed in this alphabet have lately arrived at Salt Lake City. Brigham Young, it would seem, has by no means played his last card yet.

THE Outside Land Committee asked the city for the modcrate sum of $10,000 each for their services, but as it is not convenient to make the exact change, they will, according to Judge McKinstry's decision, have to content themselves with $2,100.

THE destruction of the dam at the outlet of Clear Lake, although not a very orderly proceeding, has had the desired effect. The lake has fallen 12 inches, and a large tract of land formerly overflowed is now ready to receive seed.

THE artesian well which is being bored by the Central Pacific Railroad Co., between the Truckee and Humboldt Rivers is now down over 300 feet, and the water is still very hot.

THE *Yreka Union* says that the lakes in Siskiyou County are rising from year to year. An old road traveled in 1852 is now 18 feet under water.

THE rain fall thus far is 5.07 inches which is said to be sufficient to insure a grain crop. The rain is as acceptable to the miners as to the farmer.

THE Pioneer Silk Factory is still at work turning out a good quality of goods, notwithstanding its reported death.

THE Santa Rosa *Democrat* says that the crops have never failed in Sonoma County since its settlement.

AN excursion from this city and Sacramento to Calistoga via Vallejo, took place on Wednesday last.

A PROJECT is said to be already on foot for a railroad to the White Pine region.

THERE are 118 locomotives now in use on the Union Pacific road.

THE fare to Sacramento by steamboat has been reduced to $2.

BURGLARS are at work in Alameda County.

ALLEN'S ORIGINAL AND GENUINE

Nerve and Bone Liniment.

The Nerve and Bone Liniment was originated by Geo. M. Allen, in the year 1834, and has lived entirely on its own merits without the aid of advertisements; but owing to the many counterfeit and worthless articles called Nerve and Bone Liniment, now upon the market, has induced the proprietors to advertise it. Many certificates of leading citizens who have used and constantly keep it in their houses, as a great family remedy, could be added to the advertisement, but knowing the many virtues of Allen's Nerve and Bone Liniment, and that one application will satisfy any one of its beneficial effects, deem it unnecessary to bring the certificates before the public. Allen's Nerve and Bone Liniment does not effect a cure in a minute, but acts upon the Nerve and the Bone of the patient by its penetrating properties, when used according to the directions on each bottle, and gives new strength to the parts affected, and thus acts as an agent in helping nature to restore the diseased parts to health. It is also invaluable in all diseases of horses.

Be sure to call for Allen's original and genuine Nerve and Bone Liniment, all others are worthless counterfeits, and should not be tolerated by the public.

CURRENT TOPICS.

The Board of Foreign Missions of the Old School branch of our Church makes an exhibit of its condition which should move all who may be expected to come to its relief to immediate action. There is no demonstration of incapacity or inefficiency, no complaint of doors closed by Providence against advance, no fear that the Lord disapproves of the work the Board has undertaken. On the contrary, so manifest was the favor of God, and so inviting and wide were the doors through which the Gospel might have access to the nations in darkness, that the Board was encouraged to attempt with more vigor than before to accomplish its work. There seemed to be an imperative and emphatic command that the representatives of the missionary spirit in the Church go forward, and everything seemed to forbid that they should go back. Yet those on whom they relied for support have gone back, even from the position attained last year. The treasury has received less than last year during the first seven months, by $40,861, and the Board is now in debt $88,897. No one believes that more has been undertaken than ought to be done by us for the conversion of the heathen. There is reason to fear that the missionary spirit needs to be more generally cultivated among Christians of all denominations, for almost all are found to be in debt, notwithstanding the liberality of the comparatively few who have supported missions. Every man and every woman who loves the Savior, should keep His commandment when He says, "Go, preach the Gospel to every creature." Then there would be both money and men for the work, and the paralysis of debt would be removed.

The Church is widely exercised as to the means of reaching the masses with the Gospel. It seems to be generally admitted that other labor than that of the ministry is needful for the purpose. *The Presbyterian*, in a two-column article, urges that the ordinary means of grace are sufficient, viz: the preaching of the Word, together with fidelity on the part of the Church in Christian doctrine, beneficence, and attendance upon religious duties in the closet and sanctuary; and warns us against unusual agencies, as but of "mushroom growth, and their influence as evanescent." *The Christian Work*, on the other hand, would almost seem to ignore the methods heretofore adopted, and would resort to a vast co-operative influence and united aggressive attack upon the kingdom of Satan, even to the extent of employing the Church as a political engine with which to overthrow her enemies. We had supposed that the terrible result of such an experiment in the time of Constantine, followed, as it was, by the Great Apostacy, would be sufficient to guard against any such suggestion. The truth evidently lies in the medium. We need more labor on the part of our Christian people; labor in finding out families that do not attend Church, and bringing them there, and to Christ; labor in increasing the attendance upon our Sunday Schools. But we also need all the institutions of God's house; the studious, faithful pastor: the watchful, active eldership; the affectionate, liberal deaconship; the zealous, earnest membership; all constituting a faithful branch of Christ's mystical Body.

One of the marvels of our days is the recklessness which prevails respecting the use of kerosene. Accidents resulting in the loss of limbs and of life, and the destruction of property, are attributed to it so often that they are almost regarded as a matter of course. Occasionally some writer will publish a few words of remonstrance, but the most of the people seem to pay little heed, and nothing of which we have ever heard has been done for the regulation of the manufacture, or the sale, of an article that is so dangerous. The danger is believed to arise from certain qualities that affect the purity of the oil, and we are told that it can be prepared in such a way that it will be entirely safe for household use. If this is true, there ought to be a law determining its ingredients, or mode of composition, and there should be men appointed to examine and seal all that is offered for sale, with a heavy penalty if any is sold not thus guaranteed to the purchasers. Neglect is criminal, and common philanthropy, if not a conviction of personal peril, should provide all possible means of protection to the people, while kerosene continues to be used.

Our Committee for the Aid and Evangelization of the Freedmen has been in existence three years, and the results of its work are very encouraging and satisfactory. With an expenditure of $122,887, including all that was granted by the Government, 23 churches have been organized, with 4,603 communicants; 23 houses of worship have been built or purchased, and 2,869 pupils have been gathered into schools. Of course, a large portion of the work done thus far has been preparatory, and we may look for more success that will be apparent during the next three years. In no department of Church efficiency has the effect of system and vigor been more manifest than in the action of this Committee. The difficulties to be overcome were not small, yet, by wisely directed effort, we have been able to set an example which our brethren of other denominations recognize, and which they will imitate.

An English paper states that a College for Seamen has been founded in South Shields, at the mouth of the Tyne. A physician of that place bequeathed $300,000 for this purpose, who directed that a complete nautical education should be given to every seaman, whether British or foreign, who was willing to receive it. This appears to be another indication that the judgment of many practical men begins to favor the division of education into departments, so that those who desire to give their whole study to some particular branch of science, or art, may have opportunity to do so, in a school devoted entirely to that branch. There is much reason to doubt the wisdom of this opinion, since it tends to the development of parts of a man, rather than his complete education, but the experiment will be made. The only condition of admission into this College for Seamen is that the applicants shall be *bona fide* seamen and be acquainted with reading, writing, and the first four rules of arithmetic; and the course of instruction is rigidly confined to those studies which are directly related to navigation.

The number of Jews in this country is about 500,000. There is much wealth among them, but little influence in proportion to their numbers, and not much enthusiasm, even in respect to maintaining their own congregations, if we may rely on the statistics they furnish. They have about 250 congregations, of which not more than 40 are supplied with clergymen. Advance will be slow indeed, if the ancient Church does not show more zeal in self-support and the conversion of others to the Jewish faith, and it is difficult to account for such general apathy. Christians are by no means doing what ought to be done to propagate the truth as they hold it, yet they are far more active than the Jews. If the Jews are right, and we are wrong, they are certainly to be blamed for the indifference with which they regard the world's spiritual condition.

After a struggle for independence which should have been rewarded with a better fate, Crete has been obliged to surrender to Turkey. Other nations professed to be in sympathy with the brave little band, and there was hope for a time that some form of intervention would put an end to the war in her favor, but indifference or diplomacy at last prevailed, and no help was offered them. It remains to be seen whether the condition of the island will be better or worse, as the result of the war, though it can hardly be expected that the conquerors will lighten the burdens of the insurgents.

Universalists, one would suppose, should not be much disturbed by any evidence that as a body they are not rapidly increasing in numbers and influence. The nature of their creed should induce content, since its acceptance on the part of others is not necessary to their welfare, and many will feel that a Universalist Church is an idle form. Yet they are dissatisfied, and last month held a Conference in Springfield, Massachusetts, to consider their condition, and to devise plans for the extension of their influence. The chief necessity urged was

that they should have a more thorough organization, and some advocated a Church in regular form, on the ground that "sin is organized, and the devil is one of the greatest of organizers," a sentiment most true, yet one which sounds a little strange as uttered in such a meeting. There was another utterance on the floor, however, which must have surprised in some measure even those who hold the broadest views. One man did not feel the need of reconstruction, or more definite organization, but declared, "We must not be afraid to say that we must be converted. If we have the Spirit of God in our hearts we can take our present organization, and do all that we can hope for." If Conferences promote the declaration of such doctrines as this from the lips of Universalists, we hope they will be multplied. To our view it is a significant sign of the times that they are pressed by manifest decline, and loss of position and power, to the avowal of what their old-time leaders would have ridiculed and condemned.

The state of affairs in the south of Europe must attract the attention of all who are watching the political chess-board, when a move by one nation, or another, may determine events of mighty import. Crete and Greece are of little consequence, in themselves, but they are so related to Russia and Turkey and the Western Powers, that they may become of vast consequence, and their destiny may be the key of the future for the whole continent. At present it seems that the Sultan has much more nerve in his purpose to maintain his old relations than he was thought to possess, and the resolution of those who oppose him, directly and indirectly, is developed by his own firmness. Diplomacy can hardly settle the questions now involved in the strife, and all the nations concerned regard a more general war as imminent.

Religious Intelligence.

PACIFIC COAST.

Appropriate.—Being present at Mr. Van Pelt's funeral, in Dr. Eell's church, I noticed that the Christmas wreaths and evergreens still adorned the walls of the building. The connection struck me with peculiar force. This excellent young man had been a scholar and teacher in our Sunday Schools. He had died composed, resigned, hopeful, with a heart full of all consecration to Christ. It was right, then, that the amaranth and bays should shed their bloom and verdure about his coffin. The remarks of the pastor, that in this case Christ had not only "brought life and immortality to light," but had "abolished death," came like a voice from Heaven. The young Christian hero lay in his glory. Death for him was abolished. Body and soul were indeed separated for a short space of time. But the body reposed with all the emblems of victory about it; and the soul had ascended to mingle with the rejoicings of the redeemed. "We are more than conquerors, through Him that loved us." S. W.

Vallejo.—We have the promise of an abundant harvest, in the copious showers of rain that have been falling for the past few days, and still continue to refresh the earth. With rain comes plenty of wind, but in spite of the two combined, the scholars of the Presbyterian Sabbath School of this place assembled upon Christmas Eve under the shadow of a goodly Christmas tree, and received various tokens of good will from its branches. Nor was their pastor, (Rev. N. B. Klink) forgotten, but was made the recipient of a check for $405, which with a purse for Mrs. Klink, and many valuable gifts to his family, was thankfully received. Such tokens are befitting the time commemorative of the dawn of good will upon our earth. E. S. K.

Mariners' Church.—Rev. Mr. Rowell, pastor of the Mariners' Church, gave last Sunday morning a *resumé* of his work for the past ten years. He mentioned among the other causes of the church's gratitude, several interesting facts. He has held, during this period over 2,000 religious services. He hopes that he has witnessed in his ministry nearly 300 conversions. The church has had upon its list nearly 200 members. Not a few of his flock in their death have illustrated the sentiment: "The chamber where the good man breathes his last is privileged beyond the common walks of life." The joys and sorrows of his people have been of such a kind and degree as to excite mutual sympathy and fraternal love. His long pastorate has exceeded in duration that of any contemporaneous minister. The church has entered upon the enjoyment of a beautiful house of worship. For these cheering facts the pastor called on his people to give glory to God, and trust Him more implicitly in the future. We rejoice that such a measure of prosperity as is indicated above has attended this enterprise. Helping the seaman we are helping at once the poor and the stranger—the two classes whom especially God would not have his people forget.

Healdsburg.—We are pleased to learn that the Alexander Academy, situated in this pleasant village and conducted under the auspices of the Presbytery of Benicia, is in a flourishing condition. The institution is under the management of Rev. R. R. Wells, assisted by Miss C. A. Brown. The course of study is designed to fit pupils for the various pursuits of life, and students will also be prepared for a collegiate course. The present session commenced on Monday last.

Petaluma.—The Baptist church in this place three years ago numbered 33 members. At present the number is 150. 125 is the gain during the pastorate of Rev. B. S. McLafferty.

City Missionary Society.—This society will hold its regular quarterly meeting on Sunday 10th inst. in the Congregational church at the Mission.

Howard Presbyterian Church.—The average attendance at this church is estimated to be, in the morning 740, in the evening 1,150.

EASTERN.

Wants to Back Out.—Before the war Mr. C. H. McCormick proposed to the General Assembly of the Presbyterian Church (O. S.) that he would endow four professorships in a Theological Seminary to the amount of $25,000, if such institution were established in Chicago under the auspices of that denomination. The offer was thankfully accepted. Three of the professorships were endowed and filled with able men. The fourth (Rev. Wm. M. Blackburn) was filled at the recent Albany meeting of the General Assembly, and Mr. McCormick was duly notified. He has refused to pay the last instalment, and intimates the propriety of a refunding of the $75,000 he had already paid, adding, by way of inducement, "without interest." Mr. McCormick, widely known as "the Reaper man" is a Democrat and used to express his belief that "the Old School Church and the Democratic party were the two hoops that held the Union together." But since the Assembly sent back Dr. E. D. McMasters, an old line Abolitionist, to take Dr. Rice's chair in the Seminary, and when Dr. McMasters died sent a man of like spirit in his place, Mr. McCormick thinks one of "the hoops" has warped a little, and now withdraws from his offers. On the refusal of the General Assembly to re-elect Dr. Rice, he gave $30,000 to the Union Theological Seminary of Virginia; but now offers to pay over the remaining installment to the Seminary in Chicago, if a working majority of the directors can be of *his friends*, and to add $5,000 more to each professorship.

Congregational Church in Washington.—The *ex parte* council summoned by Gen. Howard and his friends in the church at Washington, in their report recite the proceedings, give a summary of the evidence, and conclude with their findings. Touching the action of the church in dismissing from office two of its deacons without charges preferred against them or trial, also in suspending a brother for writting a severe private letter to the pastor, also in irregularities of holding meetings, and in keeping the records, also in respect to pledging in writing candidates for admission to support of the pastor, the lack of observance of missionary concerts, and collections, also in relation to the conduct of the pastor in regard to the Sabbath-school, to the admission of colored people to membership of the church, on all these points the Report was emphatic in disapprobation. This council recommended a mutual council as the only tribunal suitable for the case and to this end advised to use every endeavor to make the council called by the pastor and his friends for the 13th of January a mutual one to consider and settle all matters of difference.

Congregational Papers.—The Congregationalists have now only two denominational papers. The *Congregationalist and Recorder*, of Boston, and the *Advance*, of Chicago. The *Independent*, formerly a very zealous denominational sheet, now says: "This journal is the organ of no sect in the Church; is no 'organ' at all, except of its editor and publisher. It undertakes to represent nobody but ourselves. It is this liberal and Catholic Christianity, and no narrow and belittling sectarianism, that this journal, by God's grace, shall continue to advocate."

Towards *The Advance*, it gets off the following:

"We are greatly pained to be told that *The Advance*, an amiable local paper of Chicago, has lost $20,000 since its establishment. As we are under obligations to that journal for much gratuitous advertising of the *Independent*, and as we are not willing to be thought ungrateful, even for small favors, we take this opportunity to commend *The Advance* to the sympathies of the charitable and humane. Any money sent to us in behalf of the sufferers will be promptly forwarded."

Brooklyn.—The Classon Avenue Church (Dr. Duryea, pastor), laid the corner-stone of their new church edifice on Thursday, December 1st. Rev. Messrs. Lee, Booth, Cuyler, and Gleason took part in the exercises; Dr. Duryea laid the stone. The building is to be 100x74 feet, of Belleville (N. Y.) stone, trimmed with Ohio sandstone, built in the Norman style, though somewhat modified; to have two towers, and a spire of 200 feet high, and to cost, when completed, $125,000. The interior arrangement is somewhat peculiar, in that the pulpit will be on the side of the church, and the aisles will of course run across, instead of lengthwise of the building, and the organ is to be back of the pulpit, but the key-board on the ground-floor in front of the pulpit. The pews are arranged much as those in Mr. Beecher's and Dr. Cuyler's churches; a gallery will be placed on three sides of the church, and extended backward between the towers, thus furnishing about 1,200 sittings. From Classon Avenue there will be three entrances, from Monroe Street, two.—*Am. Presbyterian.*

Presbyterian College.—Lake Forrest, one of Chicago's suburban districts, twenty-eight miles north of the city, on the Milwaukee Railroad, is soon to realize the expectations of its founders, in the possession of a first class Presbyterian college. This enterprise, which has for some time been retarded by unforeseen causes, has been taken hold of with earnestness by the new pastor of the Lake Forest church, Rev. J. H. Taylor, whose efforts now prom-

ise success. He has nearly raised $100,000, which with the fund before secured, will be a good start for this most desirable object. Here is now building also a large and beautiful structure for a young ladies' seminary; while an academy for boys is in successful operation. So that this is destined to be an educational centre, while from its beautiful location it is the most attractive place for residences of business men within reach of Chicago.—*Cor. of The Evangelist.*

THE Rev. Albert Barnes preached a sermon commemorative of his attaining the measure of threescore years and ten, on Sunday 6th ult., in the First Presbyterian church, Philadelphia.

THE Alleghany Theological Seminary (O. S.) has 65 students in attendance, with the names of four or five more on the roll. The Seminary at Chicago has 34 students.

REV. E. P. WELLS, late of Williamson, Mass., has received and, it is understood, will accept a call to the church in Denver, Col., where he at present resides.

THE WORLD'S EVANGELICAL ALLIANCE will hold its next session in the city of New York, and Lord Shaftsbury promises to be present.

NEW JERSEY is called the garden-field of Methodism, which has now over 50,000 followers in that State.

FOREIGN.

THE Irish Presbyterian Church, besides at present establishing churches at the watering-places and the great tourist resorts, has appointed a missionary to Alexandria, in Italy, and another to Vienna, both in connection with the Jewish mission, but to take advantage of all openings for spreading the Gospel; has designated a clerical and a medical missionary to commence a mission in China at Neuchang, where Mr. Burns died; and returns her late Moderator to India, accompanied by a fresh missionary for the station there. There are now fifty-six colporteurs employed and training for their special work. They pass freely through the southern and western counties, meeting many welcomes, large sales, and, on the whole, few rebuffs. Once a year they meet at their provincial centres, pass an examination, and receive words of encouragement and counsel. Some of them assist in prayer-meetings: most of them find ready opportunities of reading the Bible to Roman Catholics, and the colporteur's pack has been sometimes opened in a convent. The necessities of trade have drawn Roman Catholic workers into Protestant neighborhoods, and the opportunities of farming have drawn Protestant settlers into Roman Catholic districts; and as this interchange of population goes on, there is a fusion that can but issue in the wider spread of evangelical truth.—*Reformed Church Messenger.*

A SCOTCH PRESBYTERIAN, PRIMATE OF ALL ENGLAND.—260 years ago a Scotchman ascended the national English throne; to-day a Scotchman ascends the English Episcopal throne. Archibald Cambell Tait, good Scotch Christian names are his, late Bishop of London, has been made Archbishop of Canterbury. He was born in Scotland, of an old Scotch family, and brought up a member of the Scotch Church. He was educated at Edinburgh and Glasgow, and was intended for his ancestral Church. But with an instinct as to his future, and an aspiration after it, he turned his back on the polity of his fathers, joined the English National Church, and went to Oxford. Tutor and Fellow there, head master in Arnold's school at Rugby and Bishop of London, were his successive steps to the base of the throne which he has now mounted. His old Scotch friends look askance at their successful brother. They attribute to him unworthy motives. He is probably the first Primate that originated in the Scotch Presbyterian Church.—*Zion's Herald.*

UR OF THE CHALDEES PAYING TITHES.—There is a little missionary church at Oorfa, in Eastern Turkey—"Ur of the Chaldees"—which has incorporated in the confession of faith assented to by every member, a promise to follow what is held to be the biblical rule or method for raising the money needed for religious purposes. It requires of every member the regular payment of a full tithe of his income "for the support of schools, preaching and other expenses of worship and instruction in the congregation," and that for purposes of benevolence, for the poor and missionary objects, it is the duty of every Christian to "lay by him in store, as God hath prospered him, every first day of the week," according to 1 Cor., xvi., 1—2. And to secure fidelity and repress covetous tendencies, each one will keep a written account of his income and expenses.—*Observer.*

A NEW DENOMINATION.—For many years a body of believers, known as the Reformed Church of Spain, and now numbering about 3,000, have been worshiping by small companies, and in secret places. About twelve churches have been wholly organized, the one at Malaga containing 200 members. In a dark cellar they have printed a few copies of the Testament and a Family Catechism. Schools, established at Bayonne and Pau in France, and Lausanne, Switzerland, are preparing their young men for Bible readers.—*United Presbyterian.*

HOW THE POPE BEARS THE NEWS.—A correspondent of the *Evangelist* says: The news of the revolution of Spain came upon Rome like a thunderbolt. According to one correspondent, "the Pope's voice trembled, and his knees smote together;" he at once ordered the different quarters of the city to be protected by an increased military force; guards were doubled, evolutions of infantry and cavalry were practised outside the city walls, and precautions the most minute were taken in the guards of the fortified places.

UNBECOMING.—The Patriarch of the Greek Church, resident at Constantinople, refuses to receive the Pope's "Letter to the Eastern Churches," as "couched in unbecoming language." The Armenian Patriarch, of the same city, replied that he could not answer it without the advice of his Synod.

MR. HAMMOND IN LONDON.—A letter from London states that Rev. E. P. Hammond has been holding a series of meetings for children, in Mr Spurgeon's Tabernacle with great success. On Sunday afternoon, Nov. 8th, it is said that between 6,000 and 7,000 were present.

PROCLAMATION AGAINST CHRISTIANITY.—The North China *Daily News* says the proclamation against Christianity, which first made its appearance in the Province of Hanan, has been now reproduced, and widely posted throughout other provinces of the empire.

A MR. DAVID DUNCAN leaves the Free Church of Scotland nearly 200,000 dollars in gold, mostly to the Church's Boards.

THE first Protestant Church in Central China was dedicated at Hankow by the Bishop of Victoria, November 7th.

List of Presbyterian Clergymen,

ON THE PACIFIC COAST, ALPHABETICALLY ARRANGED.

Rev. Jas. M. Alexander, N. S., San Leandro, Cal.
Rev. H. R. Avery, O. S., Walnut Creek, Cal.
Rev. B. B. Bonham, O. S., Sebastopol, Cal.
Rev. I. H. Brayton, N. S., Principal College School, Oakland, Cal.
Rev. W. W. Brier, N. S., Alvarado, Cal.
Rev. Fred. Buel, O. S., agent California Bible Society, 757 Market Street, San Francisco.
Rev. W. H. Cain, O. S., (Not preaching) San Francisco.
Rev. Charles Russell Clarke, O. S., Principal City Female Seminary, corner Mason and O'Farrell streets, San Francisco.
Rev. A. J. Compton, O. S., Watsonville, Cal.
Rev. Eli Corwin, N. S., Congregational Church, Oakland, Cal.
Rev. J. M. Dick, U, P., Eugene City, Oregon.
Rev. H. H. Dobbins, O. S., Sutter Creek, Cal.
Rev. Henry Durant, N. S., Professor College of California Oakland, Cal.
Rev. John Edwards, O. S., Visalia, Cal.
Rev. James Eells, D.D., O. S., pastor First Church, Stockton Street; residence, corner Stockton and Clay Sts., San Francisco.
Rev. Ben. E. S. Ely, O. S., Stockton, Cal.
Rev. J. G. Fackler, O. S., pastor Central Church, Mission Street; residence, 121 Fifth Street, San Francisco.
Rev. A. Fairbairn, O. S., Chico, Cal.
Rev. Frederick Fox, N. S., pastor Emanuel Church, corner Folsom and Seventeenth streets, San Francisco, Cal.
Rev. Thomas Frazer, O. S., Santa Rosa, Cal.
Rev. S. D. Gager, U. P., Eugene City, Oregon.
Rev. Ed. R. Geary, O. S., Calapooya, Oregon.
Rev. M. M. Gibson, U. P., residence 608 Pine Street, San Francisco.
Rev. L. Hamilton, N. S., Oakland, Cal.
Rev. J. R. Hammond, O. S., Placerville, Cal. Visiting in the East on account of ill health.
Rev. Joseph A. Hanna, O. S., Eugene City, Oregon.
Rev. Silas S. Harmon, N. S., San Buenaventura, Cal.
Rev. Oliver Hemstreet, O. S., Ione City, Cal.
Rev. I. N. Hurd, N. S., pastor Potrero Church, San Francisco, Cal.
Rev. S. G. Irvine, U. P., Albany, Oregon.
Rev. T. S. Kendall, U. P., Albany, Oregon.
Rev. N. B. Klink, O. S., Vallejo, Cal.
Rev. A. L. Lindsley, D.D., O. S., Portland, Oregon.
Rev. A. W. Loomis, O. S., Missionary among the Chinese, chapel and residence, cor. Sacramento and Stockton sts., San Francisco.
Rev. B. Lowe, O. S., 10 Martin's Block, San Francisco.
Rev. W. F. B. Lynch, N. S., Alvarado, Cal.
Rev. James H. Marr, O. S., Calvary Mission, San Francisco.
Rev. David McClure, N. S., Principal Oakland Academy, Oakland, Cal.
Rev. Robert McCullough, O. S., Yreka, Cal.
Rev. J. S. McDonald, O. S., Sacramento, Cal. Resigned.
Rev. W. C. McKaig, D.D., N. S., Marysville. Cal.
Rev. James McLaughlin, N. S., Gilroy, Cal.
Rev. J. H. McMonagle, O. S., pastor Larkin St. Church, residence, 1312 Jackson St. San Francisco.
Rev. W. J. Monteith, O. S., Albany, Oregon.
Rev. Joshua Phelps, D.D., O. S., 38 Stanley Place, San Francisco.
Rev. James Pierpont, N. S., San Francisco.
Rev. George Pierson, N. S., Brooklyn, Cal.
Rev. F. L. Nash, N. S., Alameda, Cal.
Rev. John S. Reasoner, O. S., Brownsville, Oregon.
Rev. Robert Robe, O. S., Brownsville, Oregon.
Rev. Henry M. Scudder, D.D., N. S., pastor Howard Church, Mission Street. Residence, 1 Vernon Place, San Francisco.
Rev. John Sessions, D. D., N. S., Oakland, Cal.
Rev. Anthony Simpson, O. S., Corvallis, Oregon.
Rev. W. R. Sloan, Steilacoom, W. T.
Rev. A. H. Sloat, pastor of Westminster Church, Hayes Street, San Francisco, Cal.
Rev. Townsend E. Taylor, N. S., Virginia, Nevada. Not preaching.
Rev. James S. Todd, O. S., Arcata, Cal.
Rev. Lewis Thompson, O. S., Bloomfield, Cal.
Rev. P. V. Veeder, O. S., Principal City College, corner Geary and Stockton streets. San Francisco.
Rev. Charles Wadsworth, D.D., O. S., pastor Calvary Church, Bush Street; residence, 920 Pine St. S. F.
Rev. E. B. Walsworth, D.D., N. S., President of the Female College of the Pacific, Oakland, Cal.
Rev. L. P. Webber, N. S., Santa Clara, Cal.
Rev. Robert R. Wells, O. S., Healdsburg, Cal.
Rev. S. T. Wells, O. S., agent Presb. Board of Publication. Depot at Bancroft's Bookstore, 609 Montgomery St.
Rev. Samuel Whiting, N. S., Mendocino, Cal.
Rev. A. F. White, N. S., Carson, Nev. Serving as State Geologist.
Rev. Geo. F. Whitworth, O. S., Seattle, W. T.
Rev. Ed. P. Willard, N. S.. Columbia, Cal.
Rev. S. A. Willey, N. S., Vice President College of California, Oakland, Cal.
Rev. M. A. Williams, O. S., Jacksonville, Oregon.
Rev. S. Woodbridge, D.D., O. S., Benicia, Cal.
Rev. J. Worth, U. P., Brownsville, Oregon.

Rev. Richard Wylie, O. S., Napa, Cal.
Rev. James Wylie, O. S., Napa, Cal.

Oakland Academy.

A CLASSICAL, ENGLISH, & MILITARY BOARDING SCHOOL

REV. DAVID McCLURE, PRINCIPAL.

The Ninth Term of this Institution will commence on Wednesday, Jan. 4th, 1869, in the new Academy building, recently erected on Telegraph Road, one mile from the Railroad Depot.

The location and plan of this new building have been made with the design of securing for the students a home of beauty and refinement.

Careful provision is made for thorough and extensive courses of study in English, Mathematics, Natural Science, and the Ancient and Modern Languages. A special course is also provided for those who are preparing for a commercial life.

In addition to these courses there is a daily military inspection and drill, together with vocal and light gymnastic exercises, under the instruction of a teacher. Every student is required to attend the military and gymnastic exercises, as a means of physical training.

For the mental, moral, and physical culture of each pupil committed to his care, the Principal holds himself responsible.

Further particulars may be obtained by addressing the Principal at Oakland.

Contributions.

The Heathen among us.—VIII. The Difficulties Encountered by the Mission Schools.

In this work, as in every other of any importance, the Christian laborers must expect to encounter difficulties, but perseverance will overcome them.

No scholars will ever come of themselves. They must be hunted up, and brought into the school from among Chinese wash and lodging houses. Many of them cannot speak any English, others pretend that they are unable to understand, and a few say they do not want to learn. But in no house will the visitor be treated with rudeness or disrespect; though on Sunday the heathen will be found hard at work, washing, ironing, scrubbing and cleaning up their little rooms, and engaged in other week-day labor. They will tell you that they have no time for studying to-day, but at some other time, perhaps next Sunday they will be glad to attend school; but this is only an excuse to get rid of you.

Perhaps out of ten places visited, and fifteen or twenty persons seen you may not secure a single scholar; but if you will go Sunday after Sunday to the same places, and keep urging them to come, they will in time learn to know and feel confidence in you, and some will go with you to the school. When you have secured one out of a house containing from three to six Chinese, you will in time obtain the others.

The school must be managed with great care, the Chinese are very proud and sensitive people. It is easy to hurt their feelings and estrange them by neglect or improper treatment. They can easily be driven from the school, in truth, it requires much tact and good management to retain them. But by kindness, you can so win their esteem that they will look up to you, and show in their actions and words what they feel in their hearts, sincere gratitude for the instrucion they have received. They are gentle, respectful, and obedient in their deportment.

Teachers should not raise their expectations too high. Perhaps only five of six scholars may be secured the first month, and not more that twenty at the end of half a year; but if the school is taught as it should, every scholar will aid in its increase by bringing others of his countrymen into it. The hardest work, the greatest difficulties, and discouragements will be encountered in the first few months of mission labor.

When you think of the great importance of the work in which you are engaged, and of the reward promised to the faithful Christian laborer, you will press on regardless of difficulties and discouragements, and in the end, be doubly blessed, by success here, and happiness hereafter in God's award "Well done, good and faithful servant!" C.

Humor.

A certain degree of humor is an admirable feature in a religious discourse. Ministers too often fall into the error of supposing that only grave and methodical illustrations can be admitted into their lucubrations, while, in fact, a moderate degree of more lively and entertaining ideas would not only keep their hearers awake, but would confer more correct impressions of divine truth.

Of course this view may be carried to an extreme. When a man finds that he can be humorous, he may be disposed to try to be witty. When he has succeeded in some sallies of wit, he may attempt the extravagant, the burlesque, or even the smutty, in order to raise a laugh. The mud thrown at Innocent all fell off his garments, but no doubt stuck to the fingers of his assailants. Dead flies in costly perfumery, and foolish jests from the pulpit are alike unsavory.

About 170 years ago the play upon words was a favorite amusement. The Rev. Wm. Dyer, a prominent minister of London, was a wonderful master of the art. Hardly a sentence of his printed sermons, now very rare, but contained a series of puns, or was a punning serial; that did not abound in verbal quibbles and quibbling verbiage. Hearers soon weary of such small game, and had not Mr. Dyer possessed a large fund of Gospel knowledge, his ministry could never have been attended, as it was, with marked success.

The Scriptures occupy a stand-point that rarely admits humor, yet they frequently employ irony. Thus Elijah derided the shouting prophets of Baal, "Cry aloud! for he is a god; either he is talking, or he is pursuing, or he is on a journey, or peradventure he sleepeth and must be awakened!" Yet I think there is a touch of sublime humor in that magnificent passage in Isaiah, where Babylon personified is represented as Lucifer, sun of the morning with "all his pomp and noise of his viols," descending into the grave, "Hell from beneath is moved for thee, to meet thee at thy coming! It stirreth up the dead for thee,—all the chief ones of the earth. It hath raised up from thine throne all the kings of the nations!"

A distinguished clergyman once gave a shock to my feelings—or prejudices—by inquiring if our Blessed Lord did not employ humor, when he addressed that huge, self-righteous, ignorant Galilean rabble assembled to hear the Sermon on the Mount; when together with the most wonderful exposition of of the Divine Law, he adds: "Be ye therefore perfect, even as your Father which is in Heaven is perfect."

I think, however, that such was not the case. The character of Christ was too affectionate; his object —the exaltation of the law as illustration of the necessity of the atonement—too supremely important; and the pre-occupation of his mind with his great purpose too absorbing, to admit of any play of his intense emotions beyond their direct intention.

But when Paul speaks of perfection, in Phil. iii: 12, 15, the case is different. He is not perfect; not he! "but *as many of us as be perfect!*" let us be of his mind in following Christ.

Socrates possessed a wonderful fund of humor, doubtless one cause of his extraordinary but not undeserved reputation. Just before his death—I paraphrase from memory—Crito asks him where he will be buried.

"Anywhere that you please—*if you can catch me!*" replied the sage. "Strange," added he, "that I cannot convince you that it is not I who will remain with you. After I have taken the poison, I shall depart. As to what you do with that which is left behind, I do not care."

I think that this spirit led to that remarkable last speech of his, about which so many conjectures have deen hazarded. Weeping friends were gathered about to see him die. Suddenly he raised his head —Socrates to the last:

"Don't forget that we owe the sacrifice of a cock to Esculapius!"

Much as if he had said, in these days, "Don't forget to make my apology to my doctor for dying without his help!"

Dr. Scudder's admirable sermon before the Sunday School Convention had some excellent touches of humor. His very division was a bold stroke, well calculated to impress his hearers. His text was from Nehemiah viii: 8: "They gave the sense." His division was:

"1. Get the sense. 2. Give the sense. Was the arrangement suggested by the advice in the cook-book about the hare?"

Dr. Wadsworth's Thanksgiving sermon has some exquisite illustrations of humor. He said:

"To-day we will let the star-spangled banner float undisturbed, and the American eagle nestle, and leave Plymouth rock alone in its glory. We are looking over our country from a Christian standpoint."

He compared our "glorious Constitution" to one of these California buildings, "extemporized for the occasion, brilliant with new paint, showy with cornices, but in which every earthquake is sure to smash the crockery and frighten the children." He suggested that it was doubtful whether the New Jerusalem would come down to us from Heaven by the way of the overland railroad and "switch off" at Oakland. And he even intimated a doubt whether a California Board of Education could separate religion from science in God's world.

Humor in the pulpit is like the sheet lightning of a summer evening, which, harmless itself, yet illumines the whole horizon, and throws its charming radiance at once over the canopy above, the low-lying earth, and the far-extended sea. S. W.

Medical Mission.

The following is an extract from a letter written to the Boston *Traveller* by Carleton. The Dr. "Kees" referred to, is Dr. Kerr, our medical missionary at Canton:

In 1835, a third of a century ago, Dr. Peter Parker, of Boston, a missionary of the American Board, was here in Canton, and conceived the idea of establishing a medical hospital to cure the diseases of the body, and thus commend the religion of Jesus to the Chinese. In 1841 the Massachusetts Medical Society, having heard of the project, passed a series of resolutions commending it, and appointed a committee of such men as Dr. Bigelow, Dr. Thayer, Dr. Jackson, and others, to present the matter to the merchants of Boston, and the result of this action was a fund of about $5000. The matter was brought before the English and American merchants of Canton, who formed an association known as the Medical Missionary Society of China. That was twenty-eight years ago. Since then the Society has gone on enlarging its sphere of operations, bringing Western surgery and the treatment of disease before the Chinese. The merchants contribute annually enough money to defray whatever expenses there may be. The Parsees also contribute liberally. Dr. Kees is the principal physician and surgeon, who has several Chinese assistants, some of whom have become learned and skilled physicians. There are other physicians in the inland towns, operating under the direction of Dr. Kees.

We find the doctor at home, his family occupying the chambers of the hospital building. It is the hour for seeing the patients and we go down the long stairs and find a crowd of men, women, and children in the yard, also in the chapel. The chapel is very much like some of the mission chapels in Boston—plain walls, settees, a desk, the Ten Commandments and Lord's Prayer in Chinese characters on the walls. While Dr. Kees is attending to the patients in an adjoining room, Mr. Preston talks to those in the chapel about the truths of the Bible and the doctrines of the Christian religion. Going into Dr. Kees's room we find twenty persons there—one woman with an incurable cancer, another with his cheek thrice its usual size. The doctor whips out a lancet, and in a minute the patient is relieved of the pain produced by an ulcerated jaw. Another woman

is solicitous for the little child in her arms; another one shows the scrofula, which is eating the flesh from her limbs. Stepping into another room, we see a man who had half of his under jaw taken out last week, and who is in a fair way to be well again. So on through the long catalogue of disease. Those patients who require constant treatment are lodged in the hospital, others are cared for by their friends. They look upon Dr. Kees as their best friend, and trust themselves implicitly in his hands.

It will be gratifying to those merchants of Boston who contributed their money to start this enterprise, to know that 26,000 patients were treated last year, that the Society has the confidence of the Chinese, and that it is gradually enlarging its sphere of operations. It is under the direction of the missionaries of the Presbyterian Board, but the treasury of that Society is not chargeable with one cent of the expenses. It is a great civilizing and Christianizing power. Said a gentleman at Hong Kong, an old resident; —"The Medical Society, more than any thing else, is removing prejudice from the minds of the Chinese."

Do not be troubled beacause you have no great virtues; God made a million spires of grass where he made one tree. The earth is fringed and carpeted, not with forest, but grass. Only have enough of little virtues and common fidelities, and you need not mourn because you are neither a saint nor a hero.

THE Word of God proves the truth of religion; the corruption of man, its necessity; government, its advantage.

United States Life Insurance Comp'y,

IN THE CITY OF NEW YORK.

OFFICE, No. 40 WALL STREET.

CASH ASSETS EXCEED $2,700,000.

This Company, having a Stock Capital, makes Insurances and Endowments with or without profits. Dividends to Policies with profits are equal to, or larger than those of other, or "Purely Mutual" Companies in available present cash value.

NEW AND IMPORTANT PLANS OF LIFE INSURANCE HAVE BEEN ADOPTED BY THIS COMPANY. SEE THE NEW PROSPECTUS.

Life Assurances, Endowments and Annuities in every form. Profits available after Policies have run one year, and annually thereafter. The reserved Cash fund, for re-insurance, is the largest known to or required by, the ablest and most experienced authorities in Life Insurance, thus affording undoubted security. A liberal non-forfeiture system, as to whole Life or Endowment Policies.

Policy Holders in this Company can use or apply the Dividends of profits in a greater number of ways than is afforded to Policy Holders by any other Company.

The law under which the company is Chartered, provides that if the Capital should, from any cause, become impaired to the extent of Twenty-five Thousand Dollars, or more, the Stockholders SHALL BE CALLED UPON TO MAKE GOOD SUCH DEFICIENCY. This is the only Cash Company in America which affords this safeguard to Policy-holders.

The assured in this Company are not personally liable as in Mutual Companies, which have the power of assessing their members or of reducing the sums insured, in case of deficiency.

CLERGYMEN, insuring in this Company, are allowed a DISCOUNT of TWENTY PER CENT. on first year's premium, and a liberal commission will be given on all Insurances influenced by them.

Agents wanted, on the most advantageous terms.

Forms and every information will be furnished by

PRAYER.

Much is said about prayer, yet there are few subjects respecting which we are more liable to err. It is often thought that *desires* are prayers, and that selfishness can make prayer a kind of security that it shall be gratified. On the contrary, prayer cannot be selfish, ceases to be prayer when it is prompted by selfishness; for it is the in-breathing of the Holy Ghost; it is the desire for things according to the will of God, and has no pledge of answer unless thus distinguished. For God to ally His infinite resources and powers with the wishes of His creatures, suffering these to be as diverse as are their supposed interests, and as personal as these interests themselves, would be to surrender the control of His empire, and introduce conflict and ruin everywhere. Prayer must be in the line of the all-governing Will; it presupposes complete submission; it wishes nothing that God cannot give, when surveying all His creatures and true to the welfare of all.

It is sometimes thought, moreover, that when we desire what may be really expected, it will be bestowed simply because we pray, while we feel no responsibility, after our desires are expressed.

This is opposed to the mode of God's action, as connected with man. He employs means, He blesses agents, He works through influences, for the most part; so that He answers prayer, oftentimes, by opening a way for us to gain that for which we have prayed. You pray for success in proper business, and God answers by removing the obstacles in the way of your achieving success. You pray that you may grow in grace, and the answer comes in the command, "Go, work in my vineyard," as the open gate is pointed out to you. You pray that you may have comfort in affliction, and the answer is found in access to the means of spiritual strength and consolation, from which, it may be, you have been inclined to turn away, but which you now hail with joy. We have been too willing to look for answers to prayer, only in some positive gift, as though God should hand it down to us from heaven, when we should look around us, when we pray, for some path along which we may walk to the blessing we desire.

Prayer increases responsibility, it does not remove it. Prayer only allies us with God, it does not transfer all that we may affect into His hands, leaving us no more to do. It is, no doubt, sometimes true that a good desired is given at once, and in the form of direct reply. God forbid, that we should question any of those cheering instances, which have been vouchsafed to stimulate our faith, and cause our hearts to burn when we approach the mercy-seat. But there are other answers no less real and positive to which we are prone to give less heed, and therefore fail to give God credit for all He does for us. We should make *search*, to learn whether the desires of our hearts are not being granted. We should inquire what *duties* our prayers impose on ourselves, and we shall often gather the blessings we have sought, along the paths thus opened before us, paths made radiant with the presence of God, and easy, by the delight the soul has in Him.

Readable Books.

The thumbed volumes of our libraries are particularly deserving of our attention. Dr. McCosh, in his inaugural at Princeton, holds that every study should "leave not a distaste but a relish on the palate of the young, so that they may be inclined to return to it."

"How shall I know upon which trees to find the good fruit?" asked an enquirer upon entering an orchard.

"Follow the path made by the children!" was the reply.

This advice requires large allowance when applied to books. Yet children do find out what books interest them; and it is condemnation of a Sunday School volume when we find only the first three or four leaves bearing the marks of having been turned, while all the other pages look fresh from the press.

It is useless for us to say that the children and grown people too, *ought* to read these good but uninteresting books. The salt meat and fat, heavy food of northern climates, are almost always repulsive to the taste of youth, or of persons unaccustomed to outdoor and exhausting bodily occupation. It is useless to cram either the stomach or mind with offensive diet.

The attractive, as a feature, is worthy to be considered of paramount importance. God has clothed his works with beauty as well as utility. "Consider the lilies of the field how they grow! And even Solomon in all his glory was not arrayed like one of these." The very capacity to discern what is excellent and beautiful is an argument in its favor.

The attractive leads to the useful and improving. The colors of the peach, the ruddy hue of the apple, the golden or blushing tint upon the luscious pear, the deep purple or amber of the queenly grape, represent not only flavor and fragrance, but by a step beyond, health and vigor. Much read volumes have an aroma both of power and truth. They serve to educate and elevate the mind and heart to a higher knowledge and virtue.

In selecting books for youthful readers we should wish first to have them examined by a competent committee, lest they should contain insidious errors; just as when we select candies for the children we avoid the green,—colored with arsenic; or the high colored, tinged perhaps with an excess of chromos. Then we would put the volume before the children.

If the swarm gather like hungry bees about a bed of mignonette, it would be a powerful argument in its favor. If then we found that it produced a higher tone of sentiment, a purer life, a more tender Christian heart, the evidence in its favor would be incontestible. It is of more value than rubies. These are "apples of gold in pictures of silver."

S. W.

Hon. Walter Lowrie.

The Eastern newspapers announce the death of Hon. Walter Lowrie, late Secretary of the Presbyterian Board of Foreign Missions, on the 14th ult., in the 84th year of his age.

I first saw Mr. Lowrie in the year 1834, when he was Secretary of the United States Senate. The great men of the nation were around him, Andrew Jackson was President, Webster, Clay, Benton were Senators; Van Buren was President of the Senate. And there, in the vigor of his mental power and manhood, and with his countenance shining with the radiance of celestial grace was Walter Lowrie; recognized by all as peer in intellect, as superior in the gifts of the Kingdom of God. The faces of each of the persons named are photographed on my memory; but no one is so distinct and clear, none by far so beautiful as that of the noble Pennsylvanian, who was about to give up all secular interests and honors to devote himself to the work of Missions.

The position Mr. Lowrie occupied was well calculated to keep his intellectual acumen polished and acute. His sense of justice held him, as it were, between the two great parties who made the Senate Chamber their battle ground; and when any question would arise in which the record of the Secretary or his memory would be called to account, I well recollect the confident and ever-victorious manner in which he would vindicate himself.

When any sharp thrusts from the keen cimiter of Mr Clay, or ponderous blow from the mace of Mr. Webster was aimed at Mr. Van Buren, he would often yawn, as if to cover his sensibility with a pretense of apathy. But whenever any question arose respecting Mr Lowrie, either from the giants of his own or the opposing party, he always met the point with a bright and cheerful smile,—as became a dauntless man, void of offence. Fair countenance, shining through the long vista of years, with its halo of beauty and glory!

His mark has since been left on the Church in more than 30 years of powerful work for Christ. One son died in the fore front of the Lord's army of advance in China. And now the honored father,—ripe for immortality—among the last of his generation, departs to his reward. May God send more such laborers to his Church! S. W.

Recapitulation.

The scholars of the Bible Union, having thus found just as much meaning in *baptizo* in the New Testament as Anacreon found in classic Greek, when he baptized Cupid in "a goblet of wine" (immerse), nothing more, nothing less, proceed to introduce the term immerse as the synonym of the Greek term *baptizo*, with all its meagre materialism, wherever *baptizo* and its cognates appear in the New Testament, commencing where the term first appears, as in Matt. iii: 1: "In those days came John, the *immerser*," and continuing all through the New Testament to 1st Pet. iii: 21: "Which in an antitype, immersion, now saves us also," except in one or two cases, where it is translated *endure*.

We found, also, that although it is pleasing to the Spirit of inspiration to represent the superstitious washing of the Jews, and the Christian ordinance by two distinct terms, *baptismos* and *baptisma*, the former never standing in any case specifically for the Christian ordinance, and the latter always employed for the same, including the baptism of John, that even this very distinction which the Holy Spirit had made in the original text by the employment of two separate terms in the original Greek, was lost to the perception of the English reader by the fact that the two Greek terms were expressed by one and the same term (immersion) in English. We saw, also, that this fact was the more notable, since, while the essential and spiritual meaning of the two terms—a Jewish superstition and a Christian ordinance—as wide apart as the heavens and the earth, was hidden in the English version, the external mode in which they were supposed to coincide was made of such prominent importance as alone to appear in the translation.

RESULTS.

We held, 1st. From this course of the Bible Union in uniformly translating *baptizo* with its cognates, in the New Testament, by immerse, the former having in it the inherent idea of purification by the use of the sacred writers, as seen in the reply of our Sav-

ior, "Now, do ye Pharisees cleanse, etc.," and the latter, in its use in the English language, being void of the least trace of cleansing influence and power, the translators had taken from the Word of God, in the English version, the idea of purification which God Himself had put into it.

2d. We held that in such cases as "divers immersions" (Heb. ix: 10), since, by the admission of all, the original *baptismoi* stood for the various ablutions of the Jews, some of which were by sprinkling, some by washing—no personal ablutions of the Hebrews being specifically by immersion—while the scholars of the Bible Union translated this term by immersion, thus making the term stand for one specific mode, when it is evident the Holy Spirit employed the terms "*diaphoroi baptismoi*" to express the ritual ablutions of the Hebrews in general, they thus glossed the term with their own interpretation, and added to the Word of God ideas not found in the sense of the original.

3d. We held that by representing *baptizo* and its cognates by immerse in English, limiting the extent of the application of *baptizo* in the New Testament, in the mouth of our Savior and the inspired writers, by a term expressing physical action, and nothing more, the scholars of the Bible Union had detracted from the high spiritual significance of *baptizo* and *baptisma* as an exponent of revealed mysteries, representing even an ordinance of Christ's Church—His "*ecclesia*"—as having no ecclesiastical significance whatever; degrading even the *baptisma* which saves us, "which in an antitype (immersion), now save us also" (new version), to a mere physical act. In thus striking out of the Word of God the spiritual significance which the spirit of inspiration put into it, and declared through *baptizo* and its cognates by the employment of terms in the new version which confessedly, on the part of the New Versionists, and by the common use of the English-speaking people, have nothing but a physical sense, we held an ordinance of Christ's Church was sapped of its spirituality, and one of His revealed mysteries toned down to a mere physical operation, in accordance with their own theory, for, say the scholars of the Bible Union, *baptizo* and *baptisma*, in the Greek of the New Testament, are in English immerse and immersion, nothing more, and nothing less. So they teach, and so they translate.

4th. We held that while the Holy Spirit represents two sets of ideas connected together by the common principle of ablution, but differing in essential meaning—a difference always manifested by the sacred writers by the use of two terms for the two distinct sets of ideas, this distinction being clearly defined in the original text, is entirely lost to the English reader, by the employment of one term only in the new version, for both *baptismos* and *baptisma* are translated in the new version by one and the same English word.

We held, also, that by this course, the scholars of the Bible Union had been more careful to represent in their version the common idea of total submergence which their theory puts into *baptismos* and *baptisma*, than the distinction which the Holy Ghost sets forth by the employment in the Greek text of two distinct terms, representing two widely divergent sets of ideas. Current Literature.

Lossing's History of the Civil War.

The three volumes of this work are completed, and have been in the market for some months, but we have not had opportunity to examine them with any care, until recently. We were prepared to find them full of material that must be read by all Americans with the deepest interest, and have not been disappointed. We expected that in style and arrangement this material would be offered to readers so that they could not fail to be pleased, and in this our expectations have been more than realized. The books have all the charms of romance, with all that is added by the assurance that we are reading facts which constitute the most thrilling history. Not the least satisfactory feature of the work is the large number of excellent likenesses of the prominent men in the war, both at the North and at the South, for we naturally desire to know something of the personal appearance of those whose acts are described by the writer. The maps, also, are numerous and apparently accurate, and other illustrations abound, executed in a manner that is its own commendation. Notwithstanding there have been so many histories of the war, none who have read his former works will think this of Lossing superfluous, and it must ever be an essential part of every complete library.

Changing Base.

This is an excellent book for Grammar and High School boys for whom the instructive, to be acceptable, must be considerably diluted with the amusing, but whose active nature and boyish pride will no longer permit them to be amused by mere "children's stories." It is a story of life in a Massachusetts Latin School. The story represents the actions and thoughts of the scholars as more manly and less boyish than is really the case in schools of that grade, more as they would be among the lower classes in college, but this very feature of the story will be flattering to the young reader and will make the book popular. It is an American imitation of "School Days at Rugby." The omission of the English games of Cricket, foot-ball, and foot-racing in which our American boys do not as a class feel interested, and the substitution of Base Ball, skating and nutting, amply compensate for the slight inferiority of the work, in style, to the English pattern. We have rarely seen a better delineation than this, of that strange mixture of Latin, Greek, despondency, courage, Algebra, and Base Ball that fills the schoolboy's brain. Published by Lee & Shepherd, Boston. For sale by Bancroft & Co.

LITERARY ITEMS.

Use of the Pronoun.—Our paragraph on this subject, some time since, has excited a wide interest, and we agree heartily with the suggestion that the easiest and most practicable way of avoiding awkward and ungrammatical expressions, numerous examples of which have been cited, is to extend the use of the pronoun *one*, so that, instead of saying, "let every pupil study *his* lesson," we say, "let every pupil study *one's* lesson." Another correspondent cites further illustrations.

Our good old mother tongue is not so meager as to require the invention of another pronoun to express our ideas. I would construct the sentences referred to in the following manner:

"Every person must be a judge of one's own feelings."

"Let every boy and girl study one's own lesson."

And we might add indefinitely:

"Let each look out for one's own self."

"Every person in the community should give one's aid to the cause of liberty."

There is no other proper way, as I understand it, of constructing such sentences, and we need no other. If it seems a little awkward to some at first, it is only becanse we have so long substituted an ungrammatical form, instead of the correct one. John Foster, whose style, for beauty and correctness, is a model, found no difficulty on this subject. He was not afraid to use the pronoun *one* to his heart's content, as the following example shows:

"If one deems one's self a superior mind, one knows, of course, that in no length of time," etc.—*Congregationalist.*

Industrial Literature.—If we wish to ascertain the progress of a nation, we can find no better index than in the character of its literature, and we see in the great demand in the United States for books relating to industrial subjects an evidence of the desire of our artizans and manufacturers to improve and excel in the quality, diversity, and extent of their products. So great is this demand that the publication of books relating to these subjects has become a specialty with more than one house in this country, and not a week, and indeed scarcely a day, passes that a new book is not issued on some subject connected with practical science or the useful and ornamental arts. Mr. Henry Carey Baird, of Philadelphia, is the most prolific publisher of this class of books; and his publications are made with great judgment. His list of industrial publications is, with the exception of one or two on the continent of Europe, the largest in the world, embracing not only the works of the best American technological authors, but reprints of the best English, and translations from the best French and German writers on chemistry, metallurgy, civil and mechanical engineering, architecture, fiberous and textile manufactures, dyeing, calico printing, perfumery, paper-making, ornamental designing, and several of the minor arts.—*American Artizan.*

Funeral Notices.—"Provincial papers please copy," says the *Times'* obituaries. Do nothing of the kind, say we.

Several years ago, when some parsimonious old bridegroom introduced the absurd *addendum* "No cards" to the announcement of his wedding, another fashion grew up of adding "Friends will please to receive this intimation" to the notice of a death; or, as one parvenu inadvertently put it, "Friends *will be pleased* to receive this intimation." A further and less modest request—imported, we believe, from Australia—is now not unfrequent. A gentleman who, we will suppose, lived some years at Bath, dies in London, and after the notification of his death comes the cool request, "Bath papers please copy." In these days of post-office orders, it is a very simple thing to send a notice of the death, with the usual fee, to the paper of the district in which the deceased is supposed to have left some one who would be either glad or sorry—at all events interested in hearing of his death. Let this piece of Australian 'cuteness or English shabbiness disappear from our obituary notices. If the provincial press paid no regard to it, it would die out, as all useless practices inevitably must.—*London Newspaper Press.*

The following curious sentence: "*Sator arepo tenet opera rotas,*" is not first-class Latin, but can be freely translated: "I cease from my work; the sower will wear away his wheels." It has three peculiarities: First, it spells forward and backward the same; second, the first letters of each word spell the first word; third, all the second letters of each word spell the second; fourth, all of the third, and so on all through the fourth and fifth; and we find that the last letters of each word spell the first word; the next to the last of each word spells the second word, and so on through."

Burke said of the press: "Its writers are indeed, for the greater part, either unknown or in contempt; but they are like a battery, in which the stroke of any one ball produces no effect, but the amount of continued repetition is decisive. Let us only suffer any person to tell us history, morning and evening, but for a twelve-month, and he will become our master."

Charles Dickens makes the announcement that his Christmas stories have been "so extensively and regularly imitated," that he has unwillingly resolved to abolish them, "at the highest tide of success." All of which sounds very odd.

Educational.

The Good of Writing Verses.

A taste for composing in rhyme is no uncommon one among youth. And it is often regarded as necessarily an unpromising one. But history shows that it is a taste which has marked the early years of some of the greatest and most logical minds. Blackstone's "Commentaries on the Laws of England" were declared by Sir William Jones to be the most correct and beautiful outline that had ever appeared of any human science. Yet Blackstone carried off the gold prize medal at Oxford for some verses upon Wilton, and afterwards, on beginning close legal study, wrote "The Lawyer's Farewell to his Muse," which still holds its place in English literature. Indeed, when properly guided, the writing of poetry may serve very important ends in culture. One of the highest is that of exercising the imagination. "The mental faculties, like the thews and sinews of the physical frame, develop by use. Imagination follows the same general law." Casting about for the proper material for his verses, the young writer is led inevitably to bring into play that great faculty of his nature by which he finds in the beauties and wonders of nature and art the images of spiritual truth. Another advantage from writing in rhyme is that of enlarging the vocabulary. The work of constructing a line of a certain number of syllables, a determinate arrangement of accents, and a special termination, requires, in almost every case, the review, examination, and rejection of twice as many words as the line at last contains. Another benefit of this form of composition relates to the cultivation of the ear. Even in prose composition, and in writings designed only for the eye, a musical structure should be sought. "The attention of writers is rarely directed to this quality of style any further than to the avoiding of faults. But it is sometimes found to that extent that it becomes a positive excellence and a high recommendation." And, to the acquisition of it, no way seems shorter than that of training the ear in rhyme and rhythm through poetical composition. A fourth benefit from writing poetry is suggested by Charles James Fox, as reported in Rogers' *Table Talk.* He says of rhyme: "It is a thing to repose upon, and often suggests the thought." To any one who has practiced verses, the idea here intended will be apparent. Often, it is true, the poet has his thought and seeks his word; but again, it occurs not unfrequently that the rhyming word to what he has written suggests the next thought which he shall write. It somewhat shocks our ideas of the lofty origin of poetical imagery to suspect that some grand metaphor was suggested by

an obvious jingle of sounds, but the suspicion in many cases would be well founded. Finally, poetry is a pleasant pastime, if nothing more. Supposing a man to have exhausted its powers of culture in his younger days, he may yet pursue it as the amusement of middle life. Thus, Cowper: "While I am held in pursuit of pretty images, or a pretty way of expressing them, I forget everything that is irksome." C. R. C.

Priests as Educators.

A great, though quiet, effort is now being put forth by the Romish clergy of this country to bring the education of the children of Roman Catholics wholly within their own control. They inculcate the idea that it is tantamount to infidelity for a child to be taught to read, and write, and cipher outside of the immediate supervision of the Church. Thus they are striving to raise up a large class among us who will yet not be of us, in so far as the liberalizing influences of a non-sectarian education is concerned. Education, such as we are striving to make the common heritage of every American child, and upon which our institutions are based, never prospered in priestly hands, though they may for a time, and while competing with a better system, make a great parade of intrinsic, as well as of mere material progress. A striking contrast to the statistics of education in Protestant Prussia is furnished by Belgium, where the schools are still in the hands of the priests. Of 13,774 inhabitants of Roulers, 9,840, or 70 per cent., were shown to have grown up without any schooling whatever. In other places, chiefly of the manufacturing parts, the proportion varied between 31 and 48 per cent. Of the artisans themselves, 100 only out of 1,000 could both read and write, 50 could read, and the other 850 could neither read nor write.—*Evangelist.*

Personal.

REV. E. S. LIPPETT delivered the lecture before the Y. M. C. A. last week, in place of REV. MR. HIBBEN, who left his lecture at Benicia. REV. DR. EELLS will deliver the next lecture of the course.

REV. MR. COMPTON, of the Presbyterian church in Watsonville, and REV. MR. STEARNS, of the Baptist church in Santa Clara, have been sick with the small-pox.

MR. C. A. LEAKE, formerly District Attorney of Calaveras County, has been elected District Judge of the Sixth Judicial District of the State of Nevada.

MR. A. J. MOULDER is to be engaged on the editorial department of the *S. F. Herald*, the new daily just started in this city.

REV. B. B. BONHAM writes that he is still at work in the State of Nevada, and that much success is attending his labors.

REV. J. DALY has received and accepted a call to the Congregational church at Stockton. He is to be installed at once.

CAPT. CHARLES H. BALDWIN, U. S. N., has been appointed to the *Pensacola*, to command the North Pacific Squadron.

JUDGE SOUTHARD, of Napa, is mentioned as an aspirant to the position of U. S. District Attorney for California.

MR. HANKIN, the newly appointed Colonial Secretary of British Columbia, has arrived at Victoria.

REV. B. S. MCLAFFERTY, as we learn from the Petaluma *Argus*, lately lost his umbrella.

REV. MR. BUSHNELL has resigned the Presidency of Albany College, Oregon.

MR. JOHN MCCULLOUGH, the actor, has returned from his trip in the East.

HORACE GREELEY purposes to write, during the year 1869, an elementary work on Political Economy, wherein the policy of Protection to Home Industry will be explained and vindicated. This work will first be given to the public through successive issues of the NEW YORK TRIBUNE, and will appear in all its editions.—DAILY, $10; SEMI-WEEKLY, $4; WEEKLY, $2 per annum.

PLANTATION BITTERS are especially recommended to Clergymen, Public Speakers and persons of literary habits and sedentary life, who require for digestion a relish for food and clear mental faculties. Delicate Females are certain to find in these Bitters what they have long looked for.

Miners' Foundry and Machine Works,

Nos. 245 TO 255 FIRST STREET,

SAN FRANCISCO.

HOWLAND, ANGELL, & CO., PROPRIETORS,

Manufacturers of Machinery for

QUARTZ MILLS, SAW MILLS, POWDER MILLS, FLOUR MILLS, SUGAR MILLS, PAPER MILLS, STEAM ENGINES OF ALL KINDS, AMALGAMATORS OF ALL KINDS, MINING PUMPS, OIL WELL TOOLS, ROCK BREAKERS, HOISTING WORKS,

—AND—

Machinery and Castings of all kinds, either of Iron or Brass.

Boilers and Sheet Iron Work, in all its branches

Shoes and Dies of White Iron, manufactured for, and imported by us, expressly for this purpose, and will last 25 per cent. longer than any other made on this coast.

Russia Iron Screens, of any degree of fineness. We are the only manufacturers on this coast of the "Hicks Engine," the most compact, simple in construction, and durable, of any Engine in use.

W. H. HOWLAND, H. B. ANGELL, CYRUS PALMER.

Thomas H. Selby & Co.

IMPORTERS OF METALS,

As follows: Bar Iron, Cast Steel, Boiler Plate, Axles and Springs Tin Plate, Sheet Iron, Iron Pipe, Zinc, Water Cocks, Plumbers Tools, Iron Wire, Rubber Hose, Tinman's Tools and Machines Blacksmith's do., Cumberland Coal, etc., etc.

Sole Agents for Barstow's Pat Improved Metalic Burial Caskets and Cases.

HYATT'S HAND-BOOK OF

Grape Culture in California,

Giving full and specific directions as to where, how, and when, to plant and cultivate a vineyard.

As the season is approaching for those who purpose going into the culture of the vine anew in California, or for those who wish to extend their vinicultural operations to make preparations therefor, they can find no better aid, and no source of information more valuable than to consult this highly approved Hand-Book of Grape Culture.

Following are some of the testimonials that have appeared in commendation of this useful and indispensable work:

A committee of the late Fair of the Mechanics' Institute of San Francisco, to which the work had been referred, speak thus:

"Your committee have examined Mr. Hyatt's Treatise on the Culture of the Grape, and believe it to be the BEST HAND-BOOK published on that subject for California vine culturists, and for which they recommend a Special Premium."

The California State Agricultural Fair, of 1867, awarded a Diploma to the author of this work, and also the San Joaquin Valley Agricultural Fair, at the same season.

OPINIONS OF THE PRESS.

The following are brief extracts from some of the elaborate notices of this work:

The San Francisco *Daily Evening Bulletin* says:—"The book contains a choice collection of the best foreign and native varieties of the grape cultivation in California especially, as well as at the East. The many excellent works on Grape Culture in the Atlantic States are of little or no value in California, where an entirely different system and practice are necessary in vine growing and wine-making. This Hand-Book is intended to supply this deficiency. The author has taken great pains to investigate this subject, and to aid in the improvement of viniculture in California. Its appearence is timely, and it can hardly fail to meet a large and ready sale. It is attractively printed and elegantly bound."

Sacramento Union—"Hyatt's Hand-Book of Grape Culture is a California production that will probably meet a common want. The author takes the experience of the most noted vine-growers in the State as the warrant for his conclusions and suggestions, turns to account the recorded results of experiments made by the pioneers of this branch of industry, and in addition to giving full and minute instructions in regard to the planting of vineyards and the manufacture of wines, presents statistics which will enable the beginner to calculate the probable profits of successful grape culture."

The *Mountain Democrat*, whose editor, Hon. D. W. Gelwicks, is the present State Printer of California, speaks thus:

"HYATT'S GRAPE CULTURE.—We have received from the publishers, H. H. Bancroft & Co., San Francisco, a copy of this interesting and valuable work—a work greatly needed on this coast, and which every grape-grower should purchase. We sent it to a gentleman well known in this community, for his examination—a gentleman familiar with the subject, and largely engaged in the culture of the grape. He gives it the following cordial endorsement, and his endorsement ought to secure it a large sale:

'The limited time in which to examine Hyatt's Grape Culture, published by H. H. Bancroft & Co., San Francisco, has been sufficient, however, to satisfy me that it is a work which every grape-grower should have. No matter how well fortified we may be in our own experience and theory, we must acknowledge that we may adopt many of the author's ideas and suggestions with profit. The merit of the work certainly bespeaks for it a ready sale.

Respectfully, CHAS. P. JACKSON.'"

The Golden Era: * * * "With this book in his hand, the intelligent agriculturist can engage in the business of grape culture with almost the same chance of success as one who has bought his knowledge by expensive experience. * * * The practical information contained in the book would cost many hundred dollars to obtain in any other way. We predict for it a ready and rapid sale."

S. F. Daily Dramatic Chronicle: "The book is emphatically a California production, being written by T. HART HYATT, of this city, editor of the *Rural Home Journal*, and bearing the imprint, San Francisco: H. H. Bancroft & Co. It contains a large amount of valuable information, and should be in the possession of every vine-grower and wine manufacturer in the State. The usefulness of the volume, and its convenience for reference, are very much enhanced by a full and carefully prepared index."

S. F. Mining and Scientific Press: * * * "The book professes to be a complete manual, with instructions for the management of the grape and the manufacture of wine, and is especially designed for California. * * * The book contains a considerable amount of valuable information which is not generally found in such treatises."

S. F. Daily Times: * * * "The author seems to have exhausted his subject, particularly as it relates to viniculture in this State, and as the grape interest is just beginning to attract attention which is soon to become paramount among farmers, we regard the publication of the work as most opportune. No ranchman should be without it."

N. Y. Daily Tribune: "The author brings the result of many years' experience in foreign countries to the preparation of his work, and from his observations in climates similar to that of California, arrives at the conclusion that California is singularly favorable to the culture of the grape, and to all semi-tropical fruits, and that it will hereafter be distinguished as the land of the vine, the fig, the orange, the olive and the palm. His volume forms a capital, if not a complete manual, on the care of a vineyard, and it is enriched with much industrial information connected with the subject."

Lacon (Ind.) Home Journal: "This work is most *apropos*. It comes just as thousands, without any practical knowledge of the business, having planted vineyards, find themselves destitute of that information their intelligent care demands. All over the country this interest is growing; and probably the time is not distant when America will produce more, if not better, wines than any country in the world. The author, MR. THOMAS HART HYATT, is an enthusiast on the subject upon which he writes so pleasantly, and his book embodies just what every grape-grower would like to know—what every one must know, to cultivate the vine successfully."

Colman's Rural World, St. Louis: * * * "We merely want to introduce a new and interesting treatise on this subject to our readers, from the far-off shores of the Pacific—the Golden State of California. Its author is T. HART HYATT, editor of the California *Rural Home Journal*. He has had a large experience and observation in California and in the Old World. His style is entertaining, his directions clear, plain, and practical."

Rural New Yorker: * * * "Although most valuable to the California viniculturist, yet it helps to widen our knowledge of the vine."

H. H. BANCROFT & CO., Publishers.

PRACTICAL AND SCIENTIFIC.

AGRICULTURAL.

Butter.

The oldest mention of butter (and even that is an obscure one) is found in Herodotus, who says the Scythians "stir the milk and separate that which rises to the surface, as they consider it more delicious than that which remains below it." This, perhaps, goes no further than cream, bnt Hippocrates, who wrote 400 years before Christ, and was almost contemporary with Herodotus, writes of cream, that when it is violently agitated, "the fat part, which is light, rises to the surface and becomes what is called butter. The heavy and thick part, which remains, is kneaded and dried, and is known by the name of *hippace*. The whey or serum remains in the middle." Here we have butter and cheese satisfactorily produced at least 2,000 years ago. But it does not appear from Hippocrates, nor, indeed, from any of the ancient writers who mention it, that butter was ever used as an article of ordinary food. That learned Greek physician speaks of its emollient qualities, and prescribes it externally as a medicine. Strabo says that the Lusitanians used butter instead of oil; and Ælian mentions that the East Indians anointed the wounds of their elephants with butter. Galen writes that, "in cold countries, which do not produce oil, butter is used in the baths." Pliny recommends it to be rubbed over children's gums in teething, and also for ulcers in the mouth. Plutarch tells of a Spartan lady who smelled strongly of butter, by which it seems to have been used as a perfume or ointment. It is never mentioned by any Greek or Roman writer, as used in cookery, or at the table.

The people of Germany appear to have known the use of butter at a very early period, though how early is not known. In that colder climate both butter and cheese could readily be made and preserved; while in Italy, Spain and other portions of Southern Europe, they are not even now largely produced. As a substitute, the people of those countries have always been accustomed to the liberal use of good oil, both for cooking purposes and for the table. In the south of France butter is sold in the apothecaries' shops for medicinal purposes, and one of the grievances recounted by travelers in Spain is that they can seldom meet with butter. In warm countries it is difficult to preserve it for any length of time. and it appears certain that the only butter the ancient nations possessed was in an oily state and almost liquid. The Arabs are reputed to be the greatest consumers of butter in the world. A cup full of melted butter is an ordinary morning drink among all classes. Bruckhardt, the Arabian traveller, says that the appetite for it is universal, and the poorest persons will spend half their daily income in order that they may have butter at every meal. They make it exclusively from the milk of sheep and goats, while other nations use that of camels, mares and other animals.—*Intelligencer.*

Cabbages.

I would recommend through your paper, to its readers, the more extensive cultivation of the cabbage. Now it is astonishing that so few cultivate this valuable vegetable, when soil is so well adapted to its growth. There is no vegetable which produces so large a supply of food for cattle on the same space, as the cabbage, provided the soil suits its growth.

A good and rather stiff loom is best adapted to cabbages. They require a considerable portion of manure if the land is not naturally rich, or if they are cultivated as a part of a regular rotation. The cause of failure is generally in the careless manner of planting. Holes are usually made in the ground with some blunt instrument, the plants are put in without noticing whether the roots are doubled up or straight, whether the earth is pressed close to the roots or vacancies are left, in which case they cannot take root properly.

The ground having been well prepared, and being in good heart and tilth, the plow should open a deep and narrow furrow. The plants having been carefully taken up without breaking the fibres off the root, the tops should be cut off to about two inches from the crown; then from a basket where the plants should be carefully laid, dip the roots of each plant in a pail of moisture formed by mixing rich mold with urine to the consistency of soft mud, dropping the plants in the furrow, two feet apart. A slight push will cause them to adhere to the fresh soil, and this treatment will seldom fail. The repeated use of the plow between the rows is necessary for the growth of the cabbage as well as highly useful for clearing the land. By this mode of cultivation much labor is saved, and if the ground has been well prepared and sufficiently manured, an astonishing weight of solid food for cattle is obtained, which in my humble opinion is far preferable to any of the root crops. The best sort to plant in the field is the large red, or the Scotch Drumhead cabbage.—*Mirror and Farmer.*

The Hop Fever.

The *Wisconsin Farmer* says:

From *one* station alone (Kilbourn City) were shipped last spring roots enough to plant *twelve thousand acres!* I asked my neighbor, who lives right opposite my house, about two weeks before hop-picking, how he thought his hops would yield, and what he would contract them for. His reply was that, if the most responsible insurance company on earth were that day to offer to insure him a ton per acre, and fifty cents per pound for the whole crop of 5½ acres, he wouldn't pay a quarter per cent. for the policy. That man picked only about half his yard, and was to-day querying whether he wouldn't have made money to let the whole go unpicked; for he couldn't get a shilling (12½cts.) a pound for the best of his harvest.

The hop-louse has this year ruined nearly or quite half the hops in the state. I have only seen *two lots* that I would *last year* have graded as 'prime.' Two buyers and one brewer told me that they had only seen *one* sample of perfect. There are to-day several thousand acres of hops in Sauk County, all testifying in their unpicked, blighted blackness, as they rattle in the autumn wind, that their ruin was wrought, even as by a deadly plague or a simoon, all in a few hours. I have wrought in hop-fields, and seen hops, looking fair as I left them at night, ruined the next morning. I believe some 2,000 farmers in Wisconsin will in a year from now be doing just what I saw a very shrewd man and extensive raiser doing to-day—selling hop-poles for firewood.

SMALL VS. LARGE FARMS.—Robert Bakewell, the celebrated English farmer, used to tell the following anecdote of a farmer in Leicestershire:

This farmer, who owned and occupied 1,000 acres of land, had three daughters. When his eldest daughter married, he gave her one quarter of his land for her portion, but no money; and he found by a little more speed, and a little better management, the product of his farm did not decrease. He then set to work and began to grub up his furze and fern, and ploughed up what he called his poor, dry furze, covering in some places nearly half of the land. After giving half his land away to two of his daughters, to his great surprise he found that the product increased; he made more money, because his new broken furze land brought excessive crops, and at the same time he farmed the whole of his land better, for he employed more laborers upon it; he rose two hours sooner in the morning, had no more dead fallows once in three years; instead of which, he got two green crops in one year, and ate them upon the land. When the third and last daughter married, he gave her 250 acres, one half of what remained, for her portion, and no money. He then found that he had the same money to farm one quarter of the land that he had at first to farm the whole.

A TON OF HAY BY MEASURE.—It is a matter of considerable dispute how much hay in the mow ought to be allowed, as a ton in weight. In some of the agricultural journals, figures widely apart are given as correct. Some assert that a cube of 10 feet square is required, or 1,000 cubic feet; while others place it as low as 6 feet square and 11 feet deep, or or only 396 cubic feet. Now, both of these cannot be right—neither can any measures be fixed upon to hold good under all circumstances. Hay at the bottom of the mow will be more solid than at the surface, and the whole will be very much affected by the quantity of grain put on top of it (if any), and the depth of the hay. But, having occasion to sell a ton in my barn, to be sure of the quantity for future reference, I measured off a space 8 feet square on one corner of the mow, and cut down 7 feet deep, and found the hay removed weighed 2,020 pounds, thus making 448 cubic feet, a good measure for a ton of hay; it was taken from a surface upon which 200 dozen of good oats had been stored. The hay was 12 feet deep.

When hay is sold in the barn, it is generally calculated 396 feet to the ton, which, I am confident, will always fall short. On the contrary, 448 is near the correct number, as actual trial will give me.—*Cor. Germantown Telegraph.*

WEEKLY MARKET REPORT.

WEDNESDAY, January 6, 1868.

FLOUR—The Panama steamer this morning carried 1,000 bbls in transit to New York. We quote local brands as follows: Superfine, in sks, ₱ 196 lbs, $4 75@4 87½. Extra in sks, $5 75@$5 87½.

WHEAT—Sales yesterday afternoon of 600 sks common coast $1 45; 1,000 choice milling 1 82½. The market this morning was quiet at $1 70@$1 80 for fair to choice.

BARLEY—Feed is quotable at $2 25@2 30; and brewing $2 30@2 37½ ₱ 100 lbs.

OATS—California are in active demand in small lots, at $2 10@2 25 and Oregon at $2 15@$2 30 ₱ 100 lbs.

POTATOES—Continue dull at 65@76c for Tomales and Bodega, within which range 725 sks sold yesterday. We quote Humboldt at 75@85c ₱ 100 lbs.

ONIONS—Sales of 125 sks Yellow, in two lots, $2 75 ₱ 100 lbs.

BEANS—The jobbing rates are as follows: Bayo, 3½@3¾c; Butter, 4¼@4½c; Pea, 4½c; small White, 4½c; Pink, 3¼c; Red, 2⅞@3c ₱ lb.

CORN—Continues firm, with small sales of Yellow, in two lots, $2 75 ₱ 100 lbs.

RYE—Choice is scarce; jobbing at $3 75 ₱ 100 lbs.

BUCKWHEAT—In light supply and firm at $2 75 ₱ 100 pounds.

MUSTARD SEED—Good California Red will bring 3c, and English, 4½@5c ₱ lb.

FLAX SEED.—The local mill continues to pay 4c ₱ lb for a good article.

BRAN—In fair demand at $22 50@24 ₱ ton.

MIDDLINGS—Feed descriptions sell at $28@30; sales of 50 tons fine at $35; quotable at $35@37 50 ₱ ton.

OIL CAKE MEAL—Demand good at $35 ₱ ton.

HAY—Is quiet at $14@20 ₱ ton, with sales of 85 tons within the range.

HOPS—California are jobbing at 25@30c ₱ lb.

DAIRY PRODUCTS—California fresh roll Butter is quoted at 60c@67½c; Eastern firkin do, 45@46½c for choice; Cheese 19@20c for California, and 21@22½c ₱ lb for Eastern; Eggs, 50@60c ₱ doz.

POULTRY—Live Turkeys are quoted at 15@16c, and dressed do, 17@18c ₱ lb; Hens and Roosters, $9@10; Spring Chickens and Ducks, $6@7; Geese, $15; Quail, $1 25 per dozen. No further sales of Venison can be made until the first of July.

PROVISIONS—Bacon is jobbing at 14@14½c for California smoked; Oregon do, 14½@15c; California Hams, 15@15½c; California Lard, 12½@13½c and 13c ₱ lb for Oregon.

WOOL—The shipment to New York by the Panama steamer this morning amounted to 44,000 lbs. In view of the small stock and limited prospective supplies, prices are nominal, say, 18@19c for clean grades.

HIDES—Sales since last Wednesday aggregate 1,900 California Dry at 15@15½c, and 350 Mexican Dry at 13@14c for usual selection. Market firm. We quote salted at 7@7½c ₱ pound.

TALLOW—Sales of 20,000 lbs good Beef, 8c; quotable at 7¾@8½c ₱ lb for ordinary to choice.

San Francisco Cattle Market.

Slaughterers report the market a shade lower all round, consequent upon the lessened demand and the prospect of a prosperous spring and summer season. It is proper to remark that some market dealers give higher figures than those quoted below. On the other hand, in reference to Pork quotations, we remark that large numbers of soft Hogs are freely offered at fully 1c ₱ lb below the prices annexed, which refer to hard Pork. We are informed that while these Hogs sell readily as fresh meat, they do not pack well, exhibiting a yellowish hue, which interferes with sale.

We quote slaughterers' prices as follows:

BEEF—American, 1st quality, 9@10½c ₱ lb.
do 2d do 7@8½c ₱ lb.

VEAL—Quotable at 9@11c ₱ lb.

MUTTON—Dull and lower, 6@7c ₱ lb.

LAMB—Scarce. Sheep, lamb-dressed, sell at 6@8c ₱ lb.

PORK—Undressed, 5@6¼c; dressed, 7¼@8c ₱ lb, outside figures for milk or grain fed.

—*S. F. Bulletin.*

MINING.

COAL.—The report that coal of good quality has been discovered at Argenta, seems to be fully confirmed. The coal has been tested as fuel for the locomotives, with good results. Specimens have also been received at Sacramento. The vein is about 5 feet thick, and extends for many miles. Other important coal discoveries are reported to have been made in the same region.

A STRANGE PLACE TO SPEND THE HOLIDAYS.—The miners in the Hale & Norcross Mine were kept imprisoned in the bowels of the earth during the whole of the Holiday week. A splendid Christmas dinner was however prepared and sent down the shaft, where it was eaten with much relish at a point over 1,000 feet below the surface of the earth.

THE tunnel of the Morning Star Mine, near Silver Mountain, Alpine County, has been run a distance of 1,600 feet. At this point a spacious chamber has been made by the removal of the ore. From this chamber an incline has been sunk 110 feet, and a heavy body of rich ore struck. The tunnel strikes the shaft 150 feet from the surface.

WHITE PINE.—Notwithstanding the bad weather, multitudes are going to this district from all parts of Nevada. A correspondent of the *S. F. Chronicle* says that sickness and destitution have already commenced their work among the miners, who are prevented by the weather from working.

GRASS VALLEY.—The Seven-Thirty Mine, says the *Union*, averages $60 per ton by mill process, the sulphurets which are very rich being excluded. The Bowery Mine yields $158 per ton. The *National* says that the Osborne Hill Mine is very profitably worked.

A NEW MINE.—Some rascals lately opened the grave of an Indian who had just been buried in Siskiyou County, and took from his mouth some money that had been deposited there in accordance with the religious rites of his tribe.

CALAVERAS.—The *Chronicle* says that no mining locality in the county is attracting so much attention as Railroad Flat. Rich strikes are being made, quartz mills are being erected, and gold is coming out.

GRANT DISTRICT.—The Belmont *Champion* says that the Grant District bids fair in the richness and abundance of its ore to surpass even White Pine. New discoveries are being made each day.

FOLSOM.—We learn from the *Telegraph* that considerable mining is being done in this vicinity, mostly in old claims, which pay well.

SAN BERNARDINO.—The *Guardian* has seen a lump of pure gold, weighing 7½ ounces, taken from a claim on Lytle Creek.

GYPSUM.—A vein of gypsum, 13 feet in thickness, and of the best quality, has been found near Reno, Nevada.

TIN.—The first bar of tin ever produced in the United States from native ore, was made in this city recently.

NEVADA.—The Buckeye claims are to be sold to an English company for $225,000.

IF a seaman should turn back every time he encounters a head wind, he would never make a voyage. So he who permits himself to be baffled by adverse circumstances, will never make headway in the voyage of life.

MEDICAL.

Symptoms of Hay Fever.

Imagine a man asking what are the symptoms by which he might know whether his nose had been pulled, or whether he had been kicked down stairs, or whether some one had thrown over him the unsavory contents of a bucket. The hay fever is all symptoms. You notice some evening that your eyes are suddenly weak. The light disturbs them. In an hour they begin to shed copious tears. The nose sympathizes. Your handkerchief suddenly becomes the important object in life. By the next day the slightest draft of wind sets you to sneezing. It is a revelation. You never before even suspected what it was really to sneeze. If the door is open, you sneeze. If you look into the sunshine, you sneeze. If a little dust rises from the carpet, or the odor of flowers is wafted to you, or smell of smoke, you incontinently sneeze. If you sneeze once, you sneeze twenty times. It is a riot of sneezes. First, a single one, like a leader in a flock of sheep, bolts over, und then, in spite of all you can do, the whole flock, fifty by count, come dashing over, in twos, in fives, in bunches of twenty.

They do not wait for order. They tread on each other. Four or five sneezes run together—a mere clash of sneezes. Your eyes meanwhile overflow. Your nose rejoices. That has befallen you for which the prophet longed—"Your head has been a fountain of tears." I have heard it said that no one can do well more than one thing at a time. If only you have opthalmic catarrh, you may cry, blow, sneeze, and cough each perfectly and together. After twenty minutes the paroxysm passes, and you cautiously put up your hands to see if anything is left of your head. It is there. Gradually you get used to it, and come to regard your head as a piece of artillery, intended to throw sneezes.

It is well known that when in health one may stop a sneeze by stroking his nose so as to flatter it a little. There are times when, though a sneeze is a luxury, it is out of place. Much as we like luxuries, we are conscious that they do not fit all seasons, or grace all places. One could not willingly eat ice-cream at a funeral, nor be married with a cigar in his mouth.

Lounging on a summer verandah, the bees droning and the flies buzzing, a hearty sneeze is enjoyable. But when a discourse grows touching, and the house is still, and the climax is just reached, a resounding sneeze, especially if you split it up by trying to suppress it, introduces a new train of associations. This is even less agreeable if you are an honorary member, or some distinguished person, put upon the platform—as girls put their pearls or ribbons on the neck—for show.

These are the early symptoms, and continue about a fortnight. Then, without letting go of sneezing, your head becomes stuffed with a real premium cold. You cannot breathe through your nose, and not much through your mouth. You can smell nothing, and taste nothing, and see but very little, and that little in water colors. Eating becomes a matter of skill. You cannot eat with your mouth at the same time that you are breathing through it. Two trains meet on a single track, one or the other must switch off. Thus, you chew and hold your breath; and then you switch to one side your cud, and breathe awhile. Thus, you shut off, alternately, bread and breath. This stage lasts about two weeks more. It is not uniform and dull. Now and then a day will, without a cause or warning, plump down on you with all the symptoms of the first period. The stricture will be removed; eyes and nose, like the hill after winter, will flow down to rills, and sneezes will awaken sylvan echoes, like birds among the trees.

The third stage is known by the tendency of the whole complaint to descend. It seeks to become bronchial. You are seized with spasmodic coughs. If you give way to them, they will leave you feeling as if a blunderbuss, loaded with shot, had been discharged through your lungs. A cough, like a breachy horse, should be ridden with snaffle (not snuffle) and curb, and never suffered to get under way, or to go faster than a walk. But it is not an unrelieved cough, for it alternates with asthma—a complaint in which a man feels, when asleep, as if some one was suffocating him with an unfair use of hemp; and, when awake, as if the hemp grew inside of him, and he was trying with his breath to pull it up by the roots. Before, you had busy days, but now you will have your chief occupation at night.

I do not wish you to think that I have given you all the symptoms. Only the outlines are herein set down. The filling up must be left to experience.—*H. W. Beecher, in N. Y. Ledger.*

IN mortals, there is a care for trifles which proceeds from love and conscience, and is most holy; and a care for trifles which comes of idleness and frivolity, and is most base. And so, also, there is a gravity proceeding from thought which is most noble, and a gravity proceeding from dulness and mere incapability of enjoyment, which is most base.

The Sabbath at Home

IS THE ONLY ILLUSTRATED RELIGIOUS MAGAZINE published in America. It employs the ablest Pens and Artists in giving interest to the *Study of the Bible*. It is, in a large measure, a YOUNG PEOPLE'S MAGAZINE, and every month there are Illustrated Bible Recreations for the YOUNG, and older Bible students. Price $2 00 a year.

SMITH'S BIBLE DICTIONARY

Will be sent FREE for six new subscribers.

LANGE'S COMMENTARY

Is a work for Biblical Students of all denominations. Price $5 00 a volume. Seven volumes are now ready, and will be sent to any person sending FORTY subscribers, or either volume for SEVEN subscribers.

THE LITTLE CORPORAL

Is one of the best Magazines published for boys and girls—sent free for one year for TWO new subscribers.

Our Premium List also contains

ELEGANT GIFT BOOKS!

Suitable for Holiday Presents, and beautifully Illustrated Books for the young. Also, Maps of Palestine, Picture Cards and Books for Sunday Schools. We offer SEVEN EXTRA CASH PREMIUMS, the highest being

FIFTY DOLLARS

for the largest club for 1869.

☞Send ten cents for a specimen copy and premium list. EARNEST WORKERS wanted everywhere to canvass for subscribers. Address

SABBATH AT HOME, 164 Tremont Street, Boston.

GENERAL SELECTIONS.

Listening to the Sea.

What art thou saying, restless sea?
Why canst thou never, never rest?
Whisper, across thy blue, to me,
The secrets of thy swelling breast!

Tireless and boundless are thy waves—
Thy fickle heart is treacherous too—
And in thy deep and dreadful caves
Lie treasures, hid from human view!

Oh, moaning sea, what dost thou say;
Hast thou thy promise kept to me?
I trusted one more dear than life,
Upon thy billows—faithless sea!

How like a vexed and troubled soul,
Thy waves are moving to and fro,
And, with a dirge thy billows roll,
O'er all the dead, who sleep below!

I am not gladened by the flash
Of sunlight, on thy dashing foam,
Nor can I laugh amidst the winds,
Which, wild o'er thy vast desert, roam.

No friend art thou to human hearts,
O cruel, false, yet glittering sea!
How hast thou severed souls that loved!
I sing no joyous song to thee.

Yet when thy giant-strength is roused
By winds which stir thy mighty tide,
I own Jehovah's dreadful power,
Which doth upon thy billows ride.

But, far beneath the raging storm,
All peaceful sleep the patient dead;
There kings and slaves, earth's weary ones,
Await the summons from their bed.

Her little child the mother holds,
With clinging arms which death has chilled,
But silence reigns in Neptune's halls,
For hearts are hushed, and lips are stilled!

No flattering song, with loving tone,
Bursts from my lips, dark, treacherous sea—
My heart is trembling with its fear,
Whene'er I dare to think of thee!

Thou bear'st my life upon thy breast,
Thou tak'st my all of joy from me—
Oh, spare my heart, and show thy love,
If thou *canst* love—deceitful sea.

—*Grace Webster Hinsdale.*

The Post-Office.

This is the title of an article in the November number of *Hours at Home*, which is well worth reading. It is written by Wm. R. Hooper, and gives much valuable information concerning the importance and magnitude of the work done by the Postoffice, and also an interesting account of its establishment and early history in America. We make such extracts as our space will allow:

The safe and speedy delivery of 520,000,000 letters; the supervision of 25,163 post-offices and postmasters; the collection and expenditure of $20,000,000; the sale of 3,900,000,000 of stamps and stamped envelopes; the oversight of nearly 7,000 contractors for carrying the mails, and the safe transmission of those mails for 79,000,000 miles; the carriage of 12,000,000 letters and 5,000,000 newspapers across the ocean; such is the annual work of the United States Post-office Establishment!

To accomplish so vast a work safely, speedily, and economically, requires the thorough execution of a well-planned system. In the great books of the department at Washington is recorded the exact time of the arrival and departure of every mail throughout the whole country. Every letter should start and arrive at its appointed hour. Once a month, every post-master at whose office a route begins or ends, informs the department, if the contractors for carrying the mail have so arrived and so departed. Four times in the year does each of the 25,000 postmasters give an account of the number of stamps he has sold and of the newspapers he has delivered. In no country in the world is the delivery of letters more systematic, more safe, or more speedy Only one country challenges our rivalry, and if Macaulay could say of the English post-office, that "it is a splendid triumph of civilization," we can rejoice that our mother country has no rival in the world—but her daughter.

The post in olden times was for the use of monarchs and the State; it is the result of modern civilization that the people can enjoy this great privilege. It was reserved for Charlemagne, in the year 807, to organize the first public postoffice; but when that great monarch ended at once his domestic quarrels and his weary reign, his post-office died with him and was buried in his grave for over four centuries. Then the Hanse towns—those democracies of the Middle Ages—established postal communication in the 13th century, and the establishment has continued from that day to the present. The modern post-office is the child of mediæval commerce.

In England the post-office system began as a government speculation; it is carried on to-day as a government speculation, netting yearly some $4,500,000. Were it not for the heavy subsidies paid for oceanic mail transportation, the English people would realize from a penny postage an annual income of $9,000,000. The Duke of Wellington was right when he said, "the English post-office is the only one in Europe which can be said to do its work;" The postal quarterly receipts are there considered as the political barometer of the nation. Experience proves that good crops are always succeeded by an increase of love and letters. Marriages and postage stamps are the invariable result of a good business. And good business means a happy and successful nation.

The American post-office is the child of the English; but it has followed its mother with slow and halting step. Massachusetts, the leader in most modern enterprises of worth, was the first colony that established a post-office. As early as 1639, three years after the foundation of Harvard University, the following notice was posted up in one of the straggling streets of the little village of Boston: "It is ordered that Richard Fairbank, his home in Boston, is the place appointed for all letters which are brought from beyond the seas, or to be sent thither; and he is allowed for every letter one penny, and must answer all miscarriages through his own neglect."

Eighteen years later Virginia followed her sister colony by passing a law requiring each plantation to provide a messenger who should convey government dispatches; and it is characteristic of the State and the times that the penalty for failure was a hogshead of tobacco.

In the fall of 1672, when the "merrie Charles Second" was debauching the people and government of England, "a post to goe monthly" was established between New York and Boston, the first messenger to start January 1, 1673. The advertisement of the new enterprise tells "those that bee disposed to send letters, to bring them to the Secretary's office, where, in a lockt box, they shall be preserved till the messenger calls for them; all persons paying the post before the bagg be seeled up." The post-riders set out from the two cities simultaneously each Monday morning, and exchanged their mail bags at Saybrook, Conn., the next Saturday evening. They occupied another week in the return to their anxious families. It then took fourteen days for the mails to pass between the two principal cities of the continent, which the telegraph now links together instantaneously, and that are separated by steam for only eight hours.

In 1863 William Penn established the first Quaker post-office, 44 years after Massachusetts had led the way. In 1737, sage Ben. Franklin received the charge of the Philadelphia post-office, and thus gave notice of his appointment in his own paper, the *Pennsylvania Gazette:*

"Notice is hereby given that the post-office at Philadelphia is now kept at B. Franklin's, in Market st., and that Henry Pratt is appointed riding-master for all stages between Philadelphia and Newport, Virginia, who sets out about the beginning of each month, and returns in 24 days, by whom gentlemen, merchants, and others may have their letters carefully conveyed."

Franklin was postmaster of Philadelphia for sixteen years; in 1753 he was appointed Deputy Postmaster General, with a salary of £300, if he could get it out of the office. For four years the Department ran in debt to him; after that time he obtained his salary, and paid over a small revenue to the English government. During the first year he visited every office in the country but one, closely following the Atlantic shore in his travels; for the West was as yet unsettled. Boston was the extreme office toward the north; Charleston towards the south. He introduced into the colonial post-office many an improvement that has remained till this day. He was the first to charge postage upon newspapers and to throw open the mails to every paper. Until his day, newspaper publication had been a monopoly of the postmasters, who sent their own papers free and refused all other publications. He advertized all letters remaining in the office, increased the number of post-riders, and quickened their pace. Instead of a mail between New York and Philadelphia once a week in summer and twice a month in winter, he organized a mail between the two cities three times a week in summer and once a week in winter. The Philadelphian who wrote to Boston had been forced to wait six weeks for his answer; Franklin reduced the weeks to three. He fixed the oceanic postage at a shilling; at which price it remained for 115 years, when it was reduced in 1868 to twelve cents.

Franklin was connected with the postoffice about 40 years. He was the "last and by Joe the best colonial Postmaster-General," and was removed from office by the British Government for political reasons in 1774, thus affording a pre-revolutionary precedent for political removals that has been carefully followed in post-revolutionary times.

One of the first measures of the Continental Congress that assembled at Philadelphia in 1775 was to appoint a committee of six to "consider the best means of establishing posts for conveying letters and intelligence throughout this continent." The committee early recommended "that a postmaster-general be appointed for the united colonies, who shall hold his office at Philadelphia, and shall be allowed a salary of $1,000 per annum for himself and $340 for a secretary and comptroller, with power to appoint such and so many deputies as to him may seem proper and necessary. That a line of posts be appointed under the direction of the Postmaster-general from Falmouth (now Portland), in New England, to Savannah in Georgia, with as many crossposts as he shall think fit." Under this law, Franklin was appointed the first Postmaster-General of the young confederation, and held the office for a year, when he sailed as ambassador to France. His ledger—for one book, kept by the Postmaster-General himself, then held the accounts of the whole country—now lies before us, in the clear, legible, slightly tremulous hand of the old philosopher, then 69 years old. All the accounts are kept in pounds, shillings and pence, and marked "lawful money." In the year ending Oct. 5th, 1776, the receipts of the whole establishment were about £1,000. It shows the progress of the nation, that 91 years after, in the year ending June 30, 1867, the receipts were $16,000,000.

In the early stages of our national history, the growth of the postoffice was slow. In 1700 there were but 75 offices in the United States, and but 1,875 miles of post routes. The general postoffice in that year was located at New York, Samuel Osgood of Massachusetts being the first Postmaster-General under the Federal Government. His conception of the duties of his office must have been very humble, for he recommended that the Postmaster-General should not keep an office separate from the one in which the mail was opened and distributed, "that he might, by his presence, prevent irregularities, and rectify any mistakes that might occur;" in other words, he would put the Postmaster-General, his assistant, and their one clerk into the city postoffice to see that its mails were assorted correctly! In 1796 the general office was transferred to Philadelphia, and soon after traveled on to Washington, then recently established as the capital of the nation. In 1802 the United States ran their own stages between Philadelphia and New York, finding coaches, drivers and horses; and cleared in three years over $11,000 by the little speculation of carrying passengers. The mail is now universally carried by contractors.

In 1808 the whole Southern mail that left New York was carried on one man's back to a small boat that was rowed across the North River. Now eight four-horse teams are engaged in carrying the same mail to the three trains of cars that daily leave Jer-

sey City. If another half a century witnesses a similar growth—and it will probably surpass it—what figures will calculate the postal service of the year 1918?

American Scenery.

The following is a rather sad, but, as every one will admit, a perfectly true picture of one phase of our American scenery. It is part of a long article, by Herman Merivale, taken from the *Fortnightly Review* by *Every Saturday:*

It is commonly said that the first impression of an American view (I speak of what is specially American, belonging to a new country, not of the home scenery of old settled parts) is melancholy. Why should this be so where the sense of novelty, and freshness, and hope, and the aspect of free and exulting nature, seem specially to invite to cheerfulness.

One reason I believe to be this—that there is something depressing, something which jars on the feelings, in the aspect of a vast region in which the dominion of nature seems to be ceasing, her grandeur and her abundance rapidly disappearing, while the dominion of man is not yet established, nor his mission of improvement accomplished. There is a dreary vacuity between; a gloomy interval, from the falling of the curtain over the old world, to its rising over the new. Gaze upon the huge zone of woods which circles with its frontier belt the lands occupied by man beyond the Alleghanies, and on the St. Lawrence; the mightier trees, the older denizens of the forest, have almost all disappeared; they have been cleared away by the woodman; only a few scattered specimens are left, such as the tall, meagre skeletons of the white pine, which dot the landscape, rising far above the deciduous trees, all along the limits of the cultivated line of Canada; the rest consists now mostly of undergrowth, or inferior specimens, not worth removal, left to struggle and perish together. Moreover, the mere partial clearing of a forest is found to admit into it great rushes of wind, which devastate it far and wide; and much greater destruction is occasioned by the casual fires occasioned by settlers.

Of course there are districts very differently circumstanced as to sylvan riches: I am only speaking now of the first and general effect. Man has destroyed, and has not yet replaced. Look, again, at those vast rivers, full and majestic, clear and brown as amber, or blue from their lake reservoirs, sweeping through this world of trees, and encircling with their waves fairy archipelagoes of tufted isles; they seem as if they ought to swarm with fish, and only a few years ago they did so; their waters are generally lifeless now. Wherever the saw-mills ply their trade, these discharge all their sawdust into the currents whose water-power they employ. The deleterious matter is not swept bodily away by the stream, but gathers in the eddies, clings to the shores, forms shoals in the shallow parts, clogs the gills of the fish, who soon desert waters thus infected, and leaves them destitute of their natural inhabitants.

As regards animals of the higher orders, it is unnecessary to call attention to their fate; it has been vainly deplored by naturalists and romancers until the subject is a stale one. The game first falls a prey to the speculative pot-shooting of the savage and the backwoodsman, then to the restless energy of the sportsman; finally, where it is sufficient for the purpose in the number and magnitude of the victims, to that last and most ignoble product of our civilization, the mere lust of slaughter, which leads those possessed of it to roam over continents, destroying, merely to load the earth with piles of useless carcasses of slain creatures, and note down in his books the amount of slaughter perpetrated.

The Indians, like their game, have perished from off the land; the white man, with his flocks and herds, has not yet fully taken possession of their inheritance. It adds greatly, as I have said, to the feeling of monotonous sadness which such a prospect sometimes excites, to reflect that these vast regions are almost untenanted by the dwellers for whom they seem adapted, and who so lately enjoyed them, while as yet but ill prepared for the reception of their successors; a land, as it were, without form and void—a silent, sleeping chaos between two creations. To get beyond this belt of transition country, and become intimate with unspoilt nature, the traveler must nowadays wander far afield westward, beyond the limits of the forest zone, or into the depths of the dense wilderness still left in the neglected South, or northward, until the trees themselves begin to grow stunted in the region beyond Lake Superior.

THE FAMILY PAPER OF THE PACIFIC COAST.

THE OCCIDENT.

In every true home there should be found a first class family paper—one to whose coming, father, mother, children will look with eagerness each week. Such a paper is

THE OCCIDENT.

Let all who desire such a paper, and are asking, "What paper shall I take?" read the following statement of facts:

THE OCCIDENT contains a greater amount and variety of reading matter than any other family paper on the Coast. It contains choice selections for all classes of readers. Both the child and the person of cultivated literary taste will find in each number matter which cannot fail to be interesting.

THE OCCIDENT is extensively quoted. No other weekly paper on the Coast furnishes so much matter, either original or selected, to the columns of other papers. Whole columns are frequently taken from one or another of its departments. No stronger proof of its excellence could be desired than the fact that it is so well appreciated by contemporaries.

THE OCCIDENT has a complete Agricultural Department, carefully culled from the best authorities, with all the current agricultural items of our own coast, and full market reports. The Mining Department is also very complete.

THE OCCIDENT gives a summary of Pacific Coast news and of Eastern and Foreign Telegraphic News. These items are not hastily thrown together, but are carefully prepared, and are consequently copied to a great extent. The Personal Department is the most complete collection of personal news to be found in the State.

THE OCCIDENT is the official organ of all branches of the Presbyterian Church, and contains full religious intelligence concerning the progress of all denominations. Although a religious paper, it is not sectarian. Its aim is to make men better and happier by the inculcation of the principles of the Christian religion.

THE OCCIDENT is universally admitted to surpass all other papers in the State, in typographical appearance and systematic arrangement of its contents.

Read what the papers say of

THE OCCIDENT.

"Has commenced its second volume, enlarged and improved and with excellent prospects. It is full of 'knews,' views, and family reading, and is ably edited."—*Brooklyn (N. Y.) Union.*

"It gives evidence of ability, tact, and judgment in its management."—*Cincinnati Presbyter.*

"An able paper of the same form as the *Statesman.*"—*Philadelphia Statesman.*

"One of the best of papers."—*Zion's Herald, Boston.*

"Well filled with readable articles. An important accession to the literature of the coast."—*S. F. Bulletin.*

"Its typographical appearance is finer than that of any weekly paper published on this coast."—*Chronicle.*

"A periodical worthy of patronage."—*Sacramento Union.*

Pacific Mail Steam Co's Steamships

— FOR —

NEW YORK, JAPAN AND CHINA

Will be Dispatched as follows:

LEAVE WHARF CORNER OF FIRST AND BRANNAN STREETS, at 11 o'clock A.M. of the following dates, for PANAMA connecting via Panama Railroad with one of the Company's splendid Steamers from ASPINWALL for NEW YORK.

the 6th 14th, 22d, and 30th of each month.

Steamer leaving San Francisco on the 6th touches at Manzanillo. All touch at Acapulco.

Departure of the 14th is expected to connect with the French Transatlantic Company's Steamer for St. Nazaire, and English Steamer for South America. Through tickets can be obtained.

Departure of 14th is expected to connect with English Steamer for Southampton, South America, and P. R. R. Co.'s Steamer for Central America. Through tickets can be obtained.

Departure of the 6th connects with English Steamer for Australia.

STEAMERS FOR DECEMBER, 1868.

The following Steamships will be dispatched on dates as given below.

December 5th—MONTANA, Capt. West, connecting with ALASKA, Captain Gray.

December 14th—GOLDEN CITY, Capt. Wm. H. Hudson, connecting with RISING STAR, Capt. King.

December 22d—CONSTITUTION, Capt. Cavarly, connecting with HENRY CHAUNCEY, Capt. Conner.

December 30th—COLORADO, Capt. Farnsworth, connecting with ARIZONA, Capt. Maury.

Passengers berthed through. Baggage checked through—100 pounds allowed each adult.

An experienced Surgeon on board. Medicine and attendance free.

These Steamers will positively sail at 11 o'clock. Passengers are requested to have their baggage on board before 10 o'clock.

Through tickets to Liverpool by the "Cunard," "Inman," and "National" Steamship Lines can be obtained at P. M. S. S. Co.'s office in San Francisco, where may also be obtained orders for passage from Liverpool or Southampton to San Francisco, either via New York or St. Thomas—if desired, an amount of £10 to £20 will be advanced with the above orders. Holders of orders will be required to identify themselves to the Agents in England.

For Merchandise and Freight for New York and way ports, apply to Messrs. WELLS, FARGO & CO.

The Steamship GREAT REPUBLIC, Captain S. Doane, will be dispatched on Monday, January 4th, at 12 o'clock, noon, from wharf, corner of First and Brannan streets, for YOKOHAMA and HONGKONG, connecting with the COSTA RICA for SHANGHAE.

For passage and all other information, apply at the Pacific Mail Steamship Co.'s Office, corner of Sacramento and Leidesdorff Sts.

Family Reading.

Work Calmly.

The stars move on along their giant path
Mysteriously up, across, and down,
And on their silver disks, meantime, God works
His holy wonders so mysteriously,
For lo! in blossom-laden twigs, the while
The bird sleeps undisturbed; him wakeneth not
That mighty sweep of vast activity;
No sound brings tidings of it down to earth;
No echo hear'st thou in the silent groves!
That murmur is the brook's own rushing sound
That sound is but the whisper of the leaves!
And thou, O man, desirest idle fame?
Thou dost whate'er thou dost so noisily,
And childishly wouldst write it on the stars!
But let that gentle spirit enter thee,
Which from the sun's noiselessly mighty work,
From earth and spring, from moon and starry night,
Speaks to thy soul—then thou too art at rest,
Doing thy good things and creating fair,
And going so still along thy earthly way,
As if thy soul were woven of moonlight,
Or thou wert one with that calm spirit above.

—*Evangelist.*

Our Baby's Mission.

It was a little wee thing, our baby, when it first came into the world, and Charlie said it seemed like a bundle of soft flannel, with a cry somewhere in the midst of it. Its red face, and funny little hands and tiny feet were a perpetual wonder to its sisters and brothers and its poor, faint-hearted yet unbelieving, infidel mother, who had thrown away her grasp upon God, and the angels, and clasped instead a myth she called the "Spiritualistic philosophy." It was sad to hear this wandering sheep, which had strayed from the fold, calling the spirits of the departed, her familiar friends; and babbling of spirit-force, and telling of Heaven and the angels as she rapped on the table and fancied the replies to her senseless knockings were realities, and not the offspring of her own diseased imagination.

It was more than sad to see, day after day, how the fascination for the mysteries of the Great Unknown beyond, was disturbing the intellect of the mother, and holding her in a terrible thrall, whose tightening ligaments would surely develop insanity. It was awful to hear the blasphemous teachings of the preacher who taught her that "the mysteries of the Kingdom of Heaven should be no mysteries to the soul capable of daring." It collapsed her fine spiritual nature, seeking after God thus, for she was truly trying to find Him in her *own way*, poor misguided child. And so the delusion grew upon her, and she left off teaching her Sabbath School class, because she said the Bible was full of crudities; and did not attend church because the minister believed "there was a snare in the false doctrines of unbelief."

She was very lovely in person, very artless in manner, and so was more of an instrument of evil than she knew, and as she became, in course of time, a *medium*, refined, exalted almost in her rhapsodies, she gathered around her quite a number of unsettled young people, who listened to her "inspirations" with awe and wonder, and half adopted the wicked and strange creed of what she called her "sect." St. Paul, she boldly averred, was converted by spiritualism, and why not the same influence now?

Bye-and-by she ventured into the charmed regions of clairvoyance, and foretold, and turned to account accidental fulfillments of predictions, till she herself believed in a "mission" to convert people to the doctrines of "The Spiritualistic Philosophy." She would confidently assure the mourner that the beloved lost one was with Abraham and Isaac in the land beyond the grave, and thus give consolation, after a strange fashion of her own, in her "trance-mediumship."

Thus she reached motherhood, and the baby was looked upon as a subject for these rationalistic sentiments, which have, in truth, little rationality about them. For hours, she would sit holding the little one, and telling it of sister spirits, and of the dead, and of its destiny; and when its intelligence reached speech, she would interpret its pretty infant babbling into communications from the Beautiful City, lying beyond the dark river of death.

But God held her all the while in the "hollow of His hand," even as He holds the turbulent waters of the sea, and guided her by the ways of a sore trial back to the green pastures and still waters of the Christian's rest.

The wee baby, now a dear little girl of three years, was called away from earth, and sorely stricken was the heart of this weeping mother. In vain she strove, by the old table rappings and sittings, to summon to her side the spirit form of the lost one; in vain she consulted her friends—the mediums—who had misguided her. In vain she read the volumes they sent her to prove that she could lift the veil between this world and the next. In vain she listened to their theory of spheres. All was intangible, unreal. Somewhere in her sick heart was buried this beautiful and soothing truth: "*I* am the resurrection and the life," and again and again would it come to her in her hours of grief and seeking. The angel child lured her thoughts heavenward, its ministrations were healthful and hopeful to her soul; "for are they not all ministers," these lovely ones, of God's eternal truth—of the dear Christ's all-lovingness to the benighted children clinging to earthly consolations? And so, by degrees, she was again persuaded to listen to the teachings of her pastor.

Ah! that first Sunday in church—how well she remembered its freshening influences; how earnestly she prayed for light; how clearly she saw the nature of true spiritual communion; how sincerely she accepted the knowledge that the dead come not to us, but that we shall rejoin them in that world where sickness and sighing do not enter. It was no sudden falling of the scales from her eyes; the work had been going on in her soul since the day the dear baby died, and the hour of its ripening was in the keeping of the Father, who loved and pitied, even while He chastened her.

The dear mother, since then, has had other bright little ones sent from God, and as she tells the writer sometimes of their tender little prayers, and their confiding trust in their Heavenly Father, she often adds:

"Oh! that *my* error might be written down, that the work my first baby did for *me* might come as a help to some other mistaken mother, seeking in her own will to know the hidden mysteries of the world of spirits, leveling *faith* to the dust and asking the evidence of *sight* to prove that the soul lives hereafter. How near I was to insanity, tossed on the sea of doubt and despair, wandering in darkness and error."

I have written this little story with no unkind spirit toward those adopting the "Spiritualistic philosophy," but simply as a revelation of where, and how such visionary theories may mislead earnest, honest minds, yet imbued with speculative tendencies. Nor am I at all ignorant that scientific investigation into the magnentic forces of the human body has revealed strange, startling facts; facts which prove that human magnetism may control inanimate matter; facts concerning the will of man, and its almost limitless realm. But these investigations never have solved, and I believe never will solve, the mysterious connection between spirit and matter, between "corruptible and incorruptible." That certain persons have had peculiar evidences of God's power by revelation, even in this century, is matter of history; but I have yet to see the professed Spiritualist, so termed, who accepts the sacred teachings of Holy Writ, in *all* their breadth, depth and compass, without cavil and objection. And I believe the numbers added to the order, are under Scriptural delusion, and very unwholesome excitement. To the case of my friend I may aptly apply E. B. Browning's beautiful lines:

"Knowledge by suffering entereth
And life is perfected by death." N.

The Two Clocks.

Two clocks stood on the mantel. One was large and somewhat old fashioned, and had a regular orthodox tick. It seldom got out of order, but performed its duty like a veritable time-server as it was.

One day, a smaller clock, which had got into very bad habits, and was altogether unreliable, was placed by the large one to be regulated. The pendulum was adjusted, the hands set to correspond with its neighbor's, and then it was wound up. Such a time as it made! Tick-tick, tick-tick, just as fast as it could go. It really seemed as though it must be trying to get ahead of time. But for all it made such a fuss, it didn't really accomplish any more work than its less demonstrative neighbor. The hands worked around just the same on one as they did on the other, and pointed exactly to the hour on each.

"Now what's the use of your making such a to-do? You can't accomplish any more work than old Slow and Easy, who travels on his regular beat, and only asks to be wound up once a week."

"But I'm so little," said Fast and Furious, "it takes me longer to go over the ground; and if I didn't travel as fast as possible, I should always be behind hand." So away he worked, with the most irritating tick, tick, tick, tick, tick, that ever was heard, until we were obliged to have it removed to another room, where our ears and nerves would not be annoyed by it.

I couldn't help thinking of my friend Nellie. It is such a pleasure to visit her. She keeps no servant, but everything about the house is in such complete order, you might easily imagine that several pairs of hands had been at work. Step into her garden; it is her especial pride, and she has every reason to be proud of it, for it bears evidence of care and culture. You will remain to supper, of course. Nellie leaves you for a few moments. Although the kitchen is close at hand, you hear no sound of preparation, and have already made up your mind, perhaps, to partake of a frugal repast. The bell rings just as you are in the midst of an animated discussion with Nellie's husband, and you enter the dining-room. Hot biscuits, delicious cake, preserved and canned fruit' with delicate slices of smoked tongue, look quite attractive to a hungry man. But Nellie's face is not flushed, and she appears so calm, it does stagger your credulity somewhat to believe that no fairy has assisted her in her culinary preparations.

A perfect contrast to this is my friend Mary. She is constantly in a flutter herself, and makes everybody else feel in a sort of "springy" state. Everything she does seems to be an exertion; and if you should hear her tell all she had to do, or had succeeded in accomplishing, you might imagine her a modern Mrs. Hercules.

And such trouble as she has with her servants! Why, no woman was ever so persecuted and lived. If she sits beside you to sew, she jerks her needle through with such violence, and fidgets so unmercifully, that you feel as though you were doing the work yourself, and losing your breath in the operation. Mary always makes me feel tired when I am with her. She is like the little clock. She puts herself in a flutter, and everybody else—and after all, don't accomplish such a great amount of work as you might imagine.—*Presbyterian Banner.*

Anecdote of Baron Rothschild.

A short time ago the Baron Von Rothschild took a walk in Paris, and suddenly found himself behind the Pantheon, in a part of the city with which he was not familiar. He entered the shop of a dealer in old curiosities, and discovered among a great deal of worthless trumpery, an old barometer from the time of Louis XVI, the carving of which was exceedingly well preserved. The Baron, who is a connoisseur of such things, immediately resolved to buy the barometer. The price was ten francs, and Rothschild, glad to get it so cheap, put his hand in his pocket to give the woman who kept the store a ten-franc piece. He discovered that he had unfortunately left his pocket-book at home.

"Well, never mind," he said, "I will take the barometer anyhow. Send it to my house. I am Baron Rothschild. The money will be paid to you at my house."

"I do not know your name, Monsieur," replied the woman; "moreover, I never send any goods away unless they have previously been paid for."

The Baron was greatly puzzled. He had never dreamed that anybody could be ignorant of his name. But, as he happened to be in a very good humor, he felt highly amused, and was just about to give her some information as to who he was, when he saw a *commissionaire* pass by on the other side of the street. He beckoned to him, and when the honest Auvergnat stood before him, he asked him—

"Do you know, perhaps, Baron Rothschild?"

"That is a funny question, sir. Rothschild! Why, that is our money-king. Why do you ask the question?" he said, growlingly, for he supposed it was a mere mystification.

"Because madam, here refuses to trust him for ten francs," said Rothschild, pointing to the woman.

"Is that really true, Madame Duclos?" cried the *commissionaire*, in surprise.

"Yes, you see, Monsieur Pierre, we cannot know everybody in the world," replied the woman, in confusion. "I know you, and if you will go the gentleman's security."

At these words the Baron burst into a fit of laughter.

"Very well, Monsieur Pierre," he said, "if you will go my security, do you; but above all things, go and fetch me a hack, and then carry this barometer to my house." The *commissionaire* received a very handsome reward at the house of the rich millionaire for going security for Baron Rothschild.—*Presbyterian.*

Young Folks.

Learning to Walk.

Only beginning the journey,
Many a mile to go,
Little feet how they patter,
Wandering to and fro.

Trying again, so bravely,
Laughing in baby glee;
Hiding its face in mother's lap,
Proud as a baby can be.

Talking the oddest language
Ever before was heard;
But mother—you'd hardly think so—
Understands every word.

Tottering now, and falling,
Eyes that are going to cry,
Kisses and plenty of love words,
Willing again to try.

Father of all, oh! guide them,
The pattering little feet,
While they are treading the up-hill road,
Braving the dust and heat.

Aid them when they grow weary,
Keep them in a pathway blest,
And when the journey's ended,
Savior, oh! give them rest.

—*American Presbyterian.*

The Bitter Kiss.

Who would have thought there *could* be such a thing between a mother and her little daughter! Yet I know there was, for a pair of coral lips told me of it this afternoon.

We were talking in the class, and Florence asked, "If we say things in joke, and then explain right off, is that really lying?"

And while we were trying to make it clear to the children's minds that lies are lies, and that truth is truth, a great many incidents came from the children's lips. Daisy said she thought it best never to "make believe," but always say what was really meant; Florence was somewhat unsettled in her mind, desired me to think it over a little, and answer next Sunday; and then it was that Mary told me about the "bitter kiss."

"I was a little bit of a girl," she said, "and mamma had told me not to touch a jar of mincemeat, which she had on the table, ready to make pies. Suddenly, some one called her to the hall door, and the minute I heard her talking, I just put my hand right into the jar and helped myself; then I jumped down and ran into the play-room, and stayed a long time; I could not go back to mamma, even though she had promised to make me a little pie. I washed my hands and face, and was sure nobody could find it out. I did not remember that God saw me! When mamma took me in her lap at night, and bent down to undress me, she started back and her face was very red. She did not say anything then, but she told me afterwards she saw a bit of mince-meat clinging to my apron. She hoped it was an accident, and did not wish to say anything until she knew certainly; so she went on repeating our night's verses, until she seemed to be thinking of the mince-meat again. Then she asked if I had touched it in play, and I said right off, 'No, ma'am, Mamy didn't take any;' but my face felt so hot I had to take mamma's fan; then she looked very sober, and stopped talking for a minute, when somebody called her and she went right ont. So I crept into bed, not daring to ask her to kiss me, and feeling as if I could not go to sleep without it. Presently she came back, and bending over me, raised my lips to hers. In a moment I should have had one of her sweet kisses, but her eyes filled with tears and her face grew very white, as she exclaimed:

"'My child has surely told a lie! Oh, Mamy, your breath tells the story. That was a bitter kiss my little daughter was going to give her mother. Oh, my child!'

"Then she kneeled down by my little bed, and called me to her, and she put her arms round me, and asked the Savior to forgive me, and every now and then she had to stop, the tears came so fast. I shall never forget that time, nor "the bitter kiss" I was going to give my mother. I have never told a lie since. I think it's best always to tell the truth. I feel about just as Daisy does, and I guess Florence will too, when she thinks about it."

Then we talked it over a little, how that Mary's first sin, stealing the mince-meat, led to the second sin, denying it; and so it was best to be truthful, and always avoid the *first step* that is wrong. Then the children learned this verse: "Lying lips are an abomination to the Lord, but they that deal *truly* are his delight;" and Florence made up her mind that she should not need "time to think it over," but could decide now that it was always best to "deal truly."—*The National Baptist.*

The New Coat.

"Good-bye, Charlie; be careful how you handle your gun, and *don't spoil your new coat,*" said a "cumbered-about-many-things" mother to her son, a lad of twelve years of age, as she stood in the door, and watched him walking off with a schoolmate for a hunt in the woods. And Charlie gave her a bright, cheery smile in answer to her admonition. He wore a brown coat, cut and sewed by his mother's own hands; and as it fitted him nicely, she felt justly proud of her handiwork. And her boy's smile said to her, "I'll be careful!" But soon after getting into the woods, the boys started up a rabbit; and as hunting was new to Charlie, he entered into the chase with great glee, forgetting new coat, and everything else but the sport before him, particularly when the rabbit ran into a tall stump. How to get him out was the question. How they poked in sticks, thumped on the sides of the stump; did everything to make him run out again. But poor, frightened Bunny felt safe in his hiding-place, and there he stayed."

"Let us smoke him out," said Charlie's school-fellow; and to work they went. To have a good smoke the top of the stump had to be closed, so Charlie took his hat—new, like his coat—and placed it in the hole, where it fit nicely. Then over that he placed his coat; but in such a way that he thought all was safe. "*Smoke* wouldn't hurt it!" The "smoke" was made, and as they watched for the rabbit to run out, they forgot to look at any thing else. At last looking up, what was their suprise and dismay, to see flames busting out of the stump. Poor Charlie sprang for his coat, pulled it down, and trampled it under foot, to put out the fire. His powder flask was in one of the pockets, too; but the fire did it no harm. Had but a tiny spark of the fire touched the powder, Charlie would have been terribly hurt. But God was taking care of him.

How changed was the expression on Charlie's face, when he returned to his home in the evening, from that which beamed on it in the morning? And how changed the new coat and hat—both burnt and battered—never fit to wear again? But he wore them home, went straight to his mother, and without a word laid his head on her shoulder. And she understood it all—knew how his heart ached. and wisely refrained from "scolding." After a little time, he told the whole story—never trying to "make up" a tale to screen himself from blame.

Boys and girls, never be afraid to go to mother with all your troubles, or of telling her all the truth. —*Presbyterian.*

A Sea Flower.

Would it not be curious, little people, to think of flowers growing on the rocks under the deep sea?

Well, strange as it seems, if you could take a peep into the blue depths some sunny morning, you would see what you would be certain were flowers of the loveliest colors and shapes.

They are in fact, however, animals, and have mouths, and eat meat and drink water as well as you.

One of these exquisite wonders of the sea is called the Oplet, and is about as large as a German Aster, looking, indeed, very much like one.

Imagine a very large, double Aster, with ever so many long petals of the most delicate shade of light green, glossy as satin, and each one tipped with rose color. These lovely petals do not lie quietly in their places, like those of the Aster in your garden, but wave about in the water, while the Opelet himself generally clings to a rock.

How innocent and lovely it looks on its rocky bed! Who would suspect that it could eat any thing grosser than dew or sunlight! But those beautiful waving arms—as you may call them—have another use besides looking pretty. They have to provide food for a large open mouth, which is hidden deep down amongst them—so well hidden that one can scarcely find it.

Well do they perform their duty, for the instant a foolish little fishlet touches one of their rosy tips, he is struck with poison, as fatal to him as lightning. He immediately becomes numb, and in a moment stops struggling, and then the other beautiful arms wrap themselves around him, and he is quietly drawn into the huge, greedy mouth, and seen no more.

Then the lovely arms unclose, and wave again in the water, looking as innocent and harmless as though they had never touched a fish.—*Children's Hour.*

STRETCH A LITTLE.—A little girl and her brother were on their way to the grocer's one wintry morning. The ground was white with frost, and the wind was sharp. They were both pretty poorly dressed, but the little girl had a sort of coat over her, which she seemed to have out-grown. As they walked briskly along, she drew her little companion close to her saying:

"Come under my coat, Johnny!"

"It isn't big enough for both," he replied.

"I think I can stretch it a little," she said, and they were soon as close together and as warm as two birds on the same nest. How many shivering bodies, and heavy hearts, and weeping eyes there are in the world, just because people do not stretch their comforts a little beyond themselves!

NEWS SUMMARY.

PACIFIC COAST ITEMS.

THE *S. F. Examiner* claims for Dr. Robert Semple the honor of having published the first paper on this coast in the English language. It appeared at Monterey in July 1846. The *Enterprise* on the contrary, states that the *Oregon Spectator* was started by Mr. John Fleming, at Oregon City in February 1846.

THE *Humboldt Register* says that Humboldt County, Nev., is destined to become famous for its potatoes. This county alone could supply the Pacific Coast. One variety grown there is claimed to surpass in excellence any other potato grown in America.

THE contract with Wells, Fargo & Co. for carrying the mails is to be investigated by Congress. It is doubtful if this investigation will impart any interest to papers and magazines received three months behind time.

STANISLAUS is the leading wheat county in the State. It is estimated that the total value of all crops in that county for the past year will average nearly $1,000 to each inhabitant. The population is about 3,000.

LATE census returns show the population of Sacramento to be 20,268, an increase of 4,000 during the past year. There are 800 Chinese. $165,000 have been expended the past year on street improvements.

THE whalers at San Diego are hard at work. Last week, says the *Union*, two whales were killed, one of them the largest ever taken at that place. It yielded about 90 barrels of oil.

MORE wood and iron work is done in Woodland than in any other place of equal size on the coast, so says the *Democrat*.

THE Central Pacific Railroad is now graded to within 30 miles of the point of junction with the Union Pacific.

PORTLAND, Oregon, is said to have better sidewalks and crossings than any other city on this coast.

IT is expected that the new Capitol at Sacramento will be ready for the use of the next Legislature.

THE Oakland Public Library was opened on New Year's Day. It contains about 3,000 volumes.

THE *San Jose Argus* recommends the California walnut as the best shade tree for this climate.

THE Builders' Insurance Company has at last been declared insolvent by the courts.

AN observatory is to be built in Washington Square, for the use of the Coast Survey.

A MAN in Washington, Yolo County, is going to plant 100 acres of mulberry trees.

THE rains have raised the Sacramento River 17 feet above low water mark.

A CIRCULATING SPIRITUAL LIBRARY is to be established in this city.

VALLEJO has 724 school children. Solano County has 3,048.

OVER 600 men are employed at the Mare Island Navy Yard.

PHILOMATH COLLEGE, Oregon, has about 80 pupils.

TELEGRAPHIC.

EASTERN.—30 persons in sleighs broke through the ice at Jackson, Pa., and all except one were drowned....The difficulty between Gen. Howard and the pastor of the Congregational church in Washington has broken out again....A railroad depot in Philadelphia, was burned on Dec. 31....Mr. Rodgers, formerly Superintendent of St. Nicholas Hotel, was murdered in 12th St., New York, in broad daylight on the 31st ult....Gov. Swan has been dangerously ill in Baltimore....Movements are being made to improve the navigation of the Illinois River....Over $3,000,000 have been spent in improving the streets of Chicago during the past year....The Indians have been again defeated in a battle in the Wacheta Mountains....A new Cuba annexation movement is on foot in New York....The President's reception on Jan. 1st, was rather poorly attended on account of the weather....The negroes all through the country celebrated the anniversary of the Emancipation Proclamation....They have had a violent snow storm throughout the northwest....The Suspension Bridge at Niagra was thrown open to the public on the 3d....Treasurer Spinner is dangerously ill....Commodore Salter, U. S. N., died on the 4th inst....The Underground railroad project has been given up for the present....Vigilance Committees are being formed in New York City....The sale of pews in Beecher's church netted $97,000....The postmaster of Salem, Mass., has absconded with $20,000.

SOUTHERN.—In Arkansas, the condition of affairs does not improve. The negroes are all joining the militia and leaving the cotton to pick itself....The *National Intelligencer* says that negro suffrage is a fixed fact in Virginia....The agent of the Virginia Express Company was knocked down and robbed at Norfolk.....There has been an outbreak among the negroes near Savannah....The leading men of Virginia have been holding a conference about reconstruction. They are willing to accept negro suffrage and general amnesty. A convention is to be held in Richmond on the 10th of February....The negro troubles still continue in Georgia....The Legislature of Florida met on the 4th.

POLITICAL.—A Cabinet meeting has been held to consider the expediency of releasing all political prisoners....Senator Morton has written a letter, in reply to that of Greeley, on the question of finance....The Dacotah House of Representatives has given women the right to vote and hold office in that territory. The bill will probably be defeated in the Council....Gov. Hoffman, of New York, was inaugurated January 1st....An effort is being made to get another indictment against Surratt....The New York Legislature met on the 5th....Gov. Fenton will sue Thurlow Weed for libel.....Hamlin and Morrill are candidates for the Maine Senatorship....Congress met on the 5th and transacted some unimportant business.....A Republican Mayor has been elected in Wilmington, N. C....Z. Chandler has been nominated for re-election to the U. S. Senate by the Republicans of Michigan.

FOREIGN.—The last of the Cretan insurgents have surrendered to the Turks, and a Provincial Government has been established by the Turkish authorities....All is quiet in Spain, a slight outbreak took place in Seville, but was easily suppressed....The name of the new Government organ of France is the *Journal Official de l'Empire*....The English yacht *Cambria* declines to race with Bennett's *Dauntless*....50 European families have been murdered in New Zealand....The French papers favor the success of Burlingame's mission....A monument is to be erected in Trieste, to the memory of Maximilian....Turkey does not want any European Conference....The re-establishment of the Mikado at Yeddo is confirmed....A terrible colliery explosion at Wigan destroyed 22 lives.

SPECIAL NOTICE.

Acrostic.

P ain Killer is worth what it weighs, in gold,
A ll around the world are its praises told;
I t will Cholera cure—scourge of southern climes;
N o victim dies who takes it betimes.

K eep Pain Killer, a true friend, by your side;
I t will cure Cough or Cold, or Colic beside.
L ook out to apply it for Bruise or for Sprain;
L et it once be tried—'twill be used again.
E very word I am telling you, reader, is true,
R emember that Pain Killer is good for you.

Every Month.

The Pain Killer is sold by all Druggists and dealers in Family Medicines.

ALLEN'S ORIGINAL AND GENUINE

Nerve and Bone Liniment.

The Nerve and Bone Liniment was originated by Geo. M. Allen, in the year 1834, and has lived entirely on its own merits without the aid of advertisements; but owing to the many counterfeit and worthless articles called Nerve and Bone Liniment, now upon the market, has induced the proprietors to advertise it. Many certificates of leading citizens who have used and constantly keep it in their houses, as a great family remedy, could be added to the advertisement, but knowing the many virtues of Allen's Nerve and Bone Liniment, and that one application will satisfy any one of its beneficial effects, deem it unnecessary to bring the certificates before the public. Allen's Nerve and Bone Liniment does not effect a cure in a minute, but acts upon the Nerve and the Bone of the patient by its penetrating properties, when used according to the directions on each bottle, and gives new strength to the parts affected, and thus acts as an agent in helping nature to restore the diseased parts to health. It is also invaluable in all diseases of horses.

Be sure to call for Allen's original and genuine Nerve and Bone Liniment, all others are worthless counterfeits, and should not be tolerated by the public.

ALLEN & CO., Proprietors, Cincinnati, O.

For sale by all druggists.

CURRENT TOPICS.

The American Chapel in Paris has been under the general supervision of the American and Foreign Christian Union, and the pastors of the church worshipping in it have been recommended, if not supplied, by that society. Since Rev. Dr. Robinson has been pastor, however, the church has flourished to such a degree that it is now proposed to form an independent organization to be called the American Evangelical Union, which shall choose its own pastor, and regulate its officers very much as do Congregationalists among us. A creed will be adopted, so general and liberal in its terms, that while embracing the cardinal doctrines of salvation, it will meet the approval of all truly evangelical Christians. It is hoped that such a church will have some advantages in such a population, and that it will not be long before others will be formed having this for a model. The work of the Christian Union will not be superseded by this action, but will be continued with the more encouragement because of such results of its labor, and endeavor to gain more direct access to the French themselves than heretofore. This must be regarded as evidence of progress, for there will be no longer any prejudice against this congregation of Christians as sustained by missionary influence. It will become an independent institution of the city, and will be a powerful support of Protestantism, and fountain of streams that may flow through all the channels of society.

"If words could kill," then would the fanatical party in Spain fill the world with slaughter. The idea that the revolution in that nation should open the country to free thought, to circulation of Protestant books and a higher grade of education, drives the bigoted faction almost to frenzy. Their latest effort has been to induce the women to petition against the suppression of the nunneries. One of their writers says: "Let the cargoes of King James' Bibles come, and crews of soup-ers to boot! While the women of Spain speak and act thus, her religious unity shall be unbroken; though here and there, to spite the priests, or store up papers for cigarritos, a few wicked or silly ragmuffins may accept Testaments or tracts from unctuous white-chokers, or Bible readers." The time foreseen by Bunyan is visibly approaching; when Pope and Pagan, fangless and stingless, shall be left sitting by the roadside near the Valley of the Shadow of Death, while thankful Christian wends on his way rejoicing toward the Heavenly City.

If it is true in these days, as in ancient times, that God holds nations responsible for the acts of their representatives, and punishes those who trample on His laws, we may look for heavy judgments in this country for the public and shameless, and wholly unnecessary desecration of the Sabbath by our public men. We had hoped there might be a change in this respect with the administration about to commence, but there is too much evidence that such hopes are not likely to be realized. There are multitudes in the land who read with disappointment and grief that Gen. Grant and a large party of distinguished officers left Washington on Saturday evening, and traveled all the Sabbath, on their way to Chicago to attend the Soldiers' Reunion. Respect for the large body of Christians in the nation should have induced one who has been chosen as our Chief to pay some heed to their convictions in regard to God's law, for many of these are known to have been his most earnest and faithful supporters. But we grieve to know that higher considerations than this did not forbid such needless contempt for the Sabbath, and most sincerely trust that it may not be taken as an earnest of the spirit that will be manifested in the highest office of the nation.

The past week has been remarkable for the vast extent of soil put under tillage. The rains were late, so that all cultivators were prepared to improve the opportunity. A greater number of farmers are in the country than ever before. More improved machinery for fallowing and seeding is employed. And the copious yet gentle rains of the first of the month prepared the earth admirably for culture. Standing upon the summit of one of the high hills back of Vallejo, where the eye can range over a considerable portion of three or four agricultural counties, it gladdens the heart to see the broad rich belts of dark loam widening perceptibly and daily under the plough. More than half a million of acres will be tilled and seeded between January 1st and February 15th, producing, at the estimate of an average crop, 6,000,000 centals of wheat; worth, at present prices, more than $10,000,000, and sufficient to supply a population three times larger than ours in California with bread-food for a year. "The king himself is served by the field." May our King receive His due!

Advancement in scholarship is a favorite theme of the day. A public reception was given to Dr. McCosh at Philadelphia on the evening of December 8th, in Dr. Crowell's Church, and a crowded assembly gave their warmest plaudits to the idea. The day is near when this subject must come before us here in California with new force. We have thus far been contented with the excellence of our public and local schools. Some beginnings have been made toward a collegiate and university course. But a general awakening of public sentiment is yet in the future. Without advance of scholarship, our character as a people, our professional reputation, our Christian position, must decline. The miraculous gifts of Pentecost ceased with the Apostles. But those gifts pointed out the way we are to follow. We have the foundation of a University of San Francisco. Will not some liberal person found a President's chair, or professorships, which shall endure forever, and by which he when dead, yet shall speak?

The efforts in behalf of the poor, industrious classes made in our great cities, are deserving of the sympathies of every Christian. By the Monthly Record of the Five Points House of Industry, it is shown that the enterprise is still prosperous. This reformatory institution commences properly with abandoned street children, and seeks to train them in Christian knowledge and righteousness. It also extends its help to those who, by some small relief in food, medicine, or clothing, can be enabled to obtain work. The number of boarders in the "Working Women's Home" is larger than ever before. A similar institution has been lately established in Chicago; and the Superintendent writes that "it is packed full, and they could have 500 boarders more if they only had room." Our noble Labor Exchange is accomplishing even a greater work. The condition of our street children, however, demands attention, thought, and regard. How they can be kept from profanity, intemperance, and vice, and educated to virtue, industry, and holiness, are problems it is our duty to solve.

While John Bright lives, the common people of England will not want an advocate who is able and willing to maintain their rights, nor will liberal ideas fail to be represented and to make progress in that country. The late elections seem to confirm the sentiment he uttered not long ago, that the center of power has been moved from the nobility to the people, and it may be that even the laws of primogeniture may soon be removed from the statute books. The great Commoner is acknowledged to be a mighty power in the land, and his speeches are read with feelings unlike any occasioned by the merely political fulminations of most public men. In a recent speech he said, "You may have an ancient monarchy, with the dazzling glitter of the sovereign, and you may have an ancient nobility in grand mansions, and parks, and great estates, and you may have an ecclesiastical hierarchy, covering with worldly pomp that religion whose mitre is humility, but notwithstanding all this, the whole fabric is rotten, and doomed ultimately to fall, for the great mass of the people on whom it is supported are poor and suffering and degraded." These are words of great import, and they are received by multitudes in all classes as prophetic.

Dr. McCosh announced in his inaugural address that the doors of Princeton College should ever be open to all who might there seek education, of whatever rank, or color, or land, and the sentiment was re-

ceived with satisfaction by multitudes, as worthy of the College and its President. Perhaps sooner than he anticipated, he has opportunity to give the sentiment practical illustration, and to exhibit the nerve with which he will administer affairs in a time of some difficulty, For years past, on Sabbath afternoons, it has been the custom, in the College to recite three chapters of the Bible, but the new President has discontinued these, and substituted for them a series of lectures on the life of Christ, of which the students take notes, and respecting which they are afterwards examined. These lectures are attended also by the students of the Theological Seminary, and others, who crowd the chapel every Sunday afternoon. Among them came a black man who is preparing for the ministry in the South; whereupon between 60 and 70 of the College students sent a petition to the Faculty, asking his exclusion for all time to come. The result has not yet been announced, but President McCosh will be obliged to decide whether he was speaking what a black man may receive as a pledge of protection in the enjoyment of equal privileges with the white man, or not. We do not doubt that he will be firm, and that the colored student will keep his place.

RARELY are we able to trace great results back to some small beginning, with so much pleasure as in the case of Sunday Schools in Germany. Eight years ago, Mr. Albert Woodruff, a merchant of Brooklyn, established a Sunday School in Bremen, when on a visit in that city. That was the first school in Germany. Now, there are 66 schools, with 981 teachers, and 11,299 scholars; and in German Switzerland 19 schools, with 222 teachers, and 2,353 scholars. The movement increases in interest, and ardent friends are springing up in various parts of the land, as experience makes known the value of influences thus brought to bear on the children. Here is a cheering and blessed harvest from the seed sown by a faithful man, as he journeyed. Most Christians would have passed on, and seen no opportunity for such seed-sowing. They would see no harvest. But to him the waving, beautiful fields, that shall perpetuate their ever-increasing products long after he is gone, must be a rich reward for the labor and prayer with which the seed was scattered.

RELIGIOUS INTELLIGENCE.

PACIFIC COAST.

EPISCOPAL MISSIONARY MEETING.—Nearly all the Episcopal churches in this city united on last Sunday evening in holding a missionary meeting at the Church of the Advent on Howard Street. The meeting is said to have been the largest ever held in the State in the interests of this church. Eloquent addresses were delivered on the subject of missionary work in this diocese, showing the work that is being done and the difficulties yet to be overcome. Much interest was aroused among the audience by an account of the labors of Rev. Mr. Wilber of San Diego, for whose church it is proposed to buy a melodeon. During the meeting a collection of $411 was taken, which sum has since been considerably increased. Regular quarterly meetings will be held hereafter, all the Episcopal churches uniting. The next is to be held in Trinity Church.

CITY MISSIONARY SOCIETY.—The quarterly meeting of this society was held in Rev. Mr. Pond's Church at the Mission, on Sunday evening last. The attendance was good, and the exercises were of the usual interesting character. In the report of the Superintendent the special claim of the destitute on the generosity of our citizens, by reason of the ravages of the small-pox, is noticed. We take from the report the following items:

We have the opportunity to establish another Sabbath School. We need teachers.

A preaching station is offered to us with a lot for a church and parsonage, if we can commence the work.

We are pleased to note the organization of a mission similar to our own, by the Methodist and Presbyterian brethren, and we cordially welcome their workers on the field.

BIBLE WORK IN OREGON.—From the *Pacific Christian Advocate* we take the following items concerning the progress of distributing the Word of God in Oregon and Washington Territory:

AGENT'S WORK.—The Bible Agent for Oregon travels from 600 to 1,500 miles per month, and preaches from 15 to 25 times. He reports revival meetings at every point he has visited.

AUXILIARY BIBLE SOCIETIES.—There are twenty-one Auxiliary Bible Societies organized in the different counties of Oregon, and Washington Territory, for the purpose of aiding in the circulation of the Holy Scriptures.

BIBLES BOUGHT.—During the past 18 months, about 5,000 Bibles and Testaments have been purchased from the Parent Society for circulation and distribution throughout Oregon and Washington Territory.

A COSTLY PICTURE.—When the Roman Catholic Archbishop, Allemany, was last in Rome, he purchased, for the sum of $5,000, a very large painting of the Ascension of the Virgin, by some Artist not known to us. The painting was secured for the St. Mary's cathedral in this city. When it arrived, it was found to be so very large, that it was with difficulty gotten into place as an altar picture. It is now found that the light is so poor, that the picture disappoints all beholders. The painting so far has cost $11,000, but it is such a pet affair with the Archbishop, that he now says a church must be built for it.

—*Pacific.*

THE NEW EPISCOPAL BISHOP.—A private letter from Right Rev. B. Wistar Morris, the recently elected Episcopal Bishop for Oregon and Washington, states that he is already engaged in labors for the behalf of his diocese. His letter is one of inquiry relative to the wants of the Territory, and exhibits an earnest desire to promote the temporal as well as the spiritual interests of the people committed to his care. He is evidently alive to his work and moving in the right direction. He purposes spending the winter in the East, where he will employ his time in awakening an interest in our Territory among the members of his church and his personal friends. At an early day in the spring he will leave for this coast, and expects to bring with him substantial aid, in money and laborers, to prosecute the work of religion, virtue, and knowledge. The Bishop will be in good time to spread the leaven that is to aid in shaping the morals of the thousands who are soon to be congregated here. Let all welcome such men and bid them God speed.

—*Pacific Tribune.*

CHINESE SUNDAY SCHOOL.—One of these schools was formed on Sunday last in the Howard Presbyterian Church, according to the plan marked out by a contributor to THE OCCIDENT. Dr. Scudder delivered a most eloquent address on the occasion.

THE ladies of the sewing circle of the Presbyterian Church of Arcata gave a festival on Christmas eve, at which the receipts amounted to $609 50.

WALNUT CREEK.—Prayer meetings were held every evening during the week of prayer, in which much interest was exhibited.

THE PRESBYTERY OF OREGON.—This Presbytery held an unusually interesting and pleasant meeting at Brownsville on December 24th, 25th, and 26th. The ministers were all present and the churches well represented. The usual routine of business was attended to with harmony. Resolutions on reunion on the basis of the standards of the Church were unanimously adopted. The Committee on Education reported encouragingly of the Albany Collegiate Institute. Rev. J. A. Hanna was appointed financial agent for said Institute. But the most cheering was the solemnity of its devotions. It held four special sessions of prayer; seven sermons were preached on the occasion, including the Sabbath; also, the administration of the Lord's Supper. The good seed sown at this meeting cannot fail to yield fruit in its time. T. C.

SALE OF PEWS.—The annual sale of pews in Rev. Mr. Stebbins' church on Geary St., took place on Monday evening. The first choice brought $250, and the whole $3,660. On the same evening the sale of pews at Dr. Scudder's church took place, the first choice bringing $550 and the whole $5,550, enough to free the church from debt.

SACRAMENTO.—Twelve persons united with the Presbyterian church in this place last Sunday; 10 by letter, and 2 by profession of faith. The congregations have been increasing for the past few weeks. No pastor has as yet been secured for this church.

EASTERN.

THE RIGHTEOUS DEAD.—A contemporary introduces several of its obituary notices under the heading, "The Righteous Dead." Are we to conclude that it has had any special revelation respecting the future state of these excellent individuals. And what is the case in regard to those whose decease it chronicles under the common heading, "Deaths," some of whom "stood up for Christ," had "unwavering faith," or "left a glorious record" behind them? We venture to suggest that the marriage notices in the same paper be divided in a similar way. A good endorsement like this would be really worth more to a live man than a dead one.

—*Congregationalist.*

GERMAN PAPER.—The specimen number of a German Church paper, devoted to the advocacy of the doctrinal basis, ecclesiastical principles, and Church usages of the General Synod, will soon make its appearance. It will be issued from Indianapolis, Indiana, under the auspices of the Committee appointed at the last meeting of the General Synod. The Rev. J. D. Severinghouse, of Troy, O., will assume the editorial charge of the paper, assisted by an adequate number of able associates and regular correspondents. Its name will be, "*Der Lutherische Kirchen-Freund*,"—*The Lutheran Church Friend.*

UNIVERSALIST.—A society called the "Universalist Women's Association" has been formed in Illinois, and will give its attention to educational and missionary work. It proposes to raise $50,000 for the erection of a collegiate hall at Galesburg, for the accommodation of lady students, and as a centennial offering of the Universalist women of Illinois to the denomination. —*Independent.*

MR. IUASKI NAGAI, a young Japanese student in Rutgers College, New Brunswick, N. J., was baptized and received, on Sabbath, 22d ult., into the membership of St. James' Methodist Episcopal church. He is said to be the second of his people who have openly professed the Christian faith. —*Instructor.*

ARRIVAL OF MR. HAMMOND.—Rev. Edward Payson Hammond had arrived in Boston, and went immediately to Towanda, Pa., at which place he may be addressed. —*Evangelist.*

LUTHERANISM IN THE UNITED STATES.—From the *Lutheran Almanac* for 1869, recently issued, we learn that this denomination now has 1,800 ministers, 3,182 houses of worship, 51 synods, and nearly 400,000 communicants. There are 24 religious periodicals—11 English, 10 German, 2 Swedish, and 1 Norwegian—13 theological seminaries, 17 colleges, 8 schools for females, 12 academies, 12 orphan asylums, besides other elemosynary and benevolent institutions. In the Lutheran Church the Gospel is preached in English, German, Swedish, Norwegian, Bohemian, and in several Sclavish dialects.

LIFE IN NEW YORK.—The pastor of the Allen Street Presbyterian church, Rev. Dr. W. W. Newell, is engaged in delivering a course of lectures on Sunday evenings, on topics which naturally come under the above general head. Two lectures have thus far been delivered, and good has been accomplished, at least so far as they attract many to the sanctuary who would never think of coming out to hear an ordinary sermon. The subject of the next lecture is "Gambling." —*Evangelist.*

PRESBYTERIAN DAY SCHOOL, RICHMOND, VA.—At the last meeting of the Presbyterian Sunday School Union the subject of the establishment of a Presbyterian day school, was broached, and the subject was fully discussed. The speakers seemed to concur in regard to the propriety and feasibility of establishing such a school; and, on motion, it was resolved that a committee be appointed to consider the subject and report at the next monthly meeting of the Union. —*Central Presbyterian.*

WASHINGTON.—We learn, from the *American Presbyterian*, that the Fortieth Anniversary of the Fourth Church, Washington, D. C., Rev. John C. Smith, D.D., pastor, occurred Nov. 24th. Three of the original members remain. A total of 1,489 members has been received, an average of over 37 per annum. During Dr. Smith's ministry of 29 years, 1,152 were received, an annual average of 40, within a fraction. In the same pastorate, 650 infants, an annual average of over 22, were baptized.

REV. WM. M. MARTIN, formerly of Virginia City, Nev., but more recently known in Home Mission service as "the man with the big map," has been again engaged by the Permanent Committee for the purpose of aiding pastors in presenting the Home Mission cause to their people. He can be addressed, care of Rev. Dr. Kendall, Presbyterian Rooms, 150 Nassau Street, New York.
—*American Presbyterian.*

CHICAGO.—Chicago contains about 100 Protestant Evangelical Churches, of which 12 are Methodist, 10 New School and 8 Old School Presbyterian; but the population gains on the churches. The Congregationalists and Old School Presbyterians have each a Theological Seminary. The Methodists have the North-Western University, with a productive fund of $200,000, and the Garret Biblical Institute. The Baptists have the Douglas University.
—*Observer.*

NOMINATIONS.—It is said that Dr. Norman Macleod, the editor of *Good Words*, has been nominated, which means in point of fact appointed, Moderator of the next General Assembly of the Established Church in Scotland, and that Sir Henry W. Moncrieff has been nominated, or in other words appointed, Moderator of the next General Assembly of the Free Church of Scotland. —*Presbyterian.*

FINANCIAL.—The Presbyterian (O. S.) Board of Church Extension reports that in the last thirteen and a half years it has received a little over $400,000, and has aided in the erection of 900 churches, capable of accommodating about 200,000 worshipers. The average cost of the sanctuaries is less than $3,000. —*Independent.*

THE Baptists have 60 Sunday Schools in Philadelphia, and nearly 15,000 scholars. Of these over 400 joined the Church last year. —*Presbyterian.*

REV. JOSEPH SMITH, D.D., formerly President of Franklin College, New Athens, Ohio, died at his residence, in Greensburg, Pa., December 4th. Dr. Smith was for several years a pastor in Virginia, and was the grandson of Rev. Joseph Smith, of Buffalo, one of the leading ministers and educators of Western Pennsylvania. —*Observer.*

GENERAL C. H. HOWARD, a brother of the general who is at the head of the Freedmen's Bureau, has accepted his appointment as district Secretary of the American Missionary Association for the West. His headquarters are in Chicago.

THE OLDEST PRESBYTERIAN CHURCH.—The Presbyterian church in Newcastle, Del., claims to be the first Presbyterian organization in America.

THE sermon of Rev. Albert Barnes on the occasion of his reaching the age of three-score years and ten, was extemporaneous.

BALTIMORE has subscribed, in a canvass of less than a week, $22,000 for the American College in Rome.

FOREIGN.

A GREAT CATHEDRAL.—The Roman Catholics of London are about to erect a cathedral that will rival any of the cathedrals of the continent. The site selected is in Westminster, near Buckingham Palace. The building is professedly a memorial to Cardinal Wiseman, who styled himself, as does his successor, Archbishop of Westminster. It is said that it will be eventually the most spacious and attractive cathedral in the world. The ground alone which it is to occupy has cost no less than $200,000. It will be the first recognized Roman Catholic Cathedral since the days of Queen Mary.—*Zion's Herald.*

THE BRITISH NAVY.—On a recent public occasion in England, Captain Richard Price, R. N., said "it was a fact, which was borne witness to by the officers throughout the service, that there was a marked improvement in the moral condition of the sailors and marines of this country within the last 10 or 15 years, and he, himself, from the experience he had had, could publicly bear testimony to the immense good that had been done in that direction.
—*American Presbyterian.*

QUAKERISM NO THE INCREASE.—In England, in several places in the rural districts of Westmoreland and Carven (in Northwest Yorkshire) there is now taking place a remarkable conversion to the principles of Quakerism. In some villages the inhabitants gather together by scores to worship in silence, with the occasional exhortations and readings of Holy Scriptures.

GENEROUS.—A Protestant convert of Diarbekir, one of the wealthiest men in the community, freely offered to the missionaries, and urged upon them that they should accept his fine house, made of cut basalt, for a theological seminary. It was refused, as for many reasons it seemed wiser to have the seminary at Mardin. —*Independent.*

List of Presbyterian Clergymen,

ON THE PACIFIC COAST, ALPHABETICALLY ARRANGED.

Rev. Jas. M. Alexander, N. S., San Leandro, Cal.
Rev. H. R. Avery, O. S., Walnut Creek, Cal.
Rev. B. B. Bonham, O. S., Sebastopol, Cal.
Rev. I. H. Brayton, N. S., Principal College School, Oakland, Cal.
Rev. W. W. Brier, N. S., Alvarado, Cal.
Rev. Fred. Buel, O. S., agent California Bible Society, 757 Market Street, San Francisco.
Rev. W. H. Cain, O. S., (Not preaching) San Francisco.
Rev. Charles Russell Clarke, O. S., Principal City Female Seminary, corner Mason and O'Farrell streets, San Francisco.
Rev. A. J. Compton, O. S., Watsonville, Cal.
Rev. Eli Corwin, N. S., Congregational Church, Oakland, Cal.
Rev. J. M. Dick, U. P., Eugene City, Oregon.
Rev. H. H. Dobbins, O. S., Sutter Creek, Cal.
Rev. Henry Durant, N. S., Professor College of California Oakland, Cal.
Rev. John Edwards, O. S., Visalia, Cal.
Rev. James Eells, D.D., O. S., pastor First Church, Stockton Street; residence, corner Stockton and Clay Sts., San Francisco.
Rev. Ben. E. S. Ely, O. S., Stockton, Cal.
Rev. J. G. Fackler, O. S., pastor Central Church, Mission Street; residence, 121 Fifth Street, San Francisco.
Rev. A. Fairbairn, O. S., Chico, Cal.
Rev. Frederick Fox, N. S., pastor Emanuel Church, corner Folsom and Seventeenth streets, San Francisco, Cal.
Rev. Thomas Frazer, O. S., Santa Rosa, Cal.
Rev. S. D. Gager, U. P., Eugene City, Oregon.
Rev. Ed. R. Geary, O. S., Calapooya, Oregon.
Rev. M. M. Gibson, U. P., residence 608 Pine Street, San Francisco.
Rev. L. Hamilton, N. S., Oakland, Cal.
Rev. J. R. Hammond, O. S., Placerville, Cal. Visiting in the East on account of ill health.
Rev. Joseph A. Hanna, O. S., Eugene City, Oregon.
Rev. Silas S. Harmon, N. S., San Buenaventura, Cal.
Rev. Oliver Hemstreet, O. S., Ione City, Cal.
Rev. I. N. Hurd, N. S., pastor Potrero Church, San Francisco, Cal.
Rev. S. G. Irvine, U. P., Albany, Oregon.
Rev. T. S. Kendall, U. P., Albany, Oregon.
Rev. N. B. Klink, O. S., Vallejo, Cal.
Rev. A. L. Lindsley, D.D., O. S., Portland, Oregon.
Rev. A. W. Loomis, O. S., Missionary among the Chinese, chapel and residence, cor. Sacramento and Stockton sts., San Francisco.
Rev. B. Lowe, O. S., 10 Martin's Block, San Francisco.
Rev. W. F. B. Lynch, N. S., Alvarado, Cal.
Rev. James H. Marr, O. S., Calvary Mission, San Francisco.
Rev. David McClure, N. S., Principal Oakland Academy, Oakland, Cal.
Rev. Robert McCullough, O. S., Yreka, Cal.
Rev. J. S. McDonald, O. S., Sacramento, Cal. Resigned.
Rev. W. C. McKaig, D.D., N. S., Marysville. Cal.
Rev. James McLaughlin, N. S., Gilroy, Cal.
Rev. J. H. McMonagle, O. S., pastor Larkin St. Church, residence, 1312 Jackson St. San Francisco.
Rev. W. J. Monteith, O. S., Albany, Oregon.
Rev. Joshua Phelps, D.D., O. S., 38 Stanley Place, San Francisco.
Rev. James Pierpont, N. S., San Francisco.
Rev. George Pierson, N. S., Brooklyn, Cal.
Rev. F. L. Nash, N. S., Alameda, Cal.
Rev. John S. Reasoner, O. S., Brownsville, Oregon.
Rev. Robert Robe, O. S., Brownsville, Oregon.
Rev. Henry M. Scudder, D.D., N. S., pastor Howard Church, Mission Street. Residence, 1 Vernon Place, San Francisco.
Rev. John Sessions, D. D., N. S., Oakland, Cal.
Rev. Anthony Simpson, O. S., Corvallis, Oregon.
Rev. W. R. Sloan, Steilacoom, W. T.
Rev. A. H. Sloat, pastor of Westminster Church, Hayes Street, San Francisco, Cal.
Rev. Townsend E. Taylor, N. S., Virginia, Nevada. Not preaching.
Rev. James S. Todd, O. S., Arcata, Cal.
Rev. Lewis Thompson, O. S., Bloomfield, Cal.
Rev. P. V. Veeder, O. S., Principal City College, corner Geary and Stockton streets. San Francisco.
Rev. Charles Wadsworth, D.D., O. S., pastor Calvary Church, Bush Street; residence, 920 Pine St. S. F.
Rev. E. B. Walsworth, D.D., N. S., President of the Female College of the Pacific, Oakland, Cal.
Rev. L. P. Webber, N. S., Santa Clara, Cal.
Rev. Robert R. Wells, O. S., Healdsburg, Cal.
Rev. S. T. Wells, O. S., agent Presb. Board of Publication. Depot at Bancroft's Bookstore, 609 Montgomery St.
Rev. Samuel Whiting, N. S., Mendocino, Cal.
Rev. A. F. White, N. S., Carson, Nev. Serving as State Geologist.
Rev. Geo. F. Whitworth, O. S., Seattle, W. T.
Rev. Ed. P. Willard, N. S., Columbia, Cal.
Rev. S. A. Willey, N. S., Vice President College of California, Oakland, Cal.
Rev. M. A. Williams, O. S., Jacksonville, Oregon.
Rev. S. Woodbridge, D.D., O. S., Benicia, Cal.
Rev. J. Worth, U. P., Brownsville, Oregon.
Rev. James L. Wylie, N. S., San Jose, Cal. Gone East for the recovery of health.
Rev. Richard Wylie, O. S., Napa, Cal.
Rev. James Wylie, O. S., Napa, Cal.

Oakland Academy.

A CLASSICAL, ENGLISH, & MILITARY BOARDING SCHOOL

REV. DAVID McCLURE, PRINCIPAL.

The Ninth Term of this Institution will commence on Wednesday, Jan. 4th, 1869, in the new Academy building, recently erected on Telegraph Road, one mile from the Railroad Depot.

The location and plan of this new building have been made with the design of securing for the students a home of beauty and refinement.

Careful provision is made for thorough and extensive courses of study in English, Mathematics, Natural Science, and the Ancient and Modern Languages. A special course is also provided for those who are preparing for a commercial life.

In addition to these courses there is a daily military inspection and drill, together with vocal and light gymnastic exercises, under the instruction of a teacher. Every student is required to attend the military and gymnastic exercises, as a means of physical training.

For the mental, moral, and physical culture of each pupil committed to his care, the Principal holds himself responsible.

Further particulars may be obtained by addressing the Principal at Oakland.

Contributions.

A Suggestion for the Season.

Have you made a will? Do not think that your property or interests are too small, or too large; too simple or too complicated for it. Death does not regard such points, and neither should we.

Some persons are superstitious on this subject. But this is unreasonable, for there is nothing in a rational preparation for the dissolution of our bodies that can hasten the event. But, on the other hand, when sickness occurs, a source of profound anxiety is removed by the consciousness that we have done all in our power to make provision for the loved ones whom we may leave behind. Besides, as a fact, there are men who have kept their wills prepared for half a century, modifying them from time to time, as circumstances required, until at length they were almost disposed to think that the grim destroyer had a spite against them, because they were always ready, and so passed them by.

I have been called to write the testaments of persons just upon the point of dying. Then, instead of rallying the thoughts preparatory to meeting God, the soul is compelled to return to the anxieties of mortal life, and to mingle with the pangs of death not only the grief of parting, but also the feeling of neglected duty to the objects of tenderest earthly love, and a sense of incapacity for the important task impending. Too often at such a time the work cannot be properly done, nor without injury to body or soul.

Let the will be properly attested. It has been my custom, as the pastor of a church, to present this subject to the congregation. Many years ago, at the close of a sermon, a pioneer Californian said to me that he should immediately attend to this duty. A few days afterward he gleefully remarked:

"The work is done! My will is made! I have given $500 to the American Bible Society; and my house to our congregation for a parsonage!" and he mentioned some other bequests.

"But your friends in the old States," said I.

He replied that he had no near relatives or friends to whom he wished to leave more than some slight memorial.

He removed to the interior of the State, and two or three years afterward died suddenly. It was then discovered that his supposed will was merely a memorandum. His property went first into the hands of the public administrator. A relative soon after arrived, and not one dime of the property was appropriated in the manner the owner wished.

These are the points to be regarded. If we have the control of any property, to make our will, and to-day. To dispose of everything with strict justice; and, if consistent, also with benevolence. To note whether any bonds should be required by the executors. Then to have the will attested by the written signature of two witnesses.

The Heathen among us.—IX. The Duties of Christian Families Employing Chinese.

There is a great duty, and consequent responsibility, resting upon all Christian families employing Chinese as house servants. There are not less than 1,500 in this city, and 3,000 in this State, so engaged. As they are thus kept in constant contact with their employers, living in the same houses, mingling and conversing with them at all times, they are peculiarly subject to Christian influences, if there are such in the house, and if any attempt be made to exert them, they can daily, almost hourly, be taught some religious, or at least moral truths, and be instructed in such a way as to gradually wean them from their idolatry, and fit them for the work of the missionary.

A few, alas, very few, trace the commencement of their conversion to such Christian influences. It is greatly to be regretted that there are so many Christian families in which the blind heathen has never been taught any religious truths, and in which no efforts have been made to draw them out of their idolatry. What account must these careless or indifferent Christians render at the bar of judgment for these neglected opportunities to do the Master's work and win souls to Him?

Christian employers ought to be kind to the poor heathen in their service, to be considerate of their rights and feelings, and treat them as human beings, yes, even as God's children, though blind and erring. Their respect and confidence may thus be won. When this has been gained, they will look up to you for advice, and as a rule, trustfully follow it. Then lead them to the mission school connected with your church, if there be one; if not, to some other, so that they may receive religious instruction. They should always be present at family prayers, that they may be accustomed to our worship.

Introduce them to the teachers of the school, and remain a little while, until they have gained confidence. After this, see that they go to the school every Sunday. When they have attended for two or three weeks your care will be no longer necessary, for they will by that time have learned to respect and esteem their teachers too much to desert them.

If the servant is unwilling to attend the school, begin to teach him at home. After he has learned the alphabet, and can read a little, he will become so interested in his studies that he will gladly go wherever he can continue them.

Think for a moment, how mighty would be the influence upon the heathen, and in time, how great would be the result, if only 1,500 of the 3,000 women having Chinese servants under their charge, would feel and do their duty, earnestly, faithfully, prayerfully, in trying to win their souls to Christ. Christian women of California, how long will you refuse to see and do the work which the Master has brought into your homes. God grant that your indifference may soon end, and that the sin of opportunity slighted, may pass away from you. C.

Exposition.

Philippians iii: 12, "I follow after, if that I may apprehend that for which also I am apprehended of Christ Jesus."

"I follow after," I pursue. Several are gone before me in this glorious way and have obtained the crown of martyrdom; I am hurrying after them; "that I may apprehend," that I may receive those blessings to which I am called by Christ Jesus. To complete this faithful contention is what he has in view; that he may *apprehend*, or lay hold on that for which he *had been apprehended* or taken by the hand by Christ, who had converted, strengthened and endowed him with apostolic powers that he might fight the good fight of faith and lay hold on eternal life."—*Adam Clarke.*

"I follow after," I pursue with vigor, as one following after the game. I endeavor to get more grace and do more good; and never think I have done enough; "if I may apprehend that for which also I am apprehended of Christ."

Observe (1) from whence our grace comes; from our being apprehended of Christ Jesus. It is not our laying hold of Christ first, but his laying hold of us which is our happiness and salvation. Observe (2) what the happiness of heaven is. It is to "apprehend that," etc.—*Matthew Henry.*

"He did pursue with all vigor, as those laboring in the *Agonisticks*; with all his might and main, not desponding of obtaining the goal, with groanings and longings after utmost perfection. If that I may lay hold (apprehend) on that attainment to be as holy as men shall be at the Resurrection. He was in his effectual calling laid hold on by Christ, being found in whom he was striving after perfection. This "apprehended" is a metaphor borrowed from those that run a race, one taking hold of another to draw him after to win the prize as well as himself."—*Matthew Poole.*

To *follow* is not here spoken of pursuit, as of an enemy; nor yet absolutely, of merely earnestly endeavoring to obtain; but of following earnestly after one who has preceded; as the second rank follows the first, in hope to obtain a prize. "I follow after" Christ, *if I may apprehend.* This is merely the old English word for "lay hold upon." What Paul aimed to lay hold upon in the race is set forth in the 14th verse: "the prize of the high calling of God in Christ Jesus."

For which also I am apprehended of Christ. He who had gone before; labored and suffered, and died and risen again for his his people, now will help them who are struggling after him, in order to ensure success to them. "He who hath begun a good work in you, will perform, (finish) it until the day of Jesus Christ."—Phil. i: 6.

The Savior reaches back from his high advance to take hold of his people and draw them after him. You and I in our toils, loneliness, struggles, discouragements are but following our dear Lord. From Heaven he reaches down to us. In His strength what can we not do? Let us follow on. The Infinite prize is before us. Our Helper is our sympathizing Savior God.

Suggestions.

Before closing this discussion, there are a few suggestions which I desire to make:

1st. The inconsistency in the friends of the new version in claiming for it pre-eminence as a pure and faithful version of the word of God, when the very idea of purity which was in the term *baptizo* by common use and understanding, in those who spoke and read Hellenistic Greek, and which Jesus Christ found in it when, in response to *baptizo*, He replies as if to *cleanse*; which, again, Peter found in it when he says that the *baptismos* he means is, not a cleansing of the filth of the flesh, but a higher spiritual cleansing found in the answer of a good conscience; which, again, Paul found in it when he used it to signify the purification of the Jewish economy, and which is entirely ignored and set aside by the employment of immerse, a term to represent *baptizo* in their version, which in its Latin parent, as well as in its use in the English tongue, is totally destitute of any such meaning whatever; in fact, as free from any cleansing power and capacity as the wash which flowed through the slough of despond. That is, forsooth, that the version of the Bible Union is pre-eminently a pure version, when it replaces a term in the Greek of the New Testament, which, whenever and wherever it appears, carries with it the idea of purification, either of the flesh or the spirit, by a term which never has had, has not now, and never will have, till the laws which govern human language change, or till a new meaning accrues to it, any idea of purity attached to it. So of the faithfulness of the new version. If immersion is a faithful representation and reflection of *baptismos*, setting forth a Hebrew ablution, or Jewish superstition, it

cannot be at the same time a faithful representation and reflection of *baptisma* in Ephesians: "One Lord, one faith, one baptism," for the *baptisma* of the Apostle, is neither a Hebrew ablution or a Jewish tradition, but an ordinance of the Christian Church, which it seemed good to the Holy Ghost to represent by a different term in Greek from that used to signify these inferior ablutions, while it seemed good to the scholars of the Bible Union to represent in English these inferior ablutions and the Christian ordinance by one and the same term—immersion. To go behind the mind of the Spirit, and seek to show why the Author of inspiration used two terms for these several ordinances in place of one, would be, to be wise above what is written, except to say that it seemed good to Him to do so. To go behind the mind of the new versionists and show why it was pleasing to them to use one term in the new version in place of two in Greek, would be to go into a discussion of motives foreign to my present purpose. Suffice it to say that the existence of such a discrepancy is incompatible with the claim for faithfulness which its friends assert for the new version.

2d. The question in this matter is not between Baptists and Pedo-Baptists, but between the terms immerse and baptize, as representatives in English of the ordinance which Jesus Christ appointed to His Church, set forth in Greek by *baptizo* and *baptisma*. The question is, I repeat, between those on the one hand who hold to the spiritual idea pertinent to the terms used in this connection, as setting forth an ordinance of the Church of Jesus Christ and a revealed mystery, and those on the other hand who find in *baptizo* no metaphysical or ecclesiastical act signified, and who limit the term in the extent of its application by a word in English in common and secular use, chosen designedly on account of its best representing in English the physical idea of total submergence, which they find in *baptizo*, and representing nothing more, nothing less. Now, while the whole experience of its use in the ordinary speech of men justifies the revisors in the correctness of their selection of the term from their own stand-point, the large mass of biblical scholars, including some of the very highest standing in the Baptist Church find in the use of *baptizo* in the New Testament a meaning peculiar to Christian revelation, as Ripley and Hackett on Acts xxii: 16, and Judson, the missionary, who, in his translation of the Scriptures into Burmese, so far from limiting *baptizo* in its application to the idea of total submergence, took a term in Burmese of such primary meaning, and so altered it by affix and suffix, as to give new power to the word, and to cause it henceforth to stand for an idea new in the language—for a sacred, holy dipping, peculiar to Christian revelation and the Christian religion.

Now, between those who find in *baptizo* in the New Testament nothing but a secular idea, and those who find in it the setting forth of a Christian mystery, there is a divergence and departure just as wide as there is between a book containing mere secular ideas and the Book of Divine Revelation, and the question arises, shall the mere secular idea in *baptizo*—be it dip or immerse—appear in the English version, or shall we do as the ancient Latins did in the days of primitive Christianity? The Latin Fathers, when they could find in their heathen tongue no word—no, not even *immergo*—which could properly represent an ordinance of Christ's Church, transferred *baptizo* bodily into the Latin, with all the fulness of meaning which it had in Greek. This they did to represent, not its secular signification, which *mergo* and *tingo* might properly do, but a new idea peculiar to Christian revelation, which no word in a heathen tongue was adequate to express, for no word of mere heathen import can compass Christian mysteries and set them forth to hearers and readers for their comprehension.

I repeat, the question I apprehend, then, to be decided is this: Is *baptizo* in the Greek of the New Testament limited in its application to the secular idea which it had in classic Greek? If the answer be in the affirmative, then undoubtedly immerse is its proper synonym in English. But, on the other hand, if it be held that *baptizo* in the New Testament represents ordinances and truths peculiar to Christian revelation, then I apprehend we must first pass by the dip of the heathen Saxon as inadmissable, and come next to immerse. This term, derived directly from the Latin, has so much likeness to its parent, both in form and spirit, letter and meaning, inheriting, it is true, all its father's wealth, but adding nothing thereunto, that we consider it no more qualified to stand for the Christian *baptizo* in English than was its father in Latin, and pass it by as the Latins did. Then, as they did, we adopt *baptizo* as the representative of itself, only anglicised, carrying with itself all the truths which the light of Christian revelation embodied in it, and eliminating from it every idea not purely its own, by the same divine authority. This, I repeat, is not a matter between Baptists and Pedo-Baptists, but between those who hold to the spiritual power of the term *baptizo* in the New Testament, and those who demand for it only its primitive and secular meaning.

3d. That the substitution of immerse for *baptizo* being the controlling idea in the formation of the Bible Union, and the distinguishing feature between their version and the common version, the error of the scholars of the Bible Union in translating *baptizo* by immerse, characterizes and vitiates their whole work, and hence condemns it as a corrected and improved version of the Word of God.

—

CORRECTION.—I have referred in the discussion to Bunyan, Hall, and Spurgeon, who, in their views, were, or are, open communion, as Baptists, and quoted their authority as such, while I learn that at the present day those who adopt their views are ruled out of the Baptist connection. If I have erred in calling these great men Baptists, I trust that it will be considered an unintentional misrepresentation.

F. B.

Oxford Bibles.

The superior excellence of the Bibles printed at the Oxford University Press is proverbial among all who prize correctness of the text, and clearness and beauty of typography and binding. The Oxford editions are the standard from which other editions are copied, and are therefore acknowledged as superior.

The Subscribers, who act as

SOLE AGENTS IN THE UNITED STATES

for these Bibles, keep all varieties and sizes, from the 48-mo. to the Folio. They select the following, which they strongly recommend

THE SUNDAY SCHOOL BIBLE. Printed in clear type and well bound in arabesque - - - - - - - - - 50 cents.

THE PEW BIBLE. Printed in large type and bound in morocco, $2 00; Turkey morocco, $3 00.

THE STUDENT'S BIBLE. Printed on fine paper, in beautiful type, with References and Maps, and an Index to the persons, places, and subjects occurring in the Scriptures. Turkey morocco, - - - - - - - - - - - - $4 00

THE CLERGYMAN'S BIBLE. Printed in large, clear type, with References and Maps, and an Index to the persons, places, and incidents occurring in the Scriptures. Bound in Turkey morocco, - - - - - - - - - - - - - $5

THE PULPIT BIBLE. Beautifully printed in very large, clear type, demy, 4to. Bound in Turkey morocco, - - - $20 00

THE FAMILY BIBLE. Beautifully printed in large type containing Family Record, with or without References. Plates, and Maps, in every style of binding, from $17 00 upwards.

THOS. NELSON & SONS,
187 Grand Street, New York.

The prices quoted above are in U. S. Currency, and any of the books will be mailed free on receipt of price.

HYATT'S HAND-BOOK OF
Grape Culture in California,

Giving full and specific directions as to where, how, and when, to plant and cultivate a vineyard.

As the season is approaching for those who purpose going into the culture of the vine anew in California, or for those who wish to extend their vinicultural operations to make preparations therefor, they can find no better aid, and no source of information more valuable than to consult this highly approved Hand-Book of Grape Culture.

Following are some of the testimonials that have appeared in commendation of this useful and indispensable work:

A committee of the late Fair of the Mechanics' Institute of San Francisco, to which the work had been referred, speak thus:

"Your committee have examined Mr. Hyatt's Treatise on the Culture of the Grape, and believe it to be the BEST HAND-BOOK published on that subject for California vine culturists, and for which they recommend a Special Premium."

The California State Agricultural Fair, of 1867, awarded a Diploma to the author of this work, and also the San Joaquin Valley Agricultural Fair, at the same season.

OPINIONS OF THE PRESS.

The following are brief extracts fron some of the elaborate notices of this work:

The San Francisco *Daily Evening Bulletin* says:—"The book contains a choice collection of the best foreign and native varieties of the grape cultivation in California especially, as well as at the East. The many excellent works on Grape Culture in the Atlantic States are of little or no value in California, where an entirely different system and practice are necessary in vine growing and wine-making. This Hand-Book is intended to supply this deficiency. The author has taken great pains to investigate this subject, and to aid in the improvement of viniculture in California. Its appearence is timely, and it can hardly fail to meet a large and ready sale. It is attractively printed and elegantly bound."

Sacramento Union—"Hyatt's Hand-Book of Grape Culture is a California production that will probably meet a common want. The author takes the experience of the most noted vine-growers in the State as the warrant for his conclusions and suggestions, turns to account the recorded results of experiments made by the pioneers of this branch of industry, and in addition to giving full and minute instructions in regard to the planting of vineyards and the manufacture of wines, presents statistics which will enable the beginner to calculate the probable profits of successful grape culture."

The *Mountain Democrat*, whose editor, Hon. D. W. Gelwicks, is the present State Printer of California, speaks thus:

"HYATT'S GRAPE CULTURE.—We have received from the publishers, H. H. Bancroft & Co., San Francisco, a copy of this interesting and valuable work—a work greatly needed on this coast, and which every grape-grower should purchase. We sent it to a gentleman well known in this community, for his examination—a gentleman familiar with the subject, and largely engaged in the culture of the grape. He gives it the following cordial endorsement, and his endorsement ought to secure it a large sale:

'The limited time in which to examine Hyatt's Grape Culture, published by H. H. Bancroft & Co., San Francisco, has been sufficient, however, to satisfy me that it is a work which every grape-grower should have. No matter how well fortified we may be in our own experience and theory, we must acknowledge that we may adopt many of the author's ideas and suggestions with profit. The merit of the work certainly bespeaks for it a ready sale.

Respectfully, CHAS. P. JACKSON.'"

The Golden Era: * * * "With this book in his hand, the intelligent agriculturist can engage in the business of grape culture with almost the same chance of success as one who has bought his knowledge by expensive experience. * * * The practical information contained in the book would cost many hundred dollars to obtain in any other way. We predict for it a ready and rapid sale."

S. F. Daily Dramatic Chronicle: "The book is emphatically a California production, being written by T. HART HYATT, of this city, editor of the *Rural Home Journal*, and bearing the imprint, San Francisco: H. H. Bancroft & Co. It contains a large amount of valuable information, and should be in the possession of every vine-grower and wine manufacturer in the State. The usefulness of the volume, and its convenience for reference, are very much enhanced by a full and carefully prepared index."

S. F. Mining and Scientific Press: * * * "The book professes to be a complete manual, with instructions for the management of the grape and the manufacture of wine, and is especially designed for California. * * * The book contains a considerable amount of valuable information which is not generally found in such treatises."

S. F. Daily Times: * * * "The author seems to have exhausted his subject, particularly as it relates to viniculture in this State, and as the grape interest is just beginning to attract attention which is soon to become paramount among farmers, we regard the publication of the work as most opportune. No ranchman should be without it."

N. Y. Daily Tribune: "The author brings the result of many years' experience in foreign countries to the preparation of his work, and from his observations in climates similar to that of California, arrives at the conclusion that California is singularly favorable to the culture of the grape, and to all semi-tropical fruits, and that it will hereafter be distinguished as the land of the vine, the fig, the orange, the olive and the palm. His volume forms a capital, if not a complete manual, on the care of a vineyard, and it is enriched with much industrial information connected with the subject."

Lacon (Ind.) Home Journal: "This work is most *apropos*. It comes just as thousands, without any practical knowledge of the business, having planted vineyards, find themselves destitute of that information their intelligent care demands. All over the country this interest is growing, and probably the time is not distant when America will produce more, if not better, wines than any country in the world. The author, MR. THOMAS HART HYATT, is an enthusiast on the subject upon which he writes so pleasantly, and his book embodies just what every grape-grower would like to know—what every one must know, to cultivate the vine successfully."

Colman's Rural World, St. Louis: * * * "We merely want to introduce a new and interesting treatise on this subject to our readers, from the far-off shores of the Pacific—the Golden State of California. Its author is T. HART HYATT, editor of the California *Rural Home Journal*. He has had a large experience and observation in California and in the Old World. His style is entertaining, his directions clear, plain, and practical."

Rural New Yorker: * * * "Although most valuable to the California viniculturist, yet it helps to widen our knowledge of the vine."

H. H. BANCROFT & CO., Publishers.

The Occident.

San Francisco, Saturday, January 16, 1869.

CONTINUANCE OF FAITH.

The Lord did not tell Peter that He had prayed that He might not be tried, nor even that He might not faint for the time, but that His faith might not utterly fail, so that there should be no foundation left on which to build that better structure of piety which He designed to rear, as the monument of His grace after the trial had passed, and true penitence had been exercised for failure to withstand the evil influence that should come upon Him. The greatest good to a Christian may not be escape from severe afflictions; on the contrary, such afflictions, which try his faith to the utmost may be of essential and abiding value, when it is remembered that God's object, in all we are obliged to experience here, is perfection of character and the attainment of what may be of eternal worth, rather than release from temporary trial. The Christian has his spiritual ideal to realize in the midst of a host of opposing influences; he has his life-work to achieve, while beset by untold difficulties. The greatest blessing is not the removal of the necessity that he meet these, but ability to triumph over them all, making them tributary to the very end he seeks, and they would prevent. That prayer of Christ for His disciple included all inferior good. It gave him access to all the promises and all the resources of God. When it was answered, he could not be a negative Christian, having no strength because his powers were never tested; having no knowledge of his dependence on God because there was no opportunity to learn this. Nor did it make him a perfect Christian, with no conviction of his own unworthiness and need of grace, because of the power of evil still upon his heart. It obliged him to be a positive wrestler with his enemy, while he had strength in proportion to his faith; and it so thoroughly revealed his imperfection that he was evermore humble and watchful, while it assured him that even his fall would not wholly separate him from the grace which would not suffer his faith utterly to fail.

And what was true of Peter may be true of us. The Lord can grant no richer blessing than that our faith fail not. If He sees that it needs to be developed by means that seem to us to be stern, it will not be affection that will permit us to lack the qualities thus acquired, rather than endure the experience that may be sanctified to that end. What we need most, that we may make the highest attainments in piety, is a strong hold upon God; a trust that will never give place to self-confidence, and never tolerate sin; and it may be necessary that Satan sometimes buffet us, and get the advantage of us, and glory over our fall while relying on ourselves, until we shall come, with all the contrition and humility of Peter, to Him who has only been waiting for this effect of these assaults. Then we shall be convinced, that if we are to be kept at all, it must be "by the power of God through faith," and that "the trial of our faith, being much more precious than of gold that perisheth, though it be tried with fire, may be found unto praise and honor and glory, at the approaching of Jesus Christ." And we shall find, as did he, that the end of such faith, framed and strengthened, and purified, even by the rough discipline sent upon us, by a wise Providence, will be the salvation of our souls.

HOPEFULNESS.

A peculiar warmth of coloring sometimes covers our California landscapes. Gazing into the distance, we see all nature softened by an etherial tint, and a radiance of airy lustre, charming to the eye and awakening a sense of exquisite beauty in the mind. This soft light does not destroy the reality of the scene; "'Tis distance lends enchantment to the view." The rougher features of the country lie beyond our observation; and the colors are merely those of the atmosphere, brought out by the intervening space, thus enabling us to perceive their delicate hues.

Some minds are so constituted, owing either to their natural composition, or to the exercise of divinely kindled emotions, that they are enabled to take similar views of the future. While many persons only foresee discouragement, troubles and misfortune; view the horizon always darkened by a coming tempest, and the heavens clouded with overshadowing gloom; the hopeful look beneath the cloud to the radiance of the evening sky; or, if this view is shut in, then their thoughts soar above the storm to the azure heights of the firmament, where a glory of sunlit splendor rests on the sea of tossing mists.

The explanation of the enjoyment of the landscape lies in that capacity of beauty by which our senses link themselves to our emotions. The ultimate cause why soft lights, delicate features, graceful outlines please, is found in the constitution of mind with which our Creator has endowed us. This capacity is capable of cultivation, and thus may become an increasing source and inlet of refined gratification. The hopefulness with which we may regard the future is equally of divine origin, and is still more capable of training and enlargement. The scenes of the earth, beautiful as they are, yet are also fading and evanescent. But the enlightened eye, looking into the future, may behold the City of God; the city with everlasting foundations; those towering walls never to be overthrown; those fair mansions the Redeemer has gone to prepare. Our hopefulness and expectation does not owe its argument and stress to any virtue, or even capacity we find in ourselves, but to the sovereignty of our Lord.

We mistake the universe, its nature and intention, when we endeavor to eliminate the emotions from it. Without them, it is tame, prosaic, and even dead. It has been a favorite suggestion with certain writers that "the period of romance dies," and "a world of hard, living reality arises." That certain airy fancies, which never had an existence outside of the imagination, perish, is undoubted. But that a universe full of coloring, intended to touch the emotions, and enkindle them to a divine and beautiful life, fades out, is entirely untrue.

Once upon a time I was walking with an aged clergyman who "by reason of strength" had attained to more than four-score years, when we met a lady also far advanced in life. The old gentleman took her hand warmly, and after addressing a few cheerful words to her, turned to me.

"My young friend," said he,—it was many years ago,—"I suppose that you see no beauty in the face of this aged woman, but to me this worn and wrinkled countenance is more beautiful than when I used to know it in the days of its fair youth. Every line speaks of emotions of noble endurance, faith in God, and hope of immortality."

As he spoke, a soft flush of color rose to the woman's cheek, and there was a sudden awakening of strange emotions upon her countenance, kindling it to a mysterious, wonderful beauty,—as if the veil of old age for the instant was withdrawn, and the angel beyond it stood revealed.

Angels are always around and before us. Not necessarily powers of spiritual life, but the angels of opportunity, of usefulness, of doing good, of serving God. The Sunday School teacher may often be discouraged by the dullness and carelessness of his pupils. But of their number are they who will shine as stars forever in the kingdom of God; and through the very instrumentality here employed. When evening shadows gather, light fails from the world. Yet the infinite Life of God occupies it still. The sparrow poises on his wing, or falls, not without our Heavenly Father. A cold, stupid scepticism argues that the blossom only springs from corruption and partakes of its nature. The sceptic errs, he rejects the mighty element of the living functions which exclude what is foul, and secrete fragrance and beauty with which to adorn the world.

All the future is but a succession of flowering plants in the garden of God. The universe is full of God. If we discern Him, we see ourselves and all life of love to Him pervaded with glowing emotions. "God is love." "Hope thou in God."

PROPER RECREATION.

Muscular Christianity is on the wane. We sympathize with those distinguished and pious heroes who have been foremost in the gymnasium and boat-club, and have achieved redoubtable victories with the gloves and foils. But let them not be discouraged. There is still room for glory with the base ball. Only the day has gone by when it is urged that a student, or merchant, or clergyman should strive to imitate Dr. Winship, the Boston "strong man," who lifts a ton weight with ease; or Mr. Walker, who trots 100 miles a day; or Mr. Heenan, who strikes a blow with a momentum of 600 pounds.

Yet, while specialities of physical strength or agility are condemned alike by the physician and common sense, for persons of sedentary habits, no one questions the necessity of recruiting the energies. The brain is the student's organ. It must be trained in order to constitute the intellectual athlete. Its secretions, however, differ widely from those needful to the muscular tissue. It demands an excess of phosphates, and in obtaining them, exhausts the general system more than any mere physical exertion does. In order to restore the wearied brain, it imperiously demands moderate general exercise, recreation, and sleep. The first keeps the bodily system in vigorous activity; forces the blood to the extremities, warming the hands and feet; moves the diaphragm by a stronger respiration, thus exciting the liver and other viscera to action, and increases the perspiration, free or insensible. Sleep is the poise in nature's balance of forces; "Tired nature's sweet restorer, balmy sleep."

Recreation brings the mind and nervous system into that cheerful condition in which the body is enabled to receive the benefits of food and rest. All exciting or laborious games or amusements are inconsistent with its intention. One overcrowded professional man is said to have kept hens for his private amusement. He ever rushed from his pressure of duties to his poultry yard with unabated zeal. He never wearied with exhibiting the products of his favorite pullets. He attributed his health, success, and vigor to his chickens, devouring his eggs with a double zest.

A certain clergyman kept a favorite horse, which he fed, groomed, exercised, and bragged of. The

last was perhaps the greatest benefit, as leading to that nice discrimination between truth and falsehood, of which the horse is the most notable test—all jockeys being judges.

THE GOSPEL OF MATTHEW.

With surprise I learned from a contributor to the *Overland Monthly*,—a magazine of which every Californian is justly proud—among other astonishing things, that the Gospel of Matthew, "was probably not written before A. D. 70." What new light has been thrown upon this point we are not informed. Meanwhile till our darkness is dispelled, we must remain content with the former belief, that this portion of Scripture was much earlier in circulation. The first Christian writers express themselves very vaguely as to its date. Eusebius (A. D. 320. Book III. C. 24.) says that Matthew committed his Gospel to writing at the time when leaving the Hebrews he went forth to preach to other nations. Irenæus, A. D. 180 is usually quoted as saying that Matthew composed his Gospel at the time that Peter and Paul preached in Rome. But Eusebius quotes his words in a different sense, B. V, C. 8: "Matthew produced his Gospel written among the Hebrews in their own dialect; whilst Peter and Paul proclaimed the Gospel and founded the Church at Rome;" the purport being to show the sphere of labor not the comparative date.

The *internal evidence* of this Gospel indicates an early period. Especial reference to persecution, the manner in which it is to be borne, the reward of patience, the judgment upon the oppressors denote its production in such a period. These allusions were doubtless to the Jewish persecution, which ended about the time of the conversion of Paul, three years after the crucifixion.

Pilate is called Governor (28: 2.) with the sense and meaning of being still in office. He was deposed by Lucius Vitellius, Proprætor of Syria, about six years after the death of the Lord. The manner in which this Apostle refers to the Jews, to Jerusalem, to Herod is in striking contrast with the latter Evangelists; and is accounted for by the early period of his writing. It certainly seems unreasonable that the Church should have been left 40 years without any record of her Redeemer, at a period when literature was general and extensive, and when she was going forth in her march of unparallelled victories. Neither friends nor enemies could have been silent respecting such an occurrence. There is no tradition of any time after the ascension when this Gospel was not extant, unless the above quoted from Eusebius be considered such.

Books

Of all kinds, on all subjects, conveniently classified, occupy one half of the first story and the entire second floor of BANCROFT'S BOOKSTORE.

Stationery

Of every description, including all kinds of Writing Papers, Envelopes, Inks, etc., is sold at wholesale and retail at BANCROFT'S.

The American Tract Society

Is represented, in both its New York and Boston branches, by a large stock of its publications, at BANCROFT & COMPANY'S, who are the general agents for this coast.

The Presbyterian Board of Education

Has a Depository of its Works at BANCROFT'S BOOKSTORE, which is their headquarters for the Pacific Coast.

Sunday School Libraries

In great variety, supplied at the lowest wholesale prices. A fine assortment to select from at the Book and Stationery House of

Current Literature.

Our Religious Exchanges.

Several of the religious papers published on this coast give evidence of increased prosperity, or at least of an intention to deserve it, by making their appearance at the commencement of the new year in an enlarged and improved form. The *Cumberland Presbyterian*, the organ of quite an important branch of our Presbyterian family, was several weeks ago transferred from Alamo to Stockton, a much more favorable locality from which to exert an influence throughout the State, in favor of its peculiar views. The paper commences the year greatly enlarged, under the name of the *Pacific Observer*.

The organ of our Methodist brethren in California, formerly the *California Christian Advocate*, dropping the "California" as superfluous, and leaving the "Christian" to be discovered, as it easily will be, in the spirit of its contents, takes a bold step to the size and general appearance of *Zion's Herald*, the leading Methodist paper in the East. It is the form adopted by The Occident at the start, and which is becoming more and more popular among first class papers. The *Advocate* has been and we doubt not will continue, one of the very best of our religious exchanges. Its managers show great enterprise in making the present change, and their confidence in the generous support of the people should not be disappointed.

The *Evangel*, always a faithful champion of close communion Baptist principles, enlarges its sheet in accordance with the growing claims of that denomination. Its editors express freely and ably their convictions of right, and the paper exerts a wide influence for good.

The other religious papers, the *Pacific*, *Pacific Churchman*, *Pacific Christian Advocate*, and *Spectator*, although retaining their old form and size have doubtless the intention to "enlarge" their spheres of usefulness by infusing new interest into their respective pages. We wish all our contemporaries a prosperous year. There is need on this coast of greater interest in good religious and family papers, and no such paper is injured, but on the contrary each is benefited by the success of the others.

The *Atlantic Monthly* for January, comes to us with an interesting table of contents. This number is fully up to the high standard adopted by this excellent magazine. The publishers, Fields, Osgood & Co., not only show all the energy displayed under the old name of Ticknor & Fields, but have adopted some new measures in connection with the *Atlantic* which are calculated to bring it more prominently before the public, and will hardly fail to increase its popularity.

The history of San Francisco, although a brief one, should furnish material in abundance for a first class work of fiction, a work fit to occupy a high and permanent position in American literature. Such a work will undoubtedly be written after a certain number of partial failures and moderate successes. Yet life in our metropolis has not been made the subject of a sufficient number of respectable romances to render out of place a notice of fresh attempts in this field, the latest of which is a readable book of much merit, under the title of Gloverson and his Silent Partners, from the pen of Ralph Keeler, formerly a teacher in this city, and known to some extent as a lecturer and newspaper correspondent. We find in the story many fine touches of humor, evidences of good descriptive talent, and a plot equal at least to that of many modern novels which have been pronounced successes. As a picture of San Francisco life and character it is a failure. Change the scene to New York, or any other American city, and the story would neither gain nor lose in interest. The events described are confined chiefly to this city. They should have been entirely so, for the only attempt of the author to divert the attention of the reader to the interior, by means of an excursion to the vineyards of Sonoma, is unfortunate, involving the principal, and almost the only original, manly character, Amos Dixon, in a disgraceful fit of intoxication, utterly inconsistent with the man, and by no means counterbalanced by his heroic conduct in protecting, on the return trip, a poor, deaf man from a cowardly assault.

Miss Sophia Garr, the school mistress, although a caricature, is a good one. Her life, and "mining operations" on the hearts of men, would of themselves have made a capital magazine article. When the author leaves the humorous and attempts the horrible and mysterious, he affects the style of the German writers, and with no other apparent purpose than to enable himself to do this consistently, he introduces a sentimental German Baron, who, when he has answered the author's purpose, is swindled and driven to his death-bed by a very common-place villain in the shape of a Montgomery Street stock-broker. The book is published in good style by Lee & Shepard, Boston, and is for sale in this city by Bancroft & Co.

The gift books for the holidays sold in the Eastern cities this season, are reported to have been to an unusual extent of a religious character. The demand for editions of the Bible containing explanatory notes, a dictionary and concordance, is very large. The supply of excellent religious reading is also largely increased. Boxes of handsome volumes are coming into great repute, and we see that the Boards and Committees of Publication of the Presbyterian Church are leading the way, and have issued some elegantly illustrated works. We are all children in admiration of such books.

Periodicals Received:

The Galaxy for January, filled with the best of reading matter. New York: Sheldon & Co.

The New Eclectic Magazine for January, containing a portrait of John Ruskin, and a rich variety of selected matter. Baltimore: Trumbull & Murdock.

The Presbyterian Monthly for January. Philadelphia: Presbyterian House.

American Agriculturist for January. New York: Judd & Co.

Rural Southerner for December. Atlanta, Ga.: Miller & Bailey.

American Stock Journal for October. Parkesburg, Pa.: Boyer & Co.

Catalogue of Dartmouth College. 1868-9. Hanover, N. H.

Baccalaureate Address by President Asa D. Smith, D.D., of Dartmouth College. Hanover, N. H.: Dartmouth Press.

Third Annual Report of the California Prison Commission. San Francisco: Cubery & Co.

LITERARY ITEMS.

The saying "speech was given to man to conceal his thoughts," is commonly attributed to Talleyrand, but that arises from a convenient habit of giving the witty French man the fame of every sharp saying of which the author is unknown. In "Familiar Quotations," Mr. Bartlett tells us that "The germ of this saying is to be found in Jeremy Taylor. South, Butler, Young, Lloyd and Goldsmith have repeated it after him."

The same authority says that the common quotation,

> "He who's convinced against his will
> Is of his own opinion still,"

was written by its author,

> "He that complies against his will," etc.,

as any one may prove by turning to Butler's Hudibras, Part 3, line 624.

Of Tennyson, late reports do not speak in the flattering vein once so fashionable. A recent letter says of him:

"He lives a life of lazy and selfish seclusion, versifying a little, dreaming and smoking a good deal, and seeming to have no more interest in the world of living men than if he did not belong to it. When he has chosen to make himself heard of late years, it has rarely been in a way to cause other than regretful feelings among his admirers. He had only scornful words to throw at John Bright; he is reported to have been a "Southern sympathizer" during our war; and he eulogized Gov. Eyre, the cruel tyrant of Jamaica. So far as political affairs are concerned, he seems to have combined a sort of wrongheaded ignorance with his dreamy laziness. The great poet is anything but a great *man*."

A Writer in the *Saturday Review* declares that no object in nature is, on the whole, less beautiful than the sea. This he maintains by saying that because water is essential to a beautiful landscape it has been hastily inferred that you cannot have too much of it. "If from the Lake of Lucerne we take away Mount Pilate and the Righi, and, in short, all its shores, where would be the beauty of the lake? Would any one travel a mile to see it? The remaining beauty of the sea is supposed to be in the color of the water and the form of the waves." The color he thinks extremely monotonous and far from brilliant, and the waves "wretched little ups and downs" which have received exaggerated praise.

Dr. Kirkland, when President of Harvard College, was once applied to by a student for leave of absence on account of illness; the fact being that he was well enough, but wanted to go to a ball in his native town—which fact the President was not long in discerning. Taking a pen however, he wrote the desired document, and, as he handed it to the applicant, quietly observed that "physicians had remarked this peculiarity of the climate of Cambridge, that, within the precincts of the college, sickness of various kinds prevails in a greater proportion to the deaths, than in any other place in the Commonwealth."

The last syllable of the word Mussulman is not the English man, for which reason the plural form, Mussulmen, is an error. It should be Mussulmans, A correspondent of a New York paper once wrote: "The Turkish Sultan has just sent one of his sons, Master Abdel Hamid, a little Mussulboy of nine years, to be educated in Paris."

In the time of Benjamin Franklin, serious doubts were entertained of the propriety of his starting a new paper in the city of Philadelphia. Prominent men doubted whether it could be sustained as there were already two newspapers in the United States.

Mr. Samuel Bowles's "Rocky Mountain Vacation" letters, which have already appeared in the *Springfield Republican*, are to be published in a book.

Educational.

Errors of Fact in Text-Books.

Errors of fact may be found in nearly all school text-books. Sometimes the fault will consist in the misuse of a name. "In June, 1846, a treaty negotiated in Washington established parallel 49°, and the Strait of San Juan de Fuca as the separating

line." (*Quackenbos.*) The slip in this sentence is rather amusing. Juan de Fuca was a bold Greek sailor, who distinguished himself by being the first to see that portion of our continent now included in Washington Territory. He was not at all a saint in the Romish sense of the word, and therefore the *San*, as above, is quite superfluous. "Their remonstrances being disregarded, they declared their independence of Mexico, and made ready to support it by force of arms. Volunteers from America hastened to their aid." In this extract (from the same source as the above) the name *America* is used, rather presumptuously, for *United States*. Morally, the names have about the same breadth, but not geographically. Other errors in text-books, however, which relate to matters of relationship, cause, and effect, etc., are more important. "At that time, Queen Anne's son, George, was monarch of England, and this contest was called King George's War." (*Dossing.*) The slip in this sentence is a magnificent one. George could scarcely have been the son of Anne, inasmuch as he not only belonged to a different royal family, but was five years her senior! Again, the following is an account of the town of Los Angeles: "The country there is so beautiful, and the air always so delightful, that the people who discovered it chose it at once for their dwelling-place, and called the town they built *Los Angeles*, which means the *dwelling-place of the angels.*" (*Guyot.*) The fact is, that the full name of the mission of Los Angeles is *La reyna de los Angeles*, which means *the queen of the angels*, referring, of course, to the Virgin Mary. It might seem that such errors would serve a good purpose in enabling the teacher to show that he had some knowledge of his subject, apart from the text-book in hand. But they serve a better purpose in enabling him to show a little of the grace of humility. He should correct faults, to be sure, but in the spirit of one who knows that to err is human; and who has sense enough to perceive how easy it is to fall into occasional errors while striving to accomplish a large work. C. R. C.

Personal.

THE Congregational Church at Sacramento not being willing to accept the resignation of REV. MR. DWINELLE, who had been elected to the leading professorship in the Theological Seminary about to be established. REV. J. A. Benton, of this city, has been elected to that position. A better man could not have been selected.

REV. J. S. MCDONALD, we are glad to learn, is enjoying much better health than heretofore, and it is hoped that he may so far recover as to be able to resume his labors as pastor of the Presbyterian Church in Sacramento, which has been without a pastor since his resignation.

REV. J. P. MOORE, Superintendent of the City Missionary Society, will, it is feared, be obliged, by the state of his health, to resign the position. This is to be regretted, as it will be difficult to find another man so well fitted for missionary work in our city.

HON. CHARLES WESTMORELAND, one of the most prominent lawyers in the State, and formerly editor of the *Marysville Appeal*, died of small-pox on board the steamer, while on his way to carry the electoral vote of California to Washington.

HON. A. C. ADAMS, of Mokelumne Hill, has been appointed Judge of the Eleventh Judicial District, in place of HON. S. W. BROCKWAY, resigned.

HON. NEWTON BOOTH, REV. A. L. STONE, D.D., and PROF E. S. LIPPITT have been engaged for the course of lectures to be delivered at Suisun this winter in behalf of a Public Library and Reading Room.

MR. H. G. COMSTOCK, the original discoverer of the celebrated Comstock lead, is now operating with an arastra at South Pass City, on ore from the Sweetwater Mines.

MESSRS. A. S. WARNER, C. W. GREELEY, and MR. SWEENY were, at a late meeting of the Congregational Society of Chico, elected Trustees for the ensuing year.

JULIEN MARTINETTI, a prominent member of the celebrated Martinetti Troupe, died of small-pox, last week, on board a government steamship at Mare Island.

MR. FREDERICK LUX has been appointed Internal Revenue Assessor of the First California District, in place of MR. L. C. GUNN, resigned.

REV. J. A. BENTON, an old California pioneer and editor of *The Pacific*, publishes his portrait in a late number of that paper. A good idea.

GOV. BLASDELL of Nevada, in his late message to the Legislature, advocates a speedy return to gold and silver currency.

CAPT. POOLE, of the Sacramento steamers is to become landlord of the Occidental Hotel in this city.

NED. BUNTLINE has gone East. He is said to have made some money during his stay on this coast.

REV. MR. STEARNS, of the Baptist Church at Santa Clara, died of small-pox on December 29th.

HON. WM. M. STEWART has been re-elected for for U. S. Senator, from Nevada.

MR. THOS. MCDANIEL, Treasurer of Butte Co., died at Cherokee on January 2d.

MAJOR JACK STRATMAN started for the East last week.

ALLEN'S ORIGINAL AND GENUINE
Nerve and Bone Liniment.

The Nerve and Bone Liniment was originated by Geo. M. Allen, n the year 1834, and has lived entirely on its own merits without the aid of advertisements; but owing to the many counterfeit and worthless articles called Nerve and Bone Liniment, now upon the market, has induced the proprietors to advertise it. Many certificates of leading citizens who have used and constantly keep it in their houses, as a great family remedy, could be added to the advertisement, but knowing the many virtues of Allen's Nerve and Bone Liniment, and that one application will satisfy any one of its beneficial effects, deem it unnecessary to bring the certificates before the public. Allen's Nerve and Bone Liniment does not effect a cure in a minute, but acts upon the Nerve and the Bone of the patient by its penetrating properties, when used according to the directions on each bottle, and gives new strength to the parts affected, and thus acts as an agent in helping nature to restore the diseased parts to health. It is also invaluable in all diseases of horses.

Be sure to call for Allen's original and genuine Nerve and Bone Liniment, all others are worthless counterfeits, and should not be tolerated by the public.

ALLEN & CO., Proprietors, Cincinnati, O.

For sale by all druggists.

HOSTETTER, SMITH & CO., Agts. for Pacific Coast.

DR. H. AUSTIN
Dentist,

No. 634 WASHINGTON STREET,

Between Montgomery and Kearny,

Over San Francisco Baths,) SAN FRANCISCO.

Heuston, Hastings & Company,

LICK HOUSE BLOCK,

SAN FRANCISCO.

United States Life Insurance Comp'y,

IN THE CITY OF NEW YORK.

OFFICE, No. 40 WALL STREET.

CASH ASSETS EXCEED $2,700,000.

This Company, having a Stock Capital, makes Insurances and Endowments with or without profits. Dividends to Policies with profits are equal to, or larger than those of other, or "Purely Mutual" Companies in available present cash value.

NEW AND IMPORTANT PLANS OF LIFE INSURANCE HAVE BEEN ADOPTED BY THIS COMPANY. SEE THE NEW PROSPECTUS.

Life Assurances, Endowments and Annuities in every form. Profits available after Policies have run one year, and annually thereafter. The reserved Cash fund, for re-insurance, is the largest known to or required by, the ablest and most experienced authorities in Life Insurance, thus affording undoubted security. A liberal non-forfeiture system, as to whole Life or Endowment Policies.

Policy Holders in this Company can use or apply the Dividends of profits in a greater number of ways than is afforded to Policy Holders by any other Company.

The law under which the company is Chartered, provides that if the Capital should, from any cause, become impaired to the extent of Twenty-five Thousand Dollars, or more, the Stockholders SHALL BE CALLED UPON TO MAKE GOOD SUCH DEFICIENCY. This is the only Cash Company in America which affords this safeguard to Policy-holders.

The assured in this Company are not personally liable as in Mutual Companies, which have the power of assessing their members or of reducing the sums insured, in case of deficiency.

CLERGYMEN, insuring in this Company, are allowed a DISCOUNT of TWENTY PER CENT. on first year's premium, and a liberal commission will be given on all Insurances influenced by them.

Agents wanted, on the most advantageous terms.

Forms and every information will be furnished by

B. J. DORSEY,

General Agent for the Pacific Coast,

Southeast Corner Sansome and California Sts., San Francisco

Practical and Scientific.

AGRICULTURAL.

A Settled Policy of the Farm.

The whole secret of the successful farmer often lies in his having a fixed plan of operations. Multitudes have no plan but to meet their immediate necessities and make money by the easiest and seemingly shortest methods. If wool brings high prices, they will gradually give up dairying and work into sheep, with the expectation of making their fortunes. If wool and mutton raising for a time does not pay, they sell their flocks at a great sacrifice. If hops are sixty cents a pound, they invest in hop poles and kilns for drying, and expect a sudden wealth. If when in their yards, some in full bearing, the prices fall off one half or more, they are disgusted, and ready to blow up their yards, concluding the business will not pay. There are men who are taking up a good thing a little too late to make money by it. The farmer cannot afford this continual change. His business is less speculative than any other, and, after providing for the wants of his family and stock, he should give his attention merely to the production of a few animals, crops, or other products, on which he can rely to raise money. Any branch of farm industry, steadily followed, will be found profitable. Dairying, in a year of short grass, might not pay well. But the years of drought are exceptions, and the man who makes firstrate butter or cheese will find them a reliable source of income. Where a specialty is made of some one crop, it is particularly important that he should follow it steadily. The raising of hops or of tobacco requires fixtures that are useless in any other branch of farming, and the change involves a considerable loss of capital. Besides we are always learning in a business to which we give habitual attention, and this knowledge is as much a part of our capital as the money invested in tools and in buildings. If a man should make potatoes his leading crop, he should study to lessen the cost of production, and would resort to devices in the preparation of manures, and in cultivation, quite unknown to the farmer who pursues a careless style of husbandry. He could raise potatoes cheaper than his neighbors, by means of his improved methods, and if he sold at the same price, make more money. Whatever branch of farming you follow, stick to it, if it is moderately profitable. Lay your plans far ahead, and prepared for the exceptional years, when large profits come from high prices, or losses from unfavorable seasons. A mixed husbandry is always the safest, and is not at all inconsistent with the cultivation of commercial crops, as tobacco, hops, flax, onion seed or vegetable seed of any kind, garden vegetables for market, fruits, etc. The introduction of these requires close calculation, definite plans and thorough business management, if success be attained.

—*American Agriculturist.*

Alkali Land.

The following article will dispel an erroneous idea entertained by many of the citizens of this and adjoining counties relative to the worthlessness of alkali lands. The experiments cited develop the fact that the longer such lands are cultivated the more productive they become:

A remnant of volcanic matter stretches through the eastern side of Santa Clara Valley and is familiarly known as the "alkali streak." This curious belt varies in width from one hundred yards to a quarter of a mile, and the soil contained within it is completely saturated with saleratus and other alkaline salts. At present the alkali streak is almost valueless for agricultural purposes, and is considered a positive detriment to the farms through which it passes in its natural condition, the only vegetable life which can exist upon it is a species of tough, wiry grass, known as "alkali grass," and a few stunted specimens of marsh weed. Experience has proven that the alkali grounds can be reclaimed by cultivation. At present, some of the handsomest gardens and orchards in San Jose, are thriving in the very heart of the alkali streak. It requires time and labor to accomplish the reclamation, but in the end it is found that the subdued salt acts as a first class fertilizer.

Every farmer is familiar with the fact that if ashes be thrown in heaps upon a meadow, or greensward, the excess of potash which the rain leaches from the ashes, will completely destroy surrounding vegetation. The same effects are produced by an excess of alkali in the soil. If the pile of ashes is scattered broadcast over the meadow, they form an excellent manure, and will be of great value to the growing crop. If, by constant cultivation, the alkali grounds are constantly stirred about, the deleterious salt will be equally distributed through the soil, and will become a supply of natural manure. The longer such grounds are cultivated, the more productive and valuable will they become, and instead of being considered worthless wastes, as they now are, will be sought after by the gardener and farmer. One of the best methods for reclaiming these lands, is to sow them with beets. It has been proven by experiment that the beet thrives finely in the alkali streak, and as these tubers grow large and penetrate the soil to a considerable depth, they serve a better purpose than deep plowing. Now that the sugar manufactory is about starting at Alviso, we shall expect every rod of alkali land to be sown in sugar beets.

—*Santa Clara Argus.*

A Farm Picture.

What a vivid sketch is this which George William Curtis draws of some country homes! Happily not all, nor yet the majority, are here painted, but that this picture has its living originals, all must admit:

I think of many and many a sad-eyed woman I have known in solitary country homes, who seem never to have smiled, who struggled with hard hands through the melting heat and pinching cold, to hold back poverty and want that hovered like wolves about an ever increasing flock of children. How it was scour in the morning, and scrub at night, and scold all day long! How care blurred the window like a cloud, hiding the lovely landscape! How anxiety snarled at her heels, dogging her like a cur! How little she knew or cared that bobolinks, drunk with blind idleness, tumbled and sang in the meadows below, that the earth was telling the time of year with flowers in the wood above. As I think of these things, of the solitary, incessant drudgery, of the taciturn husband coming in heavy with sleep—too weary to read, to talk- to think, I do not wonder that the mad houses are so richly recruited from the farm houses, as the statistics show—that the farmer's daughter hangs enchanted over stories in the weekly paper of the handsome Edward Augustus, with white hands and black eyes—nor that the farmer's son hears the city bells that long ago rang to Whittington, "Turn again, Whittington, Lord Mayor of London," ringing to him as he pauses in the furrow, "Turn again, ploughboy, millionaire, and merchant!"

Butter From Five Cows.

Ephraim Penrose of Berks county, Pa., sold from five cows 1,123½ pounds of buiter in one year, commencing May 1st, 1867, when they were first but to pasture. They were native cattle, indicating no striking marks of any particular breed, but of medium size and well built. One week's trial gave 11½, 11¼, 10¼, and two 8 pounds each. The one giving 11¼ had her first calf, and the two giving 8 pounds had been milked about three months before the trial. The family, always consisting of six persons, and sometimes more, used freely of milk, cream and butter from the same cows. The butter used, they think, was not less than four pounds a week, making the yield from each cow abont 266 pounds. Their food consisted of meadow grass, clover and timothy, and they always had access to running water. During the winter they had as much clover and timothy hay as they would eat, and about 2½ quarts of bran twice a day. They also had pumpkins the early part of winter. The stable was warm, cleaned daily, and well littered with straw. The cows were carded, curried or brushed all the year.

The above is not given because of the extraordinary yield, but is proportionably more than is obtained in large daries under much stronger feeding, at least in concentrated food. The care taken in cleanliness was doubtless of much benefit. It is a common saying that with horses currying is half the feed;—why then will not the same care taken with cattle be equally beneficial?—

—*N. Y. Observer.*

The average yield of wheat per acre in 32 States east of the Rocky Mountains last year, was 11-17 bushels, and the average price, $2.23. Connecticut furnishes the largest average per acre, 17-5; South Carolina the least, 6-4.

The area of land under cultivation in the Australasian colonies, according to the last returns, is 2,500,000 acres, and the live stock consists of 600,000 horses, 4,000,000 cattle, 38,500,000 sheep, and 400,000 pigs, giving a total of more than 43,000,000 head of stock.

News has reached Amoy of the burning down Rev. Mr. Maxwell's house at Taxao. The unfortunate gentleman and his wife are said to have lost all they possessed, even to their wearing apparel.

A farmer should increase the growth of useful plants and shrubs around his home, but not use rails, poles, and boards to *prop-a-gate* with.

WEEKLY MARKET REPORT.

Wednesday, January 13, 1868.

Flour—The recent heavy receipts from Oregon have depressed the market for those brands, some of which are being offered as low as $5. We quote local brands as follows: Superfine, in sks, ₱ 196 lbs, $4 75@4 87½. Extra in sks, $5 75@$5 87½.

Wheat—Sales include 500 sks good shipping, $1 75; 2,240 sks do, 1 75; 2,200 sks choice, $1 80 ₱ 100 lbs.

Barley—Feed is quotable at $2 25@2 30, and brewing $2 30@2 37½ ₱ 100 lbs.

Oats—We learn that $2 20 was refused for a round lot of Oregon by recent arrival; quotable at $2 15@2 25 and California at $2 10@$2 25 ₱ 100 lbs.

Potatoes—Sale of 525 sks Bodega, 65c; quotable at 60@70c; 472 sks Humboldt and Pigeon Point, 75@80; quotable at 70@80c ₱ 100 lbs.

Onions—Sales of 100 sks Yellow, in lots, $2 75 ₱ 100 pounds.

Beans—Under light stocks and a concentration of supplies, jobbing rates have been advanced as follows: Bayo, 4½c; Butter, 5½c; Pea, 6c; small White, 5½@6c; Pink, 4c; Red, 3¾c ₱ lb.

Corn—Yellow, is quotable at $1 75@1 90 ₱ 100 lbs.

Rye—Quiet at $3 75@4 ₱ 100 lbs.

Buckwheat—Last invoice was reported sold at $3 ₱ 100 pounds.

Mustard Seed—Nominal at 3c, for good California Red and 4½@5c ₱ lb for English White.

Flax Seed.—The local mill continues to pay 4c ₱ lb for a good article.

Bran—Is firm and active at $22 50 ₱ ton from the mill.

Middlings—Feed descriptions sell at $28@30, and fine from $35@37 50 ₱ ton.

Oil Cake Meal—In moderate request at $35 ₱ ton.

Hay—Favors the buyer at $14@20 ₱ ton, latter a full figure.

Hops—Nominal at 25@30c ₱ lb for California.

Dairy Products—Nearly all descriptions are lower, consequent upon the late rains. California fresh roll Butter is quoted at 50c and Eastern firkin 40@42½c for jobbing lots; Cheese, 19@20c for California, latter figure for new; Eastern 20@21c ₱ lb, with sale of 130 do per steamer, private. Eggs are dull at 37½@40c ₱ doz.

Poultry—Live Turkeys are quoted at 16@18c, and dressed do, 18@20c ₱ lb; Hens and Roosters, $8@10; Spring Chickens and Ducks, $6@7; Geese, $12@13; Quail, $1 25 per dozen.

Provisions—Bacon is jobbing at 13@13½c for California smoked; Oregon do, 14@14½c; California Hams, 14½@15c; Oregon do, 15@16c; California Lard, 12½@13½c and Oregon in cases, and 11½@12½c lb for Oregon in kegs.

Wool—Supply nominal; demand active at old rates; sale of 2,000 lbs burry at 13½c ₱ ℔.

Hides—Sales since last Wednesday aggregate 1,100 California Dry at 14½@15c; salted weak at 7@7½c ₱ pound.

Tallow—Fair to choice Beef is quoted at 7¾@8½c ₱ lb, with sales for the week of about 25,000 lbs within the range.

San Francisco Cattle Market.

Market firm at last week's quotations.

We quote slaughterers' prices as follows:

Beef—American, 1st quality, 9@10½c ₱ lb.
do 2d do 7@8½c ₱ lb.

Veal—Quotable at 9@11c ₱ lb.

Mutton—Dull and lower, 6@7c ₱ lb.

Lamb—Scarce. Sheep, lamb-dressed, sell at 6@8c ₱ lb.

Pork—Undressed, 5@6¼c; dressed, 7½@8c ₱ lb, outside figures for milk or grain fed.

—*S. F. Bulletin.*

PRACTICAL.

The Laws and Manners of the Road.

It is commonly said that every one has a right to half the road. This is practically true, and comes about in this wise. You and I meet upon the road—our legal rights are exactly equal, and both have a right to go our several ways without obstruction; so, popularly, we say I own half and you half. The law steps in to facilitate matters, and directs each to turn towards his right hand. This is true whatever the load or the team; for if one can drive such a team that another can pass him but with difficulty, if at all, their rights are no longer equal. This point becomes very important in winter, for it is no joke to turn your horse and all into the deep snow, while your neighbor goes smoothly along in the beaten path. No one has a right so to load his team as not to be able to give up half the track to whoever demands it.

A footman may choose the part which pleases him or any portion of his right hand half of the way, and the team must yield it to him. This is clearly so in winter, and no man is obliged to step in the snow for one or two horses. This is law, and the court awards it.

The first requirement of the road manners is good nature, and an accommodating spirit. Do to others as you would have them do to you. Always be willing to yield more than half the space, then you will be pretty sure to be equally well treated. They who exact inches will have inches exacted of them. If your neighbor has a heavy load, consult his convenience as far as possible; you may sometimes be loaded. It has become a practical rule of courtesy to turn for heavy teams, especially in winter, and when the roads are heavy. But remember it was a favor, not your right, and you have a reciprocal duty to perform, and one which, I am sorry to observe, is not always borne in mind.

When a team comes up behind you, that team has a right to a reasonable space and opportunity to pass on—in fact, to half the road for that purpose—and your obstructing him in his lawful desire is both bad manners and bad law. If your load is heavy, do the best you can. In most cases the very least that can be asked is that you should stop. This is particularly so in the winter, when it is a heavy tax on a team to force it into a trot in deep snow, or deep mud, or frozen or deep ruts—made necessary by your continuing to move on.

—*Northwestern Presbyterian.*

Mining on a Large Scale.

The Earl of Dudley's territorial possessions and country seats in Staffordshire, and Worcestershire, England, his shooting-grounds in Scotland and the east of England, his mansion and picture gallery in London, his winter palace in Rome, even his valuable mineral estate in Merionetshire, fade into insignificance when compared with his mines and collieries, and iron-works around the midland town which takes his title. The latter estate—honey-combed by industry beneath, blackened by industry on the surface—covers an area of ten square miles. It furnishes employment for nine thousand working people, and reckoning in their families, wholly supports at a moderate computation, something like seven and twenty thousand human beings. It is intersected by two private canals, and traversed by forty miles of railroad. The horses employed upon it are numerous enough to supply a cavalry regiment; the boats to furnish a fleet. The steam power under ground is simply incalculable, it is so dispersed. Eight locomotives ply upon its railways. There are forty boilers in one of its works, and twenty in another. Every pit, and every furnace over and under the whole ten miles has its accompanying steam engines. This vast estate yields seventy thousand tons of pig-iron per week, to say nothing of limestone used for flux; and it sends manufactured iron into all the markets of the world. Nearly a hundred heads of departments are engaged in managing it, and it takes over three hundred clerks to keep the accounts. The annual outlay in wages does not fall far short of half a million sterling.—*Alpine Miner.*

THE VIRTUES OF BORAX.—The washerwomen of Holland and Belgium, so proverbially clean, and who get up their linens so beautifully white, use refined borax as washing powder, instead of soda, in the proportion of a large handful of borax powder to about ten gallons of boiling water; they save in soap nearly half. All the large washing establishments adopt the same mode. For laces, cambrics, etc., an extra quantity of the powder is used, and for crinolines (requiring to be made stiff,) a strong solution is necessary. Borax being a neutral salt, does not in the slightest degree injure the texture of the linen; its effect is to soften the hardest water, therefore it should be kept on the toilet table. To the taste it is rather sweet, is used for cleansing the hair, is an excellent dentifrice, and in hot countries is used in combination with tartaric acid and bi-carbonate of soda as a cooling beverage.

—*Evangelist.*

PRESBYTERIAN BOARD OF PUBLICATION.

THIS popular and extensive house publishes a great variety of works in all the departments of

Religious Literature,

Including,

COMMENTARIES, ANNOTATIONS, RELIGIOUS HISTORY, RELIGIOUS BIOGRAPHY, SERMONS, BIBLE DICTIONARIES, CHILDREN'S BOOKS, QUESTION BOOKS, CATECHISMS, DEVOTIONAL BOOKS, ETC., ETC.

Particular attention is called to their large and varied assortment of the most carefully selected

SUNDAY SCHOOL LIBRARIES.

Sunday School Teachers and Officers, and others who have charge of supplying Schools with Libraries, will save themselves much trouble in selecting, and will insure to the Schools under their charge a suitable collection of Books by calling to examine this stock.

Among the HYMN BOOKS published by the Presbyterian Board may be noticed the

PRESBYTERIAN PSALMODIST, PRESBYTERIAN JUVENILE PSALMODIST, CHILDREN'S PRAISE, AND

THE HYMNAL,

One of the latest and most popular collections of Hymns and Tunes, and one admirably adapted to the general introduction of

CONGREGATIONAL SINGING.

Persons in want of the above varieties of books may procure them at reasonable rates by calling at the DEPOSITORY OF THE PRESBYTERIAN BOARD for the Pacific Coast, which has been established at the store of

H. H. BANCROFT & COMPANY,
609 Montgomery Street, San Francisco, Cal.

General Selections.

Leaves in Autumn.

Delicate leaves!
Ah! how their beauty the eye deceives!
Their color foretells the coming death,
Who will take them away with his lightest breath;
And their golden palms must touch the earth,
While the loud winds whistle in careless mirth,
Or softly sigh, like a soul that grieves—
"Beautiful leaves, beautiful leaves!"

Falling away!
Tender and fresh were they in their day,
Clinging for life to the parent bough;
Where is their strength and their freshness now?
The stricken trees must lose their dower,
Falling away in a golden shower,
Or loosening lightly, one by one,
In the yellow light of a hazy sun;
While sad winds murmur at close of day,
"Falling away, falling away!"

Drifting away!
Mark where they rustle at dawn of day
In the forest path! Ere the day is done,
They are far away in the setting sun;
Floating—ah, whither? upon the stream
That bears them away in its tuneful dream;
Or borne on the wind, which seems to say,
"Drifting away, drifting away!"

—*Presbyterian.*

The Telescope.

The *N. Y. Daily Tribune* gives a readable synopsis of a lecture delivered before the American Institute, by Prof. Alexander, of Princeton College, who, after being introduced to the audience, spoke as follows:

It was a noble figure which Bunyan used in his Holy War, in which he calls the senses the gate of the soul — the inlet of knowledge from without. Among these, noblest of them all, is the eye-gate, the medium through which from afar the glories of light are borne upon the very wings of the morning. Quite as interesting, in some aspects, is the eye, through which we are enabled to see. And then, how beautiful and glorious is the light, entering, as it does, through the unbarred gates of the morning, gilding with glory the canopy of the sky, revealing the distant mountain-top, and unvailing the fair face of nature. Even its shreds and patches are beautiful as they sparkle in the diamond or twinkle in the dew-drop, and the light comes back blushing itself because it has kissed the cheek of the blushing rose. Ah! beautiful is light; but most grand and most beautiful, most glorious, when it reveals to us from afar the glories of the great panoply that surrounds us, and the sun who covereth himself with light as with a garment. Most glorious, in the next place, is the adaptation of the eye to light, and of light to the eye. Oh, what a simple telling fact is it that the wonderful emanation is poured upon the most deligate organ of the human body, in its own way, with the velocity which would accomplish a journey by steam of 250 miles in a single second, without injury to that organ. On the contrary, light is a blessed thing for the eyes, and all the senses harmonize in its reception. The lecturer here illustrated by diagrams the effect which prisms and lenses have in diffusing the rays of light. About the earliest mention of the use of instruments for diffusing the rays of light was the use by the monster Nero, who was near-sighted, of a convex mirror, composed of precious stones, in order that he might fully enjoy the contests of the gladiators in the arena. Prof. Alexander, in this connection, exhibited a magnesium light on the platform, showing the effect of the light entering at different points of the mirror. The lecturer next referred to the history of the telescope, and said that he had a book in which there was an article by one Prof. Alexander, and as that writer was a personal friend of his, he would quote from it.

"Roger Bacon, in his Opus Majus, makes use of such language with reference to what 'may be performed by refracted vision,' as to render it somewhat probable that he was at least acquainted with the theory of a refracting telescope, though there is no sufficient proof that he constructed one; and Baptista Portia is said by Wolfius to have made a telescope, but the description of the instrument given by the inventor is very defective, and the instrument, whatever it was does not seem to have been used in any celestial observation. Indeed, 'we have no distinct evidence that such an instrument was used before the beginning of the 17th century.

Descartes ascribes the invention of the telescope to James Metias (Jacob Adriansy) of Allmear, in Holland; but Huyzans, as well as Borellus, to John Lippenshelm, or Lippersy, (Hans Zanz, or Jansen,) a maker of spectacles, of Middleburgh. Prof. Moll, after an examination of official papers preserved in the archives of the Hague, comes to the conclusion, that on the 17th of October, 1608, Jacob Adriansy was in possession of the art of making telescopes, but from some unexplained cause concealed it: and that on the 21st of the same month Hans Zanz, or Jansen, was actually in possession of the invention; but there is little reason to believe that it was devised by either him or his son Zacharias, though one of them invented a compound microscope about the year 1590. One of the earliest of the telescopes made by the Jansens was presented to the Prince Maurice, to be used in the wars. It was in April or May, 1609, that Galileo first heard of this, and the instrument was then described to him as one which had the property of making distant objects appear as though they were near. Galileo thereupon divined how that might be effected, and the next day, according to Delambre, was in possession of a telescope magnifying three times. Galileo's second telescope magnified about 18, and his third about 33 times."

The next topic was the planet Jupiter and his satellites, of which there are four. These satellites were observed by Galileo, who also observed their eclipse. Jupiter turns round in less than ten hours. The moon, it would be noticed from the diagram, had a very ragged edge, which was accounted for by the fact that the mountains upon its surface were first struck by the rays of the sun; thus causing it to exhibit an uneven appearance to the eye. They have a different atmosphere in the moon from that on earth; things weigh only one-sixth what they do here, and the moon is not made of the same stuff as the earth. The sun, it would be observed, was broken by long, black, hollow spots, which sometimes open and close in the space of three or four days. The spectroscope shows that there is iron there, and magnesium, and sundry other things. Next is the planet Mars, which seemed to be covered with something very like snow. The distance to the moon is a ten months' journey by steam; from here to the sun is more than 300 years' journey at 30 miles an hour, so that if we had started with Cortez when he conquered Mexico, we should have had a residence there of but 25 years. But what is that compared to the distance of the fixed stars, which were 7,000 times as far off as the most remote planet? The light of some of these stars has been actually measured, and one of them seems to be brighter than a hundred suns.

What shall we say of the Power who gives light to these hundred suns? These suns, which are so remote, were started before the human race began. The consideration of this showed us the power of omniscience and the velocity of light. The lecturer here explained why the stars exhibited a white light, showing also that fixed stars, being in pairs, revolved around another, and thus sometimes presented the appearance of being but one. For the same reason, some appeared to be colored green, others yellow and blue, and others black. The greatest imagination ever exercised—that of Milton—never conceived anything more sublimely magnificent than is found in these tinted suns, these gems that surround the dark brow of night. For these discoveries, said the speaker, we are largely indebted to an American, Allen Clark, one of the best opticians in the world. Photography has been a valuable assistant in promoting the science of astronomy as well as of other sciences, showing a beautiful instance of the cooperation of the sciences in these days. Prof. A., in conclusion, exhibited a photograph of a remarkable phenomenon which he said exhibited the appearance of a whirling rocket on its travels through the sky, and closed with an eloquent peroration.

How many wasted hours have been spent in hearing intellectural sermons.

Attention to Dress.

The *Hartford Churchman* advances the following sensible views on this subject and gives the American custom of "dressing for church" the rebuke it richly deserves:

At the outset, we must recognize the fact that attention to dress is not only harmless in itself, but also a duty. There is no virtue in worldliness, or in mean attire. To appear well, to present such an exterior as will not only not offend, but will also please those with whom we associate, is one of those obligations which God put upon us when he placed us in a world of beauty and made us members of society. There are places and occasions which demand richness and elegance of dress. Clouds are not always sombre. The hues of the carnation are in marked and beautiful contrast with the gray moss which covers the sturdy trunk of the forest tree, the delicately shaped and curiously fashioned foliage which sways to the winds of summer, possesses—simply because it is to be seen—a grace which the roots hidden under ground do not have.

But it may be seriously questioned how much of the extravagance in dress which characterizes modern fashionable society, springs from either a desire to please others, or from a love for the beautiful. No doubt, millions upon millions of dollars are squandered yearly from a mere wish to excite envy and to surpass others in show. The secret of this ruinous expenditure which makes society a parade-ground for the display of tinsel and glitter, and which flaunts its gorgeous colors even in the audience chambers of Him who is the Maker of both rich and poor, is worldly and unchristian pride. Vanity advertises itself in excesses of dress which outrage good taste and lead those who cannot afford them into acts of dishonesty. And thus, while God's kingdom pleads for means to feed a few half-paid missionaries, and is compelled to adopt all sorts of expedients to secure even crumbs of wealth, her members seem to take it for granted that it is their chief mission to outshine the world in these outward adornments.

And because women have fewer worldly aims to strive for than men have, and because their thoughts and time are not so engrossed in business cares, this is an evil to which they are especially exposed. Still we ought to recognize, perhaps, underneath the richness of clothing with which they are peculiarly prone to adorn themselves, a more delicate taste and a more scrupulous regard for the beautiful, than men can be expected to possess. Yet there is, for this very reason, great danger of coming to consider the outward as all in all, and to forget that, for a Christian woman, the highest adornment consists of "that which is not corruptible." The richest robe that ever flashed with jewels upon the admiring gaze of society cannot invest a woman with such beauty as enriches the character of one who strives to win the love of the lowly rather than the admiration of the rich; who denies herself for the sake of Him whose Gospel has lifted her sex out of social degradation, and who ministers unto Him in the persons of those whom we shall always have with us till He returns to make us all equally rich in the wealth of His personal glory.

There is one place where modesty and moderation of dress are imperatively demanded by Christian principles, and by the rights of God's less fortunate children. We refer to the house of worship. It seems a mockery to see persons using the hour of prayer as a time for display, and the temple of the lowly Christ's presence as a place for the exhibition of selfish vanity—listening to that Gospel, of which millions have not heard, with ears in which are hung jewels that would afford the means of Christianizing a whole community. This is a sin against God, against the religion of the lowly Jesus, and against the plain precepts of the New Testament. It is also a wrong to others. It shuts poorer people out from the churches which should be free to all. We cannot blame persons for staying away from service, if they can come, only to be despised for their "vile raiment" by those who are fortunate enough to be able to wear "gay clothing." We ought not to ask them to confine their attendance to mission chapels, where they will come in contact only with those of the same condition of life. The House of

God, if it is really His, is for all people—for any one who, feeling his or her unworthiness, would touch the garment of Him who offers freely to all, the riches of eternal life.

THE AMERICAN PULPIT.—Timothy Titcomb writing from Europe, says:—"I am learning a new respect for the Amerian pulpit—the best, I verily believe that the world knows. The Scotch are doubtless very sound, but I must say that they are very heavy, also." —*Presbyterian.*

THE FAMILY PAPER OF THE PACIFIC COAST.

THE OCCIDENT.

In every true home there should be found a first class family paper—one to whose coming, father, mother, children will look with eagerness each week. Such a paper is

THE OCCIDENT.

Let all who desire such a paper, and are asking, "What paper shall I take?" read the following statement of facts:

THE OCCIDENT contains a greater amount and variety of reading matter than any other family paper on the Coast. It contains choice selections for all classes of readers. Both the child and the person of cultivated literary taste will find in each number matter which cannot fail to be interesting.

THE OCCIDENT is extensively quoted. No other weekly paper on the Coast furnishes so much matter, either original or selected, to the columns of other papers. Whole columns are frequently taken from one or another of its departments. No stronger proof of its excellence could be desired than the fact that it is so well appreciated by contemporaries.

THE OCCIDENT has a complete Agricultural Department, carefully culled from the best authorities, with all the current agricultural items of our own coast, and full market reports. The Mining Department is also very complete.

THE OCCIDENT gives a summary of Pacific Coast news and of Eastern and Foreign Telegraphic News. These items are not hastily thrown together, but are carefully prepared, and are consequently copied to a great extent. The Personal Department is the most complete collection of personal news to be found in the State.

THE OCCIDENT is the official organ of all branches of the Presbyterian Church, and contains full religious intelligence concerning the progress of all denominations. Although a religious paper, it is not sectarian. Its aim is to make men better and happier by the inculcation of the principles of the Christian religion.

THE OCCIDENT is universally admitted to surpass all other papers in the State, in typographical appearance and systematic arrangement of its contents.

Read what the papers say of

THE OCCIDENT.

"Has commenced its second volume, enlarged and improved and with excellent prospects. It is full of 'knews,' views, and family reading, and is ably edited."—*Brooklyn (N. Y.) Union.*

"It gives evidence of ability, tact, and judgment in its management."—*Cincinnati Presbyter.*

"An able paper of the same form as the *Statesman*."—*Philadelphia Statesman.*

"One of the best of papers."—*Zion's Herald, Boston.*

For sale by H. H. Bancroft & Co., San Francisco.

Pacific Mail Steam Co's Steamships

—FOR—

NEW YORK, JAPAN AND CHINA

Will be Dispatched as follows:

LEAVE WHARF CORNER OF FIRST AND BRANNAN STREETS, at 11 o'clock A.M. of the following dates, for PANAMA connecting via Panama Railroad with one of the Company's splendid Steamers from ASPINWALL for NEW YORK.

the 6th 14th, 22d, and 30th of each month.

Steamer leaving San Francisco on the 6th touches at Manzanillo. All touch at Acapulco.

Departure of the 14th is expected to connect with the French Transatlantic Company's Steamer for St. Nazaire, and English Steamer for South America. Through tickets can be obtained.

Departure of 14th is expected to connect with English Steamer for Southampton, South America, and P. R. R. Co.'s Steamer for Central America. Through tickets can be obtained.

Departure of the 6th connects with English Steamer for Australia.

STEAMERS FOR JANUARY, 1869.

The following Steamships will be dispatched on dates as given below.

January 6th—SACRAMENTO, Captain Parker, connecting with ALASKA, Capt. Gray.

January 14th—MONTANA, Capt. West, connecting with RISING STAR, Capt. King.

Jan. 22d—CONSTITUTION, Capt. Wm. H. Hudson, connecting with HENRY CHAUNCEY, Capt. Conner.

Jan. 30th—GOLDEN CITY, Captain Lapidge, connecting with ARIZONA, Capt. Maury.

Passengers berthed through. Baggage checked through—100 pounds allowed each adult.

An experienced Surgeon on board. Medicine and attendance free.

These Steamers will positively sail at 11 o'clock. Passengers are requested to have their baggage on board before 10 o'clock.

Through tickets to Liverpool by the "Cunard," "Inman," and "National" Steamship Lines can be obtained at P. M. S. S. Co.'s office in San Francisco, where may also be obtained orders for passage from Liverpool or Southampton to San Francisco, either via New York or St. Thomas—if desired, an amount of £10 to £20 will be advanced with the above orders. Holders of orders will be required to identify themselves to the Agents in England.

For Merchandise and Freight for New York and way ports, apply to Messrs. WELLS, FARGO & CO.

The Steamship GREAT REPUBLIC, Captain S. Doane, will be dispatched on Monday, January 4th, at 12 o'clock, noon, from wharf, corner of First and Brannan streets, for YOKOHAMA and HONGKONG, connecting with the COSTA RICA for SHANGHAE.

For passage and all other information, apply at the Pacific Mail Steamship Co.'s Office, corner of Sacramento and Leidesdorff Sts.

FAMILY READING.

Jacob's Ladder.

Ah! many a time we look on starlit nights
Up to the sky as Jacob did of old,
Long looking up to the eternal lights,
To spell their lines in gold.

But nevermore, as to the Hebrew boy,
Each on his way the angels walk abroad,
And nevermore we hear, with awful joy,
The audible voice of God.

Yet to pure eyes, the ladder still is set,
And angel visitants still come and go;
Many bright messengers are moving yet
From the dark world below.

Thoughts, that are red-crossed Faith's out-spreading wings,
Prayers of the Church are keeping time and tryst—
Heart-wishes, making bee-like murmurings,
Their flowers, the Eucharist—

Spirits elect, through suffering rendered meet
For those higher mansions—from the nursery door
Bright babes that climb up with their clay-cold feet
Unto the golden floor.

These are the messengers, forever wending
From Earth to Heaven, that faith alone may scan,
These are the angels of our God descending
Upon the Son of Man! —*Rev. W. Alexander.*

Some Thoughts on Family Worship.

There should be an effort on the part of those who conduct family worship, to make it interesting. I don't wonder much that some persons have a dislike for this service. They have never known what it is to have it conducted in an interesting manner. If it were absolutely necessary to conduct family worship as some men do, I think I should oppose it—at least where there are small children. That it may be interesting there should be—

1. A becoming *brevity*. Some persons seem to think it necessary to sing at least three double stanzas, to read the whole of a chapter though it contain seventy verses, and then to pray at least twelve minutes. Certainly such a conscientious discharge of duty ought to be regarded with reverence by the young. But human nature is weak, and will get tired. Now the question arises whether it is not better to be brief, that the interest may be sustained. It seems to me that ten minutes profitably spent would be better than twenty impatiently spent. And instead of its being a solemn duty to read the whole of a chapter, I think it often a solemnn thing not to do it. For the relief of those who make a conscience of this I would remark that they have quite as good a right to divide up a book as the man who did it. The chapters are only a very modern thing—made by a man who laid no claim to inspiration; so that if conscience is to be consulted here, the whole of a book ought to be read. And certainly there ought to be an equal regard to brevity in prayer. We undoubtingly should keep in view our latter end, but I think we ought to take it for granted that there will be other opportunities to pray, and not try to include everything.

2. We should study *variety*. Unless there is a certain amount of variety about any duty engaged in twice a day the year round, it will fail to interest us. To give this variety, let every one present take part in the reading. Let difficult points sometimes be explained; let the events of the family, the congregation, the community, and the nation be noted; let interests familiar to all form a prominent part. So long as you pray abstraction, but little interest will be elicited, but as soon as you touch on home and familiar affairs, attention is likely to be concentrated. Every one must have observed this. If some attention be paid to these things, considerable variety will be gained.

Reader, if you have been without the family altar, I adjure you to try it; and try it so as to make it interesting. —*United Presbyterian.*

To Doubting Christians.

If Jesus were on earth, would you not go to Him and ask Him to save you? Would you not believe Him if He said to you: "Thy sins are forgiven thee; thy faith hath saved thee; go in peace?" Thus He speaks to you in the Bible. Hear His voice, believe what He says, command away every doubt by the authoritative voice of the mighty Savior. He is now at the right hand of God; but still He speaks—speaks from Heaven—speaks in the the living word, the Scriptures of truth. And why is He exalted to the throne of the Majesty in the heavens? In order to be a Prince and a Savior—to give repentance and the remission of sins. His name, Jesus, given to Him at His birth, and again to Him by God in the resurrection, proclaims the blessed truth that salvation is in Him. Faith in that name is sufficient.

Two gentlemen were lately conversing together upon this momentous subject. One said to the other, after pointing out to him the mighty works of Christ on the cross,

"Do you need anything more?"

The other replied:

"Yes, I think I do; I think I must have some work of my own."

His friend replied:

"Jesus, at the right hand of God is my title, and my only title, to salvation. Here are pen, ink, and paper; now write me down a better."

The truth is, that Christ in glory is the proof of the complete and all-sufficient value of His death. If a friend becomes surety for me, and is thrown into prison on account of my debt, and I afterwards meet that friend walking at liberty, I am sure he must have made full satisfaction for my debt, otherwise he would not be out of prison. So, the Lord, at the right hand of power on high, is a proof that He has answered to the full every demand of God against me as a sinner. His death is everything or nothing. It is either the entire blotting out and cancelling of every charge that can be made against me, or it avails me nothing.

John Bunyan was walking one day in a field, in great trouble of soul at the discovery of his own vileness, and not knowing how to be justified with God, when he heard, as he imagined, a voice saying to him, "Your righteousness is in Heaven." He went into his house and took his Bible, thinking to find there the very words that had thus sounded in his heart. He did not discover the identical expression; but many a passage of Scripture proclaimed the same truth, and showed him that Jesus, at the right hand of God, is complete righteousness to everyone that believeth. —*Soltau.*

The Blessed Bible.

In Scotland, during the times of bloody persecution, when the soldiers were marching about the country, driving people from their homes, burning their houses, and putting many godly people to death, a pious father told his family that there were soldiers near, and they must hasten to the next village, where there was a strong old church that the fugitives could use as a fort. So, he told Jeanie to take the big Bible for her load, and that she must be very careful not to let it get wet, or lose it by the way; "For we could not live," said he, "without the good book.

So she wrapped a gown around the Bible, and started with her father and mother, each of whom carried a child.

They had to cross a brook, but they did not dare to go by the bridge, lest they should be captured by the enemy. There was a place where they thought they could cross on some stepping-stones, but on reaching the place it had become quite dark. So Jeanie's father waded across and carried the others, one by one, until she was left quite alone. Jeanie was much afraid to be left there by herself, so she started to cross after her father, stepping carefully from stone to stone. But presently her foot slipped and down she went to the bottom. At the same time, up went her arms, holding the precious burden over her head. The water came up to her waist, but, bracing herself firmly against the rapid current, she walked bravely on across the stream, and had nearly reached the shore, with her dear old book lifted as high as she could raise it, when she met her father, returning to bring her.

"Father," she cried, "you told me to take care of the dear old Bible, and I have done so."

Just as she said this they heard the sound of several pistol shots and the approach of horsemen. They soon hid themselves in a little cleft of the rocks, and were not discovered.

Jeannie married in after years, and now has great-great-grandchildren living. The old Bible became hers after her father's death, and in it were written the names of her seven children. It is still in very good condition, in the possession of her descendants.

Jeanie never forgot that dreadful night when she carried the old Bible through the deep waters, and when she was dying, she seemed to be dreaming of it, and said:

"I am in the deep river—in the deep river, but I'll hold up the dear old Bible! There, take the book," and she ceased to breathe.

—*N. Y. Observer.*

Prayer as a Good Deed.

Acceptable prayer is not only an important means to a right end, but a veritable act, well pleasing to God. It is in itself a deed done for the object sought, a practical effort, even though no external action be possible. In this lies the inestimable value of prayer, viz., that it is not only a supplication for the Divide aid, but an actual endeavor on the part of the suppliant. It is remembered of the Lord, treasured in heaven. Thus the inspired Revelator speaks of the "prayers of saints" as being borne before the Lamb in "golden vials."

So it is recorded of Cornelius, that "thy prayers are come up for a memorial before God." In harmony with this also the precept is given to "pray without ceasing." Our Lord likewise teaches that "men ought always to pray and not to faint." Wherefore?

Not as affecting the Divine more than the human action. Not because the Lord's ear is heavy, and he cannot be moved without a given number of petitions, or a certain amount of importunity. Nay, but rather because he is pleased that man himself should labor, as well in the offering and fervency of his petitions as in the use of the external means appropriate to the end. No less important is the inward than the outward doing.

What a field lies open herein for all God's people! How wide, and yet how near, for every true believer! Not riches, nor learning, not even bodily health and vigor, are essential to entrance upon this sphere of toil for Christ. As well the child as the man, the feeblest as the strongest, the most obscure as they that stand foremost, can labor effectually for the heavenly kingdom in this work of "praying always with all prayer and supplication in the spirit." Do Christians take hold of this precious truth, and imbibe from it the needful comfort, when infirmity, or lack of opportunity, or any cause, prevents them from performing the external act? Do they perceive how high is the estimate which the Scripture sets upon doing good by the simple act of "fervent effectual prayer?" Was there ever greater need than now of this king of good deeds?

—*Vermont Chronicle.*

I Thought Everybody Loved the Bible.

There was once a very clever and learned gentleman, but an infidel—that is, one who did not believe the Scriptures—and he was traveling among the mountains and valleys of Wales. He came to a roadside cottage in a lonely, lovely spot, and as he was very tired and thirsty, stopped to ask for a drink of water. It was a little girl he spoke to, sitting at the cottage door with a book on her knee. She instantly rose and said:

"Will you not have a cup of milk, sir? You are hot; and the cold water would hurt you."

He was very much pleased with her kindness, and thought he would like to have a little chat with her. So, when she came out with the milk, he said:

"I see you are getting your lesson there, my dear."

"No, sir," she answered, "I am only reading."

"Why, what book?"

"The Bible, sir."

"What!" said he, half smiling to himself as he gave her back the cup. "Do you like that book, then?"

For a moment the little maiden did not answer for surprise; then, lifting her bright eyes to his face, she said:

"Why, sir, I thought that everybody loved the Bible!"

The gentleman bid the child good-bye, and slowly rode along. I did not know what he was thinking of then; but, years after, when he had become a true and humble Christian, he used to tell of that little Welsh girl and say:

"And I, too, now that I understand what the Bible is, am almost as ready to wonder at my question as she was; for every one who really knows it must surely love it too." —*Balt. Episcopal Methodist.*

LATE AT CHURCH.—We commend to the consideration of those who are in the habit of getting to church late, the question which a little boy put to his mother. The incident is furnished by a correspondent of *The Advance:*

Many years ago, a little son, not four years old, one Sabbath morning, came very carefully and silently down the chamber stairs, as though afraid of awakening some one. Coming into my room, and softly laying his hand upon my shoulder, he whispered:

"Mamma, is it wicked to get up as early Sunday morning as you do other mornings?"

The little fellow knew that he had sometimes to stay at home because there was not time to get all the children ready. That was a lesson to me—a lesson which I have never forgotten.

Young Folks.

The Two Clerks.

A STORY FOR BOYS.

In Market Square, in the pleasant city of Merryport, was a crockery-ware store, over the door of which was a black sign bearing in gilt letters, the name Benjamin Hudson. For many years this crockery-ware store had been there, with the great pitcher hanging in front for a sign; indeed, when Mr. Hudson first opened the store, some forty years previously, he was quite a young man, and the sign over his door was very bright and handsome; but now his eyes had grown dim, and the owner was called "Old Hudson" by all the boys and girls of the city.

The windows of this store had great attractions for all the children that passed that way. There were beautiful vases, handsome China mugs, with "Ellen;" "Fanny," "William," and lots of other names inscribed upon them; there were also plates, with pictures upon them, representing Franklin's maxims; and funny clocks, shaped like dogs, that would roll up their eye-balls to and fro every time they ticked, and many other things, curious and ornemental.

Mr. Benjamin Hudson had grown rich in his business, for he had conducted it all himself, and taken care that nothing should be wasted or lost by neglect. He had made mistakes, to be sure, as every man will make some blunders during a lifetime, but by skillful management he recovered from them. Sixty-five years had begun to bend over Mr. Hudson's shoulders, and dim the brightness of his eyes, and he found business more irksome than it formerly had been.

"I must have a partner," said he, one day to himself, as he sat before a cheerful fire. "I must have some one interested in the business who is young and active, and will take the weight from off my shoulders, for I cannot do as I used to do."

Now, in Mr. Hudson's employ were two young men—Herbert Bond and Charles Sehmour. They had been with him an equal length of time, and had performed their duties faithfully and well. Charles did his work quickly and had a more quiet demeanor, and accomplished quite as much without making a great stir about it.

"I must have either Herbert or Charles for a partner," soliloquized Mr. Hudson; "which one I cannot decide. They both do very well in the store, but I ought to know something of them out of the store, and I am sorry to say that is a point I have never paid proper attention to. My clerks come here in the morning and go away at night; what becomes of them over night, I know not; and yet I ought to know. Neither of them have parents in the city; they live in some of the numerous boarding-houses, and I hope are steady and well-behaved. I must see them in their homes, and then decide which shall be my partner."

The next day Mr. Hudson ascertained the boarding-houses of the two clerks, without letting them know for what purpose, and after supper that evening, his wife and daughters were somewhat astonished to see him go to the hall and put on his coat and hat.

"Where are you going, papa?" asked Lily, the youngest daughter, who could hardly remember the evening when her father had not remained at home.

"I am going to make a call, Lily, on two young men of my acquaintance—shall not be gone long," replied Mr. Hudson. And, bidding them good night, he went out.

Herbert's boarding house was the nearer of the two, and here Mr. Hudson stopped first. It was a neat looking house in a very pleasant street. Mrs. Buntin, the landlady, opened the door when Mr. Hudson rang.

"Does a young man named Herbert Bond board here?"

"He does. Walk in, sir, and I will call him," replied the woman.

"I will go to his room, if you will show me where it is," answered Mr. Hudson. "I presume he is in it."

"I think so; he is seldom out in the evening. You can step up there if you like, sir; go up two flights, and the first one on the right is the one," replied Mrs. Buntin.

Mr. Hudson puffed up the stairs, and knocked with his cane at the designated door. It was opened by Herbert, who looked very much amazed when he saw his employer, and said:

"Why, Mr. Hudson, is there anything the matter at the store? Nothing happened out of the way, I hope?"

"No—nothing—nothing at all," said Mr. Hudson, walking in and taking a chair. "I took a notion to call around and see how you were this evening."

Bond expressed himself as being very glad to see his employer, and while he took his hat and cane, Mr. Hudson glanced around the chamber. It was an attic room, with two dormer windows; a good fire was burning in an open grate; a book rack, filled with books, adorned one side of the room, while the center of the floor was occupied by a table, on which were writing materials.

"You look very cosy here, Herbert; but why do you have an attic room? Are there none that you can have below stairs?"

"O, yes, sir; but this room is a dollar per week cheaper, and I have all the more money to send to my father," replied Herbert.

"Isn't your father well off?" inquired Mr. Hudson.

"Not very, sir. He used to be rich, but his business proved disastrous, and he lost a great deal of money," said Herbert.

"What do you find to do evenings? Doesn't time hang heavy?"

"O, no, sir; I have books to read, and letters to write. To-night I am writing home. They want me to make a visit, but I write father that it is a busy time just now; when it is over I shall ask you for a few days' absence," answered Herbert.

"You shall have it, willingly," said Mr. Hudson; and then he added: "Does Charles ever call upon you?"

"No, sir; I have asked him to do so several times, but he has never called."

"Are you contented here in this boarding house?" inquired Mr. Hudson.

"It is a very good boarding house, and Mrs. Buntin treats me very kindly; but I often wish that I could live at home with my father and mother," answered Herbert.

"And why can't you? How far is it from here?" asked his employer.

"It is twenty-five miles, sir; rather far to travel every day; and then I cannot afford the expense," was Herbert's reply.

"What time should you reach the store in the morning?"

"At half-past eight, sir."

"And you would leave at what time in the afternoon?"

"About half-past five, sir."

"Not very bad hours for business, Perhaps it can be arranged so that you can live at home, Herbert."

"O, I should like it so much if I could! I am so homesick here in the city!" was the reply.

"I'll look into the matter, Herbert. It seems a pity that one who is fond of his home can't live there, in these times of railway and fast traveling," said Mr. Hudson; and he rose to depart. Herbert thanked him for his visit, and said it would please him to see Mr. Hudson again.

The old gentleman desended the stairs well satisfied with the call, and said to himself; "Now for Charles Sehmour's. I hope I shal find him as well as Herbert Bond."

On the way to the house, which was three or four streets distant, Mr. Hudson's attention was attracted to three young men, who were talking very loudly, and acting in a rowdy manner, pushing each other against passers-by, and making rude, insulting remarks to them. It so happened that Mr. Hudson wore a white hat. "O, what a hat!" "Who stole the donkey?" "The man with the white hat!" and similar impolite remarks. As they walked much faster than he did, they were soon out of sight.

The boarding-house was reached, the bell rung, and Mr. Hudson admitted. The servant said that Sehmour was in, and ushered him to his chamber door. Mr. Hudson knocked, and the door was immediately flung wide open, and a voice exclaimed:

"Well, old fellow, got along at last, have you? We're all ready for you; have you got the——" Charles Sehmour stopped here, and his face turned deadly pale at seeing, instead of one of his boon companions, his venerable employer. It was several seconds before he could recover his speech. "I beg your pardon, Mr. Hudson; you must excuse me; I expected a friend this evening, and by the dim light of the entry, I thought you were he. Walk in sir and sit down."

Mr. Hudson entered the room, and was somewhat surprised to see there the identical three young men who had insulted him in the street; they were smoking cigars, and had their feet elevated on the bureau mantle piece and bedstead. Mr. Hudson saw at once that he was a very unwelcome guest. The room was in confusion, and Sehmour's actions were painfully awkward, nevertheless his employer started conversation, and had been there about ten minutes, when a footstep was heard on the stairs; then the door opened a little way, and a bottle of champagne came rolling across the floor, followed immediately by a round Dutch cheese, a bunch of cigars, and two more bottles. Sehmour looked dreadfully distressed, but could do nothing. It was a fourth friend who had been out for refreshments, and took this facetious mode of introducing them into the chamber Mr. Hudson thought it was time for him to go; so he took his leave and returned to his home. Sehmour's enjoyment of the evening was exceedingly marred by this unexpected visit. He and his friends had arranged for a jolly good time.

Mr. Hudson was not long in making up his mind as to which one of his clerks would make the most faithful and efficient partner; and in less than a week it was announced in the papers that Herbert Bond was a member of the firm of "Benjamin Hudson & Co." It was a happy day for Herbert, for he could live at home again, amid the scenes of his childhood; and it was not many years before he managed the whole of the business himself, and became a wealthy man.

Charles Sehmour knew very well the reason of Mr. Hudson's choice, and he never ceased to regret having formed such unprofitable acquaintances as were assembled in his room that unlucky evening.

—*Oliver Optic's Magazine.*

THE chief study of a Christian, and the very thing which makes him to be a Christian, is conformity to Christ. The sum of religion, says Pythagoras, is to be like him whom thou worshipest.

NEWS SUMMARY.

PACIFIC COAST ITEMS.

THE people on the Pacific Coast are already making their arrangements for revisiting their old homes in the Eastern States over the Pacific Railroad next summer. The Society of California Pioneers have, we understand, accepted the invitation to ride from the California capital to New York in June next; and, after these veterans of 1849, undoubtedly there will follow a mighty stream of the hardy sons of the East, who have long waited for the through railroad line. Thousands of these, especially women and children, have been pining to see the faces familiar in their youth, but have feared the rigors of an ocean voyage twice as long and arduous as the route to Europe. On this side, also, are relatives and friends who have been postponing the day of their visit "till the railroad was built." What a gala day will that be which witnesses the actual incorporation of the Pacific slope in the Union by connecting it with our great system of modern communication without the intervention of a foreign State or a perilous voyage! That day is not now far distant.—*New York World.*

THE Odd Fellows, Red Men, and other associations, are considering the propriety of establishing special hospitals for their respective members who may be attacked by the small-pox. This project is in the highest degree praiseworthy, and should be carried out at once. The present want of accommodation for small-pox patients is a disgrace to the city. The honor of making the first movement toward the establishment of special hospitals belongs to the *Société Francaise de Bienfaisance Mutuelle,* which has had such an hospital in operation for several months, where patients receive the best of care and medical treatment.

IT seems there is a project on foot to extend the Nevada line into Utah, so as to include Salt Lake City, and about half of Idaho. The Virginia *Enterprise* says:

It is not within the range of probability that Utah will ever be admitted as a State. Her social problem will be solved by territorial partition and absorption, so that we shall find little or no opposition in Congress to our proposition to remove the eastern boundary of Nevada two degrees further into the present Mormon domain.

THE *Santa Barbara Post* says that a gentleman of that place has an orchard containing 4,000 Olive trees. It takes 7 years to bring the trees to a perfect bearing state, but the tree grows more rapidly and is more prolific in Santa Barbara than in any other locality in the State. In size and quality as a table fruit, the fruit is inferior to that grown at San Diego, but much excels the San Diego olive in the quantity and quality of its oil.

THE Sycamore Bend and Tejon Pass Railroad Company has been incorporated with a capital of $6,000,000. They propose to build a road 150 miles in length, to connect the proposed Stockton and Tulare road with the Southern Pacific.

WE forgot to mention last week the important fact that "another year, freighted with its joys and sorrows, has passed away and mingled its waters with the mighty ocean of the past."

ABOUT 100 tons of codfish from the northern seas, are now being dried in the sun on the flakes at Saucelito. The fishermen will start on a new trip about March 1st.

A SUBMARINE cable has been laid from Vallejo to Mare Island under Napa Bay, so that the officials in the Navy Yard can communicate with the outside world.

THE cars do not yet carry passengers from Napa to Vallejo, the road not being sufficiently graveled to be safe, so says the *Reporter.*

A 75 pound nugget, containing about one-third gold, was recently found near El Dorado City, Willow Creek diggings, Oregon.

A LITTLE girl died recently in Yosemite Valley. This was the first natural death that ever took place in that valley.

A SILK flag is to be manufactured at San Jose from California material, to be given to the State for the new Capitol.

THE Academy of Natural Sciences in this city has a rattlesnake's tail containing 30 rattles.

OVER 24,000 bushels of castor beans were raised in Napa County last year.

WORK is to be commenced soon on the Alison Ranch Mine.

TELEGRAPHIC.

EASTERN.—Much damage has been done at Albany, N. Y. by the freshet and breaking up of the ice....The Surratt case has been finally dismissed....Postmaster-General Randall favors uniting the postal and telegraphic services....The floor of a schoolroom in Rochester, N. Y., gave way on the 6th, while crowded with people; 8 were killed and many fatally wounded....John Minor Botts died recently at his residence in Virginia....Cyrus W. Field lately fell and received serious injuries.....The Camanches have been again defeated.

SOUTHERN.—Order has been restored among the negroes in Virginia....The citizens of Georgia send a petition to Congress stating that it is impossible for Union men to live in the rural districts of the State; or for murderers of Union men to be brought to justice. They ask for some legislation on the matter....In Kentucky the constitutionality of the Civil Rights Bill is to be tested....The accounts of the Florida troubles published by the Southern papers prove to have been wholly false. The whites were altogether to blame....The prominent State officers in Georgia have been re-elected....Gen. Rousseau isdead....In Georgia, removals from office are being made under the 14th Amendment. 100 have already been removed.

POLITICAL.—Gen. Blair is still of the opinion that Grant intends to make himself Dictator or Emperor....There are numerous contradictory and absurd reports as to the men who will be appointed by Gen. Grant to the offices at his disposal....Gov. Palmer of Illinois, was inaugurated on the 11th. He denounces the charter by Congress of railway companies in the States....Thee lection frauds in New York City prove to have been more extensive than has ever been supposed. Many witnesses testify to having voted from 9 to 30 times each....Onslow Stearns is Republican candidate for Governor of New Hampshire,...The Kansas Legislature met on the 12th....Gov. McClurg of Missouri was inaugurated on the 12th....Gov. Bowie of Maryland, was installed on the 13th....John P. Stockton is Democratic candidate for Senator from New Jersey....Mr. Evarts orders that all suits for treason be discontinued.

CONGRESSIONAL.—Senator Sherman has introduced in Congress a bill to allow Judges of the Supreme Court over 70 years old to retire on a life pension equal to their salary Capitalists send a protest to Congress against the heavy subsidies asked by the Northern and Union Pacific Railroad companies, and offering to build the roads for $75,000,000 less....Butler has introduced his currency and funding bill. ....A bill for the annexation of Cuba, without purchase, if the Cubans are willing, has been introduced in the House. ....The House passed the bill repealing the Tenure of Office Act....Ashley of Nevada introduced a bill granting $5,000,000 for the Sutro Tunnel....A joint resolution was reported giving the right of suffrage to all without distinction of race and color.

FOREIGN.—The European Conference has been in session during the past week. The Grecian Ambassador was present at first, but has been excluded. The hostile nations have agreed to keep the peace till the close of the Conference. ....Turkey is trying to borrow money in Paris, for war purposes....Recent disturbances in Florence have been suppressed....A committee of leading citizens of Havana have gone to meet the Spanish Revolutionary leaders and to make an effort for peace....The sugar crop in Cuba will be good. ....They have had heavy earthquakes in South America.

THERE are now 476 miles of railroad in operation in California.

Simple announcements of Marriages or Deaths inserted free of charge. Additional matter, such as Obituary Notices, or Poetry, inserted at the rate of ten cents per line.

MARRIED.

At Watsonville, on New Year's Eve, by Rev. A. J. Compton, B. O. OSBORNE and MISS ANNIE E. KNOWLTON; also, A. SANBORN and MISS ELIZA J. POOL.

In this city, Jan. 12th, by Rev. Dr. Scudder, W. BRUCE and SUSAN COOK.

In this city, Jan. 12th, by Rev. M. M. Gibson, JOHN HUMPHRIES and MARGARET HOGAN.

In this city, Jan. 11th, by Rev. M. M. Gibson, GEO. HARVEY and ANN FORRESTER.

DELICIOUSLY MEDICINAL.—This is the universal verdict pronounced upon PLANTATION BITTERS by all who have tried them. The well-known health-promoting ingredients from which they are made and their individual merits as a remedy for indigestion and all its consequent ailments, and the preventive qualities against diseases arising from climatic changes, miasmatic influences and imperfect secretions, are so widely known and so honorably endorsed, that we trust no one will forego the advantages of their use.

SPECIAL NOTICE.

Acrostic.

P ain Killer is worth what it weighs, in gold,
A ll around the world are its praises told;
I t will Cholera cure—scourge of southern climes;
N o victim dies who takes it betimes.

K eep Pain Killer, a true friend, by your side;
I t will cure Cough or Cold, or Colic beside.

Current Topics.

We have not always favored the various associations and unions that have been formed by mechanics and laboring men for the purpose of promoting what they have regarded as their interests. The motive has been commendable, no doubt, for the most part, but there is opportunity in some instances to question the wisdom of the means by which the object has been sought. There is one such organization, however, lately formed in some of the Eastern cities, which we must heartily commend, and would like to see established in all large places. It is designed to provide for working-men of all classes, weekly, semi-monthly, and monthly lectures and essays, upon subjects connected with the several departments of labor. The association proposes to "hire and open rooms in convenient places, at first, and to charge a small membership fee, from which a fund is expected, with which reading-rooms and libraries and regular mechanics' institutes will ultimately be established." This has been tried with success by the workmen in Great Britain, and it would be eminently successful in this country, greatly to the elevation and increased intelligence of all who might avail themselves of its advantages.

A new era of prosperity is opening to our State. Before summer arrives, the overland railroad will be completed, and an increased population and business will follow. The merchants of Chicago are anticipating a trade with China by this route, and a deputation of their number are to come with the earliest trains, in order to make the arrangements. Other cities will not be backward to imitate them, should the project prove to be feasible. The main branches of our industry, mining and farming, are receiving additional impulses. All these encouragements demand new consecration from the Church, to enable her to fulfil the enlarged obligations that rise before her.

The appeals in behalf of schools for the Chinese, which have been published in our columns, are regarded with interest. The subject rises in importance. We are to give these people the Gospel. In order to succeed, it is indispensible to employ that powerful agency that has already revolutionized India,—the English language. Its literature, its ideas, are Christian. It is evidently destined to become the commercial language of the world. That great Anglo Saxon race rising with such grandeur and amazing rapidity in the scale of population and wealth in North America and Australia, speak it. Its influence is already controlling. Under God, only this language can awaken the Asiatic mind from its long paralysis, and imbue it with the stirring and savoring truths of God's Holy Word.

The Ritualists are exercised over perishing Protestantism—administering extreme unction. "Protestantism as a religion," thus preaches Mr. Wagner, of Brighton, England, an Episcopal clergyman, "is on its death-bed. It is dying of exhaustion. It is dying for want of vital power. The ear of God's mercy is closed to Protestantism. It is fast falling!" etc. This is simply ridiculous. The statistics of the churches are the only reliable basis from which to derive our opinion. With a steady step, like the tramp of doom, the great Protestant denominations; that is the real Catholic or Universal Church, composed of all justified by faith in Jesus Christ, of every name, or no name; Protestant as protesting against priestcraft, are marching to conquest. In the United States, with its mighty emigration from Romanist countries, doubling its population every twenty-five years, the members of the evangelical churches double in less than fifteen years. Dying! If we can die at the same rate for a century or two more, our land will be Immanuel's.

Intelligent observers estimate that the population of this city doubles in ten years. In this view, when the generation now in our Sunday Schools hold the prominent places in society, a million of people will throng these streets. The religious communities in such a country are not like those in old settled States, where little change takes place, who can rest satisfied with former acquisitions. We are to harmonize all these discordant elements, introduced from many nations, and weld them into the unity of the Gospel. The standard of progress for the next decade of years demands at least one new church every year for each prominent denomination. This should be doubled in the second decade, and quadrupled in the third. A mighty work lays before California Christians. But it is not beyond the reach of those who labor with the help of God's holy Spirit.

The telegraph informs us that the backbone of the Indian rebellion has been broken by the destruction of the Camanche village. The savages have sent a delegation of chief men to beg for peace, declaring that all the tribes are mourning their losses. and the people starving. They offer to surrender unconditionally. General Sheridan deserves great praise for the energetic manner in which he has carried on this war. That the result of this campaign will be a permanent settlement of the Indian troubles is hardly to be expected, but Sheridan's vigorous war policy, so different from that of those who have preceded him, yet so amply proved by experience to be best for the real interests of the Indians as well as whites, gives us ground to hope that at no distant day this contest with the natives, that since the first settlement of America has caused so great an outlay of life and money, will give place to a lasting peace.

Rationalism is dying out in Prussia. In a recent conference of the clergy, not a voice was lifted in its favor. Dr. Hoffman, President of the Upper Consistory—corresponding to our Synod—publicly announced as the decision of his judicatory, that "if any distinct and definite charges were brought against any clergyman, that he taught what was contrary to the Confessions of the Church, the case would be inquired into, and if the charge was sustained, he would be dismissed from his office." This is right. A person may either accept or decline to receive the standards of the Church. But if he has adopted them, and publicly pledged himself to preach them; common honesty demands that, in case of change of views, he shall withdraw from the communion he can no longer support.

The New York Sabbath Committee have published the thirty-fifth of their documents in favor of the cause in which they work. It treats of Sunday railroad work, and contains much information furnished by superintendents of railroad companies, concerning the amount of Sunday work performed on their respective roads. A large number of these prominent railroad men express the opinion that Sunday trains are unprofitable as well as injurious to morals. The document should accomplish much good. Sunday traveling is becoming a great national sin. It is especially an evil in California, where the matter should be more widely agitated and discussed than it ever has been.

During the past week a new "Temple of the Drama" has been opened in this city. In magnificence and convenience, this place of amusement is superior to any similar institution on our coast, and scarcely inferior to any in the country. What will be the effect of its establishment upon the morals of California? Its influence will be great. Will it be for good or bad? Nearly all agree that the drama *might be* an influence for good. The opinion is equally general among good men that it never *has been* anything of the kind. What it *will be* remains to be seen. This field, like every other, is open to the work of reformers. Those persons who condemn the theatre altogether, and sneer at the idea of any possible reform, are perhaps hasty in their conclusions. The managers of the new theater declare their purpose to admit only such plays as shall tend to "elevate and not degrade the drama." We hope they will carry out this purpose. The fact that others have started with the same purpose and failed, should by no means cause us to attribute to these men failure in advance.

It has been recently stated in public by a prominent priest that seven out of every ten of the children of Protestants educated in Catholic schools in the

United States become Roman Catholics. We know not whether the truth of this statement can be substantiated, but it is certainly a statement that ought to claim the attention of Christian parents and open the eyes of those who seem to think there is no danger to be apprehended from placing their children in Catholic institutions of learning.

Religious Intelligence.

PACIFIC COAST.

Week of Prayer in Chico.

A grand season of union and harmony of the churches in Chico took place last week. The opening services of the "Week of Prayer" were commenced on Sabbath the 3d, in Wood's large hall, where the Presbyterian church worships, by Rev. W. R. Gober of the Methodist (South) church. The hall was well filled with an attentive audience. Mr. Gober is comparatively a stranger yet in this place, but has made many friends already.

The meetings were kept up during the week, Rev. Fairbairn of the Presbyterian; Revs. Chivers and Hobart, of the M. E. Church; and Revs. Gober and Clayton, of the M. E. South, all taking an active part. These meetings were held in the Methodist Church South, that being the largest and most comfortable. On Sabbath, 10th, Union Services were held in the morning in the South Methodist Church, which was crowded to overflowing. The sermon was preached by Rev. W. Chivers, in an able manner, and was listened to attentively notwithstanding the crowded state of the church. In the evening, the closing services of the Week of Prayer were held in Wood's Hall, which was crowded to its utmost capacity, between 300 and 400 being present. Rev. A. Fairbairn preached from the words: "Watchman, what of the night?" He made a deep impression on the audience who fully appreciated the earnestness of the preacher.

It was a pleasure, indeed, to your correspondent, to witness the salutary effect of these Union meetings in the town of Chico, where one year ago, both ministers and people, of different denominations, were almost at "swords points." No better nor brighter signs of the times of the progress and advancement of the kingdom of Christ could be cited than the working of these three churches in harmony. This is a large and growing field, and lively, united effort will accomplish more good than anything that could have taken place.

The Occident being the "organ" of the Presbyterian Church on this coast, your readers would like to hear how our Church prospers. At the risk of making this communication too long, I will briefly state that we are, under the blessing of God, getting along well—better than we expected. Mr. Fairbairn has now been one month with us, and we have reason to be thankful to Almighty God that we have "got the right man in the right place." We would not exchange for any of your "big guns" of the Bay City, and we intend to support him so that there shall never be "a wolf at his door." He already has a large acquaintance, and is doing much good by his frequent visitations.

Our Sabbath School has only been organized four weeks, and last Sabbath numbered 60, teachers and scholars combined. John R. Kennedy, the Superintendent, is earnest in the work, and manages well.

Another feature of the Chico Presbyterian Church is an excellent choir, under the leadership of Mr. David Ramage, an old Scotch Presbyterian. With all these adjuncts, so well appointed, it is no wonder that we should prosper.

I almost forgot to mention that we celebrated the Sacrament of the Lord's Supper on the 3d, when three were added to our number—two females by letter, and one male by profession of faith. Mr. Fairbairn's discourse on this occasion was the most spiritual and earnest your correspondent has ever heard delivered in this State. Chico.

Presbytery of Santa Fe.

Rev. J. M. Roberts, a missionary to the Navajo Indians, in New Mexico, having reached Santa Fe, the "Presbytery of Santa Fe" was, on the 14th of December, organized in accordance with the directions of the last Assembly. The Presbytery now consists of the following ministers: Rev. D. F. Mc Farland, domestic missionary at Santa Fe; Rev. J. N. Schultz, chaplain U. S. A.; and Rev. J. M. Roberts, missionary to the Indians.

Your readers will be gratified to learn that Rev. J. A. Skinner, recently pastor of the church at Stockton, California, has just been commissioned by our Board of Domestic Missions as a missionary in Arizona. It is expected that he will soon become a member of the Presbytery of Santa Fe.

The blessing of God seems to rest upon the labors of Rev. Mr. McFarland, and our mission at Santa Fe is prospering, in spite of great obstacles and discouragements. Three members have been added to our little church there, within the last few weeks. The Sabbath evening services and the Wednesday evening prayer-meeting are largely attended. Services were to be held on each evening of the week following the organization of the Presbytery, and the sacrament of the Lord's Supper was to be administered on the next Sabbath, when it was expected that several others would be added to the church, on profession of their faith in Christ.

At the organization of the Presbytery, Mr. Wm. Kennedy was enrolled as the ruling elder from the Santa Fe church. Mr. Kennedy has been recently ordained. He assists Mr. McFarland as a teacher in the mission school, is from Indiana, and seems sent, in the kind providence of God, to assist in the work of establishing the Church of Christ in that dark and wicked section of our land.

The last of the three members added to the Santa Fe church, as heretofore noticed, was a young soldier who had previously led a reckless and wicked life, and who was hopefully converted while on duty in Santa Fe.

Your readers will, no doubt, be pleased to hear of our progress in those far-off and important fields. Will they not remember these brethren in their prayers, and give them the substantial encouragement they so well deserve and so much need? Our Board of Domestic Missions, now so efficiently and satisfactorily conducted, is doing all it possibly can for the extension of our Church. Would that it were able to send its missionaries into all the waste places of our land—and pay them decent salaries.

—*Presbyterian.*

California Bible Society.—Rev. H. Richardson hands us a communication in which he states the labors performed by him during the past year as follows:

My field of labor, the past year, is comprised mostly in the counties of Solano, Napa, Lake, Sonoma, and Marin. During this period I have traveled about 3,000 miles: reached over 3,000 families; sold 601 Bibles, 243 Testaments, and 216 portions of the Bible; given *in toto* 125 Bibles, 257 Testaments, and 118 portions, in addition to many other volumes, in part. Of destitute families, I have found 243, of which I have supplied 135—all that could be persuaded to receive them either by purchase or gift.

In connection with my work of canvassing, I have preached 50 sermons, and made 40 Sabbath School addresses.

Then follows a list of receipts from various churches and individuals, with an expression of sincere thanks in behalf of the Society for donations, and in closing the writer makes the following good suggestions:

It would be well, if we felt able, as is oft done at the East, to furnish not only every public room of all our hotels, lodging and boarding-houses with a Bible, but also their private and sleeping apartments, so that, at the least, the sight of God's Word should mingle with the thoughts of every occupant, last at night and first at morn. Were every room in San Francisco, and all our cities and towns thus furnished, who knows how many thousands would, every day, be addressed by their Maker, who otherwise would not hear his voice? Who, longing and panting to do good, will put into the hands of our chief agent, Rev. F. Buel, $50, $100, or $500, more or less, for such a purpose? The many tons of Bibles which I have circulated in this State, the last three years, in fifteen different languages, during which I have passed over not much less than 10,000 miles, nor visited much less than that number of families, assure me that the Bible is not only a need, but a felt need to the human soul, when it is fairly brought into contact with it, in spite of all its opposers.

Shall this need be met? met by us? Met now? Met here in our representative world—our own adopted California? O, for the zeal and liberality of the Pentecostal and Apostolic days! With them, we might put the Bible into the hands of every human being, before many of us had tasted death.

Vallejo.—The Presbyterian Church at Vallejo is an illustration of what can be accomplished by steady, self-denying labor. The acting pastor, Rev. N. B. Klink, came to the place about eight years ago. Many discouragements existed. The Presbyterians had no church organization nor house of worship. The population was fluctuating, depending chiefly for support upon labor in the Navy Yard. Few persons were interested in the enterprise, and they were able to contribute but little for the support of the Gospel. But, under all discouragements, the faithful pastor labored on. Gradually better days dawned. The town increased in population and wealth. A large, handsome church was built. And now, visiting this flourishing town and looking at its prosperity, secular and religious, it is hard to believe by what toil and sacrifices these foundations have been laid. "Weeping may endure for a night, but joy cometh in the morning." S. W.

An Error.—In reprinting an item from an eastern exchange a few weeks since, which contained a sharp hit at the Chicago *Advance*, from the New York *Independent*, we very carelessly neglected to expunge a few lines containing the not very correct statement that since the defection of the *Independent*, the Congregationalists have only two denominational organs in the country—the *Advance* and *Congregationalist*. This was a very stupid blunder, as we have a first class Congregational paper in our own city, although it does, according to it own admission, and as we have had occasion to notice, occasionally publish a *very* Presbyterian item of news. *The Pacific* is naturally surprised to see such an error in our columns, but it will see that the item is in solid type, and consequently not original with The Occident.

Synod of Alta California.—This Synod met at Oakland on Jan. 12th, the object of this special session being the consideration of the case of Rev. L. Hamilton. Mr. Hamilton, in sermons preached last spring, advanced doctrines for which he was censured by the Presbytery of San Jose, which body passed a resolution enjoining him not to preach or expound those doctrines, which in the opinion of the

Presbytery, were contrary to the belief of the Presbyterian Church. Mr. Hamilton complained of the decision of the Presbytery to the Synod, which, after a long and thorough investigation of the matter, decided by a nearly unanimous vote to sustain the Presbytery in its former action, forbidding the further preaching of the doctrines in question.

SACRAMENTO.—A week ago to-day we were invited out to take dinner with some friends. In this particular instance there was considerable strategy displayed in getting us away and keeping us away until a crowd of well disposed persons took possession of our house and warmed it up for our return in the evening. We were completely surprised when we arrived at home at half past seven, P.M., to find a host of good people in full possession. Various nice presents were found scattered through the house, in addition to which a purse of $188 75 was presented to different members of the family. It is pleasant to record such kind visitations. May the Lord abundantly bless the cheerful, generous givers.

JAMES S. MCDONALD.

SUNDAY SCHOOL AT NEVADA.—On Sunday last the annual reports of the officers of the Congregational Sunday School were submitted. The School during the past year has been in a flourishing condition. The following statistics are from the Superintendent's report: Total attendance, 4,881; males, 1,829; females, 1,675; average, 94; The school begins the new year with a membership of 129. The library contains 330 volumes, and the aggregate, including singing and class books, is 445. On last Sunday a system of monthly concerts and examinations was commenced, which will be continued through the year. The pupils are examined by the Pastor, reports of monthly collections are made, and general exercises gone through with. These meetings are held in the morning. —*Nevada Transcript.*

UNIVERSITY OF THE PACIFIC.—The *San Jose Patriot* says: "The balance of the land on hand is worth $75,000, besides the college *Campus* which contains eighteen acres, and is worth $10,000 additional. The land remaining is to be sold at private sale, and the proceeds kept invested as a permanent endowment fund, the interest only to be available to meet incidental expenses. Mr. Baker will commence after the holidays to canvass for building funds, and as soon as the requisite amount shall be pledged, the building will be commenced. The building for the present use will cost about $40,000. San Jose will doubtless do her part in furnishing the above amount, as she will be greatly benefited in the successful prosecution of the enterprise.

FASTING AND PRAYER.—The following religious notice, signed by the pastors of the Baptist, Methodist, and Presbyterian churches in Napa, was published last week in the local papers: "Owing to the prevalence of small-pox among us and at the request of the committee appointed to look after the health of the town, the churches under our charge will be closed on next Sabbath, the 17th inst. Therefore, we earnestly request the members of our several congregations, together with all who love our Lord, to observe that day at their homes in fasting, humiliation, and prayer, recognizing in the present calamity the hand of God, seeking His blessing in the chastisement, and praying for its removal as soon as it may be our Divine Father's will."

MARYSVILLE.—By the exertions of the pastor, Rev. Dr. McKaig, and some of the leading members of the Presbyterian Church, the sum of $3,000 in gold has been raised for the purchase of an organ. The amount raised is sufficient to buy a good instrument of a size and power adapted to the building in which it is to be placed, and such an instrument cannot fail to add greatly to the attractiveness of the church where this flourishing society worship.

MISCELLANY.—The following items we take from *The Pacific:* The Second Congregational Church recently received six new members.... The Theological Seminary is to be in working order, if possible, by March 1st.... A mission church has been commenced at Oakland by the First Congregational Church.... The Mariners' Church will hold a "Seamen's Missionary Meeting" on the evening of the third Sunday of each month.... The Church in Nevada have painted and repaired their house and started a temperance society.

From the *Advocate* we learn that at Relief Hill, Nevada, they have a neat little church, a society of 12 members, and a good Sunday School. Rev. G. G. Walter is the preacher.... Protracted meetings with encouraging success are being held in Albany and Dallas, Oregon. A revival is in progress at Eugene City, and quite a number of persons have been converted on Puget Sound. There is also a revival at Grande Ronde.... The Centenary M. E. Church at Napa City will be consecrated a whole offering—free from debt—on Sabbath, Jan. 24th.... The pastor of the Central M. E. Church received a new suit of clothes as a New Year's present.

THE *Evangel* has the following:

The Church at San Jose is receiving on an average 5 members a month, the congregations are excellent, and the Sabbath School prosperous.... The Ebenezer Church will worship in their new house in a few weeks.... A Baptist Church is about to be organized at Visalia, from about 40 stray sheep in that vicinity.

THE minimum price of pews in the Presbyterian church at Vallejo this year is $16 00. The best pews brought a premium of from $4 to $45.

EASTERN.

THE religious interest of the Y. M. C. A. at Biddeford, Maine, still continues. A committee recently visited all the drinking and gambling-saloons without insult, and with invitation to come again.

THE Euclid street Presbyterian church Cleveland, Ohio, which was recently repaired and completed, supports a large cross on the top of its stately steeple.

THE Rev. J. S. Lindsey, late pastor of the Granby street Methodist church, Norfolk, Va., has applied for orders in the Episcopal church.

IN Grace church, Wilmington, Delaware, Rev. A. Cookman pastor, as the result of a revival, there have been ninety conversions.

MANUSCRIPT sermons at fifty cents apiece, suitable for any denomination' are advertised in Boston.

Oakland Academy.

A CLASSICAL, ENGLISH, & MILITARY BOARDING SCHOOL

REV. DAVID McCLURE, PRINCIPAL.

The Ninth Term of this Institution will commence on Wednesday, Jan. 4th, 1869, in the new Academy building, recently erected on Telegraph Road, one mile from the Railroad Depot.

The location and plan of this new building have been made with the design of securing for the students a home of beauty and refinement.

Careful provision is made for thorough and extensive courses of study in English, Mathematics, Natural Science, and the Ancient and Modern Languages. A special course is also provided for those who are preparing for a commercial life.

In addition to these courses there is a daily military inspection and drill, together with vocal and light gymnastic exercises, under the instruction of a teacher. Every student is required to attend the military and gymnastic exercises, as a means of physical training.

For the mental, moral, and physical culture of each pupil committed to his care, the Principal holds himself responsible.

Further particulars may be obtained by addressing the Principal at Oakland.

Selected.

Life in the Desert.

From Mount Sinai to the southern borders of Palestine, the country is arid in the extreme, the surface consisting of hard sand and rocky formations, almost destitute of vegetation. To such as have never seen the desert, it is difficult to convey an idea of the utter desolation that prevails, and it seems a marvel that human beings should be willing, or able to live here, at all. In rare localities indeed, a few acacias and palm trees appear, and feathery turfa shrubs often chequer the dry water-courses, but from Suez to Sinai, across to Gaza and the Dead Sea and thence sweeping down, east and south, past Mecca and the Persian Gulf, the desolation, like an ocean waste, everywhere prevails.

The inhabitants live at the farthest possible remove from the modes of Western life. Without fixed abodes, they dwell in goat's-hair tents, and in their habits and customs are simple and free. They are of a sun-burnt, hazel color, and active and noisy as the wind; naturally intelligent yet destitute of literature as the country is of verdure, and, like the mountain ranges and rocky cliffs, endowed with the immovable traits and instinct with fires capable of sublime manifestion. On entering the country, it is impossible to forget the words of 30 or 40 centuries ago, respecting their great ancestor: "He will be a wild man: his hand will be against every man, and every man's hand against him."

Four thousand years have wrought out rare results in this desert. The Bedawin Arabs present a singular mixture of rapacity and generosity. With the one marked virtue of hospitality, they are a race of robbers. It would seem that the old quarrel between Sarah and Hagar, perpetuated from generation to generation, is yet alive, and that Ishmael's children are to-day blindly seeking reparation for wrongs suffered by their ancient mother, on the soil where she experienced them. If this is so, how eminently worthy Abraham's beautiful wife as an actor on human society to stand in the line of apostolical succession from the first peerless mother?

The Bedawin regard as enemies all who do not belong to their tribe, or who are not in treaty with them; and to fight and plunder such is not only a general practice. but a universal sentiment and passion. Probably it would be impossible for Franks to cross the Arabian desert at all, without first comming into friendly correspondence with the sheikhs, as lords of the soil. Their fortune, at least, on making the attempt, would closely resemble his, who "went down from Jerusalem to Jericho and fell among thieves, who stripped him of his raiment' wounded him, and departed, leaving him half dead." The Bedawin execute this process now, as they did eighteen hundred years ago, not only on that very road to Jericho, but everywhere from the Jordan and the Dead Sea to the borders of Egypt. The epithet "thieves," applied by our Lord, was pronounced, of course, from the gospel stand-point, and not from the Arab's. The Bedawin hold it a point of *honor* to make thorough work in their robberies. To yield to entreaty, or from a sentiment of pity to spare a miserable victim, would be a weakness not to be entertained for a moment. Yet, so sharply defined and powerful is custom among them, that if a traveler, ordinarily deemed fit only for assault and plunder, should once enter an Arab's tent and throw himself on his hospitality, he would be treated, not as an enemy, but as a guest; his person would be held sacred, his life and property would be protected, and all that the tent could afford for his comfort, eagerly placed at his disposal: and, after hospitality had been received, any offer of remuneration therefor would be deemed an offence.

Our first sight of the Bedawin, on their own soil, was at the Gulf of Suez. Having crossed that arm of the Red Sea—several feet *vertically above* the level on which the Israelites made the passage when pursued by Pharaoh—and having landed on the eastern shore, we saw at a little distance a group of camels, some loaded, others with empty saddles, attended by numerous active and voluble persons, awaiting our arrival. This was our caravan. The Arabs were dressed in cotton gowns with large sleeves drawn tight at the edges, some of them in light drawers, and some *sans culottes*, with a belt around the waist, a sheathed knife and pistol hanging from it, and on the head a close fitting cap, surmounted with a large handkerchief, bound around with a camel's-hair cord. Their breasts were open and their feet bare. Occasionally there appeared, over all, a kind of loose cloak of striped wool, called an "abba." Add to this, a gun with an immensely long barrel, or a lance still longer, and you have the Bedawy of the desert.

When my camel was brought, I found him an intelligent, noble-looking animal with a saddle, some seven or eight feet from the ground, to which I was destined to ascend. At a sort of chuckling sound uttered by Joseph, down he came, first on his fore knees, then on his haunches, and then there followed a general settling motion of the body at large, and he lay along, in full length, on his belly, on the ground. The saddle was now at about the height of an ordinary horse's back. Putting foot in the stirrup, I was directly astride the great animal; when, suddenly reversing the process of descent, he rose with a jerk, first in the rear, bringing affairs to an angle of about forty-five degrees, so that one must hold on by the horns of the saddle, or else fare worse; but before there was time to consider of this, up he came in front also, and so, speedily attaining his full altitude, things were horizontalized and rendered satisfactory. Shortly after, in a long straggling line, we were traveling on the desert. After a ride of a couple of hours, the tents appeared, marked against the southern sky, and soon we were welcomed into camp at the Wells of Moses.

In about an hour after our arrival, dinner came on. But who shall attempt to describe these repasts? Those experiences suggest the doubt whether the temptation of poor Esau when exposed to the flavor of Jacob's pottage will ever be appreciated by occidentals, unless they come to the Arabian desert. "Give me soup or I die; what is my birth-right, what is my life, compared with the pottage?" Whatever our opinion of that transaction, we can now at least fully understand it. Hour after hour passed away at the table. The incidents of the day were discussed, thoughts were sent far off to that distant world where our friends are, and where we once were, journals were written up, social prayer to the great Protector of all, a single sleep, and lo! morning had come; we were strong again and ready for another day.—*Extracts from "The Arabian Desert" in the Congregational Review.*

Going Away to School.

It was settled, then, that I should go to Phillips Academy, and preparations were made that I might join the school at the beginning of the autumn.

In due time I took my departure in the old carriage, a little modernized from the pattern of my Lady Bountiful's, and we jogged soberly along—kind parents and slightly nostalgic boy—towards the seat of learning, some twenty miles away. Up the old West Cambridge road, now North Avenue; past Davenport's tavern, with its sheltering tree and swinging sign; past the old powder house, looking like a colossal conical ball set on end; past the old Tidd House, one of the finest ante-revolutionary mansions; past Miss Swan's great square boarding school, where the music of girlish laughter was ringing through the windy corridors; so on to Stoneham, town of the bright lake, then darkened with the recent memory of the barbarous murder done by its lonely shore; through pleasant Reading, with its oddly named village centres—"Trapelo," "Readinwoodeend." as rustic speech had it, and the rest; through Wilmington, then renowned for its hops; so at last into the borders of the academic town.

It was a shallow, two-story white house before which we stopped, just at the entrance of the central village, the residence of a very worthy professor in the theological seminary—learned, amiable, exemplary, but thought by certain experts to be a little questionable in the matter of homoousianism, or some such doctrine. There was a great rock that showed its round back in the narrow front yard. It looked cold and hard; but it hinted firmness and indifference to the sentiments fast struggling to get uppermost in my youthful bosom, for I was not too old for homesickness—who is? The carriage and my fond companions had to leave me at last. I saw it go down the declivity that sloped southward, then climb the next ascent, then sink until the window in the back of it disappeared like an eye that shuts, and leaves the world dark to some widowed heart.

Sea-sickness and home-sickness are very hard to deal with by any other remedy but time. Mine was not a bad case, but it excited sympathy. There was an ancient, faded old lady in the house, very kindly, but very deaf, rustling about in dark autumnal foliage of silk or other murmurous fabric, somewhat given to snuff, but a very worthy gentlewoman of the poor-relation variety. She comforted me, I well remember, but not with apples, and stayed me, but not with flagons. She went in her benevolence, and taking a blue and white soda-powder, mingled the same in water, and encouraged me to drink the result. It might be a specific for sea-sickness, but it was not for homesickness. The *fiz* was a mockery, and the saline refrigerant struck a colder chill to my despondent heart. I did not disgrace myself, however, and a few days cured me, as a week on the water often cures sea-sickness.

—*Oliver Wendell Holmes, in Atlantic Monthly.*

Revivalists.

The *National Baptist*, in a review of a book written by Rev. A. B. Earle, the revivalist, expresses its opposition to this class of preachers in the following rather severe language:

Our objections to these professional revivalists, in addition to their entire want of New Testament authority, may be briefly stated. They put dishonor on the pastoral office, and on the ordinary means of grace. They teach, by precept and example, that the great purpose of the Church's existence is the "conversion of souls," and the comparison of the fruitfulness of their labors with the result of the pastor's labors for a series of years is always to the disparagement and humiliation of the pastor. Mr. Earle distinctly says in his book, more than once, that the reason why pastors are not as successful as he has been in winning souls is because he has more faith and is more faithful, and these men do not hesitate to talk in this way in the presence of those whom they thus charge with delinquency. They often go further, and insist that these delinquents shall make confession of their sinfulness and unfaithfulness before their self-constituted confessor, the revivalist, and receive his prayers and benedictions. Now no pastor, who is at all fit for his place, can submit to such treatment without gratuitously humiliating himself before his people, degrading his office, and doing dishonor to the Master who has committed to him a great and responsible trust. God has given to the pastor an office and a work above all others in the Church, and has appointed the pastor's preaching and other labors as the great instrumentality for the conversion and sanctification of men. The pastor's principal work is the instruction and edification of the Church, and from this, with the Church's co-operation, comes inevitably the ingathering of others from the world. The theory of the revivalist is the reverse of this, and is destructive of right views and of right action, as touching the position of the pastor and the work of the Church. Who can tell how many faithful and efficient pastors have been driven from their fields, as part of the results of most successful and blessed revivals?"

Printing one Thousand Years Ago.

An extraordinary discovery has been made of a press in India. When Warren Hastings was Governor-General of India, he observed that in the district of Berares, a little below the surface of the earth, is to be found a stratum of a kind of fibrous woolly substance of various thicknesses, in horizontal layers. Major Roebuck, informed of this, went out to a spot where an excavation had been made displaying this most singular phenomenon. In digging somewhat deeper for the purpose of further research, they laid open a vault, which on further

examination, proved to be of some size, and to their astonishment they found a kind of printing press set up in a vault, and on it movable types placed as if ready for printing. Every inquiry was set on foot to ascertain the probable period at which such an instrument could have been placed there, for it was evidently not of modern origin, and from all the Major could collect it appeared probable that the press had remained in a state in which it was found for at least one thousand years. We believe the worthy Major, on his return to England, presented one of the learned associations with a memoir containing many curious speculations on the subject. Paper we know to have been manufactured in the East many centuries before we had any knowledge of it, and we have many reasons to think that the Chinese had been acquainted with the mode of printing they now employ, many years before Faust and Guttenburg invented it in Europe. It certainly does no credit to the inventive genius of the Romans to know that, while they approached so near as to engrave in style not to be equalled in the present age on gems and stones, and of course the taking of impressions of them, they should have remained ignorant of the art which has bestowed so many blessings on mankind.

LOST HOURS.—One person rises in the morning at half-past nine, another at six. If each live to be 50 years old, the one will have enjoyed 63,875 hours, or 2,661 days more than the other. Let us suppose that there are throughout Great Britain 1,500,000 persons who rise at a quarter past nine, or later; of these, perhaps 950,000 would if they rose at six, be usefully employed. At this rate, 56,346,875,000 hours, or 6,432,291 years of individual improvement are lost to society every half century. This is supposing that these 950,000 get up at a quarter past nine whereas thousands do not leave their beds till eleven or twelve. All this time is uninterrupted day, and composed of hours in which the intellect is far clearer and more fit for study than the rest of the day. It must be remembered, too, that nothing conduces more to health, and consequently to longevity, than early rising. Suppose, out of the above number of persons, 500,000 should live four years longer than they otherwise would have done, viz: 54 years instead of 50, according to the ratio above, here are 2,000,000 more years of actual existence utterly wasted.

Oxford Bibles.

The superior excellence of the Bibles printed at the Oxford University Press is proverbial among all who prize correctness of the text, and clearness and beauty of typography and binding. The Oxford editions are the standard from which other editions are copied, and are therefore acknowledged as superior.

The Subscribers, who act as

SOLE AGENTS IN THE UNITED STATES

for these Bibles, keep all varieties and sizes, from the 48-mo. to the Folio. They select the following, which they strongly recommend

THE SUNDAY SCHOOL BIBLE. Printed in clear type and well bound in arabesque - - - - - - - - - - 50 cents.

THE PEW BIBLE. Printed in large type and bound in morocco, $2 00; Turkey morocco, $3 00.

THE STUDENT'S BIBLE. Printed on fine paper, in beautiful type, with References and Maps, and an Index to the persons, places, and subjects occurring in the Scriptures. Turkey morocco, - - - - - - - - - - - - - - $4 00

THE CLERGYMAN'S BIBLE. Printed in large, clear type, with References and Maps, and an Index to the persons, places, and incidents occurring in the Scriptures. Bound in Turkey morocco, - - - - - - - - - - - - - $5

THE PULPIT BIBLE. Beautifully printed in very large, clear type, demy, 4to. Bound in Turkey morocco, - - - $20 00

THE FAMILY BIBLE. Beautifully printed in large type containing Family Record, with or without References, Plates, and Maps, in every style of binding, from $17 00 upwards.

THOS. NELSON & SONS,
137 Grand Street, New York.

The prices quoted above are in U. S. Currency, and any of the books will be mailed free on receipt of price.

FISHER & CO.

ESTABLISHED 1851,

Importerrs and Manufacturers of

Fine Hats.

300 Montgomery Street, Corner of Pine,

SAN FRANCISCO.

Heuston, Hastings & Company,

ARE THE

FASHIONABLE CLOTHIERS

OF

SAN FRANCISCO.

SPECIALITIES.

PRICE AND GUARANTEE.

The largest and most varied stock of Gentlemen's Clothing, Furnishing Goods, Trunks, Bags and Valises, on the Pacific Coast. Every article sold, being of our own manufacture, is guaranteed. Having contracts direct with European and American Manufacturers of piece goods, we thereby effect a saving of fully 50 per cent. in wholesale dealers' profits, and are thus able to offer superior Goods at less than second-rate prices.

STYLES.

Having agents in London and Paris, we introduce the new styles in San Francisco simultaneously with their appearance in New York.

GOODS MADE TO ORDER.

For the accommodation of such as may desire, we have secured the services of a celebrated European cutter, and are prepared to make up piece goods in a style superior to any other house on the coast. Shirts, Ties, Collars, etc., made to order at short notice.

COUNTRY ORDERS.

Goods forwarded by Express to any part of the Pacific Coast on receipt of orders and measures; send for directions for measurement.

Heuston, Hastings & Co.

LICK HOUSE BLOCK,

SAN FRANCISCO.

United States Life Insurance Comp'y,

IN THE CITY OF NEW YORK.

OFFICE, No. 40 WALL STREET.

CASH ASSETS EXCEED $2,700,000.

This Company, having a Stock Capital, makes Insurances and Endowments with or without profits. Dividends to Policies with profits are equal to, or larger than those of other, or "Purely Mutual" Companies in available present cash value.

NEW AND IMPORTANT PLANS OF LIFE INSURANCE HAVE BEEN ADOPTED BY THIS COMPANY. SEE THE NEW PROSPECTUS.

Life Assurances, Endowments and Annuities in every form. Profits available after Policies have run one year, and annually thereafter. The reserved Cash fund, for re-insurance, is the largest known to or required by, the ablest and most experienced authorities in Life Insurance, thus affording undoubted security. A liberal non-forfeiture system, as to whole Life or Endowment Policies.

Policy Holders in this Company can use or apply the Dividends of profits in a greater number of ways than is afforded to Policy Holders by any other Company.

The law under which the company is Chartered, provides that if the Capital should, from any cause, become impaired to the extent of Twenty-five Thousand Dollars, or more, the Stockholders SHALL BE CALLED UPON TO MAKE GOOD SUCH DEFICIENCY. This is the only Cash Company in America which affords this safeguard to Policy-holders.

The assured in this Company are not personally liable as in Mutual Companies, which have the power of assessing their members or of reducing the sums insured, in case of deficiency.

CLERGYMEN, insuring in this Company, are allowed a DISCOUNT of TWENTY PER CENT. on first year's premium, and a liberal commission will be given on all Insurances influenced by them.

Agents wanted, on the most advantageous terms.

Forms and every information will be furnished by

B. J. DORSEY,

General Agent for the Pacific Coast,
Southeast Corner Sansome and California Sts., San Francisco

HYATT'S HAND-BOOK OF
Grape Culture in California,

Giving full and specific directions as to where, how, and when, to plant and cultivate a vineyard.

As the season is approaching for those who purpose going into the culture of the vine anew in California, or for those who wish to extend their vinicultural operations to make preparations therefor, they can find no better aid, and no source of information more valuable than to consult this highly approved Hand-Book of Grape Culture.

Following are some of the testimonials that have appeared in commendation of this useful and indispensable work:

A committee of the late Fair of the Mechanics' Institute of San Francisco, to which the work had been referred, speak thus:

"Your committee have examined Mr. Hyatt's Treatise on the Culture of the Grape, and believe it to be the BEST HAND-BOOK published on that subject for California vine culturists, and for which they recommend a Special Premium."

The California State Agricultural Fair, of 1867, awarded a Diploma to the author of this work, and also the San Joaquin Valley Agricultural Fair, at the same season.

OPINIONS OF THE PRESS.

The following are brief extracts fron some of the elaborate notices of this work:

The San Francisco *Daily Evening Bulletin* says:—"The book contains a choice collection of the best foreign and native varieties of the grape cultivation in California especially, as well as at the East. The many excellent works on Grape Culture in the Atlantic States are of little or no value in California, where an entirely different system and practice are necessary in vine growing and wine-making. This Hand-Book is intended to supply this deficiency. The author has taken great pains to investigate this subject, and to aid in the improvement of viniculture in California. Its appearance is timely, and it can hardly fail to meet a large and ready sale. It is attractively printed and elegantly bound."

Sacramento Union—"Hyatt's Hand-Book of Grape Culture is a California production that will probably meet a common want. The author takes the experience of the most noted vine-growers in the State as the warrant for his conclusions and suggestions, turns to account the recorded results of experiments made by the pioneers of this branch of industry, and in addition to giving full and minute instructions in regard to the planting of vineyards and the manufacture of wines, presents statistics which will enable the beginner to calculate the probable profits of successful grape culture."

The *Mountain Democrat*, whose editor, Hon. D. W. Gelwicks, is the present State Printer of California, speaks thus:

"HYATT'S GRAPE CULTURE.—We have received from the publishers, H. H. Bancroft & Co., San Francisco, a copy of this interesting and valuable work—a work greatly needed on this coast, and which every grape-grower should purchase. We sent it to a gentleman well known in this community, for his examination—a gentleman familiar with the subject, and largely engaged in the culture of the grape. He gives it the following cordial endorsement, and his endorsement ought to secure it a large sale:

'The limited time in which to examine Hyatt's Grape Culture, published by H. H. Bancroft & Co., San Francisco, has been sufficient, however, to satisfy me that it is a work which every grape-grower should have. No matter how well fortified we may be in our own experience and theory, we must acknowledge that we may adopt many of the author's ideas and suggestions with profit. The merit of the work certainly bespeaks for it a ready sale.

Respectfully, CHAS. P. JACKSON.'"

The Golden Era: * * * "With this book in his hand, the intelligent agriculturist can engage in the business of grape culture with almost the same chance of success as one who has bought his knowledge by expensive experience. * * * The practical information contained in the book would cost many hundred dollars to obtain in any other way. We predict for it a ready and rapid sale."

S. F. Daily Dramatic Chronicle: "The book is emphatically a California production, being written by T. HART HYATT, of this city, editor of the *Rural Home Journal*, and bearing the imprint, San Francisco: H. H. Bancroft & Co. It contains a large amount of valuable information, and should be in the possession of every vine-grower and wine manufacturer in the State. The usefulness of the volume, and its convenience for reference, are very much enhanced by a full and carefully prepared index."

S. F. Mining and Scientific Press: * * * "The book professes to be a complete manual, with instructions for the management of the grape and the manufacture of wine, and is especially designed for California. * * * The book contains a considerable amount of valuable information which is not generally found in such treatises."

S. F. Daily Times: * * * "The author seems to have exhausted his subject, particularly as it relates to viniculture in this State, and as the grape interest is just beginning to attract attention which is soon to become paramount among farmers, we regard the publication of the work as most opportune. No ranchman should be without it."

N. Y. Daily Tribune: "The author brings the result of many years' experience in foreign countries to the preparation of his work, and from his observations in climates similar to that of California, arrives at the conclusion that California is singularly favorable to the culture of the grape, and to all semi-tropical fruits, and that it will hereafter be distinguished as the land of the vine, the fig, the orange, the olive and the palm. His volume forms a capital, if not a complete manual, on the care of a vineyard, and it is enriched with much industrial information connected with the subject."

Locon (Ind.) Home Journal: "This work is most *apropos*. It comes just as thousands, without any practical knowledge of the business, having planted vineyards, find themselves destitute of that information their intelligent care demands. All over the country this interest is growing, and probably the time is not distant when America will produce more, if not better, wines than any country in the world. The author, MR. THOMAS HART HYATT, is an enthusiast on the subject upon which he writes so pleasantly, and his book embodies just what every grape-grower would like to know—what every one must know, to cultivate the vine successfully."

Colman's Rural World, St. Louis: * * * "We merely want to introduce a new and interesting treatise on this subject to our readers, from the far-off shores of the Pacific—the Golden State of California. Its author is T. HART HYATT, editor of the California *Rural Home Journal*. He has had a large experience and observation in California and in the Old World. His style is entertaining, his directions clear, plain, and practical."

Rural New Yorker: * * * "Although most valuable to the California viniculturist, yet it helps to widen our knowledge of the vine."

H. H. BANCROFT & CO., Publishers.

The Occident.

San Francisco, Saturday, January 23, 1869.

IMPERFECTIONS.

Some persons seem to gain no advantage from a review of their mistakes, or errors, from self-examination in general, except as it gives them occasion for self-humiliation and distress. They bring up all they can remember of the past, and sit down before it and weep. Oh! how sinful they have been! How grievously they have wandered from God! How they deserve His frown! If any one tries to lift the cloud they gather around themselves, and let in the rays of comfort and hope which come from the promises of God, they say: "Oh! no. I am not worthy to have any light, or happiness, or good. I have so greatly sinned!" and they gather the closer around them the gloom of self-condemnation. Now, these persons are sincere, they feel all they say, but they sadly belie the religion they think they honor by such exclusion of its blessings. We ought to have a just sense of our guilt, but the only object of this is that being penitent, we may be pardoned, and lose the burden. We ought to review the past, but the only profit from examination is, that we may be made wiser and more useful for the time to come. These perpetual, unbroken clouds, under which some Christians walk and weep, are a dishonor to their Lord, and of no value to any one.

There are others, who seem to think that the advantage of such review of our imperfections is, that we are led thus constantly to magnify the grace of God, which has continued in us any measure of faith, and permitted us to retain any hope that we are His children. They are ever sitting still, extolling the amazing forbearance of the Holy Spirit, the infinite love of Jesus, and they make their experience of pardon and restoration no more than the food for their reflection on God's mercy. But, our whole duty is not that we adore the grace that saves us, delightful and natural as is this expression of our thanks. This will not be the whole of our duty in Heaven; much less is it while we are surrounded by the responsibilities and obligations of our earthly life. We are to make one expression of our gratitude in our interest for others, and the chief object in a review of our experience should be that we may make it of profit to those exposed to like temptations, or evils. If you see one in the Slough of Despond, where you sank down, go and tell him how, and at what point, you came out upon firm land again. If you see one mourning in the dungeon of the Giant Despair, go and give him the keys by which you was able to make your escape. If you see one struggling in conflict with Apollyon, bleeding, exhausted, ready to fall, hasten to him, and tell him how you resisted, or on account of what you fell, and help him that he may conquer, being made wise by your failure. If you see one wandering into wrong paths, go take him by the hand; tell him you have been over all this ground, and know all its dangers, and persuade him, through a recital of your experience, to come back with you to the ways of obedience and peace. If you see one trying to be faithful, standing up manfully against Satan, shunning evil, loving good, encourage him by showing both what you gained by like efforts, and what you lost when you ceased them. Thus, in view of all your own career, strengthen others, and know that by nothing do you more honor your Lord. The varied lives of Christians, in this way, may become a common stock of profit. We may erect way-marks along the road to success; we may place beacons to mark the spots where we have fallen; while, throughout our history, if we are sincere, though we are imperfect, we may be cheered by the truth that our Divine Redeemer will both pray for us and help us, that we may finally triumph, and be saved.

COMMUNION WITH GOD.

Affection awakens a desire for the presence and society of the object of regard. The loving family rejoice in social intercourse and a common interest. Friends seek each other, and delight in interchange of thoughts and emotions.

Of all emotions the religious are the strongest. This comports with the divine law, "Thou shalt love the Lord thy God with all thy heart and soul!" It agrees with experience. Other feelings of the heart pass through their phases with our mortal lives; have their youth, maturity, and old age. But the religious nature ever attains to a stronger capacity.

God also is an emotional Being. His natural universe is arranged in accordance with such a disposition; in beauty, sublimity, and terror. It is not more certain that there is a God, or that He possesses an intellect, than it is that he also possesses a moral character. "He is angry with the wicked every day." He loves His people also with passionate tenderness. "I have redeemed thee! I have called thee by thy name! Thou art mine! When thou passest through the waters, I will be with thee; and through the rivers, they shall not overflow thee; when thou walkest through the fire, thou shalt not be burned; neither shall the flame kindle upon thee." But it was in the unspeakable gift of the Redeemer that this affection was most deeply displayed. "God so loved the world!"

These affections lead to desire for communion between God and His people. To accomplish it a divine unity has been formed between them. God sends His Holy Spirit to dwell with His people, and move them to holy exercises, and endow them with heavenly faith. Thus "quickened" (Eph. ii: 5), they discern, and accept, and embrace Him, and cling to Him as their life.

These emotions of the believer find utterance in all devotional exercises; in adoration and thanksgiving; in prayer and grateful meditation; in singing God's praise, and studying and setting forth His immeasurable perfections. It is a succession of such views, rolling in like never ceasing surges, that tunes the unwearied song of the seraphim.

This communion is a real intercourse with God. He reveals Himself—not miraculously, but in the mind and heart, as a glorious Presence full of infinite life and love. Sometimes the emotions thus awakened are almost overwhelming. I have heard it related of President Edwards, that upon a certain morning, when riding through a forest, his view of a present God became so vivid and delightful that, unable to continue on, he alighted from his horse and fell upon his knees. Scarcely a moment seemed to have elapsed in this ravishing interview, when, suddenly startled, he awoke to consciousness to find that the sun was already set. All the day had passed as an instant of time in that delicious communion with God.

I was once asked if there is a physical as well as an intellectual and emotional sensation in these exercises? It is probable that there is. In great joy in meeting a beloved friend, we are often sensible of a thrilling, pleasurable, nervous excitement, like the vibration of a harp string, throughout our frame; and it is certain that intimate communion with God fills all our being with delight. It satisfies the intellect, rejoices the heart, and affords a sense of beauty and glory, animating and cheering to every fibre of the sanctified nature.

Pythagoras dreamed of the harmonies of the universe. Plato argued the immortality of the soul from them. But neither heathen moralist nor Christian Prophet has yet attained to the measure of the believer's Oneness with God. "Eye hath not seen, nor ear heard, neither have entered into the heart of of man, the things which God hath prepared for them that love Him."

The Heathen among us.—XI. We must Support the Established Missions.

I do not wish to be understood, in anything I have written in reference to this subject, as desiring to lessen the respect, or weaken the confidence of our Christian people in the mission of the Presbyterian, and latterly of the Methodist Church, established among us. Nothing that we can do, no success that it is possible for us to achieve, will justify their abandonment. They are indispensible, and ought to be generously aided, greatly strengthened, and the number of regular missionaries increased. Our work cannot supercede theirs, but will aid and extend their usefulness.

There is very much of the missionary work that can only be done by the regular missionaries to the Chinese, familiar with their language, who devote all their time, talents, and energies to the duties of their office. There are many Chinese in mining and other camps, along the line of the railroad, and even larger numbers in our towns and cities, who are utterly ignorant of our language, never come in contact with us, and are therefore beyond the reach of any but missionaries.

Mission schools, however numerous, well organized and zealously conducted, cannot obviate the necessity for churches established specially for the Chinese, in which the services are conducted wholly in their own language. They will be the training school for the mission church, just as Sunday Schools are with us.

Instead of two missionaries to the Chinese on the Pacific, there ought to be at least from six to ten, representing our principal religious denominations. No one or two sects ought to monopolize this work, or be required to meet all the expense of carrying it on. It belongs to all, like our common Christianity, and is equally the duty of all of us. Our great anxiety ought not to be to make them Methodists, Presbyterians, Baptists, or Episcopalians, but Christians. Missionaries should be stationed at Sacramento, Stockton, Virginia City, and perhaps one or two other places, in addition to the two or three needed in San Francisco. At least two missionaries might be profitably employed in traveling through the interior of this and neighboring States, and visiting the Chinese in their mines and settlements.

It ought to be a matter of pride in the Christian people of the Pacific, to sustain our missionaries. It has been abundantly proven that we are not wanting in either wealth or liberality. There never was a better opportunity presented to us for the use of both. The wildest visionary in our churches here, never thought of sending missionaries to New York, to assist the Christians of that great city in laboring among the heathen of Five Points. Why is it not equally wrong for the Christians of New York to send and support missionaries to our heathen in Sacramento and Dupont streets?

We want all of these, missions, missionaries, churches, mission schools, and Christian employers faithful to their trust. When we have them, the heathen among us will be so environed and hemmed in with religious influences, that they cannot escape from them, but must surrender to the faith of Jesus. God speed that day. C.

PRESBYTERIAN BOARD OF PUBLICATION.

THIS popular and extensive house publishes a great variety of works in all the departments of

Religious Literature,

Including,

COMMENTARIES, ANNOTATIONS, RELIGIOUS HISTORY, RELIGIOUS BIOGRAPHY, SERMONS, BIBLE DICTIONARIES, CHILDREN'S BOOKS, QUESTION BOOKS, CATECHISMS, DEVOTIONAL BOOKS, ETC., ETC.

Particular attention is called to their large and varied assortment of the most carefully selected

SUNDAY SCHOOL LIBRARIES.

Sunday School Teachers and Officers, and others who have charge of supplying Schools with Libraries, will save themselves much trouble in selecting, and will insure to the Schools under their charge a suitable collection of Books by calling to examine this stock.

Among the HYMN BOOKS published by the Presbyterian Board may be noticed the

PRESBYTERIAN PSALMODIST, PRESBYTERIAN JUVENILE PSALMODIST, CHILDREN'S PRAISE, AND

THE HYMNAL,

One of the latest and most popular collections of Hymns and Tunes, and one admirably adapted to the general introduction of

CONGREGATIONAL SINGING.

Persons in want of the above varieties of books may procure them at reasonable rates by calling at the DEPOSITORY OF THE PRESBYTERIAN BOARD for the Pacific Coast, which has been established at the store of

H. H. BANCROFT & COMPANY,
609 Montgomery Street, San Francisco, Cal.

Books

Of all kinds, on all subjects, conveniently classified, occupy one half of the first story and the entire second floor of BANCROFT'S BOOKSTORE.

Stationery

Of every description, including all kinds of Writing Papers, Envelopes, Inks, etc., is sold at wholesale and retail at BANCROFT'S.

The American Tract Society

Is represented, in both its New York and Boston branches, by a large stock of its publications, at BANCROFT & COMPANY'S, who are the general agents for this coast.

The Presbyterian Board of Education

Has a Depository of its Works at BANCROFT'S BOOKSTORE which is their headquarters for the Pacific Coast.

Sunday School Libraries

In great variety, supplied at the lowest wholesale prices. A fine assortment to select from at the Book and Stationery House of

BANCROFT & COMPANY,
San Francisco, Cal.

Current Literature.

Wild Life under the Equator.

Paul Du Chaillu, famous for his long-continued explorations in tropical climates, as well as for the interesting manner in which he has, by his writings and lectures, made the whole world familiar with his wild adventures, comes before the public with a new work. This, like his "Stories of the Gorilla Country," is intended for young readers, who will read with delight and wonder this account of life in the forests and jungles of Equatorial Africa, and will not probably pay much heed to the grumblings of European *savants*, who sit in their closets and question the accuracy of the statements of the brave gorilla-hunter. His story bears on its face the marks of truthfulness, and the book will be both popular and useful. Harper & Brothers are the publishers, and Bancroft & Co. have the book for sale. Here is the preliminary chapter:

Dear young folks! In the book I wrote for you last year, called "Stories of the Gorilla Country," I said to you "*au revoir*;" that means good-bye till I come again.

I have come again to my publishers, who are also my good friends, and who have let me have my own way about the illustrations of this book; they have told me that you were pleased with the last book. Not only have they told me so, but many of you have said the same thing to me.

This was good news, for I delight to tell stories to young folks, and "Stories of the Gorilla Country" being the first book I ever wrote for you, I was delighted to hear of its success.

I felt quite happy when I learned that I had been able to interest you in what interested me, while traveling in far-distant countries.

I have taken my pen once more. I am going to lead you into the great forest of Equatorial Africa. I am going to try to make you travel with me in the wild country I have explored. I am going to bring you face to face with the gorilla, and lead you into the midst of the wild tribes of men I have discovered. I will tell you how they live, what queer superstitions they have, and what sort of people these poor savages are.

I shall tell you about snakes, leopards, elephants, hippopotami, and other wild beasts of the forest. About insects, wonderful ants, and many other curious things.

You will follow me in that great jungle; you will get lost in it; you will build your camp with me, and you will hunt with me; you will be hungry with me; you will have flies to plague you; you will have lots of adventures, and perhaps when you close this book you will shout, "What a glorious time we have had with our friend Paul!" I hope you will not only be amused, but that you will be also instructed.

I have written two large volumes—"Explorations in Equatorial Africa" and "Journey to Ashango Land"—for older people than yourselves, and I do not see why I should not write for young folks. Now let me lead you into that land of wonders, where no civilized man had ever trodden before me.

Sunshine and Shadow in New York.

There is no city on our Continent in which the contrasts suggested by this title of a book, written by Matthew Hale Smith, are more fully presented than in New York. The Sunshine there, seen in the personal character of some of the prominent citizens, in the magnificent institutions of education and benevolence, and religion, and in the agencies for good which send forth streams over the whole world that are there supported, is as brilliant as any sunshine that cheers and blesses mankind. And the Shadow, there, seen in the shameless vices of many who claim to be reputable, in the gilded palaces of wickedness, and in the dreadful effects of depravity in its worst and lowest forms which there abound, is as deep and fearful as any shadow that has ever fallen upon any dwellers in a civilized and Christian land. The design of the author, in the book before us is to bring his readers under both the sunshine and the shadow, for a time, chiefly that he may interest them in the work and render it popular, but also, we are willing to believe, that he may impress the inferences which are unavoidable while reading the descriptions and facts it contains. Mr. Smith has rare power in writing for the people, and he has themes in the range brought before him by his design which allow full play for it all. We are not surprised that the book is in great demand, and we trust that the diffusion of more sunshine than shadow, upon character and life, will be the result of its sale. It is published by J. B. Burr & Co., Hartford, and R. J. Trumbull & Co., San Francisco, and is sold only by those who canvass for subscribers.

Chart of the Great Earthquake of Oct. 21, '68.

R. J. Trumbull has published a work, in the form of a map, or chart, that will be valuable for reference respecting the principal facts that distinguished the great earthquake, whose terrors are still vividly in the minds of those who experienced them. Besides a narrative of these facts, it contains photographic representations of some of the buildings that were the most damaged in this city and vicinity, the sight of which, even now, causes one to shudder. To those who were witnesses of the commotion, there is no need of such demonstration that it was fearful, but others will gain some idea of the violence of the shock from these pictures. Not the least interesting feature of the chart is the list of prominent earthquakes in past times, of which there is any record, with a statement of the damages they occasioned. This work, also, is sold only by subscription, through the agents of R. J. Trumbull & Company.

LITERARY ITEMS.

Donate.—I need hardly say, I hope, to any reader of these articles, that this word is utterly abominable—one that any lover of simple English cannot hear with patience, and without offence. It has been formed by some presuming and ignorant person from donation, and is much such a word as vocate would be from vocation, orate from oration, or gradate from gradation; and this, when we have, give, present, grant, confer, endow, bequeath, devise, with which to express the act of transferring possession in all its possible varieties. The first of these will answer the purpose, in most cases, better than either of the others, and donation itself is not among our best words. If any man thinks that he and his gift are made to seem more imposing because the latter is called a donation which he donates, let him remember that when Antonio requires that the wealthy Shylock shall leave all he dies possessed of to Lorenzo and Jessica, he stipulates that "he do record a gift" of it, and that Portia, in consequence, says, "Clerk, draw a deed of gift;" and more, that the writers of the simplest and noblest English that has been written called the Omnipotent "the giver of every good and perfect gift."

—*R. Grant White.*

The Boston *Journal* says: We have lately heard this capital incident related, and can vouch for its authenticity: One day, when Miss Larcom happened to be on a visit to the family of John G. Whittier in Amesbury, a stranger, an admirer of the Quaker poet, knocked at the door of the cottage to pay his respects to the man whose works had for so many years afforded him special delight. As usual on such occasions, Whittier sat silent, while the visitor poured out his tribute of admiration and thanks. "The piece I like best of all your poems," said the gentleman, "is one, 'Hannah Binding Shoes;' that seems to me very beautiful." "Yes," rejoined Whittier immediately, "that is truly a very beautiful piece, and I agree with you in all the praise you can bestow upon it." The stranger looked surprised to hear the taciturn poet warm up at such a rate over one of his own poems, when Whittier added, in his own sly and quiet manner: "But let me introduce you to the author of that poem, Miss Lucy Larcom, the lady sitting opposite you."

Speaking of much of the current criticism of Shakespeare, which finds all knowledge and all philosophies shadowed forth in this "myriad-minded" bard, Mr. Robertson finely says in one of his letters; "Such critics do with Shakespeare just as Swedenborg did with the Bible,—inform it with themselves and their own sentiments and philosophy; or, as the wolf did with Baron Munchausen's horse, began at his tail and ate into him until the Baron drove the wolf home harnessed in the skin of the horse."

A Mohammedan's Idea of the World.—The map in common use among the learned in India was prepared by an educated Mussulman. India is represented as covering one-third of the globe, China another third, Arabia and other Mohammedan countries nearly the whole of the remaining third. England, Scotland, Ireland, Norway, Sweden and Denmark are crowded in the north-west corner, and represented by a territory smaller than Iceland. South of these, Africa is exhibited as a small island, of which *America* is one of the principal towns.

—Chicago has two weekly papers devoted to the cause of woman. One of them—the oldest—is *The Sorosis*, which rather avoids the question of suffrage, and makes prominent such subjects as the employment and social elevation of the sex. The other is *The Chicago Sorosis*, which contends stoutly for suffrage as a fundamental right, indispensable to the welfare of the sex.

The Boston Latin School is the oldest educational institution in the country, having been founded 233 years ago, three years before Harvard College. It has graduated many celebrated men, among others John Hancock and five of his fellow signers of the Declaration of Independence.

An orator, in a recent speech, used the quotation: "*Ubi Libertas, ibi Patria.*" A short-hand reporter "took him" all right, but in writting out the notes made him say: "You be Libertas, I be Patria," and thus it was printed.

Mr. Dickens has announced that he shall not write another extended work of fiction.

Educational.

Schoolmasters as Professors.

A professor, strictly speaking, is one who has mastered some science and devotes himself exclusively to it. He keeps abreast of its literature. He adds, by discovery, to its facts and laws. He has a right to add new names to its terminology. Under this definition it is scarcely possible for an all-day and every-day teacher to be a professor. His time, which would otherwise be consumed in mastering one science, is occupied in teaching many. Of each of these he is, properly speaking, only an amateur. As such he is fully competent to instruct tyros; but would be a learner only in the presence of a true professor. At the same time, it may easily happen that the most laborious schoolmaster may perform at times the highest functions of a professor. Nothing prevents that he should even discover great principles. Other amateurs have done so, and why may not he? Goethe was only an amateur botanist, but

in that science he brought to light one of the grandest laws. The record of history is that "it was reserved for the first of Germans, the poet Goethe, to effect the last great revolution that the ideas of botanists have undergone." He demonstrated that the floral organs are all modifications of the leaf; "the branch being a contracted leaf, the calyx and corolla a combination of several, the stamens contracted and colored leaves in a state of disintegration, and the pistils leaves rolled up according to certain laws." (*Figuier.*) In like manner analogy suggests that the teacher may possibly be an observer of new facts. Other men, not strictly professors, have increased the sum of human knowledge by new phenomena observed, and so may he. The first observer of a transit of Venus was not a professor, but a clergyman. "Kepler did not anticipate it, and so the honor both of predicting and of observing it rests with a young English amateur, Jeremiah Horrox, of Hoole." (*Chambers.*) So with the polarization of light. It was not a member of the Institute, but a French officer, Malus, who while "looking through a piece of crystal at the image of the sun reflected from the windows of the Luxembourg," made those happy observations which led to our better knowledge of the above subject. He was not only a military man by profession, but he received promotion in that profession as a reward for his discovery.

But there is another function, belonging more to professors, which the teacher is sometimes almost forced to attempt. This is the business of naming. Required to convey the facts and principles of science to young minds, the teacher soon feels most keenly any defects in the terms of those sciences. If those terms are inadequate, or unhappy, no one will feel it sooner than he who is obliged to make them the vehicle of ideas to uninstructed minds. And this will lead to attempts, and suggestions in the way of improvement. Thus, Beckwith, of Oakland, proposes to his classes a beautiful change in the naming of the English tenses. The common method is to apply the name *perfect* to any action completed at, or before, some given moment. Thus a thing done just at or before the present moment is called *present-perfect*; before a past moment, *past-perfect*; and before a future moment, *future-perfect*. He suggests the better word *prior*, to convey the same idea; and would call the above tenses, *prior-present*, *prior-past*, and *prior-future*. Thus, either from analogy or actual example, it appears that the teacher, although only an amateur in science, may yet incidentally both discover and name quite as happily as the most devoted professor. O. R. C.

Personal.

REV. MR. BALLAGH, who has worked for many years as a missionary in Japan, in behalf of the Reformed Church Board of Missions, is now in this city on his way to the East. He delivered a very instructive discourse on the subject of "Missionary Work in Japan," at the First Presbyterian Church last Sunday evening.

REV. J. A. SKINNER, formerly pastor of the Presbyterian Church at Stockton, is now on his way to this past from the East. He has been commissioned by the Board of Domestic Missions as missionary to Arizona. This is a field of great importance, and one for which Mr. Skinner is admirably fitted.

MR. W. BOGGS has purchased the *Mendocino Herald*, Mr. BUDD retiring.

REV. JOHN EDWARDS, pastor of the Presbyterian Church at Visalia, writes that his house was invaded on New Year's eve by a surprise party, who left holiday gifts of cash and other good things to the amount of $135.

REV. L. HAMILTON, says the *Pacific*, is about publishing a volume of sermons concerning the theological teaching of which so much discussion has arisen, together with his statement before the Presbytery and Synod.

REV. F. DILLON EAGAN, Rector of St. James Church in this city, has been requested by the Trustees to resign. Some very serious charges are made against him.

REV. M. C. BRIGGS, D.D., will preach at Napa on the 24th, on the occasion of the consecration of the M. E. Church, of which REV. J. L. TREFFREN is pastor.

REV. STEPHEN RILEY, from Oregon, and REV. MR. SATTERFIELD, from Clear Lake, have recently moved to Visalia, and will establish Baptist Churches at once.

REV. ROBERT LOWRIE, assistant rector of Trinity Church, has gone East to remain. REV. C. B. WYATT, the rector, has returned and resumed his labors.

REV. CHAS. G. AMES, of Santa Cruz, delivered the seventh lecture of the Y. M. C. A. course on Tuesday evening; subject: "Good Society."

REV. MR. RAYNOR, Post Chaplain, has collected money from the people of Sitka sufficient to pay for the Lutheran Church at that place.

MR. J. W. NYE was elected on the 8th inst. Superintendent of the Sabbath School connected with the Central M. E. Church.

MR. S. F. GILCHRIST, City Attorney of Oakland, was knocked down and robbed in the street on Saturday evening last.

REV. MR. ROUSE has been seriously ill at Benicia.

THE fame of the celebrated PLANTATION BITTERS has no parallel in the history of Medicine. The thousands upon thousands of bottles that are made and sold daily is but proof positive of their wonderful virtues. Thousands of certificates can be produced showing the efficacy and certainty of the cures which they effect, and the Medical Fraternity, usually so jealous of anything which causes persons to think and doctor for themselves, are compelled to acknowledge its efficacy and wonderful virtues, and prescribe it for those who seek their advice. They are sold by all our druggists.

ALLEN'S ORIGINAL AND GENUINE
Nerve and Bone Liniment.

The Nerve and Bone Liniment was originated by Geo. M. Allen, in the year 1834, and has lived entirely on its own merits without the aid of advertisements; but owing to the many counterfeit and worthless articles called Nerve and Bone Liniment, now upon the market, has induced the proprietors to advertise it. Many certificates of leading citizens who have used and constantly keep it in their houses, as a great family remedy, could be added to the advertisement, but knowing the many virtues of Allen's Nerve and Bone Liniment, and that one application will satisfy any one of its beneficial effects, deem it unnecessary to bring the certificates before the public. Allen's Nerve and Bone Liniment does not effect a cure in a minute, but acts upon the Nerve and the Bone of the patient by its penetrating properties, when used according to the directions on each bottle, and gives new strength to the parts affected, and thus acts as an agent in helping nature to restore the diseased parts to health. It is also invaluable in all diseases of horses.

Be sure to call for Allen's original and genuine Nerve and Bone Liniment, all others are worthless counterfeits, and should not be tolerated by the public.

AGRICULTURAL.

Early Pruning of Grape Vines.

Our vine-dressers are already commencing the work of pruning. In many cases, owing to high wages and to the difficulty of obtaining skilled labor, the owners of vineyards are compelled to work at unseasonable periods. But, when practicable, the work of pruning should be deferred till February. If the canes are shortened earlier, there is risk that the warm sun in that month will cause the abundant sap in the vigorous stock to flow, thus starting the vine into leaf, and exposing the fruit buds to destruction from late frosts. The mission grape is much hardier than other varieties, and bears early pruning better. The Muscats, Hamburgs, and native American varieties should not be touched till the middle of next month. We notice that in some cases cultivators are shortening the canes excessively, in hopes of obtaining larger bunches of fruit. I think this is an error. On the contrary, the wood grows large and strong and impoverishes the clusters. S. W.

Developing our Resources—The Olive.

We are rather partial—are the people of this section of country—to talking of our great material resources, and of "developing the resources of our country." It is doubtless an excellent thing to live in a section of country which is, *par excellence*, the agricultural country, possessing the fructifying powers of both temperate and tropical climes. We are used to hearing a good deal said in praise of this land of ours—this land of the orange, the lemon, the olive, etc., etc. Now, we wish to say just a word about the latter "resource," the olive. We have said something from time to time about planting the olive. Let us hear a word of experience from those who have olives planted, and hear how they turn out as a crop—as a remunerative industry—as a "resource" of the country. We will, in this instance, take the Mission of San Fernando, the property of Don Andres Pico, and hear what he has to tell about the cultivation of the olive. Well, the Mission of San Fernando, as we all know, has a most magnificent grove of olives. The trees are large—were planted by the Fathers; consequently are in full bearing, and yield abundantly. It ought to be a profitable crop; it costs absolutely nothing to cultivate; the trees are bordering on the tablon of the vineyard. There is nothing to do but to gather the fruit and crush it. That is very easily said, and not very difficult to do. Yet, what is the fact—the melancholy fact? It is this: that from the high price of labor, the olives, abundant and rich as they are, cannot be gathered; cannot be made into either pickles or oil; and have to be left hanging on the trees, till they rot and fall off. Such is the condition of the labor market that it will cost more to gather the oil than the oil, when manufactured, will bring in the market. The consequence is, there has been made this year, at San Fernando, about a hundred gallons of olive oil, instead of thousands, which could have been made were labor available.

This is a very plain, simple fact. It is a pregnant fact. It speaks for itself. We are told to plant a certain kind of crop; yet, when the crop has been planted, and, through long, weary years, has grown to perfection, we find it will cost more to gather it than the fruit and the product of the labor will yield in the market.

There are those political economists who tell us that the rates of labor must be increased—that they must be raised at least twenty per cent. Starting out on a scale established by a placer mining basis, successful and remunerative beyond anything the world had ever experienced, we are told agriculture must pay the same scale of wages, or the produce of the earth be left to rot where it grows.

—*Los Angeles Star.*

Why Americans Hate Farming.

I think no one can read that splendid prose-poem, Guyot's Earth and Man, wherein he characterizes the position and products of the American continents, without feeling that they ought to be the food producers of the world. They are the seat, he says, of excessive vegetable, as the continents of the Eastern hemisphere are of the noblest animal, development. Let us, then, rather set ourselves to carry out the grand design of Nature than to go against it. I am tired of the stories about Western farmers burning their corn. Let the dry-goods clerks be set to work on the railroads and canals to bring it to the seaboard, then. With butter at 60 cents, and beefsteak at 40 cents a pound, and flour at $18 a barrel, as they are in Boston at this present writing, (May, 1868), it is absurd to say that we are producing enough for home consumption and for exportation too. Many a poor family have given up butter and sugar, and juicy meat within these last eight years. The fact that a paper dollar is but two-thirds of a gold dollar cannot account for provisions being two or three times their former price. No, the real trouble is that the American hates farming and loves trading, partly because he is physically undeveloped, and therefore physically lazy; partly because farming is lonely and stupid, and without any of the stimulus of human companionship to which his childhood at the district school accustoms him; partly because at that school he got no knowledge nor love of nature, but only the trading ideas instilled by six years of drill in the dollar-cent examples of the arithmetic; and last, though not least, because farming kills his wife, takes all the bloom, flesh, and vitality away from her at 40. Very often, even if she can afford one, she cannot get a servant; so that she is in truth, next to an Indian squaw, the greatest drudge on the American continent.

—*Atlantic Monthly.*

Steaming Food for Stock.

I had intended to give a detailed account of experiments made by myself 20 years ago, which have been corroborated by others since, who have practiced steaming and cooking food for stock, but am compelled for want of room to omit it. The saving was a little over 40 per cent. in ground corn, 35 per cent. on hay, and 43 per cent. on corn fodder. There is a great variety of cheap steaming and cooking apparatus; but as I decline in any way advertising any manufacturers, would refer readers desiring anything in that line, to our agricultural dealers. The investment will pay the expense the first season. One who has had ample experience in steaming food for stock, says the advantages are:

1st. It renders mouldy hay, straw, etc., palatable and satisfactory to the animals.

2d. It enables the feeder to mix different qualities of food, hay and straw, good and poor hay, etc., rendering it all palatable, softening the hard, tough fibres, and thus enabling the farmer to save all.

3d. It improves the manure, rendering it all ready for use.

4th. It will cure incipient heaves in horses, and has a remarkable effect upon horses with a sudden cold and constipation, and keeps all animals more healthy.

5th. It improves the appearance of all animals at once, and fattens them in much less time. 6th. It saves at least one-third of the food—two bushels of cooked hay will satisfy cows as well as three bushels of uncooked.

How Much—How much better is your farm than it was a year ago? How much better are your implements? How much more lovely have you made your home, by the planting of trees and shrubs? How much have you added to the value of your property, by the planting of orchard trees and the small fruits? How much better is your stock of horses, of sheep, of cattle? How much of error have you discovered in your mode of treatment of the different crops you have grown? How much have you learned from your neighbors, from your agricultural papers, from your experience in relation to your farm operations? How much have you done to aid your wife and daughters in their household duties, by furnishing them with improved household utensils, and the better location and arrangement of wells, cisterns, walks, woodpiles, cellars and dairy rooms? How much of kindness and charity have you exercised toward the needy and the helpless? How much better husband, father, brother, man are you than you were one year ago? Now is the time to reflect upon all these things.

—*Prairie Farmer.*

The Sophomore Class of the Agricultural College at Amherst recently put in practice a degree of agricultural science by husking 450 bushels of corn in one afternoon. The estimated products of the College farm this year are: Hay 200 tons; oats, 300 bushels; rye, 100 bushels; potatoes, 500 bushels; shelled corn, 1,200 bushels; besides a good supply of garden vegetables.

WEEKLY MARKET REPORT.

Wednesday, January 20, 1869.

Flour—Sales of 400 bbls Benicia Extra and XX, in jobbing lots, $5 50@5 62½. We quote local brands as follows: Superfine, in sks, ℔ 196 lbs, $4 75@4 87½. Extra in sks, $5 75@$5 87½.

Wheat—Sales include 600 sks fair shipping, $1 70; 1,000 sks good do, 1 75 ℔ 100 lbs.

Barley—Sales of 250 sks feed, slightly stained, $2 12½; 300 sks bright coast feed, $2 20. Market quiet at $2 20@ $2 25 for feed, and $2 30@2 35 ℔ 100 lbs for brewing.

Oats—Sales of 700 sks good California at $2 20; 100 sks do, $2 20; 400 sks do, $2 20; 400 sks fair do, $2 12½; quotable at $2 15@2 25; 300 sks Oregon choice, for seed, $2 35; quotable at $2 20@2 36 ℔ 100 lbs.

Corn—100 sks Yellow, slightly wet, $1 62½; 250 sks Yellow and White, in lots, at $1 90@2 for Yellow and $2 12½ @$2 25 ℔ 100 lbs for White.

Potatoes—Sale of 500 sks ordinary Bodega, 55c; 300 sks good do, 70c. Humboldts are quoted at 75@85c, and Pigeon Point, 90@95c ℔ 100 lbs.

Onions—Sales of 100 sks Yellow, in lots, $2 75 ℔ 100 pounds.

Beans—Since last Wednesday, jobbing rates for first quality have been advanced 1@2c ℔ lb all round. We quote as follows: Bayo, 5½c; Butter, 6¼c; Pea, 8c; small White, 7½c; Pink, 5c; Red, 3½@4c ℔ lb.

Rye—Last sale of Oregon was at $3 50; quotable at $3 50@3 75 ℔ 100 lbs.

Buckwheat—Small sales at $3 ℔ 100 lbs.

Mustard Seed—Good California Red is nominal at 3c, and 4½@5c ℔ lb for English White.

Flax Seed.—The local mill continues to pay c ℔ lb for a good article.

Middlings—Feed descriptions sell at $28@3:, and fine from $35@37 50. At the close, 40 tons choice Oegon fine, $35 ℔ ton.

Oil Cake Meal—In moderate request at $35℔ ton.

Bran—The market is hardly so firm, though the mill price continues to be $22 50 ℔ ton.

Hay—330 bales oat, per Rosalia, $18; quotble as to range at $12@20. At the close, 400 bales oat, $15; 120 bales common, per Salinas, $12 50 ℔ ton.

Hops—Nominal at 25@30c ℔ lb for California.

Dairy Products—California fresh roll Butter is active at 45@50c, and Eastern firkin 40@42½c for jobbng lots; Cheese, 19@20c for California, and Eastern, 18@2c ℔ lb. Eggs, 37½@42½c as extremes, the medium quotatin being 39c; Oregon Eggs, 27½@30c ℔ doz.

Poultry—Live Turkeys are quoted at 16@17c, and dressed do, 18@20c ℔ lb; Hens and Roosters, $7@7 50; Spring Chickens $5@6; Ducks, $6@7; Geese, $12@15; Quail, $1 @1 25 per dozen.

Provisions—Bacon jobbing at 14c for California smoked; Oregon do, 14½c; California Hams, 14½@16c; Oregon do, 15@16c; California Lard, 12½@13½c. At the close, 30 kegs Oregon 11½c ℔ lb.

Wool—The stock is nearly exhausted; clean grads are quotable at 18@19c; burry at 18@15c ℔ lb.

Hides—California Dry are quoted at 15@15½c, with sales of 1,500 since last Wednesday within the range; salted, 7c@ 7½c ℔ pound. The 500 Mexican received by the last steamer will be shipped to New York on owner's account.

Tallow—Fair to choice Beef is quoted at 7¾@8½c ℔ lb, with sales for the week of 20,000 lbs Good Beef at 8c ℔ lb.

Ripe Fruit—Of the 2,700 boxes Oregon Apples, per Continental, only 119 boxes inferior sold yesterday at 75c; balance will be offered this afternoon.

San Francisco Cattle Market.

We quote slaughterers' prices as follows:

Beef—American, 1st quality, 11@12½c ℔ lb.
do 2d do 10@11c ℔ lb.
do 3d do 8@10c lb lb.

Veal—Is very scarce at 12@14c for first quality, and 10c @12c ℔ lb for second quality.

Mutton—First quality, 9@10c; second quality, @9c ℔ pound.

Lamb—Scarce. Sheep, lamb-dressed, sell at 10℔ lb.

Pork—Undressed, 5½@6c; dressed, 7¼@9c ℔ ., as extremes, with 8@8½c lb lb as medium quotations f milk or grain fed.

—*S. FBulletin.*

MINING.

The Production of Copper.

Useful, in a thousand ways, for common practical purposes, as well as for coinage and ornament, and so employed from the earliest ages, copper is one of the most valuable of all the mineral products of the earth. At one time it nearly attained the rank of a "precious metal," and there is good reason to believe that it is yet to play a part in chemical combinations that will exalt it to a new and remarkable position.

In order to see how little there is of this metal, compared with others in common use, let us see the best tables we can find setting forth the copper production in the year 1866—the nearest date for which we can procure a full compilation of the figures. England yielded only 11,153 tons, owing to the rapid impoverishment of the Cornwall mines. She exports annually from 28,000 to 30,000 tons, but this amount covers the product of South America, Cuba, etc., worked over in her own furnaces, the admixture of these with her own ores being indispensable for certain purposes. Russia yielded but 5,600 tons, and Sweden and Norway 2,850. Germany produced 8,700 tons, of which Austria contributed 3,775; Prussia, 3,500; Saxony, 370; Hanover, 200; Hesse and Nassau, 355; and the other small States 500 tons. Some statistical accounts put the German total at 11,000 tons, but this includes foreign ores imported from America, Great Britain, and elsewhere, *via* Hamburg and Bremen, and reshipped. France gives 2,501 and Belgium 1,825 tons, a great part of which, however, includes fine copper imported from Chili to be worked over, and block copper for refining from England. France really fines out only about 100 tons of her own.

Spain yielded 975 tons; Italy and the coasts of Africa and the Mediteranean Sea, 850, and Turkey in Europe and Asia, 2,000 tons. The United States loom up with 14,445; the Argentine Republic has 1,095; New South Wales, 2,000; Australia, 2,250; Chili and Peru, 34,367; and Japan and China, 2,700 tons. Thus the grand total for all the countries named was 93,415 tons of copper in 1866, or an augmentation of 41,415 tons since 1846, when the total was only 52,000 tons. This very considerable increase has led to many fluctuations, ending in a gradual reduction of price, the rates being fixed by the English market.

The ton of refined copper which in 1816 was worth about $500 to $700, is now only worth about $390 to $420, after having gone as low as $350 in round numbers.

Experts are of the opinion that it may not be long ere we shall get good Chilian copper at from $320 to $360 in the European markets. It must be remembered that in the statistics above given for Chili, Australia, and the United States, and othes countries not European, the amount of argentiferous copper is not stated, since it is the object of special operations. On the other hand, about 5,000 tons must be deducted for the exportation ingot and black copper to France, Belgium, and the Germanic Empire. Therefore, allowing the deduction from the statement, and the probable addition for metal not stated, the entire production of copper is about 95,000 tons, or nearly twice as much as it was 25 years ago.

—*N. Y. Mercantile Journal.*

Why go to White Pine?

It is generally conceded that a man would be foolish to go to White Pine for the purpose of remaining through the winter. Are the inducements sufficient to influence men to go to the new district in the spring? That rich ore has been discovered no one will doubt, but its extent and value have not yet been demonstrated. No claim has been opened to any considerable depth, and no well defined ledge has yet been discovered. The large yields reported have come from one or two mines, and with this, all the wild excitement has sprung up. It must be remembered that to all new districts a certain class of men go who have no desire to invest in, or develop mines. They are aware of the excitement which generally follows new discoveries, and they go for the sole purpose of gambling in stocks. These are all interested in feeding the excitement because they know that the chances of selling high increase as the excitement increases.

The new district has not yet half the celebrity of Reese River, and the people flocked to that district by thousands, taking with them large sums of money. The Eastern capitalists contributed millions to open these mines, and yet at this time there is only a single ten-stamp mill in all the district in operation, while Nevada County has 72 mills. Had the money invested in Reese been spent in the development of mines in this county, the number of paying claims would have been doubled.

What inducements have working men to go to White Pine? They now get about $5 00 per day in the new district, and it is probable that wages will be lower in the spring. Of this amount it costs $3 00 to live. In this county the wages for miners are from $3 to $3 50, and they can board at $6 per week, or can live in cabins for about $4 50 per week. The difference in living in the two places is very great. Men could do better at $2 50 in this State than at $5 in White Pine, and they should consider well before leaving their comfortable homes for the new district. —*Nevada Transcript.*

MINERS' MEETING.—The citizens of Damascus, Humbug Canyon and vicinity met at Damascus on Saturday evening, January 3d, for the purpose of taking into consideration the best means of defending the rights of miners against the acts of the C. P. R. R. Co., in the matter of selling mineral land, situated at Green Valley in this county. The meeting appointed a committee of three for the purpose of corresponding with the miners of other districts and collecting funds to defend the case now pending in the Supreme Court. —*Stars and Stripes.*

TIMBUCTOO.—The Babb Mining Company has made a rich clean up from a portion of their flume. Tunnels are now in progress which will tap the old river bed where it is supposed the richest gravel lies. The future of the mines in this locality, of which the above is only one, is looking very favorable, and in the opinion of the *Marysville Appeal*, Yuba County bids fair to take the first rank among the mining counties of the State.

TREATING ORES BY ELECTRICITY.—F. L. A. Pioche and M. Noel have patented a process for the reduction of ores by electricity which is claimed by them as superior to any known method, and is well spoken of by experts. Whether the "process" will work on a large scale, as it seems to in the labratory, remains to be seen. It is said to be cheap and simple. —*Bulletin.*

THE AMERICAN MINING CLAIM.—The American mining claim at Sebastopol, has for several years been one of the leading gravel claims of the county. The yield has been regular and the amount about the same at each clean up. The last two runs made, have yielded as well as the preceding ones; the first being $12,000 and the last $14,000.

—*Nevada Transcript.*

EMPIRE MINE.—This famous mine, says the *National*, is now one of the best opened mines in the State. They are now down 900 feet, and have gone 52 feet on the ninth level which, when completed, will give backs enough for four years work, without sinking further. They will then have three new levels to work, 100 feet apart, and each of them 1,200 feet long.

MOKELUMNE.—The *Chronicle* states that mining has been resumed on the claims at Lower Rich Gulch. A fifth interest in Chapman, Hooper, & Co's quartz lead near Railroad Flat, has been sold for $3,000. New lodes have been discovered in this vicinity, and the miners are flocking in from all directions.

To be really successful, become a Christian.

The Unpopularity of Production.

Mr. Wells, the Revenue Commissioner, has, we believe, been more struck in the course of his investigations into the condition of American industry by the rapid decline in the quality of the skilled labor of the United States, than by almost any other fact; the cause being partly the eagerness of the better sort of young men to get into commerce, or some kind of employment in which the labor is clerical, or at all events is not, in the strict sense of the term, productive; and possibly to the growing disinclination of young men to submit to any course of training. An apprentice who has served out his full time in any handicraft, and has learned it thoroughly, is getting to be a rare bird. In some trades, shipbuilding for one, printing for another, he is almost unknown. Plenty of boys are apprentices in all trades, but hardly any remain apprenticed long enough to learn their business. Either they tire of the restraint and drudgery which meet the novice at the entrance to every calling, and go a-roving, the authority of the parents being now too weak to prevent them, or they find that they can readily get employment as journeymen long before they have attained real proficiency. The result is that the workshops swarm with inefficient workmen, who only half know their business, and only one-third *do* it, to the great detriment of their own character, the great diminution of the national production, and to the despair of employers. The shipbuilders ascribe a large proportion of the present depression in their business to the scarcity of good workmen, and they do not look very hopefully into the future, owing to the increasing scarcity of apprentices who show either the desire or intention to learn the trade thoroughly.

There are other agencies at work which have more to do with the drifting of young men into the towns than speculation. One is the degrading influence, from a social point of view, which foreign immigration has exerted, and is now exerting, in all kinds of manual employment. As the cheaper currency drives the dearer out of circulation, so the more ignorant and less exacting laborer, drives the better educated and more fastidious one out of the market. The popular theory that the better educated and more decent a workman is, the more wages he gets, and the more advantages he enjoys, is not true of workman *en masse*. What actually happens when a degraded class of laborers comes into competition with a better one is that, unless the difference between their work is enormous, the former underbids the latter, or makes the workshop and its associations so repulsive that the latter quit the field if they can find any place else to go to; and this is exactly what is happening in the United States. The flood of unpleasant foreign emigrants who are filling the factories and mines, with their low standard of living, their personal habits, their lower type of religious and moral feeling, have made most of the "haunts of industry" so disagreeable that the American mechanic, as he used to be known forty years ago, and as essayists and "magazinists" still write about him, is gradually disappearing, at least in the East. He has gone in battalions from New England, and is getting to be rarer and rarer everywhere, except in the character of a "boss."

Much the same causes are producing the same effects on farm labor. Into this field of industry Europe has poured an immense host of its poorer classes, and the native American is consequently eager and every year more eager, to escape from it, and the readiest way of escape is by taking to some kind of trade or clerk work.

It is not in human nature for a farm boy to live contentedly, and be satisfied with the dignity of husbandry, when he knows a lad who left the next farm a few short years before is living on the fat of the land in Fifth Avenue, or that another whom he remembers as a pedler in a small way, has become a first class speculator, and is filling the newspapers with the glory of his "operations."

Horace Greeley is incessantly advising farm boys who are on the farm to stay there and those who have come to the city to go back; but there is little use in his preaching as long as he spreads abroad the story of his own life, and the press keeps continually singing the praises of "self-made men." Every farm boy thinks he can "make himself," and flatters himself that he is a possible Horace Greeley. He knows the prizes of city life are numerous, and, this being the case, the fact that the failures are a hundred times more numerous does not deter him from trying his luck.

Education, too, has got somewhat ahead of the material civilization of the country. This is particularly true as regards the girls. Girls are now taught in a way, even in the common school, which would go far to fit them for "receiving" wits and beauties in New York or Boston, but which does a good deal to disqualify them for the only positions which in the present state of our civilization they are likely to hold, those of farmers' or mechanics' wives; hence the bad bread, the poor health, the small families, and the tremendous consumption of popular magazines and thrilling serial tales, and cheap pianos, and the enormous competition amongst female teachers. The young men are in a somewhat similar position, but, having more physical vigor, resist better. They do not become invalids, but they go clerking, trading, brokering, preaching, practicing law, or doctoring, anything, in short, but producing by the labor of their hands. There are probably few kind of labor on which the spread of education has told more unfavorably, strange to say, than farm labor. The life of the farmer is solitary in the extreme, and the spread of books and periodicals, instead of reconciling him to the solitude, is making it more intolerable to him.

Just as the burning of corn for fuel, in the West, of which we hear dismal stories once in seven years, is an indication that too many people there are engaged in farming and too few in manufacturing, so present prices of flour and beef, and of houses here in the cities, are indications that too many people are engaged in manufacturing, speculating, bartering, and that some of them will have to go back to the spade. This is the way Providence regulates the matter, and we suspect committees of Congress will find some difficulty in substituting a better one. We have little doubt that the prevalent disinclination of young men to learn handicrafts, or, in fact, to learn any business thoroughly, and the general disposition to roving and change, will be remedied somewhat after the same fashion. There is a glut of lawyers and clergymen, stump-speakers and brokers, clerks, shopmen, and small dealers, and there is a scarcity of all kinds of natural producers of commodities; and those who are engaged in the work of production are less skillful and less diligent, and less steady than they ought to be. But we believe we are safe in saying that there is no country in the world, and there has never been a time in the history of this country, in which such a career was opened to young men who choose to begin at the bottom of the ladder, and learn any industrial pursuit, or any work of production thoroughly, and stick to it faithfully, as is open to young men in the United States at this moment. Any boy of good education who chooses to go into a mill or workshop, and make himself master of any branch of industry, and determine to live by it, and stick to it, and make a profession of *thoroughness* and *fidelity*, may feel as sure of fortune and influence as it is ever permitted to mortals to feel. The very multitude of those who will not submit to drudgery, who love "gentility" and change, perfer jobbing and speculating to producing, make his triumph all the easier, because they make him the more remarkable by contrast, and the prizes which all the great fields of industry offer to such men are not only numerous but of enormous value. Parents and boys are beginning to find this out, and we have little doubt we shall see before long a tolerably general reaction in favor of steady industry.

—*Nation.*

Old Age.

Men have a right to old age. It is a part of the allotment of life, and belongs to every one. Men are defrauded of it if they do not possess it. They get so much less than the patrimony which God has provided for them. Sometimes men are deprived of it by the sins of their parents, or of their ancestors. This transmissive law, by which children are punished for the sins of their parents, is silent, is not sonorous; and yet it is more august and dreadful than Sinai when all in flames. Many children come into life, and the experienced eye pronounces it impossible for them to live many years. Parents weep at the strange providence and mysterious dealings of God, when there is neither strangeness nor mystery in it. Thousands and thousands are born who have no right to life, whose hold upon it is so brittle that that the wind shakes them, and they fall like untimely figs. Some are destroyed by accident, or in the discharge of duties which call them to sacrifice their life to the common weal. The greatest number, however, are deprived of a good old age by their own ignorance, or their own misconduct. Those that reach old age, often find it is a land of sorrow. Such is the spectacle that we witness in so many instances, that it is not strange that one desires not to grow old. One dreads to see gray hairs in poverty, in beggary, dependent upon a charity which is inconsistent as the tides. One shrinks from old age when it is full of pain, crippled, shrunk, helpless, hopeless, and heedless; and still more, when the reason wanes, and "childhood" is the gentle phase with which we cover up imbecility.

Now, old age was not designed to be mournful, but beautiful. Old age is part of a scheme in life which is divine and beautiful from beginning to end. It is the climax of a symphony which is beautiful in its inception, rolling on grandly, and terminating in beauty and pleasure. It is harmonious and admirable, according to the scheme of nature. The charms of infancy, the hope and spring of youth, the vigour and fruitfulness of mature manhood, the certainty and tranquil wisdom and peace of old age—all these go to constitute a true human life, with its beginning, middle and end—a glorious epic.

The end of summer is even more glorious than itself, or than its beginning in spring. October is, beyond all comparison, the crowning of the year; and the word of inspiration saith, "The hoary head is a crown of glory, if it be found in the way of righteousness." While a sturdy old man, who has corrupted his heart, and filled his life with vices, is a hideous spectacle, so on the other hand, a pure heart, a sweet nature, a generous and charitable soul, walking among the busy, mildly manifesting what are the fruits of a true piety, is at once a blessing and encouragement. There is nothing more beautiful than a virtuous, serene, happy old age; and such an old age belongs to every individual's life, if he only knows how to get it—how to build it.

—*Examiner and Chronicle.*

American Politeness.

We have undoubtedly, much whereof to glory. We can sing about our flag, tell the length of our rivers, enumerate our commerce—boast of what we are to be, and take to ourselves credit for being intelligent, keen, quick, and smart. We ask questions of everybody, on all subjects, and in all places—not as a matter of curiosity, as foreigners often suppose, but for the sake of information on any and all subjects. Asking questions is a part of life's education, and shut down this gate, and you stop our growth.

Among all the subjects of self adulation, there is one I have never heard insisted on. *We never lay claim to being a polite people*—unless it be that woman is everywhere treated with the highest respect. We are, by nature and education, cold and undemonstrative. Let any one return to this country after a long absence, feeling that he wants to embrace everybody, and how chilly the little denonstration he sees really appears to him! Let him enter the porch of one of our churches, a stranger, on a pleasant Sabbath morning, and he must stand and wait, nobody taking in the stranger til the whole congregation are seated, before the sexton dares take him to a seat, lest the owner thereof come in, and scowl at the stranger and chide the poor sexton. Or, if he has the temerity to enter the church, thinking to find hospitality, he finds all the congregation so devout and engaged in worship, that they can't possibly see him. Even the civilities of the street, the bow and smile, are revenues hard to collect. It sometimes seems as though the whole com-

munity had become near-sighted—it is so difficult to see an acquaintance in the street, and to some, I positively believe, it is a semi-trial to feel compelled to bow in the street. One would think we were on terms hardly speaking, we are so short and so gruff. And yet beneath all this, there is a deep stream of the kind and benevolent. It shows itself when distress comes upon us, when we are in real trouble, when human sympathy and kindness are most needed. It needs the hand of trouble or affliction to open the gate and let the waters of kindness flow, then we are—not demonstrative—but efficient to aid. The family whose house is burnt down, or whose home is invaded by sickness and death, experience all this, and are surprised to find how many streams of kindness flow in upon them.—*Congregationalist.*

THE FAMILY PAPER OF THE PACIFIC COAST.

THE OCCIDENT.

In every true home there should be found a first class family paper—one to whose coming, father, mother, children will look with eagerness each week. Such a paper is

THE OCCIDENT.

Let all who desire such a paper, and are asking, "What paper shall I take?" read the following statement of facts:

THE OCCIDENT contains a greater amount and variety of reading matter than any other family paper on the Coast. It contains choice selections for all classes of readers. Both the child and the person of cultivated literary taste will find in each number matter which cannot fail to be interesting.

THE OCCIDENT is extensively quoted. No other weekly paper on the Coast furnishes so much matter, either original or selected, to the columns of other papers. Whole columns are frequently taken from one or another of its departments. No stronger proof of its excellence could be desired than the fact that it is so well appreciated by contemporaries.

THE OCCIDENT has a complete Agricultural Department, carefully culled from the best authorities, with all the current agricultural items of our own coast, and full market reports. The Mining Department is also very complete.

THE OCCIDENT gives a summary of Pacific Coast news and of Eastern and Foreign Telegraphic News. These items are not hastily thrown together, but are carefully prepared, and are consequently copied to a great extent. The Personal Department is the most complete collection of personal news to be found in the State.

THE OCCIDENT is the official organ of all branches of the Presbyterian Church, and contains full religious intelligence concerning the progress of all denominations. Although a religious paper, it is not sectarian. Its aim is to make men better and happier by the inculcation of the principles of the Christian religion.

THE OCCIDENT is universally admitted to surpass all other papers in the State, in typographical appearance and systematic arrangement of its contents.

Read what the papers say of

THE OCCIDENT.

"Has commenced its second volume, enlarged and improved and with excellent prospects. It is full of 'knews,' views, and family reading, and is ably edited."—*Brooklyn (N. Y.) Union.*

Family Reading.

From "The Sunshine of the Gods."

As a man that walks in the mist,
As one who gropes for the morning
Through lengthening chambers of twilight,
The souls of the poets wander
Restless, and dumb, and lost,
Till the Word, like a beam of morning,
Shivers the pregnant silence,
And the light of speech descends,
Like a tongue of the Pentecost!

Ah, moment not to be purchased,
Not to be won by prayers,
But given, lest one despair,
By the gods in wayward kindness,
Stay—thou art all too fair!
Hour of the dancing measures,
Sylph of the dew and rainbow,
Let us clutch thy shining hair!

For the mist is blown from the mind,
For the impotent yearning is over,
And the wings of the thoughts have power:
In the warmth and the glow creative
Existence mellows and ripens,
And a crowd of swift surprises
Sweetens the fortunate hour;
Till a shudder of rapture loosens
The tears that hang on the eyelids
Like a breeze-suspended shower,
With a sense of heavenly freshness
Blown from beyond the sunshine,
And the blood, like the sap of the roses,
Breaks into bud and flower.

—*Bayard Taylor, in the Atlantic Monthly.*

We Missed You.

We missed you on Wednesday evening. There were many there, but there was room for more. Many seats were vacant. We looked around for you, but did not see you. We wished to see you there to encourage others to come, who, on various pretexts, do not attend. They tell us they have not time to come, and say that when you stay away they may do so. We wished you there for your family's sake; they would come with you, but when you do not come, they do not. We thought, too, of all the younger people who would be encouraged by your example.

We wished to see you for our own sake. It is lonely to be in a prayer-meeting when only a small part of the congregation attend. We feel as if deserted. We felt the need of your sympathy and prayers. All that day we felt depressed in spirit, felt the need of the prayers of others, and we went to the place of prayer, but you were not there. We felt disappointed, and went home more depressed than before.

We missed you also because we had been thinking about you and praying for you. We observed that you are becoming very much engrossed in business, and we feared lest the cares of the world would choke the growth of the seed. We have thought that lately you did not manifest quite so much interest in the Sabbath service as formerly, and we felt concerned lest you might be growing careless. We have been thinking also of the great influence you could exert if thoroughly awakened to devote all your talents to the service of Christ, and have been praying that you might be quickened to do this. We therefore felt disappointed when we saw your seat vacant.

We think you would have enjoyed the meeting. The brethren who prayed seemed to pray so much from the heart, and to have so much real feeling for others, and such a real desire to enjoy more of God's Spirit. The remarks made were interesting, and just such as you like to hear. We know you would have felt yourself benefited by the meeting, and would have gone home rejoicing if you had been there. It would have been still more interesting if you had been there, and we would all have been so glad to have had you with us.

Will you come next Wednesday evening? We will be expecting you. —*United Presbyterian.*

What Family Government is.

It is not to watch children with a suspicious eye, to frown at the merry outbursts of innocent hilarity, to suppress their joyous laughter, and to mould them into melancholy little models of octogenarian gravity. And, when they have been in fault, it is not to simply punish them on account of the personal injury that you have chanced to suffer in consequence of their fault, while disobedience, unattended by inconvenience to yourself, passes without rebuke.

Nor is it to overwhelm the little culprit with angry words; to stun him with a deafening noise; to call him by hard names, which do not express his misdeeds; to load him with epithets which would be extravagance if appled to a fault of ten-fold enormity; or to declare with passionate vehemence, that he is the worst child in the world, and destined for the gallows.

But it is to watch anxiously for the first risings of sin, and to repress them; counteract the earliest workings of selfishness; to repress the first beginnings of rebellion against rightful authority; to teach an implicit and unquestioning and cheerful obedience to the will of the parent, as the best preparation for a future allegiance to the requirements of the civil magistrate and the law of the great Ruler and Father in Heaven.

It is to punish a fault because it is a fault, because it is sinful and contrary to the command of God, without reference to whether it may, or may not, have been productive of immediate injury to parent or others.

It is to reprove with calmness and composure, and not with angry irritation—in a few words, fitly chosen, and not with a torrent of abuse; to punish as often as you threaten, and threaten only when you intend and can remember to perform; to say what you mean, and infallibly do as you say.

It is to govern your family as in the sight of Him who gave you authority, and who will reward your strict fidelity with such blessings as he bestowed on Abraham, or punish your criminal neglect with such curses as He visited Eli. —*United Presbyterian.*

Trials of a Successor.

The *Christian Register* thus happily touches off a grievance hard to be borne by one who is so unfortunate to be, like Mr. Van Buren, "the successor of his predecessor."

Every minister who has been a successor can bear witness to the inflictions which must be borne, for some months at least, from the oft-repeated, and tedious, and unprofitable descriptions of his predecessor. It is a staple of conversation until the subject is worn threadbare. When the weather is "done up," other topics fail, and conversation drags, then the minister and his wife (if he had one) are brought forward and showed up according to the likes and dislikes of the parish. What he did, and what he omitted to do; what he said, and what he didn't say; how he preached, and how he prayed; how he visited here, and how he didn't visit there; how he attracted, and how he repelled; what time he got up, and what time he went to bed; these, and a hundred other things are described, and discussed, and retailed, until the very name palls upon the ear, and the successor wishes that the predecessor had never been born! Now it is kindly and pleasant for the parish to remember its minister, and to speak well of him, if they can, and ill of him as little as they can; but, well or ill, praising or blaming, for or against, let it be done, we pray you, with moderation, and let there be an end to the matter as quickly as possible. To all whom it may concern, then, we say, spare the successor from over and oft-repeated doses of the predecessor.

Begin the Day with God.

There are many toiling ones whose time is not at their own command. But there is not one who can not hold converse with God. His ear can hear amid the clang and roar of machinery, or the hum of hundreds of voices. The heart can go up to Him, no matter what the surroundings. Whenever Abraham pitched his tent, there he raised up an altar to the Lord. So wherever the Christian heart is, there is also an accepted altar, from which the incense of prayer and praise may ascend.

Yet there are but few who may not, if they will, find time and place for private communion with God, before entering on the morning's duties.

Luther, in his busiest seasons, felt that praying time was never lost. When remarkably pressed with labors, he would say, "I have so much to do that I cannot get on without three hours a day praying."

Sir Matthew Hale also bears testimony. "If I omit praying and reading God's word in the morning, nothing goes well all day." How many of us may find here the cause of many of our failures, and consequent discontent and loss of happiness.

Test Questions.

Amusements may be accurately tested by a few simple questions:

Are they costly? Young people should be thrifty—saving up something for a good start. Amusements that use up what should be savings, are evil.

Are they refreshing? The amusement that makes you less able to go on with your work is badly chosen.

Are they healthful? If after any party, play, or dance, you have a headache, backache, cold, or a restless appetite—the amusement was evil. Avoid it.

Are they pure? Purity is a matter of thought quite as much as of act. "To the pure all things are pure." But alas, few of us men are pure. And plays that are innocent as the frolic of lambs, become to some persons stimulants of evil and unspeakable thoughts. Beware of those plays.

Are they well earned? Except a man work, neither shall he play. All plays and all dances are wicked for a lazy, idle man. Only the industrious can safely amuse themselves in any way.

—*Rev. T. K. Beecher.*

Young Folks.

Voyage in the Armchair.

Oh papa! dear papa! we've had such a fine game,
We played at a sail on the sea;
The old arm chair made such a beautiful ship,
And it sailed—oh, as nice as could be.

We made Mary the captain, and Bob was the boy,
Who cried "Ease her," "Back her," and "Slow,"
And Jane was the steersman who stands at the wheel,
And I watched the engines below.

We had for a passenger grandmamma's cat,
And as Tom couldn't pay he went free;
From the fireside we sailed at half-past two o'clock,
And we got to the sideboard at three;

But oh! only think, dear papa, when half way,
Tom overboard jumped to the floor;
And though we cried out, "Tom, come back, don't be drowned,"
He galloped right out at the door.

But papa, dear papa, listen one moment more,
Till I tell you the end of our sail;
From the sideboard we went at five minutes past three,
And at four o'clock saw a whale!

The whale was the sofa, and it, dear papa,
Is at least twice as large as our ship!
Our captain called out, "Turn the ship round about,
O, I wish we had not come this trip!"

And we all cried, "Oh, yes, let us get away home,
And hide in some corner quite snug;"
So we sailed for the fireside as quick as we could,
And we landed all safe on the rug.

The Fish With A Blow-Gun.

"Did you ever see a fish shoot?" asked Uncle Rea, who had been a great sailor in his time, having been twice around the world.

"Of course I have, hundreds of times," answered Harry, his little nephew. "Shoot through the water just like an arrow."

"Oh, I don't mean that kind of shooting; but with a gun, said Uncle Rea."

"A fish shoot with a gun! You know I never did, nor anybody else.

"Not so fast, my boy. There's a fish in the Indian Ocean that carries a gun and shoots its prey."

"Now, uncle, you're just fooling me! I don't believe I would believe that if I saw it."

"Seeing is believing, Harry: and as I've seen it, I'm bound to believe it."

"You, Uncle Rea; you saw a fish with a gun?"

"Yes."

"And saw it shoot?"

"Yes, other than I've got fingers and toes."

"What kind of a gun was it? Did the fish use powder and shot?"

"I hardly think," said Uncle Rea, smiling, "that it could have kept its powder dry. No, it didn't use a powder gun, but a blow-gun."

"You're just fooling me in some way," said Harry, half laughing, half serious.

"No, honor bright," returned Uncle Rea; "it's just as I'm telling you. You have seen a pair of bellows with their long nose. Well, instead of a wide mouth' like most fish, the one of which I speak has a long muzzle or snout, something like a pair of bellows, only it is split down the middle, so that it can open like a pair of pincers. This is its gun."

"Oh! I thought you meant that it carried a gun in its fins."

Uncle Rea laughed, and went on telling about his fish.

"The name of the fish is the *Beaked Chaetodon*, and it lives in the East Indian seas, along the coasts of China, Japan and many of the islands. It feeds mostly on insects, but as enough of these to satisfy its hunger do not usually fall into the water, it makes up the deficiency by gunning."

"I'd just like to know now, Uncle Rea."

"It's wonderful enough, my boy," said Uncle Rea, but I've seen it scores of times, there's no doubt of it in the world. A fly will light near the water's edge on a blade of grass or a twig, seeing which the fish takes a drop of water in its mouth and swims quietly up to within two or three feet of the fly, with its body, except the end of its snout, in the water. When near enough, it shoots this drop at the fly, and with such sureness of aim as almost always to knock it into the water, when it is snapped up instantly."

"Well now, that does beat everything!" exclaimed Harry. "And you've seen it done, Uncle Rea?"

"Oh yes, as I've said, scores of times. In Java and China they keep these finny hunters in bowls and vases as pets, and amuse themselves by watching them in pursuit of their prey."

"And did you ever see them in vases?"

"Oh yes; and have often held a fly near the water, on the end of a stick, to see them shoot it."

"And did they always shoot?"

"Almost always, and rarely missed their aim."

"Why didn't you bring one home, Uncle Rea?" asked Harry.

"I don't think they would live in our climate; they belong to a warmer region of the world."

"Are they large?"

"No; I never saw them more than five or six inches long. They are shaped much like a sun-fish, and are curiously striped with brownish bands, edged with darker, brown and white. But let us see if we can't find the picture of one of them in a book on Natural History."

And Uncle Rea went to the library and took down a volume.

"Yes, here is the very chap himself," said Uncle Rea, as he turned the leaves of the book; "and the artist who drew him has taken him in the very act of shooting a fly. See the drop of water just at the muzzle of his gun, ready to pop out at the poor insect, that hasn't a thought of danger."

"I'll believe 'most anything after this!" exclaimed Harry, gazing intensely at the picture for a long time. "And to think that I never heard of it before," he added; then after a pause, he said: "I guess there are a good many other little boys—and girls too,—that never heard of a fish with a blow-gun. I wish I could show them all this picture, and tell them about it too." —*American Presbyterian.*

The Way to Speak to Boys.

Many years ago, a certain minister was going one Sabbath morning from his school-room. He walked through a number of streets; as he turned the corner, he saw assembled around a pump a party of little boys who were playing at marbles. On seeing him approach, they began to pick up their marbles and run away as fast as they could. One little fellow, not seeing him as soon as the rest, could not accomplish this so soon, and before he had succeeded in gathering up his marbles, the minister had closed on him and placed his hand on his shoulder. They were face to face—the minister of God and the poor boy who had been caught in the act of playing marbles on Sunday morning. And how did the minister deal with the boy, for that is what I want you to observe?

He might have said to the boy, "What are you doing here? You are breaking the Sabbath! Do you not deserve to be punished for breaking the commandment of God?"

But he did nothing of the kind. He simply said to him:

"Have you found all your marbles?"

"No," said the boy.

Said the minister, "I will help you to find them," whereupon he knelt down and helped to look for the marbles, and as he did so remarked:

"I liked to play marbles when a boy very much, and I think I can beat you; but I never played marbles on Sunday."

The little boy's attention was arrested. He liked his friend's face, and began to wonder who he was. The minister of the Gospel said:

"I am going to a place where I think you would like to go; will you come with me?"

"Where do you live?" asked the boy.

"Why, in such and such a place," was the reply.

"Why, that's the minister's house," exclaimed the boy, as if he did not suppose that kind of a man and the minister of the Gospel could be one and the same person.

"Why, I am the minister myself, and if you will come with me, I think I can do you some good."

Said the boy: "My hands are dirty, and I cannot go."

Said the minister: "Here is a pump; why not wash?"

Said the boy: "I am too little; I can't wash and pump at the same time."

Said the minister: "If you will wash, I will pump at the same time."

He at once set to work, and pumped, and pumped, and pumped, and as he pumped the little boy washed his hands and face till they were quite clean.

Said the boy: "My hands are wringing wet, and I don't know how to dry them."

The minister pulled out of his pocket a clean handkerchief and offered it to the little boy.

Said the boy: "But it is clean!"

"Yes," was the reply, "but it was made to be dirtied."

The little boy dried his face and hands with the handkerchief, and then accompanied the minister to the house of worship.

Twenty years after, the minister was walking in the street of a large city, when a tall gentleman tapped him on the shoulder, and looking in his face, said:

"You don't remember me."

"No," said the minister, "I do not."

"Do you remember twenty years ago, finding a little boy playing marbles around a pump? And do you remember that boy being too dirty to go to Sunday School?"

"Oh," said the minister, "I do remember."

"Sir," said the gentleman, "I was that boy. I rose in business, and became a leading business man. I have attained a good position in society, and on seeing you in the street to-day, I felt bound to come to you and say it is to your kindness and Christian discretion that I owe, under God, all that I have attained and all that I am worth." —*Lutheran.*

Jesus Knocking.

"My dear children, if I should come to your house and knock, would you let me in?"

"Yes, indeed," said six pleasant voices.

"I wish you would come," exclaimed Annie. "I would open the door myself."

"But would you keep me waiting a long time, Annie?"

"No, indeed, not a minute. I would run to let you in."

"Perhaps you would not try to hear, or would stop your ears and let me go away day after day, without asking me to enter?"

"I can't believe you would come again, teacher, if we treated you so. I don't think any body would."

"But perhaps if I came to the front door, you would tell me to go to the back door, or to wait awhile, for you had friends in the parlor, and you were ashamed to have them meet me?"

"Now, dear teacher, you know we never should be ashamed to have you come to our house. What makes you talk so? You know we all love you."

"Yes, I thought you loved me; but I have found out that you have been impolite and unkind to a very dear friend of mine. He came to your door and knocked, Aunie, and you would not let him in. He came to yours, Bell. He came to all your homes."

"When was it? Who was it, teacher? You must be mistaken. Perhaps we were not at home."

"Yes, you were at home. Some of you heard him, and told him to wait. One of you tried not to hear, and began to sing a lively tune. One took up a story book. Another looked out, and would have opened the back door; but she was ashamed to have any one see her let in this friend of mine."

"Who can you mean, teacher? Surely, we never were so impolite to any friend of yours. Who could it be?"

"He is the dearest friend I have. He is yours also; your Saviour and mine. Many and many a time he has come knocking at the door of your heart. You have tried not to hear him; or if he knocked so hard you could not help hearing it, you answered, 'Wait awhile, I cannot open the door now; I have friends who will laugh at me if I have Christ in my heart. I cannot let you in.' Again you have said, 'Wait awhile, for I am too young. I cannot be happy as I now am, if I open the door. I am too young to have the Saviour for my guest. Go away and come when I am older.' And so with one excuse and another, you have all turned the blessed Savionr away many times. You said, if you should tell me to go away, you thought I would do it. But the Saviour is a better friend than I. He keeps coming. And yet, my dear children, you may refuse him for the last time. There is a limit even to his endurance."

"O teacher, I never thought of it so. I never knew he wanted to come in so much. How can I get him into my heart?"

"I will give you and all the class one of Christ's precious sayings, and I want you to think of it all the week. Every time you think of it, remember Christ is knocking. These are his beautiful words:

"'Behold, I stand at the door and knock: if any man will open unto me, I will come into him, and sup with him, and he with me.'

"May you all listen to Jesus this week. I shall ask you about it next Sabbath."

—*Sunday-school Times.*

SPEAK KINDLY TO HIM.—A farmer once saved a very poor boy from drowning. After his restoration he said to him:

"What can I do for you, my boy?"

"Speak a kind word to me sometimes," replied the boy, as the tears rushed from his eyes. "I aint got no mother like some of them."

A kind word! Think of it. That farmer had it in his power to give that boy money, clothes, playthings, but the poor fellow craved nothing so much as a kind word now and then. If the farmer had ever so little heart, the boy must certainly have had his wish gratified.

A kind word! You have many such spoken to you daily, and you don't think much of their value; but that poor boy in your village, at whom every boy laughs, would think he had found a treasure if some one would speak a kind word to him. Suppose you speak it? The next time you meet him, instead of laughing at him, speak kindly to him. Then watch him and see how he looks. See if his eyes do not brighten, and his lips smile.

Kind words! They are blessed things. Speak them, children, every day. Scatter them like sunbeams everywhere. They will bless others, and then return to bless your own hearts. Kind words forever!

ADVICE is like the snow; the softer it falls, the longer it dwells upon, and the deeper it sinks in the mind.

NEWS SUMMARY.

PACIFIC COAST ITEMS.

THE Stockton and Marysville papers are suggesting that the cultivation of the teazle might be profitably carried on in this State. The teazle-heads are used in all woolen mills, being attached to the surface of large wheels, and thus brought in contact with the surface of the cloth, for the purpose of raising the nap. No artificial substitute has been found which answers the purpose as well. Of course they can be raised in California, as what cannot? Besides, they grow wild in several parts of the State.

THE following are some of the items of production of Napa County for the past year, as given by the *Reporter*: In value of real estate this county ranks seventh in the State, being worth $3,931,664. The county produced 135,000 lbs butter, 113,000 gallons wine, 12,050 gallons brandy. There are 50,000 apple trees, 25,700 peach trees, 14,000 pear trees. 41,000 acres are under cultivation, of which 36,995 were sown in wheat, 2,570 in barley, 1,045 in oats, 610 in corn, 10 in castor beans, and 20 each in potatoes and turnips.

THE Los Angeles *Republican* says: Messrs. Tiliston & Emory, lately from China, have taken a building about 50 feet by 20 at San Gabriel, in which they can feed 500,000 silk worms. They have begun plowing for their trees. We are told that Mr. Tiliston was in business 7 years in the silk districts of China, and having spent some time in this county, is satisfied that no section of the world is more favorable to silk culture than this. He and Mr. Emory, besides growing the worms, will also establish a filature or reeling department, and expect to bring over some skilled workmen from China.

SAUCELITO is on the eastern shore of the Marin peninsula, a mile north of Lime Point, and at the mouth of Richardson's Cove, which is a mile wide, and extends inland two miles to the northwest, with a depth of water that does not exceed 9 feet at low tide, except within half a mile of the mouth, where it gradually grows deeper—from 6 to 18 feet. The protection against winds is good at Saucelito, but the anchorage is not convenient, the depth of the water being about 12 fathoms over the greater part of the area fit for large vessels, and the bottom hard. —*Solano Advertiser.*

MANY of the papers on the coast express the belief that Chicago will take the trade of Nevada, Utah, and even China, and leave San Francisco in the cold. No proposition is too unreasonable to have its advocates.

AN exchange says that the vote of Boston at the last election was 27,566, and that of San Francisco 25,655, the difference being less than 2,000. St. Louis exceeds our city by 4,000.

WE understand that three or four public spirited citizens of Vallejo have agreed to donate 20 acres of land in the outskirts of that city for the benefit of a first class college school. —*Pacific.*

A PAPER to be called the *El Dorado* is to be published in this city. It will advocate woman's rights. The *San Francisco Herald* made its appearance on Tuesday last.

IT is stated that a colony is being organized in Massachusetts, by a Californian, to settle on the line of the Southern Pacific Railroad in New Mexico.

THE British ship *White Star*, now in this port, is the largest, with one exception, that ever entered the Golden Gate.

TRAINS on the C. P. R. R. now run to Elko, from which place stages crowded with passengers are dispatched to White Pine.

AN association for the growing and manufacturing of sorghum has been organized at Bloomfield, Sonoma County

THE citizens of San Rafael are considering the feasibility of constructing a railroad from that place to San Quentin.

AN effort is being made in the Nevada Legislature to move the Capital from Carson.

THE work of driving piles for the grain elevator at Vallejo has been completed.

THE workmen are said to be deserting the Pacific Railroad for White Pine.

THE hot springs near Carson have sunk two feet during the past week.

PASSENGERS now go half-way from San Jose to Gilroy by railroad.

TELEGRAPHIC.

EASTERN.—Frederick Douglass was elected President of the National Colored Convention which has been in session at Washington....The ocean steamer *Gulf City*, from Galveston to New York, grounded on the 11th, and 20 lives were lost....The receipts from customs for January are estimated at $15,000,000, from internal revenue at $5,000,000....Gen. Sheridan thinks the Indians are thoroughly conquered.

SOUTHERN.—Gov. Bullock of Georgia tells the Legislature that their opposition to Congress is futile and must cease....The total cotton crop for the past year is valued a $200,000,000.

CONGRESSIONAL.—A bill for a Southern Pacific Railroad has been introduced in Congress....Ashley has introduced a bill to divide the greater part of Utah between Nevada, Idaho, Wyoming, and Colorado, so as not to leave enough for a State....It is thought that the Senate will oppose the repeal of the Tenure of Office law....The Niagara Ship Canal bill is defeated....Sherman has introduced in the Senate a new funding bill reducing interest to 5 per cent. and looking toward the resumption of specie payments.

POLITICAL.—Lieut. Gov. Cumback has been nominated by the Republicans as U. S. Senator from Indiana....Gen. Rumsey of Minnesota has been re-elected....The controversy between Morrill and Hamlin has been settled, and the latter received the united support of the Republicans....Ex-Gov. Fenton has been elected Senator from New York....The treason prosecutions against Davis and Breckinridge have been formally withdrawn....Dr. Mudd is to be pardoned....Sen. Sumner has been re-elected.

FOREIGN.—Gen. Rosecrans assures the Juarez Government that Grant's administration will be highly favorable to Mexico....The *Great Eastern* is taking on board the cable for the French and American line, which is to be laid in June. ....The Rebels in Japan have captured Hakodadi....The Paraguayan army has been badly defeated at Villetta....New riots have broken out in Italy....The Constitutional Monarchists have carried the Spanish elections by a large majority....The Conference at Paris has adjourned without accomplishing any important results....Turkey and Persia are reported to be at war.

LUCKY.—A miner at Downieville, who has worked hard in the mines of this State for the last 20 years without making a "strike," has just inherited a fortune of $50,000 from a relation in New Orleans.

REVIVAL.—A revival of religion has been reported at Emory and Henry College, Virginia. There have been about 60 conversions. Out of 180 students, 100 are professors of religion. —*Richmond Observer.*

Simple announcements of Marriages or Deaths inserted free of charge. Additional matter, such as Obituary Notices, or Poetry, inserted at the rate of ten cents per line.

MARRIED.

In Sacramento, Jan. 14th, by Rev. J. S. McDonald, GEORGE PEARCE, of Petaluma, to MISS COULTER BROWN.

In this city, at the Howard Presbyterian Church, Jan. 14, by Rev. Dr. Scudder, CAPT. A. T. TRASK to MISS SOPHIA F. PALMER.

DIED.

In Oakland, Jan. 8th, GEORGE B., son of Rev. T. E. and Persis G. Taylor.

SPECIAL NOTICE.

Acrostic.

P ain Killer is worth what it weighs, in gold,
A ll around the world are its praises told;
I t will Cholera cure—scourge of southern climes;
N o victim dies who takes it betimes.

K eep Pain Killer, a true friend, by your side;
I t will cure Cough or Cold, or Colic beside.
L ook out to apply it for Bruise or for Sprain;
L et it once be tried—'twill be used again.
E very word I am telling you, reader, is true,
R emember that Pain Killer is good for you.
Every Month.

The Pain Killer is sold by all Druggists and dealers in Family Medicines.

REDINGTON & CO., and HOSTETTER & SMITH, San Francisco, Cal., General Wholesale Agents.

January 9th, 1869.

HORACE GREELEY purposes to write, during the year 1869, an elementary work on Political Economy, wherein the policy of Protection to Home Industry, will be explained and vindicated. This work will first be given to the public through successive issues of the NEW YORK TRIBUNE, and will appear in all its editions.—DAILY, $10; SEMI-WEEKLY, $4; WEEKLY, $2 per annum.

THE SIGN OF

W. C. Sullivan & Co.

CORNER OF THIRD AND MISSION STREETS,

Is supposed to be the largest in the city.

It directs you where to buy everything wanted in the Grocery line of the choicest quality and lowest rates.

CURRENT TOPICS.

The growth of the great cities of the world is vastly beyond that of the country. The rural population of Great Britain is said to be actually diminishing. But the cities are stretching out in every direction with gigantic strides. In New York the increase, both of wealth and inhabitants, is chiefly confined to the metropolis and a few of the larger towns. California proves no exception to the rule. Already one-half the wealth and one-third of the population of the State is concentrated in San Francisco. The great channels of communication by the ocean and the continent all center here. The idea of starting a *rival* city upon this coast is absurd. That there will be cities about these bays which, a generation hence, will be larger than this city is now is unquestionable. But every building put up in Oakland, Vallejo, San Jose, and twenty other unnamed suburbs, will add half a dozen to the metropolis itself. It is really appalling to estimate the enormous multitudes destined, if no great disaster befall us, to throng these streets in the lifetime of some now living.

The Temperance question is receiving unusual attention both in Old and New England. The great difficulty seems to be that while all good men agree in their opposition to intemperance, they differ widely as to the relative merits of temperance and total abstinence, and still more widely as to the extent to which prohibitory legislation should be carried. English opposers of intemperance seem disposed to make an effort to unite their forces by holding meetings for the free expression of opinions concerning the best policy to be adopted. A series of such meetings has been commenced in London, in which representatives of the different opinions are courteously listened to, and their views are considered and discussed. Much good is anticipated from these meetings. In New England there seems to be a strong public sentiment in favor of a return to prohibition. At a Convention of the friends of temperance recently held in Boston, the prohibitionists were largely in the majority, and in accordance with a spirit somewhat characteristic of Boston reformers, listened with attention and courtesy to the views of all—who agreed with them in opinion. Some very estimable gentlemen who expressed different opinions were answered with personal abuse. This is to be regretted. The experience of Massachusetts under the License Law has furnished a strong argument against the policy of the friends of the law, but by no means justifies the abuse that has been heaped upon the respectable citizens, and newspapers that have doubted the expediency of prohibition. The people of California will do well to study carefully this question. It is one upon which they will be called ere many years to act.

It is surprising to what an extent the Roman Catholics are able to command funds in order to build churches. This is now understood to result from the thorough system by which even the poorest members of their communion have been accustomed to make their regular contributions. It is remarkable what results follow such a system. The Manual of Church Erection (N. S. Presbyterian) says that "the Roman Catholic Society for the Propagation of the Faith received in 1867 $1,000,000. Of this $900,000 were received from *weekly subscriptions of one cent.*" It is estimated that if every communicant in the Presbyterian Church would contribute a cent a day it would increase the receipts of the Boards three-fold, and enlarge to an incalculable extent the efficiency of the Church. It is not the great subscriptions, but the aggregate of the smaller ones, that fill the reservoirs.

Christmas was made an occasion for feasting the dependent poor in New York. The Home of the Friendless provided dinner for a multitude. The Juvenile Guardian Society invited two or three Mission and Industrial Schools, and gave a supper and the fruit of two magnificent Christmas trees to 700 or 800 children. The Children's Aid Society gave a feast to a perfect army of newsboys, crossing-sweepers, boot-blacks, and Italian organ-boys. The Five Points House of Industry, the Mission Houses of the same locality, the Water Street Mission, and a dozen other similar institutions adopted the same course. Everywhere the best feelings prevailed, and the character of our divine religion, thus illustrated, shone with increasing lustre. The day is coming when none of the poor in our great cities can justly say, "No man careth for my soul." What we need is, some great organizing genius to systematize the whole work, so that there shall be no waste, and yet no one be overlooked.

One of our oldest and most respectable dailies has just commenced a tale for its Sunday issue, by a distinguished author in yellow covered literature. The paper having been taken in our family during the most of the time for the last sixteen years, we turned with considerable curiosity to the new characters to be introduced to the ladies and youth of our State. With surprise we found them to be the same parties we have been endeavoring to exclude for the last twenty years. We have tried the terrors of the law, of vigilance committees and of public opinion upon them; and not in vain. And lo! they come back idealized. They are ushered in by most respectable authority, in the most respectable manner. Yet they are the very thieves, gamblers and murderers that we have imprisoned, run out, or hung. The story is admirably adapted to please the tenants of San Quentin. Whether it will prove equally acceptable to the masses of the people,—the prey of the wolves so attractively described, is questionable.

There is in our city a large number of young men who are separated by the breadth of a continent from parents or relatives in the East. They work steadily for moderate wages which are, however, sufficient to enable them to live and dress comfortably and to enjoy such luxuries as are consistent with San Francisco economy, an economy, by the way, which in their old homes would be very likely to be called extravagance. A majority of these young men save nothing. We might with propriety urge them to practice *true* economy and lay up money for a rainy day, but at present we have another suggestion to make. All are liable to sickness. Few escape it altogether. A serious illness is not a pleasant prospect for a man away from home. Recent hospital developments do not increase the attractiveness of such a prospect. It may not be known to all that there are in our city, besides the secret societies, associations whose members by the payment of a trifling sum each month, are entitled when sick to the very best of care and medical attendance. Associations of this nature have long been established by the French and Germans. To that of the former, persons of any nationality are admitted. While excessive anxiety as to what may befall us would be most unwise, prudence and experience teach the wisdom of taking such precautionary measures as are placed within our reach.

Rich men can make no better use of their money than to bestow it upon religious institutions, and the right and duty of the donors to select as the object of their benevolence an institution with whose purposes they can sympathise, is undoubted. The growing prevalence, however, of the idea among men of wealth that by their gifts they obtain the right to control completely the workings of the institutions assisted, is much to be regretted. Evil results must follow donations made with such a purpose. An instance of this is found in the case of Mr. McCormick, who refuses to pay the remaining portion of his promised donation to the Theological Seminary of the Northwest, and wishes to regain what he has already paid. Not being able to control the political opinions of the professors supported by his money, he prefers to give it to Southern Colleges more in sympathy with his views. Another instance is that of General Howard, who founded a Congregational church in Washington, and claims the right to dictate to the Pastor and the majority, what shall be the action of the Church in regard to admitting colored members. A disgraceful controversy has been the result. Money paid for influence in a religious society were better invested in some more legitimate enterprise.

THE speech of Napoleon at the opening of the *Corps Legislatif* affords another opportunity for much fine writing by our exchanges. The discourse in question is merely a dignified and clear expression of the Emperor's desire for peace and the good of France, but of course much hidden meaning of the most terrible nature is discovered in his words. Our French contemporaries ridicule the criticisms of the American press, and claim that these criticisms do not indicate a very accurate knowledge of French politics. We confess that we do not feel ourselves qualified to decide these questions upon which our exchanges speak so knowingly, but it has occurred to us, while reading the oft-repeated predictions of Napoleon's downfall and hearty wishes for its speedy occurrence, that have appeared during the past year, especially in the religious papers, that before continuing the expression of such views it would be well to consider the matter more carefully. We see France under the Bonapartes occupying the foremost position among the nations of the world. We see a wonderful progress in commerce and wealth; progress in education; and progress, though not so marked, in civil and religious liberty. In view of these things, is it not possible that the tyranny of Louis Napoleon in refusing to abdicate, or to disband his armies, thus "pulling out his teeth," as a witty Frenchman expresses it, "to show his enemies that he has no intention to bite," and in suppressing *La Lanterne*, a paper filled with personal abuse of himself and family, may be more endurable than a recurrence of the scenes of the Revolution, which would drench the country with blood and reduce France for many years to a third rate power? Let our papers by all means labor for reform both at home and abroad, but before committing ourselves to the schemes of revolutionists, let us consider carefully the results.

RELIGIOUS INTELLIGENCE.

PACIFIC COAST.

THE CHINESE.—The Mission School for the Chinese, lately established by the Howard Presbyterian Church is already a great success. As many as 60 pupils have been present at one meeting. They appear to be greatly interested, and there is no doubt that they will induce a large number of their companions to attend. The following notice is printed on red fire cracker paper, in English and Chinese, and circulated in all parts of the city:

NOTICE.—Mission St., at Dr. Scudder's Church, every Sunday, at 2 o'clock, P. M. A School is opened for teaching the English Language, without charge. Any Chinaman who wishes to learn may come at that hour.

A WRITER to the *Bulletin*, from Oakland, says:

At the chapel of the Congregational church each Sabbath, a class of about 25 Chinese receive instructions in the English alphabet and in the doctrines of Christianity. They are shrewd, and learn easily. This is by no means the first effort made to educate and civilize the Chinamen in and around Oakland. The Baptist Church had, at one time, a class of these people, and a year or two since, a gentleman, who had been a missionary in China, was accustomed to preach in the Chinese language each Sunday. The attempts to better the condition of the Chinamen, are, of course, only on the part of a few persons. It would not be difficult to reach every Chinaman in the place with religious instruction, for they do not seem to have any particular aversion to hearing the "Melican" man explain his religion.

PRESBYTERY OF SAN JOSE.—The *Morning Call* blames the Presbytery of San Jose, as it says, for "issuing its *ukase* against a reverend gentleman, forbidding him to preach that 'infants a span long do not roast in hell.'" The Presbytery have done no such thing. Their standards teach, "Of such (little children) is the Kingdom of Heaven." Nor does the Presbytery forbid any person from preaching as he pleases. Only, a Presbyterian minister in their connection, and "under their care," and as such, under a solemn obligation to preach according to the standards of the Church, must not preach contrary to them. If Mr. Hamilton, or any other clergyman, no matter how able or distinguished, cannot conscientiously fulfill these obligations, the case is clear: let them withdraw. If this is not done, the obligations of the members of the Presbytery compel them to enforce the law. They have no choice. They must, by vote, exclude the recusant member from their communion.

BAPTIST.—The report having been circulated that the Baptist school at Petaluma was a "private affair, with which the Baptist denomination had nothing to do," the Secretary of the Baptist Educational Society publishes in the *Evangel* and other papers, a denial of the report. He says that the school has the sympathy and co-operation of the entire denomination, and was established under its auspices, and regrets that statements so utterly at variance with the facts should have been made.

ALASKA.—The *Advocate* speaks of the great need of ministers of the Gospel in Alaska. That paper thinks that at least two Methodist preachers should go there at once. Other denominations should also move in this matter, the present being a more favorable opportunity for labor in that field than will probably be again afforded.

JESUIT.—A lady of San Francisco having placed her son, a boy of 13 years, in the Catholic College at Santa Clara, was obliged to resort to the law to get him out, the priests having made him believe that his salvation depended on his remaining with them.

MISCELLANY.—Seventeen sermons were preached in Stockton last Sunday....The Pacific Methodist Church in this city, has received permission from the courts to mortgage the lot on Minna St....The ladies of the St. Paul's Episcopal Church, Oregon City, are making an effort to raise money to build a rectory, and have already a fund sufficient for the purchase of materials....A revival has taken place among the Cumberland Presbyterians at Tule and Lynn's Valley....There are now 14 regular Congregationalist ministers in California....A Methodist society is being built up at San Louis Obispo. ....Sonora has a M. E. Church and Parsonage out of debt....The M. E. Church at Santa Clara is reopened after undergoing repairs. The church at San Jose is on the new foundations....St. John's Church, Oakland, has recently paid $1,800 for an organ....The *Churchman* says that there is no parish in the diocese whose success has been more marked than that at the Mission Dolores.

EASTERN.

GERMAN BAPTISTS IN THE WEST.—The Annual Conference of the German Baptists of the West met, on the evening of October 15th, in the German Baptist Church in Dayton, Ohio. Ten years ago, when this Conference was organized, the membership of the churches connected with it was 679. During the past year 56 were baptized, and, in the different Sunday Schools, 260 scholars were taught. But now the Conference has, in round numbers, 2,000 members, and there were 2,300 children in the respective Sunday Schools connected with the Western churches. —*Lutheran.*

THE Rev. Joseph H. Jones, D.D., Secretary of the Fund for the Relief of aged and disabled ministers in the Presbyterian Church, died suddenly at his residence in Philadelphia, on the 22d, ult., aged 70 years. He had just returned from New York, where he had met many old friends; and among others, Dr. Tyng, a classmate in college; and with deep interest, they had recalled to each other, many remarkable Providences by which the divine interposition had been signally manifested in their behalf. On the following Sunday, the 20th, Dr. Jones preached in Metuchin, N. J., upon the mysteries of Providence, and at the close of his sermon made an appeal in behalf of aged and disabled ministers. On Monday he returned to Philadelphia, and died early the following morning. He was admirably adapted for his particular work. His letters to the aged and afflicted servants of Christ to whom he was almoner, always breathed the loving spirit of the Master, and carried comfort to many troubled hearts. He departs, followed with universal regard and reverence.

PROGRESS IN BOSTON.—At the Beach Street Presbyterian church, Boston, Mass., whose pastor, Rev. James B. Dunn, came from New York less than four months ago, the services last Sunday afternoon were of an interesting nature. 40 persons were added to the church, 20 by profession, and 20 by letter. 30 were added last communion, making 70 within three months. According to the report read at the annual meeting of the church last Friday, it would appear that since Mr. Dunn came, the income from pew rents has quadrupled, and over 150 persons have taken pews and sittings. The congregation on Sabbath is one of the largest in Boston. Among the additions are some of the leading merchants and citizens. A good religious work is also in progress at the Presbyterian church, East Boston. —*New York Times.*

IN 1864 the beneficiaries aided by the New School Presbyterian Church numbered 87; last year the number had risen to 205; this year it is expected to reach 250 at least. The Educational Committee disbursed $29,000. Of this sum, however, only about $18,000 came from the ordinary source of supply, five unexpected legacies and the sale of some scholarships filling out the balance. This year the churches will need to raise $35,000—twice as much as they contributed last year.

A CHANGE.—The majority of the members of the Presbyterian church in Bloomington, Ill., having voted to connect themselves with the New School body, the minority brought the matter into court, and it was decided that the act of the majority was legal, since "it was not perverting the church property to the teachings of new doctrines, but connecting itself with another branch of substantially the same church." —*Congregationalist.*

IN a village church in New York the other Sunday, a layman was invited to read a sermon in the morning,—the minister being absent. In the afternoon a clergyman from a neighboring place occupied the pulpit and preached the sermon which the lay member had read in the morning. The congregation was thus enabled to compare two different styles of delivery.

NEW YORK.—A recent collection for home missions, in Dr. Hall's Presbyterian church in New York, amounted to $19,000. Dr. Osgood's church is in trouble on account of a debt of $100,000. The new church has cost $250,000. Rev. Dr. Gillett, pastor of the 13th St. Baptist church, in New York has become insane.

THE following item is from the New York *Tribune:*

The *Evening Post* contains the following advertisement: "For sale cheap, my pew No. — Christ Church. It is a very desirable pew, and was in great demand before Protestantism was called a failure."

REV. CHARLES G. SOMERS, D.D., the founder of the American Baptist Home Missionary Society, died in New York, a few days since, at the age of 76. He was an Englishman by birth, was connected with the American Tract Society over 20 years, and was an accomplished scholar, and effective preacher.

PREACHING IN GAELIC.—A congregation of 200 met in Chicago lately to hear a sermon in Gaelic. The psalms were sung in Gaelic, being lined out for want of books. Public worship is conducted in that city in Hebrew, French, German, Swedish, Norwegian, Bohemian, English, and Latin.

BISHOP MANTON EASTBURN, of Massachusetts, has addressed a pastoral to his clergy and congregations, strongly discountenancing ritualistic practices, as tending to weaken the Protestant character of the Church.

THE average salaries of the New Haven clergymen are thus given: Congregational, $3,283; Methodist, $1,500, with parsonage; Episcopal, $2,600; Catholic, $800, with parsonage.

THIRTY-THREE persons were added to the Presbyterian church, Sag Harbor, L. I., on a late Sabbath, the fruits of the gracious work of the Holy Spirit in the Church. —*Presbyterian.*

THE South Cornwall Church recently declined to receive a member by letter from the College Church in New Haven, on the ground that the document was nearly 30 years old!

THE new catalogue of the Union Theological Seminary of New York shows classes of 43, 44, and 40 students respectively. The whole number of living alumni is 608.

THE New York Avenue Church, Washington City, has extended a call to Rev. Dr. Duyrea, at a salary of $6,000. It is understood that this call has been declined.

SUNDAY SCHOOLS ALL RIGHT.—The Russian clergy, after extensive discussion, have decided Sunday Schools to be "orthodox."

THE Rev. Dr. Gulliver, of Knox College, will supply the Calvary Presbyterian Church in Chicago for six months.

THE Rev. J. H. Suydam has resigned the pastoral charge of the First Reformed church, Philadelphia.

THERE are 194,046 Sunday School scholars in the Protestant Episcopal Church throughout the United States.

THE Presbyterian Church at Coatsville, Pa., requires total abstinence as a condition of membership.

THERE are 12 churches on Erie Street, Cleveland, within a space of less than a mile.

FOREIGN.

THE Established Church of Scotland is taking measures to obtain from Parliament, if practicable, the repeal or modification of the Law of Patronage —a law which has been the occasion of great trouble in that church. The great problem of religious liberty without patronage or partiality for any one denomination, is yet to be worked out in Great Britain and other European countries.

—*Northwestern Presbyterian.*

THE receipts of the English Church Missionary Society for the past year have been about $786,000. The society has 1,000 auxiliaries in England, Scotland, Ireland, Wales, and on the continent.

THE Rev. J. D. Fulton, Baptist minister, of Boston, Mass., has been visiting the Baptists in England, and says they greatly lack denominational unity. They are divided into three schools. Particular Baptists, Strict Discipline Baptists, and Open Communion Baptists. The first two agree essentially with the Close Communion Baptists in the United States. The English Open Communion Baptists have almost as little connection with the two other schools, as with the Presbyterians or Methodists. They are virtually another denomination. The star of this denomination is Mr. Spurgeon, one of the notabilities of the world.—*Presbyterian.*

A DISADVANTAGE.—The disadvantage of civilization preceding the Gospel is painfully illustrated by the hindrances thrown in the way of missionaries in foreign ports, by their abandoned countrymen. Some of these have been well educated and belong to respectable families at home, but having given full vent to the baser passions of their nature, they have become objects of contempt even to the heathen. The piratical craft in the Chinese waters are sometimes commanded by such men. Because of such untoward influences, the Gospel succeeds best at places removed from a corrupt civilization.

—*Congregationalist.*

THERE are 600,000 Jews in Hungary. They had been called on to organize their religious government under State protection. Two parties—the old Believers and the Reformers—claimed the right to manage the affair, and a severe theologico-political struggle is in progress. The rules adopted by the majority will be accepted by the "Minister of Religion," and the minority will be governed thereby. Each party is having processions, and speeches.

IN London recently one hundred and four Episcopalians went over to Rome in single a month. The London ritualists claim to have converted the Prince and Princess of Wales. The Nonconformists of England, will be represented in the new Parliament by eighty-four members. The University of Oxford, England, will begin the new year by opening its door to Nonconformists.

IN the northern portion of China, the women do not bind their feet as is the custom in the southern provinces. In the latter, only women of abandoned character go with feet unbound. Hence the tenacity of the prejudice which even the missionaries in many cases feel obliged to respect.

—*Congregationalist.*

List of Presbyterian Clergymen,

ON THE PACIFIC COAST, ALPHABETICALLY ARRANGED.

Rev. Jas. M. Alexander, N. S., San Leandro, Cal.
Rev. H. R. Avery, O. S., Walnut Creek, Cal.
Rev. B. B. Bonham, O. S., Sebastopol, Cal.; traveling in Nevada.
Rev. I. H. Brayton, N. S., Principal College School, Oakland, Cal.
Rev. W. W. Brier, N. S., Alvarado, Cal.
Rev. Fred. Buel, O. S., agent California Bible Society, 757 Market Street, San Francisco.
Rev. W. H. Cain, O. S., (Not preaching) San Francisco.
Rev. Charles Russell Clarke, O. S., Principal City Female Seminary, corner Mason and O'Farrell streets, San Francisco.
Rev. A. J. Compton, O. S., Watsonville, Cal.
Rev. Eli Corwin, N. S., Congregational Church, Oakland, Cal.
Rev. Chas. S. Dewing, N. S., Columbia, Cal.
Rev. J. M. Dick, U. P., Eugene City, Oregon.
Rev. H. H. Dobbins, O. S., Sutter Creek, Cal.
Rev. Henry Durant, N. S., Professor College of California Oakland, Cal.
Rev. John Edwards, O. S., Visalia, Cal.
Rev. James Eells, D.D., O. S., pastor First Church, Stockton Street; residence, corner Stockton and Clay Sts., San Francisco.
Rev. Ben. E. S. Ely, O. S., Stockton, Cal.
Rev. J. G. Fackler, O. S., pastor Central Church, Mission Street; residence, 121 Fifth Street, San Francisco.
Rev. A. Fairbairn, O. S., Chico, Cal.
Rev. Frederick Fox, N. S., Oakland.
Rev. Thomas Fraser, O. S., Santa Rosa, Cal.
Rev. S. D. Gager, U. P., Eugene City, Oregon.
Rev. Ed. R. Geary, O. S., Calapooya, Oregon.
Rev. M. M. Gibson, U. P., residence 608 Pine Street, San Francisco.
Rev. L. Hamilton, N. S., Oakland, Cal.
Rev. J. R. Hammond, O. S., Placerville, Cal. Visiting in the East on account of ill health.
Rev. Joseph A. Hanna, O. S., Eugene City, Oregon.
Rev. Silas S. Harmon, N. S., San Buenaventura, Cal.
Rev. Oliver Hemstreet, O. S., Ione City, Cal.
Rev. I. N. Hurd, N. S., pastor Potrero Church, San Francisco, Cal.
Rev. S. G. Irvine, U. P., Albany, Oregon.
Rev. T. S. Kendall, U. P., Albany, Oregon.
Rev. N. B. Klink, O. S., Vallejo, Cal.
Rev. A. L. Lindsley, D.D., O. S., Portland, Oregon.
Rev. A. W. Loomis, O. S., Missionary among the Chinese, chapel and residence, cor. Sacramento and Stockton sts., San Francisco.
Rev. B. Lowe, O. S., 10 Martin's Block, San Francisco.
Rev. W. F. B. Lynch, N. S., Centerville, Cal.
Rev. James H. Marr, O. S., Calvary Mission, San Francisco.
Rev. David McClure, N. S., Principal Oakland Academy, Oakland, Cal.
Rev. Robert McCullough, O. S., Yreka, Cal.
Rev. J. S. McDonald, O. S., Sacramento, Cal. Resigned.
Rev. W. C. McKaig, D.D., N. S., Marysville. Cal.
Rev. James McLaughlin, N. S., Gilroy, Cal.
Rev. J. H. McMonagle, O. S., pastor Larkin St. Church, residence, 1312 Jackson St. San Francisco.
Rev. W. J. Monteith, O. S., Albany, Oregon.
Rev. Jas. M. Newell, N. S., Placerville, Cal.
Rev. Joshua Phelps, D.D., O. S., 38 Stanley Place, San Francisco.
Rev. James Pierpont, N. S., pastor Emanuel Church, corner Folsom and Seventeenth streets, San Francisco, Cal.
Rev. George Pierson, N. S., Brooklyn, Cal.
Rev. F. L. Nash, N. S., Alameda, Cal.
Rev. John S. Reasoner, O. S., Brownsville, Oregon.
Rev. Robert Robe, O. S., Brownsville, Oregon.
Rev. Henry M. Scudder, D.D., N. S., pastor Howard Church, Mission Street. Residence, 1 Vernon Place, San Francisco.
Rev. John Sessions, D. D., N. S., Oakland, Cal.
Rev. Anthony Simpson, O. S., Corvallis, Oregon.
Rev. W. R. Sloan, Steilacoom, W. T.
Rev. A. H. Sloat, pastor of Westminster Church, Hayes Street, San Francisco, Cal.
Rev. A. M. Stewart, N. S., Austin, Nev.
Rev. Townsend E. Taylor, N. S., Oakland, California. Not preaching.
Rev. James S. Todd, O. S., Arcata, Cal.
Rev. Lewis Thompson, O. S., Bloomfield, Cal.
Rev. P. V. Veeder, O. S., Principal City College, corner Geary and Stockton streets. San Francisco.
Rev. Charles Wadsworth, D.D., O. S., pastor Calvary Church, Bush Street; residence, 920 Pine St. S. F.
Rev. E. B. Walsworth, D.D., N. S., President of the Female College of the Pacific, Oakland, Cal.
Rev. L. P. Webber, N. S., Santa Clara, Cal.
Rev. Robert R. Wells, O. S., Healdsburg, Cal.
Rev. S. T. Wells, O. S., agent Presb. Board of Publication. Depot at Bancroft's Bookstore, 609 Montgomery St.
Rev. Samuel Whiting, N. S., Mendocino, Cal.
Rev. A. F. White, N. S., Carson, Nev. Serving as State Geologist.

Rev. M. A. Williams, O. S., Jacksonville, Oregon.
Rev. S. Woodbridge, D.D., O. S., Benicia, Cal.
Rev. J. Worth, U. P., Brownsville, Oregon.
Rev. James L. Wylie, N. S., San Jose, Cal. Gone East for the recovery of health.
Rev. Richard Wylie, O. S., Napa, Cal.
Rev. James Wylie, O. S., Napa, Cal.

Oakland Academy.

A CLASSICAL, ENGLISH, & MILITARY BOARDING SCHOOL
REV. DAVID McCLURE, PRINCIPAL.

The Ninth Term of this Institution will commence on Wednesday, Jan. 4th, 1869, in the new Academy building, recently erected on Telegraph Road, one mile from the Railroad Depot.

The location and plan of this new building have been made with the design of securing for the students a home of beauty and refinement.

Careful provision is made for thorough and extensive courses of study in English, Mathematics, Natural Science, and the Ancient and Modern Languages. A special course is also provided for those who are preparing for a commercial life.

In addition to these courses there is a daily military inspection and drill, together with vocal and light gymnastic exercises, under the instruction of a teacher. Every student is required to attend the military and gymnastic exercises, as a means of physical training.

For the mental, moral, and physical culture of each pupil committed to his care, the Principal holds himself responsible.

Further particulars may be obtained by addressing the Principal at Oakland.

E. A. LAWRENCE,
No. 620 WASHINGTON STREET, ROOM 3,
SAN FRANCISCO,
Counselor at Law.
Particular attention given to Suits concerning Real Estate.

Contributions.

Mr. Muller's Orphanage.

In crossing Ashley Down, a breezy eminence near the city of Bristol, England, we notice five noble mansions, evidently appertaining to some single institution. They compose the widely renowned Orphan Asylum of George Muller, and afford one of the most remarkable illustrations of faith exercised and prayer answered recorded in history.

Mr. Muller is the minister of a small church in Bristol, of the denomination known as Brethren, and in 1836 was preaching to them without any fixed salary. During that year his heart was attracted to the case of several orphan children, and he received them into his family. Immediately afterward other cases were presented, awakening his compassion, and during August and September he had adopted as many as twenty-six of the dependent little ones.

Although poor himself, he now came to the determination not to solicit alms from any person, but simply make his wants a subject of prayer before God, believing that He would supply them. Many of his friends greatly opposed his schemes; but seeing how large and helpless his household was, sent him whatever might be necessary for their support. Sometimes, however, money or food would not be received, and the family would be reduced to the last penny, or the last pound of flour. But before the next meal time arrived, something was always sent.

By the winter of 1837 Mr. Muller had seventy-nine orphans under his charge. The next summer was a very trying one. The three houses in Bristol he had hired to accommodate his numerous household were inconvenient and crowded. Money and provisions came in very slowly, and many thought that the enterprise would have to be abandoned. But Mr. Muller's own faith never wavered. In one house at that time there were thirty-one little girls. In another the same number of infants. In the third were twenty-seven little boys. On the 21st of November, Mr. Muller's diary says: "Never were we so reduced in funds as to-day. There is not a single half-penny in hand among the matrons of the three houses." But before the day was over, a supply was received.

In 1843 there were applications for the admission of many orphans; and to the astonishment of his friends, who knew how difficult it had been for him to sustain his helpless family, Mr. Muller rented another, being the fourth house occupied by him This was also immediately filled; and in 1846 he determined to build a structure suitable for the purpose. He accordingly purchased the field at Ashley Down, and without funds of any amount, began the work. Although he made it a rule never to borrow, nor to go forward without paying for the labor, yet the building went steadily on, and the orphans were removed to it in June, 1849. The noble edifice now built was admirably adapted for its purpose. The rooms were large, well lighted and ventilated; with play rooms, school rooms, nurseries, baths, and everything else requisite for the comfort of 300 little children, the number for which it was designed. The cost was over $75,000, all contributed without solicitation.

The house was filled immediately; and the rush of orphans continuing, Mr. Muller determined to erect a second structure. Thus he has gone on. Five houses containing more than 2,000 orphans now stand as monuments of his faith in God. All objection has long since ceased, and the public sustains this vast institution without a murmur. Up to May of last year $1,400,000 had been contributed for the purpose. Many of the tradesmen about Bristol have long made their daily gifts as regularly as they support their own families. Butchers leave meat; bakers, bread or flour; and some persons even pay a percentage of their daily sales. The health of the orphans is remarkably good; and the bills of mortality show that the deaths are fewer than the average among children.

Reports of Mr. Muller's great work have extended widely abroad, and almost every nation is now tributary to the orphanage. Last year the current expenses amounted to $65,000, being an average of $62 50 to each child. There were also expended over $100,000 in building. All this amount was obtained from unsolicited donors. If the day of miracles has passed, those of Providence and faith certainly yet remain. S. W.

Betting.

Austin, Nev., January, 1869.

You bet—with a peculiar jerking accent on both the little words, is now on the Pacific Coast, and especially in Nevada, a pet provincialism. To a new-comer, and on first hearing, there is an entire bewilderment as to the intended meaning. The writer first encountered it at the western base of the Sierras, when making inquiry of a man who had just come from the eastern side, as to whether the mountain crossings were still rugged and difficult on account of remaining snow, although the first of June. His simple and emphatic reply was,

"You bet!"

"Bet what?" I inquired."

"Stranger," said he, and looking at me very earnestly, "ain't you green?"

"Certainly; and very green at that; yet what did you want me to bet?"

"Nothing. I meant to say, and did say, that the passage is very rugged and difficult."

I saw it, and meeting it daily thereafter in response to almost any special inquiry, had no further difficulty in comprehending its import. *You bet* is a vigorous and emphatic affirmative to your query.

How originated.

Such provincialisms usually have their origin in some well known and familiar habit or business among the people. *You bet* is big with philosophy, and conveys a volume of meaning. It gives a more distinct conception of Pacific society in a very important aspect than could be furnished by a hundred labored essays. Betting is a business here. Everybody bets. It has become an important ingredient in social life; a canker which has already eaten deeply into the vitals of society; a practice which is fearfully assisting to undermine confidence between man and man, and largely helping to obliterate all moral distinction between mine and thine.

Men, women and children bet, even about the most trivial things. You are suprised to hear persons of acknowledged respectability in society, and mutual friends also, when differing in opinion, it may be about the most insignificant matter—one saying, "I'll bet you so much." "Done!" says the other. Each has his hand in his pocket in an instant for the gold piece or pieces named. These are usually handed to a third person, and when the controversy is decided the winner takes the money as perfectly legitimate gain, and without a seeming thought of wrong-doing. It seemed, therefore, fitting that there should be something in the vernacular to indicate so common a business of life. Hence the origin of *You bet.*

This demoralizing habit grows legitimately out of the adventurous multitudes who are on the Pacific slope. There exists a wide-spread, inordinate, and too often unscrupulous desire to become suddenly rich; and this without the toil, the time, and precedent industry usually demonstrated in the acquisition of honest wealth. Mine prospecting, with its marvelous uncertainties—buying and selling undeveloped mines—stock jobbing; eastern companies represented by unscrupulous agents; all foster the spirit of betting, as they are generally mere gambling under assumed names.

With such surroundings, the appetite grows by what it feeds upon. The gaming table is merely the consummation, and no more dishonest nor unmanly than many another betting scheme under more plausible appellations. Thus constantly prompted, the minds of men become at length so stimulated that no venture or speculation is looked upon as too large.

Political betting.

The most reliable papers of California give it as their judgment that between one and two millions of dollars changed hands in that State alone on the decision of the late Presidential election. Such an enormous sum no doubt proved a far greater curse to those who won than of inconvenience and suffering to those who lost.

Betting is not, however, a speciality here, nor confined to the Pacific Coast. This is merely an outgrowth and imitation of that greatest of betters and black-legs—Wall Street. The contagion from that fountain-head of all dishonesty seems to be spreading, and threatens speedily to poison our entire community, turning us into a nation of betters and money-gamblers. Not even the Church, in some of her schemes for money-getting, seems altogether free from the contamination of betting. The Catholic Church carries on her schemes for extension and aggrandizement almost wholly by betting.

Remedy.

Is there any remedy against this wide-spread and still increasing canker of money gambling? Or must its slang phrases become a part of our English vocabulary, and the next edition of Webster have introduced into it *You bet?* There certainly exists no remedy in the disease itself. Like cures not like in such a fatality. No hope from Wall Street—none from our mining interests—none from the mercantile world—none from the habits of the people—none from our laws, our legislators being pioneers and adepts in betting. The mere moral reformer is compelled to sit down in impotent despair, when attempting to battle against this inordinate love of money, which is the root of this dangerous malady.

Shall we, however, as Christians, become content with imbecile complaints and inactive hopelessness as our secular journals seem to do? Thanks be to God, there is a remedy, one only, for this and all other maladies which debase our race—a cure sure and perfect: *the true Gospel leaven.* These sinners must be born again ere they leave off their betting. If we who preach had but faith as a grain of mustard-seed, this mountain would soon become a plain before the onward movements of Christ's Kingdom. Yet is not this devil cast out save by prayer and fasting. A. M. Stewart.

The bells of time are ringing changes fast.

Public Prayer.

These are strong inducements to infuse didactic, hortatory, and even controversial discussions into public prayer. Several valuable tendencies in an earnest and zealous minister, incline him, when not on his guard, to frame his prayers with reference to instruction and persuasion. The grave and impressive announcement of a doctrine in the form of a devout acknowledgement to God, carries with it a sort of sacramental attestation of solemn conviction in the speaker, and is in some respect, adapted to produce a corresponding conviction in the hearer. Hence we observe in some ministers a proneness to assert views of doctrine, and also of practice, which they suppose to be questioned or rejected. This sort of impropriety creeps into the petitions presented for the conversion of impenitent persons; when the minister prays that they may be taught a great variety of particulars, composing, in his view, the system of saving knowledge and faith; that they may be led through a course of experience, which he delineates in systematic detail—departing throughout, from the proper sphere of public supplication, except as he introduces each series with the suppliant prefix, "We pray."

Nothing but a defective apprehension of the nature of public prayer, can reconcile a devout congregation to these didactic supplications. While in form addressing God, they in fact address the people. The people feel the prayer, not as the expression of their own devotion to God, but as a means of pursuasion to themselves. The part of the evil thus incurred, is a check thrown upon the fervor of devotion in the pious mind; and another is the injury suffered by all who have become so familiar with the impropriety as not to notice it.

United States Life Insurance Comp'y,

IN THE CITY OF NEW YORK.

OFFICE, No. 40 WALL STREET.

CASH ASSETS EXCEED $2,700,000.

This Company, having a Stock Capital, makes Insurances and Endowments with or without profits. Dividends to Policies with profits are equal to, or larger than those of other, or "Purely Mutual" Companies in available present cash value.

NEW AND IMPORTANT PLANS OF LIFE INSURANCE HAVE BEEN ADOPTED BY THIS COMPANY. SEE THE NEW PROSPECTUS.

Life Assurances, Endowments and Annuities in every form. Profits available after Policies have run one year, and annually thereafter. The reserved Cash fund, for re-insurance, is the largest known to or required by, the ablest and most experienced authorities in Life Insurance, thus affording undoubted security. A liberal non-forfeiture system, as to whole Life or Endowment Policies.

Policy Holders in this Company can use or apply the Dividends of profits in a greater number of ways than is afforded to Policy Holders by any other Company.

The law under which the company is Chartered, provides that if the Capital should, from any cause, become impaired to the extent of Twenty-five Thousand Dollars, or more, the Stockholders SHALL BE CALLED UPON TO MAKE GOOD SUCH DEFICIENCY. This is the only Cash Company in America which affords this safeguard to Policy-holders.

The assured in this Company are not personally liable as in Mutual Companies, which have the power of assessing their members or of reducing the sums insured, in case of deficiency.

CLERGYMEN, insuring in this Company, are allowed a DISCOUNT of TWENTY PER CENT. on first year's premium, and a liberal commission will be given on all Insurances influenced by them.

Agents wanted, on the most advantageous terms.

Forms and every information will be furnished by

B. J. DORSEY,
General Agent for the Pacific Coast,
Southeast Corner Sansome and California Sts., San Francisco

HYATT'S HAND-BOOK OF Grape Culture in California,

Giving full and specific directions as to where, how, and when, to plant and cultivate a vineyard.

As the season is approaching for those who purpose going into the culture of the vine anew in California, or for those who wish to extend their vinicultural operations to make preparations therefor, they can find no better aid, and no source of information more valuable than to consult this highly approved Hand-Book of Grape Culture.

Following are some of the testimonials that have appeared in commendation of this useful and indispensable work:

A committee of the late Fair of the Mechanics' Institute of San Francisco, to which the work had been referred, speak thus:

"Your committee have examined Mr. Hyatt's Treatise on the Culture of the Grape, and believe it to be the BEST HAND-BOOK published on that subject for California vine culturists, and for which they recommend a Special Premium."

The California State Agricultural Fair, of 1867, awarded a Diploma to the author of this work, and also the San Joaquin Valley Agricultural Fair, at the same season.

OPINIONS OF THE PRESS.

The following are brief extracts fron some of the elaborate notices of this work:

The San Francisco *Daily Evening Bulletin* says:—"The book contains a choice collection of the best foreign and native varieties of the grape cultivation in California especially, as well as at the East. The many excellent works on Grape Culture in the Atlantic States are of little or no value in California, where an entirely different system and practice are necessary in vine growing and wine-making. This Hand-Book is intended to supply this deficiency. The author has taken great pains to investigate this subject, and to aid in the improvement of viniculture in California. Its appearence is timely, and it can hardly fail to meet a large and ready sale. It is attractively printed and elegantly bound."

Sacramento Union—"Hyatt's Hand-Book of Grape Culture is a California production that will probably meet a common want. The author takes the experience of the most noted vine-growers in the State as the warrant for his conclusions and suggestions, turns to account the recorded results of experiments made by the pioneers of this branch of industry, and in addition to giving full and minute instructions in regard to the planting of vineyards and the manufacture of wines, presents statistics which will enable the beginner to calculate the probable profits of successful grape culture."

The *Mountain Democrat*, whose editor, Hon. D. W. Gelwicks, is the present State Printer of California, speaks thus:

"HYATT'S GRAPE CULTURE.—We have received from the publishers, H. H. Bancroft & Co., San Francisco, a copy of this interesting and valuable work—a work greatly needed on this coast, and which every grape-grower should purchase. We sent it to a gentleman well known in this community, for his examination—a gentleman familiar with the subject, and largely engaged in the culture of the grape. He gives it the following cordial endorsement, and his endorsement ought to secure it a large sale:

'The limited time in which to examine Hyatt's Grape Culture, published by H. H. Bancroft & Co., San Francisco, has been sufficient, however, to satisfy me that it is a work which every grape-grower should have. No matter how well fortified we may be in our own experience and theory, we must acknowledge that we may adopt many of the author's ideas and suggestions with profit. The merit of the work certainly bespeaks for it a ready sale.

Respectfully, CHAS. P. JACKSON.'"

The Golden Era: * * * "With this book in his hand, the intelligent agriculturist can engage in the business of grape culture with almost the same chance of success as one who has bought his knowledge by expensive experience. * * * The practical information contained in the book would cost many hundred dollars to obtain in any other way. We predict for it a ready and rapid sale."

S. F. Daily Dramatic Chronicle: "The book is emphatically a California production, being written by T. HART HYATT, of this city, editor of the *Rural Home Journal*, and bearing the imprint, San Francisco: H. H. Bancroft & Co. It contains a large amount of valuable information, and should be in the possession of every vine-grower and wine manufacturer in the State. The usefulness of the volume, and its convenience for reference, are very much enhanced by a full and carefully prepared index."

S. F. Mining and Scientific Press: * * * "The book professes to be a complete manual, with instructions for the management of the grape and the manufacture of wine, and is especially designed for California. * * * The book contains a considerable amount of valuable information which is not generally found in such treatises."

S. F. Daily Times: * * * "The author seems to have exhausted his subject, particularly as it relates to viniculture in this State, and as the grape interest is just beginning to attract attention which is soon to become paramount among farmers, we regard the publication of the work as most opportune. No ranchman should be without it."

N. Y. Daily Tribune: "The author brings the result of many years' experience in foreign countries to the preparation of his work, and from his observations in climates similar to that of California, arrives at the conclusion that California is singularly favorable to the culture of the grape, and to all semi-tropical fruits, and that it will hereafter be distinguished as the land of the vine, the fig, the orange, the olive and the palm. His volume forms a capital, if not a complete manual, on the care of a vineyard, and it is enriched with much industrial information connected with the subject."

Lacon (Ind.) Home Journal: "This work is most *apropos*. It comes just as thousands, without any practical knowledge of the business, having planted vineyards, find themselves destitute of that information their intelligent care demands. All over the country this interest is growing, and probably the time is not distant when America will produce more, if not better, wines than any country in the world. The author, MR. THOMAS HART HYATT, is an enthusiast on the subject upon which he writes so pleasantly, and his book embodies just what every grape-grower would like to know—what every one must know, to cultivate the vine successfully."

Colman's Rural World, St. Louis: * * * "We merely want to introduce a new and interesting treatise on this subject to our readers, from the far-off shores of the Pacific—the Golden State of California. Its author is T. HART HYATT, editor of the California *Rural Home Journal*. He has had a large experience and observation in California and in the Old World. His style is entertaining, his directions clear, plain, and practical."

Rural New Yorker: * * * "Although most valuable to the California viniculturist, yet it helps to widen our knowledge of the vine."

H. H. BANCROFT & CO., Publishers.

The Occident.

San Francisco, Saturday, January 30, 1869.

SUSPENSION OF THE OCCIDENT.

Circumstances which could not have been anticipated at the beginning of the year, and which are beyond the control of the Synodical Committee having the interests of the paper in charge, render it necessary to suspend the publication of The Occident, at least for the present.

This necessity is regretted by the publishers and editors and the Committee, and we are willing to believe it will be regretted by many who have read the paper during the year past, but we accept it as gracefully as possible.

The names of the Publishers, H. H. Bancroft & Co., will be a sufficient guaranty to subscribers that all accounts with them will be satisfactorily arranged.

THE CONSCIENCE WARPED.

We often meet with persons who seem to think they are beyond the reach of reproof from their fellows, if their consciences do not condemn them; and that God will not find fault with a career which does not trouble them. Go to one who habitually violates the rights of others in some particular respect, and urge him to desist, and he will reply as though the answer were a bar to all further remonstrance: "My conscience is not disturbed by my course." If he is an extortioner as to money, he will say: "I never could sell liquor, or speculate in provisions, but I have no difficulty with my business." If he is guilty in either of these respects, he would be unable to lend money at exorbitant rates, or do some other iniquity, but feels at ease as he is. And men believe that because they have so much sensitiveness upon those points by which their own interest is not affected, conscience would not allow them to rest, were that in which they are engaged really wrong. Not being reproached from within, they conclude they will not be condemned by God, since conscience is the gift of God to be their guide.

Let us examine this subject a moment. Pilate could not be a murderer; he could not even get his own consent to sign the death-warrant of Jesus, and so sensitive was his conscience, that although he struggled against it long, and was tormented with the unyielding demand that he obey, he was unable to conquer it. Yet, as soon as another manner, equally wicked, was devised by which to attain his his ends, he could move on without compunction, and probably supposed himself to be not worthy of blame, since he was no longer troubled. Pilate learned, however, that is not sufficient cause for absolution that one is not positively restrained from acts of guilt, and receives no actual stripes from conscience for what he does. Suppose those who presided at the inquisition had been convinced that it was right to torture and kill heretics, and therefore could be as tranquil when applying the rack and scourge and fire, as when repeating their *pater nosters;* think you God would have looked with smiles on the horrid engines of their prisons, and bestowed on them no censure, though they tore their victims limb from limb? If a man concludes that a large portion of the Bible is unworthy of belief, because, with his little stretch of comprehension, he cannot reconcile it with what he says God ought to teach, and therefore rejects this portion, throwing himself on his conscience for justification; must he be acquitted by Him who says: "All Scripture is given by inspiration of God, and is profitable for men?"

If a man can break every command in the Decalogue, and wheedle his conscience into silence, on the ground that this code of rules was designed only for the Jews, and was abrogated with the ceremonial service, must He who wrote those laws, and has reaffirmed them in the very nature of things, insisting on their observance by all the voices of history and experience, as well as revelation, absolve him from blame, and grant him favor in his disobedience? Nay, verily. God will not accept the decisions of any conscience as sufficient reason for His approval, when these come in conflict with what He has revealed to be right. He has given a rule for conscience and the means of its enlightenment, and laid responsibility upon us respecting its normal and healthy condition. If we warp it, it will guide us away from the true path, as surely as a compass deflected by any means from its proper marking will lead a ship apart from its course. About nothing should men be more careful than respecting the treatment of the conscience, and it is by no means certain because its remonstrance is not heard in the breast of one who has abused and seared this monitor, and forced it into temporary subjection to his will, that he has no cause for fear.

I MUST WORK!

Labor is the appointment of Divine Providence. "Labor and pray." Like so many great evils and sins, originally a curse it is overruled and converted so as to become a blessing.

Labor is the foundation of wealth. However wide-spread or diversified, beautiful or refined may be the stores of riches; or even if locked up in volumes or productions of art, skill, or genius, yet all spring from soil moistened with the sweat of the brow. All wealth indeed, is but labor accumulated or represented. It is the former in the farm, or the city with its manufactories and foundries, storehouses, and dwellings, palaces, and churches. Gold, silver, gems, greenbacks, credit, are but representatives of labor.

The same laws apply in the Gospel. We "work out our salvation," for "God worketh in us." Our Redeemer exclaimed, "I must work the works of Him who sent me." His last command committed to his followers the most tremendous project and task that could have devolved upon them. Surely the Apostles could not have understood it; or their faith must have been far greater that ours, or else their hearts must have failed. Across their way was arrayed the abominations of Imperial Rome, the philosophical sophistries of vain-glorious Greece, the horrible vileness of Antioch and Alexandria, the atrocities and cruelties of barbarian nations. "In every city bonds and imprisonment." Yet their courage never abated. "They fought the good fight" to the end.

Amidst all fluctuations of the nations, the work has advanced onward. And now, as we in our generation flit down our short pathway of mortal life, the word of God comes to us in our turn, "Whatsoever thy hand findeth to do!" No grander task was ever assigned to man than is deputed to us. To conquer California for Jesus! To set up on high the ensign, whose glorious rays flaming down the evening sky, shall illumine the world! "*In hoc signo vinces.*" Throughout all Christendom, no standpoint of position, or of future influence for the Gospel, is superior to ours. All our labor for Christ is destined to bear directly upon the great result.

We are yet but in the commencement of the work. It was a great mercy that the vast tide of emigration that formerly threatened to overwhelm us was checked. When twenty years ago the mighty surges came rolling in upon us, we could not guide them, we were destitute of churches, of ministers, of all the needful means of grace. But the tide ebbed, and for many years there was scarcely a perceptible increase of population. But now once more there is a heaving ground-swell, showing that the ocean is again gathering its forces for the onset. The attraction of heavenly spheres draws up the enormous mass. Currents from various directions set towards us. A thousand eddies whirl along the line of tide ripples, with irresistible momentum and appalling grandeur, the celestial influence preponderates against inertia and inaction, and drives on the coming events.

And now God's Church is here to give religious direction and shape to all these movements. A large proportion of our agricultural communities possess the means of grace. Our cities abound with spacious and beautiful sanctuaries supplied by a devoted and eloquent ministry. A majority of our children attend our numerous and attractive Sunday Schools. Our organization is complete, and all that is needed is to bring its influence to bear upon the increasing multitudes around us.

We must work; for it is seed time, and the future harvest depends upon our industry now. We must work; for the Angel of the Covenant is coming at the head of countless hosts gathering from all countries to this new land of promise. We must work; for the future is teeming with God's promises, and the world, through the instrumentality of Christians, is to be converted to the Lord. We must work; for "the night cometh, when no man can work."

KNOWLEDGE OF GOD BY FAITH.

It is asserted that reason can grasp and settle questions that pertain to God, as readily as those which pertain to man; that no truth is beyond its powers, since all truths are subjected to essentially the same laws. There is a school of modern philosophers, so called, of whose system this is the fundamental error, and it is working evil on every side. Yet, one would suppose that the least careful thought would detect its fallacy. Notice this claim with reference to the doctrines of the Bible. We are told that it is absurd to place mysteries in a professed revelation, therefore all mysteries are to be eliminated from Scripture; that it is beyond the reach of reason that there should be a union of the divine nature and the human nature in one person, therefore the possibility of this union may be denied; that it is incomprehensible that God should control and determine all events, yet man be free in their accomplishment, therefore the declaration that this is true cannot be believed. In like manner, all doctrines which involve difficulty because of their relation to God, are rejected without hesitation.

Now, so far from being true is it, that a revelation about God should contain no mysteries, there can be no such revelation without mystery. The very conception of intercourse between the infinite and the finite is mysterious. The least of all God's works is unfathomable, for no other reason than because it bears the stamp of God. There is no more difficulty in respect to the truths of the Bible, than in respect to the facts of nature; and in both cases, the difficulty lies in the limited stretch of human powers. Why do the corn-stalk and the lily grow from the

same piece of earth? Why does the apple fall to the ground from its stem? Why does the same food make muscle here, and bone there? You answer very learnedly, by speaking of the *laws* of vegetable and animal growth, and of gravitation. Yet what do you know of these laws, beyond their existence? Every one of them involves mysteries as incomprehensible as that of the Trinity, or the Incarnation, or the harmony of God's decrees and free-will. The demand is preposterous, that the *reason* compass Jehovah, wherever He is studied. It is childish, not philosophical, to refuse to receive what cannot be comprehended. Hence the necessity of some new means of understanding God, and His declaration, which is possessed, as we are assured both by the Bible and the experience of men, by one whose will and character are such as to bring him into spiritual communication with the Deity. This is *faith*, ridiculed, despised, cast out of their systems by self-conceited men, yet honored by God as the only avenue between Himself and his creatures, as respects knowledge of the truths which relate to His Being and manifestations, and known by those who feel its influence to bear them above mere doubt and speculation.

How can an angel know anything about the glorious, eternal, infinite One, before whose throne he bows? He cannot study Him as he studies his fellow angel, for every attribute rises beyond any study. There are no means of knowledge, save as he is taught by the Supreme Himself, through the medium of faith. How can he know the length and breadth and height of those truths which pertain to God's plans and government, except by the same process? Nor can a man on earth attain this knowledge by any other means; and when reason falters and fails, it is gracious condescension that supplies what may supplement its province, and introduce the soul to higher, grander themes, as we are allowed to see and know the great God, and the truths which rest, not on the basis discovered by our faculties, but alone on His authority. This faith is the gift of God to the soul that bears His image; it is the possession only of the pure in heart. No others would be willing to admit it, and no others can. For them, and by this means, the gulf is spanned between the finite and the infinite, as God becomes His own interpreter to them of what reason seeks in vain.

EXTINGUISH THAT LION!

"The slothful man saith, There is a lion without! I shall be slain in the streets!" Bunyan enlarges the idea. His Christian Pilgrim approaching the palace Beautiful, beholds two of these precious beasts, one on each side of the way, ready, as he thinks, to devour him. Terrified at the sight, he forgets all previous commands not to turn back, when, fortunately, the porter at the gate sees his predicament, and calls to him not to be alarmed—"The lions are chained!"

How often we meet these terrible monsters in practical experience. They display their fearful forms at all the avenues of the callings, duties and obligations of life. The school-boy is frightened by seeing the grim visages staring out of his books, his desk, and with shadowy terrors darkening his coming recitation. The ferocious creatures stalk before us in our bargains, our crops, our professional pursuits. But chiefly they abound where a religious obligation rests upon us. In no African wilderness were they ever so numerous or bloodthirsty. When we think of Church on a disagreeable Sunday, we are apt to see a whole troupe of the monsters shaking their manes and displaying their man-devouring teeth before the doors of the sanctuary.

Two or three points in the natural history of these beasts are worth knowing. If it is one of the real brutes that comes in our way, we need not fear him; he is always chained. But they are mostly only shams—scarecrows, by which the devil would terrify us. Put the hand boldly upon them and they collapse into pasteboard and paint. But sometimes they roar horribly. Then we may be sure that it is a donkey in a stolen skin. A bold charge will extinguish that lion.

Current Literature.

A Word for Every One.

The only motive of the author in writing this little book was evidently a desire to do good. It is essentially a religious book, and a good one. No profound learning is brought to the discussion of disputed points in theology, no peculiar denominational doctrines are advocated, and no attempt at fine writing is made; but in a series of plain, pointed remarks on Scripture texts, the sinfulness of man's nature, his need of a Savior, and the power and willingness of Christ to supply all his needs are clearly set forth, and each chapter contains an earnest appeal to the reader to follow the promptings of his better nature and identify himself with the interests of the Christian religion. The author is Rev. Jas. Smith, who states in the preface that "the book is intended to lay on the table in the drawing-room, parlor, hall, or kitchen, that the visitor, servant, or neighbor may take it up and read a portion. It is also suitable as a present to a relative or friend. If you are benefitted by its perusal, circulate it; if you have the means, *give* a few copies away where it is likely to be of use. If you cannot afford to do this, *lend* your own copy, praying the Lord to make it a blessing." M. W. Dodd, New York, is the publisher, and Bancroft & Co. have it for sale. As a fair specimen of the book, from which the spirit of its teachings may be judged, we print the larger part of the chapter on

THE TESTIMONY OF GOD.

"I came to you declaring the testimony of God." (1 Cor. ii: 1.) The Gospel is not a cunningly devised fable, but the very word of God; it is a divine testimony; a message from Jehovah to man. It comes direct from Heaven, and is addressed to us in love. By the Gospel, God testifies to us, that we are totally and entirely lost by nature; that there is neither help nor hope for us but in the Lord Jesus Christ; but that in Him is all we need, or our circumstances require. Christ is all that God can give. Christ has all that a sinner can want. Having Christ, we can want no more; and, if we are taught by the Holy Spirit, we can be satisfied with no less.

The Gospel testifies that we are welcome to all that the fulness of Christ contains, without money and without price. God has set no price upon Gospel blessings, because they are invaluable; He has prescribed no conditions, but given a universal welcome.

The Lord testifies that true faith always produces penitence, and leads to holiness; the believing heart and the weeping eye go together. If we really believe, we daily repent; we cannot repent of sin, except we believe in Jesus; and we do not believe in Jesus, except we repent of sin. Faith produces godly sorrow, and godly sorrow leads to holiness of life. The stronger our faith, the deeper our repentance; and the deeper our repentance, the holier our life. Never be satisfied with faith without a broken heart; nor fancy that the heart is broken, except sin is bitter; and if sin is bitter to the soul, it will be sure to be forsaken. Faith and holiness are indisputable evidences of a title to Heaven. Faith purifies the heart, and the heart reforms the life.

You have heard the testimony of God, you have read it; but do you believe it? Do you perceive its great importance, and receive it into your heart, as a message of love coming direct from God to you? Do you heartily approve of it? Do you act upon it? If you reject the testimony, you treat God with contempt. If you deny the testimony, you give God the lie. If you postpone the consideration of it, you manifest the greatest folly. If you receive the testimony, you set to your seal that God is true. The testimony being sent, man is brought to the test. The testimony being rejected, the doom of man is sealed. Once more the testimony is placed before your eye, and presented to your heart; is it to be received or rejected? Decide!

Messrs. Hosford & Sons of New York, have commenced with the New Year, the publication of a new Monthly, called The Mother at Home. It is edited by Mrs. Henry Ward Beecher, and the first number has articles written by Mrs. Harriet Beecher Stowe, Rev. Henry Ward Beecher, and other eminent contributors to the literature of the country. The object of the Magazine is to increase the happiness and healthful influence of *homes*, and if the beginning may be accepted as an index of what shall follow, its object will be attained. It is fortunate in its publishers, for we know of none more worthy of success, or more likely to succeed in such an enterprise than Hosford & Sons.

Educational.

The Doctrine of Greater and Less.

The mind unpossessed of this cardinal doctrine is sadly deficient. It must suffer constant perplexity, since all things will seem of equal importance to it, and it cannot know readily which to pursue. Or, its efforts must often be wofully misdirected, since they are as likely to be turned upon trifles as things of importance. It reminds one of Hogarth's picture made in contempt of perspective. The remote seems no further off than the near; the little solicits the eye as obtrusively as the great; and the boat on the river below is in danger of collision with the passers on the bridge above. To such a mind, on a farm, the flock of ducks that are "eating their heads off" deserve equal care with the hens that pay for themselves monthly; and there is little difference between the lameness of a valuable horse and the crack in a half-worn double-tree. That some things are small and others are great, in whatever direction we turn our eyes, should be a prime lesson, both in our self-culture and in our training of others. Were we to teach ourselves the art of drawing we could not afford to neglect either the study or the practice of perspective. No more in the art of thinking can we afford to neglect the doctrine of a greater and a less; the vital fact and the underlying principles of perspective in thought. One of the foremost convictions which should occupy our minds, on entering any field of reflection or labor, is this: There are certain matters here which are vital. The next question is, which are these? But the great matter is the first conviction. This is more than half the battle: it is not difficult for the telescope of Galle to find the new planet when Le Verrier had demonstrated its existence. While, without this primary connection, and truth which the man may attain in thought, any success which he may overtake in labor, will be the fruit of accident. It will be chance if, behind the counter, he does not sacrifice a customer to a shilling; if, in teaching, he does not insist as vehemently upon small facts as upon great principles; if, in controversy, he is not led off upon side issues; if, in war, he does not abandon his citadel and sacrifice his army at some out-post; if, in geography, he is not as careful to master the form of a State as the causes of its growth or decline; if, in social life, he does not blend the smiling acquaintance and the substantial friend, the man of words and the man of deeds.

C. R. C.

Boys' Compositions.

On Boils.—A boil is generally very small at first, and a fellow hardly notices it, but in a few days it gets to be the biggest of the two, and the chap that has it is of very little account in comparison with his boil, which then "has him." Boils appear mysteriously upon various portions of the human body, coming when and where they please, and often in very inconvenient places. Sometimes a solitary boil is the sum total of the affliction, but frequently there is a "rubishin' lot of 'em" to help the first one. If a boil comes anywhere on a person, that person always wishes it had come somewhere else, although it would puzzle him to say just where.

If a chap has a boil, he generally gets a good deal of sympathy from others—"in a horn." Whoever asks him what ails him laughs at him for his pains to answer, while many unfeeling persons make game of him, or of his misfortune, or boil. It is very wicked to make sport of persons with boils, they cannot help it, and often feel very badly about it. Physicians don't give boil patients much satisfaction as a general thing, although young physicians who are just beginning to practice are fond of trying their lancets on them. Boils are said to be "healthy," and judging from the way they take hold, and hang on, and ache, and burn, and grow, and raise Cain generally, there is no doubt that they *are* healthy and have good constitutions. They are generally very lively and playful at night, and it is very funny to see a chap with a good large one, prospecting around his couch for a place where his boil will fit in "without hurting." Boils tend to "purify the blood," strengthen the system, calm the nerves, restrain profanity, tranquilize the spirits, improve the temper, and beautify the appearance. They are good things for married men who spend their evenings away from home, as they give them an opportunity to rest their night keys and get acquainted with their families. It is said that boils save the patient "a fit of sickness," but if the sickness is not the best to have, it must be an all-fired mean thing. It is also said that a person is better after he has had them, and there is no doubt that one does feel much better after having got rid of them. Many distinguished persons have enjoyed these harbingers of health. Job took the first premium at the County Fair for having more achers under cultivation than any other person. Shakespeare had them, and meant boils when he said, "One woe doth tread upon another's heel, so fast they follow."

There are a great many remedies for boils, most of which are well worth trying, because, if they don't do any good, they don't hurt the boils. If a chap goes down street with a boil, every man he meets will tell him of "a good thing for it, among which are—Shoemaker's-wacks, Mrs. Winslow's Sirup, Trix, Spaulding's Glue, Charlotte Russe, Gum Drops, Water Proof Blacking, Night Blooming Cereus, Chloroform, Kissengen, &c., &c.

On Dogs.—"Dogs is usefuller as cats. Mice is afeard of cats. They bite 'em. Dogs follers boys and catches a hog by the ear. Hogs rarely bite. Sheeps bite people. People eat hogs but not the Jews, as they and other animals that doesn't chew the cud isn't clean ones. Dogs sum times get hit with boot jacks for barking of nites. Sleepy people git mad and throw at em. Dogs is the best animal for man; they do more for man than growned hogs or koons or gotes. Gotes smell. The end."

On Moonlight.—"'Twas a calm still night; the moon's pale light shone soft o'er hill and dale. Not a breeze stirred; not a leaf stirred; not a dog stirred; not a horse stirred; not a man stirred; not an owl stirred; not a hog stirred; not a cow stirred; not a sheep stirred; not a cat stirred; not a mouse stirred; not a hen stirred; not even a goose stirred." Here the teacher interrupted, with the observation that the composition appeared to relate more to agriculture than moonlight.

Personal.

Rev. A. M. Stewart, a regular correspondent of The Occident, has obtained a dismissal from the Presbytery of Philadelphia, and has joined the Presbytery of Sierra Nevada.

REV. J. S. BUCKNER retires from the pastorship of the Baptist church at Woodbridge, not considering $150 a year an adequate salary. He is willing, however, to do his share in supporting another man at $1,000.

NED BUNTLINE, it seems, has not yet gone East as reported. He is giving entertainments in the interior, and the unfortunate people of the East are obliged to wait.

REV. T. CHIVERS of Chico, and REV. W. FREAR of Santa Cruz, are among those who have been recipients of donations during the past week.

REV. DR. BANNISTER of Alameda, is reccommended by the Methodists as a suitable man for President of the University.

REV. MR. EASTON is giving a series of Sunday afternoon lectures, on the "Primitive Christians," to the people of Santa Cruz.

REV. J. R. HAMMOND of Placerville, is on his way to this State from the East, where he been visiting for his health.

REV. DR. MOOAR of Oakland, has had his salary raised to $3,000 per year, by the members of his congregation.

REV. GEO. WHIPPLE of the Sandwich Islands, has received a call from the Episcopal church at Santa Rosa.

BISHOP KIP confirmed nine candidates at St. John's Episcopal Church at Misssion Dolores last Sunday.

GEO. FRANCIS TRAIN is making progress on his way to California. He was at Omaha at last accounts.

REV. DR. ATKINSON, of Portland, Oregon, is preaching in the East on the religious needs of our coast.

MR. J. C. PELTON has been elected to the position of Sub-Master in the Mission Grammar School.

REV. J. B. KNIGHT has been preaching with success at the Baptist church at the Mission.

MR. L. H. WAKEFIELD has been confirmed as Postmaster atPortland, Oregon.

HOW TO MEND TIN DISHES.—A hole in a tin dish may be mended by cleaning around its edges, sprinkling on a little rosin, putting on a lump of solder, and heating the other side with a lamp, or otherwise, until the solder melts.

FROM the Army Hospital; the bloody battle-field; the mansions of the rich, and the humble abode of the poor—from the office and the sacred desk; from the mountain-top, distant valley and far-off islands of the ocean—from every nook and corner of the world, is pouring in the evidence of the astonishing effects of DRAKE'S PLANTATION BITTERS. Thousands upon thousands of letters like the following, may be seen at our office: * * * * I have been in the Army Hospital for 14 months, speechless and nearly dead. At Alton, Ill., they gave me a bottle of Plantation Bitters. Three bottles have made me well again. C. H. FLAUTE.

PRESBYTERIAN BOARD OF PUBLICATION.

THIS popular and extensive house publishes a great variety of works in all the departments of

Religious Literature,

Including,

COMMENTARIES, ANNOTATIONS, RELIGIOUS HISTORY, RELIGIOUS BIOGRAPHY, SERMONS, BIBLE DICTIONARIES, CHILDREN'S BOOKS, QUESTION BOOKS, CATECHISMS, DEVOTIONAL BOOKS, ETC., ETC.

Particular attention is called to their large and varied assortment of the most carefully selected

SUNDAY SCHOOL LIBRARIES.

Sunday School Teachers and Officers, and others who have charge of supplying Schools with Libraries, will save themselves much trouble in selecting, and will insure to the Schools under their charge a suitable collection of Books by calling to examine this stock.

Among the HYMN BOOKS published by the Presbyterian Board may be noticed the

PRESBYTERIAN PSALMODIST, PRESBYTERIAN JUVENILE PSALMODIST, CHILDREN'S PRAISE, AND

THE HYMNAL,

One of the latest and most popular collections of Hymns and Tunes, and one admirably adapted to the general introduction of

CONGREGATIONAL SINGING.

Persons in want of the above varieties of books may procure them at reasonable rates by calling at the DEPOSITORY OF THE PRESBYTERIAN BOARD for the Pacific Coast, which has been established at the store of

H. H. BANCROFT & COMPANY,

The Hog.

O, much abused and much despised beast!
Men slight thee most who know thy merits least;
Who would make LIGHT of thee, should TRY thee first,
Then with thy praise they'll inter-LARD their verse,
Without thy presence at the festive board,
Tickling the palate of creation's lord,
In bake, or fry, or even in a stew,
Pray what could we or our good housewives do?
Sore grief would seize on many a bosom stout,
If by perchance, the hog should once "step out;"
And life become, 'mid all its varying scenes,
Like Sunday morning without PORK AND BEANS!

On beef and mutton Englishmen expand,
But pork's the crowning glory of our land—
Pigs are true patriots—in the Buckeye State
They die to make the Cincinnati great.
Pork to the Jews is every way unclean,
Howe'er prepared, with or without his bean.
Though Paul felt free from Moses here to swerve,
The Jew still deems it binding to observe,
We go with Paul—as every one supposes—
As for the *Jew*—why, he may go to *Moses*!

—*Observer.*

Horse Hints.

The London *Horse Book* gives these directions for feeding and other treatment:

All horses must *not* be fed in the same proportions, without due regard to their ages, their constitutions, and their work, because the impropriety, of such a practice is self evident, yet it is constantly done, and is the basis of disease of every kind.

Never use bad hay on account of its cheapness, because there is not proper nourishment in it.

Damaged corn is exceedingly injurious, because it brings on inflammation of the bowels and akin diseases.

Hay or grass alone will not support a horse under hard work, because there is not sufficient nutritive body in either.

When a horse is worked hard, its food should chiefly be oats; if not worked hard, its food should chiefly be hay; because oats supply more nourishment and flesh-making material than any other kind of food; hay not so much.

For a saddle or a coach horse, half a peck of sound oats and eighteen pounds of good hay is sufficient. If the hay is not good, add a quarter of a peck more oats. A horse which works harder may have rather more of each; one that works little should have less.

Rack feeding is wasteful. The better plan is to feed with chopped hay from a manger, because the food is not then thrown about and is more easily chewed and digested.

Sprinkle the hay with water that has salt dissolved in it, because it is pleasing to the animal's taste and more easily digested. A teaspoonful of salt in a bucket of water is sufficient.

Vetches and cut grass should always be given in the spring to horses that can not be turned out into the fields, because they are very cool and refreshing and almost medicinal in their effects; but they must be supplied in moderation, as they are liable to ferment in the stomach if given largely.

Water your horses from a pond or stream, rather than from a spring or well, because the latter is generally hard and cold, while the former is soft and comparatively warm. The horse prefers soft, muddy water to hard water, though ever so clear.

A horse should have at least a pail of water morning and evening, or, still better, four half pailfuls at four several times in the day, because this assuages his thirst without bloating him. He should not be made to work directly after he has a full draft of water, for digestion and exertion can never go on together.

Do not allow your horse to have warm water to drink, because if he has to drink cold water, after getting accustomed to warm, it will give him colic.

When your horse refuses food, after drinking, go no further that day, because the poor creature is thoroughly beaten.

Just men alone are free—the rest are slaves.

An Aim in Life.

There is nothing so important to a young man when he has reached the age at which he begins to look out for himself as a distinct and definite aim. Young men are apt to think only of present maintenance and gratification. If they can obtain sufficient to clothe them according to their taste, enough to eat, and money to spend, they are too apt to be satisfied. Such characters, or such evidences of the want of character in young men, will never allow them to rise above the position of dependents; they must ever remain as servants and hirelings, and cannot achieve that independence of fortune which is the reward of patient industry and forethought. It should be the desire of a young man to have a home of his own; and, if he be a farmer, a farm free from encumbrance and a surplus of money, which, together with the products of his farm, shall yield him comfort and support in his declining years. Such a man is independent. In the possession of a home and lands, however few the acres, he can feel an ease and security which the monarch with all his grandeur might envy.

The thriftless man labors as hard, although with no such aim. He enjoys not the satisfaction of feeling that he is securing, day by day, and year by year, a home and possessions, of which he himself will be the independent owner when he will no longer be subject to the bidding of others. Then, when the realization comes; when he can rest peacefully at night beneath his own roof, or sit beneath the shade of the tree that beautifies his own home, peace and plenty crown his days, and enjoying the fruit of his own labor, he numbers his days.

Identifying Sheep—An English paper tells of a curious custom still kept up in that country. It says;—The half yearly gathering of the shepherds whose flocks browse on the extensive range of hills going through Derbyshire, Yorkshire, and Cheshire, has just been held. The place of meeting was at the house of Mr. Taylor on the Scatterbrook Road. The shepherds brought with them nearly 100 sheep, which during the past six months had ranged from one flock to another, and which were identified by those present. After a substantial dinner had been partaken of, the interesting custom of singling out the truants began. Some 80 or 90 dogs were also in attendance, and as the sheep were let out a curious scene presented itself to the visitor. The dogs jumped among the sheep, barking at them and every now and then singling out their old acquaintances with remarkable sagacity. The shepherd, thus aided by his dog, managed to identify his own, and in the course of an hour the whole had been restored. The dog then took charge of the truants, and, in advance of their masters, drove them toward their respective stations, in some instances a distance of 20 miles. It is said that these gatherings have existed for more than 100 years, and that very few sheep are not by this method restored to their owners.

Accuracy in Farm Experiments.—On a great variety of subjects connected with farming very much can be learned by simple experiments, such as farmers can try with little expense and trouble. Questions as to the depth seeds should be planted, or the distance between plants, the time for performing different farm operations, the comparative yield of different varieties, the kind, quantity and quality of food for animals, etc., can be settled much more satisfactorily by experiments than by reasoning on general principles, or theorizing, valuable as they may be. But care should be taken to have the results fully established before accepting them finally. A common mistake is in drawing conclusions from perhaps a single experiment, when a considerable number should have been tried.

Such experiments lose much of their value if there be any guess-work about the preparation or the result. We remember to have had an account sent us of an experiment in which "about a pint of wheat had been sown in rows about a rod long, and the yield was a little over," etc. Had just one pint been sown in rows exactly a rod long, and at an exact distance from each other, and the exact result ascertained, some practical value would have been attached to the experiment. —*Western Rural.*

Reading for Farmers' Boys.—An intelligent and thrifty farmer says: "But for the co-operation of my boys, I should have failed. I worked hard, and so did they. The eldest is near twenty-one; other boys, in the neighborhood, younger, have left their parents; mine have stuck to me when I most needed their services. I attribute this result to the fact that I have tried to make home pleasant for them. I have furnished them with attractive and useful reading; and, when night comes, and the day's labor is ended, instead of running with other boys to the railway station and adjoining towns, they gather around the great lamp and become absorbed in their books and papers."

Such is substantially the testimony of a farmer who has known how hard the struggle for a footing on free soil without a capital is, and how valuable and comparatively cheap are the aids which good reading brings him.

A western gardener asserts that the best kind of molasses can be manufactured from the watermelon.

Weekly Market Report.

Wednesday, January 27, 1869.

Flour—Sales of 300 bbls Commercial (Oregon) Extra, part to arrive, current rates. Sale of 2,000 qr sks Superfine, for China, private. We quote local brands as follows: Superfine, in sks, ₱ 196 lbs, $4 75@4 87½. Extra in sks, $5 75@$5 87½.

Wheat—Sales include 500 sks fair shipping, $1 70; 700 sks good do, 1 75. At the close, 2,000 sks fair milling, $1 55; 200 sks good, $1 75. Choice grades are scarce and wanted by millers at $1 75@1 77½ ₱ 100 lbs.

Barley—Continues heavy at $2 15@2 25 for fair to choice feed, and $2 25@2 35 ₱ 100 lbs for brewing.

Oats—Sales of 1,000 sks Oregon, $2 20; quotable at $2 20@2 35, and California at $2 10@2 25. Sale of 300 sks bright California $2 25 ₱ 100 lbs.

Corn—Yellow ranges from $1 80@2, and White from $1 90 to $2 15 ₱ 100 lbs.

Potatoes—Market quiet at 65@75c for Humboldt. Sale of 150 sks Petaluma, 70c ₱ 100 lbs.

Onions—Sales of 100 sks Yellow, in lots, $2 75 ₱ 100 pounds.

Beans—Since last Wednesday, jobbing rates for first quality have been advanced 1@2c ₱ lb all round. We quote as follows: Bayo, 5½c; Butter, 6½c; Pea, 8c; small White, 7½c; Pink, 5c; Red, 3½@4c ₱ lb.

Rye—Quotable from first hands at $3 50@3 75 ₱ 100 lbs.

Buckwheat—Small sales at $3 ₱ 100 lbs.

Mustard Seed—Good California Red is nominal at 3c, and 4½@5c ₱ lb for English White.

Flax Seed.—The local mill continues to pay 4c ₱ lb for a good article.

Bran—Sales of 50 tons, in lots, at $22 50 ₱ ton.

Middlings—Feed descriptions sell at $28@32, and fine at $35 ₱ ton.

Oil Cake Meal—In moderate request at $35 ₱ ton.

Hay—Ordinary to fair qualities range from $10 to $13, and good to choice from $14 to $17 ₱ ton.

Hops—Nominal at 25@30c ₱ lb for California.

Dairy Products—California fresh roll Butter is active at 47½@52½c, and Eastern firkin 40@42½c for jobbing lots; Cheese, 19@20c for California, and Eastern, 18@22c ₱ lb. Eggs, 37½@42½c as extremes, the medium quotation being 39c; Oregon Eggs, 27½@30c ₱ doz.

Poultry—Live Turkeys are quoted at 16@17c, and dressed do, 18@20c ₱ lb; Hens and Roosters, $7@7 50; Spring Chickens $5@6; Ducks, $6@7; Geese, $12@15; Quail, $1 @1 25 per dozen.

Provisions—Bacon jobbing at 14c for California smoked; Oregon do, 14½c; California Hams, 14½@16c; Oregon do, 15@16c; California Lard, 12½@13½c. At the close, 30 kegs Oregon 11½c ₱ lb.

Wool—The stock is reduced to a nominal quantity, and hence there is no activity; clean shipping grades are quoted at 18@19c; burry at 13@15c ₱ lb.

Hides—California Dry are quoted at 15@15½c, with sales of 2,000 since last Wednesday within the range; salted, 7c@ 7½c ₱ pound.

Tallow—Fair to choice Beef is quoted at 7¾@8¼c ₱ lb, with sales for the week of 20,000 lbs Good Beef at 8c ₱ lb.

Ripe Fruit—Of the 2,700 boxes Oregon Apples, per Continental, only 119 boxes inferior sold yesterday at 75c; balance will be offered this afternoon.

San Francisco Cattle Market.

We quote slaughterers' prices as follows:

Beef—American, 1st quality, 10@12½c ₱ lb.
do 2d do 9@10c ₱ lb.
do 3d do 8@10c lb lb.

Mutton—First quality, 9@10c; second quality, 8@9c ₱ pound.

Lamb—Scarce. Sheep, lamb-dressed, sell at 10 ₱ lb.

Pork—Undressed, 5½@6c; dressed, 7½@9c ₱ lb, as extremes, with 8@8½c lb lb as medium quotations for milk or grain fed.

—*S. F. Bulletin.*

PRACTICAL MISCELLANY.

CHILDREN'S TEETH.—The first tooth appears in six months, in the third year all are cut, between the seventh and twenty-first year all the permanent teeth have made their appearance; the value of the latter depends greatly on the care taken of the first set; and as the looks, health, and happiness are all materially modified by good teeth, intelligent and affectionate parents will look to the teeth of their children as early as the third year, when, instead of being allowed to eat meat, they should mainly be fed on fruits, vegetables, and bread made of wheat, corn, or rye ground coarsely, using the entire product, bran and all, because in the bran is found almost exclusively the solid material which is to make the bone or the body of the tooth and its covering, called the enamel.

The child should be taught at five to dampen the brush in water every morning, rub it over a cake of castile soap, and then brush the teeth well, inside and out, front and rear, until, with the aid only of the saliva, the mouth is full of soap-suds; then rinse with tepid water, twirling the brush sideways over the back part of the tongue, so as to cleanse it fully of the soap and leave good taste; after each meal the mouth should be well rinsed with tepid water as also the last thing on retiring; the mouth maintains a temperature of ninety-eight degrees; hence, if any food lodges about or between the teeth, it begins to rot very soon, giving out an acid, which immediately begins to eat into the tooth, preparatory to an early decay; if solid particles are observed to lodge between the teeth, the child should be taught to use a very thin quill to dislodge it, but not without; for the more a quill is used the greater space between the teeth, which is a misfortune, as it necessitates, the use of a tooth pick for all after life, consuming a great deal of valuable time. A clean tooth does not decay. Acids and sour fruits always injure the teeth instantly; sweets never do; without them children would die, hence their insatiable instincts for sugar. If a tooth powder was never used the teeth would not be so white; but kept perfectly clean, would last for life. —*Dr. Hall's Health Tract.*

WHERE TOYS ARE MADE.—All the cheapest class of toys are of foreign make. Penny toys come from Germany; they have their birth in the black pine forests of Thuringia. The Dryads and Hamadryads are not dead, but sleeping. What roars of laughter spring from those old gloomy pine woods! The great toy capital is Sonneburg, where men, women and children, are employed upon their production. The cost of toys at the place of manufacture is infinitesimally small. The wood—the only material of which they are made—is nothing: two-pence-half penny a tree. The labor is scarcely more valuable. Toys in these old forests, are made on the most modern principle of division of labor. Any toy we may take up has gone through half a dozen hands. By this means great rapidity is attained in their manufacture, and the prime cost at home is less than a third of a penny. The transit along mountain roads, and by water-carriage to Rotterdam, whence they are conveyed by steam to England, costs more than their actual manufacture, but yet there is a profit left to the vendor. These are the true smashing toys; but the more expensive, highly finished and elaborate ones still come from Germany or the adjacent countries. Great numbers come from Grunheinscher, in Saxony, but the town of Nuremberg maintains its old monopoly for metal work, even in the matter of toys. All the leaden soldiers in boxes are sold here, whilst the tin railroads and locomotives and steam vessels of every primitive character and form, come from Biberach, in Wurtemburg. The cuirasses and helmets, and guns, come from Hesse Cassel, a highly military little kingdom, and from its big neighbor, Prussia, we have the very pretty toy interiors, shops, drawing-rooms, and other interiors, fitted with model furniture and goods. —*Travels Abroad.*

CONSUMPTION INFECTIOUS.—We have now in our mind cases of husbands having their first cough when "inhaling the breath of their sick wives," while ministering to their necessities. We have known daughters and sisters, who, full of apparent health and strength, when consumption has seized a mother or sister, have continued to sleep with the invalid, and to breathe the same closed-up atmosphere at night and to watch all day without perhaps a moment of healthful out-of-door exercise. And we have been distressed to find not a few of such healthy young persons gradually beginning to suffer with indigestion, debility, and finally cough, and all the symptoms of consumption. In some instances, in fact, the attendant has died before the life of the original patient has ended. These facts are very significant, and although we are well aware that in some of them other elements of disease may have had their fatal influences, still the cases have been full of suggestions as to the necessities of greater precautions than we in this country have usually taken in this matter.

—*Dr. Bowditch in Atlantic Monthly.*

A NEW ARTICLE OF TRADE.—A gentleman in coming up the Rappahannock a few days ago, had his attention attracted to a singular pile of roots on one of the wharves along the river. It appears that the roots are what is known as ivy in that section, and in other quarters as laurel. The roots were intended for the Philadelphia market, where they are dressed, boiled in oil, and then manufactured into the bowls of smoking-pipes. About four tons of these roots were on the wharf, and had cost $150 in the way of labor for digging. The owner of them said that they were sold, and that he had realized $450 for the four tons.

—*Fredericksburg Herald.*

BLEEDING AT THE NOSE.—A writer in the *New England Farmer* says:

"I have an excellent remedy for bleeding at the nose, which I have never known to fail in our family. I have never seen it in the *Farmer*, and think every one ought to know so simple a remedy. Take a piece of brown paper, fold it several times, until it is the size of a small penny, then wet it in cold water, and apply it to the little string under the *upper* lip, holding it there until the blood ceases to flow, which will be almost immediately."

DEATH CAUSED BY QUINCES.—A French paper contains an account of the death of a lady who slept in a room in which were also kept a quantity of quinces. In this case, according to scientific evidence, the air of the room was largely vitiated with a peculiarly suffocating perfume, and a very considerable amount of both carbonic acid and carbonic oxide gas. The room in question was always used as a bedroom; no fire had been lighted in it, nor was any other discernible cause for the death of this lady found but the exhalations of the fruit.

To take rust out of steel, rub well with sweet oil and let the oil remain upon it for forty-eight hours. Then rub with leather sprinkled with unslaked lime, finely powdered, until all the rust disappears.

OUR God requireth the whole heart or none;
And yet He will accept a broken one.

Books

Of all kinds, on all subjects, conveniently classified, occupy one half of the first story and the entire second floor of BANCROFT'S BOOKSTORE.

Stationery

Of every description, including all kinds of Writing Papers, Envelopes, Inks, etc., is sold at wholesale and retail at BANCROFT'S.

An Old Friend.

But a line in a daily paper
Thousands of eyes would see,
And careless pass the record by
That gives such pain to me.

Yet our lives had drifted far apart—
Mine at my ingle side;
And his, who, I read in the *Post* to-day,
"On the 4th of October died."

And ours, was a quiet liking,
A simple, friendly bond;
It was pleasant to meet, and light to part,
And never a thought beyond.

Yet as I read those words to-day,
Through a sudden mist of tears,
The fair, frank face, and the bright blue eyes
Gleamed out through the cloud of years.

Ah, well! it had passed away from mine,
The life that is closed at noon;
And I who forgot to watch its course,
Will forget its setting soon.

For the world goes up and the world goes down,
And the young succeed the old;
And the April sunshine gilds the buds
That spring from the churchyard mould.

And eyes that of old have answered mine
Will sadden as mine have done,
As they glance some day down the list and read
That my earthly race is run.

Well, I scarce can frame a kindlier wish
Than that every lip will say,
"God rest her soul!" as earnestly
As I breathe it for his to-day.

—*English Paper.*

Are We Inferior?

Such is the title of an article in the *Galaxy*, written by Sarah E. Henshaw, who evidently is firm in the belief that "we are not inferior." The article is well written, and the following extracts are worth reading:

It is probable that man's "unaided reason" never will discover the process by which a woman reaches her conclusions. For it is different from his, and he has no clue by which to unravel it. He cannot comprehend it because he cannot reproduce it. Woman can learn and can practice the modes of man's reasoning, but he cannot return the compliment. Her *modus operandi* is incommunicable. Her faculty is, like the poetic—born, not made.

The difference between them does not lie in any difference of their mental powers as to quantity—as, whether one has more and the other less—whether the capacity of the one is equal to a pint and the other to a quart, so to speak. This sort of measurement is equally applicable between man and man, as between man and woman.

Nor does it consist in quality. Comparison and reasoning in man are equally comparison and reasoning in woman, and a given woman may possess a superior ability in that or in any other direction, to a given man.

Nor is it enough to say that one is slow and the other quick, as though a difference in speed were the main difference between them. This again no more than the idea of quantity or quality, supplies the desired distinction.

The difference lies in their mode of mental action—in the way in which they use the same mental powers. The mind of man moves analytically—that of woman syntheticlly. He approaches his conclusion step by step through a slow and sometimes devious way of reasoning, and reaches it by degrees of approximation. She darts upon hers at once, is sure of it instantly, she does not know how, and *afterward* seeks to prove it. He reasons toward, and she from the same conclusion. So when he gets to it he is surprised to find that she has been there before him, and she is equally surprised that the journey has taken him so long. He, with infinite pains-taking, makes out and declares a general law; she, by her perception, at once affirms or denies it. His finding of truth is of the nature of a discovery, hers of the nature of a recognition; he deals in proof, she in intuition; his is sight, hers insight.

Given an intellectual circle to find the centre, man starts from the circumference and follows up the different radii until he satisfies himself that he has discovered it, and does not presume to decide where it lies, except by the proof of actual measurement. Woman, on the contrary, "with wings as swift as meditation or the thoughts of love," alights at one bound on a point which she declares to be the centre, and then for the proof follows up the radii to the circumference.

If a woman has not been trained to the use of her own mental powers, or if she has not thought out her chain of reasoning, it thus happens that she often knows (or what is the same thing to her, feels sure of) a truth which she cannot prove. Indeed such an experience is probably not unknown to most women. What woman has not at times despaired of making clear to a male comprehension, something perfectly evident to her own mind? The most intellectual man, therefore, seems at times to a woman singularly dull—the most intellectual woman appears to a man at times singularly unreasonable.

And yet, because woman's faculty is akin to genius, man must always have the conduct of the world's affairs. The masculine understanding is the one that must give form to the outward life. It is best adapted to such a work, and as such always asserts itself; for when was genius ever practical? It is of its very nature to deal with results and to overleap processes; to gaze on the purple mountain-top afar, and to ignore the valley that lies between. And so, for each generation, as long as the question is one of standards and ideals as it is in childhood and youth, so long woman is the guiding light; as soon as it becomes one of methods and of practical ways and means, then the masculine understanding leads the way. An elder sister with younger brothers—a mother with sons, is often taken by surprise with this fact. She who was the head and counsellor finds her relations to them somehow reversed, and in a few years goes to them for the advice which they formerly sought from her. So with a circle of young friends. As they develop and go out into life, the masculine understanding unconsciously assumes its appropriate place, and the admiring boy who was liked and partially patronized by his female companions, becomes the large minded, indulgent man to whom they in their turn look up. Blindness to this inevitable reversal is the secret of much surprise at marriages and of many failures to marry. The precocious girl does not recognize in her unfledged lover the man that is to be, and wonders when she hears that some woman has afterward found in him that which she failed to perceive.

Beyond everything, man admires his own reason. Not a book except the divine one but either expressly or impliedly pays it adulation. Contemplating it, he goes into raptures. Swelling with pride, he exclaims, "See how great and how wise I am! I thank thee, O Lord! that I am not a brute, or even as this woman!" If one of his philosophers, under the irradiation of approaching dawn, speaks of himself as only a child who has been picking up pebbles on the dim earthly shore of truth, the story is repeated as if the admission was an infinite condescension. Man's philosophy is a jargon, but it seems to himself divine speech. His teachings are confused and contradictory, but they seem to himself divine order. With gravest dignity he lays down, in his schools of philosophy, every imaginable absurdity. His understanding is of the earth, earthy. What he can touch, and taste, and handle, and carry to market, *that* he believes in. The physical sciences and mathematics he can manage.

But he will not believe what he cannot so touch and handle, and his proof extends not far. He cannot prove immortality, so he denies it. He cannot prove the existenc of the outside world, so he denies that. He cannot prove a Creator, so he denies Him. He invents logic, and proves by its help everything and nothing. In philosophy he is like an insect crawling hither and thither to the bounds of his small sphere, and declaring that there is nothing besides, and what he cannot see does not lie beyond.

He carries his reason into religion, and makes confusion worse confounded. He tells you that you can and cannot; that you may and shall not; that you must and you are not able. He assures you that you are responsible for what you cannot help, and that you are to be punished for what you never did. He gives you German Rationalism, French Positivism, English Ritualism, and general scepticism, as the highest products of his reason. And he calls this wisdom. He expects woman to admire and worship him as being wiser than she. But delude himself as he may by his pretensions, he does not delude woman. She by no means seeks to reason away his reasonings—she simply brushes them aside, and believes and acts by the light of her own higher faculty. For while in things of outward life, man's understanding must take precedence, in that which appertains to truth, woman's is the better guide. Hers is the divining cup whereby the lord of the world divines. Her faculty was meant for reference, for consultation, for prophetic perception, which should point the way of the world.

HUMOROUS.

Professional Jokes.—An exchange has sifted these together:

The physician strolls through a churchyard; he is accused of visiting his former patients there; he reproves the sexton for some blunder; the sexton urges in mitigation that he has *covered* a great many of the doctor's mistakes; it is a significant fact that his very prescriptions are written in a dead language.

"I hope you have followed my prescription?" he asks.

"If I had, I should have broken my neck, for I threw it out of a third-floor window," is the matter-of-fact reply.

A lawyer leaves the money he has made by his profession to a lunatic asylum, "as an act of restitution, the people who go to law being mostly of that class." He proposes as a toast, "the man that makes his own will." He invariably eats the oyster while the litigants get the shells.

"What is honesty?"

"No business of yours!" is the reply.

But even to the grave he is in bad odor, and when a shilling subscription is raised to bury him—

"What!" says Chief Justice Norbury, "only a shilling to bury an attorney? Here, take this guinea and bury one-and-twenty of them!"

A preacher gets wet through in his ride to church. He is told he will be dry enough in the pulpit. when there, he is overcome with emotion, which a Scotchman explains by saying:

"It's yersel' wad be greeting (sobbing) too, gin ye found yersel' there wi' as little to say as he has."

"What do the Arabs of the desert live on, Pa?" asked a roguish girl of her father.

"Fudge! Nelly, that's an old conundrum. They live on the *sand which is* (sandwiches) there."

"Yes, but Pa, how do they get them?"

"Well, really, Nelly, you have me there. I give it up."

"Why, Pa, don't you know that the sons of Ham are *bred and mustered* in the wilderness?"

"Come, come, my daughter, that is too killing; don't say another word."

"Oh, yes, do tell me what they eat on their sandwiches."

"Eat on 'em! why; what do they eat on 'em?"

"Butter, to be sure."

"Butter! How do they get their butter?"

"Why, you know, Pa, that when Lot's wife was turned into a pillar of salt, all the family *but her* ran into the wilderness!"

The Great Trouble.—In 1793 a delegation from the western part of Massachusetts was sent to confer with one of the Boston clergymen, as to how he got along with the doctrine of the "perseverance of the saints," which troubled them exceedingly. His suggestive reply was:

"My dear friends, it is the perseverance of the sinners which causes me all my troubles."

A convenient way of testing the affections of your intended is to marry another woman. If she don't love you, you learn it at once.

THE song, "Dear Mother, I've Come Home to Die," always struck us as a happy illustration of American assurance. Our young people go abroad to spend the hard earnings of the old folks, and, when they are dead broke, return home to be buried at the expense of their impoverished parents.

"I SAY, landlord, that's a dirty towel for a man to wipe on!"

Landlord, with a look of amazement, replied:

"Sixty or seventy of my boarders have wiped on that towel this morning, and you are the first one to find fault."

"DID you know," said a cunning Gentile to a Jew, "that they hang Jews and jackasses together in Portland?"

"Indeed!" retorted Solomon, "den it ish vell dat you and I ish not dere."

"I AM afraid you have a settled melancholy," said a landlady to a cadaverous lodger.

"No, madam," he replied, "my melancholy won't settle; like your coffee, it has too much grounds."

A BAD HABIT.—A clergyman of Springfield who has a bad habit of adding "ah," to many of his words, told, last Sunday, of "those who have been brought up on the Lord's side ah!"

WHAT is the difference between homicide and killing a pig? One is an assault with intent to kill; the other, kill with intent to salt.

WHAT is the difference between an editor and his wife? One sets articles to rights; and the other writes articles to set.

A KIND of cattle census taken in Texas gives, in round numbers, 5,000,000 head.

WILL REMOVE, January 1st, to No. 21 KEARNEY STREET near Market.

THE FAMILY PAPER OF THE PACIFIC COAST.

THE OCCIDENT.

In every true home there should be found a first class family paper—one to whose coming, father, mother, children will look with eagerness each week. Such a paper is

THE OCCIDENT.

Let all who desire such a paper, and are asking, "What paper shall I take?" read the following statement of facts:

THE OCCIDENT contains a greater amount and variety of reading matter than any other family paper on the Coast. It contains choice selections for all classes of readers. Both the child and the person of cultivated literary taste will find in each number matter which cannot fail to be interesting.

THE OCCIDENT is extensively quoted. No other weekly paper on the Coast furnishes so much matter, either original or selected, to the columns of other papers. Whole columns are frequently taken from one or another of its departments. No stronger proof of its excellence could be desired than the fact that it is so well appreciated by contemporaries.

THE OCCIDENT has a complete Agricultural Department, carefully culled from the best authorities, with all the current agricultural items of our own coast, and full market reports. The Mining Department is also very complete.

THE OCCIDENT gives a summary of Pacific Coast news and of Eastern and Foreign Telegraphic News. These items are not hastily thrown together, but are carefully prepared, and are consequently copied to a great extent. The Personal Department is the most complete collection of personal news to be found in the State.

THE OCCIDENT is the official organ of all branches of the Presbyterian Church, and contains full religious intelligence concerning the progress of all denominations. Although a religious paper, it is not sectarian. Its aim is to make men better and happier by the inculcation of the principles of the Christian religion.

THE OCCIDENT is universally admitted to surpass all other papers in the State, in typographical appearance and systematic arrangement of its contents.

Read what the papers say of

THE OCCIDENT.

"Has commenced its second volume, enlarged and improved and with excellent prospects. It is full of 'knews,' views, and family reading, and is ably edited."—*Brooklyn (N. Y.) Union.*

"It gives evidence of ability, tact, and judgment in its management."—*Cincinnati Presbyter.*

"An able paper of the same form as the *Statesman*."—*Philadelphia Statesman.*

"One of the best of papers."—*Zion's Herald, Boston.*

"Well filled with readable articles. An important accession to the literature of the coast."—*S. F. Bulletin.*

"Its typographical appearance is finer than that of any weekly paper published on this coast."—*Chronicle.*

"A periodical worthy of patronage."—*Sacramento Union.*

"It is already attracting a great deal of attention. Its original articles and judicious selections make it an intellectual treat."—*S. F. Fair Press.*

"The ability displayed gives promise of success."—*S. F. Times.*

FAMILY READING.

Tell us A Story, Sister,

Tell us a story, sister;
Please tell us only one,
The fire is burning brightly,
And every task is done.
The earnest little pleaders
Had gathered round my knee;
Those roguish baby faces,
So full of childish glee.

Then Charlie cried, "Of goblins
Or ghost, pray quickly tell!"
"O no," said Nell and Minnie,
"We know them all so well.
We love to hear of children,
Who, always young and fair,
Played with the tiny fairies,
And never knew a care."

Sweet Lily, Mother's darling,
With thoughtful dove-like eyes,
Soft whispered, "Tell us, sister,
Of Jesus in the skies."
I told the "old, old story,"
Of Christ, the undefiled,
Who fought his battle bravely,
Though wicked men reviled.

Then silence fell upon us;
I breathed a fervent prayer,
"That God would grant his blessing
Unto the sleepers there,
And keep their hearts unsullied,
Free from each earthly stain,
That all at last in heaven
Might join the glad refrain."

—*Presbyterian.*

A Father's Example.

While laboring in a revival near the city of S——, in the summer of 1863, I was called to visit a gentleman who was said to be inquiring the way of life. I was received kindly, and he related to me the following touching and suggestive incident in his experience.

For years he had been a shameless profaner of the name of God. Profane swearing had grown to be a part of his life, a plague that followed him almost without his consciousness, and attended him even into the sacred precincts of the home circle. One of the first lessons his children learned from papa was to swear.

One day, as he went from dinner to his work, his little boy, just large enough to run about, started to follow him, when his large Newfoundland dog, that had become a great pet with the children, came bounding playfully after his little master; but in his great joy, he was so unfortunate as to run over the little fellow and roll him in the dust, though without inflicting serious injury.

The vigilant mother ran for her little Edgar, who was crying with all his might; but the infuriated father would avenge his darling on Bruno, who, in the excess of his delight, had accidentally overturned the little fellow, and must now account for all his mischief.

Mr. M—— seizes a huge cudgel, and commences the punishment. Every blow is attended with a terrible oath, and responded to by the pitiful complaint of poor Bruno.

The next morning, after a nice sleep, Eddy was was out with old Bruno enjoying his play; but Bruno crossed him, and he commenced to repeat the lesson his father had given the dog the day before. He applied his little strokes vigorously, and every blow was strengthened by one of the horrid oaths his father had used the previous day.

Though seemingly in great pain when he heard his father's awful words, they had written themselves on his tender memory. He used the same words and manifested the same spirit that had been witnessed from his father!

This was too much for the wicked man and father. God had reproved him through that little child, and his heart was all broken up. He sought a Savior's love, and before I left the neighborhood, he stood up with a goodly number of others, and confessed that precious name.

Let us not forget, that from their very infancy, we are stamping the hearts of our little ones with our own characters. In that most tender soil we are sowing the seeds that may germinate, spring up, grow, and ripen before our eyes into infamy and disgrace. Are we not in a great measure responsible for the profligacy of our children? God has taught us to "bring them up in the nurture and admonition of the Lord," and shall our example lead them away from God?

The impressions made on the heart of childhood are said to be as enduring as the mind; then let us see that we make none but good impressions on the minds of these dear little ones. —*Instructor.*

Aunt Jane.

Aunt Jane was the head of the house—a lady who had spent more than fifty years in educating her brains and battling with her ailments. She had received from her parents a considerable inheritance in the way of whims, and had nursed it up into a handsome fortune. Being one of the most impulsive of human beings, she was naturally one of the most entertaining; and behind all her eccentricities there was a fund of the soundest sense and the tenderest affection. She had seen much and varied society, had been much admired in her youth, but had chosen to remain unmarried. Obliged by her physical condition to make herself the first object, she was saved from utter selfishness by sympathies as democratic as her personal habits were exclusive. Unexpected and commonly fantastic in her doings, often dismayed by small difficulties, but never by large ones, she sagaciously administered the affairs of those around her — planned their dinners and their marriages, fought out their bargains and their feuds.

She hated everything irresolute or vague. People might play at cat's-cradle or study Spinoza, just as they pleased; but whatever they did, they must give their minds to it. She kept house from an easy chair, and ruled her dependants with severity tempered by wit, and by the very sweetest voice in which reproof was ever uttered. She never praised them; but if they ever did anything particularly well, rebuked them retrospectively, asking why they had never done it well before. But she treated them munificently, made all manner of plans for their comfort, and they all thought her the wisest and wittiest of the human race. So did the youths and maidens of her large circle; they all came to see her, and she counselled, admired, scolded, and petted them all. She had the gayest spirits, and an unerring eye for the ludicrous, and she spoke her mind with absolute plainness to all comers. Her intuitions were instantaneous as lightning, and, like that, struck very often in the wrong place. She was thus extremely unreasonable and altogether charming.

—*Atlantic Monthly.*

Are You Ready?

Are you ready for life with all its multiplied cares and responsibilities, its trials and temptations, its adversities and afflictions, its sorrows and disappointments? Are you ready for death, its pains and weakness, its farewells and partings? Are you ready for the judgment, its review and its exposure of your inner life, as well as your outward acts and spoken words? Are you ready for that august tribunal where all must appear, to hear from the lips of Christ a welcome to the joys of Heaven, or the doom of banishment which shall consign the soul to endless darkness and despair? Are you ready to walk with the saints in light, ready to enter upon the enjoyments and enjoy the society of the better land?

If you are not ready for these things, think most seriously how short the time for preparation for salvation; remember that it is alone through repentance towards God and faith in the Lord Jesus Christ and a holy life that you can get ready for the future. Let not another moment pass without giving your earnest attention to this important work of life. Rest content with no state of mind short of assurance. —*United Presbyterian.*

TABLE CONVERSATION.—You will find a great deal of character is imparted and received at the table. Parents too often forget this; and therefore instead of swallowing your food in sullen silence, instead of brooding over your business, instead of severely talking about others, let the conversation at at the table be genial, kind, social and cheering. Don't bring disagreeable things to the table in your conversation, any more than you would in your dishes. For this reason, too, the more good company you have at your table, the better for your children. Every conversation with company at your table is an educator to the family. Hence the intelligence and the refinement and the appropriate behavior of a family which is given to hospitality. Never feel that intelligent visitors can be anything but a blessing to you and yours. How few have fully gotten hold of the fact, that company and conversation at the table are no small part of education.

—*United Presbyterian.*

Young Folks.

The Patchwork Cushion.

The season for making presents had come around again, and little Marion sat in her small rocking-chair, very thoughtful over some deep subject. Every one called her an "old-fashioned child," and so she was in some respects. This morning she was thinking over all the people she knew, and wondering who of them all would be likely not to get a single present.

"Because," she said, talking aloud, "I want to make a present to that one."

"I hope I am the lucky one, then," said mischievous brother Tom, who had come in unobserved while Marion was in her brown study.

She turned quickly toward him, a little disturbed to think she had been overheard, but as it was only Tom, she did not care much.

"Oh! Tom, I mean to make a present to poor old Debby Weaver. I don't believe she has anybody in the world to make her a present when Christmas comes around. It is going to be something I can make myself, and I do not know what that can be, unless I make her a new cushion for her old rocking chair. I could do that very easy, and she does need one."

Tom thought it would probably be a very good thing to do, though he did not know much about such things.

"I suppose we shall all be called upon to contribute to the general fund as usual?"

"Well you can give what you choose towards Aunt Debby's Christmas, though I can't promise to put it into the cushion."

Tom tossed her a fifty-cent note as his contribution, and then went whistling off, while Marion said:

"I am much obliged, for I had no intention of asking anybody for money. It will come very useful, though."

When Marion told her plan to her friend Louisa, she thought it a very nice one.

"Get out your old silk bag, and we will pick out your prettiest and brightest pieces of silk, and I will help you to cut them into diamonds."

"Why Aunt Debby would never use a silk cushion; she would be so afraid of spoiling it. I have a bright roll of colored flannels and gay cashmeres, and I am going to make a patch-work star out of them. I know it will suit her a great deal better."

The poor old woman sat by her lonely fireside on Christmas eve, thinking, thinking of the past, as only old age ever does. Her great "shell cat" sat on an old chair by the chimney-side, and her gentle purring made pleasant music as the twilight gloom was gathering over the earth.

But Aunt Debby's thoughts were far away on the happy Christmas times she had known in years gone by. Of the rows of little stockings along the mantel she had helped to fill, and the merry dancing eyes and tinkling bare feet which made sunshine and music in the old homestead on Christmas morning. And then her thoughts wandered away to the far-off homes which her birdlings had made for themselves, and to the grassy graves which now hid most of them from her eyes forever. Her lot had always been humble, but one who was a prince came often down to sup with her, and spread a royal feast upon her lowly board. She was not alone, for Jesus was her guest.

A gentle rap at the door aroused her from her reverie. In answer to her cheery "walk in," little Marion lifted the latch and entered, her rosy cheek, bright from the frosty air, and her eye sparkling with the pleasure which a kind act always gives to the heart.

"I have brought you a little Christmas gift, Aunt Debby," she said as she took the bright, soft cushion out of its paper cover and laid it on the table. "Now, please let me take out the old one and put this right in its place, so I can see how it will fit. I sewed the tapes on, so it is all ready."

Good aunt Debby could hardly believe her eyes, so pleased was she, and so unexpected was the gift. So she let Marion do as she pleased, scarcely speaking a word. But when the cushion was fairly tied in to its place, her admiration found expression in words. It was hard to tell which was the most delighted. Little Marion obeyed her mother, and only staid long enough to lay out the other gifts, which mother had sent in a covered basket. A little chicken pie in a bright tin basin, a pot of raspberry jam, a half dozen puff biscuits, and a paper of tea and sugar, which were bought with Tom's money.

What a happy Christmas time it was for that old lady and her cat, and how little it had cost any one. The remembrance of it warmed the lonely heart of the widow for many a long winter's day, and the sight of that bright cushion brought it back to her memory every time she looked at it.

Now, what poor person can you think of, who has not probably had a Christmas gift? Do not forget the poor and lonely, when sharing the good things God has given you.

A Bad Fire.

"Jones, have you heard of the fire that burned up the man's house and lot?"

"No, Smith, where was it?"

"Here in the city."

"What a misfortune to him! Was it a good house?"

"Yes, a nice house and lot—a good home for any family."

"What a pity! How did the fire take?"

"The man played with fire, and thoughtlessly set it himself."

"How silly! Did you say the lot was burned, too?"

"Yes, lot and all; all gone, slick and clean."

"That is singular. It must have been a terribly hot fire—and then I don't well see how it could burn the lot."

"No, it was not a large fire, nor a very hot fire. Indeed, it was so small that it attracted but little attention, and did not alarm anybody. The man for whom it did so much mischief saw it all the while, and thought it a little matter. A few drops of water would have put it out at any time. In fact, it often went out of itself, and the man lighted it again."

"What for, I should like to know?"

"Oh! he didn't seem to think what harm it was doing. He liked the smell of the fire, and amused himself with the pretty smoke."

"But how could such a little fire burn up a house and lot? You have not told me."

"It burned a long time— more than twenty years. And though it seemed to consume very slowly, yet it wore away about one hundred and fifty dollars' worth every year, till it was all gone."

"I can't quite understand you yet. Tell me where the fire was kindled, and all about it."

"Well, then, it was kindled *in the end of a cigar.* The cigars cost him, he told me himself, twelve and a half dollars a month, or one hundred and fifty dollars a year, and that in twenty-one years would amount to three thousand one hundred and fifty dollars, besides the interest. Now, the money was worth at least ten per cent, and at that rate, it would double about once in seven years. So that the whole sum would be more than ten thousand dollars. That would buy a fine house and lot even in Chicago. It would pay for a large farm in the country.—Don't you pity the family of the foolish man who has slowly burned up their home?"

"Wheugh! I guess now you mean me, for I have smoked more than twenty years. But I didn't know that it cost so much. And I haven't any house of my own. Have always rented, because I thought I was too poor to own a house. And all because I have been burning it up! What a fool I have been through life."

"There is still another idea."

"What is that?"

"You may live twenty years longer, and burn up another home."

"I see. I ought to leave off smoking."

"Yes, sir, many smokers feel that they ought to leave off."

"But I mean to give up my cigars, and quit."

"Yes I have known many to quit—the same man at least half a dozen times."

"Friend Smith, I tell you I am determined to quit once and forever, and to break myself completely of the bad habit. I am resolved to put out this fire, never to light it again. I won't burn up another home that my family so much need in my old age, and my children after me, when I am dead and gone."

"Well said, Jones! now I trust you will. If you are fully resolved you can, though I promise you a severe struggle. If you are not fully set in your purpose, the old habit will be to strong for you, and your second house and lot also will vanish in smoke."

"The boys had better never set a fire which costs so much, and which, though it might be so easily put out, is yet so likely, if once kindled, to keep burning all the rest of their lives.

—*The Sunday School Scholar.*

Little Sylvia.

This morning, almost as soon as I awoke, I heard the patter of little feet outside the door, and a little voice said:

"Please, may I come in?"

"Yes, darling," I answered; and the door opened and I saw the bright, laughing face of our little pet. Springing upon the bed, she nestled close to me, and said:

"I'm your rosebud, ain't I?"

"When you are a good little girl," said I, imprinting a kiss upon her pure white forehead.

"Well, when I say my prayers this morning, I am going to be Jesus' little lamb, sha'n't I? I'm your little pet and Jesus' little lamb;" and the little one laughed and looked so happy.

Last Sabbath she was baptized. When she came back from church, she said:

"I gave myself all to Jesus to-day. I musn't ever be naughty, nor plague D——(her little brother) any more, must I?"

Looking at me, she said, "Have you got a brother?"

"No, darling. I had a brother once, but he is dead," I answered, sadly.

"What was his name?" asked the child.

"Willie."

"Dead, is he?" said Sylvia, fixing her great blue eyes sadly upon mine.

"He has gone to live with Jesus, Sylvia," said I. The little one's face brightened, and she said earnestly:

"Is he? Oh, ain't you glad he's gone to live with Jesus in heaven? I wish I was gone, too. When I go, shall I see your brother up there?"

"I think you will, darling," I answered.

"Won't that be nice? I mean to be good to-day, and all the time now. Then I'll go to heaven." And so saying, she ran away.

Dear little sunshine! As her sister Jennie said, "everybody loves Sylvia." And so they do, and it is because she loves everybody.

Dear children, did you ever think that, if you want every one to love you, you must be kind and loving yourself?

Let every child who reads these lines try to be gentle and obliging to all around them, and they will find that others will love them more, and they will love others better than they ever did before.

—*S. S. Visitor.*

Boasting.

Anna Strong was a sad little boaster. Though she meant to speak the truth, she was so vain and thoughtless that no one could believe her.

She always wanted a long lesson; she would say: "I can learn it all; it is not too hard for me;" though when her class was called out to recite, she was very often sent back to her seat to study.

If anything was to be done at home or at school, Anna would say: "I know how; please let me do it," even if it was a thing she could not do at all.

Miss Eaton was Anna's teacher. One day she wished some one to point to the names of the cities on a large map, so that all the girls in the class might know where to find them.

"Oh, let me do it!" said Anna; "I know how to do it as well as can be."

"Yes, you may do it," said Miss Eaton; but Anna could not point to a single name that her teacher called.

"You are like a silly little pigeon I used to hear about when I was a little girl," said her teacher. "The story is, that when the pigeon first came into the world, all the other birds came, and offered each to build a nest.

"The cat-bird showed her its nest, all made of sticks and bark; and the sparrows showed her theirs, which were woven with moss and hair. But the pigeon, walking about in a very vain way, and turning her head from side to side, said: 'I know how to build my nest as well as the best of you.'

"Then the blackbird showed his nest, which was fastened to some reeds and swung over the water; and the turtle-dove said hers was easier to build than all, for it was quite flat, and made only of sticks laid together. But the pigeon turned her head as before, and said, 'I know how.'

"At last the birds left her. Then the pigeon found she did not know at all; and she went without a nest until a man took pity on her and built her a pigeon-house, and put some hay into it.

"Now, children, though the story of the pigeon is only a fable, and not true, yet you may learn from it a useful lesson. "Little boys and girls who are vain boasters, are laughed at by others, and only deceive themselves." Like the silly pigeon they say, "I know how!" but they often find to their sorrow when it is too late, that they do not."

—*American Presbyterian.*

THE GOPHER.—This little burrowing animal, common in the West, is like a squirrel. Gophers are sometimes called pouched rats, on account of their large cheek pouches, in which, as in a bag, they carry home their plunder. They feed at night on grasses, roots, and nuts, and are very destructive to trees and vegetables, cutting them up by the roots. In Iowa, lately, the government offered a reward of fifteen cents for every gopher. The boys, after a time, brought an immense number, and received the bounty; but soon it was ascertained that many of them had reared the little creatures themselves find-he business profitable.—*Young Folks' News.*

ALLEN'S ORIGINAL AND GENUINE

Nerve and Bone Liniment.

The Nerve and Bone Liniment was originated by Geo. M. Allen, n the year 1834, and has lived entirely on its own merits without the aid of advertisements; but owing to the many counterfeit and worthless articles called Nerve and Bone Liniment, now upon the market, has induced the proprietors to advertise it. Many certificates of leading citizens who have used and constantly keep it in their houses, as a great family remedy, could be added to the advertisement, but knowing the many virtues of Allen's Nerve and Bone Liniment, and that one application will satisfy any one of its beneficial effects, deem it unnecessary to bring the certificates before the public. Allen's Nerve and Bone Liniment does not effect a cure in a minute, but acts upon the Nerve and the Bone of the patient by its penetrating properties, when used according to the directions on each bottle, and gives new strength to the parts affected, and thus acts as an agent in helping nature to restore the diseased parts to health. It is also invaluable in all diseases of horses.

Be sure to call for Allen's original and genuine Nerve and Bone Liniment, all others are worthless counterfeits, and should not be tolerated by the public.

NEWS SUMMARY.

PACIFIC COAST ITEMS.

THE papers in this State are finding much fault with "Carleton" for discouraging Eastern farmers from coming here, by deceptive statements concerning the high prices of farming lands in California. In a recent letter to the *Boston Journal* he says: "I doubt if there is a State in the Union where land is held at such high prices as in California. Farming lands, 50 or 100 miles from San Francisco, cannot be had for less than $100 per acre. The best lands are held at double these rates. Good land suitable for market gardening is cheaper within 10 miles of Boston than it is within that distance of San Francisco." Mr. Coffin does not seem to reflect that the land he speaks of near this city would be a good bargain at double the price for which land near Boston could be bought, and that there are large tracts of excellent land which can be bought at a merely nominal price. The *Santa Barbara Post* says:

This pernicious and foolish cry of high prices for land is still kept up, and is doing more to retard the development of the agricultural resources of our State than all other causes combined. It not only keeps away emigration from Europe and the Atlantic States, but it keeps thousands toiling for a precarious living in the mountainous districts of our own State, who would enrich themselves and the State in its valleys. Land may be cheap at $200 an acre and it may be dear at one dollar, the intrinsic value being wholly dependant on what per centage it will produce on the investment. We sometimes hear the cry raised here, that lands are held at outrageous prices, say from twenty to a hundred dollars; and yet a single crop of corn or barley could be made to pay for them. Are they high? As good corn lands as there are in the world, that will produce from 75 to 100 bushels per acre, may be bought in this valley for 40 to 50 dollars, and rented for one-fifth of what they will produce. It is absurd to talk about lands being high priced in California. They are cheaper than elsewhere in the United States.

EXPLORATIONS made by Gen. Conner, on Salt Lake, in his new steamer, prove that the water has risen 13 feet since the first surveys, and is rising now 1 foot per year. The boat ran for a mile in one place, over what was grazing land 5 years ago. It is thought that perhaps the subterranean outlet has been partially choked up.

THE track is laid to a point 12 miles from Sacramento on the Stockton road. The Central Pacific now extends 30 miles east of Elko. A passenger depot is being built at Vallejo. The workmen on the road from Petaluma to Santa Rosa have left work on that section of the road and are now employed below Petaluma.

A CORRESPONDENT of the *Sacramento Union* knows a man in this city, whose sacred rule it is to bestow $10,000 a year on the poor. The strangest, and the best part of the story is that only a few of his friends know of this generosity, the donor being satisfied with the reward of his own conscience.

THE steamer *New World* is now running regularly on the Vallejo route. The Navigation Company, in opposition, have reduced the fare on the *Antelope* to 25 cents, at which rate one can go and see the future metropolis for less money than it takes to see the sights in our own village.

SINALOA, Mexico, with 160,000 inhabitants, has only 3 weeklies, and one semi-weekly paper, the latter being supported by the Government. San Francisco with a smaller population supports about 70 periodical publications.

A GERMAN linguist thinks he has discovered among old Chinese records, proof that the whole Pacific border of our continent was explored by Chinese adventurers 1,000 years before Columbus discovered the Eastern shore.

THE citizens of Santa Cruz are going to establish an academy. It is a good sign that they propose to call it an *Academy* and not a College or University, as is customary in California and other Western States.

THE growth of San Rafael to its present size from a mere trading post, as it was a few years ago, is attributed, by the *Journal*, to its most excellent climate, the place having not much back-country to support it.

THERE have been 21 cases of small-pox at Napa, and 4 deaths. The disease is evidently abating in this city both in malignancy and number of cases.

A SENSIBLE man has exchanged a ledge in Treasure Hill, White Pine, for 1,300 acres of land near San Jose.

A PAPER, called the *Inland Empire*, is to be published at White Pine. It will at first be a weekly.

GOLD has been discovered in large quantities at White Pine—by parties residing in Philadelphia.

SAN LEANDRO, says the *Gazette*, boasts of 4 gang-plow establishments, all doing a good business.

TELEGRAPHIC.

EASTERN.—The people of Washington, without regard to party, propose to give an inauguration ball....The Treasurer of the German Protestant Church in Cincinnati, has absconded with $8,300....The sailors in New York are on a strike for $30 per month....The Union Pacific Railroad has reached its 1,000th mile....The tobacconists have had a convention in Washington....The confessions of Arnold and Atzerodt, in relation to Lincoln's assassination, have been published....The New York Workingmen's Association is in session at Albany....Rev. Dr. Littlejohn was consecrated Bishop of Long Island, on the 27th.

SOUTHERN.—The Maryland Legislature desire Dr. Mudd's pardon....At a meeting of the Trustees of the Peabody Southern Educational Fund on the 21st, it was stated that the cause of education at the South is rapidly advancing....Gov. Clayton has revoked martial law in Woodruff County, Tenn....Ex-Governor Pickens died in South Carolina on the 27th inst.

CONGRESSIONAL.—The Senate will confirm no more nominations except where actual vacancies exist....A Bill has been introduced, for the organization of the navy....Mrs. A. Lincoln petitions Congress for a pension....It is thought that the colored congressman from Louisiana will not be able to get his seat....A resolution has passed, to give old cannon for a monument to Lincoln....A joint resolution has passed, making Agassiz Regent of the Smithsonian Institute....The Central Branch Railroad Bill was defeated in the Senate.

POLITICAL.—Gen. Grant, it is said on very good authority, is very much opposed to the settlement of the Alabama claims on the present basis. It is thought he will recall Reverdy Johnson....E. D. Neal of Minnesota, has been nominated Commissioner of Education, in place of D. Barnard. ....D. S. Pratt has been elected U. S. Senator for Indiana. ....Hon. John Scott has been elected Senator from Pennsylvania....The Democratic Convention in Connecticut favors paying the bonds in gold.

FOREIGN.—10,000 French Canadians wish to return to Canada from the United States under the same conditions as those upon which emigrants are admitted from foreign countries....The small-pox prevails in Montreal....The Sultan still expresses a hope for peace....33 whites and 20 natives were killed in the massacre at Poverty Bay....The troubles still continue in Cuba. It is difficult to tell which side has the advantage....Rivero is President of the Spanish Cortes. ....Mr. Burlingame has had an interview with Napoleon, who expressed his surprise at seeing an American acting as Ambassador of China....Greece rejects the declaration of the Paris Conference.

SPECIAL NOTICE.

Acrostic.

P ain Killer is worth what it weighs, in gold,
A ll around the world are its praises told:
I t will Cholera cure—scourge of southern climes;
N o victim dies who takes it betimes.

K eep Pain Killer, a true friend, by your side;
I t will cure Cough or Cold, or Colic beside.
L ook out to apply it for Bruise or for Sprain;
L et it once be tried—'twill be used again.
E very word I am telling you, reader, is true,
R emember that Pain Killer is good for you.

Every Month.
